**African & African Amer Studies  11**

Introduction to African Studies (123591)

*John Comaroff*

*Lawrence Bobo*

2016 Spring (4 Credits)  **Schedule:** MW 1100 AM - 1159 AM  **Instructor Permissions:** None  **Enrollment Cap:** n/a

This course introduces students to the general outlines of African archeology, history and geography, as well as key concepts in the study of African health, social life, economic situation, arts, and politics. Our aim is to give students a fundamental vocabulary and interdisciplinary methodology for the study of Africa. Throughout, we assume that Africa is not a unique isolate but a continent bubbling with internal diversity, historical change, and cultural connections beyond its shores. The course is open to all students who are interested in exploring various dimensions of African life and cultures in ancient and modern periods.

**Course Notes:** Required of concentrators in African Studies track. This course, when taken for a letter grade, meets the General Education requirement for Societies of the World.

**African & African Amer Studies  16**

Sociology of the Black Community (125925)

*Lawrence Bobo*

2015 Fall (4 Credits)  **Schedule:** T 1000 AM - 1159 AM  **Instructor Permissions:** Instructor  **Enrollment Cap:** n/a

This course examines issues of race, class, gender, and identity in the Afro-American community. Topics of special emphasis include the contemporary situation of the black family, class stratification and the conditions and prospects of the modern black middle class, black feminist thought, black educational performance, and the dynamics of race. Our objective is to arrive at a deeper sociological analysis and appreciation of the changing life experiences awaiting African Americans.

African & African Amer Studies  20

Introduction to African Languages and Cultures (118883)

*John Mugane*

2015 Fall (4 Credits)  
**Schedule:** M 0200 PM - 0359 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

This introduction to African languages and cultures explores how sub-Saharan Africans use language to understand, organize, and transmit (culture, history, etc.) indigenous knowledge to successive generations. Language serves as a road map to comprehending how social, political, and economic institutions and processes develop: from kinship structures and the evolution of political offices to trade relations and the transfer of environmental knowledge. As a Social Engagement course, AAAS 20 will wed scholarly inquiry and academic study to practical experience and personal involvement in the community. Students will be given the opportunity to study Africans, their languages, and their cultures from the ground up, not only through textbooks and data sets but through personal relationships, cultural participation, and inquisitive explorations of local African heritage communities. Throughout the semester you will be asked to employ video production, ethnographic research, creative writing, "social-portraiture," GIS mapping, and linguistic study as you engage with Africans, their languages, and their cultures. By examining linguistic debates and cultural traditions and interrogating their import in the daily lives of Boston-area Africans, we hope to bridge the divide between grand theories and everyday practices, between intellectual debates and the lived experiences of individuals, between the American academy and the African world. Ultimately, this course aims to place Africans themselves in the center of the academic study of Africa.

**Course Notes:** This course, when taken for a letter grade, meets the General Education requirement for Societies of the World.

Sophomore Tutorial (123590)

_Eric Williams_

2016 Spring (4 Credits)  Schedule:  T 0200 PM - 0359 PM

_Instructor Permissions:_  None  

_Enrollment Cap:_  n/a

This course will examine the complexity of contemporary racial and ethnic experience in the United States, focusing on self-identified "mixed-race" groups and voluntary immigrant groups from Africa, Latin America, and the Caribbean (e.g. from Brazil, Cape Verde, Ethiopia, Haiti, Puerto Rico, and Nigeria). Interdisciplinary course readings will introduce key theoretical issues in the social sciences and humanities, such as cultural relativism, the social construction of race, class, gender, sexuality, and ethnicity, and the negotiation of identity in diaspora and minority settings. Assignments will include both written work and social engagement with local communities resulting in multimedia projects.

_Course Notes:_

_Required for concentrators in African and African American Studies. Open to all undergraduates._

### African & African Amer Studies 103X

The Black Radical Tradition (156113)
This course functions, first and foremost, as a map of the major landmarks in twentieth-century black intellectual history. Using primary sources (that is, work written by black intellectuals rather than about them), the course engages the idea of a “black radical tradition”. The black radical tradition is bound together as a set of ideas that constructs and reconstructs philosophical and political connections across the rupturing history of black dispossession, displacement, and disenfranchisement. The black radical tradition, then, exists in dialectical tension with many of the key idioms of Enlightenment and liberal philosophy (freedom, progress, history, justice, civilization). We pay particular attention to how the black radical tradition has framed the relationship of black history to modernity and global historical developments; how it has posited black selfhood and black liberation over and against attempts to conscript the end of slavery into a seamless narrative about the triumph of liberal values; and finally, whether black desires and black life itself can ever be validated in the midst of ongoing anti-black racism.

Anthropology and Africa (156327)

George Paul Meiu

2015 Fall (4 Credits)  
Schedule:  
W 1000 AM - 1159 AM

Instructor Permissions:  
Instructor  
Enrollment Cap:  
n/a

Africa has occupied a central place in the making of anthropology as a discipline. If early ethnographic studies of African contexts generated leading theories of society, contemporary anthropologists made livelihoods on the continent key sites for understanding the political, economic and cultural dynamics of modernity and global capitalism. And, while anthropological discourses at times have been complicit in the making of dominant ideologies, they have also played a central role in critiquing hegemonic tropes and unraveling their effects. This course explores the relationship between, on the one hand, the discourses, practices, and politics of anthropology as a discipline and, on the other hand, “Africa” as an object of knowledge, an ideological category, a source of identity and collective consciousness, and a geo-political context of life. Students will explore how lives, subjectivities, and intimacies on the continent mediate and are shaped by global historical processes and how anthropologists have inhabited and tried to grasp such contexts. Throughout this course, students will acquire a critical conceptual vocabulary and a set of rigorous analytic skills that will allow them to think deeper about historical and cultural phenomena in Africa and about the political potentials of various forms of knowledge production. We ask: What do ethnographies of Africa offer us by means of understanding the world at large? And what may anthropology offer us by way of crafting futures in Africa and beyond?

African & African Amer Studies  111

Spectral Fictions, Savage Phantasms: Race and Gender in Anti-Racist South African & African America (126698)

Biodun Jeyifo
Why have social orders like Apartheid South Africa and White Supremacy in segregated America that are based on extreme racial, gender and national oppression always generated often violent, hallucinatory fictions of the racial and gender identities of the oppressed? And why have the oppressed in turn often internalized these sorts of fictions and also produced counter-fictions that more or less conform to the same violent, phantasmic logic? In this course, we will explore how these fictions and counter-fictions are reproduced and challenged in some of the most powerful, canonical works of drama, fiction and cinema by South African and African American authors and filmmakers. As the Nigerian author, Chinua Achebe once famously remarked: "where one thing stands, another thing will stand beside it." To this end, we will pay special attention in the course to how, both in form and in content, race and gender always seem, constitutively, to intersect in these fictions and counter-fictions. The course is thus a study in the dark, violent but generative cultural unconscious of modern racialized and gendered identities.

The History of African Americans From the Slave Trade to the Civil War (144199)

Eric Williams

This course surveys African American History from the first migrations of Africans to the Americas during the Transatlantic Slave Trade to the eve of the U.S. Civil War. Atlantic in scope, our studies will consider black US history in the context of broader regional variations, highlighting both the distinctive and the unexceptional features of black society, culture, and politics. Lectures, readings, discussions, and assignments will emphasize several key themes: the indispensability of slavery to the colonial development of the Americas, the entrenchment of race as a mode of categorical belonging and discrimination, the continuity of multivalent struggles for dignity, freedom, and equality, and the shaping force of gender, geography, and imperial warfare in the transformations of the period. Special attention will be paid to the interpretive possibilities of representing this history in the form of data,
arguementive prose, storytelling, and works of visual art.

Chocolate, Culture, and the Politics of Food (108879)

Carla Martin

2016 Spring (4 Credits) Schedule: W 0100 PM - 0259 PM

Instructor Permissions: None Enrollment Cap: n/a

This course will examine the sociohistorical legacy of chocolate, with a delicious emphasis on the eating and appreciation of the so-called "food of the gods." Interdisciplinary course readings will introduce the history of cacao cultivation, the present day state of the global chocolate industry, the diverse cultural constructions surrounding chocolate, and the implications for chocolate’s future of scientific study, international politics, alternative trade models, and the food movement. Assignments will address pressing real world questions related to chocolate consumption, social justice, responsible development, honesty and the politics of representation in production and marketing, hierarchies of quality, and myths of purity.

Mass Incarceration in Historical Perspective (156254)

Elizabeth Hinton

2015 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Today 1 in 3 African American boys will spend part of their lives behind bars, a profound reflection of the limitations of law and democracy in the United States. By examining the connections between race and the development of legal and penal systems over time, this course investigates the historical process that eventually gave rise to the mass incarceration of black and Latino Americans in the late twentieth century. The course is structured according to the major punitive changes that often emerged after the expansion of constitutional and civil rights for African Americans. Our historical consideration will provide us the necessary background to address the ongoing consequences of racial disparities in the criminal justice system and the momentous public policy implications of this dynamic.

Schedule: T 0100 PM - 0259 PM  
Instructor Permissions: None  
Enrollment Cap: n/a  

This course explores how African cultural expressions influenced colonial societies and later national cultures in Latin America. How did peoples of African descent shape the formation of Latin American national cultures in areas such as literature, religion, visual arts, music, dance, and cinema? Some scholars have debated whether African religious, musical, medical and communitarian practices were reproduced in the New World or whether they were creolized through fusion with other (European and indigenous) practices. Others have sought to explain how African cultural practices (music, religion, dances) that were derided as primitive and uncivilized in the early twentieth century became "nationalized" and transformed into key expressions of national cultures in many Latin American countries. What are the implications of this process for those cultural forms and their practitioners? How do they impact, if at all, other areas of social life? We explore these questions through historical and literary texts, films, visual arts, and recordings.

Urban Inequality after Civil Rights (156259)  

Elizabeth Hinton  

2016 Spring (4 Credits)  
Schedule: MW 0230 PM - 0359 PM  
Instructor Permissions: None  
Enrollment Cap: n/a  

Why is the United States more segregated today than ever before? By examining the impact of social, political, and economic transformations in the decades after the civil rights movement, this course addresses historical developments that functioned to increase segregation and income stratification in African American communities in the late twentieth century and into the twenty-first. Offered jointly with the Graduate School of Design as SES 5507.

The Black Power Debates: Politics, Philosophy, and Culture (160417)

*Brandon Terry*

2015 Fall (4 Credits)

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

From the mid-1960s through the 1970s, the political and cultural lives of African-Americans were riven by an extraordinary moment of radicalism, experimentation, and transformation known as the Black Power Movement. Our popular memory of this era, with its iconography of Afros, guns, and riots, has unfortunately obscured many of the most challenging political and ethical dilemmas it brought to the fore, as well as more serious assessments of why Black Power emerged and what, if anything, political struggle under this sign achieved. This course, therefore, will return to primary sources from this era, as well as retrospective reflections, in order to engage the complex philosophical, political, economic, and cultural arguments that animated the passionate debates, intensive struggles, and tragic violence this movement engendered, at home and abroad. This task is especially important in our contemporary moment, where “Black Lives Matter” activists make frequent reference to Black Power icons and American cities are experiencing violent unrest. The course will cover such topics as the philosophy and sociology of nationalism; political violence, riots, and non-violent protest; political theology and soulcraft; critiques of integrationism; aesthetics and politics; “identity” politics; and feminist, liberal, conservative, and leftist criticisms of Black Power. For advanced undergraduates and graduate students with some knowledge of post-World War II African-American history.

African-American Political Thought: From Slavery to Black Power (160416)

*Brandon Terry*

*Kathleen Jackson*

2015 Fall (4 Credits)

**Schedule:** M 0400 PM - 0559 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

This introductory course is a survey of influential figures and primary texts in the history of African-American political thought from some of the earliest extant political writings by African-Americans in the era of chattel slavery, through
the classical phase of the civil rights movement and into the black nationalist and feminist writings of the late 1960s and 1970s. Close attention will be paid to African-American intellectuals' engagement with political debates in the U.S. and worldwide, as well as those more specific to competing traditions within African-American politics. Students will be expected to engage with both well-known African-American thinkers and less-remembered figures using interpretive approaches drawn from political theory and the history of political thought, which will be integrated throughout the syllabus. No prerequisite required.

How Sweet is it to be Loved By You: Black Love and the Emotional Politics of Respect (110293)

Marcyliena Morgan
Jamaica Kincaid

2015 Fall (4 Credits)  
Schedule: T 0300 PM - 0459 PM

Instructor Permissions: Instructor  
Enrollment Cap: 25

The word 'Love' is almost never used in any portrayal or description of the African American community's daily life in contemporary media and in the social sciences. But in fact, Love, in all its many forms, familial, erotic, romantic, fraternal, is abundant, sometimes dominant, in Black culture: song, film, literature. This course will review and analyze the social science literature on intersubjectivity, family, language and ritual and closely read, watch and listen to some of the many Black artists who have looked deeply at this thing called Love.

Reading Du Bois (108234)

Tommie Shelby
Walter Johnson

2016 Spring (4 Credits)  
Schedule: W 1200 PM - 0159 PM

Instructor Permissions: None  
Enrollment Cap: n/a

This course will treat the historical and political writings of W. E. B. Du Bois-historian, activist, philosopher, and social theorist, one of the foremost intellectuals of the twentieth century, and arguably the founder of the field of African and African American Studies. From The Suppression of the African Slave Trade to the United States of America (1896) to The World and Africa (1947), Du Bois traced a course across many of the most important currents of global, black, and intellectual history: Pan-Africanism, Marxism, and Anti-imperialism, in particular.

Against the historic background of the civil rights struggles in the United States and the decolonizing liberation struggles in Africa and the Caribbean, this course explores how utopian or emancipatory aspirations in diverse genres and media like literature, oratory, and popular music impact people of different racial groups, gendered identities and social classes. Among the authors, public intellectuals and performers whose works we will explore are Ralph Ellison and James Brown, Wole Soyinka and Fela Kuti, Derek Walcott and Bob Marley, and Toni Morrison and Aretha Franklin.

This course will explore important works of film and fiction on the African diasporas in the Americas and the Caribbean. Since diaspora unfolds in waves that include both very old and very recent immigrant populations, we will explore both classic and contemporary films and novels with regard to this separation and connection between old and new diasporas. Moreover, our explorations will extend to diverse national and cultural spaces of the African diaspora –Hispanic, French/Creole and English. A special feature of the course is an introduction - in the form of homage and celebration - to classic works of cinema and fiction on the African diaspora that have almost been forgotten. Finally, we will examine differences and similarities between the experience of diaspora in earlier times and in the new millennium.

This course combines the study of the historical trajectory of educational achievement among African Americans with a sociological analysis of the challenges they have faced in attaining educational equity, with a focus on the current situation. The course will review the structural barriers to educational achievement that blacks have faced at different periods in the history of the US and the cultural strengths, such as the high value placed on education, that have driven them to achieve. The persistence of racial barriers in the current era and their importance for social mobility, particularly among working class and poor blacks, will be discussed.

From R & B to Neo Soul: Black Popular Music and Cultural Transformation (124607)
The course focuses on the history of African American popular music from Ray Charles to P-Funk to Erykah Badu with particular emphasis on its long-term impact on American culture. The rise of classic R &B, Soul, Motown, Funk, the Philly Sound and Neo-Soul are featured. Key artists include Ray Charles, Aretha Franklin, the Supremes, Curtis Mayfield, James Brown, Stevie Wonder, George Clinton, Michael Jackson, Prince, Jill Scott, Erykah Badu, Usher, Alicia Keys, and D’Angelo. The course is especially concerned with tracing the interrelationships among music, politics, spirituality, and race relations during the Civil Rights and Black Power years and their legacy for today. During these years the sound of African America indelibly shaped mainstream American popular culture in far reaching and transformative ways.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for either Culture and Belief or Aesthetic and Interpretive Understanding, but not both.

Poverty, Race, and Health (123435)

*David Williams*

2016 Spring (4 Credits) **Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** None **Enrollment Cap:** n/a

This course critically examines the health status of the poor, and of African Americans and other socially disadvantaged racial and ethnic groups in the US. Attention will be focused on the patterned ways in which the health of these groups is embedded in the social, cultural, political, and economic contexts, and arrangements of US society. Topics covered include the meaning and measurement of race, the ways in which racism affects health, the historic uses of minorities in medical research, how acculturation and migration affects health, and an examination of the specific health problems that disproportionately affect nondominant racial groups.

Scientific Racism: A History (110497)

*Alejandro de la Fuente*

2015 Fall (4 Credits) **Schedule:** W 1000 AM - 1159 AM

**Instructor Permissions:** Instructor **Enrollment Cap:** n/a

This course focuses on the history of "race" as a category of difference and explores why "race" has become a globally-accepted idiom to classify humans. It assesses the prominent roles that science and scientists have played in the process of naturalizing "race" and analyzes how "scientific" theories of race were developed and disseminated globally in the modern period. We trace the formation of these ideas in the North Atlantic, their diffusion to various areas of the world, and the manner in which cultural and political elites adopted or challenged them. We will devote considerable time to the emergence of eugenics, the science of racial improvement, in Europe, the Americas, and Africa and study the process of institutionalization of this science in Nazi Germany and elsewhere, including the United States. A final section of the course discusses the impact of contemporary science on ideas of race. Students in this class will work with texts and archival materials related to these scientists, some of whom were Harvard faculty.
Social Theory, In and Out of Africa (160333)  
Jean Comaroff  
John Comaroff  
2016 Spring (4 Credits)  
**Schedule:**  W 0200 PM - 0359 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  
Social Theory, In and Out of Africa examines, in critical depth, the major theoretical and methodological approaches that have shaped the history of Anglo-American anthropology and, more generally, social thought through the prism of Africa. In so doing, it will address (i) the historical roots and philosophical foundations of these approaches and (ii) their significance for contemporary concerns in the social sciences at large. Juniors and seniors admitted with instructor approval.

In a story titled Africa Rising (2011), The Economist argued that the continent epitomizes both the "transformative promise of [capitalist] growth and its bleakest dimensions." This workshop will explore Africa's changing place in the world - and the new economies, legalities, socialities, and cultural forms that have arisen there. It will also interrogate the claim that the African present is a foreshadowing of processes beginning to occur elsewhere; that, therefore, it is a productive source of theory about current conditions world-wide. The workshop, open to faculty and students, will meet Mondays from 6:00-7:30. 15 students will be permitted to take it as a course; they will also meet on Mondays, 12:00-1:30. Grades will be based on participation and a term essay.

Class Notes:  
The first AAAS 209a class will be held on Wednesday, September 2 (as this is a Monday schedule) at 12pm (Locke Room, Barker 230). However, there will not be an evening section (6-8pm) on Wednesday September 2. The first 6-8pm evening section (African Studies Workshop) will take place September 14. The evening sessions will take place in Robinson Lower Level Library.

Entrepreneurship in Africa (110092)

David Williams

2016 Spring (4 Credits)  Schedule:  T 1000 AM - 1259 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

This course is designed to help students develop an understanding of the socio-economic revolution in the emerging African market. The goal will be to inspire and equip budding social entrepreneurs with knowledge and skills specific to context, challenges and innovation in enterprises that advance the continent with strong social impact. Designed as a seminar course, and team taught by faculty from across the Harvard schools, each session will focus on a theme - Agriculture &Food, Energy, Healthcare and Education - that affect development across the African Continent. The course will explore the unique challenges and opportunities of launching and growing an enterprise in the African context. Students will examine conditions in North, West, East, Central and Southern Africa and study how the current environments - political, social, technological and economic - can impact entrepreneurs' approach to growth, scalability and partnerships as they launch new businesses or social ventures. The course will explore questions such as how social entrepreneurship theory manifests in practice, how Africa's challenges are identified and solutions developed, the evolving role of leadership, ethics, governments, and social sector development in Africa and how entrepreneurs can leverage their ideas to create systems and policy level social
change in Africa. The course will meet weekly including a 1-hour weekly group section focused on a final project. Students will work in teams to produce a final project business plan for a social enterprise or a strategy paper that addresses a business and development need specific to a region in Africa. The course will be open for cross-registration to all Harvard graduate students, limited by capacity to undergraduate students.

Subject: Gikuyu
Gikuyu AA
Elementary Gikuyu (120934)

John Mugane

2015 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Gikuyu is a Bantu language spoken by Kenya’s most populous ethnic group. The Gikuyu are among Africa’s most recognized peoples because of the Mau Mau freedom fighters who were mainly Gikuyu. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: The course is designed primarily for students who have no prior knowledge of Gikuyu; however, students with minimal knowledge of the language may also register for the course. Not open to auditors.

Archaeological Research Methods in Museum Collections (123454)

Rowan Flad

2016 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Special (individual) study of Peabody Museum (PM) collections approved by the PM Director and directly
supervised by a member of the PM curatorial staff. Requires a project involving a museum collection developed in
consultation with the supervisor.

Course Notes:

Must be taken for a letter grade. Priority given to students in Anthropology
and related departments. To enroll, submit a petition form (available on the
Anthropology [Archaeology] website), signed by the supervisor, the PM
Director, and the Head Tutor for Archaeology and including a proposed
research agenda, preferably during the term preceding the term of
enrollment. See the Head Tutor for Archaeology or members of the Peabody
Museum curatorial staff for more information.

Anthropology 97X
Sophomore Tutorial in Archaeology (113567)

Matthew Liebmann

2016 Spring (4 Credits) Schedule: M 0300 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course will focus on archaeological thinking, the cognitive skeleton of the discipline of archaeology, the principles and the logic that are the foundation of all archaeological conclusions and research. Central to this is an understanding of research design, archaeological theory and interpretation, culture and material culture; as well as an understanding of how to examine and construct an archaeological argument.

Course Notes: Required of all concentrators in Archaeology.

Additional Course Attributes:

Anthropology 97Z
Sophomore Tutorial in Social Anthropology (143028)

Asad Ahmed

2016 Spring (4 Credits) Schedule: MW 1100 AM - 1159 AM

Instructor Permissions: None Enrollment Cap: n/a

The course is designed as a foundational course with the specific purpose of introducing the principal social theorists whose work has been crucial to the discipline of social anthropology, that is: Marx, Durkheim, Weber, and Foucault. The first objective is to delineate the broad outlines of their thought and the central questions that informed their intellectual and political interventions. The second objective is to provide a solid grounding in the key concepts as well as the theoretical and methodological contributions of these social theorists. Finally, we will seek to demonstrate how contemporary anthropological theory continues to engage with their work.

Course Notes: Required of all concentrators. Weekly 2-hour sections to be arranged.

Anthropology 98XA
Junior Tutorial in Archaeology (112093)

Jessica Cerezo-Roman

2015 Fall (4 Credits) Schedule: M 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a
The junior tutorial provides a background in archaeological method and theory through critical analysis of selected issues and debates particularly focusing on more complex societies. Specific topics include the origins of agriculture and the domestication of animals, the development of complexity and "civilization," post-colonial and historical archaeology, and related ethical and theoretical issues. Weekly readings (drawn from current journal literature), discussions, and several short writing assignments.

**Course Notes:** Required of all concentrators in Archaeology.

Junior tutorials in Social Anthropology explore critical theoretical issues related to a single ethnographic region (eg. South Asia, Africa, Latin America). The issues and areas change from year to year, but the purpose remains the same: to give students a chance to grapple with advanced readings and to experience the ways that ideas and theories can be applied and critically analyzed in ethnographic studies.

Anthropology  98ZB
Junior Tutorial for Thesis Writers in Social Anthropology (107933)
Ramyar Rossoukh
2016 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
This individual tutorial is for social anthropology students intending to write a senior thesis, and is normally undertaken with an advanced graduate student during the second term of junior year. Students will have weekly meetings with the project advisor for the purposes of developing the appropriate background research on theoretical, thematic, regional, and methodological literature relevant to their thesis topic, and fully refining their summer research proposal. The tutorial's final paper will be comprised of a research proposal representing the research undertaken during the semester.

Course Notes:  Strongly recommended for any social anthropology junior intending to write
a senior thesis. Taken in addition to the required fall term group junior
tutorial, Anthropology 98za (formerly 98z).

This is a full year research and writing seminar limited to senior honors candidates. The course is intended to provide students with practical guidance and advice during the thesis writing process through structured assignments and peer feedback on work-in-progress. It is intended to supplement not replace faculty thesis advising (with the requirement of consulting regularly with the advisor built into the assignments) and, most importantly, allow students to share their work and experiences with other thesis writers in a collegial and supportive environment. The seminar will be run jointly by the Department of Anthropology Assistant Director of Undergraduate Studies and the Writing Tutor. Part one of a two part series.

Enrollment Cap:  n/a

This is a full year research and writing seminar limited to senior honors candidates. The course is intended to provide students with practical guidance and advice during the thesis writing process through structured assignments and peer feedback on work-in-progress. It is intended to supplement not replace faculty thesis advising (with the requirement of consulting regularly with the advisor built into the assignments) and, most importantly, allow students to share their work and experiences with other thesis writers in a collegial and supportive environment. The seminar will be run jointly by the Department of Anthropology Assistant Director of Undergraduate Studies and the Writing Tutor. Part two of a two-part series.

Anthropology 1010

The Fundamentals of Archaeological Methods & Reasoning (112378)

Rowan Flad
Jessica Cerezo-Roman

2015 Fall (4 Credits)  

Schedule:  
MW 1000 AM - 1059 AM

Instructor Permissions:  Instructor  
Enrollment Cap:  n/a

A comprehensive introduction to the practice of archaeology and major themes from our human past: how do archaeologists know where to dig? How do we analyze and understand what we find? What do we know about the origins of the human species, agriculture, cities, and civilization? The course integrates methods and theory, and utilizes Peabody Museum collections, to show how we reconstruct ancient diet, trade, and political systems. We also explore the role of archaeology in colonialism, modern politics, and film.

Course Notes:  
One 2 hour section per week. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning. This course fulfills the requirement that one of the eight General Education courses also engage substantially with Study of the Past.

Anthropology 1040
Origins of the Food We Eat (109581)

Richard Meadow
2015 Fall (4 Credits)  
**Schedule:**  
MWF 1100 AM - 1159 AM  

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

The most significant lifestyle revolution in the human past was the change from hunting and gathering to agriculture and pastoralism. That shift in the subsistence base has facilitated, and has been facilitated by, increasing populations and a restructuring of social and economic relations over the past 10,000 years. Focusing on key geographic areas and transformative time periods, we discuss how this process began by focusing on the domestication of what have become the staples and major condiments of modern diets around the world. We also consider the spread and adoption of domestic plants and animals across the Eastern and Western Hemispheres as well as the globalization of food that began at the end of the 15th century CE with the Columbian Exchange.

To study the processes of domestication and subsequent exploitation of domestic plants and animals requires a multi-disciplinary approach. Thus we sample contributions from a wide range of fields including archaeology, anthropology, history, linguistics, botany, zoology, genetics, biogeochemistry, climatology, geomorphology, oceanography, demography, and nutritional science. Fundamental, however, are archaeological excavations, which provide the material remains necessary for specialized analyses as well as the temporal and social contexts needed for their interpretation.

The course is discussion-based, with background material, concepts, and topics introduced by the instructor. Geographical focus is on West, South, and East Asia, Mesoamerica, and the Andean region, with other areas (Europe, Central Asia, Africa, New Guinea, Oceania, Amazonia, and North America) touched upon for specific foods. Readings are in the primary and secondary literature, focusing on key plants, animals, analytical methods, and interpretative debates. Evaluation is based on completing readings and two short written assignments each week and participating in class discussions. Graduate students are required to submit a short tightly focused research paper.

**Course Notes:** Given in alternate years.

Anthropology 1060
Archaeological Science (111192)

Richard Meadow
2016 Spring (4 Credits)  
**Schedule:**  
M 0700 PM - 0959 PM  

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Focus on physical science and engineering methods and techniques used by archaeologists in the reconstruction of time, space, and human paleoecology, and analysis of archaeological materials. Topics include 14C dating, ice core and palynological analysis, stable isotope chemistry of paleodietary foodwebs, plant residues from ceramic vessels, processing of latex to rubber for Mesoamerican ballgames, ancient bronze smelting and consequences for environmental pollution, and microstructural and mechanical analyses of cementitious materials used in ancient monumental buildings.
Course Notes: Meets at MIT on Mondays 7-10 pm - Classroom 4-370 (Building 4, Room 370)

This class runs on the MIT schedule.

The first class is on Monday, February 8, 2016, the last class is on May 9, 2016. The last exams at MIT are on May 20.

Classes are on: Feb. 8, Feb. 16 (Tuesday since Monday is a holiday), Feb. 22, Feb. 29, March 7, March 14, [March 21 - Spring Break Week], March 28, April 4, April 11, [April 18 & 19 - Patriots Day holiday], April 25, May 2, May 9. Total instructional days: 12.

If you wish to take the class, please contact Prof. Heather Lechtman <lechtman@MIT.edu>, the course head, before Harvard study cards are due in order to confirm your participation and to request that a syllabus be sent to you.

Class Notes: M., 7-10 pm

Recommended Prep: One year of college-level chemistry or physics.

Urban Revolutions: Archaeology and the Investigation of Early States (113901)

C. Lamberg-Karlovsky

2015 Fall (4 Credits) Schedule: TR 1100 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Examines the development and structure of the earliest state-level societies in the ancient world. Archaeological approaches are used to analyze the major factors behind the processes of urbanization and state formation in Mesopotamia, Egypt, Central Asia, the Indus Valley, and Mesoamerica. The environmental background as well as the social, political, and economic characteristics of each civilization are compared to understand the varied forces that were involved in the transitions from village to urbanized life. Discussion sections utilize archaeological materials from the Peabody Museum and Semitic Museum collections to study the archaeological methods used in the class.

Course Notes: No previous knowledge of archaeology is necessary.

Anthropology 1165

Digging the Glyphs: Adventures in Decipherment (122942)
This course focuses on the method and theory of decipherment, but also considers epistemology and the significance and enduring relevance of ancient writing systems in the modern era. It begins with the distinction between notational, iconographic and phonetic communication - only the latter can truly be considered 'writing' (a linear, graphic record of speech) - and then discusses the various different types of writing systems (including logographic, logosyllabic, syllabic and alphabetic scripts). This is followed by several case studies: the great decipherments (Egyptian, the Cuneiform scripts, Linear B and Mayan); scripts whose languages have become extinct (Etruscan and Meroïtic); scripts that remain entirely mysterious (the scripts of Phaistos, the Indus Valley and Easter Island); the major scripts of the Pre-Columbian New World (Zapotec, Isthmian and Aztec writing); and invented scripts from popular literature. Each provides its own unique insights into the enduring and engaging mystery of writing.

Cities in the Jungles: Maya Archaeology (159915)

Alexandre Tokovinine

2016 Spring (4 Credits)  
**Schedule:** TR 1200 PM - 1259 PM

Instructor Permissions: None  
Enrollment Cap: n/a

The course explores a fascinating and mysterious civilization that once flourished in the jungles of Mexico, Guatemala, Belize, and Honduras. Although most of its cities had been abandoned long before the arrival of the Spaniards in the Americas, a century of archaeological studies has revealed the world of the ancient Maya in unprecedented detail. New research methods and the decipherment of thousands of hieroglyphic inscriptions have led to recent advancements in our understanding of the indigenous history, society, politics, economy, and worldview. Rather than adopting a culture-historical narrative, this course is structured around several key problems and discussions including the emergence and the nature of statehood, relations with other Pre-Columbian civilizations of Central America, and the role of the environment in shaping and challenging the ancient way of life. The course will also address the issue of change and tensions in the paradigms of Maya archaeological studies as well as increased engagement with the indigenous communities. The course is intended for graduate and undergraduate students and requires no prior background in Maya archaeology.

The Archaeology of Ethnicity (117138)

2015 Fall (4 Credits)  
**Schedule:**
Ethnic identity and conflict are among the most powerful processes and relations shaping the world we live in today. Questions addressed include: What can we understand about ethnic identity and relations in the prehistoric world on the basis of the archaeological record? For example, how might differences in material culture represent and reflect markers of ethnic identity? The Peabody Museum collections will provide materials for study and analysis.

Encountering the Conquistadors (125450)

Matthew Liebmann

2016 Spring (4 Credits) Schedule: MW 0100 PM - 0229 PM

Instructor Permissions: None Enrollment Cap: n/a

This course examines the effects of the Spanish Conquest on indigenous peoples of the Americas between the fifteenth and eighteenth centuries, providing an introduction to the archaeology of first encounters in the Caribbean, Southeast and Southwest US, Central Mexico, highland and lowland Mesoamerica, the Amazon basin, and in the Andes. Topics addressed include the roles of disease, indigenous politics, native rebellions, and ecological change in the colonization of the 'New' World.

Forensic Anthropology: CSI Harvard (156391)

Jessica Cerezo-Roman

2016 Spring (4 Credits) Schedule: MW 1000 AM - 1059 AM

Instructor Permissions: None Enrollment Cap: n/a

This course will explore the developing role of the archaeologist and anthropologist in forensic investigations (both ancient and modern). It will follow the process undertaken by forensic specialists during their investigation and look at their role in a number of contexts ranging from missing persons to crimes against humanity. It will consider the ethical responsibilities of the archaeologist/anthropologist and the presentation of their findings.

Shipwrecks, piracy, naval battles: the phrase "maritime archaeology" often conjures up images both romantic and violent as we envision a ship lying on its side, a gaping hole in its hull, at the bottom of a dark, murky ocean. While this image is only rarely an accurate representation of the scene, maritime archaeologists use the information from shipwrecks, submerged settlements, cargo deposits, wharves and other shoreline sites to piece together a story about the people who sailed the ships, built them, loaded their cargo, and much more. In doing so we give a voice to the often undocumented, silent majority: the sailors, laborers, passengers, and shipwrights who speak to us only through the artifacts they left behind.

This class will introduce the field of maritime archaeology, including its history, procedures, and the information we can learn from both a sunken vessel and the artifact assemblages from a maritime site. Students will have the opportunity to have a hands-on experience using a remote-operated vehicle (ROV), and we are planning to visit an active local shoreline excavation site. We will also use museum collections on shipbuilding and maritime culture to learn more about different seafaring traditions. In looking at examples from excavations throughout the world, we will discover more details about those storybook images of shipwrecks, pirates, and seafarers, and understand how to better interpret what they have left for us to find.

Human Migration and US-Mexico Borderlands: Moral Dilemmas and Sacred Bundles (160434)

David L. Carrasco

2015 Fall (4 Credits)  

**Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 20

Responding to one of the major political, economic and religious developments of our times, this seminar locates the immigration crisis of the Mexico-U.S. borderlands within the epic context of human migration in history and global perspectives. The first part of the seminar will read and critique a series of books and articles about human migration, Mexican migrations to the U.S. in the last 120 years and the enigma and fluidity of national borders. The seminar will then develop a comparative perspective on immigration by comparing Mexican migrations with a) Latin America to the U.S, b) the African American migration within the U.S. from south to north, c) contemporary migrations from Africa to countries of the European Union. Questions such as 'what economic and political forces cause people to migrate?', 'do they migrate as individuals or families?', 'How do walls, fences and borders work and what do they mean?' and 'what is immigration reform-anyway?' will be explored. We will examine the profound economic and moral dilemmas facing migrants, families, sending and receiving countries. The course uses Professor Carrasco's concept of 'sacred bundles' to explore the question 'what cultural and religious resources help migrants survive the ordeal of migration and establish new identities?'

**Class Notes:** Human Migration and US-Mexico Borderlands: Moral Dilemmas and Sacred Bundles in Comparative
Anthropology 1600

Grounding the Global: Anthropological Approaches (123339)

Steven C. Caton

2015 Fall (4 Credits)

Schedule: MW 0200 PM - 0259 PM

Instructor Permissions:

Enrollment Cap: n/a

What is the value of anthropology for understanding today's world? This course illustrates the importance of an anthropological perspective for engaging with a wide range of pressing global issues such as bilingualism, water and the environment, visual media, and health epidemics. Over the semester, students will grapple with what it means to "ground the global" through an emphasis on everyday experience, cultural particularity, subject formation, and collective action.

**Enrollment Cap:** 75

An introduction to the multiple ways the Latino diaspora is challenging and contributing to the revitalization of the cultural, religious and democratic processes in the United States. Special focus on migration histories to and from Latin America, cultural exchange and social practices in families, citizenship, the arts and religious traditions. Attention to the robust debates about immigration reform, ethnic identity, Dreamers, education, bilingualism, and American cultures as cores and borderlands.

