Instructor Permissions:  Instructor  Enrollment Cap:  n/a

To see how calculus applies in practical situations described by more than one variable, we study: Vectors, lines, planes, parameterization of curves and surfaces, partial derivatives, directional derivatives and the gradient, optimization and critical point analysis, including constrained optimization and the Method of Lagrange Multipliers, integration over curves, surfaces and solid regions using Cartesian, polar, cylindrical, and spherical coordinates, divergence and curl of vector fields, and the Green's, Stokes's, and Divergence Theorems.

Course Notes:  This is a lecture taught in small sections. May not be taken for credit by students who have passed Applied Mathematics 21a. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning. Activities using computers to calculate and visualize applications of these ideas will not require programming experience.

Class Notes:  Required first meeting in fall: Wednesday, September 2, 8:30 am, Science Center B.

Fall section times: M.W.F. at 9; M.W.F. at 10; M.W.F. at 11; M.W.F. at 12; Tu.Th. 10-11:30; Tu.Th. 11:30-1.

Oliver Knill, William Boney, Matthew Demers, Dusty Grundmeier, Yu-Wen Hsu and members of the Department.

Recommended Prep:  Mathematics 1b or an equivalent background in mathematics.

Requirements:  Anti-requisite: Not to be taken in addition to AM21a.

Mathematics 21B

Linear Algebra and Differential Equations (110989)

Oliver Knill

2016 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  None  Enrollment Cap:  n/a

Matrices provide the algebraic structure for solving myriad problems across the sciences. We study matrices and related topics such as linear transformations and linear spaces, determinants, eigenvalues, and eigenvectors. Applications include dynamical systems, ordinary and partial differential equations, and an introduction to Fourier
Course Notes: This is a lecture taught in small sections. May not be taken by students who have passed Applied Mathematics 21b. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Class Notes: Required first meeting in spring: Monday, January 25, 8:30 am, Science Center B.
Spring section times: M.W.F. at 9 (with sufficient enrollment), M.W.F. at 10, M.W.F. at 11, M.W.F. at 12, Tu.Th. 10-11:30, Tu.Th. 11:30-1.
Oliver Knill, Rosalie Belanger-Rioux, Peter Garfield, Fabian Haiden, Yu-Wen Hsu, and members of the Department.

Recommended Prep: Mathematics 1b or an equivalent background in mathematics. Mathematics 21a is commonly taken before Mathematics 21b, but is not a prerequisite, although familiarity with partial derivatives is useful.

Requirements: Anti-requisite: Not to be taken in addition to Math 19b or AM 21b.

Mathematics  21B

Linear Algebra and Differential Equations (110989)

Peter M. Garfield

2015 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Matrices provide the algebraic structure for solving myriad problems across the sciences. We study matrices and related topics such as linear transformations and linear spaces, determinants, eigenvalues, and eigenvectors. Applications include dynamical systems, ordinary and partial differential equations, and an introduction to Fourier series.

Course Notes: This is a lecture taught in small sections. May not be taken by students who have passed Applied Mathematics 21b. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Class Notes: Required first meeting in fall: Wednesday, September 2, 8:00 am, Science Center A..
Fall section times: M.W.F. at 10 (with sufficient enrollment), MWF at 11, MWF at 12 (with sufficient enrollment).
Peter Garfield, Rosalie Belanger-Rioux and members of the Department.
**Mathematics 23A**

*Linear Algebra and Real Analysis I (111695)*

*Paul Bamberg*

2015 Fall (4 Credits)  
**Schedule:** TR 0230 PM - 0359 PM

**Instructor Permissions:**  
**Enrollment Cap:** n/a

Linear algebra: vectors, linear transformations and matrices, scalar and vector products, basis and dimension, eigenvectors and eigenvalues, including an introduction to the R scripting language. Single-variable real analysis: sequences and series, limits and continuity, derivatives, inverse functions, power series and Taylor series. Multivariable real analysis and calculus: topology of Euclidean space, limits, continuity, and differentiation in n dimensions, inverse and implicit functions, manifolds, Lagrange multipliers, path integrals, div, grad, and curl. Emphasis on topics that are applicable to fields such as physics, economics, and computer science, but students are also expected to learn how to prove key results.

**Course Notes:**  
Course content overlaps substantially with Mathematics 21a, 25a,b, so students should plan to continue in Mathematics 23b. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

**Recommended Prep:** Mathematics 1b or a grade of 4 or 5 on the Calculus BC Advanced Placement Examination, plus an interest both in proving mathematical results and in using them.

**Additional Course Attributes:**

Instructor Permissions: None  Enrollment Cap: n/a

A rigorous, integrated treatment of linear algebra and multivariable calculus. Topics: Riemann and Lebesgue integration, determinants, change of variables, volume of manifolds, differential forms, and exterior derivative. Stokes's theorem is presented both in the language of vector analysis (div, grad, and curl) and in the language of differential forms.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Recommended Prep: Mathematics 23a.

Mathematics 25A
Honors Linear Algebra and Real Analysis I (110808)

Tasho Kaletha
2015 Fall (4 Credits)  Schedule: MWF 1000 AM - 1059 AM
Instructor Permissions: Instructor  Enrollment Cap: n/a

A rigorous treatment of linear algebra. Topics include: Construction of number systems; fields, vector spaces and linear transformations; eigenvalues and eigenvectors, determinants and inner products. Metric spaces, compactness and connectedness.

Course Notes: For students with a strong interest and background in mathematics. Expect to spend a lot of time doing mathematics. May not be taken for credit after Mathematics 23. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Class Notes: Only for students with a strong interest and background in mathematics. There will be a heavy workload. May not be taken for credit after Mathematics 23.

Recommended Prep: 5 on the Calculus BC Advanced Placement Examination and some familiarity with writing proofs, or the equivalent as determined by the instructor.

Honors Linear Algebra and Real Analysis II (110855)
Tasho Kaletha
2016 Spring (4 Credits) Schedule: MWF 1000 AM - 1059 AM
Instructor Permissions: None Enrollment Cap: n/a
A rigorous treatment of basic analysis. Topics include: convergence, continuity, differentiation, the Riemann integral, uniform convergence, the Stone-Weierstrass theorem, Fourier series, differentiation in several variables. Additional topics, including the classical results of vector calculus in two and three dimensions, as time allows.

Course Notes: Expect to spend a lot time doing mathematics. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Class Notes: There will be a heavy workload.

Requirements: Prerequisite: Mathematics 25A OR Mathematics 55A

Mathematics 55A
Honors Abstract Algebra (113627)
Yum Tong Siu
2015 Fall (4 Credits) Schedule: TR 0230 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
A rigorous treatment of abstract algebra including linear algebra and group theory.

Course Notes: Mathematics 55a is an intensive course for students having significant experience with abstract mathematics. Instructor permission required. Every effort will be made to accommodate students uncertain of whether the course is appropriate for them; in particular, Mathematics 55a and 25a will be closely coordinated for the first three weeks of instruction. Students can switch between the two courses during the first three weeks without penalty. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Mathematics 101

Sets, Groups and Topology (122943)

Cliff Taubes

2016 Spring (4 Credits)  
Schedule: TR 1130 AM - 1259 PM  
Instructor Permissions: None  
Enrollment Cap: n/a

An introduction to rigorous mathematics, axioms, and proofs, via topics such as set theory, symmetry groups, and low-dimensional topology.

Course Notes: Familiarity with algebra, geometry and/or calculus is desirable. Students who have already taken Mathematics 23a,b, 25a,b or 55a,b should not take this course for credit. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning. This course given fall term and repeated spring term.

Recommended Prep: An interest in mathematical reasoning.
Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

Mathematics 110

Vector Space Methods for Differential Equations (126610)

Paul Bamberg

2016 Spring (4 Credits) Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: None Enrollment Cap: n/a

Develops the theory of inner product spaces, both finite-dimensional and infinite-dimensional, and applies it to a variety of ordinary and partial differential equations. Topics: existence and uniqueness theorems, Sturm-Liouville systems, orthogonal polynomials, Fourier series, Fourier and Laplace transforms, eigenvalue problems, and solutions of Laplace's equation and the wave equation in the various coordinate systems.
Mathematics 112
Introductory Real Analysis (109817)

Tristan Collins
2016 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule: TR 0100 PM - 0229 PM

An introduction to mathematical analysis and the theory behind calculus. An emphasis on learning to understand and construct proofs. Covers limits and continuity in metric spaces, uniform convergence and spaces of functions, the Riemann integral.

Recommended Prep: Mathematics 19a,b or 21a,b and either an ability to write proofs or concurrent enrollment in Mathematics 101; or an equivalent background in mathematics.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

Mathematics 113
Analysis I: Complex Function Theory (113608)

Horng-Tzer Yau
2016 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule: MWF 1200 PM - 1259 PM

Analytic functions of one complex variable: power series expansions, contour integrals, Cauchy's theorem, Laurent series and the residue theorem. Some applications to real analysis, including the evaluation of indefinite integrals. An introduction to some special functions.

Recommended Prep: Mathematics 23a,b or 25a,b or 112, or an equivalent background in mathematics.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 55b.
Mathematics 114
Analysis II: Measure, Integration and Banach Spaces (123227)
Daniel Gardiner
2015 Fall (4 Credits)
Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: Instructor
Enrollment Cap: n/a
Lebesgue measure and integration; general topology; introduction to $L^p$ spaces, Banach and Hilbert spaces, and duality.
Recommended Prep: Mathematics 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.

Mathematics 115
Methods of Analysis (111065)
Babak Haghighat
2016 Spring (4 Credits)
Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: None
Enrollment Cap: n/a
Complex functions; Fourier analysis; Hilbert spaces and operators; Laplace's equations; Bessel and Legendre functions; symmetries; Sturm-Liouville theory.
Course Notes: Mathematics 115 is especially for students interested in physics.
Recommended Prep: Mathematics 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.

Mathematics 116
Real Analysis, Convexity, and Optimization (118302)
Paul Bamberg
2015 Fall (4 Credits)
Schedule: MWF 0100 PM - 0159 PM
Develops the theory of convex sets, normed infinite-dimensional vector spaces, and convex functionals and applies it as a unifying principle to a variety of optimization problems such as resource allocation, production planning, and optimal control. Topics include Hilbert space, dual spaces, the Hahn-Banach theorem, the Riesz representation theorem, calculus of variations, and Fenchel duality. Students will be expected to understand and invent proofs of theorems in real and functional analysis.

Recommended Prep: Mathematics 23a,b or 25a,b or 55a,b; or Mathematics 21a,b plus at least one other more advanced course in mathematics; or an equivalent background in mathematics.

**Additional Course Attributes:**

**Linear Algebra and Applications (120228)**

*Michael Hopkins*

2015 Fall (4 Credits)  
**Schedule:** MWF 0200 PM - 0259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Real and complex vector spaces, linear transformations, determinants, inner products, dual spaces, and eigenvalue problems. Applications to geometry, systems of linear differential equations, electric circuits, optimization, and Markov processes. Emphasizes learning to understand and write proofs. Students will work in small groups to solve problems and develop proofs.

**Recommended Prep:** Mathematics 19b or 21b or an equivalent background in mathematics.

**Requirements:** Anti-Req: Not to be taken in addition to Mathematics 23a or 25a or 55a.
Mathematics 122
Algebra I: Theory of Groups and Vector Spaces (122603)

Benedict Gross
2015 Fall (4 Credits)  
**Schedule:** MWF 1100 AM - 1159 AM
**Instructor Permissions:** Instructor  
Enrollment Cap: n/a

Groups and group actions, vector spaces and their linear transformations, bilinear forms and linear representations of finite groups.

**Recommended Prep:** Mathematics 23a or 25a or 101 or 121; or an equivalent background in mathematics.

**Requirements:** Anti-Req: Not to be taken in addition to Mathematics 55a.

Mathematics 123
Algebra II: Theory of Rings and Fields (116503)

Arul Shankar
2016 Spring (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM
**Instructor Permissions:** None  
Enrollment Cap: n/a

Rings and modules. Polynomial rings. Field extensions and the basic theorems of Galois theory. Structure theorems for modules.

**Requirements:** Prerequisite: Mathematics 122 or Mathematics 55a

Mathematics 124
Number Theory (111533)

Barry Mazur
2015 Fall (4 Credits)  Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: Instructor  Enrollment Cap: n/a

Factorization and the primes; congruences; quadratic residues and reciprocity; continued fractions and approximations; Pell’s equation; selected Diophantine equations; theory of integral quadratic forms.

Recommended Prep: Mathematics 101 or 122; or 55a which can be taken concurrently; or an equivalent background in mathematics.

Classical Geometry (123211)

Eric Peterson

2016 Spring (4 Credits)  Schedule: MWF 1100 AM - 1159 AM

Instructor Permissions: None  Enrollment Cap: n/a

Presents several classical geometries, these being the affine, projective, Euclidean, spherical and hyperbolic geometries. They are viewed from many different perspectives, some historical and some very topical. Emphasis on reading and writing proofs.

Recommended Prep: Mathematics 19a,b or 21a,b or 23a or 25a or 55a which may be taken concurrently; or an equivalent background in mathematics.

Additional Course Attributes:

Mathematics 131

Topology I: Topological Spaces and the Fundamental Group (111458)

Cliff Taubes

2015 Fall (4 Credits) Schedule: MWF 1200 PM - 1259 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

First, an introduction to abstract topological spaces and their properties; and then, an introduction to algebraic topology and in particular homotopy theory, fundamental groups and covering spaces.

Recommended Prep: Some acquaintance with metric space topology as taught in Mathematics 23a,b, 25a,b, 55a,b, 101, or 112; and with groups as taught in Mathematics 101, 122 or 55a.

Mathematics 136

Differential Geometry (111133)

Tristan Collins

2015 Fall (4 Credits) Schedule: MWF 1000 AM - 1059 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

The exterior differential calculus and its applications to curves and surfaces in 3-space and to various notions of curvature. Introduction to Riemannian geometry in higher dimensions.
Recommended Prep: Mathematics 19a,b or 21a,b or 23a or 25a or 55a (may be taken concurrently); or an equivalent background in mathematics.

Additional Course Attributes:

Mathematics 142

Descriptive Set Theory (159623)

Peter Koellner

2015 Fall (4 Credits)

Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: Instructor

Enrollment Cap: 30

An introduction to the study of definable subsets of reals and their regularity properties (such as Lebesque measurability and the property of Baire). A discussion of the unresolvability of the classical questions in ZFC and their resolution through the introduction of axioms of definable determinacy and strong axioms of infinity.

Recommended Prep: Knowledge of the material in Mathematics 141.

Requirements:

Prerequisite: Mathematics 141 OR permission of the instructor

Additional Course Attributes:

Mathematics 152

Discrete Mathematics (116191)

Paul Bamberg

2015 Fall (4 Credits) Schedule: TR 1130 AM - 1259 PM
Instructor Permissions: Instructor Enrollment Cap: 16

An introduction to sets, logic, finite groups, finite fields, finite geometry, finite topology, combinatorics and graph theory. A recurring theme of the course is the symmetry group of the regular icosahedron. Elementary category theory will be introduced as a unifying principle. Taught in a seminar format: students will gain experience in presenting proofs at the blackboard.

Course Notes: Covers material used in Computer Science 121 and Computer Science 124.

Recommended Prep: Mathematics 19b or 21b or 23a or 25a or 55a (may be taken concurrently) or an equivalent background in mathematics. Previous experience with proofs is not required.

Requirements: Not to be taken in addition to Computer Science 20, Mathematics 55 or Mathematics 122.

Mathematics 153

Mathematical Biology-Evolutionary Dynamics (119502)

Martin Nowak

2015 Fall (4 Credits) Schedule: TR 0230 PM - 0359 PM
Introduces basic concepts of mathematical biology and evolutionary dynamics: evolution of genomes, quasi-species, finite and infinite population dynamics, chaos, game dynamics, evolution of cooperation and language, spatial models, evolutionary graph theory, infection dynamics, somatic evolution of cancer.

**Recommended Prep:** Mathematics 19a,b or 21a,b or 23a,b or 25a,b or 55a,b; or an equivalent background in mathematics.

<table>

**Mathematics 154**

Probability Theory (113811)

*Jacob Lurie*

2016 Spring (4 Credits) **Schedule:** MWF 0100 PM - 0159 PM

**Instructor Permissions:** None  **Enrollment Cap:** n/a

An introduction to probability theory. Discrete and continuous random variables; distribution and density functions for one and two random variables; conditional probability. Generating functions, weak and strong laws of large numbers, and the central limit theorem. Geometrical probability, random walks, and Markov processes.

**Course Notes:** This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

**Recommended Prep:** A previous mathematics course at the level of Mathematics 19ab, 21ab, or a higher number. For students from 19ab or 21ab, previous or concurrent enrollment in Math 101 or 112 may be helpful. Freshmen who did well in Math 23a, 25a or 55a fall term are also welcome to take the course.

Combinatorics: Designs and Groups (116196)

*Noam D. Elkies*

2016 Spring (4 Credits) **Schedule:** MWF 1100 AM - 1159 AM

**Instructor Permissions:** None  **Enrollment Cap:** n/a

In combinatorics and elsewhere one often encounters a "design", or a collection of subsets of some finite set S whose elements are evenly distributed in a suitable sense; for instance the collection of edges of a regular graph (each of whose vertices is contained in the same number of edges) or the collection of lines of a finite projective
plane (any two of whose points are contained in a unique line). Of particular interest are designs symmetric under a large group of permutations of $S$. The consideration of specific classical designs and their symmetries will lead us to the general study of designs and of permutation groups. We conclude with the construction and detailed analysis of the remarkable designs associated with Mathieu’s sporadic groups of permutations of 12- and 24-element sets.

**Recommended Prep:** The ability to write proofs and some knowledge of linear algebra will be needed.

**Mathematics 156 Section: 1**

Mathematical Foundations of Statistical Software (156000)

*Paul Bamberg*

2016 Spring (4 Credits)  
**Schedule:** W 0530 PM - 0729 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

Presents the probability theory and statistical principles which underly the tools that are built into the open-source programming language R. Each class presents the theory behind a statistical tool, then shows how the implementation of that tool in R can be used to analyze real-world data. The emphasis is on modern bootstrapping and resampling techniques, which rely on computational power. Topics include discrete and continuous probability distributions, permutation tests, the central limit theorem, chi-square and Student t tests, linear regression, and Bayesian methods.

**Recommended Prep:** An excellent background in single-variable calculus and infinite series, plus basic knowledge of multivariable calculus. Mathematics 18, or 21a, or 23a would be sufficient. Students should be experienced software users but need not be programmers. Background in elementary probability (e.g. AP Statistics or Computer Science 20) would be helpful but is not required, since the key results of probability theory will be developed from scratch.

**Additional Course Attributes:**

**Mathematics 157**

Mathematics in the World (159934)

*Joseph D. Harris*

2016 Spring (4 Credits)  
**Schedule:** TR 0230 PM - 0359 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** 99  

An interactive introduction to problem solving with an emphasis on subjects with comprehensive applications. Each class will be focused around a group of questions with a common topic: logic, information, number theory, probability, and algorithms.

**Recommended Prep:** Mathematics 19b or 21b or 23a; or an equivalent background in
mathematics. More importantly, students should have a broad mathematical curiosity and be eager to brainstorm during in-class problem solving sessions.

Mathematics 221
Algebra (123232)

Alison Miller

2015 Fall (4 Credits)  Schedule:  MWF 1000 AM - 1059 AM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

A first course in Algebra: Noetherian rings and modules, Hilbert basis theorem, Cayley-Hamilton theorem, integral dependence, Galois theory, Noether normalization, the Nullstellensatz, localization, primary decomposition. Representation theory of finite groups. Introduction to Lie groups and Lie algebras: definitions, the exponential maps, semi-simple Lie algebras, examples.

Recommended Prep:  Mathematics 123.
Lie Groups and Lie Algebras (123238)

*Alison Miller*

2016 Spring (4 Credits)  
**Schedule:** MWF 1000 AM - 1059 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

Lie theory, including the classification of semi-simple Lie algebras and/or compact Lie groups and their representations.

**Recommended Prep:** Knowledge of the material in Mathematics 114, 123 and 132.

---

Algebraic Number Theory (123239)

*Arul Shankar*

2015 Fall (4 Credits)  
**Schedule:** MWF 1200 PM - 1259 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

A graduate introduction to algebraic number theory. Topics: the structure of ideal class groups, groups of units, a study of zeta functions and L-functions, local fields, Galois cohomology, local class field theory, and local duality.

**Recommended Prep:** Knowledge of the material in Mathematics 129.

---

Algebraic Number Theory (123240)

*Arul Shankar*

2016 Spring (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

Continuation of Mathematics 223a. Topics: adeles, global class field theory, duality, cyclotomic fields. Other topics
may include: Tate's thesis or Euler systems.

**Recommended Prep:** Knowledge of the material in Mathematics 223a.

Spin Systems (159630)

*Roland Bauerschmidt*

2016 Spring (4 Credits)  
**Schedule:** TR 1000 AM - 1129 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Classical spin systems generalize the Ising model to a general number of components and general spin distributions. They are fundamental models of phase transitions. Topics: the proof of existence of phase transitions, continuous symmetry, methods based on convexity, random walk representations, correlation inequalities, critical phenomena, and the relation of spin systems to the self-avoiding walk.

Mathematics 254
Topics in Random Matrices (159621)
Horng-Tzer Yau
2015 Fall (4 Credits) Schedule: MWF 1200 PM - 1259 PM
Instructor Permissions: Instructor Enrollment Cap: 30
A discussion of a few advanced topics in random matrix theory. Topics include: analysis of Dyson Brownian motions via PDE method, eigenvector flows and beta ensembles. Depending on the progress of the class, other topics will be added. A quick overview of random matrix theory will be given in the beginning of the course.
Course Notes: We will assume stochastic calculus and a basic knowledge of random matrix theory.

Nonlinear Partial Differential Equations (159622)
Tristan Collins
2016 Spring (4 Credits) Schedule: MWF 0100 PM - 0159 PM
Instructor Permissions: None Enrollment Cap: n/a
An introduction to techniques in nonlinear elliptic equations. Topics: the Schauder theory, the Cordes-Nirenberg estimates for nonlinear equations, viscosity techniques and the ABP estimate, the Krylov-Safonov Harnack inequality and the Evans-Krylov theorem. Applications include solvability of the Dirichlet problem for convex equations and the Monge-Ampere equation in a domain. Possible further topics: minimal surfaces, and the sigma_K equations.
Mathematics 267

Reductive Groups Over Local and Global Fields (159847)

Tasho Kaletha

2016 Spring (4 Credits)  
**Schedule:** MWF 0100 PM - 0159 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The study of the structure of connected reductive groups over p-adic fields (i.e. non-archimedean local fields of characteristic zero) and their smooth irreducible representations. In addition, we will touch upon the corresponding theory over the real numbers and then discuss automorphic representations of the adelic points of connected reductive groups defined over number fields.

Mathematics 273

Manifolds with Special Holonomy (161255)

Dan Xie

2016 Spring (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

An introduction to manifolds with special holonomy with focus on Sasaki-Einstein manifolds, G2 manifolds. Topics: Elementary introduction to the basic properties of these manifolds; Existence and examples; String theory applications such as AdS/CFT correspondence, etc.

Mathematics 276

Topics in Probability Theory: Stochastic Calculus (159628)

Yu-Ting Chen

2015 Fall (4 Credits)  
**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

This course introduces stochastic calculus. Topics: Brownian motion, martingales, and stochastic integration and differential equations. Measure theory and basic probability theory are prerequisites.

_Joseph D. Harris_

2015 Fall (4 Credits)  
**Schedule:** MWF 1000 AM - 1059 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 40

Algebraic curves are some of the most fascinating objects in algebraic geometry: we know a good deal about them, but many major open questions remain. At the heart of these questions is the relation between the classical notion of curves in projective space and the modern notion of abstract curves. The theory of linear systems on curves, which we'll study in this course, represents a bridge between these two notions. We'll cover the basic theorems governing linear systems on curves (Riemann-Roch, Clifford's theorem, etc.) and go on to discuss the Castelnuovo
and Brill-Noether theorems, ending with a survey of open problems (and what we know about them so far).

</table>

Schedule: TR 0230 PM - 0359 PM

The purpose of this course is to introduce some invariants of contact manifolds that are defined by counting pseudolomorphic curves, and discuss some applications. We will also discuss some related invariants of symplectic manifolds. The particular invariants we will discuss will be chosen in part based on audience input; an emphasis of the course will be a recently developed invariant called embedded contact homology, and other topics may include cylindrical and linearized contact homology, Legendrian contact homology, the contact homology algebra, symplectic homology, and symplectic field theory. Some of these invariants have yet to be rigorously defined, and part of the course will involve explaining some of the issues that remain to be resolved, and some possible approaches. Applications will include generalizations of the Weinstein conjecture, symplectic embedding problems, distinguishing contact structures, and calculating Gromov-Witten invariants by cutting along contact-type hypersurfaces.

Mathematics 289

Topics on Geometric Analysis (159661)

Shing-Tung Yau

2015 Fall (4 Credits)

<table>

</tbody>
</table>

Schedule: TR 1130 AM - 1259 PM

We shall cover topics related to existence and regularity for nonlinear equations appearing in Kahler geometry and general relativity.

Mathematics 300

Teaching Undergraduate Mathematics (124821)
Robin Gottlieb  
Brendan Kelly  
2015 Fall (4 Credits)  
**Schedule:** T 0100 PM - 0229 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

Become an effective instructor. This course focuses on observation, practice, feedback, and reflection providing insight into teaching and learning. Involves iterated videotaped micro-teaching sessions, accompanied by individual consultations. Required of all mathematics graduate students.

**Class Notes:** Robin Gottlieb and Brendan Kelly

Principles of Molecular Biology (116477)

Joseph John Loparo
Dipanjan Chowdhury
Stirling Churchman
Johannes Walter
Timur Yusufzai
Melissa Leger-Abraham

2015 Fall (4 Credits)  
Schedule: MWF 1045 AM - 1214 PM
Instructor Permissions: Instructor  
Enrollment Cap: 80

An advanced treatment of molecular biology's Central Dogma. Considers the molecular basis of information transfer from DNA to RNA to protein, using examples from eukaryotic and prokaryotic systems. Lectures, discussion groups, and research seminars.

Course Notes: Offered jointly with the Medical School as BP 723.0.

Recommended Prep: Intended primarily for graduate students familiar with basic molecular biology or with strong biology/chemistry background.

Instructor Permissions: Instructor  
Enrollment Cap: 15

Introduction to behavioral pharmacology of CNS drugs (e.g., psychomotor stimulants, antischizophrenics, opioid analgesics, antianxiety agents); seminar format with emphasis on behavioral methodology (i.e., model and assay development) and pharmacological analysis (i.e., receptor selectivity and efficacy); attention to tolerance, drug dependence/addiction/treatment, and basic behavioral processes.

Course Notes: Offered jointly with the Medical School as BP 719.0.

Molecular Medicine (122596)

George Daley
David Cohen
Irving London

2015 Fall (4 Credits) Schedule: T 0100 PM - 0259 PM
Instructor Permissions: Instructor Enrollment Cap: 35

A seminar on various human diseases and their underlying genetic or biochemical bases. Primary scientific papers discussed. Lectures by faculty and seminars conducted by students, faculty supervision.

Course Notes: Faculty mentors will guide student-led discussions of the papers. Jointly offered with the Medical School as HT 140.

Recommended Prep: College-level mastery of principles of cellular and molecular biology and genetics.

Biolog Chem & Molecular Pharm 230

Principles and Practice of Drug Development (114740)

Lee Rubin
Stan Finkelstein

2015 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Critical assessment of the major issues and stages of developing a pharmaceutical or biopharmaceutical. Drug discovery, preclinical development, clinical investigation, manufacturing and regulatory issues considered for small and large molecules. Economic considerations of the drug development process.

Course Notes: Classes held at MIT. BCMP 230 is also offered as SCRB 230. Students may not take both for credit.

Biolog Chem & Molecular Pharm 234

Cellular Metabolism and Human Disease (121820)

Thomas Michel

2016 Spring (4 Credits) Schedule: MWF 0900 AM - 1029 AM
Instructor Permissions: Instructor  Enrollment Cap:  n/a

Cellular and organismal metabolism, with focus on interrelationships between key metabolic pathways and human disease states. Genetic and acquired metabolic diseases and functional consequences. Interactive lectures and critical reading conferences are integrated with clinical encounters.

Course Notes: Enrollment may be limited

Recommended Prep: For Undergraduate students only: Knowledge of introductory biochemistry, genetics, and cell biology required (MCB 52 and 54 or equivalent); one year of organic chemistry.

Biolog Chem & Molecular Pharm  236

Modern Drug Discovery: From Principles to Patients (156104)

Timothy Mitchison
Catherine Dubreuil
Nathanael Gray

2016 Spring (4 Credits)  Schedule:  TR 0330 PM - 0459 PM  Enrollment Cap:  48

Instructor Permissions:  None

This course will familiarize students with central concepts in drug action and therapeutics: specifically we will cover concepts surrounding Pharmacokinetics (PK) and the intersection of PK and medicinal chemistry in both lectures and cases based discussions. These concepts are central to modern drug development and evaluation. In the course we will cover drug-target interactions, Pharmacokinetics and Pharmacodynamics. This course will have a focus on modern approaches to therapeutic development for small molecules, protein based therapeutics, nucleic acid based drugs and antibacterial compounds as well new frontiers in therapeutic discovery.

Course Notes: This course is the combination of the BCMP 309qc and 307qc quarter courses, offered as half course. Students who plan to take the two quarters must sign up under BCMP 236.

Translational Pharmacology (127474)

*Donald Coen*

*David Golan*

2016 Spring (2 Credits)  
**Schedule:** MTWRF 0900 AM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 35

This intensive course held during the first two full weeks of January (ten days) covers principles of pharmacology and their translation into new drug development. Students participate in project groups composed of both graduate students and post-graduate M.D.’s to propose a drug development strategy from target choice through clinical trials. There are two hours of lectures each of the first eight mornings; afternoons include case studies discussed by Harvard faculty and faculty from the pharmaceutical and biotechnology industries, or time to work on the project. Evaluation is based on the project and class participation. Enrollment may be limited.

**Class Notes:** Dates: January 4-15, 2016.

This quarter course will offer students an in-depth examination of current knowledge regarding mechanisms of cell fate decisions. In addition, it will examine these processes in the context of developmental cell plasticity, cellular reprogramming, and cancer. This will primarily be a literature-based course with examination and discussion of key studies in the field. Concepts involving the instructive role of lineage-specific transcription factors, transcription factor networks, transcription factor cross-antagonism, feedback loops, multilineage priming, pioneer factors, epigenetics, chromatin remodeling factors, "super enhancers", stem cell bias, lineage identity maintenance, mitotic bookmarking, non-coding RNAs, cell polarity, asymmetric cell division, Notch signaling, lateral inhibition, lineage plasticity, and cellular reprogramming will be explored. These ideas will be examined in the context of a number of different tissue systems and organisms.

Class Notes: Course meets Wednesdays, September 16, 23, 30, October 7, 14, 28, November 4, 11, 18.

The central goal of modern biomedical research is to understand the cause of human disease and to use this knowledge to develop approaches that lessen human suffering. The path from identifying an unmet medical need through the development of interventions that impact disease is a complex process demanding the best of medicine and science, strong project management, significant financial support, and persistence. In this course, students will learn to evaluate how unmet medical needs can be "translated" into new clinical practices. The course will feature assessment of unmet medical needs, case studies of successes and failures in translation, seminars from translational medicine experts, and workshops that engage students in substantive and intense discussions on current topics. Lecturers will include innovators who have successfully led the development of therapeutic interventions, leaders in basic science who have helped uncover the underlying causes of disease and investigators who have led clinical trials that lead to the approval of new interventions.

Course Notes: This course is application-based; applications are typically due in early March. This course will meet Mondays through Fridays in June. Dates TBA.

**Biolog Chem & Molecular Pharm 312QC**

Quantitative Methods in Pharmacology (161281)
This course will cover basic models of pharmacology using computational modeling tools. We will learn how to model basic enzyme kinetics and inhibition and whole body pharmacokinetics and use these to model specific problems in pharmacology. We will investigate case studies in infectious disease, glucose regulation, cancer therapy and unique examples of drug pharmacology. The course will be built around in-class coding exercises (using MATLAB and SimBiology) and homework assignments, as well as lectures from HMS faculty and industry leaders. No previous programming experience required. A basic understanding of enzyme kinetics and pharmacology is assumed.

**Recommended Prep:** A plus if taken Biochemistry classes and BCMP 200, but not required.

Biolog Chem & Molecular Pharm 370

Advanced Topics in Biological Chemistry and Molecular Pharmacology (114232)

David Cardozo

2016 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (7 weeks). Two seminars, which can be taken in different terms, are required for credit.

Course Notes: Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Biological & Biomedical Sci 230
Analysis of the Biological Literature (108994)
Michael Demian Blower
Adrian Salic
Dipanjan Chowdhury
Stephen Elledge
Jesse Gray
Radhika Subramanian
Peter Hammerman
Andreas Herrlich
Roberto Chiarle
2015 Fall (4 Credits) Schedule: TR 0300 PM - 0559 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

Students participate in intensive small group discussions focused on the critical analysis of basic research papers from a wide range of fields including biochemistry, cell and developmental biology, genetics, and microbiology.
Papers are discussed in terms of their background, significance, hypothesis, experimental methods, data quality, and interpretation of results. Students will be asked to propose future research directions, to generate new hypotheses and to design experiments aimed at testing them. For the midterm and final exams the students will have to submit written critiques of recent papers from the literature, with an emphasis on proposing new experimental directions to test the models proposed in the papers.

**Course Notes:**
This course is required for first year BBS students, and is open only to BBS students.

### Biological & Biomedical Sci 301

Embedded Teaching Practicum (for Graduate Teaching Assistants) (127207)

_Johanna Gutlerner_

_Ronald Heustis_

2015 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Course for TAs currently teaching in an approved BBS Core Course. The embedded teaching practicum provides practice-based training in facilitating a group discussion; professionalism in the classroom; curriculum design, course evaluation and assessment development; and preparation for teaching throughout and beyond time in graduate school. Teaching assistants are provided training and experience in the development of an early-career teaching philosophy.

**Course Notes:**  
TAs should contact Jason Heustis (Ronald_Heustis@hms.harvard.edu).

**Additional Course Attributes:**

### Biological & Biomedical Sci 330

Critical Thinking and Research Proposal Writing (156089)

_Monica Colaiacovo_

2015 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

A small group tutorial systematically guiding students in the writing of original, hypothesis-driven research proposals from initial topic selection through completion of a final draft.

**Course Notes:**  
This course is required for second year BBS students; others need permission of the instructor. Dates, times, and locations for all sessions (except for Session 1) will be determined by the faculty running the tutorial sessions. Students will be able to sign up for their specific groups on a first-come, first-served basis. The BBS office will coordinate this process. Group assignments will be posted on the course website.
### Biological & Biomedical Sci 333R

**Introduction to Research in Biological and Biomedical Sciences (110559)**

*Susan Dymecki*

*Kate Hodgins*

2015 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

**Course Notes:** BBS students register for lab rotations under this course number.

Subject: Cell Biology

Cell Biology  201
Principles of Cell Biology (108339)

Danesh Moazed

2016 Spring (4 Credits)  Schedule:  MW 1030 AM - 1159 AM
Instructor Permissions:  None  Enrollment Cap:  113

CB201 is a graduate level course intended to teach critical concepts in cell biology, and expose students to current and quantitative approaches in cell biology research. Topics include the molecular basis of cellular dynamics, subcellular compartmentalization, protein trafficking, chromosome biology and epigenetics, regulated ubiquitin-proteasome pathways, cell cycle regulation, cytoskeleton and motor dynamics, signal transduction, cell-cell interactions, and programmed cell death.

