In this seminar, we will think together about education as a site of radical imagination, turning to learning spaces from the 20th century to the present where people have envisioned and attempted to bring about different worlds. Major topics of the course will include: education and social change, critical pedagogy, the imagination, abolition, and worldbuilding. Beginning in the 1920s, we will look at Black Mountain College, Highlander Folk School, and the Modern Schools alongside thinkers like W.E.B. Du Bois and Ella Baker who connected education to the practice of freedom. We will then turn to educational experiments in the 1950s to 1970s—Freedom Schools, the Black Panthers' schools, and free universities—that were part of the Civil Rights movement, the Black Power movement, and movements for liberation. The last part of the course will consider more contemporary thinkers on education, abolition, and radical imagination, turning to Angela Davis, Robin D.G. Kelley, bell hooks, and more. Throughout the course, we will look at course catalogues, manifestos, memoirs, newspapers, and other primary sources as well as theory and secondary scholarship in social movement history, critical pedagogy, literary studies, Black Studies, and women & gender studies. Together, we will ask some of the following questions: In what ways is education part of larger struggles for freedom and liberation? How do each of these educational projects seek to radically imagine and bring about other worlds? What kinds of learning spaces do we want to build today?

Asian America in Popular Culture (218311)

Karen Huang

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The release of *Crazy Rich Asians* in 2018 was a significant cultural moment for Asian America: the first major Hollywood picture with a predominantly Asian American cast in over twenty years, the film was an immediate box office success, and followed by a proliferation of mainstream Asian American productions, including *The Farewell*, *Indian Matchmaking*, and *Minari*. This recent growth of Asian American media is especially remarkable, given that Asian America has been relatively invisible in the history of American popular culture. What stereotypes and assumptions about Asian America have been produced through the historically limited range of representations, and how do we consider the significance of contemporary iterations of Asian American popular culture in this context? In this class, we will explore the origins and evolutions of Asian America in U.S. popular culture, examining themes such as romance, friendship, family, and solidarity. We will look at a wide range of cultural productions, including films, TV shows, graphic novels, and popular music, in order to examine the new and expanding ways that Asian American histories, identities, and experiences are mediated and narrativized through the versatile forms of contemporary popular culture.

Dictatorship and Resistance in Latin America (218692)

Jennifer Alpert

2021 Fall (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

As we face resurgent authoritarianism around the world, culture remains a critical tool of resistance against the perils of dictatorship and its legacies. Latin America's long history of tyranny, repression, and impunity reveals that—in national traditions where fiction has often addressed either explicitly or allegorically what journalism did or could not—culture has mediated moments of historical trauma as countries grapple with the consequences of state terrorism and general instability. In this seminar, we will focus on the military dictatorships that swept the Southern Cone in the 1970s and their aftermaths to reflect on the role of

cultural resistance in keeping democracy alive and ensuring human rights abuses never happen again. How has fiction represented these dictatorships and their consequences? How has artistic production given expression to protest against state-sponsored violence, considering that authoritarianism often engenders bloody legacies and social divisions? How do representational strategies help a nation work through historical trauma, rebuild its community, reconstruct its identity, and sustain collective memory, given the reigning impunity and lack of justice with which these countries have often contended? We will analyze a broad range of fictional and historical texts that include films, literature, comics, news coverage, testimonies, and speeches and pay particular attention to medium and genre to understand the rhetorical devices surrounding the dictatorship and the aesthetic codes that have surfaced or been repurposed as forms of resistance to ensure history does not repeat itself. In the process, students will develop methods of analysis to answer similar questions in other geographical areas and historical moments.

Witchcraft and Magic in the Atlantic World (218805)

Arianne Urus

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Magic had long been an integral part of how people made sense of the world around them, but between 1450 and 1750 some 80 to 100,000 people (mostly women) were executed under charges of witchcraft in western Europe alone. During the same period, a literal witch hunt threatened the lives of elderly or widowed women, peasants, Indigenous healers, and West African Muslims. In this course we will explore what magic and witchcraft meant and how the charge of witchcraft came to be so deadly in western Europe, North America, colonial Latin America, the Caribbean, and West Africa in the world before 1800. Such fears of witchcraft might seem odd or alien to us now, but understanding witch hunts can help us interpret the social and cultural ramifications of the host of significant changes that ushered in the modern world. Through a variety of readings we will reflect on the way conceptions of magic and witchcraft intersected with ideas of gender, race, and colonialism. Grappling with the history of the early modern witch hunt can help us make sense of things like the rise of conspiracy theories in the present day. Texts for the course will include Shakespeare's Macbeth, Laila Lalami's The Moor's Account, Arthur Miller's The Crucible, and Monty Python, as well as records from the colonial Inquisition, testimonies from witch trials, healing manuals, treatises on demonic possession, and guidebooks on how to catch a witch.

History of Art & Architecture 12Y

Genghis Khan and his Successors: Art in the Wake of the Mongol Conquests (114627)

David Roxburgh

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Is Genghis Khan's characterization "as terrifying as genocide and as dreadful as the plague" (Time, Dec. 31, 1999) sufficient? His legacy entailed the destruction of social and cultural order, but paradoxically, his empire also forged a dynamic relationship between nomadic and sedentary societies. Genghis Khan's successors fostered a climate of intense cultural activity in art and architecture, producing complex fusions of artistic traditions between the Middle East and China. These are the major concerns of the course, which focuses on the art and architecture produced from the thirteenth century on under Genghis Khan and his successors. Genghis Khan and his Mongol horde traversed Eurasia to create a world empire, their most enduring legacy stamped on the lands of Iran and Central Asia through their successors, the Ilkhanid and Timurid dynasties. This imperial order established a new relationship between nomadic and sedentary societies, an ongoing symbiosis of "steppe" and "sown." To bolster their claim to rule, successive leaders exploited the knowledge of indigenous bureaucrats and craftsmen to execute their cultural program. Regional artistic traditions were manipulated and transformed into new hybrids that could demonstrate the ruler's power to the nomadic elite and to the multi-cultural urban populations under their control. These works reveal an evolving political structure and social order. The course examines how meanings are encoded through language, forms, and aesthetic features, how they are made legible, and how they may function as propaganda.

The environments from which the Mongols emerged and into which they journeyed are initially considered in terms of the heritage, culture, and ecology of the Mongols and the peoples of the lands they conquered. How did the Mongols remember their nomadic past as the balance of their lives shifted, when they became increasingly sedentarized? Which symbolic elements could be easily translated through the available forms of sedentary art and architecture? In subsequent lectures, key monuments of Ilkhanid and Timurid art and architecture will provide a framework for analyzing different facets of the process of cultural assimilation, the changing Mongol response—at first hostile and then receptive—to the sedentarized cultures that they encountered and then ruled.

Key readings are extracted from a wealth of recent literature in addition to primary sources available in English translation. No previous classes in Islamic art and architecture or in Middle Eastern history and culture are required.

Introduction to Japanese Art (118347)

Steffani Bennett

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

From the Grand Shrine at Ise to Hokusai's Great Wave, Japanese art is among the world's great artistic traditions, distinguished by its diversity and creativity. This course explores artistic production in Japan from the prehistoric period to the twenty-first century. Students will learn to analyze key examples of painting, sculpture, architecture, prints, and ceramics. Important themes that will be addressed include processes of cultural adoption and transformation, the role that religious belief played in shaping artistic expression, and the relationship between sociopolitical development and artistic production.

Medieval Media (215760)

Jeffrey Hamburger

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

From the invention of the icon and the book in late Antiquity to printing and panel painting in the 15th century, the Middle Ages harnessed new visual media to revolutionary effect. The course examines space (architecture), light (stained glass), body (sculpture/relic), figure (fresco, tempera, oil), word (roll/codex), abstraction (diagram), mass media (printing).

Course Notes:

The course meets twice a week. The first meeting will take the form of a lecture. The second meeting, held in either the Harvard Art Museum

or Houghton Library, will take the form of a group discussion of original objects in conjunction with the readings for the week, one of which will be a primary source.

If warranted by enrollment (15 or more students), there will be a weekly section with a TF devoted to follow-up discussion of readings and related issues.

The Art of Love: Erotic Painting from Botticelli to Goya (218047)

Shawon Kinew

Felipe Pereda

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Erotic painting holds a central and fascinating role in the construction of early modern art, from the early Quattrocento to Modernity. At its inception, Renaissance erotic art rose out of a culture of humanism, inspired by Latin poetry. It became an elaborate artform for a cultural elite, which was made and collected by an educated audience, both male and female. As Renaissance and Baroque art became increasingly sensual, the art began to address explicitly the desires of predominantly male viewers. Contemporary sources described these innovations as "obscene", a phenomenon we could connect to the emergence of what is now called 'pornography,' a western form of visual culture that developed in this same period. The line dividing these two modes is, of course, thin, problematic and subject to continued debated.

This course will describe and investigate the invention of this modern genre(s) and some of its most important episodes for over three centuries. We will discuss major works of artists such as Botticelli, Bellini, Titian, Caravaggio, Rubens, Velázquez and Goya, and consider their relation to modern modes of spectatorship.

Money Matters (216165)

Evridiki Georganteli

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 60

Money is everywhere. As both an abstract construct and a material entity, money makes the world go around. Since before the invention of writing, money has been a common facet of everyday life, informing how we think and how we act. The course explores how societies across human history have made, used, and valued money in divergent ways. We will consider money as an object of aesthetic appreciation, an ethical problem, an architect of social relations, and environmental disruptor, a tool of political resistance, and much more. How has coinage design been a function of money's role as a political, religious, and cultural symbol? Is money a measure of value, and how does it align with other potential values, such as religious, moral, and aesthetic ones? Is it ethically neutral or an instrument of moral vice or virtue? What were the debates surrounding the rise of paper money beginning in the eighteenth century? How was money used as a tool of political resistance during the suffragette movement? Does money get recycled, and what is the environmental cost of different money forms today? What are the links between art, literature, theater, cinema, and money?

Class Notes: **This course is open to all undergraduates with no prerequisites.**

History of Art & Architecture 81

Art of Monsoon Asia: Interconnected Histories (218044)

Jinah Kim

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Monsoon Asia refers to the area of the globe where climates are determined or profoundly affected by the monsoon, from the Himalayas, to the islands of Indian Ocean, all the way to the Japanese archipelago. Focusing on the impact of monsoons in South and Southeast Asia, the course explores the common patterns and traits of the art of Monsoon Asia. How was the monsoon and its impact conceptualized in art? The main learning goal of the course is to understand how artistic means were harnessed to conceptualize, cope with, and tame environmental challenges posed by monsoons and long-distance travels, often facilitated by the monsoon winds, in pre-modern times. From water management to water symbolism, from impressive temples that mark auspicious arrivals to itinerant objects like ivories and amulets that moved with travelers across Monsoon Asia, we will look at diverse sites and objects that date between the fifth through the sixteenth centuries and attempt to connect the dots between ports and uncover hidden narratives of long-distance travels and travails of dealing with environmental challenges in pre-modern times. The course challenges the diffusionist model of influence in understanding trans-regional interactions and introduces ways to discuss interconnected histories using digital tools. The course will introduce basic tools of digital art history and students will be asked to contribute to a course exhibition site with annotated maps and research pages as part of their final projects.

Design Speculations: Senior Design Tutorial (207690)

Lisa Haber-Thomson

2021 Fall (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 14

This seminar will serve as a design platform for inquiry, documentation and analysis in relation either to the thesis topic or capstone project of interest to each student. Thesis students will be responsible for selecting a Thesis Advisor (or Advisors) with whom they will meet regularly to develop specific intention, substance and methodology of the thesis research and paper. This seminar is a support of independent thesis and/or independent project research, extending methodological inquiry of the project topic to design where students may convene to collectively discuss and experiment with design speculations – design tests that explore research through the visual and spatial language of architecture. The course will cover topics general to design research with discussions, assignments, and readings focused on three main themes in relation to architectural design: Discourse, the development of a proposition for the role and significance of architecture relative to the project topic of interest; Method, the design steps/process of working through a design application/inquiry of those ideas; and Context, the relationship of the project topic of study to broader surroundings which include but are not limited to the discipline of architecture, cultural contexts, technical developments and/or typologies. The seminar will emphasize and support the translation of ideas emerging from independent research into visual forms of representation including, but not limited to, drawings, diagrams, images, study models, and short animations. The techniques of representation reviewed will be catered to the project topics of individual students, but will also form a part of the general discussion of the course.
HAA 96A Transformations or HAA 96B Connections design studios is a pre-requisite to the Design Speculations course.