**Course Notes:** Sections offered in English and Spanish, based on course enrollment. This course, when taken for a letter grade, may count as a related field in the Romance Languages and Literatures concentration (Spanish or Latin American Studies tracks) or Secondary Field in Spanish. Offered jointly in Harvard Divinity School as HDS 3164.
Anthropology 1654

Global Political Ecology (160442)

Anand Vaidya

2015 Fall (4 Credits)  

**Schedule:** R 0300 PM - 0459 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

Despite enormous scientific and political efforts, climate scientists and environmental activists have found themselves unable to bring about the political changes that might reverse climate change and environmental degradation. The degradation of the earth's environment has been caused by humans, but somehow humans have not been able to stop or reverse the social processes that cause that degradation. This seminar examines case studies of environmental degradation at multiple scales, from superfund sites in Massachusetts to deforestation in the Amazon to global climate change, to three ends: to explore fundamental questions in social theory about human agency and historical change, to understand why coordinated scientific and political efforts to prevent environmental degradation have tended to fail, and to think through new political and environmental interventions that might succeed. The material that this course covers draws from environmental science, history, political economy, and anthropology, and one of the major tasks of this course is to search for ways to reconcile social scientific and natural scientific theories and methods and to think through ways to apply the results of this reconciliation.

Anthropology 1732

China Through Ethnography and Film: Seminar (108860)

Susan Greenhalgh

2015 Fall (4 Credits)  

**Schedule:** M 1000 AM - 1159 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

The rapid rise of China on the global stage is one of the most stunning developments of our time. Since the early 1980's, when China reopened its doors to research by foreign scholars, growing numbers of anthropologists have been conducting fieldwork in the People's Republic. What have anthropologists learned about the transformations underway there? What new constructs and field strategies does the anthropology of China have to contribute to anthropology generally? In this course we seek answers in film and ethnography. Following existing emphases in the literature, we will focus on issues of transformation in governance, subjectivity, and difference in a nation under an increasingly neoliberal regime.
Anthropology 1812
Cities of the Global South: Seminar (156920)
Namita Dharia
2016 Spring (4 Credits) Schedule: T 0200 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 18
What do the sprawling cities of the global South tell us about the contemporary urban condition? How is urban space produced and experienced in an era of increased interconnectedness, but also of great inequality and instability? How does the view from the South change our understanding of urban forms and processes, especially when so much of the "South" seems to be located in the "North"? To address these questions we will explore urban lives and spaces across cities in Africa, Asia, Latin America, and the Middle East. The course will include works in anthropology, geography, urban studies, and documentary film.

Second half of a year-long sequence (including 1836aar, spring 2013) in which students apply media anthropological theory and conduct ethnography using film, video, sound, still photography, and/or hypermedia. Emphasis is on pre-production and production in the spring, and on post-production in the fall.
Interview with instructor and teaching assistant required for admission.

### Anthropology 1870

**Course Title:** Dance Work (161266)

**Instructor:** Sharon Kivenko

**Course Number:** Anthropology 1870

**Level:** Dance Work

**Credits:** 4

**Schedule:**

- M 0200 PM - 0359 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

What does dance do? In entertainment, in ritual, in public display, in social encounters, dance, dancers and dancing are impacting, they work. Performers, arts patrons, scholars and critics bring particular vantage points on dance and dancing, illuminating in their own way the role that embodied practices have in human lifeways. In this "movement seminar," we will bring together dance-inspired movement exercises, scholarly texts, and film to consider how dance as ritual, as arts performance and as a means and mode of articulating social belonging might also be understood as a form of productive labor. Bringing critical analyses of dance practices from around the world in conversation with theories of labor and production, we will explore how dance and dancing might bring to light new avenues for anthropological thinking about human social life.

### Anthropology 1876

**Course Title:** Society, Culture, and Modernity in Greece (110317)

**Instructor:** Michael Herzfeld

**Course Number:** Anthropology 1876

**Level:** Society, Culture, and Modernity in Greece

**Credits:** 4

**Schedule:**

- T 1000 AM - 1159 AM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

This course explores the socio-cultural dynamics of modern Greece through ethnographies, films, and media representations. Special attention will be paid to Greek notions of tradition, history, and heritage; resistance, anarchy, and social banditry; the impact of urbanization; and the ongoing economic crisis in relation to concepts of interpersonal and international debt.

### Anthropology 1936

**Course Title:** Anthropology of Religion (109570)

**Instructor:** Anya Bernstein
What happened to religion in the modern world? We start off by exploring traditional anthropological themes, such as animism, magic, and ritual, while paying particular attention to the classic secularization thesis advanced by social scientists. We will then focus on the crucial contemporary issues, such as debates on secularism, globalization and commodification of religion, body and sexuality, secular eschatologies, such as transhumanism, and the emergence of “new age” spirituality. This course is not a survey of specific religions, but a theoretical introduction to the main themes in the anthropological study of religion.

Anthropology 1951

Eureka! An Anthropology of Innovation (160410)

Namita Dharia

To be human is to have the ability to adapt and innovate. The creative and generative spirit of human thought and action is considered to bridge the dividing lines of cultures and nations. An emphasis on innovation and creative solutions has risen in the past decade, as global crises, such as climate change, economic instability, and epidemics, challenge life as we know it. In this class we examine the idea of innovation to explore its processes and politics. We explore both the potential and perils of innovation through specific case studies in technology, artistic endeavors, entrepreneurial initiatives, and everyday life.

We approach the idea of innovation through a constellation of terms that accompany it: creativity, generativity, improvisation, ingenuity, entrepreneurism, and cultural and technological change. We will ask: Why and how do we innovate? What does it mean to innovate? What are the historical and geographic conditions and the tools and technologies that enable innovation? In this day and age of celebration of entrepreneurial activity and creative collaborations: we ask who is read as innovative and what are the limits of the innovative endeavor?

The course begins with classic texts on creative processes to discuss the innovative human condition. We juxtapose these with texts on the politics of creation. We will think through innovative processes and discuss the idea of the innovative in the every day. Ethnographic monographs will raise questions of body, technology race, class, education, mobility, and gender. How do these change the way we read innovation? We will end by examining how innovation might work with or against modes of exploitation and domination.

Anthropology 1980

Anthropology at Home (115007)

Mary Steedly

The course begins with classic texts on creative processes to discuss the innovative human condition. We juxtapose these with texts on the politics of creation. We will think through innovative processes and discuss the idea of the innovative in the every day. Ethnographic monographs will raise questions of body, technology race, class, education, mobility, and gender. How do these change the way we read innovation? We will end by examining how innovation might work with or against modes of exploitation and domination.
Anthropology got its start as a discipline devoted to studying societies regarded as "other" than ourselves. Interested in human origins and "our living ancestors" on the one hand, and assuming that the experience of long-term residence among people extremely different from themselves could unsettle cultural preconceptions and thus lead to a more objective analysis on the other, early anthropologists insisted that fieldwork should be conducted in unfamiliar, usually faraway places. A spirit of manly adventure and competitive hardship, combined with colonialist assumptions of the inherent superiority of Western society, were commonplace features of ethnographic writing well into the last decades of the twentieth century.

In contrast to this, contemporary anthropologists are more likely to spend time among people much like themselves. This is in part because of the increasing diversity of the field, wherein the distinction between "us" and "them" can no longer be obvious, but also because anthropologists’ attention is increasing drawn closer to home. Anthropologists today may conduct fieldwork in a nuclear facility or a drug rehabilitation center, among artisanal cheese-makers, community organizers or disabled war veterans, in rural coal camps or gentrifying urban neighborhoods. Even when doing fieldwork abroad, they are as likely to choose to study middle- or upper-class urbanites –psychiatrists, architects, bureaucrats, housewives, artists—as peasant villagers. Such studies complicate our assumptions about the inequality inherent in relations between observer and observed, about ethnographic objectivity, indeed about the definition of anthropology as a discipline.

This course asks what an anthropology conducted "at home" might look like. For the purposes of this class we will emphasize ethnographic studies of the U.S., while recognizing that such a focus is itself problematic, given the wide range of other places where today's anthropologists may call home. Where is home, actually? Whose "home" matters? Are there varying degrees of "at-homeness"? Through questions such as these, the course explores the nature of anthropology as a discipline and as a method, and asks what "American culture"—if we can claim that such a thing exists—looks like from an anthropological perspective.

Course Notes: Intended for advanced undergraduates and graduate students with some background in anthropology. Others with professor's permission only.

Anthropology 2010AR

Materials in Ancient Societies: Ceramics (120535)

C. Lamberg-Karlovsky

2015 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Seminars and labs provide in-depth study of the technologies ancient societies used to produce objects from ceramic materials, including clays and mortars. Seminars cover basic ceramic materials science and engineering and relate materials selection and processing to environment, exchange, political power, and cultural values. This seminar-laboratory subject provides in-depth study of the technologies of ancient societies.

Course Notes: Open to senior undergraduates with permission of instructor.

Class Notes: Meets at M.I.T.

GIS & Spatial Analysis In Archaeology (120580)

Jason Ur
Robert Homsher

2016 Spring (4 Credits)  Schedule:  TR 0100 PM - 0229 PM

Instructor Permissions:  Instructor  Enrollment Cap:  16

An introduction to the GIS and remote sensing methods used by archaeologists to document and analyze datasets at the regional scale. This class will involve the hands-on use of maps, aerial photography, satellite imagery, digital terrain models and GPS-based observations to frame and approach archaeological research questions. Labs will use sample datasets from a variety of regions but students will be responsible for assembling a GIS database for their own region of interest.

Archaeological Method and Theory: Seminar (120489)

Rowan Flad

2015 Fall (4 Credits)  Schedule:  M 0100 PM - 0359 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

The class covers archaeological method and theory emphasizing the 1950s onwards. Large-scale trends in social theory will be balanced with attention to the ideas and writings of significant anthropologists and archaeologists.

Course Notes:  Required of graduate students in the Archaeology Program of Anthropology; this class is designed for graduate students but enthusiastic and energetic undergraduates are most welcome.

Anthropology 2170

The Rise and Fall of the Moche of Northern Peru (161205)

Luis jaime Castillo butters

2016 Spring (4 Credits)  
**Schedule:** R 0230 PM - 0529 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Two things are exceptional about the Moche of the north coast of Peru: they were probably the first state level society in South America, and in the last 25 years there has been more archaeological research focused on the Moche than on any other Pre-Columbian society of Peru. The Moche went full circle from being a cluster of incipient chiefdoms developing in the valleys and on the shores of the north coast of Peru, transforming into a multitude of small and medium sized regional states, facing the organizational, political, economic and ideological challenges of growth, and ultimately, succumbing to their own forms of organization. The collapse of the Moche is the best-documented radical transformation in the region. Starting in 1987, with the discoveries of the royal burials in Sipán, Moche archaeology has become the most prominent regional field of research in Peruvian archaeology. Hundreds of excavations, iconographic studies, material analyses, and theoretical studies have been carried out up to the present day. The fact that we have such a rich body of evidence has made explorations of the north coast all the more intense and results the more thought-provoking.

This seminar will explore and debate some of the critical issues in Moche archaeological research to date. The course will start with a series of lectures on the state of the art in Moche studies in order to set the stage for the
material to be covered later. Three weeks of lectures will be followed by weekly discussions on such issues as: origins of Moche society and culture, political and geopolitical organization, ideology and religion, iconography, social organization (including gender), and collapse, among others. Consideration of these topics will bring to the fore a range of theoretical and methodological issues central to Peruvian archaeology in general. Students will contribute by coming to class prepared to discuss critically the assigned readings. Students will also write a research paper dealing with a topic selected in consultation with the professor on a topic relating to the material covered in class.

Course Notes: Ability to read Spanish helpful but not essential for participation.

Archaeology and Heritage (160955)

*William Fash*

2015 Fall (4 Credits) Schedule: R 0200 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

The links between archaeology, cultural heritage, and nation building have been fundamentally important to archaeological practice since the origins of the discipline. The uses and abuses of archaeology by the state over the past fifty years have been criticized by all manner of social scientists, journalists, local communities and indigenous people in countries across the globe, in dozens of books, hundreds of articles, and The International Journal of Heritage Studies. Archaeological practice and heritage management continue to be the topic of lively theoretical and legal debates by multiple stakeholders with competing claims to the past. The ideological uses and commodification of archaeological heritage by diverse factions has led many archaeologists to become actively involved in creating sustainable solutions that promote responsible heritage stewardship in this dynamic context. The members of the seminar will read and discuss theoretical schema, practice and critiques from the Americas and the Old World in examining innovative approaches to archaeological heritage management. The focus in this
A seminar will be on finding a 'third way' to address the valid claims of local communities and indigenous peoples, vis-à-vis the ways central governments construct their own origin myths and legitimation of the state through archaeological research and its presentation to the public.

Homeland, Memory and Apocalypse in the Writings of Toni Morrison and Gabriel García Márquez (161287)

*David L. Carrasco*

2016 Spring (4 Credits)  
**Schedule:** W 0200 PM - 0359 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:** 15

This course is a comparative journey through selected writings of Toni Morrison and Gabriel García Márquez tied together by the themes of the quest for home, memory and the catastrophic end of the world. Writings will be examined from the perspective of the history of religions, psychoanalysis, anthropology and post-colonial studies. Readings include Sula, Song of Solomon, Beloved and Home plus One Hundred Years of Solitude and News of a Kidnapping. Each book will be read in relation to the historical conditions it reflects and criticizes. Jointly offered as HDS 2166.

**Course Notes:** Offered jointly with the Divinity School as HDS 2166.

Ancient DNA and the New Science of the Human Past (160538)

David Reich

2015 Fall (4 Credits) Schedule: F 0100 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 30

The ability to sequence genomes from ancient remains is revolutionizing our understanding of past human behavior. This seminar will focus on what genome-wide studies of modern and ancient DNA have already shown, the tensions that have arisen between genetics and other disciplines, and possible ways to reconcile these tensions. Enrollment will be limited to 15, chosen to represent a balance of disciplines touched on by the new data. Prospective students should submit a one-page essay explaining their interest in the course and the critical perspective that they expect to bring.

Sexuality and Political Economy (156677)

George Paul Meiu

2016 Spring (4 Credits) Schedule: W 1000 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: 18

This seminar explores the complex links between sexuality, capitalism, and power. Sexuality has long represented a central domain for the creation and contestation of subjects and sovereignties, labor and capital, relatedness and belonging, desire and development, security and violence. With the publication of Michel Foucault's The History of Sexuality (1976), the role of modern forms of power that work to discipline subjects and regulate populations has become central to how scholars conceptualize sexuality. By comparison, however, the relation between sexuality, the capitalist economy, and the myriad forms of postcolonial sovereignties has only recently become the topic of rigorous analysis. In this seminar, we revisit classic works by Freud, Foucault, Lacan and Fanon as well as texts in feminist, queer and postcolonial theories in order to craft a conceptual vocabulary for understanding emerging configurations of sex and politics in late capitalism. We ask: Under what historical circumstances does sexuality become a marker of inclusion, exclusion or exceptionalism in relation to race, ethnicity, culture, and state politics? What are the relations between commodities, discourses of sexuality, and the erotic practices of concrete historical actors? And what do we learn about globalization when we think of sexuality as a central domain of economic production, social reproduction, and political belonging?

Anthropology 2626

Research Design/Proposal Writing (116522)
This course is a practicum designed to help students craft effective research and grant proposals, learn how to constructively critique others' proposals, and develop enduring collaborative relationships. Many writing problems are fundamentally thinking and design problems. For this reason, conceptual structure, project design, and methodological choices will occupy a great deal of our time. The first half of the semester will focus on Wenner-Gren-type proposals, the second half on proposals for the National Science Foundation and similar funders.

Course Notes: By permission only. The class is open to third year (or higher) social anthropology students who have done most of the background reading for a major research project and are actively working on a formal research proposal, of which they have a draft in hand. For most students, this will be a proposal for their PhD dissertation research. Students in their second year may be eligible to take the course in certain circumstances.

Anthropology 2674
Legal Anthropology and Modern Governance (127130)
Asad Ahmed
2016 Spring (4 Credits) Schedule: T 0300 PM - 0459 PM
Instructor Permissions: None Enrollment Cap: n/a

This course examines changing configurations of law, power and governance. The law, and in particular the 'rule of
law' has been central to imagining and delineating the relationship between the political and the legal. In particular it
is the means through which sovereign power has been conceptualized and limited. This subsumption of the political
to the legal has been critiqued by Schmitt and the reduction of power to law has been challenged by Foucault. We
begin by exploring these theoretical challenges to liberal legality before turning to the relationship between law and
imperialism. In subsequent weeks we continue exploring these themes of legal regulation, emergency, exception,
rights and violence through contemporary ethnographies.

Anthropology 2676
Muslims, Islam and Anthropology (110034)
Asad Ahmed
2015 Fall (4 Credits) Schedule: W 1100 AM - 1259 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

This is a survey course to the anthropology of Islam. We first critically examine seminal texts by Evans-Pritchard,
Ernst Gellner and Clifford Geertz before turning to Talal Asad's analysis of anthropological categories, and attempt
to situate the study of Islam as a discursive tradition. In the second half we focus on recent ethnographic materials
that explore Muslim engagements with, and responses to, various features of modernity such as the state,
democracy, gender equality as well as the management and securitization of Muslims in the West.
Anthropology 2682

Anthropology of Urbanism: Japan in Comparative Perspective (109413)

Theodore Bestor

2015 Fall (4 Credits)  
Schedule: W 0400 PM - 0559 PM  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

This course examines patterns of Japanese urbanism -- social, cultural, historical, and built-environmental -- through interdisciplinary discussion. It is open to graduate students in any department or programs. Students are required to attend lectures of SW 33 Tokyo; students in Anthro 2682 will participate in specialized discussion sections and will frame term projects tailored to their future research plans in close consultation with the professor. The seminar is equally open to graduate students with strong interests in urban anthropology, in urban design and planning, and in Japanese/Asian Studies in history, the social sciences, and the humanities.

Course Notes: Students must also attend all lectures of Societies of the World 33 "Tokyo".

Anthropology 2690

Middle East Ethnography: Discourse, Politics, and Culture (122439)

Steven C. Caton

2015 Fall (4 Credits)  
Schedule: T 1000 AM - 1159 AM  
Instructor Permissions: Instructor  
Enrollment Cap: 18

The discursive construction of culture and its complex politics are examined in a wide range of ethnographies that have been written recently on countries in the Middle East, including Lebanon, Jordan, Israel/Palestine, Egypt, Morocco, Yemen, and Iran. Among the theoretical topics to be considered are orientalism, colonialism and post-colonialism, nationalism, self, gender, and tribalism.

Course Notes: Open to undergraduates.

Anthropology 2704

Linguistic Pragmatics and Cultural Analysis in Anthropology (119983)

Nicholas Harkness
Exploring classic theory and recent innovations in linguistic anthropology and the semiotic anthropology of communication, we connect the social life of language to its role in culture.

Course Notes: Limited to graduate students, who will also be expected to attend all Anthropology 1640 lectures.

Recommended Prep: Limited to graduate students, who will also be expected to attend all Anthropology 1640 lectures.

**Anthropology 2705**

Semiotic Anthropology (160462)

*Nicholas Harkness*

2016 Spring (4 Credits) Schedule: M 1000 AM - 1259 PM

Instructor Permissions: Instructor Enrollment Cap: 30

This seminar examines the mediation of socio-cultural life by sign phenomena in multiple modalities of experience.

Class Notes: Limited to graduate students. Undergraduate students may petition to enroll. Anthro 2704 is suggested but not required.

**Anthropology 2712**

Ethnographies of Food (127134)

*Theodore Bestor*

2015 Fall (4 Credits) Schedule: T 0100 PM - 0259 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

We will discuss the "food turn" in anthropology through reading contemporary (and classic) ethnographies of food in contexts of production, distribution, social exchange, gender, and science. Note: Undergraduates encouraged to participate.

Sonic Ethnography (108976)

*Ernst Karel*

2015 Fall (4 Credits)  
**Schedule:** TR 0200 PM - 0359 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 10

This is a practice-based course in which students record, edit, and produce anthropologically informed audio works which interpret culture and lived experience. Listening sessions will provide a broad context of contemporary work using location recordings, and readings will situate the practice within the growing field of sound studies. In their projects, students will experiment with technical and conceptual strategies of recording and composition as they engage with questions of ethnographic representation through the sensory dimension of sound.

**Course Notes:**  
Course will also include additional weekly two-hour listening session, and occasional required technique/technology workshops, to be scheduled.

**Recommended Prep:**  
Experience in media production helpful but not required.

Colonial Departures (161254)

Mary Steedly

2016 Spring (4 Credits) Schedule: R 0100 PM - 0259 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

Following World War II, the fabric of European empire in Asia and Africa began to unravel. In some cases through revolutionary violence, in others through diplomatic negotiation, new nations declared themselves free of colonial domination. This course will examine colonialism's 20th century heyday, decline and aftermath from an anthropological perspective, giving particular attention to local decolonizing practices and to the many forms the postcolonial condition may take.

Anthropology 3300

Supervised Field Work in Anthropology (116596)

2015 Fall (4 Credits)

Instructor Permissions: Instructor

Instructor

Enrollment Cap: n/a

General instruction in field methods and practice in the various divisions of anthropology, including archaeology, ethnography, and physical anthropology. Instructional personnel and location of course vary with the research program of the staff. Lectures, conferences, field and laboratory work.

Course Notes: May be taken by graduate students for academic credit, but since it is tuition-free, does not count for residence credit leading to reduced tuition. Open to students with adequate previous training in the subject.

Class Notes: Members of the Department

Applied Computation
Subject: Applied Computation

Applied Computation 209

Data Science (109898)

Hanspeter Pfister
Joseph Blitzstein
Verena Kaynig-Fittkau

2015 Fall (4 Credits) Schedule: TR 0230 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Learning from data in order to gain useful predictions and insights. This course introduces methods for five key facets of an investigation: data wrangling, cleaning, and sampling to get a suitable data set; data management to be able to access big data quickly and reliably; exploratory data analysis to generate hypotheses and intuition; prediction based on statistical methods such as regression and classification; and communication of results through visualization, stories, and interpretable summaries. Built around three modules: prediction and elections, recommendation and business analytics, and clustering and text analysis.

Course Notes: Only one of CS 109, AC 209, or Stat 121 can be taken for credit.

Recommended Prep: Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Applied Computation 274

Computational Fluid Dynamics (128101)

Sauro Succi

2015 Fall (4 Credits) Schedule: TR 1000 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

The course will describe major computational techniques for fluid flows, as described by the Navier-Stokes equations of continuum mechanics. In addition, the course will cover a new class of mesoscale techniques for complex flows and soft matter systems, which do not fit within the continuum Navier-Stokes description. The latter encompass a broad class of flowing materials of special interest to micro-nano engineering and biology.

Class Notes: For more information, see http://projects.iq.harvard.edu/ac274_2015/home

Recommended Prep: Basic notions of numerical analysis and scientific computing.

Applied Computation 290R Section: 1

Extreme Computing: Project-based High Performance Distributed and Parallel Systems (160444)

Pavlos Protopapas
Sadasivan Shankar
Efthimios Kaxiras

2015 Fall (4 Credits) Schedule: W 0100 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 25

Predictive computer simulations will play a critical role in scientific discoveries, national competitiveness, and in solving societal problems. For such predictions of real problems, the ability to scale the solution techniques, algorithms, and software to large-scale is necessary. This course will explore the techniques used for extreme computing (distributed cloud computing, scaling, performance, etc), supporting infrastructure (distributed file systems, replication, web services etc) and algorithms (MapReduce, Graph Methods, Kinetic Monte Carlo etc). Specifically, the course will identify three areas from physical, natural and social sciences that could be addressed by these techniques. The social sciences module will focus on customer reviews and influencing; the bio/health module will focus on cancer modeling; the materials module will focus on battery modeling. The faculty from Harvard, in collaboration with the visitors from National Cancer Institute and Argonne National Laboratories, will conduct the lectures and computer labs. Computing resources will be provided for the class projects.

Recommended Prep: Strong programming experience will be helpful.

Applied Computation 297R

Computational Science and Engineering Capstone Project (156202)

Pavlos Protopapas

2016 Spring (4 Credits) Schedule: T 0400 PM - 0559 PM
Instructor Permissions: Instructor Enrollment Cap: 45

The CSE capstone project is intended to integrate and apply the skills and ideas CSE students acquire in their core courses and electives. By requiring students to complete a substantial and challenging collaborative project, the capstone course will prepare students for the professional world and ensure that they are trained to conduct research. There will be no homework or lectures. Students will be dealing with real-world problems, messy data sets, and the chance to work on an end-to-end solution to a problem using computational methods.

Applied Computation 298R

Interdisciplinary Seminar in Computational Science & Engineering (109339)
This course, centered on the Institute for Applied Computation Science (IACS) seminar series, will provide broad exposure to cutting-edge topics, applications, and unifying concepts in Computational Science & Engineering. Students will read, present and discuss journal articles related to IACS talks, attend the seminars and meet with visiting speakers. Possible topics to be covered include scientific visualization, computational approaches to disease, mathematical neuroscience, computational archeology, and computational finance.

### Applied Mathematics 50

**Introduction to Applied Mathematics (122564)**  
*Christopher Rycroft*

**2016 Spring (4 Credits)**  
**Schedule:** MW 0100 PM - 0229 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course provides an introduction to the problems and issues of applied mathematics, focusing on areas where mathematical ideas have had a major impact on diverse fields of human inquiry. The course is organized around two-week topics drawn from a variety of fields, and involves reading classic mathematical papers in each topic. The course also provides an introduction to mathematical modeling and programming.

**Recommended Prep:** Mathematics 1b is a prerequisite, although it can be taken concurrently. Some limited concepts from Mathematics 21a / Applied Mathematics 21a will be used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, and starts from the level of a complete beginner; in the past, some students have found Computer Science 50 helpful, although this is not required.

### Applied Mathematics 91R

**Supervised Reading and Research (121692)**  
*Yiling Chen*  
*Christopher Rycroft*  
*Margo Levine*  
*Sarah Iams*

**2016 Spring (4 Credits)**  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

An individual project of guided reading and research culminating in a substantial paper or other piece of work which can be meaningfully evaluated to assign a letter grade; may not be taken on a PA/FL basis. Students engaged in preparation of a senior thesis ordinarily should take Applied Mathematics 99r instead.

**Course Notes:**  
May be taken as a half course in either term; normally may not be taken for more than two terms. Applications may be obtained at Pierce Hall 110. Students should consult their advisers and concentration literature for further information and guidance. Applications must be signed by the student, by the faculty member supervising the project (who will recommend the grade), and by the Director of Undergraduate Studies, who will sign the student's study card once the project and its method of evaluation have been approved.

Applied Mathematics  101

Statistical Inference for Scientists and Engineers (132127)

Vahid Tarokh

2015 Fall (4 Credits)  Schedule:  TR 0100 PM - 0229 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Introductory statistical methods for students in the applied sciences and engineering. Random variables and probability distributions; the concept of random sampling, including random samples, statistics, and sampling distributions; the Central Limit Theorem and its role in statistical inference; parameter estimation, including point estimation and maximum likelihood methods; confidence intervals; hypothesis testing; simple linear regression; and multiple linear regression. Introduction to more advanced techniques as time permits.

Course Notes:  May not be taken in addition to Engineering Sciences 101. This course, when taken for a letter grade, meets the General Education requirement for
Empirical and Mathematical Reasoning.

**Recommended Prep:** Math 21a or Applied Math 21a or equivalent.

Series Expansions and Complex Analysis (122094)

*Nitin Upadhyaya*

2015 Fall (4 Credits)  
**Schedule:** MWF 0100 PM - 0159 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Introduces fundamental concepts for solving real-world problems and emphasizes their applications through examples from the physical and social sciences. Topics: series expansions and their convergence; complex functions, mappings, differentiation, integration, residues, Taylor and McLaurin expansions; wave (Fourier) and wavelet expansions and transformations, and their uses in signal and image analysis and solving differential equations.

**Recommended Prep:** Applied Mathematics 21a and 21b, or Mathematics 21a and 21b.

Introduction to Scientific Computing (120198)

Thomas Fai

2016 Spring (4 Credits)  Schedule:  TR 0100 PM - 0229 PM

Instructor Permissions: None  Enrollment Cap:  n/a

Many complex physical problems defy simple analytical solutions or even accurate analytical approximations. Scientific computing can address certain of these problems successfully, providing unique insight. This course introduces some of the widely used techniques in scientific computing through examples chosen from physics, chemistry, and biology. The purpose of the course is to introduce methods that are useful in applications and research and to give the students hands-on experience with these methods.

Course Notes: Applied Mathematics 111 is also offered as Engineering Sciences 111.
Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 111.

**Recommended Prep:** Applied Mathematics 21a and 21b, or Mathematics 21a and 21b, or permission of instructor.

**Enrollment Cap:** n/a

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

**Course Notes:** Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

**Recommended Prep:** Mathematics at least at the level of Applied Mathematics 21a, b but preferably at the level of Applied Mathematics 105 (formerly Applied Mathematics 105b). Additional skills in analysis, algebra, probability, statistics and computer programming will increase the value of the course to students.

Applied Linear Algebra and Big Data (113876)

*Eli Tziperman*

2016 Spring (4 Credits)  
**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** None  
**Enrollment Cap:** 110

Topics in linear algebra which arise frequently in applications, including in the analysis of large data sets: linear equations, eigenvalue problems, principal component analysis, singular value decomposition, quadratic forms, linear inequalities, linear programming, optimization, linear differential equations, modeling and prediction, data mining methods including frequent pattern analysis, classification, clustering, outlier detection. Examples will be given from physical sciences, biology, climate, commerce, internet, imageprocessing, economics and more.

**Recommended Prep:** Applied Mathematics 21a,b or equivalent, Computer Science 50 or programming experience.

Statistics and Inference in Biology (110059)

Sharad Ramanathan

2016 Spring (4 Credits) Schedule: MW 1000 AM - 1129 AM

Instructor Permissions: None Enrollment Cap: n/a

We often deal with incomplete information when going about our lives: recognizing a friend’s face covered by a shadow, having a phone conversation where the reception is poor, reading a document with lots of spelling and grammatical errors. In such circumstances, we make good guesses to process and understand the data. How do we do this? What kind of mathematical framework do we need to interpret noisy and incomplete data? This course will develop a set of statistical tools that will help us solve such poorly posed problems. We will draw on examples from primary literature in biology to study optical illusions, text recognition, sequence alignment, decoding cryptographs, processing of chemo-attractive signals to find food, and survival strategies of bacteria in unpredictable environments to motivate the underlying mathematical framework.

Recommended Prep: Mathematics 19a/b or Mathematics 21a/b.

Applied Mathematics  140R

Computational Geometry (110063)

Elizabeth Chen

2015 Fall (4 Credits) Schedule: MWF 0100 PM - 0229 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

An inquiry based and hands on exploration in computational geometry. Topics include: projective geometry (duality between points/lines, symmetry among spheric/planar/hyperbolic geometry), linear algebra (vectors, matrices, symmetry groups) and recursion. We will draw pretty pictures (fractals, tesselations, algebraic curves, etc.). We will write computer programs in Mathematica (and possibly Java, if time permits).

Course Notes: Grading based on final project, in-class assignments, in-class participation. No written exams, no written homework outside class. You will present your finished programs and pretty pictures to the class.
Class Notes: Please install Mathematica and bring your laptop to every class. We will start programming on the very first day!

Recommended Prep: Applied Mathematics 21a/b or Mathematics 21a/b. You know how to multiply matrices and vectors. No previous programming experience required.

Applied Mathematics 141R

Computational Music Theory (110333)

Elizabeth Chen

2016 Spring (4 Credits) Schedule: F 0100 PM - 0359 PM
                                     MW 0100 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 24

An inquiry based and hands on exploration in computational music theory, combining mathematics, computer programming and aesthetics. Math topics: vector space model of music theory, binary tree model of scale theory. Programming in Mathematica: converting between notes and numbers, output to music notation, input from audio. Aesthetics: build your own musical instruments, invent your own music notation, compose pieces. You need to bring your laptop to class every day. Be sure to install & register Mathematica before the first class. Generally, we will program on Mondays and Wednesdays, and build/test instruments on Fridays. Grading based on final project, in-class assignments, in-class participation. No written exams or written homework outside class. You will present your finished programs, instruments and beautiful music to the class.

Class Notes: Students who previously took AM 141r—Computational Music Theory in spring 2014 will not be allowed to enroll in the course.

Recommended Prep: Applied Mathematics 21a/b or Mathematics 21a/b or equivalent. No previous programming experience required.

Applied Mathematics 147

Nonlinear Dynamical Systems (121989)

Sarah Iams

2015 Fall (4 Credits)

Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

An introduction to nonlinear dynamical phenomena, covering the behavior of systems described by ordinary differential equations. Topics include: stability; bifurcations; chaos; routes to chaos and universality; approximations by maps; strange attractors; fractals. Techniques for analyzing nonlinear systems are introduced with applications to physical, chemical, and biological systems such as forced oscillators, chaotic reactions, and population dynamics.
Recommended Prep: Mathematics 21a and 21b, or Applied Mathematics 21a and 21b.

Advanced Scientific Computing: Numerical Methods (110684)

*Christopher Rycroft*

2015 Fall (4 Credits)  

**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

An examination of the mathematical foundations of a range of well-established numerical algorithms, exploring their use through practical examples drawn from a range of scientific and engineering disciplines. Emphasizes theory and numerical analysis to elucidate the concepts that underpin each algorithm. There will be a significant programming component. Students will be expected to implement a range of numerical methods through individual and group-based project work to get hands-on experience with modern scientific computing.

Recommended Prep: Familiarity with linear algebra and calculus; basic programming knowledge at the Computer Science 50 level.

Advanced Scientific Computing: Stochastic Methods for Data Analysis, Inference and Optimization (127561)
Verena Kaynig-Fittkau
2016 Spring (4 Credits) Schedule: TR 1130 AM - 1259 PM
Instructor Permissions: None Enrollment Cap: n/a

Develops skills for computational research with focus on stochastic approaches, emphasizing implementation and examples. Stochastic methods make it feasible to tackle very diverse problems when the solution space is too large to explore systematically, or when microscopic rules are known, but not the macroscopic behavior of a complex system. Methods will be illustrated with examples from a wide variety of fields, like biology, finance, and physics.

Recommended Prep: Basic knowledge of a computer programming language (preferably Python), basic knowledge of statistics.

Applied Mathematics 216

Inverse Problems in Science and Engineering (135919)
Lakshminarayanan Mahadevan
2016 Spring (4 Credits) Schedule: W 0100 PM - 0359 PM
Instructor Permissions: None Enrollment Cap: n/a

Many problems in science and engineering are inverse problems. For example, an experimental result that requires an explanation can be couched thus - given the data, what is the theory/model that provides it - this is an inverse problem. In engineering, a given function (in a product/software .... ) requires a design - again an inverse problem. In this course, we will first spend some time on characterizing common features of inverse problems from science and engineering - from oil prospecting and seismology to cognitive science, from particle physics to engineering design, then introduce deterministic and probabilistic methods for their solution, and finally deploy them.
computationally on real questions drawn from the sciences and engineering.

**Recommended Prep:** Linear algebra, Differential equations, Basic probability, some MATLAB experience.

Advanced Optimization (107600)

*Yaron Singer*

2016 Spring (4 Credits) **Schedule:** MW 0230 PM - 0359 PM

**Instructor Permissions:** None  **Enrollment Cap:** n/a

This is a graduate level course on optimization which provides a foundation for applications such as statistical machine learning, signal processing, finance, and approximation algorithms. The course will cover fundamental concepts in optimization theory, modeling, and algorithmic techniques for solving large-scale optimization problems. Topics include elements of convex analysis, linear programming, Lagrangian duality, optimality conditions, and discrete and combinatorial optimization. Exercises and the class project will involve developing and implementing optimization algorithms.

**Course Notes:** Offered jointly with the Business School as 4460.

**Recommended Prep:** Applied Mathematics 21b or Mathematics 21b (linear algebra) and Applied Mathematics 121 or equivalent or permission of instructor. Comfort with programming.

**Additional Course Attributes:**

*Nikolaos Trichakis*

*Joel Goh*

2016 Spring (4 Credits) **Schedule:** TR 0415 PM - 0545 PM

**Instructor Permissions:** None  **Enrollment Cap:** n/a

The course covers the modeling, analysis, and control of stochastic systems. Topics include Bernoulli and Poisson processes, Markov chains and Markov decision processes, optimization under uncertainty, queuing theory, and simulation. Applications will be presented in healthcare, inventory management, and service systems.

**Course Notes:** Offered jointly with the Business School as 4465.

**Class Notes:** Course will meet at HBS, Cumnock Hall 230.
Recommended Prep: Applied Mathematics 121.

Applied Mathematics 232

Estimation and Control of Dynamic Systems (161259)

Na Li

2016 Spring (4 Credits)  Schedule: MW 1000 AM - 1129 AM

Instructor Permissions: None  Enrollment Cap: n/a

This graduate level course studies dynamic systems in time domain with inputs and outputs. Students will learn how to design estimator and controller for a system to ensure desirable properties (e.g., stability, performance, robustness) of the dynamical system. In particular, the course will focus on systems that can be modeled by linear ordinary differential equations (ODEs) and that satisfy time-invariance conditions. The course will introduces the fundamental mathematics of linear spaces, linear operator theory, and then proceeds with the analysis of the response of linear time-variant systems. Advanced topics such as robust control, model predictive control, linear quadratic games and distributed control will be presented based on allowable time and interest from the class. The material learned in this course will form a valuable foundation for further work in systems, control, estimation, identification, detection, signal processing, and communications.