Course Notes:  Methodological focus on current approaches in cell biology including quantitative tools. Emphasis on experimental design. Offered jointly with the Medical School as CB 713.0.

Recommended Prep:  Basic knowledge in biochemistry, genetics and cell biology.

Additional Course Attributes:

Cell Biology  207
Vertebrate Developmental and Regenerative Biology (111215)

Andrew Lassar
Jayaraj Rajagopal
Yingzi Yang
Analyzes the developmental programs of frog, chick, zebrafish, and mouse embryos, emphasizing experimental strategies for understanding the responsible molecular mechanisms that pattern the vertebrate embryo. Signaling pathways controlling morphogenesis, organogenesis, stem cells and regeneration will be discussed in detail.

**Course Notes:** Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. Short research proposals are required in lieu of exams.

**Cell Biology 211**

Molecular and Systems Level Cancer Cell Biology (116737)

*Peter Sicinski*

*Jarrod Marto*

*Marc Vidal*

2016 Spring (4 Credits)  
**Schedule:** MW 0100 PM - 0229 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 27

Examines the molecular basis of cancer formation including alterations in signal transduction pathways, cell cycle machinery, and apoptosis. Describes novel systems biology proteomic approaches to study cancer cell signaling networks.

**Course Notes:** Given alternate years with Cell Biology 212. Offered jointly with the Medical School as CB 704.0.

**Recommended Prep:** General knowledge of biochemistry, molecular genetics, and cell biology.

### Additional Course Attributes:

**Cell Biology 226**

Concepts in Development, Self-Renewal, and Repair (121707)

*Iain Drummond*

*Amar Sahay*
Explores developmental mechanisms through the life cycle, contrasting pluripotency and cell fate restriction in embryos and adult tissues. In depth analysis of in vivo approaches, with emphasis on adult stem cells, tissue repair and self-renewal.

Course Notes: Offered jointly with the Medical School as CB 721.0. For more information visit: <a href="http://www2.massgeneral.org/bbs/" target="_blank">Massachusetts General Hospital</a> and select CB 226.

Recommended Prep: Upper division cell biology or equivalent.

Cell Biology 300

Advanced Topics in Cell, Molecular, and Developmental Biology (116986)

David Cardozo

2016 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (seven weeks). Different topics are covered each term.

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Cell Biology  301QC
The Epidemiology and Molecular Pathology of Cancer (127478)
Massimo Loda
2016 Spring (2 Credits)  Schedule:  TWRF 0900 AM - 0459 PM
This January course will provide students with an in-depth introduction to the epidemiology and molecular pathology of cancer. We will explore multiple types of cancer, including breast, colon, lung, prostate and brain, through a series of lectures and hands-on practice tutorials. These tutorials will include training in molecular pathology techniques, state of the art image analysis of human biomarkers, tissue processing, immunohistochemistry, and tumor histology. In addition, the epidemiology, genetics and relevant signal transduction pathways of cancer will be highlighted.

Course Notes: This is an intensive January course. Curriculum Fellow: Megan Mittelstadt, 617-432-7498.

Class Notes: Dates: January 5, 2016 to January 15, 2016

Advanced Experimental Design for Biologists (127479)

*Randall King*  
*David Glass*

2016 Spring (2 Credits)  
**Schedule:** MW 0400 PM - 0559 PM

Instructor Permissions: Instructor  
Enrollment Cap: 24

This course will focus on both the theory and practice of experimental design. The emphasis is on project planning and vetting, individual experimental design, and trouble-shooting. Special focus will be placed on methods to avoid experimental bias, and potential sources of inappropriate interpretation. Also the importance of system validation is especially emphasized.

Introduction to Human Gross Anatomy (127989)

*Gerald Greenhouse*

2016 Spring (2 Credits)  
**Schedule:** MWF 1200 PM - 0659 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Lectures, laboratory dissections, and prosections will provide students an opportunity to explore the gross structure and function of the human body. The course will provide a foundation for the student to acquire practical skills in recognizing, dissecting, and differentiating key anatomical structures. Structure/function relationships will be emphasized and some foundation will be provided for understanding the anatomic basis of diseases. Each of the 13 sessions will include a lecture, 3 hours of dissection, and an evening guest lecturer on clinical or research aspects related to the dissections (supper provided).
Cell Biology 305QC

Intracellular Transport (107336)

Victor Hsu

2015 Fall (2 Credits)

Schedule: W 0300 PM - 0459 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course will provide a practical guide to understanding the role of intracellular transport in physiology and disease settings. Basic mechanisms and also interdisciplinary areas that involve this fundamental cellular process will be selected for discussion.

Course Notes: Offered in alternate years.

Class Notes: Course meets November 11, 2015 through December 23, 2015.

Cell Biology 306

Chromatin Dynamics in metabolism and DNA repair (126365)

Raul Mostoslavsky

2015 Fall (4 Credits)

Cell Biology  306QC

Teaching 100: The Theory and Science of Teaching (107400)

Johanna Gutlerner

2015 Fall (2 Credits)  Schedule:  R 0100 PM - 0329 PM

Instructor Permissions:  Instructor  Enrollment Cap:  15

For many graduate students, teaching will be part of their career, whether as mentoring, formal classroom teaching, or outreach. In addition, the theory and research evidence accumulating in the disciplines of cognitive psychology, neuroscience, and from STEM classrooms, has turned the question of, ‘How do we best teach science?’ into its own scientific discipline. The Theory and Science of Teaching focuses on understanding why certain teaching methods are effective by examining the scientific research and theoretical frameworks that support these methods. We will read and discuss foundational educational and cognitive psychology texts and primary literature, and then develop an annotated lesson plans that allows us to put these ideas into practice.

Course Notes:  The course has been designed as a companion to Genetics 302qc: Teaching 101, but neither course is a prerequisite of the other.

Class Notes:  Course meets October 1, 2015 through November 19, 2015.

Molecular Aspects of Chromatin Dynamics (107455)

*Raul Mostoslavsky*

*Danesh Moazed*

*Johnathan Whetstine*

*Lee Zou*

2016 Spring (2 Credits)  Schedule: TR 0300 PM - 0459 PM

Instructor Permissions: Instructor  Enrollment Cap: 25

This course will discuss the role of chromatin dynamics in modulating molecular and cellular processes. The genetic information encoded in our DNA is organized in a defined set of chromosomes, which are condensed about 10,000 fold in order to fit in the cell nucleus. This compaction occurs through packaging of the DNA around histone proteins, a structure known as chromatin. In what was thought to be a rigid structure, today we know that chromatin is an amazingly dynamic folding that plays a crucial role in controlling accessibility of factors to the DNA, and as such, it regulates a vast number of critical biological functions, including gene transcription, DNA replication, DNA repair and cellular identity. In this course we will attempt to cover some of the basic molecular mechanisms that play a role in regulating chromatin dynamics, and in turn how chromatin itself modulate biological processes, including basic mechanisms of inheritance. We will specifically discuss the role of DNA methylation, histone modifications, nucleosome dynamics and novel epigenetic modulators in the context of different biological processes for which chromatin accessibility appears to play a crucial role.

**Course Notes:** The course consists of 12 sessions, 1.5 hr each session; 8 regular Sessions, 4 Discussion Sessions.

**Class Notes:** The Course consists of 8 Theory classes, to be given on Tuesdays, and 4 Discussion Sessions, to be held on alternate Thursdays.

Introduction to Histology for Graduate Students (107831)

*Adrian Salic*

*Gerald Greenhouse*

*Stephen Liberles*

2016 Spring (2 Credits)  Schedule: MWF 0100 PM - 0459 PM

Instructor Permissions: Instructor  Enrollment Cap: 11
Histology—the study of structure and how structure relates to function, in cells and tissues. The class will include a session on each of the major tissue types—epithelium, connective, muscle, and nerve. This will be followed by sessions during which organ systems will be studied. Each session will include an introductory lecture followed by shared observation of slides using a 12-headed light microscope. Pathology correlates will be included when possible. In the last two sessions, students will have hands on training in tissue staining with recently developed compounds in the lab of Adrian Salic and learn frozen section technique on brain tissue from Stephen Liberles.

Course Notes: This course is offered usually during the month of June or July each year.

Cell Biology 310QC
Current Topics in Cancer Biology Research (109381)

Alex Toker
2015 Fall (2 Credits) Schedule: R 0900 AM - 1029 AM
Instructor Permissions: Instructor Enrollment Cap: 12
This course is designed for early- to mid-year graduate students that are interested in exploring current topics related to the Hallmarks of Cancer. Leading and cutting edge technologies in Cancer Biology Research are explored in-depth using recent papers of high profile in a round-table discussion format. Course sessions consist of a short lecture led by a postdoctoral discussion leader to review background information, followed by discussion of the literature selected for that session. Topics include: Metastasis and EMT, Tumor Microenvironment and Metabolism, Cancer Genomics, Cancer and microRNAs, and Cancer Stem Cells.

**Class Notes:**
Course meets September 24, 2015 through November 12, 2015.

Cell Biology 313QC
Introduction to Quantitative Microscopy & Image Analysis (160762)
Jennifer Waters
Hunter Elliott
2015 Fall (2 Credits) Schedule: M 1000 AM - 1159 AM
M 1000 AM - 1159 AM
W 1000 AM - 1159 AM
Instructor Permissions: Instructor Enrollment Cap: 16
When used properly, quantitative optical microscopy and computational image analysis are powerful tools for exploratory and mechanistic investigations of molecular and cellular processes. This quarter course is an introduction to experimental design and best practices for using optical microscopy techniques (fluorescence, confocal, TIRF, super-resolution, light sheet microscopy) and computational methods (image segmentation, filtering, object detection, tracking, image-derived data analysis, etc.) in cell biology research. An emphasis is placed on making accurate and precise quantitative measurements from optical microscopy images.

Class Notes: Course meets Sept 2 (Wed), 9 (Wed), 14 (Mon), 16 (Wed), 23 (Wed), 28 (Mon), 30 (Wed), Oct 7 (Wed).

Developmental & Regen Biology  330QC
Experimental Approaches to Developmental Biology (122586)
David Van Vactor
2016 Spring (2 Credits)  Schedule:  MTWRFS 1000 AM - 0959 PM
This laboratory course is designed to provide a survey of major topics and contemporary research in developmental and regenerative biology. Students will rotate in the laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and gain hands on experience in a variety of model systems, experimental techniques and research areas. Each day of the course will consist of a lecture followed by hands-on laboratory activities and interactive discussions.

Course Notes: This is an intensive January course. Open to first-year and second-year BBS students; Not repeatable for credit.

Class Notes: Dates: January 4, 2016 to January 19, 2016

### Developmental & Regen Biology 331

Critical Analysis and Experimental Approaches in Developmental Biology (110315)

*David Van Vactor*

*Ya-chieh Hsu*

2016 Spring (4 Credits)  
**Schedule:** MTWRFS 1000 AM - 0559 PM

Instructor Permissions: Instructor  
Enrollment Cap: 15

This course will provide a survey of major topics and contemporary research in developmental and regenerative biology. Students will rotate in the laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and gain hands on experience in a variety of model systems, techniques and research areas. Each day of the course will consist of a lecture followed by hands-on laboratory activities and interactive discussions. Students will be required to complete the lab experience and the following assignments: lead two chalk-talk format paper presentations, and write one 5-6 page research proposal.

Course Notes: This is an intensive January course. Open to first-year and second-year BBS students; Not repeatable for credit. This course is designed to run concurrently with the 2-unit course DRB330QC. Students have the option of enrolling in DRB330QC instead to complete fewer assignments and earn one quarter credit only.

Class Notes: Dates: January 4, 2016 to January 19, 2016

### Subject: Genetics

**Genetics 201**

Principles of Genetics (113752)
An in-depth survey of genetics, beginning with basic principles and extending to modern approaches and special topics. We will draw on examples from various systems, including yeast, Drosophila, C. elegans, mouse, human and bacteria.

**Course Notes:** Intended for first-year graduate students. Offered jointly with the Medical School as GN 701.0.

**Additional Course Attributes:**

**Genetics 202**

**Human Genetics (125413)**

**Matthew Warman**

2016 Spring (4 Credits) **Schedule:** W 0200 PM - 0459 PM

| Instructor Permissions: Instructor | Enrollment Cap: 20 |

This course examines genetic principles and experimental approaches for addressing fundamental questions about human variation, history, health, and disease. Each session is comprised of a lecture and a class discussion. Each lecture introduces a new topic while the class discussion addresses the previous week’s lecture topic and solidifies knowledge about that topic through the critical reading and analysis of research and review articles. Class discussions utilize different types of source materials that are recommended by each lecturer. These materials will typically include a review article and a current article in that field. Additionally, two problem sets will be assigned over the course of the semester. These assignments will give students the opportunity to apply the concepts from the lecture and class discussion and get experience using tools critical to the study of human genetics. The knowledge and practical skills gained from this course will be applicable for many other lines of scientific inquiry.

**Recommended Prep:** Genetics 201 or permission of the Course Director.

**Additional Course Attributes:**

**Genetics 216**

**Advanced Topics in Gene Expression (111358)**

**Fred Winston**
Robert Kingston  
Stephen Buratowski

2016 Spring (4 Credits)  
Schedule:  
T 0200 PM - 0459 PM
Instructor Permissions:  
Enrollment Cap:  
16

Covers both biochemical and genetic studies in regulatory mechanisms. Small number of topics discussed in depth, using the primary literature. Topics range from prokaryotic transcription to eukaryotic development.

Course Notes:  
BCMP 310QC has merged with Genetics 216. Offered jointly with the Medical School as GN 703.0.

Recommended Prep:  
BCMP 200 and Genetics 201. All students taking Genetics 216 should read and be prepared to discuss the three papers for the first meeting on January 26. The readings can be downloaded from the course web site.

Additional Course Attributes:

Inheritance and Weird Stuff (125838)

Chao-ting Wu

2016 Spring (4 Credits)  
Schedule:  
TBD
Instructor Permissions:  
None
Enrollment Cap:  
n/a

Focus on patterns of inheritance, including those that were once considered extraordinary but are now recognized as paradigms spanning fungi to humans. Expectations: questions, ideas, conversation during class. No tests, problem sets, or papers.

Recommended Prep:  
Primarily for first-year graduate students, but is open to medical students and advanced undergraduates. A basic understanding of genetics recommended.

Additional Course Attributes:

**Genetics 228**

Genetics in Medicine - From Bench to Bedside (121745)

Christopher Newton-Cheh  
David Sweetser

2016 Spring (4 Credits)  
Schedule:  
F 0200 PM - 0459 PM
Instructor Permissions:  
Instructor
Enrollment Cap:  
30
Focus on translational medicine: the application of basic genetic discoveries to human disease. Will discuss specific genetic disorders and the approaches currently used to speed the transfer of knowledge from the laboratory to the clinic. The three-hour sessions include a patient interview and student led journal club in addition to lectures.

**Course Notes:** Course will include patient presentations and lectures by investigators known for their work in a specific disease area. Course will be held at MGH (transportation provided to MGH). Offered jointly with the Medical School as GN 711.0. For more information visit http://www2.massgeneral.org/bbs/gen228/gen228.htm

**Recommended Prep:** Genetics 201 or equivalent.

Current Tools for Gene Analysis (156915)

Neena Haider

2016 Spring (2 Credits) Schedule: R 1000 AM - 1159 AM
Instructor Permissions: Instructor Enrollment Cap: 15

The goal of this course is to explore a number of the current online tools to analyze genes, gene function, pathways, DNA, RNA, and protein analysis. Each class we will introduce a new online tool. The majority of the class will be spent exploring the tool together in an interactive manner. At the end of each class students will be given an assignment which utilizes the knowledge they gained in class and helps them to further explore the new tool. Assignments will be reviewed in class the following week. After taking this class students will be proficient in the use of each online tool and will be able to apply their knowledge to learning new tools and programs.

Course Notes: Students will need to bring a laptop to class each day.
Recommended Prep: Genetics 201 or with permission from the instructor.

Genetics 389
Epigenomics of Allele-Specific Expression (128170)

*Alexander Gimelbrant*

2015 Fall (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

**Course Notes:**
This is an intensive January course. Priority will be given to first year graduate students. Students must first contact the faculty for enrollment approval prior to registration for the course. Meeting Dates/Times: Approximately 8:30 am-4:00 pm each day for 10 days.

**Class Notes:**
January 5, 2016 to Jan 15, 2016

**Recommended Prep:** Students must also enroll in, or have taken, Genetics 201.

Genetics 390QC
Advanced Experimental Methods: Experimental Approaches in Genetic Analysis (125362)

*Fred Winston*

2016 Spring (2 Credits)  
**Schedule:** MTWRF 0830 AM - 0559 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 8

A survey of major themes in genetics combined with exposure to various experimental techniques, technologies, and model systems. Combines lectures and hands-on laboratory activities emphasizing experimental methods, hypothesis generation and testing, and data analysis.

**Course Notes:**

**Class Notes:**

**Recommended Prep:** Students must also enroll in, or have taken, Genetics 201.

Genetics 391
Human Genome Structural and Regulatory Variation (127407)

**Genetics 391QC**

Advanced Experimental Design in Genetics (110243)

*Fred Winston*

2016 Spring (2 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 8

To be run concurrently with Genetics 390qc. Students will have the opportunity to design experimental approaches that aim to answer specific questions in the field of genetics. Combined with the hands-on laboratory experience of Genetics 390qc, students will use their knowledge of experimental methods and data analysis with a variety of model organisms and techniques. Over the two-week course period, students will be asked to reflect daily on their experiences and design two unique experiments that will broaden their experience in the areas of hypothesis testing and data interpretation.

**Course Notes:** This is an intensive January course. Must be taken concurrently with Genetics 390qc. Priority will be given to first year graduate students. Students must first contact the faculty for enrollment approval prior to registration for the course. Approximately 8:30am - 4:00pm each day for 10 days.

**Class Notes:** January 5, 2016 to January 15, 2016

**Recommended Prep:** Students must also enroll in, or have taken, Genetics 201.

Principles and Practice of Human Pathology (107843)

Scott Lovitch

2016 Spring (4 Credits)

**Schedule:**
R 0900 AM - 1259 PM
T 0900 AM - 1059 AM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

This course provides a comprehensive overview of human pathology with emphasis on mechanisms of disease and modern diagnostic technologies. Topics include (1) general mechanisms of disease (inflammation, infection, immune injury, host response to foreign materials, transplantation, genetic disorders and neoplasia), (2) pathology of major organ systems, and (3) review of diagnostic tools from invasive surgical pathology to non-invasive techniques such as diagnostic imaging and molecular pathology. The objectives of this course are achieved through a set of integrated lectures and laboratories, as well as a student-driven term project leading to a formal presentation on a medical, socioeconomic, or technological issue in human pathology.

**Course Notes:**
Enrollment may be limited. Jointly offered with HMS as HT035.0

**Recommended Prep:**
General biology.

**Additional Course Attributes:**

**Human Bio & Translational Med 201**

Tumor Pathophysiology and Transport Phenomena - A Systems Biology Approach (143057)

Rakesh Jain

2015 Fall (4 Credits)

**Schedule:**
M 0500 PM - 0659 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

Tumor pathophysiology plays a central role in the growth, metastasis, detection, and treatment of solid tumors. Principles of transport phenomena are applied to develop a quantitative understanding of tumor biology and treatment.

**Course Notes:**
Given in alternate years. Offered jointly with the Medical School as PA 712.0. Classes held at MIT.

**Human Bio & Translational Med 300QC**

Advanced Topics in Human Biology and Translational Medicine (127506)

_David Cardozo_

2015 Fall (4 Credits)  

**Schedule:** MWF 0900 AM - 1029 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This course covers the normal physiology and pathophysiology of selected organs, through lectures, readings, tutorials based on clinical cases, and patient presentations. Human biology is emphasized, with some examples also drawn from model organisms.

**Course Notes:**  

Course enrollment will be limited, with priority given to graduate students and a maximum of 10 undergraduates (priority given to seniors).

**Recommended Prep:** Knowledge of introductory biochemistry, molecular biology, and cell biology required (MCBS2 and MCBS4 or equivalent and one year of organic chemistry for undergraduates is recommended).

**Additional Course Attributes:**

Case Studies in Human Biology and Translational Medicine (127520)

Caren Solomon
Mary Hamel

2016 Spring (2 Credits) Schedule: MTWF 0900 AM - 1059 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Two-week course that is required of and restricted to first-year LHB students. Each week of the course focuses on a different "case study" in translational medicine.

Course Notes: This is an intensive January term course. Restricted to Leder students only.

Class Notes: January Session; dates: January 11-22, 2016

Human Bio & Translational Med 303QC

Vision: A System and its Assessment (109226)

Patricia D'Amore
Russell Woods

2015 Fall (2 Credits) Schedule: W 0300 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course provides an introduction to the visual system and its assessment. In general, we will consider vision as a system rather than its low-level components. Each two-hour session consists of two lectures provided by faculty with expertise in that area. Topics will include basic science and clinical topics, normal vision and abnormal vision, methods of assessment of animals and humans, clinical and laboratory measures.

Class Notes: Meeting Dates: September 9, 15, 24, 30, October 14, 21, 28, November 4, 18, 2015. Meeting Time: Wednesdays, 3:00 - 5:00pm, except as noted. Location: 2nd floor conference room, Schepens Eye Research Institute, 20 Staniford Street, Boston 02114

Molecular Bases of Eye Disease (127483)

Darlene Dartt
Magali Saint-Geniez

2016 Spring (2 Credits) Schedule: M 0300 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

This course provides an overview of the pathogenic process of prevalent ocular diseases. The goals of the course are: (i) to explore the structural and functional aspects of the eye relevant to understanding the pathology, (ii) to review the manifestations of the disease and its effects on vision, (iii) to discuss current views and research in the pathophysiology, and strategies for therapeutic intervention. For most sessions, the basic science and clinical topics will be presented by two faculty lecturers.

**Immunology 201**

Principles of Immunology (148547)

*Thorsten Mempel*

*Michael Carroll*

*Ulrich von Andrian*

2015 Fall (4 Credits)  

**Schedule:** TR 0300 PM - 0359 PM  
TR 0130 PM - 0259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 50

Comprehensive core course in immunology. Topics include a broad but intensive examination of the cells and molecules of the immune system. Special attention given to the experimental approaches that led to general principles of immunology.

**Course Notes:** Intended for students who have had prior exposure to immunology on the undergraduate level. In the absence of such exposure, students must obtain the permission of the Course Director. Offered jointly with the Medical School as IM 702.0.

**Recommended Prep:** A background in genetics and biochemistry strongly recommended.

**Immunology 202**

Advanced Principles of Immunology (148503)

*Filip Swirski*

*Mikael Pittet*

2016 Spring (4 Credits)  

**Schedule:** TR 0130 PM - 0359 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

IMM202 builds on IMM201 and explores fundamental principles of immunology in the context of immune and inflammatory diseases. Through a series of lectures and discussion, students will survey a broad range of diseases in which the immune system is essential. Topics will include not only diseases that mobilize classical immunity but also conditions to which we now know the immune systems contributes. Students will use oral and written exercises to learn how to evaluate and synthesize major concepts and tools germane to immunology's relationship to bioscience.

**Course Notes:** Offered jointly with the Medical School as IM 712.0.
Recommended Prep: Immunology 201 or its equivalent.

**Immunology 204**

Critical Readings for Immunology (143254)

*Duane Wesemann*

2016 Spring (4 Credits)  

**Schedule:** R 1000 AM - 1259 PM

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Original research articles from fields including immunology, biochemistry, genetics, and cell and developmental biology will be critically analyzed in an intensive small group format. Grading will be based on class participation and oral presentations.

**Course Notes:** Required for first-year immunology students, open to second-year immunology students. No auditors. Offered jointly with the Medical School as IM 703.0.

**Immunology 300**

Advanced Topics in Immunology (141598)

*David Cardozo*

2015 Fall (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

Reading and discussion seminars each running for a half term (7 weeks). Two seminars, which can be taken in different terms, are required for credit. Topics include the role of intracellular and transmembrane protein phosphates in signal transduction.

**Course Notes:** Intended for first- and second-year Immunology graduate students. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Call 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

**Immunology 301**

Immunology Seminar (142204)

*Michael Carroll*

*William Haining*

2016 Spring (4 Credits)

**Schedule:**

- W 0330 PM - 0459 PM
- W 1215 PM - 0114 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 20

Gives students exposure to research topics in Immunology. Students prepare for the weekly seminar through readings, discussions, and preparing brief write-ups. These discussions are facilitated by members of the Committee on Immunology.

**Course Notes:**

Given alternate years with Cell Biology 212. Offered jointly with the Medical School as CB 704.0. Required for, and limited to, first-year Immunology graduate students. All others will be evaluated for enrollment on a case by case basis.

**Recommended Prep:**

General knowledge of biochemistry, molecular genetics, and cell biology.

Immunology 301QC

Autoimmunity (146257)
Franco Quintana
2016 Spring (2 Credits)  
Schedule: M 0400 PM - 0629 PM
Instructor Permissions: Instructor  
Enrollment Cap: n/a
This course will focus on basic immunological mechanisms of autoimmune diseases, with an emphasis on recent advances in the field. At each session, we will focus on a particular topic and discuss three important publications.

Course Notes: Offered in alternate years. Expected to be given in the first quarter of the spring term in academic year 2014-2015

Immunology 302

Innate and Adaptive Immune Inflammation in Allergic and Asthmatic Models (131252)
K Austen
2015 Fall (4 Credits)

Immunology 305QC
Neuro-Immunology in Development, Regeneration and Disease (130342)

Isaac Chiu
Michael Carroll
Beth Stevens

2016 Spring (2 Credits) Schedule: R 0400 PM - 0629 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

It is increasingly clear that the nervous system and immune system share parallel molecular pathways, and communication between neurons and immune cells play significant roles in homeostasis and disease. This course will investigate current topics in neuro-immunology: CNS development, chronic pain, neuro-degeneration, aging, axon regeneration, auto-immunity and infection. We will focus our discussions on molecular mechanisms shared by the immune and nervous systems and the molecular cross-talk between these two systems.

Course Notes: Each class will cover a specific topic in neuro-immunology. Students should be prepared to lead discussions on pre-selected papers for each session.

Immunology 307QC
Cancer Immunology (130614)

Kai Wucherpfennig
There have been many exciting recent developments in the cancer immunology field, and multiple therapeutic approaches have shown efficacy against diverse types of cancer. This course will emphasize new mechanistic insights, in particular on the following topics: Mechanisms of spontaneous protective anti-tumor immunity; Key effector cell populations of anti-tumor immunity; Inflammation and tumor microenvironment; Immunosuppressive mechanisms in tumor immunity; Targeting of inhibitory receptors; Cancer vaccines; New approaches for delivery of immunotherapies into tumors.

Class Notes: Course meets November 2, 2015 through December 21, 2015.
Immunology 308QC

Transformational Immunology (159944)

Laurence Turka
Shiv Pillai

2016 Spring (2 Credits) Schedule: W 0930 AM - 1129 AM
Instructor Permissions: Instructor Enrollment Cap: 12

This is a reading course with central themes on advances in immunology that created new paradigms and changed the field. There will be a reading requirement of 2-3 relevant papers on the topics of discussion for each week. Each session will consist of a student-led presentation of background on the topic (which will consist of a brief introduction followed by a discussion involving the whole class) followed by another student’s presentation of the key points of the papers and how the new findings transformed the field. Each student is expected to make two presentations during the seven-week course. Evaluation is based on presentations and class participation.

Human Functional Anatomy (120066)

Lee Gehrke

2015 Fall (8 Credits)

Schedule: MWF 0130 PM - 0229 PM

Instructor Permissions: Instructor

Enrollment Cap: 52

Lectures, detailed laboratory dissections, and prosections provide a thorough exploration of the gross structure and function of the human body. Fundamental principles of embryology and bioengineering promote analytical approaches to understanding the body's design.

Course Notes: Open to qualified graduate students with permission of the course director. The course has a minimum enrollment of 30. This course requires rental of a...
locker for two hundred and ten dollars. Offered jointly with the Medical School as HT010.

**Class Notes:** Please note that there will be an additional fee for microscope rental.

PhD Pathfinder (161280)

David Cardozo
Joseph Arboleda-Velasquez

2016 Spring (2 Credits)  Schedule:  MTWRF 0300 PM - 0559 PM

Instructor Permissions:  Instructor  Enrollment Cap:  50

The course is open to all Ph.D. students interested in learning about the range of career options available to biomedical Ph.Ds. The course includes talks, didactic sessions, workshops and networking events to promote interactions between students and invited speakers. There will be a special emphasis on helping students design their own career map using a tool created by RA Capital. After each session there will be a small networking reception for both the students and lecturers.

Students will learn about the many career paths available to people with advanced degrees in biomedical research including academia, biotech, patent law, science writing/publishing, consulting/business, education, and science policy/regulation.

A Ph.D. education provides students with fundamental knowledge about the principles and practice of the scientific method and promotes development of problem-solving skills in ways that are quite useful for many different professions. Students will have the opportunity to learn from experienced professionals representing each of these paths, to learn about strategies for career development, curriculum enrichment, and networking opportunities that will make them competitive for their career of choice.

Course Notes:  Students are required to attend all five sessions

### Microbiology 205

Mechanisms of Microbial Pathogenesis (146757)

*Clyde Crumpacker*

2015 Fall (4 Credits)  
Schedule: TR 0830 AM - 1229 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 40

The mechanisms of bacterial, mycoplasmal, fungal, and viral pathogenesis are covered. Topics are selected for intrinsic interest and cover the spectrum of pathophysiologic mechanisms of the infectious process. Emphasis on pathogenesis at the molecular level.

Course Notes: Offered jointly with the Medical School as HT 040.

Class Notes: Please note that there will be an additional fee for microscope rental.

Recommended Prep: A background course in molecular biology is strongly encouraged.

### Microbiology 210

Microbial Sciences: Chemistry, Ecology, and Evolution (125823)

*Michael Gilmore*

2016 Spring (4 Credits)  
Schedule: F 0830 AM - 1145 AM  
Instructor Permissions: None  
Enrollment Cap: 20

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology.
Course Notes: Also offered as Organismic and Evolutionary Biology 290.

Recommended Prep: For advanced undergraduates, Life Sciences 1a and 1b are required, or permission of instructor. MCB 52 is recommended.

### Microbiology 213

Social Issues in Biology (122708)

*Jonathan Beckwith*

*Louis Guenin*

2016 Spring (4 Credits)  

**Schedule:** R 0100 PM - 0359 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 15

Discussion course on topics selected from the following: history, philosophy of science; evolution vs. creationism; genetics and race; women and science; genetic testing; genetic enhancement; science journalism; genetics and criminality; science in wartime; scientists and social responsibility; theater and the public presentation of science.

**Course Notes:** Offered jointly with the Medical School as MG 722.0. Alternates yearly between the Longwood and the Cambridge campuses.

**Recommended Prep:** Some background in genetics.

### Microbiology 214

Mechanisms of Bacterial Pathogenesis and Host Immune Response (156454)

*Marcia Goldberg*

*Jonathan Kagan*

*Michael Starnbach*

*Darren Higgins*

2015 Fall (4 Credits)  

**Schedule:** TR 1000 AM - 1159 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This course focuses on molecular mechanisms of bacterial pathogenesis and the host response to infection. The class consists of lectures and group discussions emphasizing methods, results, and interpretations of classic and contemporary literature. The course is designed to complement Microbiology 201.

**Introduction to Infectious Disease Research: Infectious Diseases Consortium Boot Camp** (109380)  
*Eric J. Rubin*

2016 Spring (2 Credits)  
Schedule: MTWRF 0900 AM - 0459 PM

This intensive January course provides an introduction to the breadth of infectious disease research carried out at Harvard. Students will learn techniques for studying infectious diseases, more about different types of infectious diseases, and meet faculty, students, and postdocs in infectious diseases labs at Harvard.

**Course Notes:** This is an intensive January course.

**Class Notes:** January Session; dates: January 11-15, 2016

Subject: Neurobiology

Neurobiology 200

Neurobiology (117726)

John Assad
Matthew Frosch
Jeffrey Holt
Rosalind Segal
Ziv Williams

2015 Fall (4 Credits) Schedule: F 0830 AM - 1029 AM
MW 0830 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: 50

This is a comprehensive course in Neuroscience. Basic principles of organization and function of the nervous system will be discussed with frequent reference to pathophysiology of neurological and psychiatric disorders. Combining pathophysiology with basic neuroscience should provide physician/scientists and Ph.D. candidates with a dynamic picture of the rapidly evolving field of neuroscience and the experimental process from which the picture is derived, and all students should emerge with a greater awareness both of the applications of their work in alleviating disease, and of the ways that disease can provide insight into basic scientific questions. The course will span modern neuroscience from molecular neurobiology to perception and cognition, and will include the following major topics: Anatomy and Development of the Brain; Cell Biology of Neurons and Glia; Ion Channels and Electrical Signaling; Synaptic Transmission, Integration, and Chemical Systems of the Brain; Sensory Systems, from Transduction to Perception; Motor Systems; and Higher Brain Function (Memory, Language, Affective Disorders).

Course Notes: Offered jointly with the Medical School as HT 130. Follows the Medical School calendar. Nine hours of lecture or lab/conference weekly.

Recommended Prep: Introductory cell and molecular biology course.

Additional Course Attributes:

Neurobiology 204

Systems Neuroscience (148097)

Rachel Wilson
Richard Born
Mark Andermann
Michael Do
Christopher Harvey
Margaret Livingstone

2016 Spring (4 Credits) Schedule: MW 1000 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: 25

This course introduces major themes and fundamental concepts underlying current research in systems
neuroscience. Each week covers a different theme, and draws on research from different sensorimotor modalities and model organisms.

**Course Notes:** Offered jointly with the Medical School as NB 721.0.

**Recommended Prep:** Neuro 200 / HST 130 or permission of instructor

**Additional Course Attributes:**

**Neurobiology 209**

Neurobiology of Disease (116455)

*Edward Kravitz*  
*Patricia Musolino*

2016 Spring (4 Credits)  

**Schedule:**  
W 0700 PM - 0929 PM  
M 0600 PM - 0829 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25

Monday sessions involve patient presentations and "core" lectures describing clinical progression, pathology, and basic science underlying a major disease or disorder. Wednesdays, students present material from original literature sources, and there is general discussion.

**Course Notes:** Given in alternate years. Offered jointly with the Medical School as NB 713.0. For advanced undergraduate, graduate students, MD and MD/PhD students.

**Recommended Prep:** Introductory neurobiology, biochemistry, and genetics/molecular biology recommended.

**Additional Course Attributes:**

Neurobiology  230
Visual Recognition: Computational and biophysical perspective (107755)

Gabriel Kreiman
2015 Fall (4 Credits)  Schedule: M 0330 PM - 0529 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

Examines how neuronal circuits represent information and how those circuits are implemented in artificial intelligence algorithms. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision.

Course Notes:

Neuro 230 cannot be taken if Neuro 130 has been taken. Neuro 230 cannot be taken concurrently with Neuro 130.

Recommended Prep: Life Sciences 1a (or Life and Physical Sciences A) and Life Sciences 1b (or equivalent). Recommended: Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

Requirements: Anti-Req: NEURO 130

Neurobiology  300
Advanced Topics in Neurobiology (117896)

David Cardozo
2016 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

Topics cover areas at the molecular, cellular, and systems levels in both basic and clinical neuroscience. A series of reading and discussion seminars, each running for a half term (seven weeks).

Course Notes:
Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Biochemistry and Biology of Neurodegenerative Diseases (127719)

Michael Wolfe  
Dominic Walsh

2015 Fall (2 Credits)  Schedule: M 0200 PM - 0359 PM
Instructor Permissions: Instructor  Enrollment Cap: 20

Biochemistry and biology are integrated to provide a broad perspective on major human neurodegenerative diseases. The biochemistry, enzymology, structural biology and pathology of disease-associated proteins and approaches to developing therapeutics will be examined.