Special Seminar (113117)

Jennifer L. Roberts

Evridiki Georganteli

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Seminar offered under special arrangements consisting of weekly meetings with designated faculty, where regular reading and writing assignments are focused on a topic of mutual interest.

Class Notes: **Being offered this Fall 2021:**

Eurydice Georganteli, *Whose Culture? The Curation and Management of World Heritage*

"This seminar will take us on a journey through different historical periods and across continents in search of select sites, monuments,

and routes of foremost historical and cultural importance, designated as world heritage. We will be examining landmarks of world architecture such as the Parthenon in Greece, the Hagia Sophia in Istanbul, the Alhambra in Spain, and the cities of Palmyra in Syria and Babylon in Iraq. We will travel along an ancient route that traverses four Balkan countries with very different approaches to cultural preservation of their shared heritage. As art historians, how can we best study monuments, sites, and routes, some of them endangered, destroyed, or off-limits? What are the tools we can employ to retell their complex story beyond narrow national narratives? How can we best engage the next generation of visitors to heritage sites through digital storytelling, personalized itineraries, AR, and gaming? How can our art-historical training make us active participants in policymaking processes that address cultural diversity, religious accommodation, and citizenship.

Venue: Harvard Art Museum Study Center and other locations."

History of Art & Architecture 96A

Architecture Studio I: Transformations (109375)

Zachary Seibold

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0430 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Architecture assembles multiple models, surfaces, and materials; it is not a single monolithic thing, rather it is comprised of disparate parts and organizational systems operating at different scales. Design, the bringing together of these elements, requires sensitivity, registers scale, and renders perceptual effect. This course is an introductory architectural design studio focused on building foundational architectural concepts and design methodologies studied through a process of making. A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site.

The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary

application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

Class Notes: **Notes: The Monday session will be joint taught as a combined section by Zachary Seibold and Ian Miley in Gund 522. Room 427, 485 Broadway will be available for overflow on the occasion that the sections meet separately on Monday, which will be communicated via course announcement.**

A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site.

The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

Class Notes: **The Monday session will be joint taught as a combined section by Zachary Seibold and Ian Miley in Sackler (485 Broadway), room 427.**

History of Art & Architecture 96B

Architecture Studio II: Connections (110362)

Elle Gerdeman

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

The practice of architecture fundamentally asks us to continuously engage with, and re-conceptualize, the world for which we are designing. As such, architecture as a discipline is not only about designing buildings, but also about challenging us to imagine new ways of seeing the world. This studio takes on the challenge through a series of design exercises focused on understanding, engaging with, and reimaging the urban condition. Throughout the course, we will approach architectural design as both a method of producing urban environments, and also as an avenue through which to understand our cities. We will be directly confronting the social, political, and environmental contexts that are necessarily implicated in any design process.
Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges towards a similar end. This studio originates at the scale of the urban site, and begins with a set of design research assignments that ask students to imagine the city from the perspective of a non-human agent. Extrapolating abstract principles from these agents, we will be mobilizing the possibilities of architectural representation to reimagine the city through mapping, diagraming, and collage.
The studio culminates in a design proposal for a site in Harvard Square. Students will be given an architectural brief, and will produce projects that address existing site conditions, programmatic space requirements, and projected users of the site. Technical workshops will provide all the necessary skills required for the course, and will allow students to develop aptitude in architectural drawing, mapping, rendering, and simple animation. No existing expertise or technical proficiency is necessary for this course. Students from all backgrounds are welcome; we will be encouraging interdisciplinary thinking throughout the design research process.

History of Art & Architecture 98AR

Junior Tutorial (110650)

Chassidy Winestock

2022 Spring (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Required of juniors concentrating in History of Art and Architecture. A group tutorial consisting of weekly meetings with a graduate student, with regular reading and writing assignments. HAA 98ar offers concentrators the choice of several study groups investigating a particular field or topic in art history, including each year: museums and collections; race and aesthetics; the art of looking and writing, and; architectural methods. Concentrators select two of the group tutorial topics.

For AY 21-22, the following topics will be offered:

"Museums and Collections" (Fall)

"Race and Aesthetics" (Spring)

"The Art of Looking and Writing" (Spring)

Class Notes: **Topic: Race and Aesthetics**

This course takes as its premise that the concepts of race, ethnicity, and "the Other" are closely linked with the study of vision,

representation, materiality, and the broader discipline of art history. As such, it offers a broad overview of visual and theoretical engagements with encountering difference, historically and today.

The majority of the course will center on contemporary artists whose work as a critical practice — and in its reception — addresses questions of race and aesthetics in varied ways. Case studies include Carrie Mae Weems, Byron Kim, María Magdalena Campos-Pons, and Glenn Ligon, among others. Readings and assignments are structured to encourage students to think locally and globally about race and to contend with the social and political dimensions of all artistic representation.

We will begin with three thematic sessions, investigating the foundations of art historical practice through close readings of Johann Joachim Winckelmann, as well as broader theoretical engagements through the work of Simon Gikandi, Christina Sharpe, and Édouard Glissant. Major themes include the formation of aesthetic and racial hierarchies, gender and intersectionality, and resistance, among others.

For AY 21-22, the following topics will be offered:

"Museums and Collections" (Fall)

"Race and Aesthetics" (Spring)

"The Art of Looking and Writing" (Spring)

Class Notes:

Topic: The Art of Looking and Writing

In this junior tutorial, we'll look at examples of great writing on art and architecture—from academic texts to exhibition reviews to ekphrastic poetry—with an eye towards understanding how the discipline works at the level of language. What does exemplary art historical writing look like? What forms of writing are distinctive to the discipline? How do we—can we?—distinguish art historical prose from other forms of writing about art, such as criticism? How have certain writers pushed against the limits of genre and form, and where might art historical writing be headed in the future?

Students will produce a short piece of writing of their own each week, and a portion of class time will be devoted to workshopping and reflecting on these weekly assignments. These assignments will offer the chance to approach questions of method at the level of writerly mechanics, test out different genres of art-centered writing, and examine how ideas are generated through the very process of writing itself.

Transregional Echoes from Anatolia to India: Practices & Aesthetics of Timurid-Turkmen Architecture (218046)

Gulru Necipoglu-Kafadar

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Examines the "international Timurid-Turkmen" tradition of architecture, urbanism, gardens, and multimedia ornament in Anatolia, Iran/Central Asia, and India from a transregional perspective. The primary focus is on early Ottoman Anatolia and the Balkans, especially the capital cities of Iznik/Nicea, Bursa, Edirne, and Istanbul, along with their major monuments, ornamental idioms, and architectural practices. Monuments in neighboring as well as contemporaneous polities will be considered from a comparative and connective perspective, rather than given full treatment (Timurid-Turkmen Iran/Central Asia, Mamluks in Syria-Egypt, and Sultanate/Bahmanid India). Final student research papers can focus on these polities or other relevant regions.

Rome, Constantinople, Ravenna in the Light of Imperial Rule (124620)

Ioli Kalavrezou

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The course will focus on three cities of the Mediterranean world during the Late Antique-Early Christian period (4th to 6th centuries): Rome, Constantinople and Ravenna. It will study the building activities through a number of major monuments that transformed the urban fabric when Christianity was becoming the major religion in this Greco-Roman world. This is a time of cultural changes that set the development of western civilization.

Popular beliefs and the formation of Pilgrimage sites in the Mediterranean world (119597)

Ioli Kalavrezou

2022 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The course will concentrate on the Mediterranean world during Late Antiquity from the 4th to the 8th century. This is a time of cultural changes that set traditions leading up to the Christian medieval world. The course will focus on the creation of Christian holy sites, developed during these early centuries in relation to the life of Christ, to that of holy men and to objects and remains of martyrs and other figures.

This phenomenon created popular venerations and cult centers of specific holy sites and the beginning of Christian pilgrimages. A number of sites will be studied more closely as, for example, the so-called Holy Land in Palestine, sites of burials of holy men such as St. Demetrius or St. Menas or sites themselves as that of Mt Sinai. The veneration of these 'relics' and the creation of cult centers contributed to an extraordinary movement of people throughout the Mediterranean.

History of Art & Architecture 155M

Expansion and Reflection: Visual and Material Culture in the Dutch Republic (218043)

Antoinetta Grootenboer

2021 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

How do objects affect people in everyday life? What do things tell us about the people who own them? How do possessions impact social lives, shape public identities and private notions of the self? How do they help people think about the world and reflect on their position in that world?

This seminar examines these questions by looking at visual and material culture of the Dutch Republic, Europe's first modern economy. Seventeenth-century Holland witnessed an explosive growth in the consumption of (exotic) luxuries. Amsterdam embodied a cornucopia of global objects—"where else on earth," René Descartes writes, "could you find, as easily as you do here, all the commodities of life and all the curiosities you could hope to see?" The exposure to new things resulted in an obsession extending as well to ordinary household objects. How did objects speak—from the domestic cabinets in which they were kept—of the cultures and lands from which they were taken? What kind of knowledge about the local and global worlds did they produce? How do representations of these things, from paintings to poems, inform us about the often conflicting meanings they embodied? How do these things, then and now, philosophize about their own meaning and status?

This course attempts to answer these questions by focusing—from a transhistorical perspective—on how ordinary and extraordinary things were experienced through the senses as well as through the inquisitive mind. In particular, we will look at the intimate relations between objects and the spaces they occupy; the cabinets in which they were stored; the interiors in which they were handled; and the way in which their owners saw themselves reflected in them. Topics include: the status of the home; the role of women in

organising space; the presence (and absence) of slavery; the depiction of labour (and leisure); the politics of portraiture and the significance of still life.

This course offers insights in the history of to the visual and material culture of the Dutch Republic, from classic as well as recent perspectives and is largely structured around the holdings of the Harvard Art Museums and other Boston institutions such as the Museum of Fine Arts' Center for Netherlandish Art and the Isabella Stewart Gardner Museum.

Hieronymus Bosch (218055)

Joseph Koerner

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Considers the deeply enigmatic art of Hieronymus Bosch in its entire range, and in relation to earlier and later European painting. Concerned to imagine, vilify, and (sometimes) identify with "the enemy," whoever or whatever that foe may be, Bosch's creations take us to the shadowy core of Renaissance art. The course also explores the strategies, techniques, and limits of art historical analysis.

Francisco de Goya (203078)

Felipe Pereda

2022 Spring (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course is about two things. First it's an introductory course to the art of Francisco de Goya (1746-1828) at the time of the Enlightenment and early Romanticism. It will look into his formation in the institutions of the Old Regime (Travel to Rome, member of the Royal Academy, Court Artist) and explore how Goya challenged this artistic culture, exploring new ideas for the meaning of art, of its public and of the role of the artist in society. Second, the course will discuss Goya's work (from his early "caricatures," the Caprichos, to the Disasters of the War) in relation to modern debates about testimony, witnessing and trauma.

Artisanal Modernism & the Labor of Women (218177)

Maria Gough

2022 Spring (4 Credits)		**Schedule:**	W 1200 PM - 0245 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	12

The objectives of this workshop-style graduate seminar are two-fold:

1) To foreground the pioneering role of textiles and other artisanal media produced by women in the development of modernist art, especially abstraction, Dada, constructivism, productivism, & the Bauhaus & its diaspora.

2) To study and research related works of art in the collections of the Harvard Art Museums (HAMs), with a view to curating an exhibition on the subject for its teaching galleries.