Course Notes: Applied Mathematics 232 is also offered as Engineering Sciences 202. Students may not take both for credit.

Class Notes: First class will meet on Monday, Jan. 25. It will not meet on Wednesday, Jan. 27.

Recommended Prep: Linear algebra, differential equations, and signals and systems (AM 120, ES 156, or equivalent). Undergraduates need permission.

Information Processing and Statistical Physics (160447)

Yue Lu

2015 Fall (4 Credits)  Schedule: MW 1000 AM - 1129 AM

Instructor Permissions: Instructor  Enrollment Cap: 30

This course introduces students to several fundamental notions and methods in statistical physics that have been successfully applied to the analysis of information processing systems. Discussions will be focused on studying such systems in the infinite-size limit, on analyzing the emergence of phase transitions, and on understanding the behaviors of efficient algorithms. This course seeks to start from basics, assuming just undergraduate probability and analysis, and in particular assuming no knowledge of statistical physics. Students will take an active role by applying what they learn from the course to their preferred applications.
Course Notes: Applied Mathematics 254 is also offered as Engineering Sciences 254. Students may not take both for credit.

Recommended Prep: Analysis (Math 21a/b, or equivalent), Probability (Statistics 110, Engineering Sciences 150, or equivalent).

Applied Physics
Subject: Applied Physics

Applied Physics  50A

Physics as a Foundation for Science and Engineering, Part I (108880)

Federico Capasso
Eric Mazur
Kelly Miller

2015 Fall (4 Credits)  Schedule:  TR 1000 AM - 1259 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

AP 50a is the first half of a one-year, team-based and project-based introduction to physics. This course teaches students to develop scientific reasoning and problem-solving skills. AP50a topics include: kinematics; linear and rotational motion; relativity; conservation of momentum and energy; forces; gravitation; and oscillations and waves. Multivariable and vector calculus is introduced and used extensively in the course. Students work in teams on three, month-long projects, each culminating in a project fair. The twice-weekly class periods are all inclusive: there are no separate labs or discussion sections.

Course Notes:
AP50a satisfies the premedical requirements and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 2, Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

Recommended Prep:
Mathematics preparation at least at the level of Mathematics 1b concurrently is required. However, some elementary ideas from multivariable calculus are used and students are encouraged to take Applied Mathematics 21a or Mathematics 21a concurrently. The mathematics content of Applied Physics 50a will be coordinated with Applied Mathematics 21a. This course can be taken concurrently with AM 21a to meet the calculus prerequisite. This course can be taken concurrently with AM 21a to meet the calculus prerequisite.

Applied Physics  50B

Physics as a Foundation for Science and Engineering, Part II (108882)

Eric Mazur
Kelly Miller

2016 Spring (4 Credits)  Schedule:  TR 1000 AM - 1259 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
AP 50b is the second half of a one-year, team-based and project-based introduction to physics. This course teaches students to develop scientific reasoning and problem-solving skills. AP50b topics include: electrostatics; electric currents; magnetostatics; electromagnetic induction; Maxwell's Equations; electromagnetic radiation; geometric optics; and, wave optics. Multivariable and vector calculus is introduced and used extensively in the course. Students work in teams on three, month-long projects, each culminating in a project fair. The twice-weekly class periods are all inclusive: there are no separate labs or discussion sections.

Course Notes: AP50b satisfies the premedical requirements and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 3, Physical Sciences 12b, Physics 15b), but focuses on the application of physics to real-world problems. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

Recommended Prep: A solid knowledge of multivariable calculus at the level of Applied Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.

Applied Physics  195

Introduction to Solid State Physics (131331)

Donhee Ham

2015 Fall (4 Credits)   Schedule: WF 0100 PM - 0229 PM

Instructor Permissions: Instructor   Enrollment Cap: n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); electrons in solids and band formation; metals and semiconductors; diodes and transistors; plasmonic excitations and screening; optical properties; solid-state lasers; magnetism, spin waves, magnetic resonance, and spin-based devices; dielectrics and ferroelectrics; superconductivity, Josephson junctions, and superconducting circuits; electronic transport in low-dimensional systems, quantum Hall effect, and resonant tunneling devices.

Recommended Prep: Elementary quantum mechanics.

Applied Physics  216

Electromagnetic Interactions with Matter (141253)

Jene Golovchenko

2016 Spring (4 Credits)   Schedule: WF 1030 AM - 1159 AM

Instructor Permissions: None   Enrollment Cap: n/a
This course will focus on how electromagnetic fields and matter interact. Deterministic, statistical, classical, and quantum mechanical considerations will be covered. The course will be useful for experimental and applied physics students in atomic, solid state, optical, chemical, and biophysics.

**Recommended Prep:** An advanced undergraduate course at the level of Physics 153 is required.

**Additional Course Attributes:**

**Applied Physics 217**

**Applications of Modern Optics (121975)**

*Lene Hau*

2015 Fall (4 Credits)  

**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

Optical systems and lasers have recently revolutionized both technology and basic research. We cover simple models of light-matter interactions, Fourier optics and holography, light scattering, and optics in biology: single-molecule studies, optical coherence tomography, nonlinear imaging techniques.

**Recommended Prep:** An undergraduate course in electromagnetism and quantum mechanics.

**Additional Course Attributes:**

**Electrical, Optical, and Magnetic Properties of Materials (121594)**

*Xin Li*

2015 Fall (4 Credits)  

**Schedule:** MW 0100 PM - 0229 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This course covers the electrical, optical and magnetic properties of several technologically important materials systems. It provides a general introduction of structure-property relations; defect chemistry including Kroger-Vink diagram and charged point defect; ionic conductivity in electrochemical intercalation energy storage materials; optical properties of wide bandgap metal oxides; spin, charge and crystal structure coupling, and their ordering and disordering.

**Recommended Prep:** Introductory solid-state physics or equivalent course.

**Additional Course Attributes:**

Applied Physics  225
Introduction to Soft Matter (121403)
Jennifer Lewis  
Shmuel Rubinstein
2015 Fall (4 Credits)    Schedule:    TR 1130 AM - 1259 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
Introduction to the physics of soft matter, also called complex fluids or squishy physics, includes the study of capillarity, thin films, polymers, polymer solutions, surfactants, and colloids. Emphasis is on physical principles which scale bulk behavior. Students will understand the concepts, experimental techniques, and, especially, the open questions. Lecture notes are supplied in place of a textbook.

Class Notes:  AP 225 will not meet on Thursday, Sept 3; the first class will be held on Tuesday, Sept 8.

Recommended Prep:  Knowledge of basic thermodynamics, statistical mechanics and differential equations.

Additional Course Attributes:

Applied Physics  226  Section: 1
Introduction to Soft Matter - Capillarity and Wetting (125449)
Ian Morrison
2016 Spring (4 Credits)    Schedule:    F 1000 AM - 1259 PM
Instructor Permissions:  None  Enrollment Cap:  n/a
Consider phenomena strongly influenced by surface tensions, high curvatures, thin films, diffusion, adsorption, wetting, which are variously mobile, dynamic, polymeric, transient, and fragile. Emphasis on the physics, thermodynamics, rheological, and scaling laws that govern bulk behavior.

Course Notes:  Offered in alternate years.
Recommended Prep:  Knowledge of thermodynamics and basic statistical mechanics and some familiarity with phase diagrams.

Additional Course Attributes:

Electron Microscopy Laboratory (116509)

David Bell

2016 Spring (4 Credits)  Schedule: M 0230 PM - 0359 PM
Instructor Permissions: Instructor  Enrollment Cap: 16

Lectures and laboratory instruction on transmission electron microscopy (TEM) and Cs corrected, aberration-correction microscopy and microanalysis. Lab classes include; diffraction, dark field imaging, X-ray spectroscopy, electron energy-loss spectroscopy, atomic imaging, materials sample preparation, polymers, and biological samples.

Course Notes: Primarily for graduate students planning to use TEM for their research.

Applied Physics 295A

Introduction to Quantum Theory of Solids (143855)

Efthimios Kaxiras

2016 Spring (4 Credits)  Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: None  Enrollment Cap: n/a

Electrical, optical, thermal, magnetic, and mechanical properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Metals, semiconductors, and insulators will be covered, with possible special topics such as superconductivity.

Course Notes: Applied Physics 295a is also offered as Physics 295a. Students may not take both for credit.

Recommended Prep: Applied Physics 195 or equivalent, and a graduate level quantum mechanics course similar to Physics 251a. (Physics 251b would be helpful and may be taken concurrently.)
Applied Physics 299R
Special Topics in Applied Physics (131373)

*Eric Mazur*

2015 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Supervision of experimental or theoretical research on acceptable applied physics problems and supervision of reading on topics not covered by regular courses of instruction.

**Course Notes:**  
Open to graduate students and AB/SM candidates only. Students must arrange such work with a member of the School of Engineering and Applied Sciences. This course is graded and is ordinarily taken with the approval of the Committee on Higher Degrees. Applicants must file a project sheet before study cards are filed. Project sheets may be obtained from the Student Affairs Office, Pierce Hall 110.

Astronomy
Subject: Astronomy

Astronomy 2
Celestial Navigation (111305)

Philip Sadler

2015 Fall (4 Credits)  Schedule:  T 1130 AM - 1259 PM
                                           T 0700 PM - 0959 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Never be lost again! Find your way on sea, land, or air by employing celestial and terrestrial techniques. Acquire expertise in using navigators' tools (sextant, compass, and charts) while learning the steps to the celestial dance of the sun, moon, stars, and planets. This 108-year-old course continues to rely on practical skills and collaborative problem-solving, while utilizing historical artifacts (instruments, maps, captains' logs) and student-built devices. Culminating in a day-long cruise to practice navigation skills.

Course Notes:  Minimal lecturing; predominantly practical activities with individual attention from teaching staff. Math beyond high school trigonometry and geometry unnecessary. This course is offered each year. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both.

Class Notes:  Class meets during lunch each Tuesday in the Classroom and again just after dinner the same day in Phillips Auditorium.

Additional Course Attributes:

Astronomy 16
Stellar and Planetary Astronomy (118136)

Karin Oberg

2016 Spring (4 Credits)  Schedule:  TR 0230 PM - 0359 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

This course provides an introduction to the physical principles describing the formation and evolution of stars and their planetary companions. Topics include thermal radiation and stellar spectra; telescopes; energy generation in stars; stellar evolution; orbital dynamics; the Solar system; and exoplanets. This course includes an observational component: students will determine the distance to the Sun, and use the Clay Telescope atop the Science Center to study stellar evolution and detect exoplanets.

Course Notes:  This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe. This course is offered each year.

Recommended Prep:  An introductory course in mechanics, which may be taken concurrently,
This course provides an introduction to the physical principles describing galaxies and the composition and evolution of the Universe. Topics include the interstellar medium; star clusters; the structure and dynamics of the Milky Way; other galaxies; clusters of galaxies; active galaxies and quasars; cosmology; and the early universe. This course includes an observational component: In addition to observing galaxies with the Science Center Clay Telescope, students will use the millimeter-wavelength telescope at the Harvard-Smithsonian Center for Astrophysics to measure the rotation velocity of the Milky Way galaxy and to determine its mass.

This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe. This course is offered each year.

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16, or Physical Sciences 12a.

Requirements: Prerequisite: An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 15a, Physics 16, or Physical Sciences 12a. REQ; Astronomy 17

Astronomy  98

Research Tutorial in Astrophysics (112487)

David Charbonneau

2015 Fall (4 Credits)  Schedule: M 0100 PM - 0229 PM  T 0530 PM - 0729 PM
This tutorial introduces students to research at the forefront of astrophysics, and provides opportunities for students to meet with research scientists and individuals active in science policy, education, and journalism. Students meet weekly for a lecture and discussion over dinner with a guest speaker, preceded by a reading and a preparatory seminar. Students will be mentored throughout the term on a research project of their choosing. The Harvard-Smithsonian Center for Astrophysics is home to one of the largest groups of astronomers in the world, providing extensive opportunities for undergraduate research.

Requirements: REQ; Astronomy 98

Individually supervised reading and research leading to the senior thesis. The Harvard-Smithsonian Center for Astrophysics is home to one of the largest groups of astronomers in the world, providing extensive opportunities for undergraduate research. Part one of a two part series.
Astronomy 100

Methods of Observational Astronomy (125880)

Edo Berger

2016 Spring (4 Credits)  Schedule:  WF 0200 PM - 0359 PM

Instructor Permissions: None  Enrollment Cap: n/a

In this course we will learn the basic tools of modern astronomical research, including telescopes, detectors, imaging, spectroscopy, and common software. Emphasis will be placed on both the theory behind telescopes and their use, and hands-on experience with real data. Using this basic knowledge we will analyze science-level astronomical data from a wide range of telescopes and review the basic properties of stars, galaxies, and other astronomical objects of interest. The course includes a trip to the F. L. Whipple Observatory on Mount Hopkins, Arizona, to gather data with various telescopes.

Course Notes: This course is offered each year.

Recommended Prep: Astronomy 16 or Astronomy 17.

Requirements:

Prerequisite: Astronomy 16 OR Astronomy 17

Astronomy 130

Cosmology (125883)

Douglas Finkbeiner

2016 Spring (4 Credits)  Schedule:  TR 0230 PM - 0359 PM

Instructor Permissions: None  Enrollment Cap: n/a

The physical model describing the initial conditions, evolution, and ultimate fate of the Universe. Topics include cosmic dynamics; the Robertson-Walker Metric; curvature; estimating cosmological parameters; the accelerating universe; dark matter; gravitational lensing; the cosmic microwave background; nucleosynthesis; inflation and the very early universe; formation of structure. Note: Offered in alternate years.

Course Notes: This course offered alternate years.

Requirements:

Prerequisite: Astronomy 17 OR Physics 15c

**Enrollment Cap:** n/a

Laboratory and observational projects in astrophysics. Students design and undertake two projects from a selection including: observational studies of the cosmic microwave background radiation, molecules in interstellar clouds, the rotation of the galaxy, galactic molecular sources with the submillimeter array (SMA), stars and clusters with the Clay Telescope; and laboratory experiments including super-conducting submillimeter detectors, x-ray CCDs, and hard x-ray imaging detectors and telescopes.

**Course Notes:** Primarily for concentrators in astrophysics or combined concentrators with physics. Students with physics as their primary concentration, but with a serious interest in astrophysics, may take this to satisfy their laboratory requirement (in lieu of Physics 191) upon petition to the Head Tutor in Physics. This course is offered each year.

**Requirements:** Prerequisite Astronomy 191: Astronomy 16, OR Astronomy 17, OR Physics 15C
Astronomy 200
Radiative Processes in Astrophysics (124966)

Ramesh Narayan

2015 Fall (4 Credits)  Schedule:  MW 0100 PM - 0229 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This course offers a survey of radiative processes of astrophysical importance from radio waves to gamma rays. Topics include thermal and non-thermal processes, including bremsstrahlung, synchrotron radiation, and Compton scattering; radiation in plasmas; aspects of atomic and molecular spectra.

Course Notes:  Open to seniors concentrating in Astrophysics or Physics. This course is offered each year.

Recommended Prep:  Physics 143a.

Astronomy 202A
Galaxies and Dynamics (118139)

Charles Conroy

2015 Fall (4 Credits)  Schedule:  MW 0930 AM - 1059 AM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

An overview of extragalactic astronomy. Galaxy formation, evolution and properties, galactic dynamics, clustering, gas dynamics, star formation and other topics at the frontiers of extragalactic astronomy.

Course Notes:  This course offered in alternate years.

Astronomy 202B
Cosmology (111660)

Daniel Eisenstein

2016 Spring (4 Credits)  Schedule:  MW 0930 AM - 1059 AM
Instructor Permissions: None  Enrollment Cap: n/a

The cosmological principle: isotropy and homogeneity, cosmological world models, thermal history of the Big Bang, the microwave background, inflation, growth of density fluctuations, large scale structure and other topics at the frontiers of cosmology.

Course Notes: This course offered in alternate years.

Astronomy 215HFA

Topics in Contemporary Astrophysics (109579)

Edo Berger

2015 Fall (2 Credits)  Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: Instructor  Enrollment Cap: n/a

This full year half course will cover a broad range of contemporary topics in observational and theoretical astrophysics through a set of 10-12 two-week modules taught by members of the Astronomy Department faculty. The course will meet twice per week, and each module will be comprised of a stand-alone topic with a single homework assignment. Enrolled students will be required to sign up for the full year and attend half of the offered modules. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: This course offered alternate years.

Recommended Prep: This course is open to all astronomy graduate students or by request.

Astronomy 218
Radio Astronomy (112022)
Lincoln Greenhill
2015 Fall (4 Credits) Schedule: TR 0200 PM - 0329 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
Historical development; diffraction theory of antennas and interferometers; signal detection and measurement techniques. Thermal, synchrotron and spectral-line emission in the context of radio observations of the sun, planets, pulsars, masers, hydrogen clouds, molecular clouds, ionized regions, active galaxies, quasars, and the cosmic background. Observational projects and laboratory exercises carried out with the Submillimeter Array, Haystack Observatory and the CMB Laboratory.

Course Notes: This course offered in alternate years.

Requirements: Prerequisite: Astronomy 200 OR Physics 153

Astronomy 219
High Energy Astrophysics (111053)
Jonathan Grindlay
Paul Nulsen
2016 Spring (4 Credits) Schedule: MW 0200 PM - 0329 PM
Instructor Permissions: None Enrollment Cap: n/a
Discussion of relativistic and high-energy astrophysical phenomena and observational techniques. Accretion onto compact stars (white dwarfs, neutron stars, black holes); active galactic nuclei, galaxy clusters. Gamma-ray bursts and cosmic rays. X-ray and gamma-ray background.

Course Notes: This course offered in alternate years.
Astronomy 253
Plasma Astrophysics (109578)
Nicholas Murphy
Xuening Bai
2016 Spring (4 Credits) Schedule: MW 0330 PM - 0459 PM
Instructor Permissions: None Enrollment Cap: n/a
This course provides an introduction to plasma physics and plasma processes in an astrophysical context. Topics include charged particle motions, kinetic theory, magnetohydrodynamics, waves, shocks, instabilities, partially ionized plasmas, collisionless plasmas, magnetized turbulence, particle acceleration, astrophysical dynamos, and magnetic reconnection. Astrophysical applications may include accretion disks, interstellar turbulence, cosmic rays, galactic magnetic fields, solar/stellar flares, and space weather in the Solar System and around exoplanets.

Course Notes: This course offered in alternate years.
Recommended Prep: Knowledge of intermediate electromagnetism, partial differential equations, and fluid dynamics.

Astronomy 301HFA

Journal Club (121382)

_Edo Berger_

2015 Fall (2 Credits)  
Schedule:  
T 0400 PM - 0459 PM

Instructor Permissions:  
Instructor

Enrollment Cap:  
n/a

Each week two speakers (faculty, lecturers, and students) will report on current research in astronomy, providing students with an opportunity to practice the organization and presentation of technical material. A minimum of one presentation will be expected from each student each year focused on their own research or new results in the literature. Faculty will similarly discuss recent results from the literature, as well as their own research as a way to provide an overview of research activities at the Harvard Astronomy Department. The course is intended as an opportunity for substantive discussion, as an opportunity to find out about research activities, and to foster interaction between the students and faculty. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes:  
This course is offered each semester (parts A and B) and attendance is required for all registered graduate students in Astronomy.

Scientists Teaching Science (117515)

Philip Sadler

2016 Spring (4 Credits)  

Schedule: T 0200 PM - 0329 PM

Instructor Permissions: Instructor  

Enrollment Cap: n/a

Learn the secrets of lecturing well, leading discussions, connecting to real-world applications, and creating tests in any scientific discipline as we focus on relevant educational research and case studies, plus engage in practical classroom activities.

Course Notes: Open to graduate students in all areas of science. Assignments help illustrate research findings from life, earth, and physical science education. Undergraduates with an interest in teaching at the pre-college level may be admitted with instructor permission. This course offered each year.

Class Notes: Open to graduate students in all areas of science. Assignments help illustrate research findings from life, earth, and physical science education. Topics in Origins of Life Research (161303)

Dimitar Sasselov

2016 Spring (4 Credits)  

Schedule: TR 0200 PM - 0329 PM

Instructor Permissions: None  

Enrollment Cap: n/a

This course will cover a broad range of contemporary topics in origins of life research through a set of 10 two-week modules taught by members of the Origins of Life Initiative faculty.

Enrolled students will be required to attend at least six of the offered modules over the course of two semesters. The course will meet twice per week, and each two week module will be comprised of a stand-alone topic with a single assignment.

*Frank M. Sacks*

2016 Spring (4 Credits)  
**Schedule:** TR 0130 PM - 0320 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

A review of the biochemistry of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Contemporary topics are emphasized. Particular emphasis given to current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer. Recommended dietary intakes of selected nutrients are discussed in order to understand their limitations.

**Course Notes:** Offered jointly with the Medical School as BPH 733.0 and with the School of Public Health as NUT 202.

**Recommended Prep:** Introductory nutrition course. Prior familiarity with nutrition and the health sciences expected, as well as a basic knowledge of biochemistry and human physiology.

Interdisciplinary Training in Pulmonary Sciences Part II (127599)

Quan Lu
Bernardo Lemos

2016 Spring (2 Credits)

Schedule:  
F 1230 PM - 0120 PM  
T 0930 AM - 1129 AM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Course Notes:  Offered jointly with the School of Public Health as EH 513.

Tuberculosis (127603)

*Sarah Fortune*

2016 Spring (2 Credits)  

**Schedule:**  

**TR 0130 PM - 0320 PM**

**Instructor Permissions:**  

**Enrollment Cap:** n/a

This is a comprehensive survey course on tuberculosis featuring lectures by some of the leading authorities in the field. The first half of the course focuses on population issues (TB epidemiology in the US and the world), transmission, modeling, and programmatic issues (the essentials of good TB control both here and in high burden countries). The second month deals more with the biomedical aspects of TB, immunology, genetics, diagnosis, decision analysis, and treatment, again, both here and abroad. There is a field trip to the Massachusetts State Laboratory. Because of involvement of several of the faculty, special attention is paid to the global problem of multidrug resistant TB, and the work of Partners in Health, an NGO associated with the medical school. During the second month, medical students join the SPH students for an elective course involving patient interviews at the
state TB hospital. They present these cases and related topics in class during the second month. SPH students are evaluated on the basis of class participation and one or more presentations on relevant TB topics of interest. The course ends on or near World TB Day, with optional TB-related activities in the Boston area.

Course Notes: Offered jointly with School of Public Health as IID 202.

Tumor Cell Signaling and Metabolism (127755)

Brendan Manning

2015 Fall (2 Credits)  Schedule: MF 0130 PM - 0320 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

This course will focus on the metabolic reprogramming of cells as they undergo the transformation from normal to cancer cells. Emphasis will be placed on the unique nutrient and energy demands of growing tumors, the molecular mechanisms by which oncogenic signaling pathways alter cellular metabolism, and therapeutic opportunities arising from the profound differences in the metabolism of normal versus tumor cells. This course consists of one lecture and one session of critical reading of current primary literature related to the lecture each week.

Course Notes: This course will be taught every other year (odd years). Offered jointly with the School of Public Health as GCD 213.

The course will provide an introduction to the biology, genetics and control of insect vectors of infectious diseases that are relevant for Public Health. The focus will be on the mosquito vectors of human malaria, however students will study other vector-borne diseases including African Trypanosomiasis, Dengue and Yellow Fever. The course will address the major biological components shaping vectorial capacity: vector/parasite interactions; immunity; host seeking behavior, reproduction; chemoreception. The role of symbionts and microbiota in insect physiology and disease transmission will also be discussed. Strengths and limitations of current control strategies based on the use of insecticides (bednets and sprays), traps, larvicidal compounds, biological agents and environmental strategies will be discussed, as well as novel strategies based on genetically modified organisms and paratransgenic control (bacteria/fungi). Students will also learn current methods for functional and comparative genomics of principal disease vectors.

Course Notes: The course runs from March 23, 2015 - May 15, 2015.

Class Notes: The course runs from May 23, 2015 - May 15, 2015.

Biomedical Engineering
Subject: Biomedical Engineering

Biomedical Engineering  91R
Supervised Reading and Research (108926)

Robert D. Howe
Sujata K. Bhatia

2016 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Guided reading and research.

Course Notes:
Normally open to candidates accepted for work on a specific topic by a member of the teaching staff of the School of Engineering and Applied Sciences. Normally may not be taken for more than two terms; may be counted for concentration in Biomedical Engineering if taken for graded credit. Applicants should file a project sheet before study cards are filed. Project sheets may be obtained from the Student Affairs Office, Pierce Hall 110.

Additional Course Attributes:

Biomedical Engineering 110

Physiological Systems Analysis (150189)

Kevin K. Parker

2015 Fall (4 Credits) Schedule: MW 1130 AM - 1259 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

A survey of systems theory with applications from bioengineering and physiology. Analysis: differential equations, linear and nonlinear systems, stability, the complementary nature of time and frequency domain methods, feedback, and biological oscillations. Applications: nerve function, muscle dynamics, cardiovascular regulation. Laboratory: neural models, feedback control systems, properties of muscle, cardiovascular function.

Recommended Prep: Applied Mathematics 21b or Mathematics 21b or equivalent. Physiology at the level of Engineering Sciences 53 suggested.

Additional Course Attributes:

Biomedical Engineering 121

Cellular Engineering (119067)

Neel Joshi

2015 Fall (4 Credits) Schedule: MWF 0900 AM - 0959 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Topics will include expanding the genetic code, genetic circuits, rewiring signaling pathways, controlling behavior through cell-matrix interactions, and directed differentiation of stem cells. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work individually and in teams to determine the boundaries of existing cellular engineering techniques using scientific literature and conduct original research in the laboratory.

Course Notes: BE121 and ES222 are the same course. This course has an optional laboratory section that will require hand-on work outside of scheduled lecture times.

Recommended Prep: At least one semester of college-level organic chemistry and molecular/cellular biology. Physics at the level of Physics Applied Physics 50 or Physics 12.

Additional Course Attributes:

<table>

</tbody>
</table>

Biomedical Engineering 125

Tissue Engineering (121282)
Fundamental engineering and biological principles underlying field of tissue engineering, along with examples and strategies to engineer specific tissues for clinical use. Students will prepare a paper in the field of tissue engineering, and participate in a weekly laboratory in which they will learn and use methods to fabricate materials and perform 3-D cell culture.

Recommended Prep: Biochemistry or cell biology background.

Additional Course Attributes:

<table>

Biomedical Engineering 130

Neural Control of Movement (122341)

Maurice Smith

Approaches from robotics, control theory, and neuroscience for understanding biological motor systems. Analytical and computational modeling of muscles, reflex arcs, and neural systems that contribute to motor control in the brain. Focus on understanding how the central nervous system plans and controls voluntary movement of the eyes and limbs. Learning and memory; effects of variability and noise on optimal motor planning and control in biological systems.

Course Notes: Offered in alternate years.

Recommended Prep: Mathematics 21b or Applied Mathematics 21b or equivalent, probability and statistics, Physics 11a or equivalent.

Additional Course Attributes:

Biomedical Engineering 191

Introduction to Biomaterials (110020)

Neel Joshi

A biomaterial is any form of matter that is produced by or interacts with biological systems. One of the pillars of biomedical engineering is to use naturally derived and synthetic biomaterials to treat, augment, or replace human tissues. This course examines the structure, properties and processing of biomaterials.
Recommended Prep: Physical sciences 1, Math 1b.

Additional Course Attributes:

<table>

Biophysics 170
Quantitative Genomics (121318)

Leonid Mirny
Shamil Sunyaev

2015 Fall (4 Credits)  Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: Instructor  Enrollment Cap: 30

In-depth study of genomics: models of evolution and population genetics; comparative genomics: analysis and comparison; structural genomics: protein structure, evolution and interactions; functional genomics, gene expression, structure and dynamics of regulatory networks.

Course Notes: Meets at MIT
Class Notes: Shamil Sunyaev, and members of the Committee

Additional Course Attributes:

Biophysics 205
Computational and Functional Genomics (119807)

2016 Spring (4 Credits)  Schedule:  

Instructor Permissions: Instructor  Enrollment Cap: 25

Experimental functional genomics, computational prediction of gene function, and properties and models of complex biological systems. The course will primarily involve critical reading and discussion rather than lectures.

Recommended Prep: Molecular Biology (MCB 52 or equivalent), solid understanding of basic probability and statistics.

Additional Course Attributes:

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Value(s)</th>

Subject: Biostatistics

Biostatistics 230
Probability Theory and Applications I (119844)

Marcello Pagano

2015 Fall (4 Credits) Schedule: MW 0130 PM - 0320 PM
Instructor Permissions: Instructor Enrollment Cap: 30

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Notes: Offered jointly with the School of Public Health as BIO230.
Class Notes: A weekly 90-minute lab.
Requirements: Prerequisite: Biostatistics PhD Program
Additional Course Attributes:

<table>

**Biostatistics 235**

Advanced Regression and Statistical Learning (119848)

Robert Gray

2015 Fall (4 Credits)  
**Schedule:** MW 1030 AM - 1220 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimension reduction, and classification methods. Background in matrix algebra and linear regression required.

**Course Notes:** Offered jointly with the School of Public Health as BIO235.

**Class Notes:** A weekly 90-minute lab.

**Requirements:** Prerequisite: Biostatistics 231 AND Biostatistics 233

**Additional Course Attributes:**

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Value(s)</th>

**Biostatistics 238**

Principles and Advanced Topics in Clinical Trials (125262)

Scott Evans

2016 Spring (4 Credits)  
**Schedule:** MW 0130 PM - 0320 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course focuses on selected advanced topics in design, analysis, and interpretation of clinical trials, including study design; choice of endpoints (including surrogate endpoints); interim analyses and group sequential methods; subgroup analyses; and meta-analyses.

**Course Notes:** Offered jointly with the School of Public Health as BIO 238.
**Biostatistics 244**

Analysis of Failure Time Data (119849)

*Hajime Uno*

*L. Wei*

*Jelena Tillotson-Follweiler*

2016 Spring (4 Credits)  
**Schedule:** MW 1030 AM - 1220 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods.

**Course Notes:** Offered jointly with the School of Public Health as BIO244.

**Class Notes:** Weekly 90-minute lab.

**Requirements:** Prerequisite: Biostatistics 233 AND Biostatistics 250

**Additional Course Attributes:**

<table>
<thead>

Biostatistics 267
Introduction to Social and Biological Networks (160643)
Jukka-Pekka Onnela
2015 Fall (2 Credits)  Schedule:  MW 0330 PM - 0520 PM
Instructor Permissions:  Instructor  Enrollment Cap:  8

Many systems of scientific and societal interest consist of a large number of interacting components. The structure of these systems can be represented as networks where network nodes represent the components and network edges the interactions between the components. Network analysis can be used to study how pathogens, behaviors and information spread in social networks, having important implications for our understanding of epidemics and the planning of effective interventions. In a biological context, at a molecular level, network analysis can be applied to gene regulation networks, signal transduction networks, protein interaction networks, and more. This introductory course covers some basic network measures, models, and processes that unfold on networks. The covered material applies to a wide range of networks, but we will focus on social and biological networks. To analyze and model networks, we will learn the basics of the Python programming language and its NetworkX module.

The course contains a number of hands-on computer lab sessions. There are five homework assignments and four reading assignments that will be discussed in class. In addition, each student will complete a final project that applies network analysis techniques to study a public health problem.

Class Notes:  This course is offered in the Fall 2 term at the School of Public Health.

Additional Course Attributes:

The Celts (126774)
Catherine McKenna
Patrick McCoy

2015 Fall (4 Credits)  Schedule:  TR 1100 AM - 1159 AM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This course examines the ways that an elusive population group called "The Celts" has been constructed from antiquity to the present. We study the linguistic, archaeological, genetic, mythological, literary and institutional bases of "Celticity" in the light of recent critiques of the ways in which these different kinds of evidence have been asked to walk hand in hand with one another in the service of certainty about Celtic identity. All texts are read in translation.

The Folklore of Gaelic Ireland (160495)
Natasha Sumner

2016 Spring (4 Credits)  Schedule:  MW 0200 PM - 0259 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to the traditional stories, lore, customs, and music of Gaelic Ireland. Since collecting began in the eighteenth and nineteenth centuries, Ireland has amassed one of the most extensive collections of folklore in the world. Prominent tradition bearers and collectors will be introduced, and issues of collecting will be considered. Theoretical approaches will be explored to gain a deeper understanding of the material. All texts will be read in English translation.

Course Notes:  Weekly discussion section to be arranged.

Finn: The Great Gaelic Hero (127630)
Natasha Sumner

2015 Fall (4 Credits)  Schedule:  MW 1100 AM - 1159 AM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This course explores the lengthy and wildly popular Irish and Scottish Gaelic tradition surrounding the hero, Finn mac Cumail (a.k.a. 'Finn MacCool' or 'Fionn mac Cumhaill'). Finn is variously portrayed as a hunter-warrior-seer and is the leader of the intrepid fíana war band. We survey this Fenian literature as it is presented to us by medieval and early modern Gaelic manuscript tradition. We also engage with the rich modern Fenian folklore of Ireland, Scotland, and Nova Scotia. This includes the study of important texts such as Acallam na Senórach 'The Dialogue of the Ancients' and Tóraigheacht Dhiarmada agus Gráinne 'The Pursuit of Diarmaid and Gráinne'. Additionally, we consider the international impact of the Fenian tradition by examining James Macpherson's infamous,
eighteenth-century, English-language adaptations and the ensuing Ossian controversy. All Gaelic texts are read in English translation.

Scottish Gaelic Poetry (125945)
An introduction to Scottish Gaelic poetry of the sixteenth to nineteenth centuries, this course explores poets’ preoccupations and creative impulses in a time of regular conflict and drastic sociopolitical change. Critical issues we will consider include, but are not limited to, the role(s) of the poet in society, tradition and innovation, orality, and intertextuality. All texts will be read in English translation.

Subject: Irish

**Irish 132**

Introduction to Modern Irish (119128)

*Natasha Sumner*

2015 Fall (4 Credits)  
**Schedule:** MTWF 1200 PM - 1259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

An introduction to Irish as it is spoken and written today. Class work is participatory, and includes conversational role play and games as well as grammar study and drills. Audio and audiovisual resources reinforce pronunciation and aural comprehension. Songs, proverbs, and poems are an integral part of the course, introducing students to the vibrant oral and literary tradition of Gaelic Ireland.

**Course Notes:** The combination of Irish 132 and 133r satisfies the language requirement. It is recommended in any case that this course be followed by Irish 133r. May not be taken Pass/Fail. Not open to auditors.

**Class Notes:** Natasha Sumner and others

*Natasha Sumner*

*Gregory Darwin*

2016 Spring (4 Credits)  
**Schedule:** MTWF 1200 PM - 1259 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

A continuation of Irish 132, developing students’ fluency in spoken and written Irish. As our knowledge of the language expands, we venture into storytelling, journal writing and writing and performing short skits. Internet, audio and video resources complement the study of grammar and select prose texts.

**Course Notes:** This course, when taken following Irish 132, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.

**Class Notes:** Natasha Sumner and others

**Recommended Prep:** Irish 132 or permission of instructor.

Subject: Welsh

Welsh 128
Introduction to Modern Welsh (113699)

Catherine McKenna

2015 Fall (4 Credits) Schedule: MTWF 1000 AM - 1059 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

Introduction to the Welsh language as spoken and written today, designed for those with little or no prior knowledge of this vibrant Celtic language. Intensive conversation practice is provided, and students learn to write fluently.
Internet, audio and video exercises using dialogue, music and film augment a contextualized grammatical survey, and use of authentic literary texts increases as the course progresses.

**Course Notes:** The combination of Welsh 128 followed by Welsh 129r satisfies the language requirement. It is recommended in any case that this course be followed by Welsh 129r. May not be taken Pass/Fail. Not open to auditors.

**Class Notes:** Catherine McKenna and others

**Welsh 129R**

Intermediate Modern Welsh (114118)

*Catherine McKenna*

*Liam Brannelly*

2016 Spring (4 Credits)

**Schedule:**

- F 1100 AM - 1259 PM
- MW 1100 AM - 1159 AM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

Direct continuation of Welsh 128, developing and deepening students' knowledge of, and skill in, the modern spoken and written language. By the end of the semester students will be able to converse, read and write in a number of registers of idiomatic Welsh (academic, literary, informal). Various media, featuring dialogue, music and film, augment the advanced grammatical survey. Central cultural and historical issues are discussed.

**Course Notes:** This course, when taken following Welsh 128, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.

**Class Notes:** Catherine McKenna and others

**Recommended Prep:** Welsh 128 or permission of instructor.

Chemical and Physical Biology  91
Introduction to Research (122591)

Martin Samuels

2015 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Laboratory research in topics related to the CPB concentration under the direction of, or approved by, members of the Board of Tutors in CPB. A paper must be submitted to the laboratory sponsor and to the CPB Student Affairs Office for review by the Head Tutor and Course Director.