Course Notes: Expected to be given in the first quarter of the fall term of 2015-2016.
Class Notes: Course meets September 14, 2015 through October 26, 2015.

Quantitative Methods for Biologists (107877)

Michael Springer
Richard Born

2015 Fall (2 Credits) Schedule: MWF 0900 AM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 80

The goals of this course are to introduce students to programming in the MATLAB environment and to begin using this tool for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations.

Course Notes: This bootcamp course will meet in August from 8/11 - 8/22.

Neurobiology 307QC
Molecular Causes of Congenital Defects of the CNS (109113)
Mary Loeken
2016 Spring (2 Credits) Schedule: T 0200 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 15
Congenital defects can be caused by inheritance of a defective gene, maternal infection, or prenatal exposure to environmental teratogens. Use of mutant mouse strains and genomic sequencing have been particularly useful in the rapid proliferation of our understanding of the cellular and molecular mechanisms by which congenital defects of the brain or nervous system arise, and how they lead to functional consequences that range from biochemical abnormalities to gross structural defects.
Course Notes: Given every three years.

Subject: Speech & Hearing Sciences

Speech & Hearing Sciences  200
Acoustics of Speech and Hearing (108212)
John Rosowski
Discusses limitations that the speech production and hearing systems impose on the sounds we produce and sense. Focuses on acoustic cues used in sound localization, speech production mechanisms, the mechanics of sound reception and perception.

Course Notes: This course is taught in consort with 6.551J/HST.714J at the Massachusetts Institute of Technology. Classes will be held at MIT.

Recommended Prep: Mathematical methods in science (Applied Mathematics 21a or Mathematics 21a) or equivalent. Rigid body mechanics (Physics 11A), or electrical circuits (Engineering Science 154) or permission of the instructor.

Additional Course Attributes:

<table>
<thead>

Speech & Hearing Sciences  201

Biology of the Inner Ear (108213)

M. Liberman
Stephane Maison

2015 Fall (4 Credits)  

Schedule: TR 0900 AM - 1029 AM

Instructor Permissions: Instructor  

Enrollment Cap: 12

Normal biology, biophysics, physiology and morphology of the inner ear, its sensory innervation and efferent control systems, and the mechanisms underlying sensorineural hearing loss and balance disorders. Material is presented through lectures, laboratory exercises and discussions of the primary literature.

Recommended Prep: Introductory neurobiology recommended

Additional Course Attributes:

Speech & Hearing Sciences  202

Clinical Aspects of Speech and Hearing (108217)

Konstantina Stankovic

2016 Spring (4 Credits)  

Schedule: MW 0500 PM - 0659 PM

Instructor Permissions: None  

Enrollment Cap: n/a

Clinical approach to speech and hearing disorders as practiced by physicians, audiologists, speech clinicians,
rehabilitation specialists, bioengineers. Includes observation of patient care in clinic and operating room, audiology/balance disorders experience, lectures and discussion groups.

**Course Notes:** Offered jointly with HST 724 at MIT. Classes to be held at the Massachusetts Eye and Ear Infirmary (MEEI)

**Recommended Prep:** Anatomy of Speech and Hearing, Acoustics of Speech and Hearing or permission of the course director

**Additional Course Attributes:**

**Instructor Permissions:** Instructor

**Enrollment Cap:** 12

This course covers anatomy of the head and neck, with cadaver dissection, stressing structures important in speech and hearing. Lecture topics also include basic neuroanatomy, imaging, surgery, and cancer of head and neck.

**Course Notes:** This an intensive January Course. Offered jointly with MIT as HST 718. Classes to be held at the Harvard Medical School campus (HMS)

**Class Notes:** January Session; dates: January 4-27, 2016

**Recommended Prep:** Introductory biology or equivalent and director permission, if not SHBT student.

### Speech & Hearing Sciences 204

**Speech Communication (108223)**

*Satrajit Ghosh*

**2016 Spring (4 Credits)**

**Schedule:**

| TR 1100 AM - 1229 PM |

**Instructor Permissions:** None

**Enrollment Cap:** n/a

Survey of human speech communication. Acoustic theory of speech production; physiologic and acoustic descriptions of phonetic features, prosody, voice and speech perception and speech motor control. Applications to recognition, synthesis and speech disorders.
Speech & Hearing Sciences 205
Neural Coding and Perception of Sound (108224)
Bertrand Delgutte
M. Brown
John Guinan
Daniel Polley
Joshua McDermott
2016 Spring (4 Credits) Schedule: MW 0930 AM - 1129 AM
Instructor Permissions: Instructor Enrollment Cap: 20
Neural structures and mechanisms mediating the detection, localization and recognition of sounds. General principles are conveyed by theme discussions of auditory masking, sound localization, musical pitch, cochlear implants, cortical plasticity and auditory scene analysis.
Course Notes: Offered jointly with MIT HST.723J.
Recommended Prep: Neurobiology 200 or permission of the instructor.
Additional Course Attributes:

Speech & Hearing Sciences 206
Molecular Biology of the Auditory System (111258)
Albert Edge
2015 Fall (4 Credits) Schedule: T 0400 PM - 0559 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
Advances in molecular biology of hearing. Topics: Transcriptional and post-translational regulation of gene expression; cell fate determination during inner ear development; inner ear stem cells and regenerative capacity in various species; use of genomics in investigations of the inner ear; critical genes for generating functional hair cells.
Course Notes: Given in alternate years.
Recommended Prep: Introductory courses in neurobiology and molecular biology are recommended.
Speech & Hearing Sciences 300
Auditory neural coding laboratory (109006)

Bertrand Delgutte

2015 Fall (4 Credits)  
Schedule: TBD
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Research projects on the neural coding of sound and the neural basis of auditory perception, with emphasis on the mechanisms for listening in adverse environments comprising reverberation and competing sound sources.

Speech & Hearing Sciences 300
Auditory neural coding laboratory (109006)

Bertrand Delgutte

2016 Spring (4 Credits)  
Schedule: TBD
Instructor Permissions: None  
Enrollment Cap: n/a

Research projects on the neural coding of sound and the neural basis of auditory perception, with emphasis on the mechanisms for listening in adverse environments comprising reverberation and competing sound sources.

Speech & Hearing Sciences 301
Acoustics and Mechanics of the Middle Ear, with a Dual Emphasis on Comparative Phys (109007)

John Rosowski

2016 Spring (4 Credits)  
Schedule: TBD
Instructor Permissions: None  
Enrollment Cap: n/a

Investigates the acoustics and mechanics of the middle ear, with a dual emphasis on comparative phys.

Subject: Virology

**Virology 200**

Introduction to Virology (116413)

*Max Nibert*

*David Knipe*

*Priscilla Yang*

2015 Fall (4 Credits)  

**Schedule:**  
W 0845 AM - 1029 AM  
MW 0900 AM - 1029 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 20

Introduction to virology. The lecture component reviews the basic principles of virology and introduces the major groups of human viruses. Weekly discussion groups critically analyze selected papers from the literature.

**Course Notes:** There will be a final project consisting of a proposal based on laboratory rotations (for Virology, BBS, or Immunology Program students) or a final paper based on a topic from the literature. Offered jointly with the [Medical School](http://www.courses.fas.harvard.edu/6075) as MG 705.0.

**Additional Course Attributes:**

**Virology 201**

Virology (110546)

*Sean P.J. Whelan*

*James Cunningham*

2016 Spring (4 Credits)  

**Schedule:**  
MW 0230 PM - 0359 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The course focuses on the following areas of virology: (i) epigenetic regulation, (ii) RNA virus replication mechanisms, (iii) innate responses to viral infection, (iv) inhibition of viral infection. The course will comprise lectures as well as reviewing literature that describes fundamental breakthroughs relevant to these areas. Within those areas, the class will read and discuss papers dealing with virus structure, replication, pathogenesis, evolution,
emerging viruses, chronic infection, innate and adaptive immunity, anti-viral drugs/vaccines. Special emphasis will be placed on preparing students to critically evaluate the literature, formulate hypotheses and design experiments.

Course Notes: Course format will be lectures, literature-based critical reading and discussion. Prepare and defend a written research proposal. Offered jointly with the Medical School as MG 723.0.

Recommended Prep: Graduate standing and permission required.

### Virology 202

Proposal Writing (117649)

Benjamin Gewurz  
Galit Alter  
James DeCaprio  
Frederick Wang

2015 Fall (4 Credits)  
Schedule: W 0145 PM - 0459 PM

Instructor Permissions: Instructor  
Enrollment Cap: 20

Students will write, present, and evaluate research proposals in the areas of virus replication, viral pathogenesis and treatment and prevention of viral infections.

Course Notes: Offered jointly with the Medical School as MG 724.0.

Recommended Prep: General background in biochemistry and virology.

Additional Course Attributes:

In this course, we will expand our view, commonly focused on viruses of humans and sometimes other vertebrates, to viruses of more evolutionarily distant eukaryotic hosts including protozoa, fungi, plants, &arthropods. Emphasis will be placed on alternative means of transmission and spread exhibited by these viruses, but other distinctive aspects of their life cycles will be considered as well. Active student participation will be expected and essential for the success of this readings- and discussions-based course, which is intended for more advanced students who have some previous background in virology.

Course Notes: This course will be offered in even-numbered years, starting 2016.

Medieval Studies

Subject: Medieval Studies

---

**Medieval Studies 107**

Authority and Invention: Medieval Art and Architecture (118135)

*Christine Smith*

2015 Fall (4 Credits)  
**Schedule:** MW 1000 AM - 1059 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Masterworks of art and architecture in Western Europe from the decline of Rome to the dawn of the Italian Renaissance. Explores the creative tension between the impulse to originality and the authority of classical models in the search for new art forms. Emphasis on representative works considered in their totality (architecture, painting, sculpture, and minor arts) as experiential wholes; and on the plurality of geographical and cultural contexts (Italy, Germany, France, and Spain).

**Course Notes:** Offered jointly with the Graduate School of Design as 4358. Meets at the Graduate School of Design, Gund Hall. This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding. This course fulfills the requirement that one of the eight General Education courses also engage substantially with Study of the Past.

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

An introduction to the legal and constitutional history of England from the Anglo Saxons to the end of the Tudor period, essentially 600 –1600, including the development of private (e.g., contract, torts, property) and public law (e.g., criminal and constitutional law). No previous background in English legal history is assumed.

**Course Notes:** Offered concurrently at the Law School as Law 42200A-1.

**Additional Course Attributes:**

Medieval Studies 119

Constitutional and Legal History of Medieval Continental Europe (147748)

Charles Donahue

2016 Spring (4 Credits) Schedule: MWF 1100 AM - 1159 AM

Instructor Permissions: None Enrollment Cap: n/a

A survey of continental European constitutional and legal history from the fall of the Roman Empire to the "Rise of absolutism" at the beginning of the seventeenth century. Focuses on the main expressions of European legal culture over this long period of time. In each period an effort is made to relate the types of law produced to social, political, and religious history.

Course Notes: Offered concurrently, but with a separate section, at the Law School as Law 42100A-1.

Medieval Studies 201

The Auxiliary Disciplines of Medieval History: Proseminar (134669)

Michael McCormick

2016 Spring (4 Credits) Schedule: M 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 20

Familiarizes scholars in all areas of medieval studies with the research tools and techniques for advanced study of late antique and medieval evidence: Latin palaeography, codicology, hagiography, late Latin philology, late antique studies, numismatics, diplomatic.

Class Notes: Course will include group analysis of a medieval manuscript from the Houghton Library's collection.

Conscious States: Waking, Sleeping, and Dreaming (124113)

Robert Stickgold
2015 Fall (4 Credits)  
Schedule: T 0300 PM - 0459 PM
Instructor Permissions: Instructor  Enrollment Cap: 12

Focuses on waking, sleeping, and dreaming as examples of conscious states in both humans and animals. Original papers and Antonio Damasio's book (The Feeling of What Happens) form the background for discussions of waking, sleeping, and dreaming from the perspectives of neurology, physiology, psychology, and cognitive neurosciences. Discusses various approaches to understanding the functions of sleep and wake (consciousness) and reviews several theories on the topic.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field.

Music, Mind, and Brain (128214)

Peter Cariani

2015 Fall (4 Credits)  Schedule: R 0300 PM - 0459 PM

Instructor Permissions: Instructor  Enrollment Cap: 15

Survey of neuropsychology of music. Examines psychological and neural substrates of music perception and cognition (pitch and consonance, melody and harmony, timbre, rhythm and meter, Gestaltist grouping processes). Then considers affective psychology (emotion, meaning, pleasure), music therapy, music and language, and developmental, comparative, and evolutionary perspectives.

Creativity Research: Madmen, Geniuses, and Harvard Students (128215)

Shelley Carson

2015 Fall (4 Credits)  Schedule: T 0100 PM - 0259 PM

Instructor Permissions: Instructor  Enrollment Cap: 15

Examines human creativity from three perspectives: a) empirical research sources, b) case studies of eminent creative achievers, and c) ourselves as creative subjects. Topics include the definition and measurement of creativity, the creative process, the neuroscience of creativity, the creative personality, the role of family life and culture in creativity, the relationship of creativity to IQ, gender differences, and the relationship of creativity to psychopathology.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field.

The Origins and Evolution of Cognition: A Comparative Study of Human and Nonhuman Abilities (109872)

Irene Pepperberg
Guven Guzeldere

2016 Spring (4 Credits) Schedule: T 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Most scientists agree cognition is widespread in nature and involves an organism processing information to solve problems (like avoiding predators, finding prey, attracting a mate, achieving shelter), and in humans higher-level reasoning and conceptualizing. Less clear are the origins and evolutionary basis of cognition-what evolutionary pressures were exerted that selected for such processing? Explores possible ways to answer this question with research in anthropology, neurobiology, philosophy, psychology, genetics, sociality, and other disciplines. Faculty from a variety of departments attend discussions in their areas of expertise and assist students in coming to their own conclusions.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field.

What Disease Teaches about Cognition (109866)

Michael Alexander
William Milberg

2016 Spring (4 Credits) Schedule: T 0500 PM - 0659 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Seeks to reconcile the complicated and messy problems of patients with brain disease with the concise analysis of precisely defined cognitive functions in normal subjects. Students will learn to overlap cognitive functions on to the brain in disease - at the gross dissection and imaging levels - and to understand some of the complex interactions of individual cognitive operations in disease. Includes dissection of a human brain, mapping on to imaging, dissection of multi-dimensional clinical disorders into their component functional parts.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field.

Fighting Cancer with the Mind (156497)
William Pirl

2016 Spring (4 Credits)  Schedule:  W 0100 PM - 0259 PM

Instructor Permissions:  Instructor  Enrollment Cap:  15

Using contemporary mind-body practices as context, examines evidence (or lack of evidence) linking psychological practices with cancer survival. We will (1) review theoretical foundations for these links including psychoanalysis, psychoneuroimmunology, and cognitive-behavioral therapy; (2) analyze legitimation of mind-body practices for cancer in popular media; (3) interview mind-body medicine practitioners; and (4) examine published scientific data. Students will choose one mind-body practice for in-depth study, analyzing its underlying theories, scientific evidence, and appeal to patients.

Class Notes:  Preference to juniors in MBB tracks or MBB secondary field.

Dopamine (160758)

Simon Caine

2015 Fall (4 Credits)  Schedule:  R 0300 PM - 0459 PM

Instructor Permissions:  Instructor  Enrollment Cap:  15

A Parkinson's victim regains control of her body with l-dopa. A schizophrenic man paralyzed by fear and hallucinations is freed from a mental institution by clozapine. A meth addict lies, cheats, and steals, ending up emaciated and dead. Miracles and monstrosities, all related to a single molecule - dopamine. This seminar will focus on this single chemical neurotransmitter through three phases of study. The first phase orients students to tools from multiple traditional disciplines (behavioral neuroscience, behavioral pharmacology, neuroanatomy, and psychiatry) through examples of specific and important disease states (Parkinson's Disease and schizophrenia), covering a historical perspective through to a current and sophisticated consensus (i.e., review articles from within the last two years). The second phase introduces the Socratic method of critical analysis of original research articles so students learn how to arrive at their own conclusions and synopsis, particularly regarding a controversial subject such as drug addiction. In the third phase, students use original articles on a relevant subject for presentation of the issues and then engage in scientific discourse with their fellow students and the instructor. Ultimately, the students should come to understand precisely how science is advanced through research, starting with multiple traditional approaches and an historical framework, proceeding with integration of new original articles by peer review and complex scientific discourse after publication, and finally, integration into accepted consensus by the field.

Class Notes:  Not open to students who have taken Neurobiology 95hfh or Neurobiology 101hfb.

Mind, Brain & Behavior  980M

Functional Neuroimaging of Psychiatric Disorders: Insights into the Human Brain-Mind (160759)
Functional brain imaging has revolutionized the study of systems-level behavioral neuroscience and psychiatric disorders, through the ability to localize and characterize distributed brain activity directly associated with perception, cognition, emotion and behavior in disorders where there are not gross brain lesions. This seminar will introduce students to translational neuroimaging methods at the interface of neuroscience, psychology and medicine. It will cover recent and ongoing advances in our understanding of fronto-limbic-subcortical brain circuitry across the range of psychiatric disorders (e.g. mood disorders, anxiety disorders, psychotic disorders, personality disorders, addictions). It will discuss new, emerging biological (as opposed to descriptive) taxonomies and conceptualizations of mental illness and its treatment. It will explore the implications of such knowledge for issues such as consciousness, meaning, free will, emotion, resilience, and religiosity. It will incorporate clinical observations, scientific data and readings, and examine future directions in brain-mind medicine.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field. Additional class meetings for site visits to be arranged.

Mind, Brain & Behavior  980N

Neuroaesthetics (161267)

*Nancy Etcoff*

Focuses on neuroaesthetics, an emerging field offering a scientific perspective on the nature of art and the ways that art reveals human nature. Integrates findings from neuroscience, psychology, evolutionary biology, philosophy, and scholarship in the arts and humanities. Begins with a brief history of ideas on aesthetics, art, beauty, and pleasure. Considers the neural underpinnings of response to art in the brain’s reward system and default network. Among the questions considered: Why are people drawn to art that is neither conventionally beautiful nor entirely pleasurable? Is art a vehicle for simulating experiences and understanding other minds? What does it mean to “enjoy” sad music or chills and thrills in response to fiction or film? Can art promote well-being? The course will range across the arts but will focus on fiction, film, and music, and response to art rather than its creation.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field.

Molecular & Cellular Biology  60
Cellular Biology and Molecular Medicine (110424)

Alexander Schier
Vladimir Denic
Dominic Mao

2015 Fall (4 Credits)  Schedule:  MWF 1000 AM - 1059 AM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This course provides an introduction to the principles of molecular and cellular biology and their connections to biomedicine. We explore how medical syndromes provide insights into biological processes and how biological mechanisms underlie human disease and physiology. Topics range from DNA repair, protein folding and vesicle transport to metabolism, cell migration and cancer. Lectures focus on the experimental evidence for key concepts, and the weekly sections combine a discovery-based laboratory research project with discussions that emphasize problem solving and primary literature.

Course Notes:  This course, when taken for a letter grade, meets the General Education requirement for Science of Living Systems.

Recommended Prep:  LS 1b recommended.

Requirements:  Prerequisite: LPS A OR LS 1a

Biochemistry and Molecular Medicine (110450)

Alain Viel

2015 Fall (4 Credits)  Schedule:  TR 0100 PM - 0229 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

The course integrates an introduction to the structure of macromolecules and a biochemical approach to cellular function. Topics addressing protein function will include enzyme kinetics, the characterization of major metabolic pathways and their interconnection into tightly regulated networks, and the manipulation of enzymes and pathways with mutations or drugs. An exploration of simple cells (red blood cells) to more complex tissues (muscle and liver) is used as a framework to discuss the progression in metabolic complexity. Students will also develop problem solving and analytical skills that are more generally applicable to the life sciences.

Requirements:  Prerequisite: LS 1a OR LPS A
Molecular & Cellular Biology  64

The Cell Biology of Human Life in the World (110451)

Robert Lue

2016 Spring (4 Credits)  
Schedule:  
MW 0100 PM - 0229 PM

Instructor Permissions:  None  
Enrollment Cap:  n/a

This course teaches fundamental concepts in cell biology in the context of individual life histories drawn from different parts of the world. Each life case focuses on key aspects of human development, growth, aging and disease while providing a nuanced view of the interplay between the life sciences, geography and culture. For example, a comparative discussion of aging in the United States and Japan is used to explore diet, cellular metabolism and its relationship to protein damage and turnover, while the Human Immunodeficiency Virus and AIDS in South Asia is used to explore mucosal immunity and the basis for estimating relative infection risk. Each case delves into the cell biology of major biological events across the life history of the human

Molecular & Cellular Biology  65

Physical Biochemistry: Understanding Macromolecular Machines (114796)

Rachelle Gaudet  
Lukas Bane  
Martin Samuels

2016 Spring (4 Credits)  
Schedule:  
MWF 1000 AM - 1059 AM

Instructor Permissions:  None  
Enrollment Cap:  n/a

The course aims to develop fundamental concepts of biochemistry as they apply to macromolecules, including protein and nucleic acid structure, thermodynamics and kinetics, ligand interactions and chemical equilibria. The course will also emphasize how these concepts are used in studies of the structure and function of biological molecules, including examples from metabolism. In the weekly section, students will undertake a discovery-based laboratory research project in which they will apply these concepts toward understanding the structure and function of the ATPase domain from the ABC transporter associated with antigen processing (TAP).

Requirements:  
Prerequisite: (LPS A OR LS 1a) AND (CHEM 20 OR CHEM 17)
Molecular & Cellular Biology 68
Cell Biology Through the Microscope (109851)
Ethan Garner
Jeff W. Lichtman
2016 Spring (4 Credits)  Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: Instructor  Enrollment Cap: 30

MCB 68 explores three fundamental fields of eukaryotic cell biology: chromosome segregation, cell motility, and neuroscience. Each topic is approached from a historic and technical perspective. Students will discover these systems as the scientific field did, learning how each successive advance in microscopy revealed new biological details. Students will come away with a theoretical and hands-on understanding of microscopy as well as a grasp of the biological findings each technology revealed.

Recommended Prep: An additional introductory course in biology (e.g. MCB 52 or MCB 60, SCRB 10, MCB 80) is recommended but not required.

Requirements: Prerequisite: LS 1a OR LPS A

Additional Course Attributes:

Joshua Sanes
Jeff W. Lichtman
2015 Fall (4 Credits) Schedule: TR 0230 PM - 0359 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, language, emotion, and mental illness.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Science of Living Systems. The course is open to students with little formal training in biology.

Requirements: Anti-Req: Cannot be taken for credit if MCB 81 already complete.

Molecular & Cellular Biology  81
Fundamentals of Neuroscience (159708)

David Cox

2015 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 20

Schedule: MWF 0100 PM - 0159 PM

An intensive introduction to topics in neuroscience, ranging from the inner workings of neurons, to the function of small neuronal networks, to the function of brain systems that give rise to perception, thought, emotion, cognition and action. The course will emphasize student-directed learning and will follow an "inverted" structure: students will be expected to watch lecture videos and complete exercises outside of class, and classroom time will be primarily reserved for discussion and in-class exercises.

Course Notes: This course serves as a more rigorous alternative to MCB 80 and is primarily intended for students who intend to concentrate in neurobiology or who intend to pursue neurobiology as a secondary field. MCB 81 may not be taken for credit by students who have taken MCB 80.

Recommended Prep: A strong quantitative background is desirable but not strictly required.

Molecular & Cellular Biology 100

Experimental Research in Molecular and Cellular Biology (160364)

Alain Viel

2016 Spring (4 Credits)  
Schedule: M 0100 PM - 0229 PM

Instructor Permissions: Instructor  
Enrollment Cap: 30

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100

Recommended Prep: LPS A or LS 1a or permission of the instructor. Students interested in a neurobiology project will need MCB 80 or permission of the instructor.

New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100

Recommended Prep: LPS A or LS 1a or permission of the instructor. Students interested in a neurobiology project will need MCB 80 or permission of the instructor.
Genomic information is accelerating the discovery and characterization of the molecular and cellular basis of human health and disease. This new lecture/discussion course will explore how knowledge from new technologies is used to advance our understanding of human biology. Topics will include personal genomics, understanding genome-wide associated studies, epigenetics, gene-environment interactions, and complex traits, the importance of model organisms to investigate molecular mechanisms, and the prospects for cancer genomics and gene/genome therapy. This lecture/discussion course will rely extensively on primary literature and contemporary review articles. Students will actively participate in class discussions and prepare four written summaries of assigned articles and two literature-based research projects (one in the middle of the term and one at the end of the term) that critically assess the scientific basis of popular news articles and consumer-targeted genomics information.

Requirements:
Prerequisite: (LS 1a AND LS 1b) AND (MCB 60 OR (MCB 52 and MCB 54))

Molecular & Cellular Biology 105

The neuronal basis of sensory processing and animal behavior will be explored in many different model systems as diverse as honeybees, weakly electric fish, and humans. Special emphasis is placed on the role of activity dependent modulation of neuronal connections in the context of learning, memory, and development of the nervous system.

Requirements:
Prerequisite: MCB 80

Cellular Basis of Neuronal Function (114789)
Venkatesh Murthy
2015 Fall (4 Credits) Schedule: MWF 0200 PM - 0259 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
The essential function of a neuron is to processes complex signals derived from the external world. To accomplish this function, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of various model circuits in the brain.

Global Health Threats (156011)
Richard Losick
Barry Bloom
2016 Spring (4 Credits) Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: None Enrollment Cap: n/a
The multidisciplinary application of epidemiology, molecular biology and genetics, pathogenesis, drug discovery, immunology and vaccine development, and economic analysis to understanding and combating major threats to human health in developing countries. Emphasis will be on critical readings and scientific writing. Grades will be
based on papers in which students will propose the application of multidisciplinary approaches to global health threats not covered in lecture.

**Course Notes:** This course cannot be taken if LS 120 has already been taken. MCB 120 cannot be taken concurrently with LS 120.

**Requirements:** Prerequisite: (LS 1a AND LS 1b) OR (LPS A AND one additional course from the following: Chemistry 27, Engineering 53, Life Sciences 2, MCB 60, MCB 52, MCB 54, OEB 10, OEB 53, or SCRB 10)

**Molecular & Cellular Biology 125**

*Molecular Basis of Behavior (159655)*

*Catherine Dulac*

2016 Spring (4 Credits) **Schedule:** TR 0130 PM - 0259 PM

**Instructor Permissions:** None **Enrollment Cap:** n/a

Modern molecular genetic approaches are teaching us a great deal on how the brain controls behaviors. This course will cover newly developed experimental strategies of molecular neuroscience, and how they have helped uncover the nature and identity of behavior circuit components. How genes and molecules affect behaviors will be investigated through key examples of mammalian behaviors with an emphasis on instinctive and social behaviors, their expression, development, and associated mental disorders.

**Molecular & Cellular Biology 129**

*The Brain: Development, Plasticity and Decline (124817)*

*Sam Kunes*

2015 Fall (4 Credits) **Schedule:** MW 1000 AM - 1129 AM

**Instructor Permissions:** Instructor **Enrollment Cap:** 20

A lecture and discussion course on how the brain develops, employs plasticity to adapt to its environment and undergoes functional decline with aging. Topics include the birth, death and identity of neurons, axon guidance and synaptic specificity, adult neurogenesis, developmental disorders of synaptic function and memory, including autism and Alzheimer's Disease. We explore how the brain loses function with aging. Course assignments emphasize critical evaluation of the primary literature, experimental design and scientific writing.

**Recommended Prep:** Permission of the instructor.

Major Advances in Understanding Evolution and Heredity (122803)

*Matthew Meselson*

2015 Fall (4 Credits)  
**Schedule:** TR 0200 PM - 0329 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 20

MCB 142 aims to develop an understanding of some of the principal advances leading to our present understanding of evolution and heredity, from Mendel and Darwin to the discovery of the genetic code. Course work includes critical reading of original papers, student presentations, group discussion, and submission of written answers to problem sets. Participation in class discussion of readings is essential. A substantial essay on a mutually agreed topic is due at end of reading period.

**Recommended Prep:** LS 1b or equivalent and permission of the instructor.

Neurobiology of Perception and Decision Making (123271)

*Naoshige Uchida*

2016 Spring (4 Credits)  
**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

One of the current goals of neuroscience is to understand neuronal circuits underlying perception and behavior. Recent advances in neuroscience have allowed us to glimpse neuronal processes that link perception and decision making. How is sensory information processed in the brain? How does an animal choose its action? How does an animal learn from ever-changing environments and adjust their behavior? The course will examine neurophysiological studies in perception and decision-making.

**Requirements:**  
Prerequisite: MCB 80

Additional Course Attributes:

Molecular & Cellular Biology 148
The Neurobiology of Pain (159880)

Ryan W. Draft

2016 Spring (4 Credits) Schedule: TR 0200 PM - 0329 PM
Instructor Permissions: Instructor Enrollment Cap: 12

This course will explore the neurobiological systems and mechanisms underlying both acute and chronic pain. Topics will include nociceptive/sensory systems, molecular basis and modulation of pain, neuroanatomy of peripheral and central pain circuits, pain pathologies, pharmacological and non pharmacological treatments. The emphasis will be on understanding basic neurobiological concepts underlying pain systems and reading/discussing the primary scientific research in the field.

Requirements: Prerequisite: MCB 80

Molecular and Cellular Immunology (111720)

Shiv Pillai
Nicholas Giovannone
Ayano Kohlgruber
Pedro Alberto Lamothe Molina

2015 Fall (4 Credits) Schedule: TR 1000 AM - 1129 AM
The immune system is frontier at which molecular biology, cell biology, and genetics intersect with the pathogenesis of disease. The course examines in depth the cellular and molecular mechanisms involved in the development and function of the immune system and also analyzes the immunological basis of human disease including AIDS and other infectious diseases, autoimmune disorders, allergic disorders, primary immunodeficiency syndromes, transplantation, and cancer.

Class Notes:
Tu., Th., 10-11:30, and a 90-minute section to be arranged.

Recommended Prep:
Genetics and cell biology strongly recommended.

Requirements:
Prerequisite: LPS A OR LS 1a

Brain Invaders: Building and Breaking Barriers in the Nervous System (109636)

Laura M. Magnotti

2016 Spring (4 Credits)

Schedule: MW 0100 PM - 0229 PM

Instructor Permissions: None
Enrollment Cap: n/a

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Requirements:
Prerequisite: (LPS A OR LS1a) AND (MCB 80 OR MCB 60 OR MCB 54)

Additional Course Attributes:

**Molecular & Cellular Biology 176**

Biochemistry of Membranes (112742)

Guido Guidotti

2015 Fall (4 Credits)

Schedule: MW 0200 PM - 0359 PM

Instructor Permissions: Instructor
Enrollment Cap: n/a

A course on the properties of biological membranes, essential elements for cell individuality, communication between cells, and energy transduction. Topics include: membrane structure; membrane protein synthesis, insertion
in the bilayer and targeting; transporters, pumps and channels; electron transport, H+ gradients and ATP synthesis; membrane receptors, G proteins and signal transduction; membrane fusion.

Class Notes: M., W., 2–4, M., at 4

Recommended Prep: MCB 60 or MCB 52 and MCB 54 are recommended but not required.

Molecular & Cellular Biology 178

Biochemistry of Protein Complexes (128150)

Guido Guidotti

2016 Spring (4 Credits) Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: None Enrollment Cap: n/a

A course on the properties of protein complexes that serve as supports, machines and motors. Topics include: hemoglobin, actin filaments, myosin function, microtubules, kinesin, metabolon, photosynthesis, rotary motors, nuclear pores and transport, proteasome. Lecture on Monday is followed by student presentations on Wednesday. The course involves reading two research papers per week, and writing a research proposal.

Recommended Prep: Chemistry 27 and MCB 60 or MCB 54 are recommended, but not required.

Molecular & Cellular Biology 186

Circadian Biology: From Cellular Oscillators to Sleep Regulation (112001)

Charles Czeisler

2015 Fall (4 Credits) Schedule: W 0200 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Properties, mechanisms, and functional roles of circadian (daily) rhythms in organisms ranging from unicells to mammals. Cellular and molecular components, regulation of gene expression and physiological functions, genetic and biochemical analyses of circadian rhythms, and neurobiology of the mammalian circadian pacemaker. Mathematics and modeling of oscillatory systems and applications to circadian rhythms. Experimental studies of human rhythms, including the sleep-wake cycle and hormone rhythms, with applications to sleep disorders.

Recommended Prep: MCB 80 desirable.
**Molecular & Cellular Biology 187**

Genome Editing - Progress and Frontiers (156731)

*Keith Joung*

2016 Spring (4 Credits)  
**Schedule:** T 1000 AM - 1129 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course will provide a comprehensive and cutting-edge primer on the burgeoning field of targeted genome editing. Topics discussed will include foundational science, recent rapid technological advances, and research and therapeutic applications of engineered zinc-finger nucleases, TALENs, and CRISPR-Cas nucleases. The class will meet twice per week, including a one-and-a-half hour lecture and a two-hour section in which students will discuss and critique original scientific papers relevant to that week's subject.

**Course Notes:** Students will be required to attend all lectures and to participate in all weekly sections. A mid-term exam will be given and students will be required to submit a final paper consisting of a research proposal.

**Class Notes:** Tu., 10–11:30, and a two hour section weekly

**Recommended Prep:** And one additional course in molecular and cellular biology.

**Requirements:** Prerequisite: MCB 60 OR MCB 52

Chromosomes (114864)

*Nancy Kleckner*

2016 Spring (4 Credits)  
**Schedule:** TR 0200 PM - 0359 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Chromosome morphogenesis in prokaryotic and eukaryotic organisms. Topics will include chromosome structure, interactions between chromosomes (sisters and homologs), DNA recombination and repair, topoisomerases, transposable elements and site-specific recombination, epigenetic inheritance. Genetic, cytological, and biochemical approaches will be integrated. Lecture, reading, and discussion of classical and current literature and consideration of future experimental directions.

**Requirements:** Prerequisite: LS 1b AND (MCB 60 OR (MCB 52 and MCB 54))

Foundations of Systems Biology and Biological Engineering (123837)
Philippe Cluzel
2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: None Enrollment Cap: n/a
This course builds an understanding of design principles in biology. We will ask why biological circuits are built the way they are and answer using mathematical models. Topics: elementary circuits in biological networks, robustness, pattern-formation in embryos, error-correction, and evolutionary optimization.

Course Notes: Students from physics, engineering and other disciplines are also welcome.
Recommended Prep: Familiarity with mathematics at the level of 19/20 is strongly recommended.
Requirements: Prerequisite: (LPS A OR LS 1a) AND (LS 1b) AND (MCB 60 OR (MCB 52 AND MCB 54))

Interesting Questions in Physical Biology (122422)

Nancy Kleckner  

2015 Fall (4 Credits)  Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: Instructor  Enroll Cap: n/a

Physical biology can be defined as a discipline that seeks to understand biological processes through the lens of physics and engineering. Faculty and students will unite to review current research with the aim of identifying and pondering interesting emerging questions in this area. Combination of lecture and discussion format. Comprises a series of two-week modules, most of which are given by a one or a pair of faculty drawn from MCB, Physics and SEAS.

Course Notes: Intended primarily for first year graduate students in the EPB PhD track of the MCO program but available to other graduate students and advanced
undergraduates as space permits.

Molecular & Cellular Biology  350
Scientific Integrity (156950)

Richard Losick
2016 Spring (2 Credits)  Schedule:  MT 0130 PM - 0359 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

MCB 350 is a discussion forum on scientific integrity using case studies to examine basic ethical and regulatory
requirements for conducting research, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction. Students are required to complete a pre-course assignment, attend all lectures including the final lecture in February, participate in class discussions, and complete a final course evaluation. A certificate will be issued upon successful completion of the course.