All sessions will be held in the Study Center of the HAMs. Readings will range from the philosophy of aesthetics to the most recent art-historical literature. In February, the seminar will make an (HAA-funded) three-day study visit to New York to see key collections and exhibitions, including Sophie Taeuber-Arp: Living Abstraction at the Museum of Modern Art.

Requirements include class & field-trip attendance & participation, short weekly response papers, & the collaborative production of a virtual exhibition catalogue.

Open to graduate students and advanced undergraduates by permission of the instructor. Limited to 12.

Manet to Man Ray: Modern Art and Its Colonial Matrix (218152)

Maria Gough

2021 Fall (4 Credits)		**Schedule:**	T 1200 PM - 0245 PM
Instructor Permissions:	None	**Enrollment Cap:**	n/a

How does modernist innovation and experimentation between 1860-1940 relate to the European quest for empire? How was modernism shaped by the violence of imperial expansion, and the domination and subordination of colonized peoples? To what extent were modern artists implicated in the colonial project of their historical moment? And to what extent, by contrast, did they oppose and engage critically with that project?

Relatedly, what are the aesthetics and politics of the "exotic" and the "primitive," problematic terms widely used to refer to art from Africa, Oceania, and sometimes also Asian and Islamic art, all of which were valorized by modern artists as a crucial means by which to reinvigorate European art and disrupt bourgeois culture. At what point does an artist's appreciation of another culture become its appropriation?

To help us think through these questions, we will study major works of modern art and, wherever possible, also critical responses by later artists. Key episodes to be examined include: Manet's 1869 critique of

French intervention in Mexico; Monet, Cassatt, Degas, & Van Gogh's "Japonisme"; Gauguin's Tahiti paintings (and responses to them by artists such as Paula Modersohn-Becker, Amrita Sher-Gil, Yuki Kihara, & Kehinde Wiley); the importance of North African and Islamic textiles for Matisse, and the development of modernist painting in colonial Algeria and Morocco; the foundational role of then-contemporary African sculpture in Picasso's collage & constructed sculpture; Nolde's expressionist primitivism (and Mischa Kuball's recent critique); Liubov' Popova's Samarkand abstractions; Hannah Hoch's photomontage series, "From an Ethnographic Museum"; Man Ray's "Noire et blanche"; the rise of Black Internationalism in Paris & the 1931 Surrealist Anti-Colonial Exhibition; and the role of masks in the work of Loïs Mailou Jones & Wifredo Lam in Paris in the late 1930s.

This course is run as a conference course, meaning we meet once a week for two hours (first hour in lecture format, second hour dedicated to class discussion). There is also a weekly TF-led section. Some sessions will be held in the galleries and Study Center of the Harvard Art Museums, and we will visit the MFA Boston. Requirements: Class attendance and participation, weekly readings, two exhibition proposals, and two short exhibition reviews.

Himalayan Art (109902)

Jinah Kim

2022 Spring (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Understood as a divine abode in Indic mythology and envisioned as the immortal realm of "Shangri-la" by later western interpreters, the Himalayas abound with Hindu and Buddhist holy sites. This course explores the vibrant visual culture of the Himalayan region. Two learning goals are: 1) Understanding the historical development of distinctive artistic forms in paintings and sculptures of Nepal and Tibet during major moments of artistic innovations in the region, including the artistic responses to the current political situation; 2) Locating this knowledge in the context of the history of reception and collecting of Himalayan art in the west.

2022 Spring (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The seminar examines the medium of drawing in the Islamic lands, focusing on the post-Mongol through early modern periods throughout the Middle East, Iran, India, and Central Asia. Topics include the medium, materiality and practice of drawing; subject matters; purposes; formats (single-sheet) and contexts (manuscripts and albums); autonomy as an art form; and intermedial relationships that include those to writing. Individual artists working in Safavid, Mughal, and Ottoman contexts are also a point of focus.

Mysticism and the Limits of Representation, from the Middle Ages to the Baroque (218053)

Felipe Pereda

Jeffrey Hamburger

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The course looks at the ways in which artists pushed the boundaries of representation to capture ineffable experiences evoked in accounts of mystical experience. Drawing on the writings of famous mystics from the 6th through the 17th centuries, it will be organized thematically around the erotic, the aesthetic, and somatic dimensions of visual images, as well as what it means to visualize the invisible.

Class Notes: **Open to graduate students and advanced undergraduates.**

The Autobiographical in Art History (218520)

Shawon Kinew

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 4

"Ogni dipintore dipinge se"—every painter paints himself—is a Renaissance proverb that posited every artist would inevitably replicate himself in his artwork, try as he might to avoid this. In short, no artist can escape himself. Are art historians really any different? Can the highly subjective experience of art be rendered objectively? Always embedded in the third person is a perspective and worldview that is specific and individual. This seminar will explore those art historians and scholars who dared to use "I" in their writing. We will begin with Giorgio Vasari's experiment in writing his own biography and proceed with writing that is unashamed in its subjectivity and/or disastrous at disguising it. This seminar is open to graduate and undergraduate students. Enrollment is limited. For consideration please submit a paragraph (via my.harvard) outlining your interest in the topic and your broader interests in art history.

Old Masters in a 'New' World (212948)

Shawon Kinew

2021 Fall (4 Credits) **Schedule:** T 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

As the territory of early modern European studies continues to expand, mimicking the colonization of the period under study, art historians inevitably become explorers of terra incognita claiming "marvelous possessions." Now is an ideal moment to take stock of recent global-facing literature and methods in the art history of early modern Europe: where are we, and where are we going? The first half of this graduate seminar will do just that. At the same time, in this experiment, each seminar participant will be encouraged to choose an "old master" as their compass and test the limits of the canon.

History of Art & Architecture 274K

Russian and Soviet Avant-Gardes (126185)

Maria Gough

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What is the role of the artist in society? We will discuss this crucial and perennial question through the lens of the work of Russian and Soviet avant-garde painters, photographers, designers, and architects—many of them female—who participated in the building of the first socialist society in the early 20thC. How did artists redefine their own role and efficacy in the new social formation so as to realize the promise of the revolution? How was their utopian imagination made into material form, both pictorial and spatial? To what extent did their forms engender, rather than simply reflect, processes of emancipation and social transformation? Over the course of the semester we will trace the avant-garde's continuous self-transformation between 1912 and 1936 from studio painters to spatial constructors to productivists to photographers to media workers to exhibition designers.

Artists include, inter alia: El Lissitzky, Vladimir Tatlin, Natalia Goncharova, Liubov Popova, Olga Rozanova, Aleksandr Vesnin, Aleksei Kruchenykh, Varvara Stepanova, Elena Semenova, Kazimir Malevich, Aleksandra Ekster, Aleksandr Rodchenko, Valentina Kulagina, Gustavs Klucis, Sophie Küppers, Mariia Bri-Bein, Aleksandr Deineka, Dziga Vertov, and Elizaveta Svilova.

Readings are drawn from short polemical essays by the artists and their contemporary apologists and critics, and key texts by art historians and theorists. The seminar will include study of works by El Lissitzky and others in the Harvard Art Museums. In February, we will make an (HAA-funded) study visit to New York to see major collections of Russian & Soviet art.

Requirements include class & field-trip attendance & participation, 1-2 page weekly reading response papers, one or two 10-minute class presentations on the readings, & a research paper (the first draft of which will be presented to the class to garner constructive criticism and suggestions).

Open to graduate students and advanced undergraduates by permission of the instructor. Limited to 12.

Art After Nature: Animal, Vegetable, Mineral, Process (218045)

Carrie Lambert-Beatty

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Without starting from pre-determined categories (e.g. eco-art), how might we map artists' multiple, conflicting, and changing engagements with the more-than-human world? By thinking through a range of critical approaches, could we reframe art as a natural-cultural process? And, by researching specific practices of art-making, institution-building, or exhibition-creation, past, present, or even future, can we

make tangible what it would mean to reframe art this way? The syllabus will focus on the period from the 1960s to the present, but students' individual research projects may take up cases from any place or period.

The Object in the Art Museum (211197)

Makeda Best

Mary Schneider Enriquez

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Practicing art history in today's increasingly mobile art world—whether as a field curator, academic researcher, critic, or other professional specialism—requires museum literacy, intellectual empathy, and the ability to work in multiple voices and mediums, in addition to art historical expertise. This object-centered seminar will introduce students to the central competencies required of art historians working in or with museums today, ranging from skills for assessing the quality and authenticity of objects on the market, to tools for working with living artists and presenting works of art to non-expert audiences. Through practical and written assignments accompanied by key readings, as well as site visits and behind-the-scenes introductions, students will gain an understanding of how the practice of art history in the gallery both differs from and relates to its practice on the page. The course will consider the key issues, debates, and interpretative strategies driving museum practice, and tackle existential questions about the role and responsibility of the 21st-century museum. Throughout the semester, students will work towards public-facing outcomes. They will identify potential acquisitions, and produce and present a temporary installation at the end of the semester. The course will meet at the Harvard Art Museums, a uniquely rich university museum environment endowed with deep collections and state of the art curatorial and conservation facilities.

Monuments (218056)

Sarah Lewis

Joseph Koerner

2022 Spring (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This graduate seminar is designed to consider: Why have monuments, particularly in the United States, become such points of controversy in recent years? What does the fixation on monuments in this historic moment have to teach us specifically about justice and racialized life in American democracy? What is it about the form and ground of a monument that offers it such symbolic value in societal life? This course will tackle these as live questions offering readings and case studies that set a foundation for the development of the practice of monument making, or monument breaking, while also considering the active debates taking place about the future of monuments today.

This course will have three components (1) instruction and discussion; (2) guest visits from architects and artists, including Michael Murphy (co-designer of the Equal Justice Initiative memorial, co-founder of MASS Design), Hank Willis Thomas (artists and co-designer of the Martin Luther King, Jr. memorial set for Boston Common), and William Kentridge (creator of "Triumphs and Laments" mural, Rome); student presentations. The assignments, meant to honor and be responsive to the constraints set upon us by the pandemic, will be rigorous but able to be completed from home and without the need for travel. All course materials will be accessible online.

Class Notes: **Students are asked to email Professors Koerner and Lewis with a paragraph explaining their interest in enrolling in the course.**

Biocentric Art in Early China (218058)

Eugene Wang

2022 Spring (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Artefacts unearthed from ancient Chinese tombs gravitate toward a biocentric universe. Its enabling force is the vital energy (qi or pneuma), which structures the early imagination of both the microcosm of the body and the macrocosm of the universe. The course examines how this qi-centric world works, and how it informs the design and organizational principle behind some monumental projects such as the First Emperor's mausoleum and Mawangdui tombs.

Sesshū Tōyō and Medieval Japanese Ink Painting (218068)

Steffani Bennett

2022 Spring (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar offers students an immersive exploration of the life and work of Sesshū Tōyō (1420 – ca. 1506), one of Japan's most celebrated painters who has been little studied outside of his home country. Throughout the course, we will investigate the contours of Sesshū's biography, the construction of his artistic persona in the early modern period, his roles as a landscape painter, figure painter, and literati-monk painter, and his engagement with the larger field of ink painting in Japanese cultural history. As part of the seminar, students will read various primary and secondary sources pertaining to Sesshū, ink painting and the broader cultural sphere of fifteenth-century East Asia. This course will be restricted to students with ability in either Japanese or Chinese language, or with permission of the instructor.

Topography of Vision: Asian Cases (218048)

Eugene Wang

2021 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The seminar examines some key monuments in East and Southeast Asia. These include early watchtowers with relief decorations, twin structures (e.g. pagodas at Gameunsa Temple, Kaiyuan Monastery in Quanzhou, etc.), ornamented four-sided structures (e.g. Tamamushi shrine, Shentong Monastery pagodas), timber structures housing tiered sculptural programs (e.g. Yinxian Pagoda, Guanyin Pavilion, etc.), monumental cities and precincts (Angkor Wat, Bagan, etc.), rock gardens (Ryōanji, etc.). The relationship between mind and matter is the central concern driving the course. Questions to be explored include how visionary blueprints are played out in physical layout, how imaginary worldbuilding translates into material forms and processes, how numerology or temporal schemes (astronomical and calendrical cycles etc.) are spatialized into architectonic forms, and how architectural structures work in ecological systems (e.g., water management, etc.).