Course Notes: Limited to CPB concentrators; written permission of both the tutor and laboratory sponsor must be submitted to the CPB Concentration Office prior to enrolling in the course. Ordinarily may not be taken as a fifth course.

Chemistry and Chemical Biology
Subject: Chemistry

Chemistry 17
Principles of Organic Chemistry (115137)
Garry Procter
2015 Fall (4 Credits)  Schedule:  MW 0230 PM - 0359 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

An introduction to organic chemistry, with an emphasis on structure and bonding, reaction mechanisms, and chemical reactivity.

Course Notes:  Open to freshmen with a score of 750 or higher in the College Boards or the Chemistry Placement Examination; to students who scored 4 or 5 on the Chemistry Advanced Placement Examination; and to students who achieved a grade of B or higher in either Physical Sciences 1, 10, 11, or another college-level introductory chemistry course. Others may enter only by permission of the instructor.

The Chemistry 17/27 sequence is intended primarily for students in the life sciences, who have completed LS1a and one of the PS courses (PS1, PS10, PS11). The Chemistry 20/30 sequence is intended primarily for students planning a concentration in Chemistry or the physical sciences. Either sequence satisfies the organic chemistry requirement for medical school. Students may not count both Chemistry 17 and Chemistry 20 for degree credit. On the other hand, Chemistry 27 and Chemistry 30 cover different material, so students may choose to take both courses for degree credit; students should ordinarily take the third half course only after completing either the 17/27 or 20/30 sequence.

Recommended Prep:  see notes

Chemistry 20
Organic Chemistry (124312)
Logan S. McCarty
2016 Spring (4 Credits)  Schedule:  MWF 0900 AM - 0959 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to structure and bonding in organic molecules; mechanisms of organic reactions; chemical transformations of the functional groups of organic chemistry; synthesis; determination of chemical structures by infrared and NMR spectroscopy.
Course Notes: Chemistry 20/30 is an integrated two-semester sequence that prepares students to study chemistry and other physical sciences, whereas the Chemistry 17/27 sequence focuses on application of organic chemistry concepts to the life sciences. Either sequence satisfies the organic chemistry requirement for medical school and the chemistry concentration. The content of Chemistry 17 is accelerated and overlaps with topics from both Chemistry 20 and 30. Students may not count both Chemistry 17 and 20 toward the degree. However, Chemistry 27 and Chemistry 20/30 cover different material, so students may choose to take Chemistry 27 after completing the 20/30 sequence.

Recommended Prep: Open to students who scored 4 or 5 on the Chemistry Advanced Placement Examination, or who successfully completed Life Sciences 1A or Life and Physical Sciences A. Others should contact the instructor to discuss their preparation.

Chemistry 27

Organic Chemistry of Life (117558)

Grace Ferris
David Christianson

2016 Spring (4 Credits) Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: None Enrollment Cap: n/a

Chemical principles that govern the processes driving living systems are illustrated with examples drawn from biochemistry, cell biology, and medicine. The course deals with organic chemical reactivity (reaction mechanisms, structure-reactivity relationships), with matters specifically relevant to the life sciences (chemistry of enzymes, nucleic acids, drugs, natural products, cofactors), and with applications of chemical biology to medicine and biotechnology. An understanding of organic reactions and their "arrow" pushing mechanisms is required.

Course Notes: Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17. This course, when taken for a letter grade, meets the General Education requirement for Science of Living Systems.

Recommended Prep: Chemistry 17 or Chemistry 30 or Chemistry 20 with permission of the instructor.

Chemistry  30
Organic Chemistry (118925)

Jacob Sanders

2015 Fall (4 Credits)  Schedule: MWF 0900 AM - 0959 AM
Instructor Permissions: Instructor  Enrollment Cap: n/a

Continuation of Chemistry 20. Fundamental principles and advanced topics in organic chemistry. Carbonyl chemistry and pericyclic reactions are covered in particular detail, using principles of stereochemistry, stereoelectronic theory, and molecular orbital theory as a foundation. Students learn about strategies in multi-step organic synthesis and are given an introduction into organometallic chemistry. Laboratory: an introduction to organic chemistry laboratory techniques and experimental organic synthesis.

Course Notes: Chemistry 20 or equivalent.
Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.

Recommended Prep: See notes section

Chemistry 100R

Experimental Chemistry and Chemical Biology (123022)

Austin Bennett Scharf

2016 Spring (4 Credits)  
Schedule: M 1200 PM - 0129 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

A laboratory course where students carry out research and gain exposure to the research process. Projects will be drawn directly from faculty covering a range of methodologies in chemistry and chemical biology. Students will regularly discuss their progress and write formal reports.

Course Notes:  
Note: Chem 100r must be a student's only research commitment during the enrolled semester.

Suitable for students either with or without extensive laboratory experience, but may not be taken concurrently with other research courses.

Chemistry 30 or Chemistry 27, and permission of the instructor

Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience.
Chemistry 100R
Experimental Chemistry and Chemical Biology (123022)

Austin Bennett Scharf

2015 Fall (4 Credits)  
Schedule: M 1200 PM - 0129 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Chemistry 101
Chemical Biology Towards Precision Medicine (124554)

Stuart Schreiber

2015 Fall (4 Credits)  
Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Chemical Biology Towards Precision Medicine teaches students principles of modern organic synthesis, chemical biology and human biology relevant to the discovery of safe and effective small-molecule therapeutics in the future. The course will explore patient-based 'experiments of nature' that illuminate disease, including cancer, diabetes, infectious disease and psychiatric disease, among others. Students will then use their knowledge of chemistry and chemical biology to propose research yielding novel small molecules that affect biological systems by mechanisms suggested by the experiments of nature. Chem 101 aims to prepare students for the next decade where academic research tests hypotheses emerging from human biology in humans using novel small-molecule probes.

Course Notes: Pre-requisite: Chemistry 17/27, Chemistry 20/30, or the equivalent
**Chemistry 106**

Advanced Organic Chemistry (108840)

*Eugene Kwan*

2015 Fall (4 Credits)  
**Schedule:** MWF 1000 AM - 1059 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

This course will survey modern organic chemistry from a fundamental perspective. The foundations of structure and bonding, donor-acceptor interactions, and conformational analysis will be considered in the context of pericyclic reactions and cyclic and acyclic stereocontrol. The behavior of reactive intermediates, the basis for enantioselective catalysis, and patterns in functional group reactivity will also be discussed.

**Course Notes:** Chemistry 30 or permission of instructor.

**Recommended Prep:** See Notes section

**Chemistry 110**

Small Molecules and Biological Processes (110241)

*Matthew Shair*

2016 Spring (4 Credits)  
**Schedule:** TR 1000 AM - 1129 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

Small molecules are extraordinarily useful tools to investigate biological processes, perturb cell states and treat human diseases. They are complementary to many biological techniques (e.g. expression of mutant proteins, RNAi, genome editing and antibodies) in that they are fast-acting, typically cell permeable, easily reversible, and they can engage multiple targets simultaneously. In this course, we will discuss how these useful small molecules are discovered, how they have revealed deep insights into biological processes, and how they are employed as therapeutics.

**Chemistry 115**

Advanced Organic Chemistry: Synthesis of Complex Molecules (114209)

*Andrew Myers*
An integrated course in complex synthetic problem solving that focuses on the development of principles and strategies for synthesis design with a concurrent, comprehensive review of modern synthetic transformations.

Course Notes: A grade of A in Chemistry 30

Chemistry 135

Experimental Synthetic Chemistry (112954)

Austin Bennett Scharf

An introduction to the experimental problems encountered in the synthesis, isolation, purification, characterization, and identification of organic and organometallic compounds. Students perform a variety of chemical syntheses which encourage technical proficiency, and develop an understanding of both the theory and practice of laboratory synthesis and spectroscopy.

Course Notes: Recommended as preparation for research in experimental organic and organometallic chemistry (Chemistry 98r and 99r), or related disciplines. Recommended: Chemistry 27 or 30, and permission of the instructor.

NOTE: Lab times are T or W, 12-8, plus four additional hours of laboratory time per week, with labs beginning the third week of the term.

Chemistry 145 Section: 001L

Experimental Inorganic Chemistry (109110)

Theodore Betley

Austin Bennett Scharf

An introduction to experimental problems encountered in the synthesis, isolation, purification, characterization, and identification of inorganic compounds, with an emphasis in air-free synthetic techniques and spectroscopic characterization methods specifically applicable to complexes containing transition metals.

Course Notes: Chemistry 40 and either Chemistry 27 or 30, or permission of the instructor.
Chemistry 145 Section: 002

Experimental Inorganic Chemistry (109110)

2015 Fall (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: n/a

An introduction to experimental problems encountered in the synthesis, isolation, purification, characterization, and identification of inorganic compounds, with an emphasis in air-free synthetic techniques and spectroscopic characterization methods specifically applicable to complexes containing transition metals.

Course Notes: Chemistry 40 and either Chemistry 27 or 30, or permission of the instructor.

Chemistry 154

Advanced Inorganic Chemistry (126035)

Daniel Nocera

2015 Fall (4 Credits)  Schedule:  MW 1000 AM - 1129 AM
Instructor Permissions:  Instructor  Enrollment Cap:  100

The physical inorganic chemistry of transition elements will be discussed. The course will emphasize group theoretical methods of analysis and attendant spectroscopic methods (e.g., electronic, vibrational, EPR, magnetic) derived therefrom. Connections between molecular structure and electronic structure and how that parleys into the properties of complexes and their reactivity will be illustrated throughout various modules, which will touch on advanced problems of interest in the subjects of catalytic, organometallic, coordination, solid state and bioinorganic chemistries.

Chemistry 160

The Quantum World (112976)

Kang-Kuen Ni

2015 Fall (4 Credits)  Schedule:  TR 1130 AM - 1259 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Many essential properties of atoms, molecules and materials stem from their quantum mechanical nature. In this course, we will focus on the quantum mechanical aspects of physical chemistry. The basic principles of quantum mechanics will be introduced in tandem with the chemical concepts covered. We will describe the quantum mechanics of molecular bonding, vibrations and rotations. The fundamentals of molecular spectroscopy and photophysics will be seen in the light of quantum mechanics. We will end the course by introducing what goes
behind the sciences in quantum chemistry packages for calculating molecular electronic structure and molecular properties. This year, we continue the course format introduced last year where most of the materials for evaluation will be take-home programming exercises written in interactive Python (iPython). There will be no final exam.

**Course Notes:**

Applied Mathematics 21a and 21b, Mathematics 21a and 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; Physical Sciences 2 or Physics 11a, and Physical Sciences 3 or Physics 11b.

**Chemistry 165**

Experimental Physical Chemistry (119035)

*William Wilson*

2016 Spring (4 Credits)  **Schedule:** T 0300 PM - 0359 PM

**Instructor Permissions:** Instructor  **Enrollment Cap:** n/a

Hands-on introduction to physical methods and techniques used widely in chemistry and chemical physics research laboratories. Computer-based methods of data acquisition and analysis are used throughout.

**Course Notes:** Recommended as an efficient preparation for research in experimental chemistry, chemical physics, engineering sciences, and related disciplines.

**Recommended Prep:** Chemistry 7, or Physical Sciences 1, or equivalent; Applied Mathematics 21a or Mathematics 21a; one full course in physics or equivalent. Recommended: Chemistry 160, Physics 143a or similar, a course in Quantum Mechanics.

Biological Synthesis (107702)

Emily Balskus

2015 Fall (4 Credits) \hspace{1cm} Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: Instructor \hspace{1cm} Enrollment Cap: n/a

This course will examine synthesis from a biological perspective, focusing on how organisms construct and manipulate metabolites, as well as how biological catalysts and systems can be used for small molecule production. Topics to be covered include mechanistic enzymology, biosynthetic pathways and logic, biocatalysis, protein engineering, and synthetic biology.

Chemistry 255

Practical Crystallography in Chemistry and Materials Science (107709)

Shao-Liang Zheng

2016 Spring (4 Credits) \hspace{1cm} Schedule: TR 0200 PM - 0329 PM

Instructor Permissions: Instructor \hspace{1cm} Enrollment Cap: 10

Due to great technical advances, crystal structure analysis plays an increasingly important role in the structure determination of complex solids. This course involves the basic principles of crystallography and covers advanced aspects of practical crystal structure refinement. Topics include crystal symmetry, space groups, geometry of diffraction, structure factors, and structure refinement. Students will gain a working knowledge of x-ray crystallographic techniques, including how to: grow quality crystals, collect data, reduce data, determine a structure, visualize structure, utilize structural databases, publish crystallographic results. Watch Learning Crystal Structure Analysis at Harvard.

Course Notes: Chemistry 40 or equivalent.

Scientific Teaching and Communications: Practicum (124905)

Gregory C. Tucci

2015 Fall (2 Credits)  Schedule:  T 0400 PM - 0559 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This course will teach graduate students how to communicate scientific concepts in the classroom. Students will focus on becoming effective teachers in discussion sections and in the laboratory. The course will emphasize hands-on experience in teaching and explaining scientific concepts. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes:  Required of all first-year graduate students in the Department of Chemistry and Chemical Biology.

Subject: Life & Physical Sciences

Life & Physical Sciences A

Foundational Chemistry and Biology (123833)

Gregory C. Tucci
Martin Samuels

2015 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Schedule: MWF 0900 AM - 0959 AM

This course introduces fundamental concepts in chemistry and biology. Topics in chemistry include stoichiometry, acids and bases, aqueous solutions, gases, thermochemistry, electrons in atoms, and chemical bonding. The course also examines biological molecules, the transfer of information from DNA to RNA to protein, and cell structure and signaling.

Course Notes:

Students should use their scores on the Chemistry and Biology Placement Tests to determine whether to enroll in Life and Physical Sciences A or Life Sciences 1a. This course assumes fluency with high school algebra. Students who have completed Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, Physical Sciences 11, Chemistry 17 or Chemistry 20 may not take Life and Physical Sciences A for credit. This course, when taken for a letter grade, meets the General Education Requirement for Science of Living Systems.

Requirements:

Anti-req: Cannot be taken for credit if Life Sciences 1a, OR Physical Sciences 1, OR Physical Sciences 10, OR Physical Sciences 11, OR Chemistry 17 OR Chemistry 20 already complete

Physical Sciences 1
Chemical Bonding, Energy, and Reactivity: An Introduction to the Physical Sciences (122574)

Hongkun Park
Sirinya Matchacheep

2016 Spring (4 Credits)  Schedule: MWF 1000 AM - 1059 AM
Instructor Permissions: None  Enrollment Cap: n/a

The course covers the chemistry and physics underlying molecular phenomena in the world. Starting from a single electron, the course will build up to atoms, molecules, and materials. Interactions of molecules are studied through thermochemistry, equilibria, entropy and free energy, acids and bases, electrochemistry, and kinetics. Applications include physical principles in biology, global energy demands, and modern materials and technology.

Course Notes: A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

This course is part of an integrated introduction to the physical science intended for students who plan to pursue a concentration in the physical or life sciences and/or to satisfy a pre-medical requirement in general/inorganic chemistry. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe. Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep: A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

Physical Sciences 10
Quantum and Statistical Foundations of Chemistry (107367)

Adam Cohen

2015 Fall (4 Credits)  Schedule: MWF 1000 AM - 1059 AM
Instructor Permissions: Instructor  Enrollment Cap: n/a

An introduction to the fundamental theories of quantum mechanics and statistical mechanics and their role in governing the behavior of matter. The course begins with the quantum behavior of a single electron and develops
the elements of the periodic table, the nature of the chemical bond, and the bulk properties of materials. Applications include semiconductor electronics, solar energy conversion, medical imaging, and the stability and dynamism of living systems. Calculus will be used extensively.

**Course Notes:**
Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical school can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

**Recommended Prep:**
A strong background in chemistry (Chemistry AP score of 5, or Physical Sciences 1, or equivalent preparation), mathematics at the level of Mathematics 1b (may be taken concurrently), and some familiarity with physics (force, energy, work, and electric charge).

**Physical Sciences 11**

Foundations and Frontiers of Modern Chemistry: A Molecular and Global Perspective (107368)

*James Anderson*

*Gregory C. Tucci*

*Lu Wang*

2016 Spring (4 Credits)

**Schedule:**
MWF 1000 AM - 1059 AM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

The Physical Sciences hold the key to solving unprecedented problems at the intersection of science, technology, and an array of rapidly emerging global scale challenges. The course emphasizes a molecular scale understanding of energy and entropy; free energy in equilibria, acid/base reactivity, and electrochemistry; molecular bonding and kinetics; catalysis in organic and inorganic systems; the union of quantum mechanics, nanostructures, and photovoltaics; and the analysis of nuclear energy. Case studies are used both to develop quantitative reasoning and to directly link these principles to global strategies.

**Course Notes:**
A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have high school chemistry, or have completed school mathematics. Students are expected to have high school chemistry, or have completed Life and Physical Sciences A (LPS A) or Life Sciences 1a (LS 1a), or have received permission of the instructors.

Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical students can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe. **NOTE:** Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.
**Recommended Prep:** A strong background in chemistry. Students are expected to have had Honors or AP-level high school chemistry preparation or a placement score of 650 or better on the Harvard Chemistry Placement exam. A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed.

Classics, The
Subject: Classical Archaeology

Classical Archaeology  101 Section: 1
Introduction to the Classical Archaeology of Roman Antiquity (108693)

Adrian Staehli
2016 Spring (4 Credits) Schedule: WF 1100 AM - 1159 AM
Instructor Permissions: None Enrollment Cap: n/a

The course provides a broad overview of the development of Roman art, architecture, and material culture from the time of the Republic through the Imperial period, to the age of Constantine. It offers basic knowledge about core categories of archaeological artifacts and remains within their topographical setting and within the context of Greek culture and society; it also includes issues of archaeological methods and problems of current research.

Class Notes: This course is a basic introduction to Greek art and archaeology and is specifically designed for undergraduates.

Classical Studies  97A Section: 1  
Greek Culture and Civilization (116729)  
Naomi Weiss  
2015 Fall (4 Credits)  
Schedule: MW 1000 AM - 1059 AM  
Instructor Permissions: Instructor  
Enrollment Cap: n/a  
This course is an introduction to the major achievements, developments, and ideas in Greek culture, from the Bronze Age to the 4th Century BCE. We will examine this inventive and tumultuous period through weekly readings in epic, lyric and dramatic poetry, history, biography, and philosophy, as well as visual images. All readings will be done in English translation. Our aim is both to try to understand this distant culture in its own sociopolitical context, and to trace its relationship to subsequent developments in Western civilization.

Course Notes: Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Class Notes: Class will normally meet in sections during Friday session.

Class Notes: Naomi Weiss and assistants

Roman Culture and Civilization (124050)

Gil Renberg
Tyler Flatt
Eliza Gettel

2016 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule: MW 1000 AM - 1059 AM

This course has three components: a chronological survey of Roman history from the beginnings to Late Antiquity; thematic explorations of key features of culture and daily life in Rome as well as other parts of Roman Italy and the provinces (including religion, law and government, elite society, Romanization, urban topography, etc.); and an introduction to the tools and methods available for research on the Roman world, with an emphasis on material culture and documentary sources.

Course Notes: Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Class Notes: Renberg and assistants.

Classical Studies 110 Section: 1
Roman Literature in the Age of Augustus (128074)

Richard Thomas

2016 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule: TR 0100 PM - 0229 PM

The course will examine in translation Latin literature during the transition of the Roman republic to the regime of Augustus Caesar. Authors studied will include Virgil, Horace, Livy, Propertius and Ovid. Close attention will be paid to the political contexts of the literature of the period, and to the evolution of various literary genres during this artistically fertile period.

Magicians, Healing Gods, and Holy Men (160535)

Gil Renberg

2015 Fall (4 Credits)  Schedule:   MW 0100 PM - 0159 PM

Instructor Permissions:  Instructor  Enrollment Cap:   n/a

This course will examine magic, divination, and other unconventional religious phenomena in the Greco-Roman world by focusing on extraordinary practices and practitioners. The topics to be explored include soliciting curative dreams from the gods; employing protective magic to ward off disease and other dangerous forces; using aggressive forms of magic to ensnare the object of one's sexual desires or harm one's opponents; the rise of "holy men" believed to have supernatural powers; and attempting to foresee the future through astrology or various forms of divination. The sources for these phenomena, most of which are strikingly different from those typically encountered when studying the ancient world, provide fresh perspectives.

Classical Studies  141 Section: 1

Storytelling and Deceptive Narration at Rome and Beyond (159812)

Brigitte Libby

2015 Fall (4 Credits)  Schedule:   W 0100 PM - 0259 PM

Instructor Permissions:  Instructor  Enrollment Cap:   n/a

How do we make others believe us when we stretch the truth? This course is both a survey of ancient Roman literature and an introduction to the classic tools of storytelling and deception that we still encounter today. We will study how ancient authors manipulate our perception of the stories they tell and see how these techniques recur in modern examples. Topics include historical legend, love poetry, the courtroom strategy of Cicero, political propaganda in epic poetry, Aesopic fables, ghost stories, and the account of a man transformed into a donkey. We end with several modern short stories. Readings are in English.

The Sophisticated Empire (160557)

Carlo Vessella

2016 Spring (4 Credits) Schedule: W 0200 PM - 0359 PM
Instructor Permissions: None Enrollment Cap: n/a

Through a review of literary and documentary sources (in English), we will try to understand the links between education, literature, and power in the Roman Empire during the period of the so-called Second Sophistic, with special emphasis on the importance of higher education and linguistic proficiency in Classical Greek for Greeks and Romans alike.

Classical Studies 152
The Construction of Gender and Sexuality in Ancient Greece (156310)

Naomi Weiss

2016 Spring (4 Credits) Schedule: MW 1200 PM - 1259 PM
Instructor Permissions: None Enrollment Cap: n/a

This course will explore ancient Greek ideologies of gender difference and sexuality, including the mythical "origins" of gender, legal definitions of marriage and adultery, the gendering of space, the portrayal of women on the tragic stage, gender-bending and cross-dressing in comedy, medical models of sex and childbirth, and the links between pederasty and pedagogy. With the help of some important modern discussions about the construction of gender, sexuality, and identity, we will try to assess the ways in which sexual practices and male and female identities were imagined, formed, reinforced, and institutionalized during the archaic and classical periods (roughly 800-300 BCE).

Course Notes: This course, when taken for a letter grade, meets the General Education requirement Culture and Belief. This course fulfills the requirement that one of the eight General Education courses also engage substantially with Study of the Past.

Class Notes: Course has additional section hour to be arranged.

2016 Spring (4 Credits) Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: None Enrollment Cap: n/a
We will read extensive selections from major authors of the late Republic and Principate across a range of genres, from Vergil to Boethius, and satire to historiography, and consider their form and content against their historical contexts. Class will consist of a mixture of prepared translation from Latin and introductory lectures, while a weekly section will allow students to deepen their grammatical understanding of the texts. Designed for those with a good
foundation of Latin grammar and vocabulary, students will be exposed to a robust amount of Latin prose and poetry, and at the end of the course will have acquired a solid grasp on Latin literary history.

**Latin 132 Section: 1**

Ciceronian Oratory (126342)

*Jared Hudson*

2016 Spring (4 Credits) **Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** None **Enrollment Cap:** n/a

The focus of this course will be a careful reading of two particularly significant speeches of Cicero (*Pro Caelio* and the *Second Philippic*), with an aim towards understanding their full meaning: as both virtuosic literary texts and as rich documents of a vibrant—and dangerous—culture of legal and political speech. While the course will explore issues of Cicero's Latinity, structure and presentation, and ancient rhetorical theory, our guiding thematic thread will be invective—vehement personal attack, a mode of speaking that dramatizes the intersection of Latin oratorical style and the Roman culture of public censure.

Subject: Medieval Greek

Medieval Greek 115
Introduction to Byzantine Greek (121896)
2016 Spring (4 Credits) Schedule: F 0200 PM - 0359 PM
Instructor Permissions: None Enrollment Cap: n/a
This course will introduce students to post-Classical Greek language and literature and, through selected readings, to the study of Byzantine culture and society. Texts will be selected to provide a diachronic survey of a variety of literary genres in order to reflect the diversity of Byzantine life and letters. Topics include: biography/hagiography, historiography, sacred and secular poetry, letters, the novel, homilies, and rhetorical texts. Selections may correspond in part to participants' interests in consultation with the instructor.
Topic: Repeat for credit
Class Notes: Instructor is Fr. Maximos Constas.
Recommended Prep: Greek Ba or equivalent.

Subject: Medieval Latin

Medieval Latin 107 Section: 1
William of Tyre's Crusader History of Jerusalem (160161)
Explores the life, writings, and world of William of Tyre (ca. 1130–1186), the foremost historian of the crusader kingdom of Jerusalem of the twelfth century. William of Tyre authored an extensive history covering the First Crusade and the fortunes of those who remained in the Levant and their relations with surrounding cultures, including Byzantines, Muslims, Arab Christians, and Armenians. Students will be exposed to a robust amount of Latin prose, with attention to interpretation rather than grammatical exposition. At the end of the course, students will have acquired a thorough understanding of medieval historiography and the topic of the crusades, and be well-equipped to translate medieval Latin prose.

**Medieval Latin  207**

Medieval Latin Encounters of Christianity and Islam (160457)

Julian Yolles

2016 Spring (4 Credits)  
**Schedule:** M 0400 PM - 0559 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

How did medieval Christians writing in Latin perceive Islam and its adherents? What knowledge did they possess, and how did they acquire it? How did they engage with Islam in various Latin literary forms, and to what end? These questions and many others will be at the center of this graduate seminar, in which students will read large amounts of medieval Latin prose and poetry spanning from the ninth to the fifteenth centuries in a variety of genres, from epic poetry to polemical treatise, including texts that were pivotal in shaping the perception of Islam in the Early Modern period and beyond. Designed for graduate students with a solid background in Latin (familiarity with medieval Latin not required), this seminar will allow students to develop a thorough knowledge of a topic that remains relevant to this day.

Modern Greek     AC Section: 1
Grammar and Reading for Heritage Speakers (160451)

Vassiliki Rapti

2015 Fall (4 Credits) Schedule: MWF 0900 AM - 0959 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

This course is intended for heritage speakers to help them acquire the foundation in grammar and syntax necessary to enable them to take the second half of Modern Greek B or a 100-level course in the spring. By combining comprehensive grammar review with practice in reading, and presenting material related to the culture of modern Greece and the Greek Diaspora, students advance their linguistic skills while at the same time they are introduced to the history of the Greek Diaspora.

Modern Greek  100

Advanced Modern Greek: Introduction to Modern Greek Literature (123852)

Vassiliki Rapti

2016 Spring (4 Credits)  Schedule:  W 0100 PM - 0259 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Special Topic: Narratives of the Greek Crisis: Prose, Cinema, and Performance. This course examines a variety of textual and visual narratives dealing with the Greek crisis. How is the "world's most messed up country" reflected in Greek literature, cinema, and theatre? How are the repercussions of the multifaceted crisis perceived by renowned and emerging authors and artists, both in Greece and abroad? What new literary genres have emerged out of this crisis? These are some of the questions that will be addressed in this course, while students are expected to enhance significantly their critical reading and writing skills.

Course Notes:  Conducted in Modern Greek. Permission of instructor required.

Grounds for Comparison (128115)

*David Damrosch*

2015 Fall (4 Credits)  
**Schedule:** T 0200 PM - 0359 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

This seminar provides an introduction to literary studies in a global age. How do writers refract and transform the world around them, and the world beyond their borders? How do they celebrate or challenge their society's values and rethink their literary heritage? Writers in every culture have mobilized the resources of poetic language and literary form to delight and instruct their readers, while critics and theorists have sought to understand how writers achieve their effects. Through close reading of a range of compelling works, accompanied by major critical and theoretical statements, we will explore the relations of literature to society and theory to literature, focusing on a set of interconnected themes: travel and self-discovery, empires and their aftermath, and the politics of language and of cultural memory.

**Comparative Literature 109**

On Translation (117413)
Examines theories of translation from various periods (Dryden, Schopenhauer, Schleiermacher, Benjamin, de Man, among others). Also looks closely at specific translated texts (e.g., various English translations of *The Thousand and One Nights*), and considers such topics as the notion of "unequal languages," the problem of cultural translation, translation post-9/11, and the possibility of untranslatability. Final project involves an original translation and commentary.

**Course Notes:** Preference given to Literature concentrators.

**Recommended Prep:** Reading knowledge of one foreign language.
This course explores the interchange between dance and poetry in late nineteenth and early twentieth-century culture across a variety of literary traditions: Anglo-American (Pound, Yeats, Eliot); French (Baudelaire, Rimbaud, Mallarmé); German and Austrian (Trakl, Rilke); Italian (Campana, Marinetti, Soffici); and Spanish (Lorca). How can poetry draw inspiration from dance and use it as a model for formal experimentation? Through a hands-on engagement with a number of seminal texts, students will learn how dance can set words in motion—and how, conversely, words can deal with the challenge of representing subtle nuances of bodily expression. We'll focus on issues such as musicality and rhythm, free verse, meter and lyricism in poetry; broader attention will be given to inter-artistic borrowings, including synaesthesia (the blending of sensory modalities), ekphrasis (the literary imitation of a visual object), and Gesamtkunstwerk (the drive to achieve a total work of art).

Course Notes: The course will feature film screenings (Loïe Fuller and Pina Bausch; animation by Oskar Fischinger), guest lectures and visits to Harvard Library collections. We'll be reading poetic texts in translation, with an eye to comparing them with the original.

Games - Tricks, Puns and Ploys in Literature and Culture (139362)

* Cecile Guedon

This course is an exploration of games and their philosophical stakes for literature, film and music. Drawing from insights ranging from material culture to anthropology, we will reflect upon the ludic dimension inherent in literary composition.

Our texts will cover first the thematic approach to games (including chess, cards, dice novels in the Russian tradition with Pushkin, Dostoyevsky, Nabokov) before moving to a more formalist take on game—building upon the idea of "play" in language and improvisation in aesthetic terms. We'll see thus how experimental texts use chance processes as catalysts for their composition—looking at possibilities opened up by infinite variations for Queneau, a dice throw for Mallarmé, a hopscotch design for Cortázar, an I Ching sequence for Philip K. Dick, and the tarot figures for Calvino. Finally, we will see how film, theatre and music have reflected upon the gambler/trickster as a character (Prokofiev, Lang); we'll explore how the shady trade of make-believe can ultimately be connected to the very notion of theatricality (Shakespeare, Corneille, Marivaux, Renoir).

This course will feature regular screenings, guest lectures from the Music department and visits to the Peabody Museum and the Harvard Art Museums.

Island Literature (160882)

Marc Shell

2015 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Schedule: M 0200 PM - 0359 PM

All the world's a planetary stage. Islands, both a part of and apart from the main, offer ready-made laboratories for linguistic, narratological, and political investigation. Islandness encourages political and economic philosophy, geography, psychology, and vacation. This course focuses on island literature, with special attention to works by Homer, More, Shakespeare, Defoe, and Wagner, as well as works by cinematographers like Bergman and painters like Böcklin.

Comparative Literature 140

Catastrophe and Continuity in Jewish Literature from the Bible to Today (160527)

David Stern

2015 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Schedule: TR 1200 PM - 0129 PM

From the Bible until today, the theme of catastrophe has loomed large in Jewish literature. Why has God's chosen people been made to undergo so many terrible ordeals and sufferings? This question has posed challenges in multiple dimensions -- theological, historiographical, literary -- and in this course we will consider the many different, often surprising (and overlooked) responses that have been given to these challenges in Jewish literature from the Biblical period through the Holocaust (and beyond). We will also consider the literary problem of the representation of catastrophe, the origins and development of martyrdom, and the history of Jewish responses to catastrophe as a tradition worthy of study in its own right. All readings will be in English translation, and will include Biblical and post-Biblical texts, Rabbinic sources, medieval chronicles, laments, and legal texts, and modern poetry, fiction, and theological writings. No previous experience in catastrophe required.

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Schedule: M 0400 PM - 0559 PM

This course will look into the oneiric literature, ranging from Apuleius and Shakespeare to Cao Xueqin, Marcel Proust, and Virginia Woolf, exploring these works through different dream theories, from the Romantics to Freud to
the Surrealists and beyond. We will examine how dreams differ in time and space in different cultures to reveal shifting relations between dreams, memory, visions, reveries, magic, games, and theatre.

Comparative Literature  157

From Type to Self in the Middle Ages (112654)

Luis Giron Negron

2015 Fall (4 Credits) Schedule: MW 1000 AM - 1059 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

It has been argued that the poetic "I" in premodern literatures is not a vehicle for self-representation, but an archetype of the human. The course will examine this thesis against the rise of autobiographical writing in medieval and early modern Europe. Readings include spiritual autobiographies (Augustine, Kempe, Teresa of Ávila), letter collections, maqama literature, troubadour lyric, Hispano-Jewish poetry, pilgrimage narratives, medieval allegories, Dante and the picaresque novel. Theoretical perspectives by Spitzer, Lejeune, Zumthor and DeCerteau.

Course Notes: This course counts for the Romance Studies track in the Department of Romance Languages and Literatures.

Class Notes: In the event that a Monday or Wednesday class is cancelled, the class will be held on Friday at the same time as the regular class.

Images in Motion: Time and Space in Film and Literature (156481)

Delia Ungureanu

2016 Spring (4 Credits) Schedule: W 0400 PM - 0559 PM

Instructor Permissions: None Enrollment Cap: n/a

This course will is look at the universal language of images through masterpieces of film and literature, comparing films with works of literature that address similar topics, configuring them as temporal arts turned spatial through the use of a magical mechanism. How do verbal and visual images capture time on film and on the page? We will explore questions of memory and oblivion, war and peace, desire and loss, in films by Martin Scorcese, Andrei Tarkovsky, Wong Kar Wai, Volker Schlöndorff, Michael Gondry, and others, and in works by Shakespeare, Tolstoy, Woolf, Calvino, and Pamuk.

Figures of Orpheus: Literature, Music and Visual Arts (160327)

John T. Hamilton

2016 Spring (4 Credits) Schedule: R 0100 PM - 0259 PM
Instructor Permissions: None Enrollment Cap: n/a

The course spans over two thousand years of varying interpretations, settings, and appropriations of the Orpheus myth. The power of music and the fatality of passion, the expropriating effects of language and the regenerating promise of poetry, individual uniqueness and the conditions of knowledge, are but a few of the themes addressed and elaborated within the myth's threefold configuration of harmony, descent, and dismemberment. In addition to investigating the rich literary tradition, the course also turns to significant versions in opera, film, and the visual arts. Emphasis will be placed throughout on close reading, with attention to philosophical, aesthetic and theoretical ramifications.

Comparative Literature 255

Dysfunctional Family as National Allegory in the Middle Eastern Novel (109673)

William Granara

2016 Spring (4 Credits)  Schedule:  R 0200 PM - 0359 PM
Instructor Permissions:  None  Enrollment Cap:  n/a
The radical changes following the emergence of the modern nation state in the Middle East have been most graphically illustrated in the novel. This course examines the trope of the family in flux in narrating the destabilization of traditional social structures, shifting loyalties, and conflicting articulations of identity. The course interrogates the F. Jameson and A. Ahmad debates on ‘thirdworld’ and ‘national allegory’ in reading selected novels of the post WWII period to the present, from Turkey, Iran, Israel, and the Arab World. Authors include Naguib Mahfuz, Mohamed Shukri, Hanan Shaykh, Sahar Khalifa, Amos Oz, Elif Shafak, and Mahmoud Dowlatabadi.

Course Notes: All readings in English translation, but students are encouraged to read in the original. Course will count for NELC concentration and citation in Modern Middle Eastern Studies. Open to Undergraduates.

Comparative Literature 258

Ancient Interpretation of the Bible (160526)

David Stern

2016 Spring (4 Credits) Schedule: W 0300 PM - 0559 PM

Instructor Permissions: None Enrollment Cap: n/a

This is a course about READING; specifically about the different ways in which a single book, the Bible, has been read through the centuries, particularly in the ancient and early medieval periods by Jews and Christians. No book in the history of Western culture has been read more intensively that the Bible, and the main emphasis of the course will fall on close readings of major ancient Jewish and Christian interpreters of the Bible, with a view to considering their exegetical approaches historically as well as through the lens of contemporary critical and hermeneutical theory. We will also consider how the respective religious and theological beliefs of these interpreters shaped and were shaped by the ways they read Scripture. As a consequence, this will also be a course about the early development of Judaism and Christianity although the focus will always be on the interpretation of the bible. All readings will be in English translation, and will include Dead Sea Scrolls selections, Philo, Rabbinic Midrash and Medieval Jewish Commentaries, the New Testament, Origen and other early Christian commentators, Augustine, Luther, and as a concluding coda, Spinoza. The course is open to both undergraduates and graduate students; there will be extra sessions for the graduate students.