Course Notes: According to NIH Guidelines, students are required to take a Scientific Integrity Refresher Course every four years (*MCB 351).

Microscopy (156952)

Jeff W. Lichtman
Douglas Richardson

2016 Spring (2 Credits) Schedule: WR 0100 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course presents the fundamental concepts that underlie modern light microscopy in a rigorous but non-mathematical way for biological applications. The students will learn about the four major frameworks for light (ray optics, wave optics, electromagnetism, and quantum optics). The ways lenses work, the theory of resolution, and the optical design of the compound microscope will be described. The course will also describe the photo-physical principles that underlie fluorescence and genetically encoded fluorescent proteins, and light detector and imaging strategies. Scanning (confocal and 2P), light sheet and super-resolution microcopies will also be described. We will end with a tour of the Harvard Center of Biological Imaging.

Molecular & Cellular Biology 353

Building Your Own Microscope (160485)

Venkatesh Murthy

2016 Spring (2 Credits)  
**Schedule:** W 1000 AM - 0459 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Microscopes of various sorts are used by most biologists, who typically buy these off the shelf. With a little knowledge, however, most biologists can build their own microscopes to do many of the things that the commercial ones do. In this quarter course, you will learn to build an epifluorescence microscope and to acquire images using a computer.

Molecular & Cellular Biology 354

Introduction to Model Organisms (160493)

Craig Hunter

2015 Fall (2 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Model organisms are embedded in our scientific culture, from text books on the discovery of genetic material, to mod-encode genome projects. This quarter course is a means to formally introduce an enormously successful experimental scientific approach that has revealed uncountable new biological mechanisms for the last 70 years. Students in this class will engage in hands-on learning exercises to become familiar with commonly used model organisms. They will learn about the genesis of each model system and compare and contrast the features and available experimental approaches that govern whether a particular organism is an appropriate model for different biological phenomena.

**Course Notes:** Limited to first year graduate students in the MCO Ph.D. program.

**Additional Course Attributes:**

Visualizing, Analyzing and Presenting Macromolecular Structures with PyMOL (160523)

Rachelle Gaudet

2016 Spring (2 Credits)  
**Schedule:** TW 0200 PM - 0359 PM  
TW 1000 AM - 1159 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a
PyMOL is one of the most popular software programs to display and explore high-resolution structures of macromolecules. It is readily used to create publication-quality figures, and movies and animations of structural information. In this course, you will learn the basics of PyMOL and be able to display, explore and present three-dimensional structures of macromolecules. With this basic training, you will be able to generate high-quality images and simple movies, and have the resources to learn more on your own to generate more complex displays.

**Molecular & Cellular Biology 356**

Practical Introduction to Robotics (160558)

_Benjamin de Bivort_

2016 Spring (2 Credits)  

**Schedule:**  
FS 0400 PM - 0759 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
20

Automation and robotics have revolutionized molecular biology. Liquid handling robots are already facilitating the "omics" revolution in genome sequencing, proteomics and high throughput screening. Now, neuroscience and microscopy are adopting robotics for throughput and experiments requiring precision and repeatability, like targeted microelectrode placement. In this nano course, students will learn 1) basic principles of practical robotics including the interaction of software and hardware, 2) the roles of drivers, control cards, microcontrollers and sensor electronics, and 3) practical engineering skills including basic soldering, measurement of voltage, conductivity, polarity and resistance. Students will explore the challenges of translating conceptual operational algorithms into physical implementations.

**Course Notes:**  
To enroll, students must be apart of a Life Science Graduate Program, or permission of the instructor.

Music 1
1000 Years of Listening (156060)
Emily Dolan
2016 Spring (4 Credits)  Schedule: MW 0100 PM - 0159 PM
Instructor Permissions: None  Enrollment Cap: n/a
This course aims to introduce you to a variety of music, and a range of ways of thinking, talking and writing about
music. The majority of music dealt with will be drawn from the so-called "Classical" repertory, from the medieval period to the present day, including Monteverdi, Bach, Handel, Mozart, Beethoven, Schumann, and Schoenberg. Class will explore the technical workings of music and together we will build a vocabulary for analyzing music and articulating a response to it; we will explore music as a cultural phenomenon. By the end of class, students will be equipped to embark on a lifetime of informed listening.

Course Notes: May not be taken for concentration credit. This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding. This course fulfills the requirement that one of the eight General Education courses also engage substantially with Study of the Past.

2016 Spring (4 Credits)

Schedule: W 1100 AM - 1159 AM

Instructor Permissions: None

Enrollment Cap: n/a

Seeks to develop a greater understanding of music, musical analysis, and critical listening. We will study some of the organizing principles of musical works (from a range of styles) by means of composition projects, score analysis, and aural skills. While reading knowledge of simple musical notation is helpful, there will be at least one section for students with no previous experience.

Course Notes: Open to all students. May not be counted for concentration credit. This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding.

Music    4
Introduction to Composition (111353)

Osnat Netzer
2015 Fall (4 Credits)   Schedule:    R 0300 PM - 0459 PM
Instructor Permissions:    Instructor   Enrollment Cap:    n/a

Open to students with little or no prior experience in composition. Explores ways of thinking about and organizing basic compositional elements such as melody, harmony, rhythm and instrumental color, as well as developing skills of score preparation and analytical listening. The primary focus of the course is a series of short compositional exercises, culminating in a somewhat longer final project. Workshop performances of students' music take place throughout the term.

Course Notes:    May not be counted for concentration credit.
Recommended Prep:    Some prior experience in music theory or permission of the instructor.

Music    10A
Harvard-Radcliffe Orchestra (110112)

Federico Cortese
2015 Fall (2 Credits)   Schedule:    MR 0700 PM - 0929 PM
Instructor Permissions:    Instructor   Enrollment Cap:    n/a

This is an experiential learning course. The ensemble gives several concerts each year, sometimes joining with the chorus to perform large-scale works. Students are required to attend all rehearsals and certain special Saturday "retreats" announced in advance. Students are expected to practice the music outside the rehearsal time. Grades are based on attendance and participation.

Course Notes:    The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Class Notes:    Auditions: August 31 and September 1: 10:00 am - 8:00 pm; September 2: 9:00 am - 1:00 pm. Two contrasting movements or pieces chosen by candidate.

The Harvard Dance Project (110113)

*Jill Johnson*

2015 Fall (2 Credits)

**Schedule:** TR 0300 PM - 0559 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

THE HARVARD DANCE PROJECT (Music 12A) The Harvard Dance Project cultivates invention and fosters the courage of artistry. This faculty-led, performance company gives students the opportunity to be original cast members and collaborators in two or more diverse dance works created by preeminent professional choreographers. The project focuses on performance research, collaboration, choreographic composition, and links choreographic thinking to other fields. It is a studio-based course which includes at least 12 performances at major venues on campus. Fall 2015 includes works by: Merce Cunningham, Anne Teresa DeKeersmaeker, Jill Johnson; performances at the ICA, Carpenter Center & Dance Center. Enrollment determined by audition during the first week of class. Dance experience required. Full-year course (runs fall to spring); students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:**

The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

*Richard Beaudoin*

2015 Fall (4 Credits)

*Schedule:*  
W 0200 PM - 0359 PM

*Instructor Permissions:*  
Instructor  
Enrollment Cap: n/a

Course unfolds the foundations of tonal music, including line, harmony, counterpoint, rhythm, timbre, and form. Includes regular practical exercises in model composition, analysis, ear-training, keyboard skills, and musicianship.

**Course Notes:**  
For this course a placement exam is required, which is offered the week
before classes begin. Please see the Canvas course website for M51a for more information. Music 51a or its equivalent is required of all concentrators. Students planning to concentrate in Music are encouraged to take the course in their freshman year. Concentrators should plan to meet this requirement by no later than the end of the sophomore year. This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding.

**Recommended Prep:** Basic theory and ear training skills. Basic keyboard skills are useful.

Sophomore Tutorial: Music History & Repertory: Classical to Contemporary (125867)

Anne Shreffler

2015 Fall (4 Credits)  

Schedule: MWF 1000 AM - 1059 AM

Instructor Permissions: Instructor  

Enrollment Cap: n/a

A survey of Western classical music from the 18th to the 21st centuries, continuing from Music 97a. The course emphasizes listening, analysis, and historical context. Two semesters of Music 97 are required of all concentrators, preferably taken in the sophomore year, or earlier by permission.

Course Notes:  

Music 97 is required of all concentrators, preferably taken in the sophomore year, or earlier by permission. Each third of the course culminates in an examination testing students' knowledge of a large listening repertory. These examinations must be passed in order to receive credit for the course.

Recommended Prep:  

Music 51 may be taken concurrently.

Enrollment Cap: n/a

A dance course that explores fundamental skills of improvisation and composition. Using wide-ranging musical styles, experimentation, problem solving, and an equal curiosity about both success and failure —this course explores the processes of analytical and intuitive decision making in the dancing body. Students will learn a series of specific physical tasks, tools, and systems taught through intensive exercises, guided improvisations and rigorous real-time composition. Physical research and written work in the course connect dance to architecture, the visual arts, mathematics, philosophy, science, theater, and literature in ways which link the mind and body to innovation.

Course Notes: Minimal dance experience required.

Foundations of Modern Jazz: Topics (138072)

Yosvany Terry

2015 Fall (4 Credits)  
Schedule: T 0200 PM - 0359 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

West African Musical Traditions. This course is designed to familiarize students with the key structural elements in West African music and how to recognize them in modern jazz. Students will be given tools that will allow them to
demonstrate these key concepts in both their improvisational work and assigned compositional exercises. Through coursework, students will deepen their knowledge, understanding and appreciation of important rhythms, melodic patterns, and phrase models, but the fundamental goal is to enable them to feel these elements before and apart from their interpretation of written music. This attention to improvisation will develop the student's creative abilities and introduce them to methods of music composition. Exercises that involve the clapping and singing of specific rhythmic patterns will help students approach sight-reading in an intuitive and responsive way, because strong ear-training and musicianship skills are a key requirements for successful interpretations of and improvisations on the score. By examining instructional DVDs, historical and contemporary recordings, scholarly books and articles, and through the analysis and discussion of class material, the class will collectively develop a more thorough understanding of the principles guiding modern jazz musicians and composers. Students will be expected to contemplate and practice on their instruments the repertoire given to them between class meetings. The West African Ensemble's repertoire consists primarily of original compositions by Lionel Loueke (Benin), Avishai Cohen (Israel), Dafnis Prieto (Cuba), Edward Simons (Venezuela), and Yosvany Terry (Cuba). Other composers will be explored in accordance with the time limits and the direction of each class.

*Art Blakey's Jazz Messengers.* The Jazz Messengers were more than just a musical group; they were one of the greatest institutions in modern jazz, paving the way for several generations of musicians to develop new and original approaches to composition and improvisation. This course will introduce students to the Jazz Messengers and the concept of hard bop created by artists searching for new musical expressions, as a necessary evolutionary step after Be-Bop in modern Jazz. Students will be become familiar with the Jazz Messengers' repertoire, gaining insight and practical experience by first playing and memorizing their songs, and, afterwards, transcribing and studying the recordings of key compositions. Additionally, students will gain proficiency in performing compositions by some of the Messengers' most prolific alumnae, including pianist Horace Silver, saxophonist Wayne Shorter, pianist Cedar Walton, saxophonist Benny Golson, and trumpeter Freddie Hubbard. Each week the students will make presentations on the selected class readings which are intended to deepen their understanding of the music by providing the social context in which this music was developed. Finally, students will select, rehearse, and perform some of the Jazz Messenger compositions in an end-of-semester concert.

Creative Music: Critical Practice Studio (110311)
Vijay Iyer
2016 Spring (4 Credits) Schedule: M 0200 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 20
This course is an intensive, research-oriented workshop environment for advanced improviser-composers. Open to both undergraduate and graduate students. Through critical listening, readings, term papers, and collaborative musical projects, students will engage with a range of contemporary musical perspectives and practices. Graduate
students are welcome.

Course Notes: Between December 22 and January 18, each student should submit a recording, up to fifteen minutes in of your performance, solo or with a group, of your own compositions or those of others, and featuring solo or group improvisation. Please provide details about the music -- instrumentation, repertoire, personnel, date of recording, and any other relevant descriptive information. Audio should be submitted via sharing links to YouTube, Soundcloud, Dropbox, or similar. Submit links to vijayiyer@fas.harvard.edu. Please do not email files. No applications will be accepted earlier than December 22 or later than January 18.

Music and Disability: Through field work, readings, discussions, and presentations, this course will explore topics related to disability in music history, music theory, and performance studies, and examine recent developments in neuroscience, music therapy, and music education. Defining disability as a cultural construction rather than as a medical pathology, the course will also consider the practice of music as a vehicle of empowerment, reflecting on music's generative role in shaping communities and advancing social justice and human rights. Students will design and implement inclusive and democratic community music projects, partnering with local service organizations and educational institutions.

2016 Spring (4 Credits)  
**Schedule:** TW 0700 PM - 0959 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

Through auditions, students will be divided into chamber music ensembles by the Parker Quartet and have weekly coachings with members of the Parker Quartet and Heng-Jin Park of the Boston Trio. Students will be expected to rehearse between each coaching and to participate in chamber music studio classes throughout the semester, which will be led by the Parker Quartet. Auditions will be held in the first week of the semester, either in conjunction with HRO auditions or on a separate non-HRO audition day. Students who do not meet the requirements below may take the course for SAT/UNSAT credit. Pre-formed ensembles are encouraged and will be accommodated as much as possible. Students intending to enroll in both the HRO and Music 189, auditions are held at dates to be announced.

**Course Notes:** This course is only offered for a letter grade when students are involved in one or more of the following: music concentrator, enrolled in a music department course in the same semester, a member of a faculty-led ensemble (the Harvard-Radcliffe Orchestra). Pre-formed ensembles are
encouraged and will be accommodated as much as possible.

Class Notes: Auditions for the Spring semester will be held on the first day of classes for students who did not audition for either HRO or Music 189 in the Fall. Please prepare two works of contrasting styles and note that you may be asked to demonstrate sight reading ability.

Topics in Medieval and Renaissance Music: Proseminar (111726)

Suzannah Clark

2015 Fall (4 Credits) Schedule: T 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Concepts of Love and Sin in the Songs and Motets of the Middle Ages. This course will explore the lyric traditions of the troubadours and trouvères, and their influence on the development of the "ars antiqua" motet. We will examine how chivalry, courtly love, lust, and the sacred adoration of the Virgin Mary are depicted musically—sometimes in combination in a single work. Our cast of characters will include knights, clerics, nuns, monks, students, lords and ladies, and shepherds and shepherdesses. We will address such questions as: Did cupid's arrow make a sound? How did different expressions of love amongst different social classes generate different musical and poetic genres? Where might we draw the line between fact and fiction in the tales depicted—and does
the music provide an answer? What were the prized attributes of men and women in the game of love—and how were they expected to sing or play along? No knowledge of medieval French or Latin is required.

**Course Notes:** May be taken by students from other departments with permission of instructor.

Special Topics (108983)

*Marie Abe*

2016 Spring (4 Credits)  
**Schedule:** W 0300 PM - 0459 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

*Music and Violence.* Music can be a form of weapon or torture; a mediating force in a process of conflict resolution; a force complicit with violence; storehouse of memory and/or process of healing for survivors of violence; a mode of resistance against a violent regime; and a creative process of alliance-building, among many others. This seminar explores the various intersections of music and violence, considered broadly—from mass political conflict to everyday violence that is structural, symbolic, and otherwise—, and the emerging body of scholarship within ethnomusicology over the last decade dedicated to the subject. At the heart of seminar discussions will be an investigation into the role of expressive culture in reflecting, generating, and sustaining political and other social movements, and the question of how sound and music enable us to think creatively through the relationship between critical attention, compassion, and commitment.

**Course Notes:** Students from other departments are welcome.

Music 201A

Current Methods in Historical Musicology (118075)

Anne Shreffler

2016 Spring (4 Credits) Schedule: W 1000 AM - 1159 AM

Instructor Permissions: None Enrollment Cap: n/a

Introduction to musicological scholarship drawing upon theoretical frameworks, and working methods of historical musicology. Includes aspects of the history of the discipline of musicology, as well as newer methodologies. Students will read relevant theoretical texts from other disciplines and consider the possibilities of interdisciplinary projects within musicology.

Course Notes: Graduate students only. May be taken independently by students from other departments with permission of instructor.

*African Music and Theory from the South.* This seminar explores leading contemporary cultural theorists of Africa such as Achille Mbembe, Jean and John Comaroff, Kofi Agawu, and Ngugi Wa Thiong'o in relationship to classic issues in the study of African musics. Beginning with popular, regional, and international musical genres the course takes hybridity as a point of departure and then examines historical presumptions about the nature of tradition in the ethnomusicological literature on African music. Classic issues in African music, such as rhythm, transcription, orality, social engagement, and religion are explored in the context of the anthropological and postcolonial literatures.

*Performers and Composers in Early Modern Europe.* This course studies the relationship between improvised polyphony and written works by composers from Josquin des Prez and Claudio Monteverdi to Arcangelo Corelli. Techniques examined include improvised canons, stretto fuga, fauxbourdon, bass patterns, and partimento. This hands-on, performerly perspective facilitates a series of reflections on the status of composers, singers, instrumentalists, and written "works" in histories of the period.

**Course Notes:** Open to undergraduates with permission of instructor.

Sound Studies and Instrumentality. This seminar will explore transforming notions of instrumentality, considering the role of instruments (defined broadly) within music and in broader technological contexts. We will consider both the history of instrumentality and what instrumentality means today in light of the proliferation of digital technologies. This seminar will be taught in collaboration with a mirror seminar at McGill, led by Jonathan Sterne. We will meet jointly—digitally—regularly throughout the semester and students in both seminars will work collaboratively throughout the semester, all the while reflecting thoughtfully on the tools and technologies that enable these sorts of interactions.

Theorizing Improvisation (156365)

_Vijay Iyer_

2015 Fall (4 Credits)  
Schedule: T 1200 PM - 0159 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

_Theorizing Improvisation._ This research-oriented seminar surveys the newly emerging, interdisciplinary area of critical improvisation studies, in which recent scholarship in African diasporic music and aesthetics joins a larger conversation on improvisation across multiple research fields in the arts, the sciences, and the humanities. Through a range of published and unpublished readings, mostly from the last two decades, we examine improvisation as a central feature of individual and collective subjectivities.

Near Eastern Languages and Civilizations
Subject: Akkadian

Akkadian AA
Introductory Akkadian (114320)
Gojko Barjamovic
Jae-Hwan Kim
2015 Fall (4 Credits) Schedule: TR 0130 PM - 0259 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
An introduction to the Semitic language of Akkadian, primarily through the Old Babylonian dialect and cuneiform writing system as used during the time of Hammurabi (c. 1750 BCE). Students learn the fundamentals of grammar and the writing system, as well as the most common cuneiform signs in official and cursive script. Readings span a variety of genres, including private letters, judicial documents, literary and religious texts, divinatory compendia, legal code, and royal inscriptions. The course also briefly introduces students to examples of texts from other periods and dialects of the Akkadian language for cultural and comparative purposes. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Akkadian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Akkadian 152
Assyrian and Babylonian Texts from the 1st Millennium BCE (115588)

Gojko Barjamovic

2016 Spring (4 Credits) Schedule: R 1100 AM - 1259 PM
Instructor Permissions: None Enrollment Cap: n/a

The object of this course is to read relatively fast through a number of primarily royal inscriptions dated to the 1st millennium BCE in original orthography (and in some cases from original objects in the museum collection). The purpose is to give students a closer familiarity with script, language and genre through reading a large volume of representative texts.

Recommended Prep: Akkadian grammar, basic vocabulary, knowledge of cuneiform script.

What are the essential elements of human society? Have our fundamental conditions developed, and how? Can we use themes from ancient history to think about contemporary society and culture? These questions are in focus in this course on 'Ancient Lives', which explores the earliest human civilizations in the region commonly known as Mesopotamia (c. 3000-300 bce) in what is now Iraq, Iran, Syria and Turkey. Few elements in the way we live and organize ourselves today are to be taken for granted. There is, and has always been, a wealth of ways in which humans live. But biologically we are the same as our ancestors of 5000 years ago, at the dawn of history. Any likeness or difference between 'us and them' is therefore likely to be a product of history and culture. 'Ancient Lives' builds upon this realization to inspire a critical way of thinking about society in the broadest possible scope. Areas explored during the course are selected for their relevance across the range of contemporary life - they include freedom, music, public health, food, jurisprudence, trade, the visual arts, science, sexuality, religion and political
power. You learn about how societies and individuals have dealt with change on multiple levels, from large-scale societal revolutions to personal transformation. Having taken this course, you will have gained a fundamental understanding and appreciation of human life in the broadest scope, as well as of your own life as a part of history. You will be able to critically assess contemporary discourses on the study of 'the other' in past and present; engage with core concepts of human society, such as justice, beauty, value and belief on a broad historical base; be familiar with examples of classical social theory and thinkers through concrete cases in which their work has been applied to or shaped by the study of the past; and acquire skills in presenting scholarly work to a general audience.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Societies of the World.

Ancient Near East 111
Law in the World of the Bible (120820)

Peter Machinist
2015 Fall (4 Credits)  Schedule: T 0100 PM - 0259 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

An examination of what law was and how it operated in ancient Israel through its primary expression in the Hebrew Bible. Attention to the wider contexts of law in the ancient Near East, especially Mesopotamia, in which biblical law originated, and to the legacy of biblical law in the subsequent traditions of early Judaism.

Course Notes: Offered jointly with the Divinity School as 1129.

Ancient Near East 117
Biblical Archaeology (156358)

Robert Homsher
2015 Fall (4 Credits)  Schedule: T 0200 PM - 0359 PM
Instructor Permissions: None  Enrollment Cap: n/a

This course combines biblical historiography and archaeology to critically evaluate many of the debatable incongruities between text and material evidence. Various periods of biblical history will be studied within their greater Near Eastern and Eastern Mediterranean context, looking specifically at results of archaeological excavations and evidence from extra-biblical textual sources. Beginning with the composition of biblical text and biblical chronology, readings and lectures will then navigate through biblical theories and archaeological evidence from the primordial creation stories until post-exilic Second Temple Judaism. Additionally, the history of "biblical archaeology" will be traced until the present day, especially including portrayals in popular media, while highlighting the good, the bad, and the very ugly.

Course Notes: Offered jointly with the Divinity School as 1422.

Ancient Near East 120A
Introduction to the Hebrew Bible/Old Testament 1: Pentateuch and Former Prophets (118849)

Andrew Teeter
2015 Fall (4 Credits)  Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: Instructor  Enrollment Cap: n/a
A critical introduction to the literature and theology of the Hebrew Bible, considered in light of the historical contexts of its formation and the interpretive contexts of its reception within Judaism and Christianity. The course, the first part of a divisible, year-long sequence, will focus on the major biblical narrative traditions, the Pentateuch and Former Prophets.

Course Notes: Offered jointly with the Divinity School as 1102.

Readings in the Septuagint (112752)

*Richard Saley*

2015 Fall (4 Credits) Schedule: TR 1201 PM - 1259 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course aims to increase facility with Septuagint Greek by reading representative prose portions of the Septuagint and studying the peculiarities of the grammar inductively. The basics of Koine Greek will be reviewed as necessary.

Course Notes: Offered jointly with the Divinity School as 4215.

Recommended Prep: One year of Greek.

Ancient Warfare in the Near East: An Archaeological Perspective (159979)

Robert Homsher

2016 Spring (4 Credits)  Schedule:  W 0200 PM - 0359 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

People tend to be familiar with ancient warfare in the classical civilizations of the Greeks and Romans, but what was the nature of warfare in earlier historic or pre-historic societies? This course explores the meaning and impact of military and warfare in societies throughout the ancient Near East and Eastern Mediterranean. From the time of the earliest evidence for warfare until the arrival of Alexander the Great, we will investigate various forms of archaeological and historical evidence in order to address the extent to which war shaped society, while dispelling some misconceptions and possible historical biases. Lectures will be supplemented with visits to Harvard museums and special artifact sessions at the Harvard Semitic Museum.

Elementary Arabic (116746)

*Dalia Abo-Haggar*

2015 Fall (4 Credits)  

**Schedule:** MTWRF 0900 AM - 0959 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Introduces students to the phonology and script of classical/modern standard Arabic and covers the basic morphology and syntax of the written language. Emphasis on the development of the four skills (reading, speaking, listening, and writing). Samples of modern (contemporary) and classical styles of writing introduced into basic syllabus, and audio-visual material from the contemporary Arabic media. Required textbooks: (1) *Alif Baa* (with multimedia), 2nd edition. (2) *Al-Kitaab fii Ta'allum al-'Arabiyya*, Part I, 2nd edition. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:** Offered jointly with the Divinity School as 4345.

Not open to auditors. Cannot be taken pass/fail. Arabic AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Class Notes:** If this 9am section is full, please register for section 005, also at 9am.

Hebrew 243

Critical Study of Midrash (160490)

David Stern

2015 Fall (4 Credits)  Schedule: W 0200 PM - 0459 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

The aim of this course is to introduce students to the contemporary critical study of midrash, the literature of classical Rabbinic Biblical interpretation. We will be primarily concerned with two questions: 1) How did the Rabbis read the Bible? and 2) What can midrash, as a form of literary discourse in its own right, tell us about its authors, the Rabbinic sages who lived in the first five centuries in the common era? We will also compare midrash to other types of ancient Jewish interpretation, discuss the various hermeneutical and literary theoretical issues that have figured in recent scholarship, and consider its place in the history of Jewish Biblical exegesis. Texts to be read will run the entire gamut of Rabbinic literature (including both Tannaitic and Amoraic collections, and midrash halakhah as well as midrash aggadah). All readings will be in the original language, and students are expected to be able to read unpointed Hebrew texts (although pointed texts will be supplied whenever possible). No other previous background in Rabbinic literature is required.

Course Notes: Offered jointly with the Divinity School as 1832.
Recommended Prep: Students are expected to be able to read unpointed Hebrew texts. No other previous background in Rabbinic literature is required.

The Book of Jeremiah: Composition and Reception (160590)

Andrew Teeter

2015 Fall (4 Credits)         Schedule:  T 0400 PM - 0559 PM
Instructor Permissions: Instructor  Enrollment Cap: 30

An examination of the shape and development of the Book of Jeremiah, including close reading of select portions in Hebrew, with attention to large scale strategies and elements of inner-scriptural interpretation. Some attention will also be given to representative selections illustrating the nature and scope of the differences between the Greek and Hebrew forms of the book (including Qumran fragments). The course will also consider the continued reception of the prophet and the book in a variety of other compositions, including Lamentations, Baruch, the Epistle of Jeremiah, and the Jeremiah Apocryphon.

Course Notes: Offered jointly with the Divinity School as 1305.

Recommended Prep: Two years of Biblical Hebrew strongly recommended.

Proseminar: Approaching the Qur’an (160949)
William A. Graham
2016 Spring (4 Credits) Schedule: R 0300 PM - 0459 PM
Instructor Permissions: None Enrollment Cap: n/a
Considers the Qur’an as text and as scripture. Reading of the text in translation as well as of primary and secondary sources to place it in historical context from its 7th-century origins through subsequent centuries. No previous study of Islam or Arabic is assumed, but students with Arabic can work with the original text in a separate section. Topics include: themes of the Qur’an; origins and debates regarding origins; shared biblical/prophetic history; the Qur’anic sciences (e.g., tafsīr/exegesis); the Qur’an in Muslim piety and Islamic culture. Requirements include weekly reading and short written or research assignments, regular class participation with one or more short oral presentations, and either a final exam or a term paper.

Course Notes: Additional hour to be arranged.

Islam, Modernity and Politics (109243)

Ousmane Oumar Kane

2015 Fall (4 Credits) Schedule: F 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 18

The aim of this seminar is to study the evolution of Islamic thought and political practices in Muslim societies from the 19th to the early 21st centuries. Attention will be devoted to the patterns of interaction between the Muslim World and the West because it is our assumption that these patterns contribute to influence ideological formations and modes of religious/political mobilizations in the Muslim World. By the end of the eighteenth century, much of the Muslim World was in "decline" whereas European imperial powers, mainly France and Great Britain, were on the rise. The course will explore the response of Muslim societies and intellectuals to the rise of European prominence. The major 19th century reformist movements that appeared in the Muslim World will be discussed, ranging from movements advocating mild reform to those rejecting all influence of "Western civilization" and advocating a return to the Tradition of Muhammad. In the twentieth century, virtually all the Muslim World came under European colonial domination. During colonial rule and after, the Muslim world experienced major transformations which affected the nature and administration of law, politics and society. It is in this context, that the new Islamic revival that some have called "Islamism" was articulated as an alternative to Westernization. The course will address the rise of contemporary "Islamism," as an alternative to Western domination and modernization/Westernization. The major theorists of political Islam as well as the different trajectories of "Islamism" in diverse Muslim societies will be covered. The impact of political Islam in the West will also be addressed. The final part of the course will assess the trajectories of political Islam and address the ongoing debates on post-Islamism, secularism and modernity.

Course Notes: Offered jointly with the Divinity School as 3368.

Islamic Civilizations  176

Islam in Modern West Africa (109812)

Ousmane Oumar Kane

2015 Fall (4 Credits) Schedule: TR 0100 PM - 0159 PM

Instructor Permissions: Instructor Enrollment Cap: 30

At the beginning of European colonial rule in the early 20th century, less than a half of the West African population was Muslim. By independence from European colonial rule in the early 1960s, close to 90 percent of many West African countries have been Islamized. More people converted to Islam during the six decades of European colonial rule than in the preceding thousand year of slow Islamization. The aim of this lecture course is to analyze contemporary West African Muslim societies with particular reference to the twenty and twenty first centuries. This course will look at how colonialism created a favorable ground for the spread of Islam. It will also address the main
institutions and movements of modern Islam in West Africa as well as the postcolonial transformations in education, gender, the arts, interfaith relations etc. In addition to the discussion section in English, this lecture course will also offer a section in Arabic in which participants will be initiated to the intellectual production of Muslim intellectuals in Africa.

**Course Notes:**
Offered jointly with the Divinity School as 3366.

**Islamic Civilizations 178**

Muslim Societies in South Asia: Religion, Culture, and Identity (111918)

*Ali S. Asani*

2015 Fall (4 Credits)  
**Schedule:**  
R 0100 PM - 0259 PM

**Instructor Permissions:**  
Instructor: Staff

**Enrollment Cap:**  
n/a

South Asia (India, Pakistan, and Bangladesh) is home to the largest concentration of Muslims in the world. This course introduces students to a variety of issues that have characterized the development and evolution of South Asian Muslim communities. While the course will briefly survey the historical development of Islamic and Muslim institutions in the region, its central focus will be the formation of identity - as expressed through language, literature, and the arts - among South Asian Muslim communities. The issues that influence these identities will be considered with regard to the constantly evolving religious and political contexts of South Asia. Special attention will be given to recent attempts to redefine Muslim religious identities through reform and revivalist movements as well as state policies of Islamization. We will look at the impact of these policies on issues such as the status of Muslim women, relations between Muslim and non-Muslims and the growth of sectarian tensions between Muslim groups. The course is appropriate for those who wish to acquire a bird's-eye view of the Islamic tradition in South Asia, as well as those interested in exploring some of the issues confronting Muslim populations in contemporary times.

**Course Notes:**  
This course, when taken for a letter grade, meets the General Education requirement for either Culture and Belief or Societies of the World, but not both. This course fulfills the requirement that one of the eight General Education courses also engage substantially with Study of the Past. Offered jointly with Divinity School as 3625.

**Islamic Civilizations 211**

Jurisprudence of the SCC of Egypt, 2011 thru 2014: Aspects of Constitutional Doctrine (156321)

*Baber Johansen*

2016 Spring (4 Credits)  
**Schedule:**  
T 0200 PM - 0359 PM
The aim of this seminar is to study the SCC’s role in the transition processes between the presidencies of Nasser and Mubarak, on the one hand, the presidencies of Mubarak to Mursi and from Mursi to the situation of 2014. Under all these regimes the SCC’s task is to guarantee the state’s abidance by its constitutional obligations in the field of legal procedure and democratic principles. In a first step we will compare the tasks assigned to the highest courts of the different branches of the judiciary in Egypt and the way in which the SCC is integrated into this hierarchy of this courts. In a second step we will study the way in which the SCC in the past acted as guarantor of constitutional norms with special consideration of Human Rights, the interpretation of Islamic Law as a constitutional source of national legislation and the state’s prerogative of ruling under rules of emergence. Finally, we will focus on the role of the SCC as actor in the transition from the Mubarak to the Mursi presidency and from the Mursi regime to the regime under the control of the military that came into existence between July 2013 and February 2014. For the first and the second part we will mainly rely on the texts of the constitutions of 1971 and 1980 and on secondary literature on the court’s jurisprudence. The third part will mainly be based on the texts of the constitutions of 2012 and 2014, on the political calendar of the years 2011-2014 and on BJ’s translations of some of the most important decisions of the SCC during the 2011-2014 period and the analysis of their function in the transition process.
From the eighth century on, the construction of gendered spheres in the *fiqh* assigns to women the capacity to dominate and control certain spheres, such as the sphere of reproduction, the education of children through the first years of their life, some schools of law also assign only to women the right to report to courts and the outer world on acts and persons they have seen in the gendered spheres dominated by women. The seminar will try to establish a full list of such gendered spheres under feminine control. The reasons by which such gendered spheres are justified by the jurists are many: the women's intimacy has to be protected against the intrusion of the male gaze and touching that may stir the man's and the woman's sexual desire for each other. The seminar will discuss the growing list of reasons for additional veiling and seclusion in the writings of different schools of Sunni law. At the same time, an inverse development also takes place. The number of exceptional situations that require the uncovering of free (and slave) women in the presence of male strangers is constantly growing. Such situations as medical therapy or identification before a court require and justify the unveiling of women in the presence of strangers. As a result, a particular category of women of high standing is developed who are exempt from these exceptions. We will try to follow the development of the casuistry on veiling and unveiling and to find a satisfying explanation for the many contradictions that characterize the arguments for veiling as developed in the legal literature of the classical period. Such an effort to come to terms with the notions of the legal development of veiling from the eighth to the nineteenth century will also allow us to understand better the fundamental change that has taken place in the functions attributed to veiling over the last 50 years.

**Course Notes:** Offered jointly with the Divinity School as 3486.

have encouraged a new understanding of Islam and a growing opposition against authoritarian states, developments that were visible since the 1990s also in the Arab world. The growing role of non-Islamist political activists during that period shows the widespread disappointment with the Muslim Brothers and the concept of an Islamic State, but it does not seem to lead to a renaissance of liberalism. The question which political and cultural role Islamic modernism is going to play in the near future is hard to answer. The seminar does not pretend to answer it.

Jewish Studies 157
The Binding of Isaac in Jewish, Christian, and Islamic Tradition (160491)
David Stern
2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: None Enrollment Cap: n/a

The Akeidah, or the Binding of Isaac, as told in Genesis 22, is one of the great Biblical stories and the foundation for one of the great themes of Western religion, the near-sacrifice and restoration of the beloved son. The story is also one of the most enigmatic texts in all Biblical literature, and a source for countless later re-tellings and re-imaginings in later Jewish, Christian, and Islamic literature. In this course, we will study the history of this narrative, its interpretation, and reception from the Bible through the contemporary period in order to show how a Biblical
tradition develops and changes in response to historical and cultural change. The focus will be on Jewish tradition but we will also read Greco-Roman, Christian and Islamic parallels because, as we shall see, no religious tradition in Western culture has ever developed in a vacuum. In this way, we will also attempt to understand the very nature of Tradition-- the process by which the past is received and handed on to future generations-- as it figures in Judaism and Western culture in general. All readings will be in English translation; texts will include Biblical selections, Euripides, Hellenistic Jewish and Rabbinic works, medieval chronicles and commentaries, early Christian and Islamic sources, Kierkegaard, Kafka, and other modern prose and poetry including contemporary American and Israeli prose and poetry.