Explorations in Afro-Latin American Art (218050)

Thomas Cummins

Alejandro de la Fuente

2022 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar explores how visual artists and the visual arts have contributed to debates on race, citizenship, and nation in Latin America, from the colonial period to the present. We approach the history of art in Latin America primarily through the production of images of afro-decendants and works by artists of African descent. We will offer a critical and historical analysis of the racialized biases of the existing canon, as well as the need for new research strategies, new methods, and new sources. We also study the contributions of artists and intellectuals who claim connections to Afro-Diasporic cultural practices or participate in broader debates about race and inclusion in Latin American societies.

By combining approaches centered on authorship and on thematic influences and representations, the seminar explores different conceptualizations of Afro-Latin American Art and highlights the possibilities of this field within the art history of Latin America. We cover different geographic areas, different socio-cultural groups as well as different political conditions. We will address various media, including painting, sculpture, architecture, printmaking, photography, video, and installation and study how this artistic production has evolved over time. The course follows a rough chronological order that becomes more media specific as we enter the end of the 19th-century and finishing in the 21st. For this seminar, a social historian of slavery and race and an art historian of colonial Latin America join forces to explore the contours of this field from multidisciplinary perspectives. Undergraduate students are welcome to join the seminar, previous consultation with the instructors.

Class Notes: **The combined enrollment cap across departments is 15.**

Mestizo Nations: Modern Architecture in Mexico and Brazil (218042)

Patricio del Real

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Architects in Latin America have engaged ideas on race developed by intellectuals and cultural actors in the 20th Century. What is the relationship between the notion of *mestizaje* debated by José Vasconcelos and Manuel Gámio, and Mexico's architecture? How did the idea of *racial harmony* advanced by sociologist Gilberto Freyre contributed to Brazilian modernism? This graduate seminar examines how architecture in Mexico and Brazil was mobilized to imagine and construct modern mestizo nations. We will engage in a close analysis of key works to unravel architecture as a cultural and socio-political object that embodied and spatialized race. Our aim is to study the multiple sites and strategies of constructing racial imaginaries and their bearing on spatial practices in the Americas.

Tutorial - Sophomore Year (115419)

Anne Harrington

2022 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Sophomore tutorial is a hands-on course that introduces students to some of the most exciting and

productive questions in the history of science, technology and medicine, while developing critical reading, presentation and discussion skills. Small groups of students will tackle different aspects of a larger theme each week and share discoveries in sessions led by the faculty instructor. The course will be further enhanced by a series of supervised individual projects.

Course Notes:

Required for undergraduate concentration in History and Science. Students must register for a plenary class session that meets on Mondays from 12:45-2:45pm OR 3:45-5:45pm, as well as a weekly meeting on Tuesdays from 5:00-6:00pm, and a weekly section to be arranged.

Knowing the World: An Introduction to the History of Science (123398)

Hannah Marcus

Benjamin Wilson

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

What are the origins of modern science and of the scientific method? Have the ways of knowing the world of different cultures and societies changed over time? How has scientific knowledge been related to other enterprises such as art, religion, literature, and commerce? We will ask these questions and more through a broad survey of many of the crucial moments in the development of science from the Middle Ages to the present day. Topics and figures will include Ibn Sina, Li Shizhen, Galileo, evolution, eugenics, the atomic bomb, and the human genome project.

Nature on Display (123396)

Janet Browne

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Lecture course for undergraduates. This course aims to unpack human ideas about the concept of "nature". We shall include indigenous ways of thought whenever possible. We concentrate on the way that "nature" is displayed in museums, zoos, botanic gardens, film, national parks, etc. ranging from the 17th century to the present and what these displays have to say about us and the societies in which we live. We shall also think about media and imagery, illustrations in books, and early wildlife film. The course hopes to enlarge your understanding of the complex relations between display, entertainment, and scientific knowledge as well as the natural history tradition in North America. Visits will be made to the Natural History Museum, the Ernst Mayr library, and archives at Harvard. The final project is an electronic 'display' compiled by the class.

Foreign Bodies: On Health and Migration (212935)

Eram Alam

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

During the twentieth century, unprecedented human mobility has raised significant questions regarding migration and health. Whether coerced or voluntary, these migratory flows reverberate through individuals, communities, populations, environments, and the body politic in unexpected ways. This course will focus on the relationship between health and migration and ask the following questions: How are moving bodies named and managed? What are the political, economic, juridical, and medical implications of movement? How is risk defined and constructed in relation to migration? Readings will include case studies from around the world, supplemented with theoretical and literary texts.

Course Notes:

Enrollment limited to 20.

Medicine and Health in America (213244)

Eram Alam

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course surveys major historical developments in medicine and health in the United States during the modern period. We will analyze medicine and health within social, cultural, and political contexts to better understand the relationship between medicine and power. Topics will include: citizenship, nationalism, and imperialism; race, gender, and the body; capitalism and the medical marketplace; professionalization, expertise, and authority; crises and epidemics; technology and therapeutics; and questions of care.

From Colonial to Global Health (218843)

Joelle Abi-Rached

2021 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

"Global health" has become a new mantra of our time. Its deeper roots, though, lie in the history of colonialism. How does this fact matter? To find out, this course will focus on relations among colonialism, health care, and globalization in Africa, the Middle East, India, and Southeast Asia . Through a set of interdisciplinary and transnational readings, we will explore issues related to race, religion, modernity, subjectivity, and imperial ambitions, and we will do so through the lens of public health, epidemics, psychiatry, medical institutions, and disease history.

Historical Perspectives on Global Health (219650)

Joelle Abi-Rached

2022 Spring (4 Credits) **Schedule:** F 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar is designed for motivated undergraduates wishing to better understand the current state of scholarship on the history of global health, while developing a supervised research project of their own. What are the most exciting new directions in the field? The most important unresolved controversies? The areas most urgently in need of more scholarly attention? The course is open to students from all concentrations, but advanced undergraduates who are considering writing a senior thesis

that engages in some way with global health history are particularly encouraged to join.

War and Medicine (218842)

Joelle Abi-Rached

2021 Fall (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course explores how modern warfare has shaped the development of medicine from the Crimean War in the 1850s to the Syrian Civil War today. Among the topics covered are war-related discoveries (aseptic surgery, prosthetics), new mental ailments (Shell-Shock, PTSD), the rise of medical humanitarianism (Red Cross, Médecins Sans Frontières), and the long-term health costs of war. What has been the impact of war on medicine and the medical profession? Why are war-related psychiatric disorders deemed controversial? Should physicians treat the wounds of enemy soldiers and civilians as impartially as they treat those of their own side? And, why should we care?

Mental Health in Crisis: From War Neurosis to Covid-19 (219649)

Joelle Abi-Rached

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course explores the history of mental health through the ways in which our minds grapple with war, terror, shock, violence, and natural and manmade disasters. The course starts in the nineteenth century, a period that saw the birth of the concept of "traumatic memory," and ends in our own century, that saw the emergence of new forms of mental distress caused by migration and refugee crises as well as the ongoing Covid-19 pandemic. Drawing on interdisciplinary readings, we will analyse the extent to which ways of thinking about and acting on broken minds are being reshaped by "crises."

Food, Science, and the Invention of Global Hunger (218686)

Gabriela Soto Laveaga

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

How does a biological trait become a political tool? When did the notion of a "hungry world" become synonymous with the developing world? When and why did engineering better crops become the solution to a social problem like hunger? This course explores the history of science and medicine with a focus on food and hunger —what it means, why we need it, and why food or its absence is so political. In Fall 2021 the course will have a significant agricultural science component.

Broken Brains: A Patient-Centered History (160496)

Anne Harrington

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

An exploration of the complex relationship between doctors and scientists who study and treat different kinds of "broken brains," the patients they study and treat, and larger public conversations about being human in today's neurological society. Topics include iconic cases of brain damage that catalyze new scientific understandings (like the case of H.M.), the study of brain damage in war, the emergence of writings (including memoirs and novels) that attempt to describe "what it is like" to suffer from disorders like autism and Alzheimer's, and controversies over recent efforts to see psychiatric disorders like depression as simple products of a chemically "broken brain."

Psychopathologies of Modern Life (218690)

Elizabeth Lunbeck

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

What is the relationship between cultural change and individual pathology? Are the stresses of modern life implicated in the emergence of new forms of psychic distress and mental illness? Over the past century, psychological experts have identified new emotions, dissatisfactions, and disorders, producing an expansive catalogue of modern woes and fashioning a range of remedies. With attention to variations across race and gender, we explore the coalescence and cultural fortunes of, among other topics, the personality disorders (narcissism, BPD); trauma, PTSD; disorders of identity and of attachment; social anxiety, isolation; gaslighting; Black Rage; greed, success neurosis, imposter syndrome; stress, coping, burnout.

Alex Csiszar

2022 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Does information have a history? The control and manipulation of data has become central to politics, economics, and daily life. But what came before this age of bits and big data? How did we get to this point? This course will examine the changing meaning and significance of information from diverse perspectives including technology, gender, ethics, and materiality over the last several centuries. Topics will include information technologies from printing to digital computing, news and disinformation in social media, information labor, state secrecy, and the self as data. The course will include several optional field trips including a printing workshop and a visit to a bioinformatics production facility.

Co-ops, Commons, and Communes: The Technology of Cooperation (219646)

Dave Unger

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In this class we will learn about people who have organized themselves and their economy in cooperative, humane, and equitable ways. We will look at cooperative enterprises, the solidarity economy, physical and digital commons, and the organizations that spring up during disasters. Lessons learned from these examples offer ways to create a more liberated world based in racial, climate, and economic justice.

Digital Storytelling: Using Interactive Media to Share Research (218691)

Dave Unger

2021 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In this project-based class, small teams of students will create interactive, web-based, multi-modal pieces that share research from the history of science with a general audience. The projects will be part of a website redesign for the Department of the History of Science and will be featured on the new site. We will be inspired by cutting edge work in online exhibits, digital publishing, digital humanities, interactive historical fiction, and more. Our work will be grounded in techniques of public history, science communication, and design thinking. Students will learn the skills needed to research, plan, and build projects of their own design. No prior technical knowledge is needed.

Science Before Science: Sources and Methods for the Study of the Premodern History of Science (218687)

Hannah Marcus

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This graduate seminar is designed to introduce students to the important thematic areas and historiographical questions in the study of premodern science. We will survey the landscape of premodern technology, medicine, and natural philosophy with the goal of providing students with the necessary toolkit to conduct research in premodern sources and to read critically in the secondary literature.

Science in the Cold War (205382)

Benjamin Wilson

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This seminar examines the broad and multifaceted interaction between science and the Cold War. In the years between 1945 and the collapse of the Soviet Union, science was enrolled in a remarkable range of ideological, cultural, political, and technological projects. In what ways did Cold War priorities and institutions shape the development of modern science? How did modern science make the Cold War? Readings will include classic and recent works that have explored and critiqued the notion of "Cold War science."

The Changing Concept of Race in Science and Medicine in the U.S.: From Jefferson to Genomics (108811)

Evelynn Hammonds

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course explores the history of the concept of "race" as used by biologists, anthropologists, and physicians from the 17th century to the present and social and political responses to the concept of race in these fields.

History of Science 2812

China in the History of Science and Technology (218688)

Victor Seow

2021 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This graduate seminar has been designed to prepare students to undertake independent research in the history of science and technology in China from the late nineteenth century to the present. To that end, it introduces students both to general trends in the relevant literature from the history of science and technology and adjacent social sciences as well as to various types of primary sources that can serve as the foundation for a scholarly contribution. Advanced proficiency in the Chinese language and some basic familiarity with the history of modern China required.