Course Notes: To be jointly offered with the Divinity School.

Computer Science  1
Great Ideas in Computer Science (119953)

Henry Leitner

2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: None Enrollment Cap: n/a

An introduction to the most important discoveries and intellectual paradigms in computer science, designed for students with little or no previous background. Explores problem-solving using high and low-level programming languages; presents an integrated view of computer systems, from switching circuits up through compilers and GUI design. Examines theoretical and practical limitations related to unsolvable and intractable computational problems, and the social and ethical dilemmas presented by such issues as software unreliability and invasions of privacy.

Course Notes: May not be taken for credit after completing Computer Science 50. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Computer Science  50
Introduction to Computer Science I (152514)

David J. Malan

2015 Fall (4 Credits)  Schedule:  MW 0100 PM - 0159 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web development. Languages include C, PHP, and JavaScript plus SQL, CSS, and HTML. Problem sets inspired by real-world domains of biology, cryptography, finance, forensics, and gaming. Designed for concentrators and non-concentrators alike, with or without prior programming experience. 72% of CS50 students have never taken CS before.

Class Notes:  This course ordinarily meets in Sanders Theatre on Mondays and Wednesdays from 1pm until 2pm, but students may simultaneously enroll in another course that meets at the same time. To do so, enroll in the other course via my.harvard.edu, and then email enrollment@fas.harvard.edu to have CS50 added to your study card as well. Undergraduates, GSAS students, and cross-registered students may take CS50 either Satisfactory/Unsatisfactory (SAT/UNS) or for a letter grade. When taken for a letter grade, CS50 meets the General Education requirement for undergraduates for Empirical and Mathematical Reasoning. See cs50.harvard.edu for FAQs.

Systems Programming and Machine Organization (123623)

Margo Seltzer

2015 Fall (4 Credits) Schedule: TR 0230 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

Fundamentals of computer systems programming, machine organization, and performance tuning. This course provides a solid background in systems programming and a deep understanding of low-level machine organization and design. Topics include C and assembly language programming, program optimization, memory hierarchy and caching, virtual memory and dynamic memory management, concurrency, threads, and synchronization.

Recommended Prep: CS50 or some experience programming in C.

Privacy and Technology (125407)

*James Waldo*

2015 Fall (4 Credits)  

**Schedule:** TR 0100 PM - 0229 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

What is privacy, and how is it affected by recent developments in technology? This course critically examines popular concepts of privacy and uses a rigorous analysis of technologies to understand the policy and ethical issues at play. Case studies: database anonymity, research ethics, wiretapping, surveillance, and others. Course relies on some technical material, but is open and accessible to all students, especially those with interest in economics, engineering, political science, computer science, sociology, biology, law, government, philosophy.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Culture and Belief.

Intelligent Systems: Design and Ethical Challenges (160419)

*B Barbara Grosz*

2015 Fall (4 Credits)  

**Schedule:** TR 0100 PM - 0229 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 20

For centuries, people have imagined smart machines in fictional stories. Computer systems now communicate in speech and text, learn, negotiate, and work in teams (with people and other systems). These intelligent-systems capabilities raise questions about the impact of such systems on people and societies. This course introduces the basic techniques of AI in the context of (science) fiction imaginings and ethical challenges. It examines the roles of design and of policy in reducing potential negative consequences. The course presumes a basic programming ability, but is accessible to concentrators in the humanities and social sciences as well as science and engineering.
Computer Science 109
Data Science (109899)
Hanspeter Pfister
Joseph Blitzstein
Verena Kaynig-Fittkau
2015 Fall (4 Credits) Schedule: TR 0230 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
Learning from data in order to gain useful predictions and insights. This course introduces methods for five key facets of an investigation: data wrangling, cleaning, and sampling to get a suitable data set; data management to be able to access big data quickly and reliably; exploratory data analysis to generate hypotheses and intuition; prediction based on statistical methods such as regression and classification; and communication of results through visualization, stories, and interpretable summaries. Built around three modules: prediction and elections, recommendation and business analytics, and clustering and text analysis.

Course Notes: Only one of CS 109, AC 209, or Stat 121 can be taken for credit.
Recommended Prep: Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Computer Science 121
Introduction to the Theory of Computation (119064)
Harry Lewis
2015 Fall (4 Credits) Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: Instructor Enrollment Cap: n/a
General introduction to the theory of computation, teaching how to reason precisely about computation and prove mathematical theorems about its capabilities and limitations. Finite automata, Turing machines, formal languages, computability, uncomputability, computational complexity, and the P vs. NP question.

Course Notes: Students may not receive credit for both CS 121 and CS 125.
Recommended Prep: experience in formal mathematics at the level of Computer Science 20.

Computer Science 124
Data Structures and Algorithms (115384)

Michael Mitzenmacher

2016 Spring (4 Credits) Schedule: TR 1130 AM - 1259 PM
Instructor Permissions: None Enrollment Cap: n/a

Design and analysis of efficient algorithms and data structures. Algorithm design methods, graph algorithms, approximation algorithms, and randomized algorithms are covered.

Course Notes: Starting in the spring of 2013, Computer Science 124 will assume background from Computer Science 20. Students will not receive credit for both CS 124 and CS 125.

Recommended Prep: Computer Science 50 or equivalent; Computer Science 51 is helpful. Some exposure to discrete applied mathematics, such as Applied Mathematics 106 or 107 or Computer Science 121 or Statistics 110, is also helpful.

Computer Science 125
Algorithms and Complexity (156210)

Michael Mitzenmacher

2015 Fall (4 Credits) Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

An accelerated introduction to theoretical computer science for students with strong mathematical preparation, to be taken in place of both Computer Science 121 and 124. Algorithm design methods, including graph algorithms, approximation algorithms, and randomized algorithms. Models of computation, computability theory, and computational complexity, including the P vs. NP question.

Course Notes: Students may not receive credit for both CS 125 and either CS 121 or CS 124.

Recommended Prep: Comfort with reading and writing mathematical proofs, at the level of Math 25 or 55 (which may be taken concurrently).

Additional Course Attributes:

Cryptography is as old as human communication itself, but has undergone a revolution in the last few decades. It is now about much more than "secret writing" and includes seemingly paradoxical notions such as communicating securely without a shared secret, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as fully homomorphic encryption and software obfuscation. This is a proof-based course that will be best appreciated by mathematically mature students.

Recommended Prep: Comfort with mathematical proofs at the level of CS121, CS124 or similar. Please contact the instructor if you're unsure if your background is sufficient.

Networks—of social relationships, economic interdependencies, and digital interactions—are critical in shaping our lives. This course introduces models and algorithms that help us understand networks. Fundamental concepts from applied mathematics, microeconomics, and computer science will be presented through the lens of network science, in order to equip students to usefully analyze the "big data" generated by online networks. Applications discussed include the viral spread of ideas, maximizing influence, and the contagion of economic downturns. Concepts and tools covered include game theory, graph theory, data mining, and machine learning.

Course Notes: Computer Science 134 is also offered as Economics 1034. Students may not take both for credit.

Class Notes: Course Link [http://networksatharvard.com/](http://networksatharvard.com/)

Recommended Prep: Linear Algebra, Calculus, probability (either their courses or their equivalents): AM 21a, AM 21b, Statistics 110.
Computer Science 136
Economics and Computation (128164)

David Parkes

2016 Spring (4 Credits) Schedule: MW 1130 AM - 1259 PM
Instructor Permissions: None Enrollment Cap: n/a
The interplay between economic thinking and computational thinking as it relates to electronic commerce, social networks, collective intelligence and networked systems. Topics covered include: game theory, peer production, reputation and recommender systems, prediction markets, crowd sourcing, network influence and dynamics, auctions and mechanisms, privacy and security, matching and allocation problems, computational social choice and behavioral game theory. Emphasis will be given to core methodologies, with students engaged in theoretical, computational and empirical exercises.

Course Notes: Formerly Computer Science 186

Recommended Prep: Applied Math 21b, Computer Science 51 or equivalent, Statistics 110, and one of Computer Science 181, Computer Science 182, Economics 1011a, Economics 1052, or Economics 1056.

Computer Science 144R
Networks Design Projects (112630)

H. Kung

2015 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
Networking has evolved to a new era of supporting large-scale distributed computing for big data. These new networks are software defined in the sense that they can be dynamically programmed to meet various communications needs in computing. In CS 144r/244r, students will obtain the knowledge and experience necessary not only to understand this momentous technological shift in networking, but also to be able to play a part themselves. To this end, the course will not only teach the fundamental concepts necessary to understand this emerging field of software-defined networking, but also real world applications of the technologies such as next-generation ultra-dense 5G cellular networks, as well as their connection with complementary topics such as machine learning. The class will be organized into the following eight modules: A View of the Future: The Promise of Next Generation Networking; Basic Network Design and Protocols; Datacenter Design and Networking; Software Defined Networking; Cross-Disciplinary Applications of Next Generation Networking: Machine Learning, Distributed Computing, and Consumer Applications; Wireless Networking: 5G Networks and Millimeter Wave Communication; Connecting the Internet of Things; Next Generation Networking Enabled Infrastructure: Network Function Virtualization. Students will gain mastery of the subject through lectures, programming assignments, discussion of the latest networking literature, and a final project. Students will have wide latitude in designing and implementing a final project they are passionate about. Industry partners will support the course and provide resources for the final projects.

Course Notes: Preference given to upper-class undergraduates or graduate students in computer science or in business.

Recommended Prep: Programming experience (CS 50 should be fine) and interest in the subject matter. Importantly, CS 143 is NOT a prerequisite. Labs and extra support will provide intensive preparation in the first weeks of the semester to help students quickly obtain the networking background necessary to excel in the course.

Design of VLSI Circuits and Systems (110990)

*Gu-Yeon Wei*

2016 Spring (4 Credits)  
**Schedule:**  
TR 1130 AM - 1259 PM  
**Instructor Permissions:**  
Instructor  
**Enrollment Cap:**  
16

Presentation of concepts and techniques for the design and fabrication of VLSI systems and digital MOS integrated circuits. Topics include: basic semiconductor theory; MOS transistors and digital MOS circuits design; synchronous machines, clocking, and timing issues; high-level description and modeling of VLSI systems; synthesis and place and route design flows; and testing of VLSI circuits and systems. Various CAD tools for design, simulation, and verification are extensively used.

Course Notes: Offered in alternate years.

Recommended Prep: Computer Science 141 or permission of instructor.

Stephen Chong

2016 Spring (4 Credits)  Schedule:  TR 1000 AM - 1129 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

Comprehensive introduction to the principal features and overall design of both traditional and modern programming languages, including syntax, formal semantics, abstraction mechanisms, modularity, type systems, naming, polymorphism, closures, continuations, and concurrency. Provides the intellectual tools needed to design, evaluate, choose, and use programming languages.

Recommended Prep:  Computer Science 51; Computer Science 121 is recommended. Students must have good programming skills, be very comfortable with recursion, proofs, basic mathematical ideas and notations, including sets, relations, functions, and induction.

Computer Science 153
Compilers (131493)

Jean-Baptiste Tristan

2015 Fall (4 Credits)  Schedule:  TF 1000 AM - 1129 AM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Implementation of efficient interpreters and compilers for programming languages. Associated algorithms and pragmatic issues. Emphasizes practical applications including those outside of programming languages proper. Also shows relationships to programming-language theory and design. Participants build a working compiler including lexical analysis, parsing, type checking, code generation, and register allocation. Exposure to run-time issues and optimization.

Class Notes:  For more course information, see http://sites.fas.harvard.edu/~lib153/.

Recommended Prep:  Computer Science 51 or 61.

Data Systems (119249)  
*Stratos Idreos*  
2015 Fall (4 Credits)  
**Schedule:** MW 0100 PM - 0229 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  
We are in the big data era and data systems sit in the critical path of everything we do, i.e., in businesses, in sciences, as well as in everyday life. This course will be a comprehensive introduction to modern data systems. The primary focus of the course will be on modern trends that are shaping the data management industry right now such as column-store and hybrid systems, shared nothing architectures, cache conscious algorithms, hardware/software codesign, main memory systems, adaptive indexing, stream processing, scientific data management, and key value stores. We will also study the history of data systems and traditional and seminal concepts and ideas such as the relational model, row-store database systems, optimization, indexing, concurrency control, recovery and SQL in order to understand both how data systems have evolved over the years and why, as well as how these concepts apply today and how data systems might evolve in the future.  
**Recommended Prep:** Computer Science 51 and Computer Science 61.

### Computer Science 175

**Computer Graphics (113410)**

*Steven Gortler*

2015 Fall (4 Credits)  

**Schedule:** MW 0230 PM - 0359 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This course covers the fundamentals of 3D computer graphics using a modern shader-based version of OpenGL. Main topics include: geometric coordinate systems and transformations, keyframe animation and interpolation, camera simulation, triangle rasterization, material simulation, texture mapping, image sampling and color theory. The course also touches on ray tracing, geometric modeling and simulation-based animation.

**Recommended Prep:** Computer Science 51 or 61, Applied Mathematics 21b or Mathematics 21b.

### Computer Science 179

**Design of Useful and Usable Interactive Systems (123971)**

*Krzysztof Gajos*

2016 Spring (4 Credits)  

**Schedule:** TR 0230 PM - 0359 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

The course covers skills and techniques necessary to design innovative interactive products that are useful, usable and that address important needs of people other than yourself. You will learn how to uncover needs that your customers cannot even articulate. You will also learn a range of design principles, effective creativity-related practices, and techniques for rapidly creating and evaluating product prototypes. You will also have several opportunities to formally communicate your design ideas to a variety of audiences. You will complete two large team-based design projects.

**Recommended Prep:** CS 50 or web programming experience.

**Additional Course Attributes:**

Machine Learning (148156)

*Finale Doshi-Velez*

2016 Spring (4 Credits)  
**Schedule:** TR 1000 AM - 1129 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Introduction to machine learning, providing a probabilistic view on artificial intelligence and reasoning under uncertainty. Topics include: supervised learning, ensemble methods and boosting, neural networks, support vector machines, kernel methods, clustering and unsupervised learning, maximum likelihood, graphical models, hidden Markov models, inference methods, and computational learning theory. Students should feel comfortable with multivariate calculus, linear algebra, probability theory, and complexity theory. Students will be required to produce non-trivial programs in Python.

**Recommended Prep:** Computer Science 51, Computer Science 121, Statistics 110, Math 21a and 21b (or equivalent).

**Additional Course Attributes:**

**Computer Science 182**

Artificial Intelligence (110661)

*Alexander Rush*

2015 Fall (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Introduction to AI focused on problems in reasoning about action and rational decision making, covering search, knowledge representation and planning. Search: heuristics, informed search and optimization; constraint satisfaction; game playing. Knowledge representation: logics, efficient logical inference, reasoning about categories. Planning: action representations and planning algorithms, hierarchical task networks, sequential decision making. Applications to multi-agent systems, robotics and natural-language processing. Discussion of relevant work in philosophy, economics, and decision theory.

**Course Notes:** Formerly Intelligent Machines: Reasoning, Actions, and Plans

**Recommended Prep:** Computer Science 51; Computer Science 121 (may be taken concurrently).

**Additional Course Attributes:**

<table>

**Computer Science 189**

Autonomous Robot Systems (127551)

*Radhika Nagpal*
Building autonomous robotic systems requires understanding how to make robots that observe, reason, and act. Each component uses many engineering principles: how to fuse, multiple, noisy sensors; how to balance short-term versus long-term goals; how to control one’s actions and how to coordinate with others. This year theme will be “Robots Roam the Halls”, where we will focus on kinect-based robots that move in the SEAS buildings, to do applications like navigating, map building, and interacting with people. The class format will have a mixed lecture and lab format, and have a final project component.

Course Notes: Preference will be given to students with experience in AI (e.g. CS181 or CS182 and/or robotics ES159).

Computer Science 205
Computing Foundations for Computational Science (128104)
Thouis Jones
2015 Fall (4 Credits) Schedule: MWF 1100 AM - 1159 AM
Instructor Permissions: Instructor Enrollment Cap: n/a
An applications course highlighting the use of computers in solving scientific problems. Students will be exposed to fundamental computer science concepts such as computer architectures, data structures, algorithms, and parallel computing. Fundamentals of scientific computing including abstract thinking, algorithmic development, and assessment of computational approaches. Students will learn to use open source tools and libraries and apply them to data analysis, modeling, and visualization of real scientific problems. Emphasizes parallel programming and "parallel thinking."

Recommended Prep: Students are expected to have programming experience (e.g., CS50/51, fluent in Python, C/C++, or similar). Course will be taught primarily in Python.

Additional Course Attributes:

Systems Development for Computational Science (128105)
Pavlos Protopapas
Rahul Dave
2016 Spring (4 Credits) Schedule: MW 0230 PM - 0459 PM
Instructor Permissions: None Enrollment Cap: n/a
This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for
scientific computing. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to fit tools and approaches to the problem being solved.

**Recommended Prep:** Students are expected to have basic programming experience (Computer Science 50).

**Additional Course Attributes:**

### Computer Science 229R

**Information Theory in Computer Science (120237)**

*Madhu Sudan*

2016 Spring (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This advanced graduate course will introduce students to tools from Information Theory that have seen applications in Computer Science: List of topics include:

1) Basic tools of Information Theory
2) Distribution Testing
3) Moser's algorithmic LLL
4) Communication Complexity
5) Parallel repetition and Direct Product Theorems
6) Polar Codes and Capacity

Course will be run in seminar style with students presenting half the lectures.

The following courses illustrate some of the topics that we will cover:

- [https://catalyst.uw.edu/workspace/anuprao/15415/86593](https://catalyst.uw.edu/workspace/anuprao/15415/86593)
**Computer Science 229R**  
*Algorithms for Big Data (120237)*  
*Jelani Nelson*

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

This course will cover rigorous methods, based on solid theoretical foundations, for processing massive amounts of data. Topics discussed will include streaming and sketching algorithms, dimensionality reduction, and external memory algorithms, to name a few.

**Recommended Prep:** Mathematical maturity and comfort with algorithms (e.g. CS 124), discrete probability, and linear algebra.

Computer Science 242

Computing at Scale (160624)

H. Kung

2016 Spring (4 Credits)  

Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: None  

Enrollment Cap: n/a

Scaling computation over parallel and distributed computing systems is a rapidly advancing area of research receiving high levels of interest from both academia and industry. The objective can be for high-performance computing and energy-efficient computing ("green" data center servers as well as small embedded devices). In this course, students will learn principled methods of mapping prototypical computations used in machine learning, the Internet of Things, and scientific computing onto parallel and distributed compute nodes of various forms. These techniques will lay the foundation for future computational libraries and packages for both high-performance computing and energy-efficient devices. To master the subject, students will need to appreciate the close interactions between computational algorithms, software abstractions, and computer organizations. After having successfully taken this course, students will acquire an integrated understanding of these issues. The class will be organized into the following modules: Big picture: use of parallel and distributed computing to achieve high performance and energy efficiency; End-to-end example 1: mapping nearest neighbor computation onto parallel computing units in the forms of CPU, GPU, ASIC and FPGA; Communication and I/O: latency hiding with prediction, computational intensity, lower bounds; Computer architectures and implications to computing: multi-cores, CPU, GPU, clusters, accelerators, and virtualization; End-to-end example 2: mapping convolutional neural networks onto parallel computing units in the forms of CPU, GPU, ASIC, FPGA and clusters; Great inner loops and parallelization for feature extraction, data clustering and dimension reduction: PCA, random projection, clustering (K-means, GMM-EM), sparse coding (K-SVD), compressive sensing, FFT, etc.; Software abstractions and programming models: MapReduce (PageRank, etc.), GraphX/Apache Spark, OpenCL and TensorFlow; Advanced topics: autotuning and neuromorphic spike-based computing. Students will learn the subject through lectures/quizzes, programming assignments, labs, research paper presentations, and a final project. Students will have latitude in choosing a final project they are passionate about. They will formulate their projects early in the course, so there will be sufficient time for discussion and iterations with the teaching staff, as well as for system design and implementation. Industry partners will support the course by giving guest lectures and providing resources. The course will use server clusters at Harvard as well as external resources in the cloud. In addition, labs will have access to state-of-the-art IoT devices and 3D cameras for data acquisition. Students will use open source tools and libraries and apply them to data analysis, modeling, and visualization problems.

Recommended Prep:  

(1) programming experience (Python, MatLab or C/C++ should be fine); (2) basic knowledge in systems and machine organization; (3) familiarity in data structures and algorithms; and (4) maturity in mathematics (e.g., undergraduate linear algebra and statistics). For students with strong interest in the subject matter and related research topics, one of these four
requirements may be waived. Labs and extra support will provide preparation in the first weeks of the semester to help students quickly obtain the background necessary to excel in the course.

Additional Course Attributes:

**Computer Science 244R**

Networks Design Projects (112631)

_H. Kung_

2015 Fall (4 Credits)  
**Schedule:** MW 0230 PM - 0359 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

The contents and course requirements are similar to those of Computer Science 144r, with the exception that students enrolled in Computer Science 244r are expected to do substantial system implementation and perform graduate-level work.

**Course Notes:** Preference given to upper-class undergraduates or graduate students in computer science or in business who are proficient in computer programming or in business software.

**Recommended Prep:** Programming experience (CS 50 should be fine) and interest in the subject matter. Importantly, CS 143 is NOT a prerequisite. Labs and extra support will provide intensive preparation in the first weeks of the semester to help students quickly obtain the networking background necessary to excel in the course.

Systems Security (160579)

*James Mickens*

2015 Fall (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

This course explores practical attacks on modern computer systems, explaining how those attacks can be mitigated using careful system design and the judicious application of cryptography. The course discusses topics like buffer overflows, web security, information flow control, and anonymous communication mechanisms such as Tor. The course includes several small projects which give students hands-on experience with various offensive and defensive techniques; the final, larger project is open-ended and driven by student interests.

**Recommend Prep:** Computer Science 161 (Operating Systems)

**Computer Science 265**

Big Data Systems (113660)

*Stratos Idreos*

2016 Spring (4 Credits)  
**Schedule:** WF 0400 PM - 0529 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Big data is everywhere. A fundamental goal across numerous modern businesses and sciences is to be able to exploit as many machines as possible, to consume as much information as possible and as fast as possible. The big challenge is "how to turn data into useful knowledge". This is far from a simple task and a moving target as both the underlying hardware and our ability to collect data evolve. In this class, we will discuss how to design data systems and algorithms that can "scale up" and "scale out". Scale up refers to the ability to use a single machine to all its potential, i.e., to exploit properly the memory hierarchy and the multiple CPU and GPU cores. Scale out refers to the ability to use more than 1 machines (typically 100s or 1000s) effectively. This is a research oriented class. Every week we will read two modern research papers; one from the scale up area and one from the scale out area. We will use examples from several areas, including relational systems and distributed databases, graph processing systems (i.e., for social networks), key value stores, noSQL and newSQL systems as well as mobile computing. Each student will work on a semester long data systems research project (in groups of 2-4 students) which can be in any of the above areas and will be based on an open research problem.

**Recommend Prep:** CS 165 or permission of instructor.
Computer Science 278
Rendering and Image Processing in Computer Graphics (116856)

Steven Gortler

2016 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Advanced course in computer graphics focusing on image rendering and processing. Topics include: light transport, efficient rendering, image based rendering, texture processing, interactive image processing.

Class Notes: Instructor to be determined

Recommended Prep: Computer Science 175 or permission of instructor.

Computer Science 281
Advanced Machine Learning (107677)

Finale Doshi-Velez

2015 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 60

Advanced statistical machine learning and probabilistic data analysis. Topics include: Markov chain Monte Carlo, variational inference, Bayesian nonparametrics, text topic modeling, unsupervised learning, dimensionality reduction and visualization. Requires a major final project.

Class Notes: Instructor to be determined

Recommended Prep: Students should feel comfortable with basic linear algebra and probability theory. Students will be expected to implement algorithms in a programming language such as Matlab, Python or R.
Computer Science 283

Computer Vision (113944)

Todd Zickler

2015 Fall (4 Credits)

Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Vision as an ill-posed inverse problem: image formation, two-dimensional signal processing; feature analysis; image segmentation; color, texture, and shading; multiple-view geometry; object and scene recognition; and applications.

Course Notes: Offered jointly with the Design School as SCI-06275.

Optimization Algorithms for Robotics (160954)

Scott Kuindersma

2016 Spring (4 Credits)

Schedule: TR 0230 PM - 0359 PM

Instructor Permissions: None

Enrollment Cap: n/a

Computational methods have revolutionized the way we control the motions of complex, nonlinear, and underactuated robots. In this course, we study a variety of optimization algorithms for designing and stabilizing trajectories for walking, manipulating, and flying systems. Topics will include optimal control (HJB and Pontryagin's minimum principle), nonlinear optimization, trajectory planning (shooting and direct methods) and stabilization, model-predictive control, legged systems (classical models, humanoids, centriodal dynamics), convex methods for control and stability analysis, and optimization through frictional contact. Students will gain practical experience implementing modern algorithms to control a variety of simulated systems using the Drake software toolbox.*

*http://drake.mit.edu

Recommended Prep: Linear algebra and calculus. Prior exposure to robotics and dynamics is helpful, but not required. Students will be expected to complete programming problems in MATLAB.

Computer Science 287

Statistical Natural Language Processing (112867)

Alexander Rush

2016 Spring (4 Credits)

Schedule: TR 0230 PM - 0359 PM

Instructor Permissions: None

Enrollment Cap: n/a
Focuses on statistical and machine learning approaches to natural language processing. Methods include log-linear models, hidden Markov models and conditional random fields, expectation maximization, and neural networks. Natural language topics include language modelling, tagging and information extraction, syntactic parsing, and machine translation. As part of the course, students will also undertake a final research project.

Recommended Prep: CS 181 required, CS 187 or Linguistics 116 recommended.

**Computer Science 289**

Biologically-inspired Multi-agent Systems (120238)

*Radhika Nagpal*

2016 Spring (4 Credits)  

**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

Surveys biologically-inspired approaches to designing distributed systems. Focus is on algorithms, analysis, and programming paradigms. Topics: swarm intelligence, amorphous computing, immune-inspired systems, synthetic biology. Discussion of research papers and a research project required.

**Course Notes:** Geared toward graduate students of all levels as well as advanced undergraduates. Preference given to graduate students or upper-level concentrators.

**Recommended Prep:** Experience with algorithms (e.g. Computer Science 124) and programming (e.g. Computer Science 51).

**Additional Course Attributes:**

Special Topics in Computer Science (114035)

*David Parkes*

2015 Fall (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

Supervision of experimental or theoretical research on acceptable computer science problems and supervision of reading on topics not covered by regular courses of instruction.

**Course Notes:** Open to graduate students and AB/SM candidates only. Students must arrange such work with a member of the School of Engineering and Applied Sciences. This course is graded and is ordinarily taken with the approval of the Committee on Higher Degrees. Applicants must file a project sheet before study cards are filed. Project sheets may be obtained from the Academic Office, Pierce Hall 110.

The Dynamic Earth: Geology and Tectonics Through Time (128156)

Francis Macdonald

2015 Fall  (4 Credits)  Schedule:  TR 0200 PM - 0329 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Students will learn how the Earth works and how critical events in Earth history shaped their surroundings. We will explore what the Earth is made of, why there are continents and oceans, and how plate tectonics provides a unifying model to explain geological observations. Topics covered include the discovery of deep time, the relationship between geology and topography, the geology of our surroundings, plate tectonics, magnetism, chemical differentiation at subduction zones and mid-ocean ridges, mountain building, basin formation, isostasy, heat flow, convection, and feedbacks with the fluid Earth. Ultimately we will use physical processes to explain the patterns of nature. Our treatment will be quantitative with applications to other phenomena, and based on sound physics. Field trips provide opportunities to learn how to read rocks, to see data in the field, and to interpret observations in terms of their possible history and forces acting in and on the Earth.

Course Notes:  Course includes a weekly three-hour lab to be arranged and two field trips. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

Earth & Planetary Sciences   22
The Fluid Earth: Oceans, Atmosphere, Climate, and Environment (128224)

Ann Pearson
Peter Huybers

2016 Spring  (4 Credits)  Schedule:  TR 1000 AM - 1129 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

This course introduces students to the fluid Earth, emphasizing Earth's weather and climate, the carbon cycle, and global environmental change. The physical concepts necessary for understanding the structure, motion and energy balance of the atmosphere, ocean, and cryosphere are covered first, and then these concepts are applied in exploring major earth processes. Examples from Earth's past history, on-going changes in the climate, and implications for the future are highlighted.

Course Notes:  Course includes a weekly three-hour lab to be arranged. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.
Earth & Planetary Sciences  56

Geobiology and the History of Life (108969)

David Johnston
Andrew Knoll

2016 Spring (4 Credits) Schedule: MWF 1000 AM - 1059 AM

Instructor Permissions: None Enrollment Cap: n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

Course Notes: Course includes a weekly three-hour lab to be arranged and one field trip. EPS 56 is also offered as OEB 56. Students may not take both for credit.

Recommended Prep: EPS 21, 22, or Life Sciences 1b; or permission of instructor.

Earth & Planetary Sciences  74

Field Experiences in Earth and Planetary Sciences (120728)

Francis Macdonald

2016 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Attend a domestic or overseas geological field program of 3-6 weeks duration to learn methods of obtaining, synthesizing, and interpreting field observations.

Course Notes: Field programs are selected individually by students with the advice and approval of the instructor. Students must notify the instructor and Academic Administrator of intention to enroll by Study Card Day of the preceding term.

Recommended Prep: EPS 21 or permission of instructor.

The Missing Matlab Course: An Introduction to Programming and Data Analysis (122333)

Miaki Ishii

2015 Fall (4 Credits) Schedule: TR 0100 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

An overview of modern computational tools with applications to the Earth Sciences. Introduction to the MATLAB programming and visualization environment. Topics include: statistical and time series analysis, visualization of two- and three-dimensional data sets, tools for solving linear/differential equations, parameter estimation methods. Labs emphasize applications of the methods and tools to a wide range of data in Earth Sciences.

Course Notes: Course meeting time includes lecture and lab. Students are not allowed to audit the course except for an exceptional circumstance (requires permission of the instructor). Given in alternate years.

Recommended Prep: Mathematics 1a, b; or equivalent.

Earth & Planetary Sciences 107

Evolution of Plant Life in Geologic Time (108748)

Andrew Knoll

2015 Fall (4 Credits) Schedule: MWF 1000 AM - 1059 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Origin, evolution, dispersal, paleoecology, and geologic history of the major groups of the plant kingdom. Laboratory study of representative groups, living and fossil.

Course Notes: Course includes a weekly two-hour lab to be arranged. EPS 107 is also offered as OEB 107. Students may not take both for credit. Given in alternate years.

Recommended Prep: OEB 10 or permission of instructor.
Earth & Planetary Sciences 112
Thermodynamics by Case Study (161215)
Scot Martin
2016 Spring (4 Credits)  Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: None  Enrollment Cap: n/a
Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes: EPS 112 is also offered as Engineering Sciences 112. Students may not take both for credit.

Earth & Planetary Sciences 131
Introduction to Physical Oceanography and Climate (111361)
Eli Tziperman
2016 Spring (4 Credits)  Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: None  Enrollment Cap: n/a
Observations and understanding of ocean physics, from local beach waves to the effects of the oceans on global climate. Topics covered include wave motions such as ocean surface waves, internal waves, tsunamis and tides; currents, including the wind driven circulation, and the Gulf stream; coastal upwelling and fisheries; temperature, salinity, the overturning thermohaline circulation and its effect on global climate stability and variability; basic fluid dynamics equations; El Niño; the oceans and global warming; Ocean observations by ships, satellites, moorings, floats and more.

Course Notes: When offered, a field trip to the Woods Hole Oceanographic Institution on Cape Cod will be included. EPS 131 is also offered as ES 131. Students may not take both for credit. Given in alternate years.

Recommended Prep: Applied Mathematics 21a,b; Physical Sciences 12a,b, Physics 15a,b,c or Applied Physics 50a,b; or permission of instructor.
Earth & Planetary Sciences 132

Introduction to Meteorology and Climate (123877)

Brian Farrell

2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: None Enrollment Cap: n/a

Physical concepts necessary to understand atmospheric structure and motion. Phenomena studied include the formation of clouds and precipitation, solar and terrestrial radiation, dynamical balance of the large-scale wind, and the origin of cyclones. Concepts developed for understanding today's atmosphere are applied to understanding the record of past climate change and the prospects for climate change in the future.

Course Notes: EPS 132 is also offered as ES 132. Students may not take both for credit.

Recommended Prep: Mathematics 21 or Applied Mathematics 21a and 21b; Physics 11 (no longer offered) or 15 or Physical Sciences 12; or permission of instructor.

Earth & Planetary Sciences 134

Global Warming Debates: The Reading Course (126141)
The atmospheric carbon dioxide concentration is now the highest it has been in at least 800,000 years, raising concerns regarding possible future climate changes. This seminar will survey the science of global change from the perspective of scientific debates within the climate community. Specifically, the course will involve guided reading and discussion of papers that present contentious viewpoints on the science of global change, with the goal of students learning how to scientifically evaluate these claims. During weekly sections, students will review climate topics in further depth and prepare group presentations for subsequent classes.

Course Notes: Course includes a weekly section to be arranged. Given in alternate years.

Class Notes: Enrollment limited to 24.

Recommended Prep: Applied Mathematics 21a,b or equivalent, or permission of instructor.

Earth & Planetary Sciences 135

Physics and Chemistry: In the Context of Energy and Climate at the Global and Molecular Level (126934)

James Anderson

2015 Fall (4 Credits) Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

A solution to the problems set by the intersection of global energy demand and climate feedbacks requires the teaching of physics and chemistry in that context. Core topics include thermodynamics, free energy, entropy, acid-base and oxidation-reduction reactions, electrochemistry, electromagnetic induction, circuit theory, AC and DC circuits, the nature of photons and of electromagnetic radiation, photochemistry, materials, catalysis, kinetics, molecular bonding, and biological processes for energy conversion and storage.

Course Notes: EPS 135 is also offered as ES 135. Students may not take both for credit.

Recommended Prep: Physical Sciences 1, or Physical Sciences 11, or permission of instructor.

Earth & Planetary Sciences 141

Isotope and Trace Element Geochemistry and Geochronology (122074)

Stein Jacobsen

2015 Fall (4 Credits) Schedule: TR 1130 AM - 1259 PM
The origin of the element and isotope distribution in the Earth and the Solar System. Closed system radioactive
decay, isotope fractionation, mass balance and mixing. Application of Rb-Sr, Sm-Nd, U-Th-Pb, Lu-Hf, Re-Os and K-
Ar isotope systems for geochronology and as tracers for geological processes. Noble gas geochemistry. Extinct

Course Notes: Given in alternate years.

Recommended Prep: A course in college-level chemistry or equivalent; EPS 21 or EPS 51; or
permission of instructor.

Global Geophysics: A Primer (109231)

Jerry Mitrovica

2015 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

A comprehensive introduction to global geophysics. This course serves as a bridge between introductory Earth
science courses (EPS 21, EPS 22) and higher level courses in EPS. Topics include: plate tectonics, the Earth's
composition, thermal state and rheology, mantle convection, the geodynamo, the Earth's gravity field and geodesy,
comparative planetology, and (modern and paleo) climate change.

Course Notes: Formerly offered as EPS 52. Students who have taken EPS 52 cannot take
EPS 152 for credit.

Recommended Prep: Applied Mathematics 21a,b (or Mathematics 1a,1b; or Mathematics 21a,b);
Physics 11a,b (no longer offered) or Physics 15a,b (prior or concurrent) or
Physical Sciences 12a,b; or permission of the instructor.

Space Science and Engineering: Theory and Application (160957)

Robin Wordsworth

2015 Fall (4 Credits) Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: Instructor Enrollment Cap: 30

This course is an introduction to the challenges involved in designing spacecraft for observation of Earth and
exploration of other planets. Topics covered include basic atmospheric and planetary science, key principles of
remote sensing, telemetry, orbital transfer theory, propulsion and launch system design, and thermal and power
management.

Consequences of Earthquakes (110819)

*Miaki Ishii*

2016 Spring (4 Credits)  

**Schedule:** TR 0230 PM - 0359 PM

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Introduction to seismology with a focus on conceptual understanding of seismic phenomena. Emphasis will be on earthquakes, e.g., detection, mechanism, characteristics, statistics, hazard, and relationship to dynamics. Broader topics such as the types of seismological data and inferences of the Earth's internal structure also will be covered.

**Course Notes:** Course includes a weekly three-hour lab to be arranged. Given in alternate years.

**Recommended Prep:** Mathematics 21a, b or Applied Mathematics 21a, b (may be taken concurrently); or equivalent.
Earth & Planetary Sciences  171

Structural Geology and Tectonics (112745)

John Shaw

2015 Fall (4 Credits) Schedule: MW 0100 PM - 0229 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

An introduction to the deformation of Earth materials, including the processes of mountain building and plate tectonics, faulting and earthquakes, folding, and ductile deformation. Structures are examined using geologic maps, balanced cross sections, seismic reflection data, satellite imagery, microscopic analysis, analog experiments, and numerical methods. Labs emphasize the applications of structural geology in the energy and environmental industries, and for assessing earthquake hazards.