### Modern Hebrew 241R

**Advanced Seminar in Modern Hebrew: Israeli Culture: Cinema & Literature (127670)**

*Irit Aharony*

2015 Fall (4 Credits)

**Schedule:** W 0700 PM - 0859 PM  
M 0100 PM - 0259 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

This course constitutes the final level of Modern Hebrew language studies. The course offers representative readings and screenings from contemporary Israeli literature and cinema, and it forms bases of discussion on major cultural and linguistic themes through academic readings. We will focus on the theme of the family in Israeli culture and relationships between fathers and sons in "Far away Islands"; "Book of Intimate Grammar"; the new series "Shtissel"; and more.
Course Notes: Offered jointly with the Divinity School as 4045. Not open to auditors. Discussions, papers, movies and texts presented only in Hebrew.

Recommended Prep: Modern Hebrew 130b or equivalent.

Modern Middle East  100

Introduction to the Modern Middle East (107349)

Malika Zeghal
Mary Elston

2016 Spring (4 Credits)

Schedule: MW 1000 AM - 1059 AM

Instructor Permissions: None
Enrollment Cap: n/a

An introduction to Middle Eastern Studies focusing on the modern period. Lectures will be sequenced according to historical chronology but will be thematically organized. This is not a survey course and it will not be exhaustive in its coverage of the region. Readings will consist of primary and secondary sources. This course is designed to give students a good grasp of the history of the modern Middle East and of the major themes in modern Middle Eastern Studies. Students will critically engage with some of the most important topics that resonate in that area of the world, and will also be exposed to the diverse ways in which the scholarly literature has shaped and approached these topics across disciplines. The larger aim of the course is to develop students' critical thinking in dealing with the history, cultures, politics, and political economies of the contemporary Middle East. Required for all concentrators in The Modern Middle East. Open to all undergraduate and graduate students. There are no prerequisites for this course.

Course Notes: A required course primarily for undergraduates pursuing a secondary field in modern Middle Eastern Studies.

Modern Middle East  200A

Approaches to Middle Eastern Studies (117327)

William Granara
Arafat Razaque

2015 Fall (4 Credits)

Schedule: M 0100 PM - 0259 PM

Instructor Permissions: Instructor
Enrollment Cap: n/a

Interdisciplinary seminar serves as an introduction to the major disciplines constituting Middle Eastern Studies, including history, political science, anthropology, literature and Islamic Studies. Faculty affiliated with Center for Middle Eastern Studies serve as guest lecturers.

Course Notes: Taught by members of the department. Required for students pursuing the AM in Middle Eastern Studies. Primarily for first-term students in the AM in Middle Eastern Studies program, although open to Graduate students in related fields.

What defines the Middle East? What long-term historical and cultural developments can we trace in the region? How do these affect contemporary global order and policy? This team-taught course in the NELC department will address these three fundamental questions of great present relevance by introducing students to the ancient and modern peoples, languages, cultures, and societies of Western Asia and North Africa. The study of this diverse region is uniquely aided by a deep-time perspective afforded by thousands of years of vibrant art, writing and cultural artefacts. Relying on the classic expertise integral to area studies, the course brings together faculty from a variety of disciplines—from history and archaeology to literature and philology, and from sociology and economy to the political sciences—in a common endeavour to explore the rich cultural complex of the region through four key topics: history, religion, literature and politics.

Course Notes: Formerly NEC 97r, this course satisfies the NELC Sophomore Tutorial requirements. Taught by Members of the Department.

Persian 155
"Beginnings": Prefaces and Exordiums in Classical Persian Literature (159759)

Justine Landau
2015 Fall (4 Credits) 

Instructor Permissions: Instructor Enrollment Cap: n/a

Schedule: TR 1000 AM - 1129 AM

Readings from major Persian poetic and prose works from the 10th to the 15th century, with a focus on prefaces and exordiums. Spanning across genres, from epic, lyric and narrative verse to didactic andarz, scientific treatise and historiography, the course will explore the various possible openings of classical Persian texts and survey the functions and techniques of literary thresholds. Authors will include Ferdowsi, Keykāvūs, Neẓāmī, Joveynī, Rūmī and Jāmī.

Course Notes: Instructor: Justine Landau
Recommended Prep: At least two years of Persian or equivalent.

Additional Course Attributes:

Persian 158
Modern Persian Poetry and Prose (159766)

Amr Ahmed
2016 Spring (4 Credits) 

Instructor Permissions: None Enrollment Cap: n/a

Schedule: TR 1130 AM - 1259 PM

The course focuses on the reading and understanding of a selection of texts from various genres within the corpus of modern Persian poetry and prose. Students will become acquainted with the major actors of the early Iranian literary modernity (late 19th - early 20th century) through a selection of excerpts drawn from their literary as well as theoretical output. The detailed understanding of the language at play among Iranian modernists will complement the study of the context and literary significance of these texts.

Recommended Prep: At least two years of Persian or equivalent.
Persian 165

Sweet and Sour: A Taste of Persian Literary and Visual Culture (159765)

Justine Landau

2016 Spring (4 Credits)  
Schedule:  T 0200 PM - 0359 PM

Instructor Permissions:  None  
Enrollment Cap:  n/a

Introduction to some of the most significant aspects of Persian Culture, explored through the notion of "sweet-and-sour" (torsh-o shirin). Borrowed from the realm of food and cookery, the idiom refers to a dominant flavor in Persian cuisine. Yet, it may also express the conflicting nature of human experience or the savory contrasts at play in works of art and craft. This course examines the paradigm of taste and its role as an aesthetic and anthropological criterion in pre-modern and modern Persian culture. From the pickles market in Hamadan and Avicenna's Canon of Medicine to Nezami's romance Khosrow-o Shirin and Abbas Kiarostami's Taste of Cherry, we will survey a wide array of material from literature, iconography, cinema and the culinary arts.

Course Notes:  Instructor: Justine Landau. Knowledge of Persian not required; a separate section will be arranged for students with adequate reading knowledge of Persian.

Persian 251

Classical Persian Poetics and Rhetoric (159760)

Justine Landau

2015 Fall (4 Credits)  
Schedule:  T 0200 PM - 0359 PM

Instructor Permissions:  Instructor  
Enrollment Cap:  n/a

This course explores the development of Persian literary theory from the 11th century onwards, with readings from the major authors who shaped the technical (Raduyani, Rasid al-Din Vatvat, Sams-e Qeys-e Razi, Hoseyn Vaez-e Kasefi), didactic (Keykavus, Nezami Arudi) and philosophical (Nasir al-Din Tusi, Jami) trends in classical literary scholarship. Students will become acquainted with the tools and concepts of literary analysis developed in pre-modern Iran and exert their skills through the practice of close reading and discussion of select literary material.

Course Notes:  Instructor: Justine Landau

Recommended Prep:  At least two years of Persian or equivalent.

**Subject: Yiddish**

**Yiddish AA**

Elementary Yiddish (114058)  
*Yuri Vedenyapin*

2015 Fall (4 Credits)  
**Schedule:** MWF 1000 AM - 1059 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Introduction to the Yiddish language, as written and spoken in Eastern Europe, the Americas, Israel, and around the world, and through it, to the culture of Ashkenazic Jews. Development of reading, writing, speaking, and oral comprehension skills. Course materials include selections from both secular and religious Yiddish literature; Yiddish jokes, songs, and proverbs; and films of Jewish life past and present. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:**  
For students with little or no knowledge of Yiddish. Additional sections at different times may be added as needed. Yiddish AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Neurobiology  101A

Novel Therapeutics in the Central Nervous System (113003)

Recent advances have elucidated new non-traditional molecular signaling pathways involved in many disorders and diseases in the CNS. This tutorial will focus on examining novel therapeutics and ‘outside the box’ approaches to treat CNS disorders: Alzheimer’s, Autism, Schizophrenia, Traumatic Injury and Multiple Sclerosis. To do this, we will examine primary and clinical literature and explore drug design strategies. Students must complete both terms of this course(parts A and B) within the same academic year in order to receive credit.

Class Notes: Please enroll in Neurobiology 101 if you are interested in taking one of the

Neurobiology 104A

The Neurobiology of Drug Addiction (109592)

_Johanna Gutlerner_

2015 Fall (2 Credits)

_Instructor Permissions:_ Instructor

Schedule: W 0330 PM - 0459 PM

Enrollment Cap: 12

Students will examine primary literature to understand the acute and chronic action of drugs of abuse, including opioids, cannabinoids, psychostimulants, nicotine, and ethanol. The course will introduce the models of addiction and examine animal and human research results to build an understanding of how modifications to molecular signaling, cells and neural circuits underlie the development of the addicted brain. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Class Notes: Please enroll in Neurobiology 101 if you are interested in taking one of the sophomore tutorials.
Neurobiology 104B

The Neurobiology of Drug Addiction (159698)

Johanna Gutlerner

2016 Spring (2 Credits)

Schedule: W 0330 PM - 0459 PM

Instructor Permissions: Instructor 

Enrollment Cap: 12

Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Neurobiology 105A

Fundamentals of Computational Neuroscience (156051)

Alexander Mathis

2015 Fall (2 Credits)

Schedule: T 0700 PM - 0829 PM

Instructor Permissions: Instructor 

Enrollment Cap: 12

The brain is an extremely complex computing device. Computational neuroscience seeks to understand brain function by constructing mathematical models of the nervous system to summarize our knowledge and gain new insights into how neurons perform basic tasks, e.g., encode stimuli, form memories, or generate movements. This course presents computational techniques for investigating, modeling, and understanding the function of neurons, neuronal networks, and systems. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Class Notes: Please enroll in Neurobiology 101 if you are interested in taking one of the sophomore tutorials.

Recommended Prep: one of Math 19a/21a/21b or above.

Human Cognition: Reading and Writing the Neural Code (159700)

*Shaun Patel*

2015 Fall (2 Credits)  
**Schedule:**  
R 0600 PM - 0729 PM

**Instructor Permissions:**  
Instructor  
**Enrollment Cap:**  
12

In this course, we will explore a new and cutting-edge discipline in neuroscience -- invasive human neurophysiology. Some neurosurgical procedures, such as deep brain stimulation surgery, allow for the unique opportunity to directly access the human brain while patients are awake-and-behaving. Topics will include: place/grid cells, deep brain stimulation, epilepsy, face processing, brain-machine control, and reward processing. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Class Notes:** Please enroll in Neurobiology 101 if you are interested in taking one of the sophomore tutorials.

Neurobiology 107A
Pleasure, pain and everything between: How Touch Encodes the World Around Us (159702)

Amanda Zimmerman  
Emily Kuehn
2015 Fall (2 Credits)  
Schedule: M 0700 PM - 0829 PM
Instructor Permissions: Instructor  
Enrollment Cap: 12

We rely on our sense of touch for essential tasks and behaviors, including feeding, object recognition and grasping, avoiding physical harm, mating behaviors, and child rearing. This course covers the neural components and circuitry that underlie our sense of touch. From skin to the cortex, we will explore touch and its role in development, diseases, and most importantly, in our everyday life. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.
Neurobiology 107B

The Hippocampus: From Molecules to Memory (159704)

Joshua Sarinana

2015 Fall (2 Credits) Schedule: W 0700 PM - 0829 PM

Instructor Permissions: Instructor Enrollment Cap: 12

The hippocampus encodes our spatial and temporal relationship with our environment. Hippocampal processing of space and time constructs our perception of context, the memories of our experiences, and our ability to imagine future possibilities. Without the hippocampus we would be stuck in the present moment. In this course we will study the genetic, physiological, and behavioral functions of the hippocampus. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Class Notes: Please enroll in Neurobiology 101 if you are interested in taking one of the sophomore tutorials.

Requirements: Prerequisite: LS 1a AND MCB 80
Neurobiology 130
Visual Recognition: Computational and Biophysical Perspective (160750)

Gabriel Kreiman
2015 Fall (4 Credits)

Schedule: M 0330 PM - 0529 PM

Instructor Permissions: Instructor
Enrollment Cap: n/a

Examines how neuronal circuits represent information and how those circuits are implemented in artificial intelligence algorithms. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision.

Course Notes:

Neuro 130 cannot be taken if Neuro 230 has been taken. Neuro 130 cannot be taken concurrently with Neuro 230.

Recommended Prep:
Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

Requirements:
Prerequisite: ((LifeSci 1A OR LPS A) AND (LifeSci 1B)) AND may not be taken at the same time with NEURO 230

Subject: Independent Study

**Independent Study**  1

*Independent Study (150200)*

*Adam Muri-Rosenthal*

2015 Fall (4 Credits)  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

**Course Notes:** A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

2016 Spring (4 Credits)  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

**Course Notes:** A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's...
resident dean, as well as an outline of the student's proposed project. It
must be submitted to the Allston Burr Resident Dean for approval, ordinarily
in the first week of the term.

Organismic & Evolutionary Biol  10
Foundations of Biological Diversity (144594)

Brian Farrell
Andrew Richardson
Elena Kramer

2015 Fall (4 Credits)  Schedule:  MWF 1200 PM - 1259 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

An integrated approach to the diversity of life, emphasizing how chemical, physical, genetic, ecological and geologic processes contribute to the origin and maintenance of biological diversity. Topics to be covered include the evolution of metabolic pathways, multicellularity and structural complexity; causes and consequences of differences in diversity over space and time; the role of species interactions (including symbioses) as an evolutionary force; and the evolution of humans and their impact on the environment.

Course Notes:  Knowledge of introductory molecular, cellular biology, and genetics is recommended. This course, when taken for a letter grade, meets the General Education requirement for Science of Living Systems.

Organismic & Evolutionary Biol  50
Genetics and Genomics (130236)

Daniel Hartl
Robin Hopkins

2015 Fall (4 Credits)  Schedule:  TR 1130 AM - 1259 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Fundamental concepts in genetics and genomics forming a critical foundation for biology approached from two perspectives: (1) as a body of knowledge pertaining to genetic transmission, function, mutation, and evolution in eukaryotes and prokaryotes; and (2) as an experimental approach providing a toolkit for the study of biological processes such as development and behavior. Topics include structure, function, transmission, linkage, mutation, and manipulation of genes; genetic approaches in experimental studies of biological processes; and analysis of genomes in individuals and populations. Related ethical issues also discussed include genetically modified organisms, gene therapy, genetic testing, personalized medicine, and genetic privacy.

Organismic & Evolutionary Biol  51

Biology and Evolution of Invertebrate Animals (144597)

Cassandra Extavour

2016 Spring (4 Credits) Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: Instructor Enrollment Cap: 14

Introduction to invertebrate diversity, will cover the development, adult anatomy, biology and evolutionary relationships of the main animal phyla including sponges, mollusks, annelids and arthropods among others. Special emphasis is placed on understanding the broad diversity of animal forms and their adaptations to different ecosystems and how these phenomena shape animal evolution. Lectures will be complemented with a mandatory weekly lab and a field trip to different areas of outstanding marine diversity in the Caribbean.

Course Notes: Field trip to the Caribbean for research during spring break.

Recommended Prep: LS1b, OEB 10, OEB 53 or permission of instructor required.
Lab component: Wednesdays, 3:00pm-6:00pm, Spring 2016

Organismic & Evolutionary Biol  52

Biology of Plants (131579)

Elena Kramer
Noel Holbrook

2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: None Enrollment Cap: n/a

Introduction to the structure, diversity, and physiology of plants with an emphasis on evolutionary relationships and adaptations to life on land. Topics include growth, resource acquisition, interactions with other organisms (i.e., fungi, bacteria, insects), reproduction, and survival in extreme environments. Laboratory sessions provide an overview of plant and diversity and an introduction to basic physiological processes.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Science of Living Systems.

Class Notes: Tu., Th., 10-11:30, one afternoon laboratory per week, plus occasional field trips

Evolutionary Biology (142224)

Andrew Berry
Jim Mallet

2016 Spring (4 Credits)  Schedule:  MW 0100 PM - 0229 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

The course covers micro- and macro-evolution, ranging in its focus from population genetics through molecular evolution to the grand patterns of the fossil record. Topics emphasized include both natural and sexual selection, the ecological context of adaptation, genomic and developmental mechanisms of evolutionary innovation, speciation, phylogenetics, and evolutionary approaches to human problems.

Recommended Prep:  Life Sciences 1b or permission of instructor.

Ecology: Populations, Communities, and Ecosystems (132206)

Paul Moorcroft
Collin Johnson

2016 Spring (4 Credits)  Schedule:  MWF 1000 AM - 1059 AM
This course examines the relationships of organisms to their environment at the individual, population, and community level. The course covers topics in both pure and applied ecology including: adaptations to the physical environment, population dynamics, competition, predator-prey interactions, community ecology, ecosystem structure, stability, and function, the ecology of infectious diseases, and natural resource management.

**Recommended Prep:** Mathematics 1a or 1b.

Geobiology and the History of Life (130331)

*David Johnston*

*Andrew Knoll*

2016 Spring (4 Credits)  
**Schedule:** MWF 1000 AM - 1059 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

**Course Notes:** OEB 56 is also offered as EPS 56. Students may not take both OEB 56 and EPS 56 for credit.

**Class Notes:** M., W., F., at 10, and a weekly three-hour lab to be arranged, and one field trip.

**Recommended Prep:** EPS 21, 22, or Life Sciences 1b; or permission of instructor.

Biology of Mammals (156751)

Jonathan Losos

2015 Fall (4 Credits)  Schedule:  TR 0100 PM - 0229 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

An introduction to the biology of mammals. Lectures and laboratories examine the morphology, systematics, natural history, behavior, ecology, evolutionary relationships, and biogeography of all major taxa.

Course Notes:  Freshman only admitted under exceptional circumstances.

Lab meeting:  Wednesdays, 2:30pm-5:30pm.  A second lab may be scheduled depending on enrollment.

Class Notes:  Lab meeting:  Wednesdays, 2:30pm-5:30pm.  A second lab may be scheduled depending on enrollment.

Recommended Prep:  LS 1b or OEB 10 recommended; students who haven't taken either course may require additional study on topics with which they are unfamiliar.

OEB 101 will also include weekend field trips for whale watching and to the zoo.

Mice remain the most popular vertebrates used in biomedical R&D today, with tens of millions of lab mice produced annually in the United States alone. At the same time, mice are commonly studied for their own characteristics that continue to enhance our knowledge about innate mammalian behavior, predator-prey dynamics in changing ecosystems, and reservoir hosts for emerging diseases, to name a few. This course intends to provide a strong foundation in mouse biology, both basic and applied, as well as exposure to cultural and political aspects of the current impact of mice (real or fictitious) on contemporary societal values. Instructors: Steven M. Niemi and Kathleen Pritchett-Corning.

Plant Development and Differentiation (148122)
Elena Kramer
2015 Fall (4 Credits) Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
A comprehensive lecture course on the developmental biology of plants from fertilization through all phases of vegetative and reproductive growth. Material includes both morphological and genetic studies. Although the main focus of the course is angiosperms, examples are drawn from other lineages of land plants as well. Additional topics
include control of cell division and elongation, signal transduction, and hormone response.

**Recommended Prep:** Life Sciences 1b and OEB 52 (formerly OEB 124) or permission of the instructor.

Biology of Fishes (140830)

George Lauder

2016 Spring (4 Credits) Schedule: MW 1100 AM - 1229 PM

Instructor Permissions: None Enrollment Cap: n/a

Fishes inhabit diverse aquatic environments including deep seas, intertidal zones, coral reefs, polar waters, the vast Amazonian basin, and great East African lakes. A single fish species may occupy diverse environments through extraordinary long distance horizontal and vertical migrations. To explore this unparalleled diversity, the course emphasizes bridging traditional academic boundaries with integrative analyses of the biology underlying rapid evolutionary radiations and stasis.
**Organismic & Evolutionary Biol 155R**

Biology of Insects (142688)

*Naomi Pierce*

*Michael Canfield*

2015 Fall (4 Credits)  
**Schedule:** WF 0130 PM - 0259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

An introduction to the major groups of insects. The life history, morphology, physiology, and ecology of the main taxa are examined through a combination of lecture, lab, and field exercises. Topics include the phylogeny of terrestrial arthropods with a review of the extant orders, an analysis of abiotic and biotic factors regulating populations, including water balance, temperature, migration, parasitism, mutualism, sociality, insect/plant interactions, medical entomology, and the use of insects in biological control.

**Course Notes:** Permission of instructor.

**Organismic & Evolutionary Biol 157**

Global Change Biology (143485)

Biology and Diversity of Birds (143846)

_Scott Edwards_

2016 Spring (4 Credits)

**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

An introduction to the biology of birds. Covers the fossil record and theories for avian origins, physiology and anatomy, higher-level systematics and field characters of the ~27 orders, speciation processes, nesting and courtship behavior, vocalizations, mating systems and sexual selection, cooperative breeding, demography and conservation. Optional field trip during spring break. Laboratories will consist of gross anatomy, bird watching excursions in the Cambridge area, field techniques and specimen preparation, and systematic study of avian groups using the collections of the Museum of Comparative Zoology.

**Course Notes:** OEB 10 or OEB 53 or permission of the instructor. Students in their third
and fourth years are encouraged to enroll in the course.

Physiological and Biochemical Adaptation (148252)

Peter Girguis

2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: None Enrollment Cap: n/a

This course examines how microbes and animals have evolved to maintain function throughout the wide range of extant habitats. Emphasis is on physiological/biochemical evolution in response to environmental conditions, including climate change and life in extreme environments. As the first course in the "genomes to biomes" series, we will examine new approaches to interrogating organismal physiology in nature. Those interested can continue the "genomes to biomes" program via LS 100r.

Course Notes: One lab per week.

Recommended Prep: OEB 10 or CHEM 27 or permission of the instructor.

Laboratory Techniques in Ecological Physiology (146017)

Peter Girguis

2016 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course examines how microbes and animals have evolved to maintain function throughout the wide range of extant habitats. Emphasis is on physiological/biochemical evolution in response to environmental conditions, including climate change and life in extreme environments. As the first course in the "genomes to biomes" series, we will examine new approaches to interrogating organismal physiology in nature. Those interested can continue the "genomes to biomes" program via LS 100r.

Course Notes: One lab per week.

Recommended Prep: OEB 10 or CHEM 27 or permission of the instructor.

You've designed your experiment, made your measurements, and analyzed your data. Now what? How do you write a paper that will not only get accepted, but also get cited? This is a hands-on workshop course targeted at graduate students who are ready to write up their first research paper for submission to a peer-reviewed scientific journal. The class will emphasize the idea that your paper should tell a (nonfiction!) story that engages the reader. By the end of the semester you will have a coherent, well-structured, and polished manuscript.

You've designed your experiment, made your measurements, and analyzed your data. Now what? How do you write a paper that will not only get accepted, but also get cited? This is a hands-on workshop course targeted at graduate students who are ready to write up their first research paper for submission to a peer-reviewed scientific journal. The class will emphasize the idea that your paper should tell a (nonfiction!) story that engages the reader. By the end of the semester you will have a coherent, well-structured, and polished manuscript.

**Organismic & Evolutionary Biol 210**

Writing Scientific Papers (130327)

*Andrew Richardson*

2015 Fall (4 Credits)  
**Schedule:** MW 0230 PM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

This is a hands-on workshop course targeted at graduate students who are ready to write up their first research paper for submission to a peer-reviewed scientific journal. The class will emphasize the idea that your paper should tell a (nonfiction!) story that engages the reader. By the end of the semester you will have a coherent, well-structured, and polished manuscript.

**Organismic & Evolutionary Biol 212R**

Advanced Topics in Plant Physiology (131261)

*Noel Holbrook*

2015 Fall (4 Credits)  
**Schedule:** W 1200 PM - 0229 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

A critical discussion of current research in plant physiology including measurement techniques, modeling, and experimental approaches. In 2015, the focus will be on quantitative models of water movement from soil to atmosphere.

**Recommended Prep:** OEB 52, OEB 120, or permission of instructor.

**Organismic & Evolutionary Biol 216**

Modern Conservation Biology (156660)

*Elizabeth Wolkovich*

2016 Spring (4 Credits)  
**Schedule:** W 0210 PM - 0329 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Readings (mainly from the scientific literature) and discussion of what defines and theoretically underpins the field of conservation biology - though discussion is on the current version of the field, readings will span its development over the last 50+ years.

**Recommended Prep:** OEB 55 or permission of instructor
Organismic & Evolutionary Biol 217

What Makes a Cat? (160459)

Stephanie Pierce

2015 Fall (4 Credits) Schedule: M 0300 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: 6

A student directed course that explores the origin and evolution of cats (Felidae) through a mixture of literature discussions, cadaveric dissection and fossil observation. Discussion topics will be broad and far reaching, including such things as: evolutionary dynamics, ecomorphology, and feeding and locomotor performance. Alongside in class discussions, students will participate in dissecting cadaveric felid material with the aim to build hands-on musculoskeletal knowledge.

Topic: What Makes a Cat?

Course Notes: Prerequisite: with permission of instructor. Seminar for graduate students with an enrollment of six students maximum. Location: Museum of Comparative Zoology 4 (Oceanography Seminar Room) and MCZ. Vertebrate Preparation Laboratory.

Organismic & Evolutionary Biol 223

Topics in Neurogenetics (145012)

Yun Zhang

2016 Spring (4 Credits) Schedule: W 0200 PM - 0329 PM

Instructor Permissions: None Enrollment Cap: n/a

We will discuss current literatures related to genetic effects on neural functions, including: (1) mental illness; (2) neurodegenerative diseases; (3) various behaviors; (4) learning and memory.

Course Notes: The course is primarily planned for new graduate students, but it is also open to interested senior undergraduates who have taken OEB 57 (formerly BS 57) or MCB 80 and obtained permission from the instructor.

Organismic & Evolutionary Biol 230

Comparative Genomics (145414)

Jim Mallet

2016 Spring (4 Credits) Schedule: R 0130 PM - 0329 PM

Instructor Permissions: None Enrollment Cap: n/a

This discussion-based course will survey modern ideas about evolution and speciation, and how they have changed as a result of genomic approaches. As well as readings and discussions in class, the course will utilize some live online video sessions with major players in the field of evolutionary and comparative genomics.

Recommended Prep: Permission of instructor. Instructor's permission. It is recommended that a basic evolution or population genetics course will have been taken (e.g. OEB 53 or OEB 242).

Organismic & Evolutionary Biol 234

Topics in Marine Biology (140902)

Robert M. Woollacott

2016 Spring (4 Credits) Schedule: M 0230 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: 10

This seminar explores the fragility and resilience of marine life and ecosystems in the face of perturbations such as habitat fragmentation, land use change, anthropogenic climate change, pollution, alien species, and unsustainable fishing practices.

Recommended Prep: Permission of instructor. Course note: Course is designed for advanced undergraduate students only and graduate students.

Organismic & Evolutionary Biol 252

Coalescent Theory (131583)

John Wakeley

2015 Fall (4 Credits) Schedule: MWF 0900 AM - 0959 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

The mathematics and computation of ancestral inference in population genetics. Theory relates observable genetic data to factors of evolution such as mutation, genetic drift, migration, natural selection, and population structure.

Recommended Prep: OEB 242 or permission of instructor: calculus and statistics or probability.
Organismic & Evolutionary Biol 253R
Evolutionary Genetics Seminar (131584)

John Wakeley
2016 Spring (4 Credits)

Schedule: M 0300 PM - 0429 PM
Instructor Permissions: None
Enrollment Cap: n/a

Readings and discussion of primary literature in population and evolutionary genetics.

Recommended Prep: OEB 152 or permission of instructor.

Organismic & Evolutionary Biol 277
In Sickness and in Health: Topics in Symbiosis (146387)

Colleen Cavanaugh
2016 Spring (4 Credits)

Schedule: W 0200 PM - 0459 PM
Instructor Permissions: None
Enrollment Cap: n/a

Critical review and discussion of current issues in symbiosis. Emphasis is on microbe-eukaryote symbioses ranging from mutualistic to pathogenic associations. In 2011 the course will focus on the human microbiome and topics selected by faculty and students.

Recommended Prep: Life Sciences 1a, 1b or equivalent, microbial science, or permission of instructor.

Organismic & Evolutionary Biol 290
Microbial Sciences: Chemistry, Ecology and Evolution (124109)

Michael Gilmore
2016 Spring (4 Credits)

Schedule: F 0830 AM - 1144 AM
Instructor Permissions: Instructor
Enrollment Cap: 20
This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, and microbiologically-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology.

Course Notes: Also offered as Microbiology 210.

Class Notes: F., at 8:30, F., 9:45–11:45

Recommended Prep: For advanced undergraduates, Life Sciences 1a and 1b are required, or permission of instructor. MCB 52 is recommended.

Philosophy

Subject: Philosophy

Philosophy    3
The True and the Good (111175)

Bernhard Nickel
2015 Fall (4 Credits)  
Schedule: MWF 1100 AM - 1159 AM
Instructor Permissions: Instructor  
Enrollment Cap: n/a

The course introduces students to philosophical argumentation and writing. It is organized around a range of central philosophical questions, concerning the nature of right and wrong, free will and responsibility, the relation between self, mind, and nature, and god and death. We'll pay particular attention to how answers to one question interact with answers to the others. No previous experience with philosophy is required. Note: This course, when taken for letter grade, meets the General Education requirement for Culture and Belief.

Philosophy    7
Ancient Greek Philosophy (114416)

Jacob Rosen
2016 Spring (4 Credits)  
Schedule: MWF 1100 AM - 1159 AM
Instructor Permissions: None  
Enrollment Cap: n/a

The origins of western philosophy. We will survey the fragmentary evidence remaining for the pre-Socratic philosophers, then spend most of the course examining questions raised and arguments put forward by Socrates (as portrayed by Plato), Plato, and Aristotle. What is it to learn, understand, and explain something? What are the most basic entities? What should be our highest aim in life? What is the difference between 'philosophy' and other (literary, political, religious, scientific) endeavors?

Class Notes: The Friday meeting for this course will be held at the discretion of the instructor.

Philosophy 8
Introduction to Early Modern Philosophy (124788)

Alison Simmons

2016 Spring (4 Credits) Schedule: MWF 1200 PM - 1259 PM
Instructor Permissions: None Enrollment Cap: n/a

A survey of 17th- and 18th-century philosophy with a focus on the major metaphysical and epistemological writings of Descartes, Locke, Hume, and Kant. Topics include the natures of mind and body, the existence of God, the existence of the external world, the nature and limits of human knowledge, and the changing relationship between science and philosophy.

Philosophy 13
Morality and Its Critics (156555)

Benjamin Bagley

2015 Fall (4 Credits) Schedule: TR 1200 PM - 1259 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

An introduction to ethics, focusing on two representative views of the nature and significance of morality. On one (utilitarianism), morality is roughly about doing what best serves the interests of everyone involved; on the other (associated with Immanuel Kant) it instead concerns relating to people on terms that respect their dignity and autonomy. We'll explore these views in the context of issues ranging from animal rights and global poverty to happiness, manipulation, and responsibility, and we also consider whether both views might seriously exaggerate the place of morality in our lives.

Philosophy 21
Love and Inner Conflict (159749)

James Doyle

2015 Fall (4 Credits) Schedule: TR 0100 PM - 0159 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

The most important feature distinguishing human beings from other animals is generally supposed to be a capacity
for reasoning—about how things are, but also about what to do. It is clear, however, that no account of intentional human action that restricts itself to reasoning will be adequate. Much of what we do seems to be the outcome of some kind of inner struggle or conflict about what to do, or (in the more momentous cases) which path in life to follow, and sometimes we act in ways we know to be ‘contrary to reason’. It is not at all clear what’s really going on when this happens.

Plato (428-348 BCE), Augustine (354-430 CE) and Freud (1856-1939) offer especially interesting and plausible accounts of such inner conflict. In their different ways, they each understood such conflict in terms of the soul’s having parts, or distinct faculties. They are also alike in positing a fundamental but highly plastic force in the soul, in terms of which its development or deformation, including its division into parts, can be understood. They all called this force love, although it is not straightforward what they meant, or whether they meant the same thing, by calling it that.

In this course, we will look at these theories of the composite, love-driven psyche as expressed in various of their works, such as Plato’s Gorgias, Symposium and Republic, Augustine’s Confessions and De Trinitate, and Freud’s The Interpretation of Dreams and The Ego and the Id. The aim is to achieve some understanding, not only of the theories, but also of the phenomena they are theories of.

Philosophy of Psychology (109353)

Guven Guzeldere

2016 Spring (4 Credits)  
**Schedule:** TR 1100 AM - 1159 AM

Instructor Permissions: None  
Enrollment Cap: n/a

An introduction to philosophical questions in psychology and the cognitive sciences: the nature of consciousness, the relation between perception, cognition, and introspection, the pertinence of language for rational thought, and the role of memory for personal identity and the self. We also examine related questions, such as how we can study the content of minds in non-human animals and assess the possibility of minds in robots, as well as how certain brain dysfunctions affect the mind and the self.

Existentialism in Literature and Film (109600)

Sean Kelly

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

What is it to be a human being? How can human beings live meaningful lives? These questions guide our discussion of theistic and atheistic existentialism and their manifestations in literature and film. Material includes philosophical texts from Pascal, Kierkegaard, Nietzsche, Sartre; literature from Dostoevsky, Kafka, Beckett; films
from Jean-Luc Godard, Alain Resnais, Carol Reed.

Philosophy 105

Stoicism: Proseminar (159685)

James Doyle

2015 Fall (4 Credits)  Schedule:  M 0200 PM - 0359 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Stoicism was by far the most systematic and influential of the philosophical schools that arose in the 'Hellenistic' period between the death of Aristotle (322 BCE) and the end of the Roman republic (31 BCE); its significance as a tradition in ancient philosophy is second only to that of Socrates, Plato and Aristotle, with which it is to some extent continuous. The writings of the Greek founders, starting with Zeno of Citium in the early third century BCE, now exist only in quotations and paraphrases in later authors, but Roman Stoicism is well attested in complete surviving works of Cicero, Seneca and others. A version of Stoic ethics became something of a default guide to life for generations of well-born Romans. In this course we will read the main surviving texts of Stoicism, and examine Stoic ideas under the three headings of physics/metaphysics, ethics and logic. The Stoics developed the first detailed and systematic account of nature that can be thought of as materialist, and the first such account of ethics based on the idea of natural law. They also made the first and perhaps only significant advances in logic between Aristotle and the Middle Ages.
Philosophy 125

Beyond Dualism: Descartes and his Critics (121954)

*Alison Simmons*

2016 Spring (4 Credits)  
**Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

We will explore Descartes' dualism in its historical context. After examining the transformation that Descartes brought about in our conceptions of body and mind, we will consider some of the notorious metaphysical problems his dualism gives rise to and four 17th century attempts to push back against it in the figures of Princess Elizabeth of Bohemia, Descartes himself, Henry More, Margaret Cavendish and Anne Conway.

Philosophy 129

Kant's Critique of Pure Reason (117823)

*Matthew Boyle*

2016 Spring (4 Credits)  
**Schedule:** MWF 1100 AM - 1159 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

A careful reading of Kant's greatest work, his first *Critique*, aiming at a general understanding of the problems that it seeks to address and the significance of its famous doctrine of “transcendental idealism.” Topics to include: the role of mind in the constitution of experience; the nature of space and time; the relation between self-knowledge and knowledge of objects; causation; freedom of the will; the relation between appearance and reality; the possibility of metaphysics.

**Class Notes:** Friday class meetings will be held at the discretion of the instructor.

Philosophy 137

The Later Philosophy of Wittgenstein (156749)

*Warren Goldfarb*

2015 Fall (4 Credits)  
**Schedule:** MWF 1200 PM - 1259 PM
A close reading of Ludwig Wittgenstein's *Philosophical Investigations*, focusing on its treatments of the topics of meaning, reference, rule-following, cognition, perception, "the private mental realm" knowledge, skepticism, and the nature of philosophy. Attention to Wittgenstein's philosophical methodology, with its claim to dissolve philosophical problems rather than propose solutions to them.