History of Science 2910

The Epistemology of Collaborations (218689)

Peter Galison

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Science works through collaborations and yet our epistemology—how we gain and secure knowledge--is fundamentally tied to the thinking, perceiving, and acting individual. How should we understand the epistemology of collaborations, from a handful of scientists working at a lab bench to a 2500-person strong team at CERN? What is the knowing subject of a group working together? Who is, who can be responsible for the robustness of the result? From questions of credit to the security of the claims, collaborations present a host of problems for historical-philosophical understanding. The course will read about the history and sociology of collective work from the Invisible College of the 17th century through the philosophical literature on the "expanded mind" (beyond skin and skull). We will look for parallels in the collective cognition of bee hives, flocking birds and artificial intelligence, all the way forward to work on the frontiers of contemporary science.

Course Notes:

Intensive (double intensity) graduate seminar, meets seven times in plenary once per week during the fall of 2021, with further individual and small-group meetings to be fixed. Full semester credit.

History of Science 2940

Science and the Conquest of the Tropics (219645)

Gabriela Soto Laveaga

2022 Spring (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Europeans' discovery of a "torrid" zone with distinct flora, fauna, and, presumably, different humans spurred a race to catalogue difference. This seminar examines how scientific knowledge of the tropics was collected, classified, and disseminated from the 1500s onward as evidence that the Global South not only had a different climate but was characteristically "less" developed than the north. Students will examine arguments from imperial botany and biology that made their way into how we explain societies today.

History of Science 2985

Science, Power and Politics (122718)

Sheila Jasanoff

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 10

This seminar introduces students to the major contributions of the field of science and technology studies (STS) to the analysis of politics and policymaking in democratic societies. The objective is to expand students' understanding of the ways in which science and technology participate in the creation of social

and political order. The seminar is devoted to reading and analyzing works by scholars in STS and related fields who have addressed such topics as the relationship between scientific and political authority, science's relations with the state, science and democracy, scientific and technical controversies, and citizenship in technological societies.

Course Notes:

Undergraduates may enroll only by permission of the instructor. Offered jointly with the Kennedy School as IGA-513.

History of Science 2993

Agnotology: The History of Knowledge and Ignorance (203706)

Naomi Oreskes

2022 Spring (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Historians of science have traditionally been concerned with the production of scientific knowledge, but in recent years have turned their attention to the production of ignorance. This course focuses on the production of ignorance as a social, political, cultural, economic and epistemic question, with attention both to techniques of deliberate ignorance production, and to the inadvertent and often uncontested production of ignorance that arises from accepted research practices and from the conditions that shape the direction and forms of scientific inquiry.

Course Notes:

Open to graduate students and advanced undergraduates in history of science, and to others with instructor's permission.

Human Evolutionary Biology 1210

Research in Human Biomechanics and Physiology (127206)

Andrew Yegian

Ali Yawar

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 8

Introduces students to experimental techniques used to investigate the musculoskeletal structure and physiology of humans. Students undertake a supervised research project in the Skeletal Biology and Biomechanics Laboratory. Students meet to introduce their project, discuss their work and progress, and to present their final results, as well as for several lectures on writing and presenting research findings. An extensive commitment of time in the laboratory is required. Grades are based on the work completed, the oral presentation, and a short research paper.

Course Notes:
This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Class Notes: **This course will meet in MCZ 539.**

Recommended Prep:
Recommended: Life Sciences 2 or Human Evolutionary Biology 1420

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll

Human Evolutionary Biology 1290

Genes, Mind, and Culture (159565)

Joseph Henrich

Amy Clark

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Humans are a cultural species. Unlike other species, we are heavily reliant on learning from others to acquire many important aspects of our behavior, and this capacity for cultural transmission has given rise to a second system of inheritance that not only explains much of our contemporary behavior but has driven our species' genetic evolution over hundreds of thousands or even millions of years. Humans are products of culture-gene coevolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for tackling basic problems and questions in psychology, economics and anthropology. In this class, we will focus on the origins and evolution of human culture using evidence from archaeology, human evolutionary biology, physical anthropology, and related fields. We will investigate how our hominin ancestors acquired and passed down a wealth of accumulated knowledge, such as technologies for hunting and collecting foodstuffs, the medicinal uses of plants, the control and manipulation of fire, and how to identify a distant group member. How did the accumulation of such information change over time and within different hominin groups (such as Neanderthals)? And how can we use the archaeological record and inferences made from human evolutionary biology to answer these questions?

Class Notes: **This course will meet in MCZ (Museum of Comparative Zoology) Room 529.**

Human Evolutionary Biology 1310

Hormones and Behavior (112219)

Carole Hooven

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

An introduction to the interaction between hormones and behavior, emphasizing research in humans. General principles of endocrine physiology are presented. The course then focuses on how hormones affect the brain and body in early development and later in adulthood, and the relationship of hormones to sex and gender. We will explore human reproduction, energy metabolism, mating and sexuality, parental behavior, stress, and dominance interactions.

Class Notes: **This course will meet in the DeVore Conference Room, MCZ 539.**

Human Evolutionary Biology 1311

Evolution of Human Locomotion (213579)

Andrew Yegian

2021 Fall (4 Credits) **Schedule:** WF 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course explores two of the most essential questions in human evolution: how and why did our unique bipedal walking and running gaits evolve? The course combines the fields of quantitative locomotion biomechanics and paleoanthropology to address these questions. Students will learn about the common mechanical models used to describe human walking and running, with an eye towards defining what "human bipedalism" is in comparison to ape bipedalism. They will also learn about the key fossils that provide evidence of locomotion evolution, and will assess the fossils using the lens of locomotion biomechanics to understand when the key aspects of our gaits evolved. Finally, we will weave these two fields together to understand the big picture of hominin locomotion ecology, and how locomotion related to the lifestyle of our ancestors and our modern selves.

Class Notes: **This course will meet in Peabody Museum 52H.**

Recommended Prep:

Life Sciences 2 and/or HEB 1420 recommended but not required.

Human Evolutionary Biology 1317

Evolution, Anatomy and Physiology of Sleep (217869)

Joanne Clark Matott

2022 Spring (4 Credits) **Schedule:** TR 0430 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This research seminar will introduce students to current theories on the evolution of sleep, the neuroanatomical circuits regulating sleep and wake, and the interpretation of physiological sleep recordings and sleep diary data. Students will also gain insight into experimental design, data collection, and data analysis. This twice-weekly seminar will consist of mini-lectures, group discussion, and in-class and own-time data analyses.

Course Notes: **This course counts as a Junior Research Seminar.**

Class Notes: **This course will meet in Peabody Museum 52H.**

Human Evolutionary Biology 1326

Ancient DNA as a Window Into the Human Past (216425)

David Reich

2022 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Over the last decade, ancient DNA technology has made it possible to ask and answer questions that were impossible to address before, and the findings that have emerged are profoundly challenging and enriching previous understandings of the past gleaned from fields outside genetics. This course is aimed at providing students with the tools needed to critically evaluate and perform original research. The centerpiece of the course will involve students learning how to analyze ancient DNA data—including unpublished data produced by the instructor's lab—leading to a final project in which students will write an original research paper based on their analysis of data, mentored by the instructor and/or members of the instructor's laboratory. The course format will include lectures aimed at providing students with an understanding of major issues in this field (starting from an assumption that students have no background), and seminar-style discussions critically assessing papers and student research projects.

Course Notes:

This course is offered by the Human Evolutionary Biology Department—whose students will be guaranteed a minimum of 1/3 of the spots in the course—but would also be of interest for students in Computer Science, Statistics, Organismic and Evolutionary Biology, Anthropology, Molecular and Cellular Biology, and History. This course is aimed at providing deep disciplinary knowledge in Ancient DNA research and as such could be a jumping-off point for students who wish to do an Honors Senior Thesis in this area or carry out Ph.D. thesis research in Ancient DNA.

Class Notes: **This course will meet in the DeVore Conference Room, MCZ 529.**

Recommended Prep:

Computer programming background (AP Computer Science or equivalent). Statistics background (AP Statistics or equivalent). Students who do not have computer or statistics background but are highly motivated to take the course should write to the instructor to have a discussion about whether they might have the background needed to take the course.

Human Evolutionary Biology 1330

Primate Social Behavior (113837)

Martin Surbeck

Isaac Schamberg

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course provides an overview of primate social behavior and cognition and will cover topics such as friendships, kinship, sex and mate choice, dominance, communication, cognition, emotion, parental care, and altruism. Over the course of the semester, we will attempt to address fundamental questions about the Primate order from three perspectives:

1) An evolutionary perspective. How do primate species differ from one another? What are the selection pressures that account for such differences? How to explain seemingly maladaptive behaviors such as infanticide within an evolutionary framework?

2) A primate perspective. An evolutionary perspective. How do primate species differ from one another? What are the selection pressures that account for such differences? How to explain seemingly maladaptive behaviors such as infanticide within an evolutionary framework?

3) A human perspective. What are the continuities and discontinuities between human and non-human

primates? What is it that sets humans apart from other primate species?

Course Notes:

This course fulfills the behavior concentration requirement for Human Evolutionary Biology.

Class Notes: **This course will meet in MCZ (Museum of Comparative Zoology) Room 529.**

Human Evolutionary Biology 1334

Grunts, gurgles, and grammar: primate communication and the origins of language (217870)

Isaac Schamberg

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar investigates the evolution of language through comparison of human and non-human systems of communication. Over the course of the semester, students will address four big questions: 1) How does language differ from the communication of other primates? 2) How do infants learn language? 3) What is the relationship between cognition and language? 4) For what function did language evolve? In addressing these questions, the class will draw on findings from psychology, anthropology, linguistics, and, especially, primatology.

Class Notes: **This course will meet in Peabody 52H.**

Coexistence in Crisis: How Animals Made Us Human (214597)

Christine Webb

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Human evolution cannot be understood in isolation from other species. Our identities are the product of a multitude

of interactions with other life forms, a complex web of constitutive relations. Anthropogenic activities on earth simultaneously undermine and overshadow this reality, rapidly spinning coexistence into a severe and fatal imbalance. We have diluted and dismantled our embeddedness with other beings, choosing a legacy of exploitation over symbiosis—of which our relationships with other animals are a telling manifestation. How did this come to be? How were "human" and "animal" delineated over time? How can we comprehend and improve the fraught dynamics between humans and other beings emblematic of the Anthropocene?

The animal Other has figured prominently in human evolutionary history, as evidenced by the cave art of the Upper Paleolithic. Today, animal representations abound in diverse and often contradictory forms. This course will explore the variety of ecological and cultural relationships that form between humans and other animals—wild and domesticated species, as commodities or companions, from research objects to spiritual/sacred subjects. The course will draw on an interdisciplinary literature from science and philosophy—covering themes such as deep ecology, posthumanism, and our moral obligations to Others—so majors and non-majors are equally welcome. Class sessions will be largely discussion-based, and students will develop a semester-long research project that investigates how a given nonhuman entanglement with human lives has shaped human evolution—thus exemplifying ecophilosopher David Abrams's assertion that "we are human only in contact, and conviviality, with what is not human."

Class Notes: **This course meets in MCZ 541.**

The Human Brain in the Animal Kingdom (214351)

Erin Hecht

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Our brains make us what we are. How did they get that way? How are they different from other animals', and how are they similar? This course will explore the structure and function of the modern human brain and examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition. Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of Homo sapiens within the context of the broader animal kingdom. Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of human-unique

phenomena like language, complex tool use, music, and mathematics; social cognition and theory of mind; individual variation and brain plasticity during learning; and domestication and self-domestication.

Class Notes: **This course will meet in the DeVore Conference Room, MCZ 539.**

Explaining Beauty: The Hidden Functions Behind Aesthetics (208137)

Bethany Burum

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Why do people from some cultures find body modifications attractive that others find ugly? What makes a Picasso beautiful? Why are fashion trends constantly changing? This course will delve into the hidden functions that explain our aesthetic tastes, including what we find beautiful in the physical body, art, and fashion. Drawing on classic evolutionary theory, theories of cultural evolution, and game theory, we will seek to explain both aesthetic tastes that remain relatively constant, and those that differ dramatically across time and culture. This course will feature field trips to art museums and discussions with experts in different domains of aesthetics.