Course Notes: Course includes a weekly three-hour lab to be arranged. Given in alternate years.

Recommended Prep: EPS 21 or permission of instructor.

Planetary Radiation and Climate (119062)

Robin Wordsworth

2016 Spring (4 Credits) Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: None Enrollment Cap: n/a

Atmospheric radiative transfer, including stellar properties, spectroscopy, gray and real gas calculations, Mie theory and scattering, satellite retrievals, and radiative-convective climate modelling. Climate feedbacks: the runaway greenhouse, volatile cycles on Mars and Titan, and atmospheric collapse around M-stars. Atmospheric evolution and escape (Jeans, diffusion-limited, hydrodynamic), and key processes in planetary atmospheric chemistry.

Course Notes: EPS 237 is also offered as Engineering Sciences 237. Students may not take both for credit.
Earth & Planetary Sciences 239

The Consequences of Energy Systems (126403)

Daniel Schrag

2015 Fall (4 Credits) Schedule: F 1000 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course provides an introduction to the physical and chemical impacts of energy choices on human society and natural ecosystems. Topics will include the carbon cycle, climate, air and water pollution, impacts of energy systems on health, land use consequences of energy technologies, and nuclear waste and proliferation.

Course Notes: This course is a requirement for the Graduate Consortium on Energy and Environment.

Recommended Prep: College level chemistry and physics and permission of instructor.

Earth & Planetary Sciences 252

Global Geophysics: A Primer (107842)
Jerry Mitrovica

2015 Fall (4 Credits)

Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

An introductory treatment of solid Earth geophysics for graduate students in all EPS and SEAS disciplines. The course will cover a sampling of topics that all Earth scientists should have knowledge of, whether to facilitate applications to their own research or to simply follow departmental seminars in geophysics. Topics include: the Earth's composition and internal boundaries; qualitative and quantitative plate tectonics; the Earth's energy budget, isostasy; Earth rheology, with examples from seismology, tides, glacial isostatic adjustment and mantle convection; the Earth's gravity field and geodesy; planetary rotation. Physical concepts will be emphasized over mathematical derivations. While there are no formal pre-requisites for the course, some training in calculus, ordinary and partial differential equations would be helpful. Extra class time and material will be available for students without this background.

Course Notes: Formerly offered as EPS 205. Students who have taken EPS 205 cannot take EPS 252 for credit.

Earth & Planetary Sciences  261

Sea Level Change (126477)

Jerry Mitrovica

2016 Spring (4 Credits)

Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: None  Enrollment Cap: n/a

The physical processes responsible for sea level changes over time scales extending from hours to hundreds of millions of years. Long-term sea-level trends: geological observations, physical mechanisms and eustasy, dynamic topography. Sea-level change on an ice age Earth (glacial isostatic adjustment, GIA): observations, viscoelastic loading, mantle viscosity, the Last Glacial Maximum (LGM), interglacial sea-level change, ongoing GIA. Ocean tides: equilibrium and non-equilibrium effects, tidal dissipation. Modern global sea level change: tide gauge and geodetic observations, ice melting and thermal expansion, closing the sea-level budget, sea-level fingerprinting.

Course Notes: Given in alternate years.

Recommended Prep: Applied Mathematics 21a, b; Physics 11 (no longer offered),15, or Physical Sciences 12; or permission of instructor.

Earth & Planetary Sciences  264

Planetary Magnetism and Dynamo Theory (160229)

Jeremy Bloxham

2015 Fall (4 Credits)

Schedule: R 0330 PM - 0559 PM
Instructor Permissions: Instructor
Enrollment Cap: n/a

An introduction to the generation of planetary magnetic fields by self-sustaining dynamo action. Magnetohydrodynamics: derivation of the induction equation from Maxwell's equations; the perfectly-conducting limit and frozen-flux; flux expulsion; diffusion and re-connection. Kinematic dynamo theory: Cowling's theorem; existence proofs; the Bullard-Gellman formalism; mean-field theories; fast dynamos. Dynamical considerations: the Navier-Stokes equation; rotating magnetoconvection; Taylor states; torsional oscillations and MAC-waves. Thermodynamic considerations: energy and entropy equations; the core heat flux problem. Numerical dynamo models.

Earth & Planetary Sciences 274

Field Geology (107945)

Francis Macdonald

2015 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Attend an advanced domestic or overseas geological field program of 3-6 weeks duration to learn methods of obtaining, synthesizing, and interpreting field observations.

Course Notes:
Field programs are selected individually by students with the advice and approval of the instructor. An upper level field course at another university can be substituted with approval of the instructor. Students must notify the instructor and Academic Administrator of intention to enroll by Study Card Day of the preceding term.

Recommended Prep: EPS 21 or permission of instructor.

**Earth & Planetary Sciences  286**

Current Topics in Biogeochemistry I: Biological and Inorganic Stable Isotope Systematics (126176)

*David Johnston*

*Ann Pearson*

2016 Spring (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This is a reading class aimed at touring the literature on light stable isotope systematics. Topics covered will range from classic applications in geology (diagenetic and high temperature exchange), through to more novel isotope systems (clumping, 17O, etc.) and applications in biological systems (for instance, those effects associated with RuBiSCo). Topics covered will also flex with the interest of the enrolled students.

**Course Notes:**  
Given in alternate years.

**Recommended Prep:** EPS 186 and 187 or equivalent; or permission of instructor.

Chinese 130A

Pre-Advanced Modern Chinese (159629)
The aim of this course is to further develop students' Chinese proficiency in both spoken and written language. By reading texts based on current issues and cultural phenomena and engaging in in-depth class discussions, students will continue to expand their vocabulary, master more complex grammatical structures, and develop an ability to perform tasks involving description, narration, and argumentation at the discourse level.

Class Notes: Classes meet five days a week, additional discussion sections to be arranged.

Recommended Prep: Chinese 120b or equivalent

**Chinese 130A Section: 002**

Pre-Advanced Modern Chinese (159629)

Xueyin Shao

2015 Fall (4 Credits) Schedule: TR 1100 AM - 1159 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

The aim of this course is to further develop students' Chinese proficiency in both spoken and written language. By reading texts based on current issues and cultural phenomena and engaging in in-depth class discussions, students will continue to expand their vocabulary, master more complex grammatical structures, and develop an ability to perform tasks involving description, narration, and argumentation at the discourse level.

Class Notes: Classes meet five days a week, additional discussion sections to be arranged.

Recommended Prep: Chinese 120b or equivalent

History, Politics, and Culture in Manchurian Space: Proseminar (156619)  
2016 Spring (4 Credits)  
Instructor Permissions: None  
Schedule:  
Enrollment Cap: n/a  

Recent scholarship on modern East Asia has seen a marked increase in attention to history, society, and culture in Manchukuo and Manchuria from interdisciplinary and transnational perspectives. The course will explore these trends with the aim of arriving at an improved understanding of the Northeast Asian frontier zone in and around the period of 20th-c. Japanese imperialist expansion.

**Course Notes:** Open to graduates and (with instructor approval) to advanced undergraduates.

**Recommended Prep:** Good familiarity with modern East Asian history. All required readings are in English.

**Chinese History  122**

Religions in Chinese Society from Late Imperial to Contemporary (160430)  
*Yanfei Sun*  
2016 Spring (4 Credits)  
Schedule: TR 1000 AM - 1129 AM
This course will help students to understand the present-day situations of a wide array of religions that exist in the mainland Chinese society, including popular religion, Buddhism, Daoism, Protestantism, Catholicism, New Religious Movements, and Islam. We will discuss their institutional practices, positions in the society, relations with the state and the economy. The course will also examine how the present-day conditions came into being, by tracing to the traditional model of late imperial China (1368–1911), and investigating how changes occurred in Republican China (1911–1949), why the Maoist period (1949–1976) was the turning point, and how a new religious situation with characteristics distinct from the traditional model has been emerging in post-Mao China. We will make reference to the religious situations in Taiwan to illustrate the distinctiveness of the case of mainland China.

This course will be taught by EALC Visiting Professor Yanfei Sun.

Chinese History  201 Section: 01

Intellectual Debates in China Today (159902)

Peter K. Bol

2015 Fall (4 Credits)  Schedule:  M 0100 PM - 0359 PM

Instructor Permissions:  Instructor  Enrollment Cap:  30

The seminar explores different positions that well-known intellectuals are taking around three larger issues: political systems, culture, and individual values/morality. In each area we will look at the divergent arguments that are being advanced and how intellectuals locate themselves in the context of China's recent intellectual past and, in some cases, China's intellectual history since ancient times. The undercurrent is the problem of what a "Chinese" identity can be in a global context and whether it is necessary. There will be a combination of common readings to establish issues and individual reports on particular figures and writings.

Course Notes:  Readings will be in Chinese and English.

Digital Methods for Chinese Studies (161272)

Donald Sturgeon

2016 Spring (4 Credits)  Schedule:  M 0100 PM - 0359 PM

Instructor Permissions:  Instructor  Enrollment Cap:  16

This course introduces graduate students in Chinese studies to programming skills and digital humanities techniques of direct practical relevance to research in their discipline. It will consist of weekly lectures, each introducing a specific type of technique, followed by an interactive lab session during which students practice applying the technique to data appropriate to their own research. No background in digital methods or programming is assumed, but students are expected to have basic computing skills and are required to bring a suitable laptop to
use during the lab sessions. The techniques covered in this course all have broad applicability to topics in Chinese studies, and students will be expected to apply them to their own research topics and relevant texts as arranged during the first few sessions. The course will end with student presentations in which students apply an appropriate selection of the techniques studied to their own research questions.

While examples and coursework will draw upon Chinese language source materials, students primarily working with other East Asian languages are also encouraged to take this course.

Course Notes: This course will be taught by Donald Sturgeon, Postdoctoral Fellow in Chinese Digital Humanities and Social Sciences at the Fairbank Center for Chinese Studies, Harvard University.

Class Notes: Enrollment limited to 16.

Chinese History 215

Studying Religions in China: Texts, Theoretical and Methodological Issues (160431)

Yanfei Sun

2016 Spring (4 Credits)  

Schedule:  

F 1000 AM - 1159 AM  

Instructor Permissions: None  

Enrollment Cap: n/a

This seminar will consist of two parts. In the first part, we will explore some of the theoretical and methodological issues that have emerged in recent years in studying religions in China, which also inform the challenges and opportunities in the sociological studies of religions in general. They will include but will not be limited to: the applicability of Rational Choice Theory of Religion in the Chinese context; the rising new approach of religious ecology; religions’ relationship with the state and market; measuring religiosities of non-Abrahamic religions; as well as the transnational or transregional dimension of religious development. In the second part of the seminar, we will examine some of the primary texts that I have collected in the field sites in China. They will primarily include inscriptions from temple steles, gazetteers, genealogical records, and liturgical texts of different religious traditions. This seminar is designed for graduate students who are interested in doing original research on Chinese religions. Advanced-level Chinese proficiency is required.

Course Notes: This seminar will be taught by EALC Visiting Professor Yanfei Sun.

**Chinese Literature 114**

Introduction to Premodern Chinese Literature (125194)

*Xiaofei Tian*

2016 Spring (4 Credits)  
**Schedule:** TR 1000 AM - 1129 AM

Instructor Permissions: None  
Enrollment Cap: n/a

This course will introduce students to the best-known writers and canonical works of Chinese literature from the premodern period.
Chinese Literature 129

Folklore in the Modern Chinese Cultural Imagination (160438)

Max Bohnenkamp

2015 Fall (4 Credits)                      Schedule:            T 0100 PM - 0259 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This seminar course examines the role of folklore and notions of cultural authenticity in the construction of the modern Chinese nation. With the launching of the "Folklore Studies Movement" in the 1910s, Chinese intellectuals discovered new sources for defining their cultural identity in the songs, legends and customs of the countryside. Ever since then, different representations of folk culture have been enlisted to define modern life in China, from the appropriation of folklore to create a new literature and the critical study of Chinese society through the lens of folk narratives and beliefs, to the adaptation of folk culture for disseminating revolutionary politics. We will look at folklore itself, sources on the study of folk culture, and modern works of poetry, fiction, film and music to examine the influence of ideas about cultural authenticity on literature, social science and politics in China over the span of the last century.

Course Notes:         This course will be taught by Max L. Bohnenkamp, EALC College Fellow.

Chinese Literature 131

Literatures of Excess in Modern China (160440)

Max Bohnenkamp

2016 Spring (0 Credits)                      Schedule:            MW 0100 PM - 0229 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

Realism has often been regarded as a dominant force in modern Chinese literature, but other styles of representation have also been important to Chinese literary creativity during the 20th century. This course examines the significance of three modes of literary "excess" that disrupt the expectations of realism- the fantastic, the grotesque and the sublime –in the history of Chinese literature from the late-Qing dynasty to the late-20th century. While each of these modes possesses links to traditional Chinese culture, they have also provided new expressive resources for reflecting the reconfiguration of social values and human perception in China during the modern era. Focusing on close readings of fiction, poetry and drama, we will examine how Chinese writers have used the fantastic to transgress the boundaries of the real, employed the grotesque to expose reality's ugliness, and invoked the sublime to try to invest literature with the potential to change reality.

Course Notes:         This course will be taught by Max L. Bohnenkamp, EALC College Fellow.

Chinese Literature  140 Section: 01
The Greatest Chinese Novel (108229)
Wai-Yee Li
2016 Spring (4 Credits) Schedule: T 0100 PM - 0359 PM
Instructor Permissions: None Enrollment Cap: n/a
The Story of the Stone (also known as The Dream of the Red Chamber) by Cao Xueqin (1715?-1763) is widely recognized as the masterpiece of Chinese fiction. It is also a portal to Chinese civilization. Encyclopedic in scope, this book both sums up Chinese culture and asks of it difficult questions. Its cult status also accounts for modern popular screen and television adaptations. Through a close examination of this text in conjunction with supplementary readings and visual materials, the seminar will explore a series of topics on Chinese culture, including foundational myths, philosophical and religious systems, the status of fiction, conceptions of art and the artist, ideas about love, desire and sexuality, gender roles, garden aesthetics, family and clan structure, and definitions of socio-political order.

Chinese Literature  207
Between History and Literature (159552)
Wai-Yee Li
2015 Fall (4 Credits) Schedule: W 0100 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 30
This course will explore what it means to read historical texts as literature and to take a historical view of literary texts. What role should historical understanding and historical imagination play in literary criticism? What is the place of subjectivity in historical knowledge and the role of imagination in the writing of history? How do allegorical and philological interpretations function in the reading of "historical" and "literary" texts? Readings will include canonical texts deemed foundational for both history and literature (e.g., Zuozhuan, Shiji), pairings of anecdotal literature and historiography (e.g., Shishuo xinyu and Jinshu), reflections on the meanings of wen and the rhetoric of historical writings (e.g., Wenxin diaolong, Shitong, Wenshi tongyi), poetry that defines the evolving ideal of the poet-historian (e.g., poems by Du Fu, Qian Qianyi, Wu Weiye), and seventeenth century drama focused on the representation of history (e.g., Li Yu's Qingzhong pu, Kong Shangren's Taohua shan).

E Asian Film & Media Studies  111

East Asian Media Studies (159551)

Alexander Zahlten

2016 Spring (4 Credits)  

Schedule: M 02:00 PM - 03:59 PM  

Instructor Permissions: None  

Enrollment Cap: n/a

This course explores the explosion of media in East Asia and the resulting forms of media production, circulation and consumption that transform everyday life, economy and politics. From pop culture phenomena such as K-Pop, fan fiction and internet platforms such as Sina Weibo, 2channel or DC Inside, from mobile phone culture to video games and social networks used in political protests, complex media forms and practices are developing with lightning speed across the region and exerting global influence. The starting point of the course are questions such as: What effects does this intense new media environment have in East Asia? How are ways of thinking and behaving adjusting to completely new forms of media? What are the consequences for the future of East Asia? How do media influence us in ways that go beyond the films, music, games, news or other forms that they supply us with? For Spring 2016 there will be film screenings once or twice a month on Thursdays 5-7 pm.

E Asian Film & Media Studies  112

Global Japanese Cinema (159550)

Alexander Zahlten

2015 Fall (4 Credits)  

Schedule: W 02:00 PM - 03:59 PM  

Instructor Permissions: Instructor  

Enrollment Cap: n/a

This course introduces Japanese cinema and its key works, styles and history as a highly influential part of global film culture. From the use of slow-motion in action scenes to the role of robots in Star Wars, cinema from Japan has left its mark on film as we know it today. Indeed Japanese film has influenced not only the history of film itself, but also the very way we think about film and film aesthetics. The course examines major historical developments in the cinema of Japan and surveys many of its most important films and their historical contexts. It explores some of the major questions that cinema from Japan has raised for thinking about the cinematic form and moving images. Through engaging with some of the masterpieces of Japanese cinema participants will acquire tools and methods for analyzing film. In the context of Japanese film history they will interrogate terms such as "national cinema", "humanism", "film auteur", "gender" or "modernism" and explore how cinema in Japan itself actively wrestled with such concepts. The course will center around questions such as: Is there such a thing as "Japanese" cinema? What
kind of influences and counter-influences were exerted between cinema in Japan and the global context? How has cinema from Japan changed how we think about film and moving images? Which potential does it hold for radically changing our thinking about film and moving images even today?

In addition to class meetings on Wednesday 2-4, there are film screenings on Monday 5-7.

**Course Notes:**
Japanese language skills are not required. This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding.

**E Asian Film & Media Studies 140**

Anime as Global Popular Culture (125611)

*Tomiko Yoda*

2015 Fall (4 Credits)  
**Schedule:** TR 0130 PM - 0259 PM

**Instructor Permissions:**  
Instructor  
**Enrollment Cap:** 38

This course examines Japanese animation (or *anime*) through its generic conventions, formal aesthetic, and narrative motifs. At the same time, the course approaches anime as a lens through which we study contemporary media culture and its local and global production, distribution, and reception. In this sense, anime will be treated as a node in an extensive transnational network involving commercial as well as non-commercial mediums such as graphic novels, live-action films, video games, character merchandises, and fanzines/fan-events.

In addition to class meetings on Tuesday and Thursday 1:30-2:59, there are film screenings on Monday 7-8:59.

**Course Notes:**  
This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding. Course limited to 38.

**Class Notes:**  
Tu., Th. 1:30-3:00. Weekly film screening Monday, 7-9. Enrollment limited to 38.

Topics in Chinese Film and Media Studies: Seminar (109511)

_Jie Li_

_Max Bohnenkamp_

2016 Spring (4 Credits)  

**Schedule:**  
R 0200 PM - 0359 PM

**Instructor Permissions:**  
Instructor  
Enrollment Cap: 15

This course addresses the question "What was/is cinema in China?" from shadow puppets to DV documentaries. Topics include cinema's arrival in China, silent film stars, sound film sing-alongs, wartime collaborations, mobile projection teams, revolutionary model operas, and Chinese cinema's transnational connections. Focus for Spring 2016: Musicals.

**Topic:** Musicals

**Course Notes:** This course will be taught by Jie Li, EALC Assistant Professor, and Max Bohnenkamp, EALC College Fellow.

**Class Notes:** Film Screenings on Tuesdays 6-8 pm

East Asian Studies  97AB

Introduction to the Study of East Asia: Issues and Methods (145419)

This interdisciplinary and team-taught course provides an introduction to several of the approaches and methods through which the societies and cultures of East Asia can be studied at Harvard, including history, philosophy, literary studies, political science, film studies, anthropology and gender studies. We consider both commonalities and differences across the region, and explore how larger processes of imperialism, modernization, and globalization have shaped contemporary East Asian societies and their future trajectories.
Course Notes: Required of sophomore concentrators and secondary field candidates. Open to freshmen. EAS 97ab may not be taken Pass/Fail.

Class Notes: James Robson and members of the Department

Junior Tutorial - The Study of East Asian Religions (146249)

James Robson

2016 Spring (4 Credits)       Schedule:               T 0200 PM - 0259 PM
Instructor Permissions: None       Enrollment Cap:  n/a

This tutorial is designed to deepen and extend the student's knowledge of the study of East Asian religions. It will build on the student's foundational understanding of the development and history of Buddhism, Daoism, Confucianism, Shinto, and various forms of popular religion, by situating that material in the context of larger issues in the study of East Asian religions. The overarching concern within this tutorial will be on reading and discussing methodologically oriented scholarship that will introduce the student to new and intellectually engaging approaches to the various traditions covered.

Course Notes: EAS 98a, 98b, 98d, 98g or a substitution approved by the Director of Undergraduate Studies is required for all EAS concentrators

Recommended Prep: Culture and Belief 33: Introduction to the Study of East Asian Religions. If students have not previously taken this course, they are required to attend those lectures concurrently with this tutorial.

Major Religious Texts of East Asia (143833)

Ryuichi Abe
2015 Fall (4 Credits) Schedule: W 0200 PM - 0429 PM
Instructor Permissions: Instructor Enrollment Cap: 12
This course aims at enabling students to read and analyze in depth major religious texts of East Asia, representing diverse traditions and genres. The course encourages students to take up their reading of texts not only as ways to acquire knowledge on Asian religious traditions, but as practice, labor, and play in which their ordinary way of understanding/experiencing the world and themselves will be challenged, reaffirmed, and renewed.

Ceramic Arts of Korea (160436)

Maya Stiller
2016 Spring (4 Credits) Schedule: R 0100 PM - 0259 PM
Instructor Permissions: None Enrollment Cap: n/a
From ancient to modern times, people have been using ceramics as their basic utensils to protect, store, cook and eat, resulting in the production of different forms of ceramics. In this course, we will examine the formal features of ceramic objects such as the Koryŏ period porcelain teacup or the Chosŏn period stoneware food vessel. We will analyze the production of Korean ceramics within the social and political framework of East Asian cultures and study the history of their reception in Europe and the United States. Through critical approaches from art history, archaeology and anthropology, students will explore aspects of the objects in detail as they pertain to ceramic
analysis, including consumption as well as patronage, collecting, connoisseurship and historiography both within and outside Korea. A hands-on approach to the examination of ceramic objects in the collections of the Harvard Art Museum and an introductory tour in the art of pottery making at the Harvard Ceramics Studio will complement classroom studies.

Course Notes: This course will be taught by Maya Stiller, post-doctoral fellow in the Korea Institute and EALC Lecturer.

Fighting Poverty in China: Welfare and Disaster Relief in Comparative Perspective (130618)

*Nara Dillon*

2016 Spring (4 Credits)  

**Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 10

This course is a research seminar on the political economy of poverty and inequality in China. Because China has tried such a wide variety of methods to combat poverty, it provides a useful "laboratory" for analyzing different anti-poverty policies. After an introduction to theories of the welfare state and international humanitarian relief, students will examine disaster relief and the welfare state in China, with comparisons to Europe, North America, and other developing countries.

Japanese 106B
Kambun (111790)
Sachiko Kawai
2016 Spring (4 Credits) Schedule: W 1200 PM - 1259 PM
MF 1100 AM - 1159 AM
Instructor Permissions: None Enrollment Cap: n/a

The goal of this course is to acquire skills to read and analyze Kambun (Sino-Japanese scripts used in Premodern Japan). Despite its antiquated and difficult character, Kambun is still important; without mastering it, we will never be able to thoroughly understand Japanese culture and society. After consolidating our foundational skills to analyze Kambun, we will read various Kambun texts organized by certain themes—significant events, historical figures, gender roles, religious ideas, and material goods—in order to advance our knowledge about Premodern Japanese history, culture, and society. For example, we will explore the lives of courtiers, warriors, religious followers, and female landlords, such as Heian courtier official Fujiwara no Munetada and royal princess Hachijō-in. By reading records on piracy, diplomacy, and natural disasters, we will also learn about different historical phenomena. The significance of Kambun training is to not only acquire an understanding of the grammatical rules and vocabulary; the real challenge and excitement of Kambun learning is to understand the society that developed the language, and to see how the language in turn shaped the society.

Course Notes: This course will be taught in Spring 2016 by Sachiko Kawai, EALC College Fellow.
Class Notes: Prerequisite: Japanese 106a or equivalent.

**Japanese History 115**

Religion and Society in Edo and Meiji Japan (119697)

*Helen Hardacre*

2016 Spring (4 Credits)  
**Schedule:** T 1000 AM - 1159 AM  
Instructor Permissions: None  
Enrollment Cap: n/a

Examination of religion and society in Japan from 1600-1912, beginning with an era of state control over religious institutions and religious affiliations of the populace, followed by the demise of the Edo-period system and diversification of religious practice in context of rapid social change, modernization, and imperialism during the Meiji period. Separate section for students able to utilize primary sources in Japanese will explore the Maruzen Meiji Microfilm collection in the Harvard-Yenching Library.

Course Notes: Offered jointly with the Divinity School as 3957.

Recommended Prep: General knowledge of Japanese history and religion is helpful.

**Japanese History 121** Section: 01

Comparative History of Women and Gender In East Asia up to WWII (160511)

*Sachiko Kawai*

2016 Spring (4 Credits)  
**Schedule:** MW 0200 PM - 0329 PM  
Instructor Permissions: None  
Enrollment Cap: n/a

A comparative perspective is a challenging but important approach for studying women's and gender history; it helps us generate new questions by seeing things that have been taken for granted. In this course, we will learn the histories of East Asian women by investigating changing gender roles and power relations from approximately 600 to 1945. Under important topics such as female rulership, legal rights, family, religion, and sexuality, we will compare experiences and representations of Japanese, Korean, and Chinese women, to understand diverse but still shared cultures from which East Asian women and men invented new customs and traditions. The relationship between authority and power is a central theme for this course. We first define authority and power. Then we will investigate historical cases in which women successfully or unsuccessfully used their authority and wielded power to accomplish their goals by negotiating challenges related to their gender roles and existing social expectations. Although we will focus on cases of women, we will compare those with other cases (men, transgenderism, etc.) to fully understand complex authority-power relations. While examining course materials in a roughly chronological order, we will refer back to previously discovered information and ideas by focusing on several important questions: 1) Did women have legally or socially acknowledged rights? If so, what kinds of rights were they? How did women use them? 2) When women lacked certain rights, under what circumstances did women still exercise power? And
how? 3) Is there an underlying force that tends to maintain gender disparity? How did it shape institutional and sociculteral mechanisms and affect the experiences of women and men as well as gender construction?

### Japanese History  203

**Women, Court, and the Japanese Monarchy: 600-1400 (160510)**

*Sachiko Kawai*

2015 Fall (4 Credits)  
**Schedule:** W 0200 PM - 0459 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Historians call the late Heian and early Kamakura period "a time of the governance by the retired monarchs" (*insei*), thereby emphasizing the political influence of retired male royals. This master narrative, however, suggests that early medieval Japan was steadily becoming a more patriarchal and male-dominant society. This obscures a more complex explanation of court politics and power relations. This storyline also dismisses the fact that royal women received a title of *nyoin*, which was the female equivalent to a retired male monarch. In this course, we will examine premodern Japanese kinship and kingship by exploring the history of royal women and supporters of the court, including female attendants, warriors, and local estate officials. Likewise, we will investigate how Heian and Kamakura court women managed to access power and pursued their own political, cultural, and religious goals although they were limited in obtaining official government posts. Throughout the course we will also think about how studies of the Japanese court and monarchy have been echoed in questions asked by scholars of other regions and times.

**Course Notes:** This course will be taught by Sachiko Kawai, EALC College Fellow.
Japanese History 214R
Major Issues in the Study of Japanese Religions (159553)

Helen Hardacre

2015 Fall (4 Credits)  
**Schedule:** W 1000 AM - 1159 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

This seminar is primarily for graduate students preparing for research and teaching in Japanese religions. Because it will have a different focus each time it is offered, students may take it more than once. The topic for Fall 2015 will be ethnographic studies of Shinto. Future offerings of the course will focus on such topics as shrine festivals (*matsuri*), religion in the Japanese empire, and Japanese new religious movements. Most readings will be in English, but Japanese-language readings will also be included.

**Topic:** Ethnographic Studies of Shinto

**Course Notes:** Offered jointly with the Divinity School as 3961.

Japanese History 271R
Research in Early Modern Japanese History: Seminar (126630)

David Howell

2016 Spring (4 Credits)  
**Schedule:** F 0100 PM - 0359 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This seminar deals with the politics, society, and culture of Japan from the late sixteenth to the mid-nineteenth centuries. Readings will include primary and secondary sources in Japanese and English. Students will write a major research paper.

Japanese Literature 162
Girl Culture, Media, and Japan (125615)
The course examines the ways in which girlhood and girl culture have figured in the construction of gender, nation, and popular medias in modern to contemporary Japan. We will study visual and textual mediums, including novels, magazines, films, manga, and animation, paying attention to principal transformations that have marked the history of modern girl culture in Japan. No prior knowledge of Japanese language or history is expected.

**Enrollment Cap:** n/a

Korean Bx is an accelerated course designed to meet the linguistic needs that are unique to heritage language students as well as those who have prior significant exposure and background to Korean language and thus possess some listening and speaking skills. This course will cover important grammatical structures and materials covered in Elementary Korean (Ba and Bb) with the focus on strengthening the basic foundation of Korean grammar for the purpose of providing tools to build upon the existing level of each student’s Korean language ability. The goal of the course is to fast track such learners to the pre-advance level upon completion of Fall and Spring semester.

**Class Notes:** Classes meet five days a week, additional discussion sections to be arranged.

This lecture course introduces students to select representations of Korean literature through literary works and their contexts from the 9th through the early 20th centuries. Lectures will be on the socio-cultural, historical, political, and philosophical contexts within which the texts, their writers' lives, their customs, their worldviews were embedded. Readings include original texts in translation and parallel scholarly commentaries. Students will read diverse genres of writing including biographies, memorials, poetry, songs, letters, fictional prose, travelogues, memoirs, folklore, and p'ansori. Some of our literary texts may perfectly fit our understanding of what a literary text is supposed to be, while others will challenge us to expand the boundaries of what we define as literature. The course aims to uncover sensibilities that constituted what Koreans during this period perceived as literary and literature-like. Combining lectures and deep reading of the course materials for class discussions, the course also uses visual representations such as paintings, maps, and old books, and portrayals of traditional Korean literary practices in film and television. Those interested in East Asian literature, history, and society will find this course useful.

Korean Literature 211

Korea through Ideologies of Languages and Writing: Seminar (156593)

Si Nae Park

2016 Spring (4 Credits)  
Schedule: M 0300 PM - 0529 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Koreans before the 20th century used literary Chinese and Chinese characters as the primary means of written expression. Present-day Koreans find this a vexing fact. What ideas of language and writing underpin such collective discomfort? This course examines how discourses on language and writing in Korea have shaped the ways in which Koreans imagined literary practices, cultural identity, power, gender, and literature. Our focus is Korea's long-time participation in and modern abandonment of the Sinographic Cosmopolis, but some of the readings will illustrate parallel cases of language ideologies in Japan, Vietnam, and China.

Introduction to economic issues and basic principles and methods of microeconomics: how markets work, market efficiency and market failure, firm and consumer behavior, policy issues such as taxation, international trade, the environment, and the distribution of income.

Course Notes: Ec 10A Microeconomics (taught in the fall term) is a prerequisite for Ec 10B macroeconomics (taught in the spring term). Taught in a mixture of lectures and small sections. No calculus is used, and there is no mathematics background requirement. Designed for both potential Economics concentrators and those who plan no further work in the field. The Department of Economics strongly encourages students considering concentration to take both Ec10A and Ec10B in their freshman year. This is a required course for all economics concentrators and a prerequisite for higher level courses in economics. This course, when taken for a letter grade together with Economic 10b, meets the General Education requirement for either Empirical and Mathematical Reasoning or United States in the World, but not both.

Class Notes: Microeconomics (taught in the fall term) is a prerequisite for macroeconomics (taught in the spring term). Students may elect to take only the fall microeconomics course and receive a half-course credit. Taught in a mixture of lectures and small sections. No calculus is used, and there is no mathematics background requirement. Designed for both potential Economics concentrators and those who plan no further work in the field. The Department of Economics strongly encourages students considering concentration to take the full-year course in their freshman year. This is a required course for all economics concentrators and a prerequisite for higher level courses in economics. This course, when taken for a letter grade together with Economic 10b, meets the General Education requirement for either Empirical and Mathematical Reasoning or United States in the World, but not both.

M., W., F., at 12. Sections also meet at 9, 10, 11, 12, 1, or 2.

N Mankiw and members of the Department

Economics 970 Section: 005

Tutorial - Sophomore Year (122752)

Kiran Gajwani

2015 Fall (4 Credits) Schedule: TR 1000 AM - 1129 AM

Instructor Permissions: Department Enrollment Cap: n/a

A series of seminars taught in small sections focusing on applications of economic theory to real problems.

Course Notes: One term required of all Economics concentrators. Enrollment limited to concentrators. Has an introductory meeting. Meets in assigned section thereafter.

Recommended Prep: Economics 10a and 10b (or equivalent); Statistics 100, 104, or 110; and Economics 1010a1, 1010a2, or 1011a.

Requirements: Prerequisite: (Statistics 100 OR Statistics 104 OR Statistics 110) AND (Economics 1010a OR Economics 1011a)

Economics 980B
Education in the Economy (126777)

Claudia Goldin
Lawrence Katz

2016 Spring (4 Credits) Schedule: M 0200 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 20

An exploration of the role of education in the economy using historical, comparative, and current policy perspectives. Topics include the theory of human capital, role of education in economic growth and distribution, the educational production function, vouchers, charter schools, class size, standards, school equalization, for-profit educational institutions, and the gender gap in college completion. A serious research paper is required, as are several short critical essays of the literature.

Course Notes: This course requires special action - application or lottery - to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.

This course requires attendance to all 12 classes.

Class Notes: M., 2–4

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Measuring and Modeling Social Networks (160356)

Benjamin Golub

2015 Fall (4 Credits)                  Schedule: M 1100 AM - 1259 PM
Instructor Permissions: Instructor    Enrollment Cap: 30

Social networks consist of relationships that carry information, mediate trade, and facilitate cooperation. Online platforms generate "big data" records of what is going on in such networks at unprecedented levels of detail. How do we make sense of the data, and how can we use it to make decisions—as individuals, within companies, and as a society? This seminar teaches models from the economics and statistics of networks that are essential to the task. Topics include ideas going viral, online markets, and social influence. Students will complete a final project that either develops an original model or applies an existing one to analyze real-world data.

International Trade Policy (110067)

Elhanan Helpman

2015 Fall (4 Credits)                  Schedule: M 0400 PM - 0559 PM
Instructor Permissions: Instructor    Enrollment Cap: n/a

Provides a discussion of the economic impacts of international trade policies and the political economy of trade policy formation. The course will focus on analytical methods and therefore requires knowledge of calculus.

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Requirements: Prerequisite: (ECON 1010a OR 1011a) AND (ECON 1010b OR 1011b) AND (STAT 100 OR 104 OR 110) AND (ECON 1123 OR 1126)

Economics 980W
Policy Options in Health and Environmental Economics (107675)

Ariel Pakes

2016 Spring (4 Credits)                  Schedule: T 0200 PM - 0359 PM
Instructor Permissions: Instructor    Enrollment Cap: n/a

The seminar will focus on policy issues in two areas; health economics, and environmental economics. We will read
papers on an assortment of policy options and formulate frameworks for analyzing their likely impacts on outcomes of interest. Examples from health care include the analysis of mergers in hospital markets and the choice of capitation vs fee for service contracts. Examples from environmental economics include the choice between tradeable pollution permits and pollution taxes. Where possible we will use data and do the analysis quantitatively. Some knowledge of microeconomic and statistical tools, particularly those related to industrial organization, will be assumed.

Course Notes: This course requires special action- application or lottery- to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980X

Economics of Work and Family (108892)

*Claudia Goldin*

2015 Fall (4 Credits)  

**Schedule:** M 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

How are the most personal choices and life transitions decided? When and whom do you marry, how many children do you have, how much education should you obtain, and which careers or jobs will you pursue? Much will be explored in terms of change over time, particularly concerning the economic emergence of women and the growing role of government. Readings draw on economic theory, empirical analyses, history, and literature from the 19th century to the present.

Class Notes: This course, when taken for a letter grade, meets the General Education requirement for United States in the World.