Class Notes: Friday class meetings will be held at the discretion of the instructor.

### Philosophy 140

**Fundamentals of Logic (111424)**

*Warren Goldfarb*

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM

*Instructor Permissions:* Instructor  
*Enrollment Cap:* n/a

Analysis of the central concepts of logic: validity, satisfiability, implication. Basic elements of model theory: completeness, compactness, Löwenheim-Skolem theorem, Beth's definability theorem. Applications to the foundations of mathematics. Attention also to higher-order logic and to non-classical (constructive) logical systems.

Course Notes: May be taken as a first course in logic by those with some mathematical background (at least a grade of 4 or 5 on the Calculus BC Advanced Placement Exam or equivalent college work).

### Philosophy 144

**Logic and Philosophy (109447)**

*Warren Goldfarb*

2016 Spring (4 Credits)  
**Schedule:** MWF 1000 AM - 1059 AM

*Instructor Permissions:* None  
*Enrollment Cap:* n/a

Three philosophically important results of modern logic: Gödel's incompleteness theorems; Turing's definition of mechanical computability; Tarski's theory of truth for formalized languages. Discusses both mathematical content and philosophical significance of these results. Prerequisite: Some knowledge of deductive logic.

Class Notes: Friday class meetings will be held at the discretion of the instructor.
Philosophy 147

Philosophy of Language (146883)

Bernhard Nickel

2016 Spring (4 Credits)  
Schedule: TR 0100 PM - 0159 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Our language use lies at the intersection of our richly detailed, idiosyncratic point of view and the fact that we all use the same, shared language, grounded in part in our shared biology. Our language lies at the intersection of how we make sense of the world in a way that may be quite thoroughly detached from the world and the way that we speak about the world. This course looks at the tensions that arise as we try to understand how language can mediate all of these aspects of our lives. In other words, we'll look at the relation between meaning and epistemic concerns, as well as the role that the world plays in constituting content. We'll look at recent feminist work on language as our main case studies.

Philosophy 149Z

Philosophy of Science (114427)

Ned Hall

Susanna Rinard

2016 Spring (4 Credits)  
Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Survey of 20th century and contemporary views on the nature of scientific knowledge, and related issues. Topics may include: logical empiricism, Popper and "falsifiability", induction and confirmation, explanation, scientific realism, causation and laws of nature, and the sense (if any) in which "everything reduces to physics". In one unit of the course we will take up these issues with respect to the burgeoning science of happiness and well-being.

Class Notes:  
sience, philosophy, happiness, well-being, psychology, creationism, intelligent design, God, religion, evolution, Darwin, natural selection, reductionism, physics, causation, explanation, confirmation, induction, skepticism, Hume

Philosophy of Action (132280)
Richard Moran
2016 Spring (4 Credits)  Schedule: W 0200 PM - 0359 PM
Instructor Permissions: None  Enrollment Cap: n/a
An examination of the nature and understanding of intentional action. Topics will include agency and causal explanation, the role of freedom and rationality in understanding action, the agent's own perspective on her action, the scope and variety of actions themselves (mental, physical, social, institutional). Readings will include Davidson, Anscombe, Frankfurt, Velleman and others.

Philosophy 158X
Self-Consciousness and Self Knowledge: Proseminar (159751)
Matthew Boyle
2016 Spring (4 Credits)  Schedule: M 0200 PM - 0359 PM
Instructor Permissions: None  Enrollment Cap: n/a
Many of the most interesting and puzzling features of the mind are connected with the fact that each of us seems to have a special perspective on his or her own mind, a perspective that gives us a distinctive awareness of ourselves "as subject, not mere object" and a distinctive knowledge of our own mental lives "from the first person perspective". We will consider the nature of such self-consciousness and self-knowledge, and also some striking ways in which we can be unknown to ourselves.

Philosophy 171
Well-Being (159747)

Benjamin Bagley

2016 Spring (4 Credits) Schedule: M 0200 PM - 0359 PM
Instructor Permissions: None Enrollment Cap: n/a

What makes someone's life go well? Is it pleasure, desire, satisfaction, or something else? How should questions of well-being bear on one's reasoning about what to do, and on one's relations with other people? Can you assess your well-being by evaluating parts of your life individually, or does it depend on the shape of your life as a whole?
Readings will include work by Richard Kraut, Derek Parfit, T. M. Scanlon, J. David Velleman, and Susan Wolf, among others.

Animals and Ethics: Proseminar (159744)

*Christine Korsgaard*

2015 Fall (4 Credits) Schedule: W 1200 PM - 0159 PM

Instructor Permissions: Instructor Enrollment Cap: 25

What, if anything, do we owe to the other animals, and why? Do the other animals have a moral nature, and does it matter to how we treat them whether they do? What can we learn about human morality by thinking about animals? Should or could animals have legal rights? We will consider some answers to these questions, including utilitarian and Kantian approaches and others.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Ethical Reasoning.

Class Notes: The course will be lottered by application process, administered at the first meeting, on Wednesday, September 9. See the course website for more details. The course is limited to an enrollment of 25 students.

Philosophy 179

Race and Social Justice (124577)

Tommie Shelby

2015 Fall (4 Credits)  Schedule: TR 1000 AM - 1059 AM

Instructor Permissions: Instructor  Enrollment Cap: n/a

Critically examines recent philosophical work on questions of racial justice: What is racism? What makes racial discrimination wrong? Are reparations owed for past racial injustices? Is racial profiling ever justified? Under what conditions should we regard racial disparities (e.g., in wealth or employment) as unjust? Should government foster racial integration in schools and neighborhoods? Is affirmative action unfair? Is a just society a "color-blind" society?

Course Notes: This course, when taken for letter grade, meets the General Education requirement for Ethical Reasoning. This course fulfills the requirement that one of the eight General Education courses also engage substantially with Study of the Past.

GSGE: Violence and Democracy (160770)

_Susanna C. Siegel_

2016 Spring (4 Credits) 

**Schedule:** W 0200 PM - 0459 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

A seminar to prepare for the interdisciplinary content and presentation format of a newly proposed course with General Education designation. This course will examine violence in various forms at the hands of the state toward its own citizens, as well as violence between citizens, and the political impact of fear of such violence, focusing on both philosophical writings and on the US in the last third of the 20th century until today. Note: The seminar will design and develop a General Education course on these themes for undergraduates.

**Meanings as Species: Seminar (159686)**

*Mark Richard*

2015 Fall (4 Credits)  
**Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

We will develop an analogy between linguistic entities (words, meanings) and biological entities (population lineages, species). The goal is to give an account that acknowledges what is correct in Quine’s criticisms of analyticity and reference determinacy while giving the notion of meaning a descriptive and explanatory role. Seminar participants need to have philosophical sophistication; they need not have extensive knowledge of the philosophy of language or the philosophy of biology.

Physical Sciences 2
Mechanics, Elasticity, Fluids, and Diffusion (122575)

Logan S. McCarty

2015 Fall (4 Credits) Schedule: TR 0930 AM - 1059 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

An introduction to classical mechanics, with special emphasis on the motion of organisms in fluids. Topics covered include: kinematics, Newton's laws of motion, oscillations, elasticity, random walks, diffusion, and fluids. Examples and problem set questions will be drawn from the life sciences and medicine. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both. Physical Sciences 1 (or Chemistry 7), Mathematics 1b, or the equivalent.

Physical Sciences 3
Electromagnetism, Circuits, Waves, Optics, and Imaging (122576)

Logan S. McCarty

2016 Spring (4 Credits) Schedule: TR 0930 AM - 1059 AM
Instructor Permissions: None Enrollment Cap: n/a

This course is an introduction to electromagnetism, digital information, waves, optics and sound. Topics covered include: electric and magnetic fields, electrical potential, circuits, simple digital circuits, wave propagation in various media, microscopy, sound and hearing. The course will draw upon a variety of applications to the biological sciences and will use real-world examples to illustrate many of the physical principles described. There are six laboratories. This course is part of an integrated introduction to the physical sciences intended for students who plan to pursue a concentration in the life sciences and/or satisfy pre-medical requirements in Physics. May not ordinarily be taken for credit in addition to Physics 1b, 11b, or 15b. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both. Physical Sciences 2 (or Physics 1a or 11a), Mathematics 1b, or equivalent.

Physical Sciences 12A

Mechanics from an Analytic, Numerical and Experimental Perspective (109274)

Christopher Stubbs

2016 Spring (4 Credits)               Schedule:       TR 0930 AM - 1059 AM

Instructor Permissions: None                Enrollment Cap: n/a

This is the first term of a two-semester introductory physical science and engineering course sequence. The focus is on quantitative scientific reasoning, with the first term's exploration framed in the context of basic mechanics. Students will gain competence in both analytic (using pencil, paper and single-variable calculus) and numerical (using computer modeling) approaches to modeling simple physical systems and for the analysis of experimental data. Topics include kinematics, linear and rotational motion, forces, energy, collisions, gravitation, simple fluids and a brief introduction to waves. Examples are drawn from across the physical sciences and engineering. The course is aimed at first year students who have an interest in pursuing a concentration in the sciences and/or engineering. The course structure includes lecture, discussion and laboratory components. Physical Sciences 12a may not be taken for credit by students who have passed Physics 11a, 15a or 16. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both.

Physical Sciences   12B
Electromagnetism and Statistical Physics from an Analytic, Numerical and Experimental Perspective (109457)
Efthimios Kaxiras
2015 Fall (4 Credits)  Schedule: TR 1130 AM - 1259 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a
This is the second term of a two-semester introductory sequence that uses a combination of analytic and numerical methods to understand physical systems, to analyze experimental data, and to compare data to models. Topics include electrostatics and magnetostatics, electromagnetic fields, optics [all topics illustrated with applications to current technological and societal challenges], and an introduction to the physics of many-body systems and their aggregate properties such as entropy, temperature and pressure. The course is aimed at second year students who have an interest in pursuing a concentration in the sciences and/or engineering. The course structure includes lecture, discussion and laboratory components.

Course Notes: May not be taken for credit by students who have passed Physics 15b or Physics 15c. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

Recommended Prep: Physical Sciences 12a

Physics   15A
Introductory Mechanics and Relativity (111164)
David J. Morin
Carey Witkov
2015 Fall (4 Credits)  Schedule: TR 1130 AM - 1259 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a
Newtonian mechanics and special relativity. Topics include vectors; kinematics in three dimensions; Newton's laws; force, work, power; conservative forces, potential energy; momentum, collisions; rotational motion, angular momentum, torque; static equilibrium, oscillations, simple harmonic motions; gravitation, planetary motion; fluids; special relativity.

Course Notes: Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15a. Topics include experimental design, model testing, error analysis, basic
programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both.

**Recommended Prep:** Mathematics preparation at least at the level of Mathematics 1b concurrently is required. However, some elementary ideas from multivariable calculus may be used and students are encouraged to take Mathematics 21a concurrently.

Physics 15B
Introductory Electromagnetism (111896)

Philip Kim

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Electricity and magnetism. Topics include electrostatics, electric currents, magnetic field, electromagnetic induction, Maxwell's equations, electromagnetic radiation, and electric and magnetic fields in materials.

**Course Notes:** Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15b. Topics include experimental design, model testing, error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both.

**Recommended Prep:** Physics 15a, Physics 16, or written permission of the Head Tutor in Physics. Mathematics preparation at least at the level of Mathematics 21a taken concurrently is required. Vector calculus, (div, grad and curl) are used extensively—in principle, this is taught in the course. Students taking Mathematics 21a concurrently will likely find that some concepts are introduced in Physics 15b before they have seen them in Mathematics 21a. Some students may wish to postpone Physics 15b until they have completed Mathematics 21a.

Physics 15C

Wave Phenomena (124154)

Matthew D. Schwartz
Cora Dvorkin
Mara Prentiss

2016 Spring (4 Credits)

Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: None
Enrollment Cap: n/a

Forced oscillation and resonance; coupled oscillators and normal modes; Fourier series; Electromagnetic waves, radiation, longitudinal oscillations, sound; traveling waves; signals, wave packets and group velocity; two- and three-dimensional waves; polarization; geometrical and physical optics; interference and diffraction. Optional topics: Water waves, holography, x-ray crystallography, and solitons.

Course Notes: Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15c. Topics include experimental design, model testing, error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both.

Recommended Prep: Physics 15a, Physics 15b, or written permission of the Head Tutor in Physics. Mathematics preparation at least at the level of Mathematics 21b taken concurrently is required. Some prior knowledge of complex numbers (for example as taught in Mathematics 1b) is helpful. Linear algebra and differential equations are used extensively. Students taking Mathematics 21b concurrently will likely find that some concepts are introduced in Physics 15c before they have seen them in Mathematics 21b. Some students may wish to postpone Physics 15c until they have completed Mathematics 21b.

Physics 16

Mechanics and Special Relativity (111197)

Howard Georgi

Carey Witkov

2015 Fall (4 Credits)

Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Newtonian mechanics and special relativity for students with good preparation in physics and mathematics at the level of the advanced placement curriculum. Topics include oscillators damped and driven and resonance (how to rock your car out of a snow bank or use a swing), an introduction to Lagrangian mechanics and optimization, symmetries and Noether's theorem, special relativity, collisions and scattering, rotational motion, angular momentum, torque, the moment of inertia tensor (dynamic balance), gravitation, planetary motion, and a quantitative introduction to some of the mind-bending ideas of modern cosmology like inflation and dark energy.
**Course Notes:** Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 16. Topics include experimental design, model testing, error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester. Emphasis is placed on collaborative teaching and learning. Many class materials are Mathematics notebooks. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both.

**Recommended Prep:** Score of 5 on the mechanics section of the Physics C Advanced Placement exam, or equivalent. Mathematics preparation at least at the level of Mathematics 21a taken concurrently is required. Thorough knowledge of calculus of one variable and vectors plus some mathematical sophistication. The mathematical level will be significantly higher than that of Physics 15a.

**Physics  90R**

Supervised Research (111672)

David J. Morin

2015 Fall (4 Credits)  
Schedule: TBD

**Instructor Permissions:** Instructor  
Enrollment Cap: n/a

Primarily for selected concentrators in Physics, or in Chemistry and Physics, who have obtained honor grades in Physics 15 and a number of intermediate-level courses. The student must be accepted by some member of the faculty doing research in the student's field of interest. The form of the research depends on the student's interest and experience, the nature of the particular field of physics, and facilities and support available. Students wishing to write a senior thesis can do so by arranging for a sponsor and enrolling in this course.

**Course Notes:** A list of possible faculty sponsors and their fields is available in Lyman 238 and on the Physics Department Web page. Course enrollment forms may be obtained from Lyman 238.

**Class Notes:** David Morin and members of the Department

### Physics 95

**Topics in Current Research (111967)**

*Christopher Stubbs*

2015 Fall (4 Credits)  

**Schedule:**  
W 0700 PM - 0859 PM  
M 0300 PM - 0415 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

The goal of this tutorial is twofold. First, students will learn about a range of modern physics research topics from experts at Harvard as well as from one another. Every Wednesday evening a faculty member speaks on his/her area of research, preceded by assigned reading and a student presentation designed to introduce the basic physics, as well as important developments and burning problems at the frontiers of that particular research area. Second, the tutorial provides structured activities to help students develop practical skills for their future careers, expanding knowledge on unfamiliar subjects, participating in discussions, presenting and writing clearly about complex topics, and engaging in self and peer evaluation.

**Course Notes:** Primarily for junior and senior concentrators, however interested sophomores are welcome.

**Class Notes:** The course meets Monday afternoon, 3:00-4:15 and Wednesday, 7 pm - 8:59 pm.  
This course may not be taught spring term, 2016.

### Physics 123

**Laboratory Electronics (124108)**

*Thomas Hayes*  
*Bradley Hubbard-Nelson*

2016 Spring (4 Credits)  

**Schedule:**  
TR 0130 PM - 0529 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 20
A lab-intensive introduction to electronic circuit design. Develops circuit intuition and debugging skills through daily hands-on lab exercises, each preceded by class discussion, with minimal use of mathematics and physics. Moves quickly from passive circuits, to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Notes: Physics 123 is the same course as Physics 223; if you are a graduate student, please enroll in 223. Two sections will be offered, limited to 20 students per section. Physics 123 is also offered as Engineering Sciences 153. Students may not take both for credit. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

Physics 125

Widely Applied Physics (120167)

John Doyle

2015 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Schedule:   MW 0300 PM - 0429 PM

Applies elementary physics to the real world and fundamental phenomena, introducing estimation and calculational techniques that are commonly used by research physicists when addressing new problems. Emphasis is on developing physical intuition and the ability to do order-of-magnitude calculations. New physical concepts are introduced as necessary. Example topics: the Big Bang and searches for Earth-like exoplanets; material properties and phase transitions; masers, lasers, and the global positioning system; magnetic resonance imaging and physiology of major organs; Earth properties & human energy use. Example estimation techniques: dimensional analysis, commonly used concepts such as diffusion and the Bloch model, scaling laws, and symmetries and conservation laws.

Course Notes:  
This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

Recommended Prep:  
Physics 15a,b,c, and mathematics at the level of Mathematics 21a. Physics 143a and 181 are very helpful, and may be taken concurrently.

Physics 140
Introduction to the Physics of Living Systems (127814)

Aravinthan Samuel

2016 Spring (4 Credits)  Schedule:  TR 0230 PM - 0359 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

We will discuss how theoretical and experimental tools derived from physics - e.g., statistical mechanics, fluid mechanics - have been used to gain insight into molecular and cellular biology including the structure and regulation of DNA, genomes, proteins, the cytoskeleton, and the cell. Students will gain an intensive introduction to biological systems, as well as physical and mathematical modeling.

Course Notes:  Given in alternate years. Lectures, problem sets, discussions. May not be taken for credit by students who have taken MCB 140. This course, when taken for a letter grade, meets the General Education requirement for Science of Living Systems or Science of the Physical Universe, but not both.

Recommended Prep:  Physics 15a,b,c.

Physics 141
The Physics of Sensory Systems in Biology (121885)

Aravinthan Samuel

2015 Fall (4 Credits)  Schedule:  TR 0230 PM - 0359 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

Living organisms use sensory systems to inform themselves of the sights, sounds, and smells of their surrounding environments. Sensory systems are physical measuring devices, and are therefore subject to certain limits imposed by physics. Here we will consider the physics of sensory measurement and perception, and study ways that biological systems have solved their underlying physical problems. We will discuss specific cases in vision, olfaction, and hearing from a physicist's point of view.

Recommended Prep:  Physics 11a,b or 15 a,b, required.

Physics 145
Elementary Particle Physics (117719)
Melissa Franklin
2015 Fall (4 Credits) Schedule: MWF 1000 AM - 1059 AM
Instructor Permissions: Instructor Enrollment Cap: n/a
Introduction to elementary particle physics. Emphasis is on concepts and phenomenology rather than on a detailed calculational development of theories. Starts with the discovery of the electron in 1897, ends with the theoretical motivation for the Higg's boson, and attempts to cover everything important in between. Taught partly in seminar mode, with each student presenting a classic paper of the field.

Recommended Prep: Physics 143a. Physics 143b or equivalent is useful.

Physics 191R
Advanced Laboratory (121993)

Isaac F. Silvera
Students carry out three experimental projects selected from those available representing condensed matter, atomic, nuclear, and particle physics. Included are pulsed nuclear magnetic resonance (with MRI), microwave spectroscopy, optical pumping, Raman scattering, scattering of laser light, nitrogen vacancies in diamond, neutron activation of radioactive isotopes, Compton scattering, relativistic mass of the electron, recoil free gamma-ray resonance, lifetime of the muon, studies of superfluid helium, positron annihilation, superconductivity, the quantum Hall effect, properties of semiconductors. The facilities of the laboratory include several computer controlled experiments as well as computers for analysis.

Course Notes: A substantial amount of outside reading is expected. Physics 191R is the same course as Physics 247R; if you are a graduate students, please enroll in 247R.

Recommended Prep: Physics 15a or 16, 15b, 15c. Physics 143a is highly recommended.
Physics 195

Introduction to Solid State Physics (112107)

Donhee Ham

2015 Fall (4 Credits) Schedule: WF 0100 PM - 0229 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); electrons in solids and band formation; metals and semiconductors; diodes and transistors; plasmonic excitations and screening; optical properties; solid-state lasers; magnetism, spin waves, magnetic resonance, and spin-based devices; dielectrics and ferroelectrics; superconductivity, Josephson junctions, and superconducting circuits; electronic transport in low-dimensional systems, quantum Hall effect, and resonant tunneling devices.

Course Notes: Designed as a first course in solid state physics for students with knowledge of elementary quantum mechanics.

Students who intend to take Applied Physics 295, and who have not previously taken a formal course in solid state physics, are strongly advised to take this course first.

Class Notes: Designed as a first course in solid state physics for students with knowledge of elementary quantum mechanics. Students who intend to take Applied Physics 295, and who have not previously taken a formal course in solid state physics, are strongly advised to take this course first.

Physics 201

Data Analysis for Physicists (161201)

Vinothan Manoharan

2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: None Enrollment Cap: n/a

This course covers what to do with experimental data after acquiring it. We will start with how to load, parse, filter, and visualize data using modern computational tools, then proceed to more advanced methods including Markov chain Monte Carlo and time-series analysis. Throughout, students will learn methods of statistical inference from both frequentist and Bayesian frameworks. Applications to particle physics, biophysics, condensed matter, applied physics, astrophysics, and more.

Course Notes: This course is suitable for students with limited or rusty programming skills. Students with more advanced programming skills may wish to take APMTH 207 or ENG-SCI 255.

Recommended Prep: Research experience commensurate with that of a first-year (or higher) PhD student in experimental physics. Students without such experimental
experience are recommended to take Physics 191r or Physics 247r (or equivalent) first.

Physics 211R

Infrared structure of gravity and gauge theory (117201)

Andrew Strominger

2016 Spring (4 Credits)  
**Schedule:** F 0330 PM - 0529 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course will begin with a pedagogical introduction to soft theorems, asymptotic symmetries and memory effects in gravitational and both abelian and nonabelian gauge theories. Recent developments on the relation of these infrared phenomena to one another will be presented as well as their applications to black hole physics.

**Recommended Prep:** Prerequisites: Quantum Field Theory (Physics 251A) and General Relativity (Physics 210).

Physics 215

Biological Dynamics (126851)

Lakshminarayanan Mahadevan

2016 Spring (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

Develops theoretical basis for modeling and quantitative analysis of biological problems. Emphasis on contemporary research topics, including molecular, cellular and tissue dynamics; development and differentiation; signal- and mechano-transduction; individuals, populations and environments.

Course Notes: It is suggested that students may wish to take AP215 when this course is bracketed. May not be taken for credit in addition to AP215.

Recommended Prep: Knowledge of differential equations and statistical mechanics at undergraduate level.

Physics 223

Electronics for Scientists (109346)

Thomas Hayes

2015 Fall (4 Credits)  Schedule: TR 0130 PM - 0529 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

An introduction to electronic circuit design intended to develop circuit intuition and debugging skills through daily design exercises, discussion and hands-on lab exercises. The approach is intensely practical, minimizing theory. Moves quickly from passive circuits to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Notes: Physics 223 is the same course as Physics 123; if you are an undergraduate students, please enroll in 123.

Schedule:  

WF 0130 PM - 0259 PM

Instructor Permissions:

Special relativity, relativistic field theories, gauge invariance, the Maxwell equations, conservation laws, time-independent phenomena, multipole expansions, electrodynamics and radiation theory, radiation from rapidly-moving accelerating charges, scattering and diffraction, and macroscopic averaged fields and propagation in matter. Additional topics may include relativistic particles with spin, coherent states, superconductors, accelerator physics, renormalization, and magnetic monopoles.

Recommended Prep:  

Prerequisites: Physics 153 and Physics 143a, or equivalent.
Physics 247R

Laboratory Course in Contemporary Physics (145024)

Isaac F. Silvera
Robert Westervelt

2015 Fall (4 Credits)

Schedule: TR 0100 PM - 0459 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Three experimental projects are selected representing condensed matter, atomic, nuclear, and particle physics. Examples: experiments on pulsed nuclear magnetic resonance, microwave spectroscopy, optical tweezers, and non-linear optics, optical pumping, Raman scattering, scattering of laser light, nitrogen vacancies in diamond, neutron activation of radioactive isotopes, Compton scattering, relativistic mass of the electron, recoil free gamma-ray resonance, lifetime of the muon, studies of superfluid helium, positron annihilation, superconductivity, the quantum Hall effect, properties of semiconductors. The facilities of the laboratory include several computer controlled experiments as well as computers for analysis.

Course Notes: A substantial amount of outside reading is expected. Physics 191R is the same course as Physics 247R; if you are an undergraduate, please enroll in 191R.

Physics 248R

Topics in Experimental Particle Physics (109993)

Masahiro Morii

2015 Fall (4 Credits) Schedule: WF 1030 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Topics in the elementary particle physics, focusing on experimental studies of the Standard Model and new physics beyond the Standard Model in the past 20 years. Taught partly in lectures and in seminars.

Prerequisite: Physics 145 or equivalent, i.e. a course at the level of Griffiths, Introduction to Elementary Particles.

Recommended Prep: Prerequisite: Physics 145 or equivalent, i.e. a course at the level of Griffiths, Introduction to Elementary Particles.

Physics 251A

Advanced Quantum Mechanics I (111314)

David Nelson

2015 Fall (4 Credits) Schedule: MWF 1100 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Basic course in nonrelativistic quantum mechanics. Review of wave functions and the Schrödinger Equation; Hilbert space; the WKB approximation; central forces and angular momentum; electron spin; measurement theory; the density matrix; perturbation theory.

Recommended Prep: Physics 143a, b or equivalent, or permission of instructor.

Physics 251B

Advanced Quantum Mechanics II (111876)

David Nelson

2016 Spring (4 Credits) Schedule: MWF 1100 AM - 1159 AM
Instructor Permissions: None  Enrollment Cap: n/a

Potential topics include Heisenberg picture; time-dependent perturbations; inelastic scattering; electrons in a uniform magnetic field; quantized radiation field; absorption and emission of radiation; identical particles and second quantization; nuclear magnetic resonance; Feynman path integrals for quantum spins.

Recommended Prep: Physics 251a.

Additional Course Attributes:

### Physics 253A

Quantum Field Theory I (122930)

*Matthew D. Schwartz*

2015 Fall (4 Credits)  

Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

Introduction to relativistic quantum field theory. This course covers quantum electrodynamics. Topics include canonical quantization, Feynman diagrams, spinors, gauge invariance, path integrals, ultraviolet and infrared divergences, renormalization and applications to the quantum theory of the weak and gravitational forces.

Recommended Prep: Physics 143a,b or equivalents.

Additional Course Attributes:

### Physics 253B

Quantum Field Theory II (115442)

*Daniel Jafferis*

2016 Spring (4 Credits)  

Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: None  Enrollment Cap: n/a

A continuation of Physics 253a. Topics include: the renormalization group, implications of unitarity, Yang-Mills theories, spontaneous symmetry breaking, weak interactions, anomalies, and quantum chromodynamics. Additional advanced topics may be covered depending on time and interest.

Recommended Prep: Physics 253a.

Additional Course Attributes:

The Standard Model (109328)
Matthew Reece
2016 Spring (4 Credits)  Schedule: TR 1130 AM - 1259 PM
Instructor Permissions: None  Enrollment Cap: n/a
The Standard Model of particle physics: theory and experimental implications. Topics include nonabelian gauge theory, spontaneous symmetry breaking, anomalies, the chiral Lagrangian, QCD and jets, collider physics and simulation, the Higgs at the LHC.
Recommended Prep: Introductory relativistic field theory, at the level of Physics 253a.
Additional Course Attributes:

Physics 262
Statistical Physics (110526)
Erel Levine
2015 Fall (4 Credits)  Schedule: TR 1130 AM - 1259 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a
Basic principles of statistical physics and thermodynamics, with applications including: the equilibrium properties of classical and quantum gases, phase transitions and critical phenomena, as illustrated by the liquid-gas transition and simple magnetic models. Universality, scaling and renormalization group. Introduction to non-equilibrium physics.
Course Notes: Students may wish to take Applied Physics 284 when this course is bracketed.
Physics 268AR

Special Topics in Condensed Matter Physics: Topological States of Matter (122818)

Bertrand Halperin

2015 Fall (4 Credits)  
Schedule: TR 0230 PM - 0359 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Notions of topology have been invoked to clarify the properties of a variety of quantum systems and to classify the possible ground states of such systems. We shall explore in depth examples such as integer and fractional quantized Hall states in two-dimensional systems, and topological insulators in two and three dimensions. Discussions will include effects of disorder and localization phenomena, and practical issues of measurement that may have only marginal relation to topological concepts.

Topic: Topological States of Matter

Recommended Prep: Prerequisites: Physics 251b, Applied Physics 295a and Physics 262, or equivalents.

Additional Course Attributes:

Physics 285B

Modern Atomic and Optical Physics II (118509)
Introduction to quantum optics and modern atomic physics. The basic concepts and theoretical tools will be introduced. Topics will include coherence phenomena, non-classical states of light and matter, atom cooling and trapping and atom optics. The second of a two-term subject sequence that provides the foundations for contemporary research.

Class Notes: M., W., 12-1:30

Recommended Prep: A course in electromagnetic theory (Physics 232a or equivalent); one half-course in intermediate or advanced quantum mechanics.

Additional Course Attributes:

<table>
<thead>
<tr>

**Physics 287C**
Conformal Field Theory (160571)

**Xi Yin**

2015 Fall (4 Credits) Schedule: WF 0300 PM - 0429 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
The role of conformal field theory in describing critical phenomena in statistical mechanics and quantum field theory. Virasoro algebra, conformal blocks, two dimensional rational and irrational conformal field theories, the conformal bootstrap in two and higher dimensions, a-theorem, and other recent developments.
Physics 295A

Introduction to Quantum Theory of Solids (127980)

Efthimios Kaxiras

2016 Spring (4 Credits)  
Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: None  
Enrollment Cap: n/a

Electrical, optical, thermal, magnetic, and mechanical properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Metals, semiconductors, and insulators will be covered, with possible special topics such as superconductivity.

Recommended Prep: Applied Physics 195 or equivalent, and a graduate level quantum mechanics course similar to Physics 251a. (Physics 251b would be helpful and may be taken concurrently.)

Psychology
Subject: Psychology

Psychology 14
Cognitive Neuroscience (126551)
Daniel Schacter
George Alvarez
2015 Fall (4 Credits)  Schedule:  MW 0100 PM - 0229 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
How do our brains give rise to our minds? Specifically, how are mental processes related to neural activity? This course will explore these questions, as well as the methods by which cognitive neuroscience seeks to answer them. We will focus on processes within perception, attention, memory, language, action, emotion, and social cognition, and methods including neuroimaging, neuropsychology, and electrophysiology.

Course Notes:  This course counts toward foundational requirements for Psychology and should be taken before courses at the 1000 level or higher.

Recommended Prep:  The Psychology Department requires completion of Science of Living Systems 20 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7) before enrolling in this course

Abnormal Psychology (123973)

*Joshua Buckholtz*

2015 Fall (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Introduction to the study of psychological dysfunction. Focuses on abnormal behavior as it relates to the definition, etiology, and treatment of major symptom domains. This course will emphasize critical evaluation of the causes and mechanisms of mental illness, with special attention paid to recent neuroscientific and genetic research on the neurobiology of psychopathology.

**Course Notes:**

Psychology 971
Contemporary Issues in Psychology: Intensive Cross-level Analyses (113094)
Jill Hooley
2015 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Department  Enrollment Cap:  n/a
Examines selected issues and phenomena in contemporary psychological research. Special attention to examining topics from a variety of perspectives, to reading primary sources in the field, and to developing thinking, writing, research, and discussion skills. This tutorial, or Psychology 975, is required of concentrators upon entering the concentration, normally in the sophomore year. Letter graded.

Course Notes: Students may take this course before formally declaring Psychology as their concentration. Psy 971 and Psy 975 are interchangeable for Psychology requirements.

Class Notes: This course is taught entirely in sections, so a required first meeting of this course for sectioning will be held the first day of classes. For Fall 2015, attend one of two meetings on Wed Sept 2nd: 1-2pm in WJH 1550 or 5-6pm in WJH 1050.

Recommended Prep: Science of Living Systems 20 (or equivalent) should be taken before this course. STAT 101 or PSY 1900 should be taken in advance or concurrently.

In the Presence of the Enemy: Social-Psychological Approaches to Intergroup Conflict (156039)

2015 Fall (4 Credits)  
**Schedule:** W 0200 PM - 0359 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 16

Conflicts begin in human minds -therefore understanding conflict requires the understanding of the influence of social-psychological dynamics-. In this course we will focus on social psychological concepts of intergroup conflict, such as identity, collective memory and stereotypes, and inquire how they propel groups towards conflict. We will also consider how understanding these processes can help prevent and resolve conflicts. For example, we will ask, how individuals reform as one identity group. What role does collective memory play in sustaining conflicts? Can contact and dialogue help to overcome conflict? Which specific circumstances are required for a successful conflict resolution?

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 15 before enrolling in this course.

Psychology of Left and Right (160162)

*Sasha Kimel*  
*N Jill Hooley*

2016 Spring (4 Credits)  
**Schedule:** T 0400 PM - 0559 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 16

What are the origins of the culture war between the political Left and Right? How do psychobiology, upbringing, temperament and moral values shape this difference in political orientations? In this course, we will explore the psychological factors underlying political divisions as well as the role of our social networks and desire for group identity in maintaining and widening the divide. The goal of this course is to develop your empirical, theoretical and methodological understandings of psychological research underlying the Left-Right conflict while providing you with tools to detect partisanship and to promote the cooperation and connection necessary for a well-functioning democracy.
**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 before enrolling in this course.

**Psychology 980P**

Social Factors in the Development of Psychopathology (110110)

*Jill Hooley*

2015 Fall (4 Credits)

**Schedule:** M 0700 PM - 0859 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 30

Does bullying lead to school shootings? Can Facebook cause depression? Are "fitspiration" communities dangerous? This course will review the role social factors (social support, social interactions, social functioning, and the broader social context of communities) relate to the development and maintenance of psychopathology on biological and behavioral levels. In the context of disorders such as schizophrenia, depression (including suicide), eating disorders, and post-traumatic stress disorder, this course will look at how social factors might contribute to the development of mental illness, as well as how social factors might be indicators of mental illness, and finally how social factors might mediate the severity of or even prevent the development of mental illness.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 18 before enrolling in this course.

To Categorize is Human: How Linguistic, Social, and Perceptual Categories Shape our Experience of th (156041)

2016 Spring (4 Credits)

Instructor Permissions: Department

Enrollment Cap: 16

Schedule:

How do you draw the line between bluish green and greenish blue? A coat and a jacket? Your own race and another race? How can people judge baseball pitches or facial emotions in fractions of a second? How do we boil down complex mixes of emotional information to make binary decisions, like whether to go on a second date? We face a world full of subtle gradations, but effortlessly place people and things into discrete categories. This course will explore how these categories form, as well as the consequences that arise from the ways we categorize objects, people, and ideas.

Class Notes: Jill Hooley and members of the Department

Recommended Prep: SLS-20 and one from PSY 14, PSY 15, SLS-15, or PSY 18.

Psychology 980U

Psychological Challenges of Adolescence and Early Adulthood (156563)

Sarah Kleiman

2015 Fall (4 Credits)

Instructor Permissions: Instructor

Enrollment Cap: 16

Schedule: R 0630 PM - 0829 PM

This seminar will examine research on a wide range of developmental, social, and psychological processes that affect the mental health of adolescents and young adults. We will discuss factors that facilitate resilience during adolescence and the transition to adulthood (such as personality traits and economic resources), as well as risk factors (such as parental maltreatment and exposure to violence). We will also explore questions specific to disorders common during this developmental period, such as whether adolescent mood and anxiety disorders are unidimensional or bidimensional constructs, and how recent social and neurobiological research can enhance our understanding of the unique challenges faced by adolescents and young adults with ADHD. Throughout the course, we will discuss research on emerging trends in media use and Facebook, and the impact of these technologies on depression, anxiety, substance abuse, and cyberbullying.