The Behavioral Biology of Women (110603)

Lara Durgavich

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An exploration of female behavior focusing on evolutionary, physiological, and biosocial aspects of women's lives from puberty, through reproductive processes such as pregnancy, birth, lactation, to

menopause and aging. Also explores female life history strategies in different cultural settings. Topics include cognitive and behavioral differences between men and women; violence against women; and women's reproductive health choices. Examples are drawn from traditional and modern human societies and data from nonhuman primates are considered.

The Arrogant Ape: Rethinking our Relationships to Others (213580)

Christine Webb

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Darwin's theory of evolution offered a powerful counternarrative to the scala naturæ, thus redefining the place of Homo sapiens in the natural world. But a great irony presents itself when a species so-named for its wisdom is currently causing the sixth mass extinction of life on earth. In this seminar, we will explore this apparent contradiction, assess why it has come to be part of our evolutionary legacy, and discuss theory and research that counteracts its profound negative potential.

What Game Theory Reveals About Social Behavior (208048)

Bethany Burum

2021 Fall (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What happens when the benefits of one strategy depend on the strategy chosen by another? From doing favors to driving on the right side of the road, this interdependence characterizes much of human social

behavior, and game theory is the tool designed to reveal what results. This course will draw on models from game theory and evolutionary dynamics to explain some of the most puzzling aspects of our psychology, including why we speak indirectly, why people end up in feuds over trivial resources, and where our moral intuitions come from. No prior knowledge of game theory or evolutionary dynamics is required.

Class Notes: **This course will meet in Northwest B101.**

Human Adaptation (218850)

Neil Roach

2021 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Humans are very weird primates. We walk on two legs, are the most ferocious predators alive, live in groups that help us thrive but challenge our health, cook our food and are incredibly reliant on technology. This course will introduce students to human origins and ongoing debates about how natural selection shaped our past and alters our world today. We will focus our discussions on major transitions in our sexual, dietary, and technological behaviors, as well as how our evolutionary history shapes our responses to disease and patterns existing variation in skin color, body shape and physiology.

Course Notes: **This course is most appropriate for undergraduate students.**

Human Evolutionary Biology 1406

Human Nutritional Biochemistry and Metabolism (218715)

Noreen Tuross

2021 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 8

The conversion of macronutrients into consumer energy and tissue is a well-traveled road of scientific enquiry. Nutrient biochemical pathways and their regulation are the basic information to explore unresolved nutritional and medical issues of the day. Although the individual macronutrients, carbohydrate, fats and protein, are often considered in isolation, the interactions of pathways and the redundancy of source intermediates are important issues to be considered. Long lived, omnivorous humans present a particular challenge in nutritional biochemistry and metabolism research for a number of reasons that will be discussed in this seminar. The changes in the human diet through time, and the known and unknown impacts of these diet changes will also form a theme through the course.

Class Notes: **This seminar is appropriate for upper level undergraduates and graduate students. Auditing is not allowed. The course will require the use of both textbook and journal articles. Occasional recorded lectures will be required viewing prior to our discussion.**

Junior Research Seminar.

This course will meet in MCZ (Museum of Comparative Zoology) Room 529.

Gut Microbiome and Human Health (204010)

Rachel Carmody

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Microorganisms residing in the human gastrointestinal tract are as numerous as our own cells and together encode at least 150 times as many unique genes. In this research seminar, we explore gut microbial contributions to human physiology in states of health and disease. We consider how the human gut is colonized, the factors shaping the structure and function of the gut microbiome, and the pivotal roles of the gut microbiome in digestion, energy regulation, immunity, development, drug metabolism, and behavior. We evaluate fast-growing evidence for the gut microbial modulation of metabolic syndrome, cardiovascular disease, cancer, and neurodevelopmental and neurodegenerative disorders, and discuss prospective microbiome-targeted approaches for the prevention and treatment of human disease. The weekly three-hour lab will introduce students to experimental, bench and computational techniques used to investigate the gut microbiome, enabling students to collaborate on a novel research project that dovetails with topics discussed in seminar.

Course Notes:

This course fulfills the research seminar requirement for Human Evolutionary Biology.

Preference will be given to Human Evolutionary Biology concentraters fulfilling a research seminar requirement and Human Evolutionary Biology graduate students.

Human Evolutionary Biology 1432

Research in Cultural Evolution (218716)

Joseph Henrich

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course allows undergraduates to conduct research as part of the Laboratory for Culture, Cognition and Coevolution. Researchers in this laboratory take an evolutionary approach to the origins of culture, the interaction between genes and culture, and the process of cultural evolution. Central topics include cooperation, language evolution, life history, religion, status psychology, societal evolution, innovation and the interplay between institutions and cultural psychologies. Students will be matched with more senior lab members and work on an independent project that fits in with the lab's research agenda.

Class Notes: **This course is intended for undergraduate students.**

Perceptions of Primates: The Art of Science Communication (203898)

Lara Durgavich

2022 Spring (4 Credits) **Schedule:** W 0945 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Fill in the blank: Everything I know about monkeys and apes, I learned from _____. Curious George? King Kong? The local zoo? The Internet?

For many people, perceptions of primates (and other scientific subjects) are formed largely by way of films and TV shows, news reports on scientific studies, and headlines on social media. In this seminar, students will examine the workings and impact of science communication by exploring how primates are portrayed in popular culture and considering how media influences the science of primatology and public understanding of that science. Course meetings will include discussions with guest scientists, journalists, and professional science communicators, and students will engage with a variety of exercises to improve their own writing and communication skills.

Class Notes: **This course will meet in Peabody Museum 52H.**

Recommended Prep:

Human Evolutionary Biology 1451

Primate Functional Genetics and Genomics (109815)

Terence Capellini

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Recent advances in genetics, genomics, and developmental biology are improving our understanding of human and non-human primate biological traits. These disciplines, when incorporated into a multi-faceted context, can reveal the mechanistic basis of evolutionary adaptations. This seminar is designed to investigate and critically evaluate foundational and novel research in primates (and other organisms) that employs the tools of these trades. In doing so, students are exposed to an integrative perspective upon which to explore classic and modern questions in functional biology.

Course Notes:

This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Class Notes: **This course will meet in MCZ 541.**

Recommended Prep:

Life Sciences 1b or equivalent genetics/genomics course.

Building the Human Body (156174)

Terence Capellini

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Humans and our primate relatives are incredibly variable. This variation results from natural selection operating on the developmental mechanisms that control anatomy and physiology. While these mechanisms remain mostly undiscovered, we are beginning to understand these complex processes due to major advances in technology that have pushed the fields of genetics, genomics and developmental biology rapidly forward. This research-centered course explores these relationships in the context of the human paleontological record. We focus on the evolution and development of the musculoskeletal system, which includes the cranium, axial skeleton and limbs, and present studies that cast light on the developmental genetic mechanisms that underlie major transitions in human evolution.

Course Notes:

This course fulfills the research seminar requirement for Human Evolutionary Biology and includes a mandatory laboratory section.

Class Notes: **This course will meet in MCZ (Museum of Comparative Zoology) Room 541.**

Recommended Prep:

LS1b (Genetics, Genomics, and Evolution). Introductory courses in paleoanthropology, anatomy helpful but not required.

Human Evolutionary Biology 1600

Evolutionary Genetics of Complex Human Traits (161269)

Maryellen Ruvolo

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 8

We need to move beyond the "one gene – one trait" framework of Mendelian genetics to understand many human traits of compelling evolutionary and biomedical significance. "Complex traits" are those determined by multiple genes, environmental factors, and their interactions. Complex traits include diseases that kill us (e.g., heart disease) and a wide range of physical and behavioral features, such as height, metabolism, language, depression, and countless others. Arguably the best characterized human complex traits are those for which the most NIH dollars and researchers' efforts have been spent; these include schizophrenia, autism spectrum disorder, and other neurodevelopmental and neuropsychiatric disorders. By paying close attention to the genetic bases of these disorders and their contributing environmental components, we will develop a useful framework for analyzing other human complex traits. In this advanced small-group seminar, we will examine their multiple genomic and environmental causes, the influences of epigenetics and of the gut microbiome, what animal models and stem cell "organoids" can tell us, whether natural selection acts to maintain these disorders in humans, and the importance of studying world-wide population diversity for uncovering the full range of genetic factors. Our discussions will span topics from the gene and neurobiological levels to the societal.

Course Notes:

This course is appropriate for upper-level undergraduate students, as well as first and second year HEB graduate students. Directions for applying to the lottery for this course will appear on the Canvas course website. Final grade is based on the research paper (50%) and on class participation including student-led discussions and presentations plus weekly written homework assignments (50%). Frequent interactions with the instructor and peer review are important components in the developing the final research paper. Auditing is not available for this course.

Class Notes:

This seminar will meet remotely. Mondays and Wednesday sessions are for class discussions with occasional Friday discussions. Fridays will mainly be used for office hours.

Recommended Prep:

Prerequisites are an A or B grade in Life Sciences 1b or demonstrated knowledge of basic quantitative genetics (please consult with instructor).

Human Evolutionary Biology 2480

Human Nature (203596)

Erin Hecht

Martin Surbeck

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course asks: What makes us behaviorally and psychologically human? In what ways are humans similar to other species and in what ways are we different? What are the evolutionary origins of the behavioral and psychological features found across human societies including parental love, sibling rivalry, pair-bonding, incest aversion, social status, war, norms, altruism, religion, language, and cooking? At the same time, how can we account for the immense diversity we observe in behavior and psychology across time and across societies? Tackling these questions within a broad evolutionary framework, the course will draw on the latest insights and evidence from evolutionary biology, primatology, anthropological ethnography, neuroscience, genetics, linguistics, economics and psychology. We'll fully contextualize contemporary behavior by examining studies of non-human primates, especially chimpanzees, and a broad breadth of human variation, based on comparative studies of hunter-gatherers, herders, agriculturalists and—the most unusual of all—people from industrialized societies. We'll also consider how cultural evolution has shaped our genetic evolution, both over our species' deep history and in more recent millennia. Along the way, we'll consider how understanding the evolutionary origins of human behavior, psychology and culture informs how we approach contemporary issues such as patriarchy, polygamous marriage, sex differences, child abuse, mating preferences, homosexuality, racism, psychological variation among populations and the use of oral contraceptives.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Human Evolutionary Biology 3000 Section: 006

Reading and Research (126279)

Erin Hecht

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Special reading in selected topics under the direction of members of the department.

Course Notes:

Consult the appropriate member of the department.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Evolutionary Biology 3000 Section: 007

Reading and Research (126279)

Maryellen Ruvolo

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Special reading in selected topics under the direction of members of the department.