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980Y

The Psychology and Economics of Beliefs (160328)

*Matthew Rabin*

2015 Fall (4 Credits)  

**Schedule:** T 1000 AM - 1159 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 30
This junior seminar focuses on how individuals and groups come to form beliefs about important things in their lives. What medicines are effective? What lifestyles are healthy? What investment strategies make sense? What careers are lucrative and rewarding? What is the right way to raise children? What economic systems are efficient and fair? We will review theories and evidence about how individuals develop their beliefs from personal observations and experience, and how people learn from each other. The organizing theme will be to compare the assumption of full rationality that is traditional in economic theory to evidence identified by psychologists and others about the types of errors people make. We will also explore what consequences these errors have. When do people become overconfident in their beliefs? Or instead not learn as much as they should? Are people’s beliefs internally consistent? When do groups of people all come to the same conclusions, vs. “polarize” into very different beliefs? Because of the heavy emphasis on rigorous formal theories and measurements along the lines of mainstream economics, the course requires background in microeconomics, mathematics, and statistics. Required readings for the course will include academic research in psychology, economic theory, empirical economics, and historical and sociological research describing the prevalence and changes in beliefs over time. The core requirement is to develop an independent research project in the tradition of theoretical or empirical economics, but regular reading and participation in will also be required.

### Economics 980Z

Empirical Research on Economic Inequality (160329)

*Maximilian Kasy*

2015 Fall (4 Credits)  
**Schedule:** T 0200 PM - 0359 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

The purpose of this class is twofold. First, to teach you something about economic inequality, some of its causes, and how it is affected by policy. Second, to teach you econometric methods which have been used in the literature on economic inequality, preparing you to do your own research on this topic, or related topics, and to maybe write an undergrad thesis. We will focus mostly on mechanisms affecting income inequality, such as racial discrimination, (de)unionization, minimum wages, shifts in labor demand due to changes in technology and trade, shifts in labor supply due to migration, intergenerational transmission of economic status, and taxation. We will talk a little bit about the historical evolution of income and wealth inequality, and a little bit about international inequality; mostly, though, we will focus on mechanisms affecting the distribution of incomes in the United States.

Economics 985UB
Research in Macroeconomics, Trade, and Finance (160784)

Stephanie Lo

2016 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Workshop for seniors writing theses. Especially for work in macroeconomics, trade, or finance, but open to all fields. Emphasis on choice of research topics, methodology, and data sources. Course requires written and oral presentations of work in progress leading toward completion of a major research paper or senior honors thesis. Part two of a two-part series; students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Economics 990A
Tutorial - Senior Year (121184)

Jonas Poulsen

2016 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

For students writing a senior thesis out of sequence. Part one of a two part series.

Course Notes: Students who are writing a senior thesis out of sequence (i.e., beginning in the spring) must enroll in Economics 990 in the spring and complete the course in the fall. Students must write a 25-page paper at the end of the first term of Economics 990. Students currently enrolled in Economics 985 may not enroll in Economics 990.

Economics 990B
Tutorial - Senior Year (159994)

2015 Fall (4 Credits) Schedule:
Instructor Permissions: Instructor Enrollment Cap: n/a

For students writing a senior thesis out of sequence. Part two of a two part series.

Course Notes: Students who are writing a senior thesis out of sequence (i.e., beginning in the spring) must enroll in Economics 990A in the spring and complete the
An economist and a humanist, together with professors from the natural sciences, analyze familiar conceptual and policy-relevant issues from viewpoints of their respective disciplines. For example, how do we measure inequality, and at what point does it become problematic (and how do we know)? How then should it be addressed (e.g., tax code, minimum wage)? What are the best policies to confront job losses from technology? What does sustainable growth mean? The goal is not merely to examine four intertwined issues "growth, technology, inequality, and evolution" but also to understand the distinct concerns and methods of the humanities, social sciences, and natural sciences.

Course Notes: Students who wish to receive economics concentration or secondary field credit must enroll in Econ 1000a. Econ 1000a and b are differentiated only by their sections and by some assignments. The common classes are the same for all students. Econ 1000a, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Recommended Prep: For Economics concentrators: Economics 10a. For others: Ec 10a or completion of General Education EMR requirement or equivalent.

Economics 1011A
Intermediate Microeconomics: Advanced (120711)

2015 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Economics 1011a is similar to Economics 1010a, but more mathematical and covers more material. The course teaches the basic tools of economics and to apply them to a wide range of human behavior. Prerequisites for this course include Mathematics 21a or permission of the instructor.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning. Economics 1011a fulfills the intermediate microeconomic theory requirement for Economics concentrators. Students may take either Econ 1010a or Econ 1011a for credit. However, starting in Fall 2014, concentrators who receive less than a B- in this course must enroll in Economics 975a (Microeconomic Theory Tutorial). Exception: Concentrators who already took their macroeconomic theory requirement (Econ 1010b/1011b) prior to Fall 2014 are held to the old rule: concentrators who earn below an average grade of B-/C+ in their two economic theory requirements must enroll in Econ 975.

Recommended Prep: Mathematics 21a or permission of the instructor.

Cultural Economics (122655)

*Alberto Alesina*

2015 Fall (4 Credits)  
**Schedule:** MWF 1100 AM - 1159 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Explores the importance of culture on economic outcomes, focusing on how heterogeneity of preferences affects economic choices and where those differences come from. Theoretical topics include group identity, social interactions and networks, evolutionary selection, the importance of the family. Empirical applications include international investment, savings, occupational choices, ethical norms, economic development, fertility decisions.

**Recommended Prep:** Economics 1010a1, 1010a2, or 1011a, and Economics 1123.

**Additional Course Attributes:**

Economics 1034

Networks (160360)

Benjamin Golub
Yaron Singer

2015 Fall (4 Credits)

Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: Instructor
Enrollment Cap: n/a

Networks—of social relationships, economic interdependencies, and digital interactions—are critical in shaping our lives. This course introduces models and algorithms that help us understand networks. Fundamental concepts from applied mathematics, microeconomics, and computer science will be presented through the lens of network science, in order to equip students to usefully analyze the “big data” generated by online networks. Applications discussed include the viral spread of ideas, maximizing influence, and the contagion of economic downturns. Concepts and tools covered include game theory, graph theory, data mining, and machine learning.

Class Notes: Course Link http://networksatharvard.com/

Recommended Prep: Ec10a or equivalent or permission of instructor.
Game theory is the study of interdependent decision-making. In the early days of the cold war, game theory was used to analyze an emerging nuclear arms race; today, it has applications in economics, psychology, politics, the law and other fields. In this course, we will explore the "strategic way of thinking" as developed by game theorists over the past sixty years. Special attention will be paid to the move from zero-sum to nonzero-sum game theory. Students will learn the basic solution concepts of game theory -- including minimax and Nash equilibrium -- by playing and analyzing games in class, and then we will take up some game-theoretic applications in negotiation settings: the strategic use of threats, bluffs and promises. We will also study the repeated prisoner's dilemma and investigate how cooperative behavior may emerge in a population of rational egoists. This problematic -- "the evolution of cooperation" -- extends from economics and political science to biology and artificial intelligence, and it presents a host of interesting challenges for both theoretical and applied research. Finally, we will consider the changing context for the development of game theory today, in particular, the need to achieve international cooperation on economic and environmental issues.

The course has two main objectives: to introduce students to the fundamental problems and solution concepts of noncooperative game theory; and to provide an historical perspective on its development, from the analysis of military conflicts to contemporary applications in economics and other fields. No special mathematical preparation is required.

**Recommended Prep:** Economics 10a
insight on how to promote more effective giving (should contributions be observable?) and better policy (should the law distinguish between crimes of omission and commission?). Through the readings, students will gain exposure to relevant literatures in experimental economics, as well as evolutionary biology and social psychology. Students will gain a facility with lab and field experimental methods, as well as the relevant game theory and dynamic models. The class is primarily discussion based; students are expected to read and be prepared to discuss cutting edge research papers each class. There will also be 2-3 problem sets over the course of the semester, and 2-3 writing assignments, including a final project in which students are required to design original research. This class is a particularly good fit for: students wishing to launch or join non-profits and socially responsible businesses; those who have an interest in politics or policy; and, those wishing to do research—especially experimental or behavioral—related to charity or altruism, perhaps in preparation for their honors theses.

**Economics 1080**

Great Theorems of Microeconomic Theory (160362)

*Jerry Green*

2016 Spring (4 Credits)  
**Schedule:** MW 1000 AM - 1059 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course surveys the most important results in microeconomics that have shaped the field in the years since WWII. It has two objectives: (i) To understand how the questions were posed, who the innovative researchers were, and what external influences drove them to approach the subject as they did. This ¼ of the course is the modern history of micro-economic thought. (ii) The major results themselves. This ¾ of the course is quite technical. The lectures will explain and introduce these results in their historical context, and provide the mathematical background. Class participants will present proofs of the results in section.

The major theorems covered come from choice theory under certainty and uncertainty, general equilibrium theory, non-cooperative game theory, cooperative game theory, social choice, and the economics of incentives and mechanism design.

Course requirements comprise three papers and one end-of-term take home exam. Section presentations will also be a component of the grade.

**Class Notes:** The class is scheduled M., W., at 10 am in Baker Library 101, at Harvard Business School. The discussion section, scheduled for Fr., at 10 am will take place in Cambridge.

**Economics 1123**

Introduction to Econometrics (123033)

*Gleb Romanyuk*

*Guillaume Pouliot*

*Andrea Passalacqua*
Adam McCloskey

2016 Spring (4 Credits)  Schedule:  MW 0230 PM - 0359 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to multiple regression techniques with focus on economic applications. Discusses extensions to discrete response, panel data, and time series models, as well as issues such as omitted variables, missing data, sample selection, randomized and quasi-experiments, and instrumental variables. Also develops the ability to apply econometric and statistical methods using computer packages.

Course Notes:  Students may take both Economics 1123 and Statistics 139 for credit. However, Statistics 139 will not count as the econometrics requirement for the economics concentration. Also, Economics 1123 may not be taken for credit if taken after Economics 1126, but credit will be given for both courses if Economics 1123 is taken first. This course, when taken for a letter grade, meets the General Education requirement for Empirical and Mathematical Reasoning.

Recommended Prep:  Statistics 100 and 104.

Data Science and Behavioral Economics: Application to Systems Medicine (160352)

Sendhil Mullainathan
Ziad Obermeyer

2016 Spring (4 Credits) Schedule: R 0200 PM - 0429 PM
Instructor Permissions: Instructor Enrollment Cap: 30

Large data sets, combined with advances in "data science", have generated new insights into complex empirical phenomena. We explore how these developments can be transformative for clinical medicine, and for human health and well-being. Since human judgment is at the core of medicine, we draw on insights from behavioral science to explore human decision making and understanding of medicine. We develop the implications of these concepts for health policy and for clinical topics such as cause of death, complications and aging.

Economics 1342
The History of Economic Growth (160351)

Melissa Dell
2016 Spring (4 Credits) Schedule: MW 1000 AM - 1129 AM
Instructor Permissions: None Enrollment Cap: n/a

This course examines the history of economic growth, beginning with the divergence between human ancestors and other primates and continuing through the end of the 20th century. Topics covered include the Neolithic Revolution; economic growth in ancient societies; the origins of modern economic growth; theories and evidence about the institutional, geographic, and cultural determinants of growth; the East Asian Miracle; the middle income trap; the political economy of growth; growth and inequality; and theories and evidence about the persistence of poverty in the world's poorest regions.

Prerequisite: Economics 1010a (1011a)

Economics 1389
Economics of Global Health (124231)

2016 Spring (4 Credits) Schedule: 
Instructor Permissions: None Enrollment Cap: n/a

This course examines health issues in developing countries from the standpoint of applied microeconomic research. Specific topics include: identifying the effect of health on growth and development and identifying the causal
relationships between income, poverty, and health. We will also discuss health care delivery and human resource issues, the challenges of healthcare financing and health insurance, and the tension between equity and efficiency in the allocation of health resources.

**Course Notes:** Offered jointly with the Kennedy School as SUP-518.

**Class Notes:** Guenther Fink and Margaret McConnell (Public Health)

**Recommended Prep:** Economics 1010a1, 1010a2, (or 1011a) and 1123 (or 1126).

The Future of Globalization: Issues, Actors, and Decisions (107821)

*Lawrence H. Summers*

2015 Fall (4 Credits) **Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor **Enrollment Cap:** n/a

What is the right balance between national sovereignty and international integration? Is the US equipped to sustain its role as a global leader? Should we regulate multi-national companies who move their factories to countries with lower labor standards? How should the IMF respond to financial crises in Europe and the developing world? How will the rise of China affect global inequality? These are all questions posed by globalization. This course uses basic economic logic to illuminate the choices faced by businesses, governments, international institutions and citizens as the global economy evolves. Policy issues are debated in class by the professors and students play the role of public and private actors in simulation exercises in order to experience the importance of the decisions made by individual actors for the evolution of the global system.

**Course Notes:** Jointly offered with the Kennedy School as BGP-625. This course, when taken for a letter grade, meets the General Education requirement for Societies of the World.

**Class Notes:** Lawrence H. Summers (University Professor; Economics) and Robert Z. Lawrence (Harvard Kennedy School)

**Recommended Prep:** Ec 10a, or equivalent economics background, or permission of instructor.

Public Economics: Designing Government Policy (117818)

*Martin Feldstein  
Casey Rothschild*
This course analyzes what role the government should play in a market economy. It covers topics such as tax and welfare policy, unemployment insurance, environmental protection, education policy, social security

Course Notes: Students should have some knowledge of basic calculus and statistics, but there is no formal mathematics prerequisite. Offered jointly with the Kennedy School as SUP-125. This course offers an optional writing requirement which if completed will satisfy the concentration writing requirement.

Class Notes: M., W., (F.), 2:00-3:30, and a weekly section to be arranged.

Recommended Prep: Economics 1010a1, 1010a2, or 1011a, or permission of instructor.

Analytic Frameworks for Policy (107613)

Richard Zeckhauser

2015 Fall (4 Credits) Schedule: TR 1015 AM - 1129 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course develops abilities in using analytic frameworks in the formulation and assessment of public policies. It considers a variety of analytic techniques, particularly those directed toward uncertainty and interactive decision problems. It emphasizes the application of techniques to policy analysis, not formal derivations. Students encounter case studies, methodological readings, modeling of current events, the computer, a final exam, and challenging problem sets.

Course Notes: Jointly offered with the Kennedy School as API-302.

Recommended Prep: Economics 1011a or permission of instructor.

Economics of European Integrations (127519)

_Hans-Helmut Kotz_

2015 Fall (4 Credits)  
_Schedule:_ TR 1000 AM - 1129 AM  
_Instructor Permissions:_ Instructor  
_Enrollment Cap:_ 40

The aim of the course is to give students familiarity with a broad range of European policy issues: integration of markets (for goods, services, and labor), monetary union (ECB) and its consequences for fiscal policy, financial sector regulation as well as supervision. It is offered for students who would like to employ the tools they have learned in principles of economics and introductory micro and macro courses on real world cases. This implies to write and present a paper (mandatory writing requirement).

**Course Notes:** Writing requirement: A research paper is required. This course meets the concentration writing requirement.

**Recommended Prep:** Ec 10a and Ec 10b.

**Additional Course Attributes:**

**Economics 1450R**

Religion and Political Economy (107425)

_Robert Barro_  
_Rachel McCleary_

2016 Spring (4 Credits)  
_Schedule:_ W 0400 PM - 0559 PM  
_Instructor Permissions:_ None  
_Enrollment Cap:_ n/a

Recent research on religion has stressed social-science approaches. Parts of the work assess effects of economic and other forces on religious participation and beliefs. This topic includes models of secularization and of competition among alternative forms of religion, including analyses of the Reformation. Religious conversion and the club model of religious participation will be considered. Other aspects of the research analyze effects of religiosity on microeconomic variables, including work effort, thrift, education, health, and violence. Parts consider the impact of religion on macroeconomic outcomes, including economic growth. Additional work considers the interplay between religion and political institutions, including the role of state religion and interactions with Communism and democracy.

**Course Notes:** Satisfies writing requirement.

**Recommended Prep:** Intermediate Macroeconomics and Microeconomics: Economics 1010a1, 1010a2, or 1011a and Economics 1010b or 1011b.
Economics 1460

Economics of Health Care Policy (122492)

Joseph P. Newhouse

2016 Spring (4 Credits)  
**Schedule:** MW 0840 AM - 0959 AM  
Instructor Permissions: None  
Enrollment Cap: n/a

Policy issues related to the following: the demand for medical care services, especially as a function of insurance; the demand for insurance and issues of selection; reimbursement policies of Medicare and other payers toward health plans, hospitals, and physicians; effects of health maintenance organizations and managed care; and malpractice and tort reform. Focus on federal policy, although state and local perspectives will receive some attention.

**Course Notes:** Students may not take both Economics 1460 and Quantitative Reasoning 24: Health Economics and Policy for credit. Offered jointly with the Kennedy School as SUP-572. This course offers an optional writing requirement which if completed will satisfy the concentration writing requirement.

**Class Notes:** M., W., 8:40–10; and an optional review on F., 10:10–11:30

**Recommended Prep:** Economics 1010a or 1011a. A statistics course is highly desirable.

Economics 1490

Growth and Crisis in the World Economy (125835)

Dale Jorgenson

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

The world economy is gradually recovering from the financial and economic crisis that originated in the United States in 2007-2009. Despite the slow recovery of Europe and the U.S., world economic growth has continued at an accelerated pace since the mid-1990s. This is due to very rapid growth of Asian economies, especially China and, increasingly, India. China overtook the U.S. as the world's largest economy in 2014, while India surpassed Japan in 2012, becoming the world's third largest economy. The growth of the two Asian economic giants is rapidly transforming the world economy. The ultimate objective of Economics 1490 is to assess the prospects for sustainable growth of the world economy in the future. Will slower growth of the U.S., Japan, and the leading economies of Europe lead to worldwide stagnation or will the accelerated growth of the world economy continue?

**Course Notes:** This course satisfies the Economics concentration writing requirement. Students who would like to enroll should submit the application form available on the course website.
**Economics 1535**

International Trade and Investment (111749)

Advanced theoretical and empirical analysis of contemporary international macroeconomic policy issues in both industrialized and developing economies. Topics include exchange rates, international capital flows, debt crises, growth, and policy coordination.

**Economics 1620**

Industry Structure, Strategy, and Public Policy (109289)

2016 Spring (4 Credits)

**Schedule:**

**Instructor Permissions:** None

**Enrollment Cap:** n/a
Provides a systematic economic and historical framework for evaluating industrial policies such as agricultural crop price supports, international dumping and subsidy rules, energy policy, technology policy, competition policy (antitrust), public regulation, and corporate bailouts. It proceeds through a series of 10 industry case studies, in order: agriculture, crude petroleum, petroleum refining, steel, integrated circuits, computers, the Internet, automobiles, pharmaceuticals (domestic and international), and beer. Grading will be on the basis of two short policy papers and a final examination. A longer industry study can be substituted for the final exam.

Course Notes: Jointly offered with the Kennedy School as BGP-201.

Class Notes: F. M. Scherer (Kennedy School)

Additional Course Attributes:

Advanced Economics of the Environment, Natural Resources, and Climate Change (126817)

Martin Weitzman

2016 Spring (4 Credits)  Schedule:  TR 0230 PM - 0359 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

Survey of foundations and applications of the modern theory of environmental and natural-resource economics. What are the basic models and what are they suggesting about policy? Externalities, public goods, common property, strategies for controlling pollution. Dynamics of renewable resources (fisheries, forestry) and dynamics of non-renewable resources (minerals like oil). Discounting, uncertainty, cost-benefit analysis, investment criteria for environmental projects, green accounting, sustainability. Basic economic analysis of climate change as prototype example.

Course Notes:  Students from other concentrations are welcome to take this course for credit.

Class Notes:  Tues/Thurs 2:30-4pm and a weekly recitation F., 2:30-4

Recommended Prep:  Economics 1010a1 or 1010a2.

Economics of Discontinuous Change (112195)

Richard Freeman

2016 Spring (4 Credits) Schedule: TR 0100 PM - 0159 PM

Instructor Permissions: None Enrollment Cap: n/a

Explores discontinuous changes in the economic position of groups and countries and presents mathematical and computer simulation models designed to illuminate these changes. Examples include growth/decline of trade unions, segregation of groups, development of linkages on the internet, changes in corporate work culture, growth of social pathologies in neighborhoods, and Malthusian concerns about the environment. Models include nonlinear simulations, neural networks, finite automata, evolutionary stable strategies, causal conjunctures, agent-based simulations, and genetic algorithms.

Course Notes: Writing requirement: A research paper is required. This course meets the concentration writing requirement. Students should have some mathematical background, but there is no prerequisite.

Recommended Prep: Ec 10a and Ec 10b.

**Economics 1820**

Education Reform in America (108993)

2016 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Introduces students to the methods and the research frontier in the economics of education. The first quarter of the course will cover common statistical methods in applied microeconomics, including instrumental variable models, regression discontinuities, difference-in-differences, and randomized inference. With these tools in hand, the course
will critically survey the economics of education literature, placing particular emphasis on policies and practices
designed to raise achievement among vulnerable populations. Topics will include achievement gaps, the role of
incentives, the rise of charter schools, school turnaround efforts, and education's role in determining economic
outcomes.

**Course Notes:**
Writing requirement: A research paper is required. This course meets the
collection writing requirement.

**Recommended Prep:**
Courses in introductory statistics, econometrics, and/or microeconomics
would be useful preparation, but there are no official prerequisites. A non-
trivial amount of math fluency is expected, however.

**Additional Course Attributes:**

Research in Behavior in Games and Markets (159877)

*David Laibson*
*Drew Fudenberg*
*Tomasz Strzalecki*
*Jerry Green*

2016 Spring (4 Credits)  
**Schedule:**  W 1130 AM - 1259 PM  
**Instructor Permissions:**  Instructor  
**Enrollment Cap:**  n/a

Presents current research in Theory, Behavioral Economics, and Experimental Economics. Students must complete
both terms of this course (parts A and B) within the same academic year in order to receive credit.
Economics 2005HFA
Research in Contracts and Organizations (107608)

Oliver Hart
2015 Fall (2 Credits) Schedule: T 1200 PM - 1259 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

Participants discuss recent research in contracts and organizations and present their own work in progress. Open to doctoral students in economics. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Economics 2005HFB
Research in Contracts and Organizations (160586)

Oliver Hart
2016 Spring (2 Credits) Schedule: T 1200 PM - 1259 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

Participants discuss recent research in contracts and organizations and present their own work in progress. Open to doctoral students in economics. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Economics 2010A
Economic Theory (124134)

Edward Glaeser
Eric Maskin
Covers the theory of individual and group behavior. Topics include consumer theory, producer theory, behavior under uncertainty, externalities, monopolistic distortions, game theory, oligopolistic behavior, and asymmetric information.

Course Notes: Enrollment is limited to students in the Economics and Business Economics PhD programs.

Recommended Prep: Mathematics 116 or equivalent; can be taken concurrently.

Microeconomic Theory I (112942)

*Christopher Avery*

2015 Fall (4 Credits)

**Schedule:** MW 0845 AM - 0959 AM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a
A comprehensive course in economic theory designed for doctoral students in all parts of the university. Topics include consumption, production, behavior toward risk, markets, and general equilibrium theory. Also looks at applications to policy analysis, business decisions, industrial organization, finance, and the legal system. Undergraduates with appropriate background are welcome, subject to the instructor's approval.

Course Notes: Students may receive credit for both API-111 and API-101/API-105 only if API-101/105 is taken first. API-111 and API-109 cannot both be taken for credit. Also offered by Harvard Kennedy School as API-111 and by the Business School as HBS 4010. Please note that the first day of class for this course will be on Friday, September 5, in L-230 at the regular meeting time, 8:30 a.m. - 10 a.m. Thereafter the course will be on Mondays and Wednesdays.

Class Notes: M., W., 8:30-10 and a weekly section to be arranged

Maciej Kotowski

Recommended Prep: Multivariate calculus and one course in probability theory. Thorough background in microeconomic theory at the intermediate level.

Economics 2035  
Psychology and Economic Theory (156371)  
Matthew Rabin  
2015 Fall (4 Credits)  
Schedule:  
M 0100 PM - 0359 PM  
Instructor Permissions:  
Instructor  
Enrollment Cap:  
n/a  
This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economics. Topics include ways utility theory can be improved--such as incorporating reference dependence, news utility, social preferences, self image, and other belief-based tastes--and ways we can relax assumptions of perfect rationality--such as incorporating focusing effects, limited attention, biased prediction of future tastes, present-biased preferences, biases in probabilistic judgment, and errors in social inference. The course will emphasize (a) careful interpretation and production of new evidence on relevant departures,(b) formalizing this evidence into models that can, with discipline and rigor, generate sharp predictions using traditional economic approaches, and (c) exploring economic implications of those models presented. Although we will primarily emphasize (b), the course is meant to be useful to students whose interests lie anywhere in this spectrum, under the premise that all such research will be improved by a greater appreciation of the full spectrum. The course is intended for PhD students in the Business Economics and Economics programs and others who have a solid background in microeconomic theory at the level of introductory PhD courses in these programs. While obviously appropriate to those wishing to specialize in "behavioral economics", the course is also designed for those interested in doing research in particular fields of economics. And while the course centers on theoretical models (learning and evaluation will center around solving formal problem sets), the theory is focused towards its empirical implementability and economic relevance, so that the course is also designed for those interested in theory-influenced empirical research.

### Economics 2098

**Topics in Economic Theory** (156616)

**Matthew Jackson**

2015 Fall (4 Credits)  
**Schedule:** TR 0830 AM - 0959 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Learn how to model social and economic networks and their impact on human behavior. How do networks form, why do they exhibit certain patterns, and how does their structure impact diffusion, learning, and other behaviors? We bring together models and techniques from sociology, economics, math, physics, statistics, and computer science to answer these questions. The course is aimed at a graduate level, but accessible for advanced undergraduates who have are comfortable with matrix algebra and statistics. The course begins with some empirical background on social and economic networks, and an overview of concepts used to describe and measure networks. Next, the course covers a set of models of how networks form, including random network models as well as strategic formation models, and statistical models for working with data. The course then discusses a series of models of how the structure of social networks impacts human behavior, including contagion, diffusion, learning, and peer influences.

**Class Notes:**  
Instructor: Matthew Jackson.

### Economics 2099

**Market Design** (110312)

**Scott Kominers**

2015 Fall (4 Credits)  
**Schedule:** T 0400 PM - 0659 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

This course explores the theory and practice of market design. Key topics include auctions, labor market matching, school choice programs, online markets, organ exchange systems, financial market design, and matching with contracts. The first half of the course will introduce market design and its technology; subsequent weeks will discuss recent papers alongside their classical antecedents.

**Recommended Prep:** Students are recommended to have prior graduate or advanced undergraduate course work in at least one of algorithms, game theory, or microeconomics.

Machine Learning in Econometrics: Prediction, Estimation, and Big Data (156429)

*Sendhil Mullainathan*

2016 Spring (4 Credits)

**Schedule:** R 1130 AM - 0159 PM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

Innovations in machine learning ('big data') have created many engineering breakthroughs from real time voice recognition to automatic categorization (and in some cases production) of news stories. Since these techniques are at their essence novel ways to work with data, they should also have implications for social science. This course explores the intersection of machine learning and social science and aims to answer a few questions about these new techniques: (i) How do they work and what kinds of statistical guarantees can be made about their performance? (ii) How can they be used to answer questions that interest social science researchers, such as testing theories or improving social policy; and (iii) How might they open up new research questions? We will cover standard machine learning techniques such as supervised and unsupervised learning, statistical learning theory and nonparametric and Bayesian approaches. The goal is to create a working understanding of when and how they can be profitably applied. Students will be required to apply some of these techniques themselves, but we will not cover the computational aspects of the underlying methods. The course is aimed at PhD students with a solid background in statistical techniques, such as comes from the equivalent of a first year economics PhD econometrics sequence.
Economics 2162A

Research in Econometrics (111451)

Maximilian Kasy
James H. Stock
Gary Chamberlain
Dale Jorgenson

2015 Fall (4 Credits)  Schedule: M 1230 PM - 0159 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

Participants discuss recent research in econometrics and present their own work in progress. Open to doctoral students in economics. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: This course must be taken Sat/Unsat.

Economics 2326
Economic Development: Theory and Evidence (156605)
Dani Rodrik
2015 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
This course aims to study theories of economic (under)development and scrutinize empirical evidence in order to glean insights to design development policy. The course will identify key features of the development process across countries, and develop an analytical framework, grounded in economic theory, to better understand these patterns. We will then apply our frameworks combined with rigorous empirical evidence to identify when and how public policies can enable economic growth and development. Macro topics include economic growth and its proximate determinants; resource misallocation, learning and coordination and their impacts on productivity; the impact of historical forces on the evolution of (political) institutions and the development process; and the effect of external influences on development. Micro topics include the determinants of and returns to investments in (health and education) human capital; credit markets, savings behavior, and the returns to financial capital; gender; behavioral economics in development; and governance and corruption.

Course Notes:  Jointly offered with the Kennedy School as PED-101.

Class Notes:  Tu., Th., 10:10–11:30 and a Friday review session, 1:10 pm - 2:30 pm

Recommended Prep:  This course requires multivariate calculus and a basic understanding of statistical methods, micro and macroeconomics. Students taking these courses concurrently should seek the instructors' permission.

**Economics 2335**

Economic Divergence in Historical Perspective: The Middle East and Europe (156747)

This course examines the economic rise of the Western World through comparisons with the Islamic Middle East. In particular, we will examine the mechanisms through which feudalism and subsequent events led to the emergence of growth-friendly institutions and examine the extent to which variation in exposure to these historical developments can help explain development outcomes today. In addition, we will investigate the interaction between these institutional developments and Europe's differential rate of human capital formation from the late medieval period through the Enlightenment and their role in determining both the timing and the subsequent diffusion of the Industrial Revolution.

Behavioral Development Economics (160359)

This graduate level course will focus on the intersection of two rapidly growing fields in economics - development economics, and behavioral economics. We will study applications of behavioral economics to development questions, and ask whether there is a special behavioral science of poverty and development. Methods covered will include field experiments, lab experiments, tests of theory and combining experiments with structural estimation.

*Sudhir Anand*

2015 Fall (4 Credits)  
**Schedule:** T 0130 PM - 0320 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a
The course will be focused on an examination of the constitutive role of health in human development, and its instrumental role in economic development. It will include discussion of the conceptual issues and measurement problems in health studies, and also in assessing inequalities in health and healthcare. The correspondence and dissonance in the links between income inequality and health inequality will be investigated, and the challenge of instituting universal health care in poor countries will be examined.

Course Notes: Offered jointly with the Harvard School of Public Health.

2016 Spring (4 Credits)  Schedule: TR 0230 PM - 0359 PM

Instructor Permissions: None  Enrollment Cap: n/a

Survey of foundations and applications of the modern theory of environmental and natural-resource economics. What are the basic models and what are they suggesting about policy? Externalities, public goods, common property, strategies for controlling pollution. Dynamics of renewable resources (fisheries, forestry) and dynamics of non-renewable resources (minerals like oil). Discounting, uncertainty, cost-benefit analysis, investment criteria for environmental projects, green accounting, sustainability. Basic economic analysis of climate change as prototype example.

Requirements:  Prerequisite: Economics 1010a

Economics 2690HFA
Environmental Economics and Policy Seminar (113829)
Robert Stavins
Martin Weitzman

2015 Fall (2 Credits)  Schedule: W 0400 PM - 0529 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

Selected topics in environmental and resource economics. Emphasizes theoretical models, quantitative empirical analysis, and public policy applications. Includes invited outside speakers. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Primarily for graduate students in economics or related fields with environmental interests. Offered jointly with the Kennedy School as API-905Y.

Recommended Prep: Graduate-level course in microeconomic theory.

Asset Pricing I (111998)

John Campbell

2015 Fall (4 Credits)  Schedule: TR 0230 PM - 0359 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

An introduction to financial economics emphasizing discrete-time models and empirical applications. Reviews basic
asset pricing theory. Discusses empirical topics including predictability of stock and bond returns, the equity premium puzzle, and intertemporal equilibrium models.

Course Notes: Offered jointly with the Business School as 4209.

Requirements: Prerequisite: Economics 2010a OR Economics 2020a

Empirical Methods in Corporate Finance (119971)

Samuel Hanson
Victoria Ivashina
Adi Sunderam

2016 Spring (4 Credits) Schedule: T 0230 PM - 0529 PM
Instructor Permissions: None Enrollment Cap: n/a

Examines empirical research in corporate finance. Covers empirical research methodology, financial institutions, and financial policy. Major emphasis is on how to do well-executed and persuasive research in corporate finance.

Course Notes: Structured to minimize overlap with Economics 2725. Seminar format; students write referee reports and a research paper. Offered jointly with the Business School as 4220.

Class Notes: Paul Gompers (Business School), Samuel Gregory Hanson, Victoria Izashina, and Adi Sunderam

Theoretical and Empirical Perspectives on Entrepreneurship: Organizational Economics and Growth (161299)

Josh Lerner
William Kerr

2016 Spring (2 Credits) Schedule: R 0230 PM - 0529 PM
Instructor Permissions: None Enrollment Cap: 30
Entrepreneurship—the formation and growth of new firms—is a complex phenomenon that has historically attracted relatively little academic attention. In recent years, however, scholars in a variety of disciplines have been devoting increasing attention to this topic. This course explores the emerging work in this dynamic area. Reflecting the complex nature of entrepreneurship, the course will touch on literature in a variety of academic disciplines. The 2015-16 class focuses on works from the industrial economics, organizational economics, economic geography, macroeconomics and sociology literatures; the 2016-17 class focuses on works from the corporate finance and labor literatures. Students taking the course for credit will be expected to complete three referee reports and a paper.

The Monetary and Fiscal Policy Seminar (159893)
Emmanuel Farhi
Alberto Alesina
Robert Barro
Seminar speakers present papers on macroeconomic topics, including issues relating to monetary and fiscal policies, economic growth, the role of institutions, and other research issues in the field. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Popularly referred to as the Macro Seminar.

Subject: Engineering Sciences

Engineering Sciences    6
Introduction to Environmental Science and Engineering (116362)
Elsie Sunderland
Patrick Ulrich
2016 Spring (4 Credits) Schedule: TR 0100 PM - 0229 PM
Instructor Permissions: None Enrollment Cap: n/a
This course will provide an introduction to environmental science and engineering through case studies of some of the most pressing environmental issues. Course modules will include climate and air quality; food production and environmental impact; availability and quality of water; species biodiversity and ecosystem services; and ecological economics, risk management and environmental policy. Case studies will provide an introduction to the fundamental principles underlying disciplines in environmental research including chemistry, hydrology, soil science, ecology, statistics, and economics. Engineering solutions to societal problems will be discussed in the context of energy availability, air and water pollution control, design of effective monitoring strategies for ecological populations, and metrics used to evaluate the effectiveness of environmental policies.
Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.
Recommended Prep: The course presumes basic knowledge in chemistry, physics, and mathematics at the high school level.
Additional Course Attributes:

How to Create Things and Have Them Matter (122566)
David Edwards
2016 Spring (4 Credits) Schedule: M 0100 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
Students in this year's "How to Create Things &Have Them Matter" class will form groups around art, design and engineering ideas that relate to the rapidly expanding universe of metamaterials. Students will learn to generate, develop and realize breakthrough ideas while learning basic skills of engineering design, brainstorming, prototyping, and public presentations. These ideas will be brainstormed with artist Chuck Hoferman, whose 2016 exhibition at Le Laboratoire Cambridge will give students a chance to participate in, and contribute to a public art exhibition. The class will include opportunities for summer fellowships to pursue ideas developed in the class including possible international travel.
Course Notes: Open to all students by permission of instructor. All completely passionate students (any concentration) welcomed - no prior experience necessary.
Engineering Sciences 21
The Innovator's Practice: Finding, Building and Leading Good Ideas with Others (128317)
Bethanne Altringer
2015 Fall (4 Credits) Schedule: MW 0900 AM - 1059 AM
Instructor Permissions: Instructor Enrollment Cap: n/a
Students gain experience overcoming many under-represented challenges of becoming an innovator, including: identifying your intrinsic motivations, finding related good ideas, working effectively with others to develop them, and leading innovative professional projects to implementation. Students apply human-centered design processes (observing, interpreting, ideating, testing, refining, planning) to stimulate innovation, negotiate, strategize, and build and lead cooperative teams. Features guest speakers from industry, academia, and involves collaborating with cutting-edge companies.

Course Notes: Offered jointly with the Design School as SCI-06271.

Engineering Sciences 22
Design Survivor: Experiential Lessons in Designing for Desirability (109374)
Bethanne Altringer
2016 Spring (4 Credits) Schedule: MW 0900 AM - 1059 AM
Instructor Permissions: Instructor Enrollment Cap: n/a
Multi-disciplinary course for students interested in designing products and services that are simple, irresistible, delightful, cool, covetable, viral, and, increasingly these days, much more likely to be successful. Students study real world cases of how organizations (e.g., Apple, Gucci, Swarovski) strategically design for desirability. In weekly design challenges, students use analogical transfer to apply these insights to diverse industries and target markets (e.g., health literacy campaigns, declining technologies, the future of luxury). Weekly critique panels with experts enable students to develop their own design point of view and to finish with a diverse design portfolio.

Course Notes: Permission required for all students.