Class Notes: Course instructor is Sarah Erb. Please contact her with any questions about the course.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 18 before enrolling in this course.

As many strive for the American Dream, the gap between the rich and poor continues to widen. Although economic inequality affects us all, resulting in greater societal dysfunction and lower national happiness, the consequences vary greatly depending on your social class. In this course, we will examine how being rich or poor differentially impacts our sense of self, our morality, our ways of thinking, our sense of being in control, our achievements, the biases that we face, and our health and well-being. We will also consider psychological interventions for reducing the consequences of this wealth gap and for promoting mutual understanding across the divide.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 before enrolling in this course.

Humans are social beings. We need to live in groups to survive and flourish. From living in tribes, the vast majority of populations have now developed into modern societies which nevertheless are fortified by social control and dominance.

Modern societies differ greatly in how their hierarchies are organized, and how the inevitable group-based inequality is maintained. For instance, Scandinavian countries are often perceived as more egalitarian than the United States, which in turn is seen as more egalitarian than Burundi.

In this class we analyze the differing degrees of inequality present within different societies and systematically explore the cultural mechanisms which contribute to the different hierarchies. We will use case studies, from the US, Burundi, and Western and Eastern European countries. We will draw from research in Psychology, Sociology and Political Science to address questions such as, what mechanism consolidate hierarchies? Among others, we will reflect how stereotypes, racism and sexism are used to strengthen existing structures and compare how they appear in different societies. We will ask, what mechanism can foster attitudinal and behavioral changes to overcome inequality and power disparity.

In a group-based class project students will develop a research proposal to address how cultures manifest or change their internal structures. This course put a strong emphasis on developing skills for how to conduct stringent empirical research in complex macro-level settings.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 15 before enrolling in this course.

Psychology 1001

The Psychology of Well-being (156637)

2016 Spring (4 Credits)  

Schedule:  

Instructor Permissions: None  

Enrollment Cap: n/a

This course will critically examine the nature of well-being, happiness and the good life. This course will cover a range of topics such as: optimal functioning, strengths, values, interests, mindfulness, physical health, and happiness. Through group and class discussions, involved exercises, projects, videos, and review of journal articles, students will: (i) gain an understanding of well-being related concepts, (ii) learn to think critically and analytically about issues related to positive psychology, (iii) experience the effects of applying well-being related principles on your own personal growth, (iv) propose an intervention to bring about change in a well-being related behavior.

Recommended Prep: SLS-20 and one from PSY 14, PSY 15, PSY 18, or SLS 15.

Psychology 1007

Psychology of Peak Performance in Athletics and its Consequences (110141)
This course seeks to understand the physical and psychological behaviors as well as the mental training components necessary to achieve peak sport performance. Students will also gain an understanding of the physical, affective, and cognitive consequences of competitive sport participation. This includes the psychological factors that influence sport performance (e.g., self-confidence, arousal), methods for enhancing sport performance (e.g., goal-setting, imagery), and the negative consequences of becoming an elite athlete (e.g., burnout, concussions).

Recommended Prep: Science of Living Systems 20 and at least one course from PSY 13, PSY 14, PSY 15, PSY 18, or SLS15.

Psychology of Women (110216)

Nicole Noll

2016 Spring (4 Credits)  Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: Instructor  Enrollment Cap: 16

How does being a woman affect our behavior, our evaluations of ourselves, and our interactions with others? This course examines psychological science on women and girls in western industrialized societies, addressing such topics as gender stereotypes, girlhood, women and work, relationships, pregnancy and motherhood, mental health, violence against women, and women in later adulthood. We will consider these topics through an understanding of gender as a social construction, being mindful of the intersections of gender, sexuality, class, and race. Although focused on women's lives and experiences, this course is highly relevant to people of all genders.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 before enrolling in this course.

Psychology 1052  Section: 101

The Application of fMRI in Cognitive Neuroscience Research (126620)

Yaoda Xu

2015 Fall (4 Credits)  Schedule: M 1000 AM - 1159 AM

Instructor Permissions: Instructor  Enrollment Cap: 18

Functional magnetic resonance imaging (fMRI) is one of the most widely used methods in cognitive neuroscience
research. In this course, students will learn the basics of fMRI research and gain hands-on experience in conducting fMRI experiments. In the first part of the course, students will have an overview of the fMRI methods, including how fMRI works, basic designs of fMRI experiments, fMRI data collection, analysis and interpretation, and current applications of fMRI in cognitive neuroscience research. In the second part of the course, students will design and conduct fMRI experiments and analyze fMRI data.

**Course Notes:** Open to graduate students and advanced undergraduates with permission of instructor.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, Science of Living Systems 15, or MCB 80 before enrolling in this course.

In Search of the Perfect School (160695)

*Amy Dent*

2015 Fall (4 Credits)  

**Schedule:** T 0100 PM - 0259 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 20

Is there a formula for the "perfect" school? Guided by this overarching question, you will critically analyze and creatively integrate theory, research, and policy with a particular focus on the application of educational psychology in secondary school. This focus serves as a window into many of the most topical and interesting issues facing our students and schools.

**Recommended Prep:** SLS 20 and at least one course from PSY 13, PSY 14, PSY 15, PSY 18, or SLS15

Explaining Academic Achievement (160724)

*Amy Dent*

2016 Spring (4 Credits)  

**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 40

Is there a formula for academic success? Would it be the same for every student? Guided by these overarching questions, we will survey some of the most interesting and important factors that facilitate achievement during different stages of formal schooling. You will be introduced to the theoretical roots, empirical evidence, and practical implications of these factors as we integrate them throughout the semester to create an equation that attempts to explain academic achievement.
Psychology 1057

Music and the Mind (160684)

Olivia Kang

2016 Spring (4 Credits)  Schedule:  R 0400 PM - 0559 PM

Instructor Permissions:  Instructor  Enrollment Cap:  20

Music is universal, pervasive in our everyday lives, and compelling. How does music make our emotions soar, spark our creativity, and influence our relationships and interactions with others? This course will examine how the brain creates and experiences music, how music in turn shapes our brains and tunes our ability to engage with our external environment, and what music reveals about the ability of the human brain to co-opt evolutionarily ancient mechanisms for seemingly "unique" human faculties. We will cover the relationship between music and emotions, movement, creativity, and sociality.

Recommended Prep:  The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15 before enrolling in this course.

Your Brain on Drugs: Psychopharmacology (122224)

Scott Lukas

2015 Fall (4 Credits)  Schedule:  TR 1130 AM - 1259 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

An introduction to how drugs affect mood, sensation, consciousness, and other psychological and behavioral functions in both healthy and disease states. Introduces concepts in neuroscience and pharmacology to understand how drugs are used to treat drug abuse, psychiatric disorders and why individuals use recreational drugs. Covers all CNS drugs, including antidepressants, antipsychotics, alcohol, and both licit and illicit drugs of abuse. Debates controversial topics such as research with psychiatric populations, diagnosing ADHD, teenage suicide, marijuana legalization, and needle exchange programs.

Recommended Prep:  The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY
14, PSY 18, or MCB 80 before enrolling in this course.

Brain Science for World Leaders (160658)

*Talia Konkle*

2016 Spring (4 Credits)  
**Schedule:** M 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Three forces have converged to make this the most exciting time for brain science. First, we don’t yet understand how the brain works, how it breaks, and how to fix it: we have important questions to answer. Second, a slew of powerful brain methods have emerged and we have entered an era of massive computing power: we have serious tools. Third, more than ever before, there is a social will and now a political mandate to tackle these questions head on: we all want to know more about brains!

This course will give you an overview of our current state of brain science knowledge and some basic neuroscience know-how. The content is structured to help you best on that future day when you’re an entrepreneur, lawyer, scientist, or the next president, so you’ll have the foundation to shape the next decade of brain science discovery and policy.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) or other psychology coursework before enrolling in this course, or permission of the instructor. No previous neuroscience coursework is required.

Brain Damage as a Window into the Mind: Cognitive Neuropsychology (116622)

*Alfonso Caramazza*

2015 Fall (4 Credits)  
**Schedule:** T 0130 PM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Examines the patterns of perceptual, motor, cognitive, and linguistic impairments resulting from brain damage. The focus is on the implications of the various types of neuropsychological deficits (such as visual neglect, dyslexia, and aphasia) for theories of the mind and the functional organization of the brain.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14 or MCB 80 before enrolling in this course.
Psychology 1305
Evolution and Cognition (156054)
Max Krasnow
2015 Fall (4 Credits) Schedule: MW 1000 AM - 1059 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

The goal of this course is for students to master the foundational logic and theory of evolutionary psychology. Students are exposed to and consider topics covering the range of human experience, including cooperation, mating, friendship, aggression, warfare, collective action, kinship, parenting, social learning, dietary choice, spatial cognition, reasoning, emotions, morality, personality and individual differences, predator avoidance, hazard management, and culture.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15 before enrolling in this course.

Psychology 1355
The Adolescent Brain (110064)
Leah Somerville
2015 Fall (4 Credits) Schedule: M 0200 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 16

This course will introduce students to the dynamics of brain development during the second decade of life. This course will examine key changes in structural, functional, connectivity, and neurochemical changes that take place in the brain during adolescence. We will assess how these changes influence several domains of the adolescent mind, including self-control, risky decision making, changes in daily emotions and moods, the onset of psychiatric illnesses (such as mood and anxiety disorders), and sensitivity to social evaluation.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, Science of Living Systems 15, or MCB 80 before enrolling in this course.

Psychology 1401
Computational Cognitive Neuroscience (160656)
Samuel Gershman
2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: Instructor Enrollment Cap: n/a
"What I cannot create, I do not understand." This course applies Richard Feynman's dictum to the brain, by teaching students how to simulate brain function with computer programs. Special emphasis will be placed on how neurobiological mechanisms give rise to cognitive processes like learning, memory, attention, decision-making, and object perception. Students will learn how to understand experimental data through the lens of computational models, and ultimately how to build their own models.

Recommended Prep: Students be comfortable with a numerical programming language (e.g., Python, Matlab, R). Psychology concentrators should have taken SLS 20 and at least one course from PSY 13, PSY 14, PSY 15, PSY 18, SLS15, or MCB 80

Psychology 1453
Consciousness: The Last Frontier of Neuroscience? (108980)
Ken Nakayama
2016 Spring (4 Credits) Schedule: W 0200 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 18
Our awareness is perhaps the most pervasive thing in our life, yet for most of the 20th century, it was off limits as a topic of scientific investigation. We argue that the current renewed examination of consciousness adds a new
integrative framework to the study of the brain and mind. In this course, we cover a wide range of phenomena and questions chosen to encourage broad thinking and discussion. Topics include: the neural correlates of consciousness, consciousness vs. unconsciousness, specific and general disorders of consciousness in brain injury, consciousness in vegetative states, visual awareness, attention and seeing, awareness vs. reflective consciousness, role of language, consciousness and moral intent, consciousness in infants, animals, and machines. Levels of analysis include: biological substrates, functional roles and philosophical status of consciousness.

Recommended Prep: The Psychology Department requires completion of PSY 14 or MCB 80 before enrolling in this course, or permission of instructor (who will also consider background in computer science and philosophy).

2016 Spring (4 Credits) Schedule: R 0200 PM - 0429 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Film and television shows often capture the cutting edge of science, and they sometimes even anticipate future scientific advances. We'll use examples from film and television as an introduction to several hot topics in the field of neuroscience, such as Mind Control, Mind Reading, Smart Pills, and Brain Machine Interfaces, which are all getting closer to reality. Will neuroscientists ever be able to control a person's thoughts, or to know what a person is thinking? Can taking a pill really awaken untapped brain power? Will you ever be able to drive a car without touching a steering wheel? In this course, we will cover the state of the art and the future of these exciting areas of neuroscience (and entertainment). Because these are not textbook topics, this is an advanced course that will focus on reading and discussing the primary literature.

Class Notes: Th. 2-4:30 plus a one-hour section to be determined.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and either PSY 14 or MCB 80 before enrolling in this course, or permission of instructor.

Psychology 1500

Decision Making and Negotiation (160692)

Christine Looser

2016 Spring (4 Credits) Schedule: MW 0230 PM - 0359 PM
Decision-Making and Negotiation

People make decisions and negotiate with others from a young age; however, most know little about the strategy and the psychology that lie beneath these sophisticated behaviors. This class is designed to look ‘under the hood’ at the cognitive processes at play when we make decisions and negotiate with others. We will discuss original research articles and use simulated class exercises to gain a better understanding of how the human mind makes choices and persuades others.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 15 before enrolling in this course. May not be taken by students who have taken PSY 2650.

Psychology 1503

Psychology of Close Relationships (107602)

Holly Parker

2016 Spring (4 Credits) Schedule: M 0730 PM - 0929 PM

Instructor Permissions: Instructor Enrollment Cap: 70

This course is an in-depth exploration of close relationships. Examples of topics to be covered include the biological bases of attraction; relationship formation; the end of relationships through break-up, divorce, or death; relationship satisfaction; deception; gender roles; same-sex relationships; loneliness; relationships and well-being; and public perceptions about relationships. You will have an opportunity to explore these topics primarily through critical examination of the empirical literature as well as through popular press.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 before enrolling in this course.

Social Cognition: Making Sense of our Social World (156580)

Katherine Powers

2015 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

As a social species, a significant proportion of our everyday thoughts are devoted to social cognition - thinking about other people and comprehending what they are thinking about us. In this course we will merge theories from social and cognitive psychology to examine how people make sense of each other, social groups, and the surrounding social world. Throughout the course, we will draw on neuroscientific findings to uncover the neural
basis of these abilities, as well as examine deficits in these social skills in autism and related disorders.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15 before enrolling in this course.

Groups and Networks: How Others Shape our Behavior, Beliefs, and Motivations (160683)

*Olivia Kang*

2015 Fall (4 Credits) Schedule: MWF 1000 AM - 1059 AM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 40

We are an intensely social species. We have vast and complex social networks, connect with strangers for common goals, and gain a sense of identity through our "in group." Understanding the human mind therefore means understanding how we influence and are influenced by the larger social web around us. In this course, we will examine empirical research that reveals how groups work -- how they can make us smarter or dumber, how we form social bonds, how the making of "us" also means the making of "them," and how our social networks transmit everything from democracy to disease.

**Class Notes:** Instructor is Olivia Kang

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15 before enrolling in this course.

How to Nudge: Using Social Psychology and Decision Science to Change Behavior and Policy (156579)

2016 Spring (4 Credits) Schedule:

**Instructor Permissions:** None

**Enrollment Cap:** n/a

How do you get people to waste less energy, save more money, and eat healthier? How do you encourage people to vote, stay in school, and drive safer? In this course you will learn relevant social psychology and decision science, as well as a promising new methodology useful for motivating and nudging people's behaviors to reduce or solve specific problems in organizations and society. By succeeding in this class you will gain identifiable skills that are applicable beyond the classroom (e.g., to improve programs, policies, organizational practices), in a variety of settings (e.g., health, education, law, public policy, business, and the environment).
Psychology 1515

Psychology of Groups at Work (110143)

2016 Spring (4 Credits) Schedule:
Instructor Permissions: None Enrollment Cap: n/a

This course seeks to understand the psychological dynamics of groups in work settings. This includes understanding the cohesion and development of groups (e.g., learning, satisfaction, commitment), interpersonal processes and relationships that occur between group members as they work together (e.g., information sharing, competition and conflict, conformity) and motivational factors that influence group performance (e.g., groupthink, social facilitation). Past and present empirical research and theory will be examined.

Recommended Prep: Science of Living Systems 20 and at least one course from PSY 13, PSY 14, PSY 15, PSY 18, or SLS15.

Social Bonds and Human Connections (156639)

Katherine Powers

2015 Fall (4 Credits) Schedule: T 0300 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 16

As social beings, humans have a fundamental need to affiliate and bond with each other. In this course, we will trace social relationships across the human lifespan, from parent-infant attachment to adolescent peer relationships to pair bonding in adulthood. In doing so, we will discuss the evolutionary benefits of this social motive and the dissolution of social bonds. We will also examine current issues in psychological science especially relevant to social bonds, including online relationships and the role of oxytocin.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15 before enrolling in this course.

Everyone longs for deep connection with others. But is connection more than a feeling? Common expressions describe social connection as being "on the same wavelength", "marching to the same beat", or becoming "one" with another person. This course will examine the ways in which these expressions are grounded in biological truth. We will cover topics such as: how do we synchronize our brains and bodies with others in our social environment, and what do these concordances reveal about the quality of our relationships? We will also examine how rapport can be reverse-engineered by manipulating synchrony in surprisingly simple ways.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 before enrolling in this course.
Psychology 1556R

Research Seminar in Implicit Social Cognition (127489)

Mahzarin Banaji

2015 Fall (4 Credits)  

Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: n/a

An introduction to research on implicit social cognition, with special focus on attitudes, beliefs, and identity and in some cases its applications to law, business, medicine, and government. Students will be paired with individual researchers to work on ongoing projects that can turn into more independent projects. In addition to weekly work in the laboratory, students are expected to attend biweekly discussion groups focusing on current issues and directions in the laboratory as a whole.

Psychology 1557

Self Regulation and the Pursuit of Personal Goals (160696)

Amy Dent

2016 Spring (4 Credits)  

Schedule: W 0100 PM - 0259 PM

Instructor Permissions: Instructor  
Enrollment Cap: 20

Have you ever abandoned a New Year's resolution? Do you find yourself flipping through Facebook as a final exam nears? These common experiences can be explained by self-regulation, an exciting yet elusive construct that has captured the attention of researchers across psychology. In this course, students will explore the widespread influence of self-regulation through diverse scholarly sources accompanied by spirited discussion. Spanning several subdisciplines of psychology to address its hottest topics from the theoretical and empirical lens of self-regulation, we will divide the course by its many domains of practical relevance (e.g., behavior, emotion, learning) and apply them to students' own lives.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY
Psychology 1558
The Psychology of Left and Right (110299)

2016 Spring (4 Credits) Schedule:
Instructor Permissions: None Enrollment Cap: n/a

What are the origins of the culture war between the political Left and Right? How do psychobiology, upbringing, temperament and moral values shape this difference in political orientations? In this course, we will explore the psychological factors underlying political divisions as well as the role of our social networks and desire for group identity in maintaining and widening the divide. The goal of this course is to develop your empirical, theoretical and methodological understandings of psychological research underlying the Left-Right conflict while providing you with tools to detect partisanship and to promote the cooperation and connection necessary for a well-functioning democracy.

Recommended Prep: SLS 20 and at least one course from Psy 13, Psy 14, Psy 15, Psy 18, or SLS 15.

Psychology 1559
The Social Brain (156640)

Katherine Powers

2016 Spring (4 Credits) Schedule: M 0100 PM - 0259 PM
Instructor Permissions: Instructor Enrollment Cap: 20

Many believe that the human brain evolved to support the complex demands of interacting with other people. In this class, we will explore how our brains are wired to allow us to know ourselves, to know what other people are thinking, and predict what they might do, and to regulate our actions to most effectively interact with others. We will combine theories and findings from social psychology, evolutionary psychology, and neuroscience to work towards an understanding of the brain in a social context.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and either PSY 14 or MCB 80 before enrolling in this course, or permission of instructor.

As many strive for the American Dream, the gap between the rich and poor continues to widen. Although economic inequality affects us all, resulting in greater societal dysfunction and lower national happiness, the consequences vary greatly depending on your social class. In this course, we will examine how being rich or poor differentially impacts our sense of self, our morality, our ways of thinking, our sense of being in control, our achievements, the biases that we face, and our health and well-being. We will also consider psychological interventions for reducing the consequences of this wealth gap and for promoting mutual understanding across the divide.

Course Notes: Preference will be given to undergraduates.

Recommended Prep: SLS-20 and at least one from PSY 14, PSY 15, PSY 18, or SLS-15

Additional Course Attributes:

Mind reading is not the stuff of science fiction, is it a complex set of mental processes honed throughout our
evolutionary history that allow us to survive and thrive in a social world. But what is a mind? Who has one? Can we ever know what is in the minds of others? In this course we will attempt to answer these questions by exploring how the human mind uses perceptual information to infer other peoples' thoughts, beliefs, and desires. Our goal will be to critically examine why people succeed and fail at reading others' minds.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15 before enrolling in this course.

Prediciting the Future (160691)

*Christine Looser*

2016 Spring (4 Credits)  

**Schedule:** R 0100 PM - 0259 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 20

Although converging evidence suggests that our brains are virtuoso predictors at the millisecond time-scale, people have a great deal of trouble simulating their future states. Why is it that we are so good at short-term predictions but fail to know how long it will take us to complete assignments, how embarrassing we'll find our high school yearbook quotes, or how happy our choices will make us? This course attempts to answer these questions by examining prospection, our ability to simulate the future. Particular attention will be paid to systematic ways in which our predictions about the future go awry.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 15 before enrolling in this course.

The Social Foundation of Human Development (126086)

*Felix Warneken*

2016 Spring (4 Credits)  

**Schedule:** TR 0230 PM - 0359 PM

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Humans would be not the species we are without the ability to connect with others, learn from others, and engage in cooperative behaviors. In this lecture course, we look at children's developing social abilities as an important foundation of human nature. How do we develop as social beings? What are the biological, cultural, and individual factors that influence this development? We will look the development of social behavior from infancy into adolescence, focusing on the types of behaviors that are most relevant at each age. This includes infant attachment, cultural learning, theory of mind, ingroup-outgroup behavior, cooperation and aggression, and romantic relationships. This course combines psychological and evolutionary approaches to human development and is thus
suited for concentrators in psychology, human evolutionary biology, and related fields in the social and biological sciences. You will hear about classic findings from psychology, as well as ongoing debates, with many illustrative examples from children and nonhuman primates.

**Recommended Prep:** The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) for all students, and one of PSY 15, SLS 15 or related HEB coursework before enrolling in this course, or permission of instructor.

Psychology of Language (109862)

*Jesse Snedeker*

*Gennaro Chierchia*

2016 Spring (4 Credits)

**Schedule:** TR 0100 PM - 0229 PM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

How do children manage to learn the sounds, the words and the grammar of their native language in three years or less? Does the language that we speak change how we think? What happens in the mind (and brain) that allows us to convert sound into meaning during language comprehension (and meaning into motor movements during language production)? Why are human languages similar to each other in some ways, and what allows them to vary in others? We will explore these questions integrating the perspectives of linguistics, psychology and cognitive neuroscience.

**Course Notes:** Not open to students who have taken or are taken Ling 160, since they are the same course.

**Class Notes:** Inquiries about this course should be addressed to Kate Pilson, 617.384.8242

**Recommended Prep:** For psych concentrators, Science of Living Systems 20. For linguistics concentrators: this course may be substituted for Ling 83 or Ling 101 as a requirement for the concentration

Psychology 1702
The Emotional Mind (108490)
Leah Somerville
2016 Spring (4 Credits) Schedule: TR 0230 PM - 0359 PM
Instructor Permissions: None Enrollment Cap: n/a
Not only do emotions permeate our everyday lives, they have aided in the survival of the human species. But what are emotions, and what are they good for? What causes us to experience an emotion? And how do emotional responses, in turn, influence our perception, memory, decision-making, and psychological well-being? This course will address these questions by drawing on key advances from historical, philosophical, psychological, and neuroscientific perspectives.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and at least one foundational course from MCB 80, PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 before enrolling in this course.

Psychology 1852
Clinical Psychology in Everyday Life (110203)
Lauren Santucci
2015 Fall (4 Credits) Schedule: W 0100 PM - 0259 PM
Instructor Permissions: Instructor Enrollment Cap: 20
This course is designed to give you exposure to the types of evidence-based psychological interventions available for many clinical and non-clinical conditions, such as sadness, anxiety, substance use, insomnia, pain-
management, weight-loss, and why your roommate can’t stop interrupting you. While the seminar emphasizes intervention research in the context of children and adolescents, the principles are often applicable across age groups. The seminar is not a self-help program or a training program for providing therapeutic services to others. Instead, the weekly discussions, exercises, and assignments will help you view the world through the lens of a scientist-practitioner - and apply those insights to everyday life in a scientific manner.

**Recommended Prep:**

The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 18 before enrolling in this course.

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The goal of this course is to give an overview of the major research findings across mood disorders such as major depressive disorder, bipolar disorder, generalized anxiety disorder, and social anxiety disorder. Every class will involve classic and cutting edge research from the literature on mood disorders. The class will also involve discussion of psychological (i.e., therapeutic) and psychiatric (i.e., medical) perspectives on etiology and treatment. By the end of the course, students will understand the etiology, course, and treatment of a variety of mood disorders.

**Class Notes:**

Evan Kleiman
Psychology 1857
Psychotherapy: Science and Practice (160646)

John Weisz
2016 Spring (4 Credits)  
Schedule:  
R 0230 PM - 0429 PM

Instructor Permissions:  
Enrollment Cap: 15

Would you pay someone to help you change? Millions of people do, every week. Psychotherapy is a healing art, a subject of scientific inquiry, and—for many—a business venture. In this course we will bring these strands together, focusing on how psychotherapy is practiced in the real world and how clinical science is used to test claims of success. We will examine competing models of therapy, evaluate their scientific status, and dig into case examples of each. We will also explore hot topics in the field, including whether all therapies have about the same effect (the "dodo bird" hypothesis), whether internet-based therapies actually work, and how to get effective therapies to traumatized people in war-ravaged and low-resource countries.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 18 before enrolling in this course.

Psychology 1858
Stress, Coping, and Resilience (156561)

Evan Kleiman
2016 Spring (4 Credits)  
Schedule:  
R 0300 PM - 0459 PM

Instructor Permissions:  
Enrollment Cap: 20

The goal of this course is to give an in-depth understanding of the theoretical and empirical work on stress (e.g., negative life events, psychological and physiological stress), coping, and resilience. Theories of stress will be discussed from social, cognitive, and biological perspectives. Major focus will be given to the study of resilience to stress and related topics (e.g., psychopathology, self-injury) through the lens of positive psychology. By the end of the course, students will understand the causes, course, and consequences of stress and resilience to stress.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 18 before enrolling in this course.
Psychology 1861
Developmental Psychopathology (116095)

John Weisz

2015 Fall (4 Credits) Schedule: R 0230 PM - 0529 PM

Instructor Permissions: Instructor Enrollment Cap: 25

An overview of psychological problems and mental disorders in childhood and adolescence. Topics include internalizing conditions (e.g., anxiety, depression), externalizing conditions (e.g., conduct disorder and ADHD), eating disorders, autism, and child responses to maltreatment and other forms of trauma. Theoretical perspectives, diagnostic criteria, etiology, and treatment approaches are examined.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 18 before enrolling in this course.

Psychology 1900
Introduction to Statistics for the Behavioral Sciences (118254)

Max Krasnow

2016 Spring (4 Credits) Schedule: MW 1000 AM - 1059 AM

Instructor Permissions: None Enrollment Cap: n/a

Provides a conceptual and practical introduction to statistics used in psychology and other behavioral sciences. Covers basic topics in statistics including: measures of central tendency and variability; probability and distributions, correlations and regression, hypothesis testing, t-tests, analysis of variance, and chi-square tests. Includes a lab section with instruction in statistical analysis using a computer program.

Course Notes: Open to freshmen with permission of instructor. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Class Notes: M, W, at 10, and an additional lab to be arranged

Intermediate Statistical Analysis in Psychology (121738)

*Patrick Mair*

2015 Fall (4 Credits)  

**Schedule:** TR 0130 PM - 0259 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This course offers intense, foundational exposure to psychological statistics, focusing heavily on analysis of variance (one-way, factorial, repeated-measures, mixed-model). Other topics include: exploratory data analysis, sampling distributions, null hypothesis significance testing, t-tests, fixed versus random effects, post hoc and planned comparisons, correlation, simple regression, the general linear model, chi-square tests, nonparametric statistics, confidence intervals, and meta-analysis.

**Course Notes:** Required of doctoral students in Psychology.

**Recommended Prep:** Psychology 1900 or the equivalent.

Psychology 2030

Bayesian Analysis for Psychology (160667)

Patrick Mair

2016 Spring (4 Credits)  
**Schedule:** W 0930 AM - 1159 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 20

Bayesian Statistics is becoming popular in Psychology and is certainly a direction where quantitative Psychology is
going to move within the next few years. This class covers basic and advanced topics of Bayesian statistics in a very applied way with a strong focus on applications in Psychology (and Social Sciences in general). Formulas and technical details are kept on a minimum -- it is all about how to integrate Bayesian concepts into your everyday research. The first part of the course introduces students to the Bayesian paradigm of inferential statistics (as opposed to the frequentist approach everyone is familiar with). We elaborate on Bayes’ seminal theorem and introduce gently the core components of Bayesian inference: prior distributions, posterior distributions, and Bayes factors. Subsequently, we will learn about simulation based approaches for sampling posterior distributions. These are the infamous MCMC (Markov Chain Monte Carlo) techniques and have fancy names such as Metropolis-Hastings and Gibbs Sampling. Then we are ready to actually do Bayesian inference and testing. We start with simple statistical tests and models such as t-test, ANOVA, and regression and compute them in a Bayesian way. We extend our modeling approach to generalized linear models (GLM) and a model family where Bayesian statistics turn out to be super helpful: hierarchical (aka multilevel or mixed-effects) models. Finally, we focus on modern, more specific (psychometric) Bayesian methods such as multidimensional/multilevel item response theory (IRT), Bayesian latent variable models, latent Dirichlet allocations (LDA; as e.g. used in natural language processing), and Bayesian networks. All topics covered will be supported by corresponding computations and illustrations in R. Lab units focus on knitting! (in other words, we focus on dynamic report generation using LaTeX and R Markdown in conjunction with the knitr package)

**Recommended Prep:** This course is intended for Harvard doctoral candidates in Psychology. It is required that students both Harvard graduate and undergraduate students have completed Psych 1950 (or an equivalent course). That said, other students (e.g. Harvard undergraduates, Harvard graduate students from other fields, MIT graduate students) may obtain permission to take the course. It helps if students have at least basic R knowledge. If someone is new to R, two introductory R units will be given right at the beginning of the semester.

**Psychology 2150R**

Social Cognitive Development: Research Seminar (125976)
In this year-long lab-course, you will have the opportunity to participate in research on social behaviors in children. We are studying the origins of our sense of fairness, how children cooperate with others, and how they judge behaviors as moral and immoral. We take a developmental and evolutionary perspective, drawing on insights from psychology, anthropology, and primatology. You will work closely with graduate students and other senior lab members in developing experiments and running studies with children from toddlerhood into school-age. In addition to data collection, students learn how to code behavioral data via video. We also hold weekly lab-meetings to discuss ongoing projects and read the relevant literature.

Please visit our website to learn more about our research and how to join our lab: https://software.rc.fas.harvard.edu/lds/research/warneken/research/

Course Notes: Open to all undergraduates with permission of instructor.

Class Notes: For information on this lab, contact the instructor at warneken@wjh.harvard.edu

Recommended Prep: For undergraduates, Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15.

Psychology 2150R

Social Cognitive Development: Research Seminar (125976)

Felix Warneken

Year-long lab course on children's social-cognitive development and the study of cooperation. Students develop and pilot experiments with children or participate in ongoing projects. In addition, students read and discuss papers on social cognition, understanding of norms, and cooperation from developmental and evolutionary psychology.

Course Notes: Open to all undergraduates with permission of instructor.

Recommended Prep: For undergraduates, Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15.

A scientific account of human concepts and conceptual development must characterize the content, format, and functional roles of both the innate and the mature conceptual repertoire, as well as the developmental processes that operate on the former to produce the latter. The evidence for innate sensory, perceptual, and motor representations is overwhelming; much recent work has provided evidence for richer primitives with content such as agent and object as well. But the adult conceptual repertoire includes explicit abstract concepts supporting natural language, spatial symbols, mathematics and logic. We will provide evidence for innate content in each of these domains, and explore the hypotheses that the representational systems that express that content nonetheless are qualitatively different from those that are realized in the adult state. These issues will be explored in three case studies: representations of number, geometry, and of logical connectives and abstract relations. The seminar will consider proposals from linguistics, philosophy, and cognitive science concerning the combinatorial resources of natural language, and will ask whether these resources are qualitatively different from those that articulate perception and action, and if so, whether they arise in human evolution only with the evolution of language, and in human development only in the course of language acquisition.

Course Notes: Undergraduates admitted by permission only.

Class Notes: Course meets Tues. 3-5:30 when no faculty meeting is scheduled.

Recommended Prep: For undergraduates, the Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and Science of Living Systems 15 before enrolling in this course.

**Psychology 2250**

Evolving Morality: From Primordial Soup to Superintelligent Machines (Grad. Sem. in Gen. Ed.) (160662)

*Joshua Greene*

2016 Spring (4 Credits)  
**Schedule:** W 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Students will help tell the story of morality on Earth, from its origins in the biology of unthinking cooperative organisms, through the psychology of intelligent cooperative primates, and into a future inhabited by machines that may be smarter and more capable than humans. Addressing longstanding philosophical questions in light of new scientific knowledge, this course will integrate material from across the humanities, social sciences, life sciences, and applied sciences with an emphasis on the development of interactive teaching tools.

**Course Notes:**

The seminar will design and develop a General Education course on these themes for undergraduates.
Psychology 2310
Brain Mystery: What is so Special about the Primate Frontal Cortex (108553)

2016 Spring (4 Credits) Schedule: 
Instructor Permissions: None Enrollment Cap: n/a

Read and discuss papers to understand how the primate frontal cortex supports a wide range of cognitive operations, including attention, working memory, executive control functions, and decision making.

Psychology 2320
Object Representation in the Mind and Brain (160686)
Alfonso Caramazza Yaoda Xu

2016 Spring (4 Credits) Schedule: M 0300 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 12

How does our visual system translate complex arrays of visual inputs into meaningful objects that we can act upon? What do we need to construct a sound theory of object representation? What progress have researchers made in understanding this process over the past few decades? What information is essential and where is it computed and represented in the human brain? In this seminar, we will address these questions by reading and discussing key papers on object representation, critically evaluating results from behavioral, neurophysiological, neuropsychological, special population (e.g., blind individuals), neuroimaging, and computational studies. This seminar will not only provide a critical review of the current literature, but also identify important challenges that await future research.

Recommended Prep: For undergraduates, the Psych Dept requires completion of PSY 14 or MCB 80 before enrolling in this course.

Psychology 2355R

Laboratory on Cognitive and Neural Organization (109597)

Talia Konkle

2016 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: n/a

This lab course provides instruction and experience in conducting research on cognitive architecture and neural organization, via the methods of visual cognition and cognitive neuroscience. Special focus on issues of high-level visual representation and the corresponding structure in neural response profiles. Open to graduate and undergraduate students working in the instructor's laboratory. Undergraduates are required to write research report at the end of the semester on the studies conducted in the lab.

Course Notes: For information on this course please e-mail the instructor at tkonkle@fas.harvard.edu

Class Notes: For information on this course please e-mail the instructor at tkonkle@fas.harvard.edu

### Psychology 2464R

Research Methods in Child & Adolescent Clinical Psychology (124970)

John Weisz  
Kristina Metz  
Jessica Schleider

2016 Spring (4 Credits)  

**Schedule:** W 0130 PM - 0259 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 30

This course is designed to give you exposure to the concepts, as well as the nuts and bolts, of research in clinical psychology of childhood and adolescence. There is a special emphasis in this course (as in the lab) on intervention research addressing youth depression, anxiety, and conduct-related problems and disorders. If you are a psychology concentrator at Harvard, you may have already taken classroom-based courses covering theories and methods that guide research in clinical psychology, such as Abnormal Psychology and Developmental Psychopathology. You may also have taken courses that introduced you to the types of statistical analyses (Psych 1900) and research methods (Psych 1901) used in psychological research. In this course, we will build on the foundation you received in such courses by applying what you have learned to the conduct of specific research projects.