Course Notes:

Consult the appropriate member of the department.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

This course reflects time that a graduate student affiliated with Human Evolutionary Biology spends on teaching effort when the student serves as Teaching Fellow for a Faculty of Arts and Sciences course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Human Evolutionary Biology 3310

Experimental Methods in Human Evolutionary Biology (117873)

Terence Capellini

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Evolutionary Biology 3310

Experimental Methods in Human Evolutionary Biology (117873)

Terence Capellini

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Human Evolutionary Biology 3310 Section: 002

Experimental Methods in Human Evolutionary Biology (117873)

Rachel Carmody

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Evolutionary Biology 3310 Section: 002

Experimental Methods in Human Evolutionary Biology (117873)

Rachel Carmody

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Evolutionary Biology 3310 Section: 003

Experimental Methods in Human Evolutionary Biology (117873)

Daniel Lieberman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3310 Section: 003

Experimental Methods in Human Evolutionary Biology (117873)

Daniel Lieberman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3310 Section: 004

Experimental Methods in Human Evolutionary Biology (117873)

Maryellen Ruvolo

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3310 Section: 004

Experimental Methods in Human Evolutionary Biology (117873)

Daniel Lieberman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3310 Section: 005

Experimental Methods in Human Evolutionary Biology (117873)

Noreen Tuross

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3310 Section: 005

Experimental Methods in Human Evolutionary Biology (117873)

Noreen Tuross

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Evolutionary Biology 3310 Section: 006

Experimental Methods in Human Evolutionary Biology (117873)

Martin Surbeck

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Human Evolutionary Biology 3310 Section: 006

Experimental Methods in Human Evolutionary Biology (117873)

Maryellen Ruvolo

Linda M. Reynard

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Human Evolutionary Biology 3310 Section: 007

Experimental Methods in Human Evolutionary Biology (117873)

Erin Hecht

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3310 Section: 007

Experimental Methods in Human Evolutionary Biology (117873)

Joseph Henrich

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Human Evolutionary Biology 3310 Section: 008

Experimental Methods in Human Evolutionary Biology (117873)

Joseph Henrich

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Evolutionary Biology 3310 Section: 008

Experimental Methods in Human Evolutionary Biology (117873)

Erin Hecht

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Human Evolutionary Biology 3310 Section: 009

Experimental Methods in Human Evolutionary Biology (117873)

David Reich

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3310 Section: 009

Experimental Methods in Human Evolutionary Biology (117873)

David Reich

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt

Human Evolutionary Biology 3350

Laboratory Methods in Primate and Human Nutrition (126406)

Rachel Carmody

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Independent laboratory study in the biochemical analysis of plant and animal foods, and of human and animal digestive physiology and feeding behavior.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3350

Laboratory Methods in Primate and Human Nutrition (126406)

Rachel Carmody

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Independent laboratory study in the biochemical analysis of plant and animal foods, and of human and animal digestive physiology and feeding behavior.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3400

Advanced Reading and Research (126282)

Terence Capellini

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Course Notes:

Consult the appropriate member of the department.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Humanities

Subject: Humanities

Humanities 10A

A Humanities Colloquium: From Homer to Valeria Luiselli (110440)

Jay Harris
David Atherton
Glenda Carpio
Ambrogio Camozzi Pistoja
David Elmer
Justine Landau

2021 Fall (4 Credits) **Schedule:** T 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 90

2,500 years of essential works, taught by six professors. Humanities 10a will likely include works by Homer, Plato, Sappho, Augustine, Ferdowsi, Murasaki, Dante, Boccaccio, Hafez, Basho, Dickinson, Nietzsche and Luiselli. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate online or in person, depending on public health conditions, in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes:

The course is open only to first-year students. All Humanities 10a seminars will meet on Thursdays from 10:30-11:45am. You must be able to attend a discussion seminar at this time in order to take the course. Students who complete Humanities 10a meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail.

Jill Lepore
Deidre Lynch
Leah Whittington

Jesse McCarthy

Wai-yee Li

Samantha Matherne

Jay Harris

2022 Spring (4 Credits) **Schedule:** T 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 90

2,500 years of essential works, taught by seven professors. Humanities 10b is open only to students who completed Humanities 10a in Fall 2021. Humanities 10b will include works by Ellison, Du Bois, Alain Locke, Woolf, Douglass, Wollstonecraft, Cao Xueqin, Shakespeare, Virgil, Sophocles and Homer, as well as the Arabian Nights, The Federalist Papers and the Book of Job. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students continue to receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate online or in person, depending on public health conditions, in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes:

The course is open only to first-year students. Students who complete Humanities 10a meet the General Education distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail.

A Colloquium in the Visual Arts (122550)

David Roxburgh

Joseph Koerner

Jennifer L. Roberts

Ewa Lajer-Burcharth

Jinah Kim

2021 Fall (4 Credits) **Schedule:** M 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 72

An introduction to major works of art and architecture from around the world, co-taught by a team of professors. Subjects include Eadweard Mybridge and photography, Hokusai, the Parthenon and Persepolis, Albrecht Dürer, women artists, Zen Buddhist art, Max Beckmann, the illustrated Bhagavata Purana, Mughal painting, Edouard Manet, and Robert Hooke. Consists of one 75-minute lecture plus a 60-minute discussion seminar led by the professors every week. Students will also participate in weekly looking labs and special lectures, workshops, and screenings outside the class.

Course Notes:

The course is open to all undergraduate students. Students who

complete Humanities 20 meet the divisional distribution requirement for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 72.

Making It: Mahindra Scholars Seminar (216637)

Robin Kelsey

Jennifer L. Roberts

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

***Making It: Mahindra Scholars Seminar* is a new course for sophomores, regardless of intended Concentration, who wish to deepen their engagement in the humanities. Each week in the seminar, guided by a distinguished guest, we will focus on a particular creative form – the novel, for example – with the aim of refining our powers of observation, interpretation, and articulation. In this way, we will learn new ways to approach the meaning of poems, speeches, paintings, sculptures, plays, arguments, and songs. The course will not only give us insight into these creative forms; it will also enhance our relationship to the world.**

Class Notes:

The course is designed for sophomores, who will receive preference through an application process. However, students from all class years are welcome to apply. Students who enroll in both HUM 90 in the fall and HUM 93: Place and Planet: Mahindra Scholars Lab in the spring will earn the distinction of being named Mahindra Scholars, an honor conferred by the Mahindra Humanities Center through the Undergraduate Scholars Initiative and the Intergenerational Humanities Project (I-HUM). Students in HUM 90 are encouraged but not required to enroll in HUM 93 in the spring. Preference for admission to HUM 93 will be given to those students who have completed HUM 90.

Applications are due on August 24 and the first introductory course meeting will be September 1. For more information, visit the course website. Students who complete Humanities 90 meet the Harvard College Curriculum divisional distribution for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 12. One two-hour guest lecture (Fridays), and one two-hour seminar led by the professors and a TF (Mondays).

Sarah Dimick

Joyce Chaplin

2022 Spring (4 Credits) **Schedule:** F 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Nature changes, nature persists, and in this recurrence of variety and predictability, we humans can find meaning and value for ourselves. This course is your opportunity to think about these natural patterns. We will examine how phenological observations—of recurring environmental phenomena like harvests, frosts, blooming dates, and migratory arrivals—have been recorded, understood, and used. We will generate our own phenological records in and around Harvard in early 2022, and we will collaborate on a projection mapping project to share our knowledge with the larger community. Phenology is now a scientific practice, but phenological observations used to be common among ordinary people, who used those natural occurrences to make practical decisions, as when to plant crops and when to harvest them. Many people have lost that awareness, or they are only regaining it with a sense of helpless alarm, as climate change and loss of biodiversity drastically alter seasonal shifts. Within this crisis, and ability to find "strength in what remains behind" is something that the humanities can help with, perhaps at least as much as the sciences.

Beginning ASL III (205111)

Andrew Bottoms

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

ASL III is designed for students who have completed ASL levels I and II. Students come to ASL III with an understanding of the fundamentals of ASL comprehension and production. These foundational courses (ASL I and II) introduce students to the language using a natural acquisition approach without explicit focus on grammatical rules. ASL III has an increased focus on the appropriate ways to converse with members the Deaf community. In this class, students will learn how to tell stories that adhere to the pragmatic and linguistic standards of the Deaf community with a focus on stylistically appropriate production. In this class, students will learn how to engage with members of the Deaf community in respectful and culturally appropriate ways. In addition to fostering language development, we will discuss the history and culture of the Deaf community.

Course Notes:

This course is limited to 15 students.

Additional Course Attributes:

Beginning ASL IV (205124)

Andrew Bottoms

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

ASL IV course will build on the foundation set in the first three levels of ASL and will focus on expressive language at a more advanced level. Students will have an opportunity to play with the language and explore different literary genres including: classifier stories, narratives of personal experience, visual vernacular and ASL poetry. Given that language learning doesn't happen in isolation, we will continue our exploration of Deaf culture and norms in order to develop a deeper understanding of the Deaf community. Growing out of this discussion, students will learn what it means to work as an ally to the Deaf community and avoid oppressive behavior. Other issues to be discussed include recognizing audism in oneself and others and how to appropriately respond.

Course Notes:

This course is limited to 15 students.

Language, Structure, and Cognition (122514)

Adam Singerman

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** 144

What do the world's almost 7,000 languages have in common? Why do they show recurrent commonalities and principled differences? What do they reveal about the human ability for speaking and thinking? How do languages develop? How do they die? This course addresses these and related questions while introducing the languages of the world; their distribution, recurrent structural properties, and genetic classification; processes of language contact; and the relationship between language and the brain.

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What determines how the words in a sentence are put together in a given language? This course introduces the field of syntax, and the study of order and structure among words. Students will learn to construct and evaluate syntactic analyses and argumentation and will be exposed to variation and universals in the syntactic patterns found in natural languages. The course will also provide an introductory survey of syntactic phenomena, including question formation, the passive, anaphora, and agreement.

Additional Course Attributes:

Linguistics 104

Word Structure (125790)

Jonathan Bobaljik

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course investigates the nature and structure of words through the lens of contemporary morphological theory. What's in a word? Topics include the place of word formation in relation to phonological and syntactic phenomena, morphological processes, and the nature of the lexicon. Emphasis on the analysis of morphological phenomena in a range of typologically diverse languages.

course requirement: LING 83 or LING 101

Sounds of Language (111954)

Kevin Ryan

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What are the sounds of the world languages, and how are they organized to make words and sentences? Why are some sounds hard to hear or make? Is there a `universal inventory' of sounds? This class introduces students to the sounds of the world's languages, and provides tools for studying them systematically. We will study the setup to transfer thoughts from one brain to another.

Linguistics 106

Knowledge of Meaning (117788)

Yagmur Sag-Parvardeh

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** 36

This course is an introduction to the field of natural language semantics, which is a branch of linguistics concerned with meaning. What does it mean to know the meaning of a sentence? How do different parts of a sentence compose to form a sentence meaning? We will start by looking at sentence-level meanings and relations between them. Then, we will investigate how the meanings of sentence-internal elements (like verbs, subjects, and adjectives) are composed to form sentence meanings. During the process, we will cover some formal tools that allow us to talk about language in a precise way: set theory, propositional logic, predicate logic, and lambda notation. We will consider how the formal tools apply (and not apply) to natural languages and discuss how we can achieve a more comprehensive understanding of meaning.

Linguistics 112

Syntactic Theory I (114153)

C.-T. James Huang

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an intensive introduction to generative syntactic theory. Emphasis on syntactic argumentation. Topics center on foundational problems in the theory of syntax, including phrase structure of nominals and clauses, varieties of movement, locality, argument structure, ellipsis case agreement, and the syntax-semantics interface.

Recommended Prep:

Linguistics 102, equivalent, or permission of the instructor.

Linguistics 115

Phonological Theory I (123439)

Kevin Ryan

2021 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is an intensive introduction to phonological theory and experimental work in phonology. This includes rule-based and constraint-based approaches, the typology of phonological processes (vowel and consonant harmony, assimilation and dissimilation, lenition and fortition, etc.), and phonological acquisition. Experimental approaches will deal with gradience, exceptionality, and productivity with an introduction to the quantitative methodologies that these phenomena require.

Recommended Prep:

Linguistics 105, equivalent, or permission of the instructor

Linguistics 117R

Linguistic Field Methods (123611)

Adam Singerman

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

In our study of human language we rely on data from different, sometimes underdescribed, languages. But how do we obtain reliable data? This course provides tools for the elicitation of phonological, morphological, and syntactic information, working with a native speaker of an unfamiliar language. We focus on the practical methodology and discuss problems of data collection and grammatical description in the field, with the aim to prepare students for their own potential fieldwork.

for undergrdautes, courses in either 83 or 101;102: Sentence Structure; 105: Sounds of Languageband, if possible, 104: Word Structure as well should be taken.