</table>
Course description: Microorganisms produce a diverse array of specialized small molecules as part of their metabolic processes. In this course we will study the production, properties, and characterization of these molecules through the lens of food fermentation. In particular, we will focus on the small molecules that contribute taste and aroma in fermented foods. Students will experience the scientific inquiry process in a creative way by designing and implementing their own research project based on a fermented food of their choosing. Still a field with much potential for discovery, interested students are invited to continue their research project in the summer.

Recommended Prep: Ls1a , LPSA or equivalent; first semester Organic Chemistry recommended but not required.

Engineering Sciences 29

Introduction to Computational Design (110138)

Panagiotis Michalatos

2015 Fall (4 Credits) Schedule: F 1200 PM - 0229 PM
W 0830 AM - 0959 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

This is an introductory course to computational design and the prerequisite for a spring course that deals with more advanced topics in the field. This course is primarily intended for designers with little background in programming who are interested in developing their skills in order to be able to better understand, interface with and customize the digital tools they are using, or develop their own software and interactive applications. The course introduces students to fundamental concepts and techniques in computational design. By the term "computational design" we mean an ad hoc set of methods borrowed from computer science, computational geometry and other fields, and adapted to specific design problems such as design development, fabrication, analysis, interaction and communication.

Course Notes: Offered jointly with the Graduate School of Design as GSD-6338. Meets at GSD. More information can be found <a href="http://services.gsd.harvard.edu/cgi-bin/courses/details.cgi?term=201520&course=SCI-06338-00">here</a>.

Engineering Sciences 50
Introduction to Electrical Engineering (140008)
Gu-Yeon Wei
Christopher Lombardo
2015 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
The main course objectives are to introduce students to the exciting and powerful world of electrical engineering and to explain how gadgets that we use every day actually work. After taking ES 50, you will be able to leverage the power of electricity to build systems that sense, control and program the physical world around you. Examples include intelligent and autonomous systems (robots), audio amplifiers (e.g. guitar amp), interactive art installations, light-shows, mind-controlled machines, and so on.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for either Science of the Physical Universe or Empirical and Mathematical Reasoning, but not both.

Recommended Prep: Enthusiasm, curiosity and desire to build things! Previous engineering or programming experience is NOT needed. The amount of high school physics required is minimal, and is limited to basic concepts only.

The Joy of Electronics - Part I (109809)

David Abrams

2015 Fall (4 Credits) Schedule: MW 0100 PM - 0229 PM
Instructor Permissions: Instructor Enrollment Cap: 32

Introduction to designing circuits to solve real problems. Two lecture and two lab sessions a week blend instruction
with hands-on lab work to emphasize understanding, building and testing circuits. The course incorporates useful
design experiences from day one. Covered topics include amplification, feedback, impedance, stability, filtering,
switching, digital logic, microcontrollers, and more. The class ends with an open ended project that challenges
students to build on core concepts.

Course Notes: Each lecture is followed by 2.5 hour lab.

Startup R & D (109272)

*Paul Bottino*

2015 Fall (4 Credits)

**Schedule:** R 0400 PM - 0559 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

Students do field-based work in entrepreneurship to develop their existing startup and explore new ideas and opportunities for startup design. The course is for students seeking innovation experience as a founder of a startup. Students may work individually; teams are preferred. Requires self-directed, independent work and active outreach to mentors, customers, and partners for guidance and feedback in addition to that provided by the instructor. Students will share their work regularly and engage in a peer-to-peer feedback forum. The coursework is customized to the needs of each student and their startup role and includes development of product, technology, market, business, organization and leadership.

**Course Notes:** Enrollment limited; permission of instructor required.

Engineering Problem Solving and Design Project (144983)

*David Mooney*

2015 Fall (4 Credits)                  Schedule: MW 0900 AM - 1059 AM

**Instructor Permissions:** Instructor  **Enrollment Cap:** n/a

Semester-long team project that provides engineering experience working with clients on real-world problems. Projects provide exposure to problem definition, performance measurement, quantitative analysis, modeling, generation of creative solutions, engineering design trade-offs, and documentation/communication skills. Ordinarily taken in the junior year.

**Course Notes:** Preference given to SB candidates.

**Additional Course Attributes:**

Engineering Sciences 100HFA

Engineering Design Projects (144350)

2016 Spring (2 Credits) Schedule:

Instructor Permissions: Instructor Enrollment Cap: n/a

Individual engineering design projects which demonstrate mastery of engineering knowledge and techniques. During the year, each student will pursue an appropriate capstone project which involves both engineering design and quantitative analysis and culminating in a final oral presentation and final report/thesis. Students must complete both parts of this course, fall and spring, in order to receive credit.

Course Notes: Ordinarily taken in the senior year. Enrollment is conditional on the student having an approved project before May 1 in the spring semester preceding actual enrollment. Formal project approval rests with ES100 teaching staff. Weekly lectures (fall only) and one hour sections (throughout the year) are mandatory."

Recommended Prep: *Engineering Sciences 96.

Science, Engineering, and the Community (125325)

*Vinoothan Manoharan*

2015 Fall (4 Credits) **Schedule:** M 0500 PM - 0729 PM

**Instructor Permissions:** Instructor **Enrollment Cap:** n/a

Activity-based course for beginning/intermediate science and engineering undergraduates. Combines readings and discussions on techniques for learning science and engineering design with implementation in an 8th grade science class in Cambridge. Students work directly with the 8th graders to guide how they learn. Students apply what they discover to improve their own understanding of college-level science and engineering.
Course Notes: Offered in alternate years.

Recommended Prep: Interest in science, engineering, learning, and outreach.

Engineering Sciences 111

Introduction to Scientific Computing (156287)

Thomas Fai

2016 Spring (4 Credits) Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: None Enrollment Cap: n/a

Many complex physical problems defy simple analytical solutions or even accurate analytical approximations. Scientific computing can address certain of these problems successfully, providing unique insight. This course introduces some of the widely used techniques in scientific computing through examples chosen from physics, chemistry, and biology. The purpose of the course is to introduce methods that are useful in applications and research and to give the students hands-on experience with these methods.

Course Notes: Engineering Sciences 111 is also offered as Applied Mathematics 111. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 111.

Recommended Prep: Applied Mathematics 21a and 21b, or Mathematics 21a and 21b, or permission of instructor.

Additional Course Attributes:

Engineering Sciences 112

Thermodynamics by Case Study (160454)

Scot Martin

2016 Spring (4 Credits) Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: None Enrollment Cap: n/a

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes: Engineering Sciences 112 is also offered as Earth and Planetary Sciences 112. Students may not take both for credit.

Additional Course Attributes:

</table>
Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes: Engineering Sciences 115 is also offered as Applied Mathematics 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Recommended Prep: Mathematics at least at the level of Applied Mathematics 21a, b but preferably at the level of Applied Mathematics 105 (formerly Applied Mathematics 105b). Additional skills in analysis, algebra, probability, statistics and computer programming will increase the value of the course to students.

Engineering Sciences 120

Introduction to the Mechanics of Solids (131270)

Joost Vlassak

2016 Spring (4 Credits)  
Schedule: MWF 0100 PM - 0159 PM

Instructor Permissions: None  
Enrollment Cap: n/a

A first course in the mechanical sciences which introduces elements of continuum mechanics and explains how materials and structures stretch, bend, twist, shake, buckle, and break. Stress-strain behavior of materials. Statically determinate and indeterminate structures. Stress and strain, equations of motion or equilibrium, strain-displacement relations. Torsion. Beam theory with applications to beam deflections, vibrations, and buckling. Three laboratory sessions required.

Recommended Prep:  
Applied Physics 50a, Physical Sciences 12a, Physics 11a (no longer offered), or 15a and Applied Mathematics 21a or Mathematics 21a (previously) and Applied Mathematics 21b or Mathematics 21b (previously or concurrently).

Engineering Sciences 121

Introduction to Optimization: Models and Methods (156288)

Yiling Chen

2015 Fall (4 Credits)  
Schedule: MW 1000 AM - 1129 AM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Course Notes:  
Engineering Sciences 121 is also offered as Applied Mathematics 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.

Recommended Prep:  
Applied Mathematics 21b or Mathematics 21b (linear algebra) and some knowledge of probability and statistics at the level of Statistics 110 or Applied Mathematics 101 or permission of instructor.
Engineering Sciences 123

Introduction to Fluid Mechanics and Transport Processes (144952)

Shmuel Rubinstein

2016 Spring (4 Credits)

Schedule: MWF 1000 AM - 1059 AM

Instructor Permissions: None

Enrollment Cap: n/a

Recommended Prep: Applied Mathematics 21a,b or Mathematics 21a,b.

Engineering Sciences 125

Mechanical Systems (144157)

Katia Bertoldi

2015 Fall (4 Credits)

Schedule: MW 0100 PM - 0229 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Modeling and analysis of mechanical and electromechanical systems. Topics include 3D rigid body dynamics, resonance, damping, frequency response, Laplace transform methods, Lagrange's equations, multiple degree-of-freedom systems and an introduction to nonlinear vibration, continuous systems, and control. Analytical modeling will be supplemented with numerical simulations and lab experiments. Laboratory exercises will explore vibration, stabilization, and nonlinear systems using data acquisition systems.

Recommended Prep: Applied Mathematics 21a,b or Mathematics 21a,b or Mathematics 23a,b; Applied Physics 50a, Physical Sciences 12a, Physics 11a (no longer offered), or 15a.
Engineering Sciences  131
Introduction to Physical Oceanography and Climate (156500)

Eli Tziperman

2016 Spring (4 Credits)  Schedule:  TR 0100 PM - 0229 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Observations and understanding of ocean physics, from local beach waves to the effects of the oceans on global climate. Topics covered include wave motions such as ocean surface waves, internal waves, tsunamis and tides; currents, including the wind driven circulation, and the Gulf stream; coastal upwelling and fisheries; temperature, salinity, the overturning thermohaline circulation and its effect on global climate stability and variability; basic fluid dynamics equations; El Niño; the oceans and global warming; Ocean observations by ships, satellites, moorings, floats and more.

Course Notes:  Given in alternate years. When offered, a field trip to the Woods Hole Oceanographic Institution on Cape Cod will be included. ES 131 is also offered as EPS 131. Students may not take both for credit.

Recommended Prep:  Applied Mathematics 21a,b; Physics 12a,b, Physics 15a,b,c or Applied Physics 50a,b; or permission of instructor.

Engineering Sciences  132
Introduction to Meteorology and Climate (156491)

Brian Farrell

2016 Spring (4 Credits)  Schedule:  TR 1000 AM - 1129 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

Physical concepts necessary to understand atmospheric structure and motion. Phenomena studied include the formation of clouds and precipitation, solar and terrestrial radiation, dynamical balance of the large-scale wind, and the origin of cyclones. Concepts developed for understanding today’s atmosphere are applied to understanding the record of past climate change and the prospects for climate change in the future.

Course Notes:  ES 132 is also offered as EPS 132. Students may not take both for credit.

Recommended Prep:  Mathematics 21 or Applied Mathematics 21a and 21b; Physics 11 (no longer offered) or 15 or Physical Sciences 12; or permission of instructor.

Engineering Sciences 135

Physics and Chemistry: In the Context of Energy and Climate at the Global and Molecular Level (107397)

James Anderson

A solution to the problems set by the intersection of global energy demand and climate feedbacks requires the teaching of physics and chemistry in that context. Core topics include thermodynamics, free energy, entropy, acid-base and oxidation-reduction reactions, electrochemistry, electromagnetic induction, circuit theory, AC and DC circuits, the nature of photons and of electromagnetic radiation, photochemistry, materials, catalysis, kinetics, molecular bonding, and biological processes for energy conversion and storage.

Course Notes: ES 135 is also offered as EPS 135. Students may not take both EPS 135 and ES 135 for credit.

Recommended Prep: Physical Sciences 1, or Physical Sciences 11, or permission of instructor.

Engineering Sciences 137

Energy within Environmental Constraints (156215)

David Keith

A solution to the problems set by the intersection of global energy demand and climate feedbacks requires the teaching of physics and chemistry in that context. Core topics include thermodynamics, free energy, entropy, acid-base and oxidation-reduction reactions, electrochemistry, electromagnetic induction, circuit theory, AC and DC circuits, the nature of photons and of electromagnetic radiation, photochemistry, materials, catalysis, kinetics, molecular bonding, and biological processes for energy conversion and storage.
Instructor Permissions: Instructor  Enrollment Cap: n/a

This course provides a systematic introduction to the energy system for students in engineering and applied sciences. Students should gain a working understanding of some of the most important energy technologies, from prime movers--gas turbines, steam cycles, and reciprocating engines--to secondary energies including fuel production and refining technologies and the electricity transmission and distribution system. The course aims at a systematic understanding of the energy system's environmental footprint as a tool to help students who will work to reduce it. Energy is a commodity. One cannot hope to re-shape the energy system to meet environmental constraints without a rough working understanding of energy markets--costs, prices and elasticities of supply and demand. So the course will integrate engineering economics and other applied social sciences into the treatment of energy technologies to enable a system's view of energy.

Recommended Prep: Advanced high school mathematics, chemistry, and physics.

Engineering Sciences 139

Innovation in Science and Engineering: Conference Course (118939)

Paul Bottino

2015 Fall (4 Credits)  Schedule: TR 0230 PM - 0359 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

Explores factors and conditions contributing to innovation in science and engineering; how important problems are found, defined, and solved; roles of teamwork and creativity; and applications of these methods to other endeavors. Students receive practical and professional training in techniques to define and solve problems, and in brainstorming and other individual and team approaches.

Course Notes: Offered jointly with the Design School as SCI-06272. Taught through a combination of lectures, discussions, and exercises led by innovators in science, engineering, arts, and business.

Engineering Sciences 150

Introduction to Probability with Engineering Applications (116859)

Vahid Tarokh

2016 Spring (4 Credits)  Schedule: TR 1130 AM - 1259 PM

Instructor Permissions: None  Enrollment Cap: n/a

This course introduces students to probability theory and statistics, and their applications to physical, biological and information systems. Topics include: random variables, distributions and densities, conditional expectations, Bayes' rules, laws of large numbers, central limit theorems, Markov chains, Bayesian statistical inferences and parameter estimations. The goal of this course is to prepare students with adequate knowledge of probability theory and
statistical methods, which will be useful in the study of several advanced undergraduate/graduate courses and in formulating and solving practical engineering problems.

**Recommended Prep:** Applied Math 21a, Math 21a or equivalent.

### Engineering Sciences 151

**Applied Electromagnetism (143005)**

*Mohamed Abouzahra*  
*Joseph Usoff*

2016 Spring (4 Credits)  
**Schedule:** TR 0100 PM - 0229 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Electromagnetism and its applications in science and technology. Topics: Maxwell's equations; electromagnetic waves (e.g., light, microwaves, etc.); wave propagation through media discontinuity; transmission lines, waveguides, and microwave circuits; radiation and antennae; interactions between electromagnetic fields and matters; optics of solids; optical devices; origin of colors; interference and diffraction; lasers and masers; nuclear magnetic resonance and MRI; radio astronomy; wireless networking; plasmonic wave (charge density wave).

**Recommended Prep:** Basic electromagnetism (Applied Physics 50b, Physical Sciences 12b, Physics 11b (no longer offered), or 15b or equivalent), basic vector calculus (Applied Math 21a or equivalent), basic differential equations (Applied Math 21b or equivalent) and familiarity with Fourier analysis (Applied Math 21b or equivalent).

### Engineering Sciences 153

**Laboratory Electronics (156518)**

*Thomas Hayes*

2015 Fall (4 Credits)  
**Schedule:** TR 0130 PM - 0529 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 22

A lab-intensive introduction to electronic circuit design. Develops circuit intuition and debugging skills through daily hands-on lab exercises, each preceded by class discussion, with minimal use of mathematics and physics. Moves quickly from passive circuits, to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

**Course Notes:** Engineering Sciences 153 is also offered as Physics 123. Students may not
take both for credit. This course, when taken for a letter grade, meets the General Education requirement for Science of the Physical Universe.

**Engineering Sciences 158**

Feedback Control Systems: Analysis and Design (156548)

*Na Li*

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

This course provides an introduction to feedback and control in physical, biological, engineering, information, financial, and social sciences. The focus is on the basic principles of feedback and its use as a tool for inferring and/or altering the dynamics of systems under uncertainty. Key themes throughout the course will include linear system analysis, state/output feedback, frequency response, reference tracking, PID controller, dynamic programming, and limit of performance. This includes both the practical and theoretical aspects of the topic.

**Recommended Prep:** Applied Math 21b or Math 21b or equivalent (ordinary differential equations and basic linear algebra).

Space Science and Engineering: Theory and Application (160452)
Robin Wordsworth
2015 Fall (4 Credits) Schedule: TR 1000 AM - 1129 AM
Instructor Permissions: Instructor Enrollment Cap: 30
This course is an introduction to the challenges involved in designing spacecraft for observation of Earth and exploration of other planets. Topics covered include basic atmospheric and planetary science, key principles of remote sensing, telemetry, orbital transfer theory, propulsion and launch system design, and thermal and power management.

Engineering Sciences 163
Pollution Control in Aquatic Ecosystems (109684)
Patrick Ulrich
2015 Fall (4 Credits) Schedule: MWF 1000 AM - 1059 AM
This course is focused on aspects of environmental engineering related to the fate, transport, and control of pollution in surface water ecosystems. Course modules will cover ecological impacts of environmental contaminants; surface water aspects of engineering hydrology, including rainfall-runoff relationships; quantitative models of pollutant fate and transport in rivers, lakes, and wetlands; best management practices for the prevention and control of aquatic pollution; and sustainable natural treatment systems for water quality improvement.

Recommended Prep: Applied Mathematics 21b (or equivalent); Engineering Sciences 6 (or equivalent).

### Engineering Sciences 164

**Environmental Chemistry (125096)**

*Karena A. McKinney*

2015 Fall (4 Credits)  
**Schedule:** MW 0100 PM - 0229 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Basic concepts, principles, and applications of environmental chemistry for students in Earth and environmental sciences. We will investigate a variety of chemistry topics relevant for environmental systems, including water chemistry, acids and bases, redox reactions, precipitation/dissolution, sorption, gas solubility, and aqueous and atmospheric reaction rates and mechanisms. The principal goal is to explore and apply the fundamental principles of chemical thermodynamics and kinetics to understand Earth processes and solve complex environmental problems.

**Course Notes:** Cannot be taken for credit by students who have already taken ENG-SCI 264.

**Recommended Prep:** Physical Sciences 1 or permission of the instructor.

### Engineering Sciences 165

**Water Engineering (138398)**

*Chad Vecitis*

2015 Fall (4 Credits)  
**Schedule:** TR 1130 AM - 1259 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Introduces the fundamentals of water biology, chemistry, physics and transport processes needed to understand water quality and water purification technologies. Practical instruction in basic water analyses concluding with a final water treatment project in place of exam.

**Course Notes:** Offered jointly with the Design School as SCI-06273.
Recommended Prep: Physical Sciences 1 or Physical Sciences 11 or equivalent and Engineering Sciences 6 or equivalent or with permission of instructor.

Engineering Sciences 166

State-of-the-art Instrumentation in Environmental Sciences (161263)

Frank Keutsch

2016 Spring (4 Credits)  

Schedule: MW 1130 AM - 1259 PM

Instructor Permissions: None  

Enrollment Cap: n/a

This course will showcase how novel technologies have allowed fascinating new insights into key aspects of our environment. The development of novel instrumentation, driven by technological advances, is revolutionizing the environmental sciences. The new instruments are transforming observations in many ways. For example, they introduce new observables and extend the spatial and temporal coverage and resolution of (Earth) observations. The observations are advancing our understanding of environmental science topics that are of high societal relevance (e.g., climate change and air pollution). This course will highlight how state-of-the-art instrument design has enabled these fascinating advances by focusing on the physics, chemistry, and engineering principals that are central to this success. The course will also focus on the special requirements for these instruments (e.g., ruggedness and robotic operation) resulting from their deployment in the environment on a variety of observational platforms. In addition, the course will discuss challenges associated with determination of accuracy of instruments that are inaccessible after deployment (e.g., on satellites or oceanic probes).

Course Notes: ES 96 (Anderson section) focuses on the implementation of the design and engineering process for one specific example instrument. In contrast, this course is more broad and will provide an overview of instrumentation across multiple environments and technologies. These courses would be complementary, and students could benefit by taking both courses in the same semester or in either order.

Recommended Prep: Math 1a, b; PS 11 or equivalent; PS 12a, b (or Physics 15a, b or AP 50a, b).

Engineering Sciences 173

Introduction to Electronic and Photonic Devices (119048)

Evelyn Hu

2015 Fall (4 Credits)  

Schedule: TR 0100 PM - 0229 PM

Instructor Permissions: Instructor  

Enrollment Cap: n/a

This course will focus on physical principles underlying semiconductor devices: electrons and holes in semiconductors, energies and bandgaps, transport properties of electrons and holes, p-n junctions, transistors, light emitting diodes, lasers, solar cells and thermoelectric devices.
**Recommended Prep:**  Applied Physics 50a and b, Physics 11a and b (no longer offered), or Physics 15a and b, Physical Sciences 12a and b, or equivalent (mechanics; electromagnetism); undergraduate level quantum mechanics highly useful, but not required.

Introduction to MicroElectroMechanical System (127589)

*Fawwaz Habbal*

*Peter Stark*

2015 Fall (4 Credits)  

**Schedule:**  

T 0530 PM - 0729 PM

**Instructor Permissions:**  Instructor

**Enrollment Cap:**  n/a

This course introduces student to the rapidly emerging, multi-disciplinary and exciting field of MicroElectroMechanical Systems (MEMS). It teaches fundamentals of micro machining and Micro fabrication techniques, including planar thin-film process technologies, photolithography and soft-lithography techniques, deposition and etching techniques, and surface, bulk, and electroplating micro machining technologies.

**Recommended Prep:**  Applied Physics 50a,b, Physical Sciences 12a,b, Physics 11a,b (no longer offered) or 15a,b; College Chemistry at the level of Life Sciences 1a and Physical Sciences 1.

Microfabrication Laboratory (109356)

*Evelyn Hu*

*Peter Stark*

2016 Spring (4 Credits)  

**Schedule:**  

M 1000 AM - 1129 AM

**Instructor Permissions:**  None

**Enrollment Cap:**  n/a

Introduction to micro- and nanofabrication processes used for photonic and electronic devices. Students use both an instructional lab as well as a state-of-the-art cleanroom in the Center for Nanoscale Systems. Several electronic and photonic devices will be fabricated, such as transistors, light-emitting diodes (LEDs) and lasers. Lectures will focus on fabrication processes, including lithography, deposition of metals and dielectrics, etching, oxidation, implantation and diffusion of dopants, and device characterization.

**Course Notes:**  This course has a 4-hour weekly lab session.

**Recommended Prep:**  Physical Sciences 12a and 12b, or Physics 15a and 15b or equivalent. ES 173 strongly recommended.
### Engineering Sciences 181

Engineering Thermodynamics (135598)

Zhigang Suo

2015 Fall (4 Credits)

**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

**Recommended Prep:** One semester of calculus-based college-level physics. Chemistry at the high school Advanced Placement level.

### Engineering Sciences 183

Introduction to Heat Transfer (108871)

David Clarke

2016 Spring (4 Credits)

**Schedule:** TR 1000 AM - 1129 AM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

The macroscopic description of the fundamentals of heat transfer and applications to practical problems in energy conversion, electronics and living systems with an emphasis on developing a physical and analytical understanding of conductive, convective and radiative heat transfer. Emphasis will also be given to problem solving skills based on applying governing principles, mathematical models and physical intuition. Includes laboratory sessions and semester-long projects.

**Recommended Prep:** Applied Math 21a (Mathematical Methods in Science) or equivalent.
Engineering Sciences 190

Introduction to Materials Science and Engineering (143870)

Frans Spaepen

2015 Fall (4 Credits)  Schedule:  MW 1130 AM - 1259 PM

Engineering Sciences 202

Estimation and Control of Dynamic Systems (142254)

Na Li

2016 Spring (4 Credits)  Schedule:  MW 1000 AM - 1129 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

This graduate level course studies dynamic systems in time domain with inputs and outputs. Students will learn how to design estimator and controller for a system to ensure desirable properties (e.g., stability, performance, robustness) of the dynamical system. In particular, the course will focus on systems that can be modeled by linear ordinary differential equations (ODEs) and that satisfy time-invariance conditions. The course will introduces the fundamental mathematics of linear spaces, linear operator theory, and then proceeds with the analysis of the response of linear time-variant systems. Advanced topics such as robust control, model predictive control, linear quadratic games and distributed control will be presented based on allowable time and interest from the class. The material learned in this course will form a valuable foundation for further work in systems, control, estimation, identification, detection, signal processing, and communications.

Course Notes:  Engineering Sciences 202 is also offered as Applied Mathematics 232. Students may not take both for credit.

Class Notes:  First class will meet on Monday, Jan. 25. It will not meet on Wednesday, Jan. 27.

Recommended Prep:  Linear algebra, differential equations, and signals and systems (AM 120, ES 156, or equivalent). Undergraduates need permission.

Advanced Cellular Engineering (114808)
Neel Joshi

2015 Fall (4 Credits)  Schedule: MWF 0900 AM - 0959 AM
Instructor Permissions: Instructor  Enrollment Cap: n/a
This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Topics will include expanding the genetic code, genetic circuits, rewiring signaling pathways, controlling behavior through cell-matrix interactions, and directed differentiation of stem cells. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work individually and in teams to determine the boundaries of existing cellular engineering techniques using scientific literature and propose original research to address unmet technological needs.

**Course Notes:**
BE121 and ES222 are the same course. This course has an optional laboratory section that will require hand-on work outside of scheduled lecture times.

**Recommended Prep:**
At least one semester of college-level organic chemistry and molecular/cellular biology. Physics at the level of Physics Applied Physics 50 or Physics 12.

Engineering Sciences 254
Information Processing and Statistical Physics (160448)

Yue Lu

2015 Fall (4 Credits)  
Schedule: MW 1000 AM - 1129 AM

Instructor Permissions: Instructor  
Enrollment Cap: 30

This course introduces students to several fundamental notions and methods in statistical physics that have been successfully applied to the analysis of various problems in signal processing, information theory, and theoretical computer science. Discussions will be focused on studying such information processing systems in the infinite-size limit, on analyzing the emergence of phase transitions, and on understanding the behaviors of efficient algorithms.
This course seeks to start from basics, assuming just undergraduate probability and analysis, and in particular assuming no knowledge of statistical physics. Students will take an active role by applying what they learn from the course to their preferred applications.

**Course Notes:** Engineering Sciences 254 is also offered as Applied Mathematics 254. Students may not take both for credit.

**Recommended Prep:** Analysis (Math 21a/b, or equivalent), Probability (Statistics 110, Engineering Sciences 150, or equivalent).

**Additional Course Attributes:**

**Engineering Sciences 256**

Informal Robotics/New Paradigms for Design and Construction (156726)

*Chuck Hoberman*

2015 Fall (4 Credits)  

**Schedule:** M 0200 PM - 0559 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

Today, robotic devices are being made from folded paper, carbon laminates or soft gels. Rather than assembled, they can be formed directly from 2D or 3D printer. These Informal robots are light, flexible, compliant, highly customized, and demonstrate programmable behavior that is closely coupled with material composition. Taught in collaboration with the Wyss Institute, the course will focus on techniques to create original robotic devices. Lectures will be organized along four primary topics: Kinematics, Fabrication, Controls and Applications. There will be assignments to produce test mechanisms and CAD models, followed by semester-long group projects.

**Course Notes:** This course does not count for concentration credit for SEAS undergraduate concentrators; this course does not count as a disciplinary course for SEAS Ph.D. students. Offered jointly with the Design School as SCI-06478 and will meet at GSD. For more information, see [here](http://www.gsd.harvard.edu/#/academics/courses/sci-06478-fall-2015.html). The first meeting of the course will be Tuesday 9/1 from 9am-12pm.

**Recommended Prep:** There are no strict prerequisites; however, those taking the class should have a strong interest in working at the intersection between technology and design. Some knowledge of mechanism design, use of CAD software, and/or exposure to electronics and controls are beneficial.

**Engineering Sciences 263**

Chemical Reactions and Mechanisms in the Environment (123682)

*Frank Keutsch*
In this course a framework of tropospheric chemistry will be generated that requires no previous knowledge of this topic. The goal is to develop an understanding of chemical and physical processes in the troposphere. Focus is on the main processes transforming emissions into the secondary pollutants that affect the environment, human health, and climate, in particular with respect to the role of anthropogenic influence. This will provide a foundation for the evaluation of the impact the newest scientific studies have on our understanding of processes that are important for the part of the atmosphere we live in.

**Recommended Prep:** Mathematics and college-level courses in chemistry and physics.

**Engineering Sciences 265**

*Advanced Water Treatment (107764)*

Chad Vecitis

2016 Spring (4 Credits)  

**Schedule:** M 0100 PM - 0259 PM

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Advanced Water Treatment will give students detailed instruction in emerging technologies for municipal wastewater treatment, industrial wastewater treatment, wastewater reclamation and reuse, desalination, and groundwater remediation. The course will begin by introducing wastewater quality, effluent water quality endpoints, and conventional treatment methodologies. The theoretical focus of the course will be on the fundamental biology, chemistry, and physics of processes including nanofiltration, reverse osmosis, membrane bioreactors, denitrification and phosphate removal, ozonolysis, UV photolysis, photocatalysis, and sonolysis. We will also discuss wastewater-to-energy processes including microbial fuel cells, anaerobic digestion, and electrochemical waste-to-hydrogen.

**Course Notes:** Offered in alternate years.

**Recommended Prep:** Engineering Sciences 165

Engineering Sciences  273

Optics and Photonics (123351)

Federico Capasso

2016 Spring (4 Credits)  
Schedule: WF 0100 PM - 0229 PM  
Instructor Permissions: None  
Enrollment Cap: n/a  
The focus is on the foundations of optics/photonics and on some of its most important modern developments and applications. Powerful and widely used computational tools will be developed in the sections. Topics to be covered: Maxwell's equations, Free space optics. Reflection, refraction, polarization (Jones Calculus and Stokes parameters); interference and diffraction. Light-matter interaction, dispersion and absorption. Guided wave optics (including optical fibers). Perturbation and couple mode theory, transfer matrix methods; numerical methods. Optical resonators. Lasers and elements of nonlinear optics. Photonic crystals. Near-field optics. Metal optics and Plasmonics.

Course Notes: Open to graduate students and advanced undergraduates.

Recommended Prep: Elements of Electromagnetism, such as taught in Applied Physics 50b, Physics 11b (no longer offered), Physics 15b, Physical Sciences 12b, Engineering Sciences 151 or equivalent.

Additional Course Attributes:

Engineering Sciences  276

Introduction to MicroElectroMechanical System (127590)

Fawwaz Habbal  
Peter Stark

2015 Fall (4 Credits)  
Schedule: T 0530 PM - 0729 PM  
Instructor Permissions: Instructor  
Enrollment Cap: n/a  
This course introduces student to the rapidly emerging, multi-disciplinary and exciting field of MicroElectroMechanical Systems (MEMS). It teaches fundamentals of micro machining and Micro fabrication techniques, including planar thin-film process technologies, photolithography and soft-lithography techniques, deposition and etching techniques, and surface, bulk, and electroplating micro machining technologies.

Recommended Prep: Applied Physics 50a,b, Physical Sciences 12a,b, Physics 11a,b (no longer offered) or 15a,b; College Chemistry at the level of Life Sciences 1a and Physical Sciences 1.
Engineering Sciences 277
Microfabrication Laboratory (109357)

_Evelyn Hu_
_Peter Stark_

2016 Spring (4 Credits)                  Schedule: M 1000 AM - 1129 AM
_Instructor Permissions: None_              _Enrollment Cap: n/a_

Content and requirements are similar to Engineering Sciences 177, with the addition that students enrolled in Engineering Sciences 277 are assigned more demanding problem sets (which may involve laboratory process demonstrations and analysis) and are required to prepare a term project.

_Recommended Prep:_ Applied Physics 50a and 50b, Physical Sciences 12a and 12b, Physics 11a and 11b (no longer offered); or Physics 15a and 15b or equivalent.

Engineering Sciences 291
Nano Micro Macro: Adaptive Material Laboratory (156219)

_Martin Bechthold_

2015 Fall (4 Credits)                  Schedule: F 0900 AM - 1159 AM
_Instructor Permissions: Instructor_              _Enrollment Cap: n/a_

This course explores research methods and techniques through the analyses of emerging energy-efficient materials and systems and their applications in buildings. It serves as an interdisciplinary platform for engineers, materials and computer scientists to interact with the design students and develop new products. The course introduces ideas-to-innovation processes in a hands-on, project/product focused manner that balance engineering concepts with promising, real-world opportunities. Switching back and forth between guided discovery and focused development, between bottom-up and top-down thinking, and market analyses, the course helps students establish generalizable frameworks as researchers and innovators with a focus on new and emerging technologies.

_Course Notes:_ Offered jointly with the Design School. For more information see <a href="http://www.gsd.harvard.edu/cgi-bin/courses/details.cgi?term=201520&course=SCI-06477">www.gsd.harvard.edu/cgi-bin/courses/details.cgi?term=201520&course=SCI-06477</a>.

Engineering Sciences 298R
Mitigating Toxicity through Better Materials Design (107995)

Elsie Sunderland
Sadasivan Shankar

2015 Fall (4 Credits) Schedule: T 0100 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

Manufacturing new materials is an important component of the world economy as demand ranges from smart phones and processed food to automobiles and airplanes. Rapid changes in the diversity and uses of materials often occur due to technological needs and economic drivers without consideration of environmental and health impacts. This can lead to large scale, global health and contamination problems such as large quantities of plastic waste in oceans, lead exposures from paint in children's toys, and widespread contamination of drinking water in regions exploited for hydraulic fracturing. The class will explore whether it is possible to use the latest advances in science, engineering, and nanotechnology to chart a sustainable material revolution. Guest lecturers from both industry and environmental regulatory agencies will be invited to speak to the class. Course evaluation will be based on in-class participation, presentations and a final project/review paper.

Recommended Prep: Graduate or approval by instructor. Higher level chemistry and math needed.

Engineering Sciences 299R
Special Topics in Engineering Sciences (143668)

Fawwaz Habbal

2015 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Supervision of experimental or theoretical research on acceptable engineering and applied science problems and supervision of reading on topics not covered by regular courses of instruction.

Course Notes: Open to graduate students and AB/SM candidates only. Students must arrange such work with a member of the School of Engineering and Applied Sciences. This course is graded and is ordinarily taken with the approval of the Committee on Higher Degrees. Applicants must file a project sheet before study cards are filed. Project sheets may be obtained from the Student Affairs Office, Pierce Hall 110.

Intended for students with prior fiction-writing and workshop experience, this course will concentrate on the structure, execution and revision of short fiction. Throughout the term, we will read and discuss literary fiction from a craft perspective. The course is primarily focused on the discussion of student work, with the aim of improving both writerly skills and critical analysis. Revision is an important component of this class.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page.

We'll examine films and screenplays in order to develop the skills necessary to write the first draft of a feature-length script. We'll begin by honing our treatments and outlines, and move on to critiquing specific scenes in our own work and in produced screenplays, with a rigorous focus on character, dialogue, tone, structure, plot, and voice.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page.

English CAMR

Advanced Playwriting: Workshop (145402)

Sam Marks

2015 Fall (4 Credits) Schedule: T 0100 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 12

This workshop is a continued exploration of writing for the stage. Students will be encouraged to excavate their own voice in playwriting. They will examine and attempt multiple narrative strategies and dialogue techniques. They will bolster their craft of playwriting through generating short scripts and a completed one act. Readings will include significant contributors to the theatrical form such as Ibsen and Beckett as well as contemporary dramatists such as Annie Baker, Caryl Churchill and Sam Shepard.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page.

English  CAPR
Poetry: Workshop (120472)
Jorie Graham
2016 Spring (4 Credits)  Schedule:  W 0400 PM - 0659 PM
Instructor Permissions:  Instructor  Enrollment Cap:  12

Open by application to both undergraduates and graduates. Please submit a portfolio including a letter of interest, ten poems, and a list of classes (taken at Harvard or elsewhere) that seem to have bearing on your enterprise. Class lasts 3 hours and includes the study of poetic practice in conjunction with the discussion of student work.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page.

English  CBBR
Intermediate Poetry: Workshop (146632)
Joshua Bell
2015 Fall (4 Credits)  Schedule:  M 0400 PM - 0659 PM
Instructor Permissions:  Instructor  Enrollment Cap:  12

Initially, students can expect to read, discuss, and imitate the strategies of a wide range of poets writing in English; to investigate and reproduce prescribed forms and poetic structures; and to engage in writing exercises meant to expand the conception of what a poem is and can be. As the course progresses, reading assignments will be tailored on an individual basis, and an increasing amount of time will be spent in discussion of student work.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page.