In this class, you will participate in several aspects of the clinical research process via your active involvement in the
research of our psychology laboratory. More specifically, through attending weekly class/lab meetings and participating in one or more research projects, you will learn how specific research ideas take shape; how research questions and hypotheses are generated; how studies are designed to address these research questions and hypotheses; how data are collected, cleaned, entered into study datasets, then analyzed; and how findings are interpreted and organized for presentation at professional meetings and in scientific publications.

The main goals of research in our lab are to build an understanding of which interventions for child and adolescent mental health problems are effective, and to promote use of the best evidence-based assessment and intervention in everyday clinical practice for youths and families. In pursuing these goals, we and our colleagues develop ways of structuring evidence-based practices to make them user-friendly and tailored to the settings in which youngsters typically receive mental health care—e.g., community mental health clinics and schools. Much of our work focuses on developing and testing these tailored approaches. We also conduct meta-analyses of the youth psychotherapy research literature, to sum up what has been learned from all the treatment studies with children and adolescents.

This course is designed to be useful to students who plan to pursue a career in child and adolescent mental health, particularly those with an interest in psychological research. However, the skills conveyed (e.g., critical thinking, research design, science writing) may be useful in a variety of ways and relevant to a number of different career paths.

Class Notes: Interested students should e-mail Jessica Schleider, jschleider@fas.harvard.edu

There will be an organizational meeting on Wed., Jan. 27 at 1 PM in William James Hall Rm. 1050.

Recommended Prep: An interview with the instructors is required.

Bad Genes, Bad Parents, Bad Behaviors (159711)

Joshua Buckholtz

2016 Spring (4 Credits) Schedule: M 0300 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: 20

This class will explore the biology of criminal behavior and violence. We will examine the construct of "anti-sociality" and unpack clinical and diagnostic issues surrounding its diverse manifestations, such as psychopathy. A strong emphasis will be placed on biological mechanisms. A particular focus will be on understanding how genes and environments act and interact to predispose antisocial behavior by shaping brain function and development.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 (or equivalent) and PSY 18 before enrolling in this course.

Intergroup Relations: Research Seminar (122753)
James Sidanius
2015 Fall (4 Credits)
Schedule: F 1000 AM - 1129 AM
Instructor Permissions: Instructor
Enrollment Cap: 30
The seminar provides students with research experience concerning different forms of intergroup relations, including the social psychology of interracial and interethnic conflict and prejudice. Graduate and undergraduate students meet on a weekly basis to discuss ongoing research on psychological mechanisms involved in power, stereotyping, inequality, identity, and ideology. Undergraduate enrollees will work under the supervision of a graduate student in the design and conduct of lab-based and survey experiments, and the input, coding and early analysis of empirical data. Undergraduate enrollees will also attend biweekly critical discussions of research articles in the field, and will have the opportunity to develop and receive feedback on their own research ideas.

Psychology 2620R
Research Seminar in Intergroup Neuroscience (156624)

Mina Cikara

2015 Fall (4 Credits)  

Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Year-long lab course exploring how cognition, affect, neural responses, and behavior change when social relations shift from "me and you" to "us and them." Students will participate in experiment development and data collection employing methods ranging from standard laboratory experiments, implicit and explicit self-reports, and behavioral measures, to fMRI and psychophysiology. Students will also read and discuss papers on intergroup relations in our weekly meetings.

Course Notes: Interested students should take the survey at https://harvard.az1.qualtrics.com/jfe/form/SV_6JY0wjescHXovpr

Recommended Prep: SLS 20 and at least one course from Psy 13, Psy 14, Psy 15, Psy 18, or SLS 15.

Psychology 2652
The Psychology of Cooperation (108989)
Felix Warneken
2015 Fall (4 Credits)  Schedule: R 0330 PM - 0529 PM
Instructor Permissions: Instructor  Enrollment Cap: 15
Why and how do humans cooperate? What are the origins of these behaviors in human development and evolution? In this course we discuss how research in psychology, behavioral economics and primatology can
provide insight into the foundation of human cooperation. This includes the study of empathy, altruism, fairness, and collaboration.

**Recommended Prep:** The Psychology Department requires undergraduates to complete Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18 or Science of Living Systems 15 before enrolling in this course.

Psychology 2661R
Research Seminar in Nonverbal Behavior, Social Perception, and Psychophysiology (110217)

Amy Cuddy

2015 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Students will gain human subject research skills and experience in the lab and online. We will cover a range of topics in social psychology, including but not limited to: nonverbal behavior, social perception, personal power, hormones, emotions, and performance in stressful situations. In biweekly meetings, students will have the opportunity to provide and receive feedback on the work of the lab as well as discuss relevant papers. In addition, monthly trainings will be held covering research tools such as eye-trackers, physiological measures, Qualtrics, and Mechanical Turk.

**Recommended Prep:** Science of Living Systems 20 plus one from Psychology 13, 15, 16, 18, Science B 29 or MCB 80.

Psychology 2670A
Decision Making and the Psychology of Possibility (131189)

Ellen Langer
Topics in decision making such as rationality, risk-taking, helplessness, and health are examined through the lens of mindfulness theory. Special emphasis given to the psychology of possibility in applied settings.

Course Notes: Open to qualified undergraduates.

Recommended Prep: The Psychology Department requires undergraduates to complete Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 before enrolling in this course.

Psychology 2670B
Decision Making and the Psychology of Possibility II (132599)

Ellen Langer

2016 Spring (4 Credits)

Schedule: T 0130 PM - 0359 PM

Instructor Permissions: Instructor
Enrollment Cap: 15

A deeper exploration into the theoretical and experimental issues pertaining to decision making and the psychology of possibility, raised in Psychology 2670a.

Course Notes: Open to qualified undergraduates. The course requires permission of instructor. Interested students are encouraged to e-mail the instructor in advance at langer@wjh.harvard.edu.

Recommended Prep: Psychology 2670a and its prerequisites: Science of Living Systems 20 (or equivalent) and at least one foundational course from PSY 14, PSY 15, PSY 18, or Science of Living Systems 15 are required before enrolling in this course.

Augustine's Confessions (159713)

Charles Stang

2016 Spring (4 Credits) Schedule: R 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 15

The aim of this course is to introduce students to the Confessions of Augustine of Hippo, a Christian theologian of the 4th/5th c. This seminar will introduce students to the life of Augustine, but will focus on a close reading of the Confessions in English translation, attending to such questions as: what is a "confession" and how does it relate to autobiography? Who is the "I" that speaks and the "you" to whom it speaks, and what is the condition of that speech? How are we best to understand this text, as a work of theology, philosophy, or literature (or is that division even helpful)?

The original form for teaching Christians how to live was not law but biography. Imitating the Gospels, many Christian writers have offered their most important teachings as narrations. They have held up holy lives as examples or displayed wicked lives as warnings. They have tried to tell their own lives in confession or to imagine alternate lives as allegory or prophecy. Always eager to move from word to action, Christian writers have tried above all to reshape lives, especially by projecting new communities and rituals. This course will consider a wide range of works from gospels to medieval allegories by authors as diverse as Athanasius or Augustine and Margery Kempe.

Religious Liberty: Contested American Stories (159755)

This course considers the long history of the United States' engagement with the ideal of religious liberty. From the Puritans' conception of liberty as the freedom to hold correct beliefs, through Native American efforts to preserve sacred practices, to the current debates over the philosophical impossibility of true religious equality and over the "religious freedom restoration acts" emerging in various states, the course will move across the full sweep of American history on the topic. It examines both the structural relationship of church and state - at the federal and local levels - as well as more diffuse cultural attitudes. It combines scholarly literature, primary sources and students' original research.

From Soul to Personality: Religion and Modern Psychology (161238)

This course considers the long history of the United States' engagement with the ideal of religious liberty. From the Puritans' conception of liberty as the freedom to hold correct beliefs, through Native American efforts to preserve sacred practices, to the current debates over the philosophical impossibility of true religious equality and over the "religious freedom restoration acts" emerging in various states, the course will move across the full sweep of American history on the topic. It examines both the structural relationship of church and state - at the federal and local levels - as well as more diffuse cultural attitudes. It combines scholarly literature, primary sources and students' original research.
Critics and religious adherents alike have used psychology to understand religion for centuries. Some argue that knowledge of the human mind can "explain away" religion while others argue to the contrary that it buffers religious belief. This course will consider different ways that modern psychology has impacted thinking about religion in the Modern West. We will discuss the rise of empirical psychology, psychoanalysis, new interest in the "personality," and the making of a field of the psychology of religion. We will use this historical context to examine recent turns to cognitive science and to "Eastern spirituality" to understand the relationship between religion and the human mind.

Women, Religion and Redemption (159572)

*Marla Frederick*

2016 Spring (4 Credits)

**Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

This course explores the role of religion in the "redemptive" work of women in the US. It takes up questions related to the triangulation of gender, race and class in how people understand and structure their religious lives. With interdisciplinary readings in history, anthropology and religious studies, this course examines closely ideas like "liberation," "agency" "purity" "respectability" and "intersectionality" as discourses used to organize, explain and promote varied redemption efforts attending to women. Within the critical space of religious discourse, these ideas take on peculiar meanings and unique manifestations. By looking primarily at the work of Christian, Muslim and Jewish women in these efforts over the last century, the course also takes into consideration how these ideals have changed and developed over time. In doing so it allows us to reexamine how we understand religion and its role in society in the aftermath of reconstruction, the Women's Movement, the second World War and ongoing civil rights struggles.

**Religion 58**

The Body in Christian Thought (159758)

*Maya Rivera Rivera*

2015 Fall (4 Credits)

**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

The course offers an introduction to Christian ideas about the body, by considering central teachings and areas of debate—including understandings of creation, incarnation, healing, and resurrection. Texts include early Christian literatures, Patristic and medieval texts, Reformation theologies, as well as modern and contemporary authors. The course will help students understand the distinctiveness and diversity of Christian positions on these topics.
Religion   74

Introduction to Buddhism (159733)

*M. David Eckel*

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

A study of the major themes of Buddhist thought and practice, beginning with the origins of the tradition in India and exploring the transmission and development of the tradition in Southeast Asia, Tibet, East Asia, and the modern West. Important themes include the concepts of reincarnation, karma, and nirvana; the legend of the Buddha, Siddhartha Gautama; the nature of the self; the education of the emotions; and the possibility of liberation. The course will focus on scriptural, literary, and philosophical classics of Buddhist tradition, but it will also consider the tradition of Buddhist art and the formative rituals in Buddhist life, such as meditation, pilgrimage, and monastic discipline. Throughout the course we will consider the relevance of this material to our own views of the world and how we should lead our lives. Note that the course has additional section hour to be arranged.

Cultures of Health and Healing: Religion, Medicine, and Global Health (160969)

Mara Block

2015 Fall (4 Credits)

Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: Instructor

Enrollment Cap: 20

What does it mean to “be healthy” and “to heal” in different contexts? What sorts of medical, ritual, or religious expertise authorizes different sorts of healers and forms of healing? What conceptions of human bodies and their capabilities are assumed? These questions probe entanglements of religion and medicine in everyday life. This course focuses on ways in which these issues might inform, challenge, and enrich thinking about global health. We will examine moral and religious histories of the global health movement alongside pressing contemporary questions such as, how do disease epidemics shape religious practice? How does religious belief shape the
reception of biomedical technologies? We will consider examples from a range of contexts and traditions. Topics include colonialism, medical missionaries, social gospel and public health, human rights, bioethics, and liberation theology. Throughout the course, we will discuss the relevance of socio-economics, race, gender, and sexuality.

Ancient Christian Martyrdom and Its Modern Legacy (159784)
Karen King
2015 Fall (4 Credits)
Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: Instructor Enrollment Cap: 30

The varied ways in which ancient Christians represented persecution in the Roman empire has left a rich and sometimes troubling legacy for the modern world. Their struggles are documented in stories of torture and public execution, revelations from God, treatise exhorting believers to confess, andpolemics against fellow Christians who thought otherwise. Some advocated suffering and demonized their opponents, others ascetic withdrawal, pacifism, silent endurance, or even living well as the best witness to God. In the aftermath, they agonized over how to heal traumatized communities. This course will examine this literature and its legacy for contemporary issues such religious (in)tolerance, torture, and what it means to be fully human.

The Shock of the New (108501)
Michael Jackson
2016 Spring (4 Credits)
Schedule: W 0200 PM - 0359 PM
Instructor Permissions: None  Enrollment Cap: n/a

This course will explore the impact of unprecedented events, overwhelming experiences and radical technological innovation on both human beings and the life worlds to which they belong. It will cover some of the epistemological, ethical, social and existential quandaries that constitute what Robert Hughes calls 'the shock of the new', as well as the religious and ritual strategies whereby people struggle to avert, accommodate, cope with and comprehend massive changes to their lives. Interpretive perspectives will be drawn from psychology, philosophy, ethnography, ethology and biomedicine, while specific empirical cases will cover new media of communications and information processing, new genetic technologies, medical crises (disabilities, organ transplantation, trauma and epidemic disease), as well as culture contact and culture shock.

Course Notes: Offered jointly with the Divinity School as 3256.

Religious Diversity and The Age of Pluralism (159691)

Diana Eck

2015 Fall (4 Credits)  Schedule: F 1000 AM - 1159 AM

Instructor Permissions: Instructor  Enrollment Cap: 12

How has the diversity of religion in today's world brought new challenges to nations, societies, and communities? How has religious diversity given rise to new theological and spiritual perspectives within each religious tradition? What does interfaith mean in the many contexts of human life and faith today? We will look at both civic and religious perspectives on the problems of religious difference, considering major writings on the meanings and regimes of religious pluralism in the U.S., Europe, and India.

Twins and Twinship in Religion and Myth (127699)

Kimberley Patton

2016 Spring (4 Credits)  Schedule: R 0200 PM - 0359 PM

Instructor Permissions: Instructor  Enrollment Cap: 20

This comparative seminar interrogates the meaning of "doubling" a living being, and how this can be religiously, culturally, and mythically expressed. The birth of two children instead of one presents anomaly, in some traditions causing anxiety that can only be ritually resolved, or in others creating opportunity. Twins link worlds that single children cannot, or embody signs, auspicious or suspicious. How are "real" twins related to the divine twins of religion and myth, if they are at all?

Course Notes: Offered jointly with the Divinity School 3310. Application only at the first class.
Religion 1040

This course examines the processes by which theologians study theologies across religious boundaries, bringing this learning into dialogue with home traditions, by careful comparison, dialogical reflection, and, ideally, a well-informed theological understanding of what it means to belong to one tradition and learn from another. Readings include (by way of example) Hindu primary texts and texts from the Roman Catholic traditions, but students are encouraged to bring their knowledge of and interest in other traditions to the discussions.

Course Notes: Offered jointly with the Divinity School as 3101.
Recommended Prep: Prior knowledge of either tradition, though desirable, is not required.

This seminar examines the relationships between modern states and religion with particular attention to Islam in Muslim majority countries and beyond. We will analyze institutional arrangements from separation to establishment, and we will examine the meaning of secularism as a modern project. We will explore what the formation of the modern state owes to religion, but also how the modern state transforms religion. More broadly, the seminar will analyze the general consequences of the modern states' engagement with religion, and will explore new potential research paths. Readings will include historical, anthropological, theoretical, as well as quantitative perspectives.

Recommended Prep: Approval of instructor required for freshmen.
Religion 1330
Ancient Greek Sanctuaries: Sacred Games (159709)

Kimberley Patton

2015 Fall (4 Credits)  Schedule:  R 0200 PM - 0359 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

Why were ancient Greek athletic competitions conducted as religious tradition and ritual observance? What was the relationship of the idealized Greek athlete to the Olympian world of the gods, and the chthonic, local world of the heroes? How were athletics related to political power and cultural memory? Exploring the four classical sanctuaries that were the sites of Panhellenic games (Olympic, Pythian [Delphi], Nemean, and Isthmian [Corinth]), as well as the Panathenaic Games in Athens, this course considers both archeological and literary evidence.

Course Notes:  Enrollment limited to 15 with the permission of the instructor, by application at the first course meeting. Offered jointly with the Divinity School as 3111.

Introduction to the New Testament (113956)

Laura Nasrallah

2016 Spring (4 Credits)  Schedule:  TR 1130 AM - 1259 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

The texts of the New Testament emerged in the diverse social and complex political context of the Roman Empire and of second-temple Judaism within the Roman Empire. This course examines historical-critical approaches that attempt to set New Testament texts within their first- and second-century contexts, pays special attention to archaeological materials which aid our understanding of the world from which these texts emerged, and considers how and why these particular texts came to be a canon. Students will also consider the vibrant and controversial contemporary contexts in which they and others interpret the New Testament.

Course Notes:  Offered jointly with the Divinity School as 1202.

What is the spiritual significance of money? Wealth and poverty have posed controversial questions for faith since the attacks by the Hebrew prophets; Jesus’ warnings to the rich about the eye of the needle; and the sharp objections raised by monastics, St. Francis and reformers. These themes persist in current disputes, sparked in part by Pope Francis’s statements about inequality, and by controversies around the prosperity gospel and liberation theology’s “preferential option for the poor.” This course will explore biblical, theological and ethical dimensions of these issues and will include some comparative discussion of how other religions approach them.

This course focuses on the American Catholic experience. We will discuss French and Spanish missions, Catholic immigration to the British colonies, the rise of nativism, and controversies over slavery, industrial capitalism, "Americanism," feminism, war, and sexuality. We will also discuss the transformation of the Catholic Church in the wake of Vatican II and contemporary divisions between "liberals" and "conservatives." Besides examining Catholic intellectual life, we will also explore Catholic popular religion and devotionalism. Throughout the course, we will focus on the historical development of the Catholic Church and the relationship between Catholics and American culture.

Protestant-Catholic Relations in America, 1600-2000 (108207)

*K Gaston*

2016 Spring (4 Credits)  
**Schedule:** MWF 1100 AM - 1159 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25

With the earliest colonists to the Americas came the legacy of the great divide that separated Protestants from Catholics during the Reformation. From that time forward, the relationship between these groups has been central to the American experiment, shaping the contours of American democracy and national identity. This course will explore the complex and continuously evolving interplay between Protestants and Catholics and its influence on American history, literature, thought, politics, and culture. Anti-Catholicism will figure prominently in the readings and lectures, but so too will such themes as agency, cross-confessional exchange, and definition in opposition. We will pay particular attention to the waxing and waning of anti-Catholicism at different points in American history; changing conceptions of democracy, religious pluralism, secularism, church-state relations, and the category of religion itself; the distinctive contributions of Protestants and Catholics to American social movements; and the growing affinities between evangelical Protestants and Catholics in contemporary America.

The Fragmentation and Future of Protestantism (161262)

*Michele Sanchez*

2016 Spring (4 Credits)  
**Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Protestantism, perhaps paradoxically, is known for its tendency toward fragmentation as well as its powerful role in shaping what many take to be the monolithic terms of the "Modern Western" social imaginary: individualism, proceduralism, discipline, rationalism, and disenchantment. This course is designed to equip students to intelligently engage differences among Protestants and to understand both the theological and social reasons for those differences—and in so doing, to better engage the relationship between Protestantism, modernity, and the current varieties of both North American and global Protestantism. The course will begin by introducing students to the variety of sixteenth-century Protestant Reforms, with attention to their theological and political differences. It will
then engage critiques of Protestantism from secularization theorists and scholars of the study of religion before
finally looking at the complex contours of the contemporary landscape: the persistence and continuing rise of
 evangelicalism alongside the struggles of mainline Protestantism.

Religion 1513
Harvard's History and Evolving Religious Identity (109536)

Stephen Shoemaker
2016 Spring (4 Credits) Schedule: MW 1100 AM - 1159 AM
Instructor Permissions: None Enrollment Cap: n/a

An examination of the intellectual and institutional history of the University that leads students through a
chronological exploration of key events and significant presidents. Among themes to be considered are European
antecedents, developments in faculty, changes in student life, curricular alterations, as well as the maturation of the
built environment. Significant attention is paid to the evolution of the religious context of the school, which was a
vital component of the University's identity for several centuries.

Course Notes: Offered jointly with the Divinity School as 2297.

Introduction to Hermeneutics and Theology (117871)

Francis Fiorenza
2015 Fall (4 Credits) Schedule: MW 1100 AM - 1159 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

General introduction to hermeneutical theory and theology. It surveys the development of theories of interpretation
from classical to modern and contemporary times and show the relation between the theory of interpretation and the
understanding of theology. The course will especially attend to the influence of nineteenth and twentieth century
theories of interpretation upon sacred texts, the diverse approaches to theology, and key theological categories
such as revelation, experience, method, foundations, classics, community, and practice. It introduce studies to
some of the modern debates about the importance of interpretation for religious and theological studies.

Course Notes: Offered jointly with the Divinity School as 2410. Course has additional
section hour to be arranged.

19th-Century Religious Thought: Theology and the Critique of Religion (109865)

*David Lamberth*

2015 Fall (4 Credits)  

**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

The nineteenth century formulated many of the questions and frameworks that continue to dominate theology and religious reflection in the West. This course considers the developing interplay between modern Christian theology (primarily continental) and the principal philosophical and social critiques of religion in the nineteenth century. Topics include human nature, religion, the divine-human relationship, religious knowledge, the social, and historicity. Readings from Lessing, Kant, Schleiermacher, Hegel, Marx, Feuerbach, Kierkegaard, Nietzsche, Harnack, and Troeltsch.

**Course Notes:** Offered jointly with the Divinity School as 2431.

Journeys (109863)

*Leila Ahmed*

2015 Fall (4 Credits)  

**Schedule:** M 0400 PM - 0559 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 12

A growing number of books have appeared recently recounting personal journeys of faith — faith searched for, wrestled with, lost, found, abandoned, affirmed, re-imagined, understood in new ways — or any combination of these. We will read contemporary works in this genre exploring, among others, themes of religion, gender and identity. Our readings will include Sarah Sentilles, Breaking Up with God, Joanna Brooks, The Book of Mormon Girl, Chris Stedman, Faithiest, Colleen Carroll Campbell, My Sisters the Saints, and Lauren Winner, Still: Notes on a Mid-Faith Crisis; Ann Lamott, Help, Thanks, Wow.

**Course Notes:** Offered jointly with the Divinity School as 3107.

Religion 1581
Religion and Politics in Modern America (161232)
K Gaston
2016 Spring (4 Credits) Schedule: T 0400 PM - 0559 PM
Instructor Permissions: Instructor Enrollment Cap: 15
This course offers students a panoramic view of the relationship between religion and politics in modern America. The readings include some of the most thought-provoking books on religion and politics published by historians in recent years. Throughout the semester, we will ask how assumptions about the relationship between secularism and pluralism inform our understanding of the grand narrative of modern American religion and politics. Has the twentieth century witnessed the secularization, or “de-Christianization,” of American politics, or have reports of religion’s decline in American public life proved premature? Might we even be seeing a concerted effort to re-Christianize American public culture? If so, will this effort gain momentum from, or run aground on, America’s ever-expanding religious diversity? The readings will provide students with a broad overview of the subject area while at the same time inviting them to consider which interpretive approaches they find most compelling and why.

Course Notes: Jointly offered with the Divinity school as HDS 2364

The Brhadaranyaka Upanisad with Sankara's Commentary (125635)

Francis Clooney

2016 Spring (4 Credits)  Schedule:  T 0200 PM - 0429 PM

Instructor Permissions: Instructor  Enrollment Cap: 20

This seminar is for students interested in the study of primary Indian/Hindu texts, read in translation and in the context of a comparative dynamic of reading across the boundaries of traditions. The Brhadaranyaka Upanisad, Sankara's commentary on it (plus excerpts from Suresvara's Vartikas), will be read (in English) along with short examples from Christian theological/commentarial literature.

Course Notes: Offered jointly with the Divinity School as 3928.

Recommended Prep: No language or course prerequisites, but students who know Sanskrit will be encouraged to make use of their expertise. It is part of a series, but not necessary to have taken prior seminars.

Muslim Devotional Literatures in South Asia: Qawwalis, Sufiana Kalam (Sufi Poetry) and the Ginans (161217)

Ali S. Asani

2016 Spring (4 Credits)  Schedule:  W 0100 PM - 0259 PM

Instructor Permissions: None  Enrollment Cap: n/a

This course explores traditions of Islamic spirituality in South Asia through the lens of three genres: the qawwali, concerts of mystical poetry; sufiana kalam, Sufi romantic epics and folk poems; and the ginans, hymns of esoteric wisdom recited by the Satpanthi Ismailis. Since these genres represent examples of language, symbols and styles of worship shared across Islamic and non-Islamic denominational boundaries, we will also examine their relationships with other Indic traditions of devotion, particularly those associated with the so-called sant and Hindu bhakti movements. Special emphasis will be given to the impact of contemporary political ideologies, globalization and the revolution in media technology on the form and function of these genres and their relationship with
contemporary communities of faith in South Asia and beyond.

The Politics of Storytelling (109925)

*Michael Jackson*

2015 Fall (4 Credits) Schedule: W 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course addresses Hannah Arendt's thesis that storytelling is a critical strategy for bridging the gap between private and public realms. Storytelling is thus understood as a mode of social and political activity that involves a struggle between personal and collective representations of the "truth" and between unofficial and official versions of events. Through the close analysis of storytelling in a variety of situations, we will explore the ways in which the meaning of stories resides not in any ahistorical essence or internal logic, but emerges from the everyday human struggle to strike a balance between domains of experience that are, on the one hand, felt to belong to oneself or one's own kind, and, on the other, felt to be shared by or to belong to others.

Grief and the Emotions: Ancient Philosophy and Theology (126474)
Laura Nasrallah
2016 Spring (4 Credits)  Schedule: R 0200 PM - 0359 PM

Instructor Permissions: Instructor  Enrollment Cap: 12

This course examines the topic of grief in the ancient Mediterranean world. We shall work with a variety of materials: New Testament texts (especially the letters of Paul), funerary monuments and inscriptions, Roman-period consolation letters and literature, philosophical writings, tragedies, satiric writing on funerals, and scholarly hypotheses regarding lifespan (especially that of mothers and the issue of infant mortality). Special attention will be paid to political and economic issues (including slavery), as well as to instructions to women about how to mourn. The course will be punctuated by modern writings on grief.
Religion 2443
Marriage, Family and Community in the New Testament and Today (160547)
Ellisabeth Schussler Fiorenza
2015 Fall (4 Credits)  
**Schedule:** T 1200 PM - 0159 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

Today's debates over marriage and family often appeal not only to concepts such as human rights and sexual ethics but also to the "American institution of marriage" and its biblical foundations. Such appeals present "heterosexual marriage" as something that is an unchanging institution and has simply always been so. Moreover, they neglect both the centrality of power relations to first century discussions of marriage and the ways in which these discussions survive in the present. Against this backdrop, the course will examine the understandings of marriage and household in the formation of Early Christian communities and consider their impact within contemporary discussions of violence against women, same sex marriage, or global sexual slavery. To that end, we will ask how New Testament traditions of obedience and subordination still shape our understandings not only of community and church, but also marriage and other human relationships. At the same time we will also explore traditions of equality, mutuality and love also inscribed in New Testament texts.

Religion 2464
Reformation and the Making of Religious Practice in Britain and colonial America, c. 1550-1700 (143024)
David Hall
2016 Spring (4 Credits)  
**Schedule:** M 0300 PM - 0459 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

A research seminar, this course covers the coming of Reformed (Calvinist) Protestantism to England and Scotland in the sixteenth century and the maturing of the Puritan movement in those countries and New England in the seventeenth. Attentive to theology and politics, this course also explores lived religion, especially devotional practice.

**Course Notes:** Offered jointly with the Divinity School as 2270.
Religion 2471

Christian Ethics, Persuasion, and Power I (155998)

Mark Jordan

2015 Fall (4 Credits)  Schedule:  T 1200 PM - 0159 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Early Christians wrote their ethical teaching not only in response to existing religious law or rite, but in competition with philosophical programs for soul-shaping. The religious traditions and the philosophic schools alike wanted to discipline bodily actions and passions, but even more to elicit certain roles or characters. This course reads some ancient philosophical examples of ethical persuasion before turning to early and medieval Christian texts that want to surpass them in power to shape lives.

Course Notes:  Offered jointly with the Divinity School as 2393.

Class Notes:  Tu., 12–2 and an hour to be arranged.

Christian Ethics, Persuasion, and Power II (155996)

Mark Jordan

2016 Spring (4 Credits)  Schedule:  T 1200 PM - 0159 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

Whatever else it might be, European “modernity” is a transformation in Christian projects for ethics. Controversies over Reformation can conceal how far both Protestant and Roman Catholic writers begin to make modern assumptions about moral learning or to exercise modern forms of control over moral subjects. The course will try to trace some of this transformation and the increasingly radical reactions to it without pretending to any completion. Readings will include major texts from the Reformation through the 19th century.

Course Notes:  Expected to be given in subsequent spring semesters of odd-numbered years. Offered jointly with the Divinity School as 2394.

Religion 2500
Character of God in Early America (110304)
David Holland
2016 Spring (4 Credits) Schedule: T 1100 AM - 1259 PM
Instructor Permissions: Instructor Enrollment Cap: 20
From the arbitrary sovereign of the Calvinists to the feminized Lord of the Moravians to the predictable creator of the Deists, perceptions of God ran the spectrum in early America. Many of the key debates of the period—about science and slavery, monarchy and poverty, scripture and disestablishment—fell back on assumptions about the character of Deity. This course examines the most prominent positions on the divine character and considers the ways they shaped the cultural developments of the period. As the culminating experience of the course, students write a substantial paper that seeks to draw a portrait of divinity from a prominent cultural artifact of the period, such as the abolitionist newspaper The Liberator, the Declaration of Independence, or the novels of Nathaniel Hawthorne.
Course Notes: Offered jointly with the Divinity School as 2383.

Narratives of American Religion: The Canon and Its Revisions (156251)
David Holland
Catherine Brekus
2015 Fall (4 Credits) Schedule: W 0100 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 15
This course will examine the writing of American religious history from the nineteenth century until the present. In the first part of the course, we will trace the creation of an American religious historical canon. Readings will include Robert Baird's Religion in America (1844), William Warren Sweet's The Story of Religions in America (1930) and Sydney E. Ahlstrom's A Religious History of the American People (1972). In the second part of the course, we will explore the transformation of the field of American religious history since the 1970s. In addition to reading textbooks such as Catherine Albanese's America: Religion and Religions (1981) and George Marsden's Religion and American Culture (1990), we will read case studies of new approaches and methodologies. Our goal is to assess the strengths and weaknesses of both the canon and the new religious history that has taken its place.

**Course Notes:** Offered jointly with the Divinity School.

*Kant: Seminar (119369)*

_**David Lamberth**_

2016 Spring (4 Credits) **Schedule:** F 1200 PM - 0159 PM

**Instructor Permissions:** Instructor **Enrollment Cap:** 12

A close reading of major works of Kant relevant to theology and philosophy of religion. The seminar focuses on issues such as the nature and limits of reason, the concepts of freedom, morality and faith, and the idea of God.

**Course Notes:** Expected to be given in 2015$16. Offered jointly with the Divinity School as 2674.

**Recommended Prep:** Advanced work in theology or philosophy of religion.

**Religion 2562**

*American Revelations (110266)*

_**David Holland**_

2016 Spring (4 Credits) **Schedule:** R 1200 PM - 0159 PM

**Instructor Permissions:** Instructor **Enrollment Cap:** 20

This course considers a number of key historical episodes in which American religious figures claimed to receive divine revelation. From the ad hoc prophets (such as Anne Hutchinson and Tenskwatawa) to the scripture writers (such as Joseph Smith and Ellen White), from the African American organizers (including Nat Turner and Father Divine) to the advocates of natural revelation (including Theodore Parker and Margaret Fuller), this course examines the contexts, contents and implications of the claim that God still speaks to Americans. Drawing from such scholars as T.M. Luhrmann, Ann Taves, Leigh Schmidt and Rodney Stark, we read anthropological, sociological and—especially—historical efforts to understand what it has meant when an American declares she has had a revelation. Students will then try their hand at constructing an account of a revelatory episode of their
choice in American history.

"Life" in Theology and Philosophy (156032)

Mayra Rivera Rivera

2015 Fall (4 Credits)   Schedule: W 0200 PM - 0359 PM

Instructor Permissions: Instructor   Enrollment Cap: 15

This course analyzes the resurgence of vitalisms in contemporary philosophy, theology, and political discourses, in their relationship with the developments in science and technology that motivate it. It also explores the relationship between philosophies of life and "biopolitics."

Religion 3420  
Seminar for Advanced New Testament Students (143084)  

Giovanni Bazzana  

2016 Spring (2 Credits)  

Schedule: T 0200 PM - 0359 PM  

Instructor Permissions: Instructor  
Enrollment Cap: 10  

Topic for 2015-16: Spirit Possession and Exorcism in Early Christ Movement. The course will examine the plentiful materials concerning spirit possession and exorcism, which by all accounts played a significant role in the early stages of the Christ movement. The course will attend to the methodological shortcomings of traditional historical and exegetical understandings of these phenomena. By utilizing insights drawn from contemporary anthropological, sociological, and cognitive studies, the course will attempt to look at spirit possession not simply negatively as a symptom of psychopathology or a reaction to social marginalization, but positively as a locale of identity formation, as an expression of agency, and a way of knowing. Biweekly presentation of research projects.  

Course Notes: A course available to Th.M., Th.D., and Ph.D. candidates, and qualified MTS and M.Div. students with permission of the instructor. Required for Th.M. candidates in the field and for Th.D. and Ph.D. candidates until the term following successful completion of general exams. Offered jointly with the Divinity School as 1980.  

Recommended Prep: Intermediate competency in at least one of the following ancient languages is required: Greek, Latin, Coptic. Meets biweekly.  

Additional Course Attributes:

HARVARD UNIVERSITY
Romance Languages and Literatures
Subject: Catalan

Catalan     BA
Introduction to Catalan (114279)
Stacey Bourns
2015 Fall (4 Credits)     Schedule:  TR 0300 PM - 0459 PM
Instructor Permissions:  Instructor     Enrollment Cap:  n/a
An introductory course in spoken and written Catalan, the language of approximately ten million people in Spain, France, Italy, and Andorra, and the most widely used of minoritized languages in Europe today. Native Catalan speakers include Antonio Gaudí, Salvador Dalí, Joan Miró, Antoni Tàpies, Mercè Rodoreda, and Pau Casals. Emphasizing oral communication, reading, and writing, offers students contact with contemporary Catalan culture.
Course Notes: Conducted in Catalan. Knowledge of another Romance language is useful but not essential. Not open to auditors. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.
This course is taught by members of the Department.

Subject: French

French  AA

Beginning French I: French Identity through Visual Media (126933)

Nicole Mills

2016 Spring (4 Credits)  Schedule: MTWR 1000 AM - 1059 AM

Instructor Permissions: None  Enrollment Cap: n/a

This elementary French course provides an introduction to French with emphasis on interpersonal communication and the interpretation and production of language in written and oral forms. Students engage in interactive communicative activities, both online and in the classroom, that provide rich exposure to the French and francophone language and culture. The course addresses the theme of identity through engagement in the discussion and interpretation of various French visual media including video, images, and film.

Course Notes: French Aa is an elementary French course for students with little or no knowledge of French. French Aa may count toward the language requirement. Open to students who have not previously studied French or who have scored below 300 on the Harvard placement exam. Students who have studied French for two years or more in secondary school must begin at French Ab or higher. May not be taken Pass/Fail. Not open to auditors. Graduate students at GSAS may take the course Sat/Unsat with permission of course head. Section on-line on the French Aa iSite. French Aa is taught by members of the Department.