Linguistics 143

Morphosemantics (000143)

Luke Adamson

2021 Fall (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course explores how nominal features like person, number, and grammatical gender are formally marked as well as interpreted, with greatest attention paid to grammatical gender. Are categories such as "masculine", "feminine", and "neuter" linguistically on equal footing, or are there asymmetries in how they are morphologically expressed or in how they map onto meanings? Are these categories represented consistently across languages? Depending on enrollee/participant interests, topics may include the representation of "markedness"; morphosyntactic defaults; connections between notional and non-notional gender assignment to nouns; gender and scope interactions; the interpretability of fake indexicals; and singular *they*.

Recommended Prep:

any (one) of the following: LING 102,104,105, equivalent, or the consent of the instructor, Luke Adamson, Lecturer

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Emerging Scholars: Problem Solving Exploration (204095)

Dusty Grundmeier

2021 Fall (2 Credits) **Schedule:** WF 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

In his seminal work from 1945, How to Solve It, George Polya introduced principles of mathematical problem solving that are widely applicable to problems in science and engineering. This year-long class focuses on building a powerful and portable problem-solving and modeling tool kit while bridging the divide between mathematics and science courses. The second semester will be organized around projects in areas of student interest. The projects are designed to launch students into undergraduate research opportunities. Math ESPb topics often include differential equations, mathematical modeling, data analysis and visualization, and mathematical and scientific programming tools.

Course Notes:

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Mathematics MA

Introduction to Functions and Calculus I (111161)

Reshma Menon

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

The study of functions and their rates of change. Fundamental ideas of calculus are introduced early and used to provide a framework for the study of mathematical modeling involving algebraic, exponential, and logarithmic functions. Thorough understanding of differential calculus promoted by year long reinforcement. Applications to biology and economics emphasized according to the interests of our students.

Course Notes:

This is a lecture course taught in small sections. This course, when taken together with Mathematics Mb, can be followed by Mathematics 1b. Mathamatics Ma and Mb together cover all the material in Mathematics 1a (and more).

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam

Mathematics QA

Quantitative Analysis for Economics and the Social Sciences I (218229)

Brendan Kelly

2021 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 38

This course develops a portable toolkit of quantitative skills that supports students' strategic thinking. At

the center of the course is a set of case studies from a broad range of organizations that require comprehensive quantitative analysis to properly diagnose and address the problems presented. After taking this course, students' strategic thinking will be bolstered by the ability to develop mathematical models, apply core ideas from differential and integral calculus to problems in economics and social science, and make use of the R statistical package to carry out data analysis. Each analytical tool comes to life in an authentic application. The course focuses not just on how to carry out the analysis, but how to communicate results to a non-mathematical audience in simple functional language. This course should be seen as an applied alternative for Math Ma/Math Mb or Math 1a for students interested in Economics and the Social Sciences. Students completing Math Qa and Math Qb will satisfy the Math 1a requirement for the Economics Concentration. Completing both Math Qa and Math Qb can count as a course toward the Mathematics Concentration. After completing Math Qa and Math Qb, students' next math course could be Math 1b or Math 18a, depending on students' interests.

Mathematics 1A

Introduction to Calculus (123680)

Michael Nathanson

2022 Spring (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The development of calculus by Newton and Leibniz ranks among the greatest achievements of the past millennium. This course will help you see why by introducing: how differential calculus treats rates of change; how integral calculus treats accumulation; and how the fundamental theorem of calculus links the two. These ideas will be applied to problems from many other disciplines.

This course includes a mandatory weekly section meeting at a time to be determined.

Course Notes:

In the fall, Math 1a is taught in small sections. In the spring, Math 1a is taught in a larger lecture format. Mathematics Ma and Mb together cover all of the material in Mathematics 1a (and more).

Recommended Prep:

A solid background in precalculus.

Requirements: **Anti-requisite: cannot be taken for credit if MATH S-1AB already complete**

Additional Course Attributes:

Attribute	Value(s)

Mathematics 1B

Integration, Series and Differential Equations (111010)

Hakim Walker

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Speaking the language of modern mathematics requires fluency with the topics of this course: infinite series, integration, and differential equations. Model practical situations using integrals and differential equations. Learn how to represent interesting functions using series and find qualitative, numerical, and analytic ways of studying differential equations. Develop both conceptual understanding and the ability to apply it.

Course Notes:

This course is taught in small sections.

Recommended Prep:

Mathematics 1a or Ma and Mb; or 5 on the AB advanced placement test; or an equivalent background in mathematics.

Requirements: **Anti-requisite: cannot be taken for credit if MATH S-1AB already complete**

Mathematics 18A

Multivariable Calculus for Social Sciences (125396)

Philip Wood

2021 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Focus on concepts and techniques of multivariable calculus most useful to those studying the social sciences, particularly economics: functions of several variables; partial derivatives; linear appproximation; multiple integrals; directional derivatives and the gradient; constrained and unconstrained optimization, including the method of Lagrange multipliers. Covers topics from Mathematics 21a most useful to social sciences.

Course Notes: **Mathematics 21b can be taken before or after Mathematics 18. Examples draw primarily from economics and the social sciences, though Mathematics 18 may be useful to students in certain natural sciences. Students whose main interests lie in the physical sciences, mathematics, or engineering should consider Math 21a or Applied Math 22a.**

Recommended Prep: **Mathematics 1b or equivalent, or a 5 on the BC Advanced Placement Examination in Mathematics.**

Requirements: **Anti-Requisite: Not to be taken in addition to Mathematics 21a or Applied Mathematics 22a**

Mathematics 18B/19B

Linear Algebra, Probability, and Statistics (213535)

Brendan Kelly

Dusty Grundmeier

2022 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Probability, statistics and linear algebra with applications to life sciences, chemistry, environmental sciences, economics and social sciences. Students will learn to use computing software to perform relevant calculations on data sets coming from these areas of study. Linear algebra includes matrices, eigenvalues, eigenvectors, determinants, and applications to probability, statistics, dynamical systems. Basic probability and statistics are introduced, as are standard models, techniques, and their uses including the central limit theorem, Markov chains, curve fitting, regression, and pattern analysis.

Additional Course Attributes:

Mathematics 19A

Modeling and Differential Equations for the Life Sciences (110596)

John Cain

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Considers the construction and analysis of mathematical models that arise in the life sciences, ecology and environmental life science. Introduces mathematics that include multivariable calculus, differential equations in one or more variables, vectors, matrices, and linear and non-linear dynamical systems. Taught via examples from current literature (both good and bad).

Course Notes:

This course is recommended over Math 21a for those planning to concentrate in the life sciences and ESPP. Can be taken with or without Mathematics 21a,b. Students with interests in the social sciences and economics might consider Mathematics 18. This course can be taken before or after Mathematics 18.

Recommended Prep:

A course in one variable calculus preferably at the level of Mathematics 1b.

Vector Calculus and Linear Algebra I (207485)

Dusty Grundmeier

2021 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Mathematics 22 covers multivariable calculus and linear algebra for students interested in mathematical sciences. It covers the same topics as Mathematics 21, but does so with more rigor. Students are taught techniques of proof and mathematical reasoning. The workload and content is comparable with the

Mathematics 21 sequence. But unlike the latter, the linear algebra and calculus are more interlinked. The content of Math 22a is mostly aligned with Math 21b (linear algebra), and the content of Math 22b is mostly aligned with Math 21a (multivariable calculus).

Mathematics 55A

Studies in Algebra and Group Theory (113627)

Denis Auroux

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

A rigorous introduction to abstract algebra, including group theory and linear algebra. This course covers the equivalent of Mathematics 25a and Mathematics 122, and prepares students for Mathematics 123 and other advanced courses in number theory and algebra. (A course in analysis such as Mathematics 25b or 55b is recommended for Spring semester.)

Course Notes:

Mathematics 55a is an intensive course for students who are comfortable with abstract mathematics. (Students without this background will gain it and learn the material from Math 55a,b in other courses by continuing into the Mathematics Concentration as sophomores.) Students can switch between Mathematics 55a and

either Mathematics 25a, 23a, 22a, 21a during the first three weeks without penalty.

Recommended Prep:

Familiarity with proofs and abstract reasoning; and commitment to a fast moving course.

Mathematics 114

Analysis of Function Spaces, Measure and Integration (123227)

Dennis Gaitsgory

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Lebesgue measure and integration; general topology; introduction to L^p spaces, Banach and Hilbert spaces, and duality.

Recommended Prep:

Mathematics 22a,b, 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.

Mathematics 116

Real Analysis, Convexity, and Optimization (118302)

Paul Bamberg (he)

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Develops the theory of convex sets, normed infinite-dimensional vector spaces, and convex functionals and applies it as a unifying principle to a variety of optimization problems such as resource allocation, production planning, and optimal control. Topics include Hilbert space, dual spaces, the Hahn-Banach theorem, the Riesz representation theorem, calculus of variations, and Fenchel duality. Students will be expected to understand and come up with proofs of theorems in real and functional analysis.

Recommended Prep:

Mathematics 22a,b, 23a,b or 25a,b or 55a,b; or Mathematics 21a,b plus at least one other more advanced course in mathematics; or an equivalent background in mathematics.

Dynamical Systems (118429)

Laurent Cote

2022 Spring (4 Credits) **Schedule:** MF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to dynamical systems theory with a view toward applications. Topics include existence and uniqueness theorems for flows, qualitative study of equilibria and attractors, iterated maps, and bifurcation theory.

Recommended Prep:

Mathematics 19a,b or 21a,b or Math 22a,b,or Math 23a,b or Math 25a,b or Math 55a,b; or an equivalent background in mathematics.

Linear Algebra and Applications (120228)

Dylan Wilson

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Real and complex vector spaces, linear transformations, determinants, inner products, dual spaces, and eigenvalue problems. Applications to some or all of the following: Ggeometry, systems of linear differential equations, optimization, and Markov processes. This course emphasizes learning to understand and write rigorous mathematics.

Recommended Prep: **Mathematics 19b or 21b or an equivalent background in mathematics.**

Requirements: **Anti-req: Not to be taken in addition to Mathematics 22a, 23a or 25a or 55a.**

Number Theory (111533)

Melanie Wood

2021 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Factorization and the primes; congruences; quadratic residues and reciprocity; continued fractions and approximations; Pell's equation; selected Diophantine equations; theory of integral quadratic forms. Also, selected applications to coding, introduction to elliptic curves and introduction to zeta functions if time permits.

Recommended Prep:

Mathematics 22a or 23a or 25a or 101 or 122; or 55a which can be taken concurrently; or an equivalent experience and comfort level with abstract mathematics.

Topological Spaces and Fundamental Group (111458)

Ana Balibanu

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

First, an introduction to abstract topological spaces, their properties (compactness, connectedness, metrizability) and their corresponding continuous functions and mappings. Then, an introduction to algebraic topology including homotopy theory, fundamental groups and covering spaces.

Recommended Prep:

Some acquaintance with metric space topology as taught in Mathematics 22a,b, 23a,b, 25a,b, 55a,b, 101, 102, or 112; and with groups as taught in Mathematics 101, 122 or 55a.

Discrete Mathematics (116191)

Paul Bamberg (he)

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** 32

An introduction to finite groups, finite fields, quaternions, finite geometry, finite topology, combinatorics, and graph theory. A recurring theme of the course is the symmetry group of the regular icosahedron. Taught in a seminar format: students will gain experience in presenting proofs at the blackboard.

Course Notes:

Covers material used in Computer Science 121 and Computer Science 124.

Recommended Prep: **Mathematics 19b, 21b, 22a, 23a, or 25a. Previous experience with proofs is recommended but not required.**

Requirements: **Not to be taken in addition to Computer Science 20, Mathematics 55a/b or Mathematics 122.**

Additional Course Attributes:

Mathematics 154

Probability Theory (113811)

Cesar Cuenca

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to probability theory. Discrete and continuous random variables; distribution and density functions for one and two random variables; conditional probability. Generating functions, weak and strong laws of large numbers, and the central limit theorem. Geometrical probability, random walks, and Markov processes.

Recommended Prep: **A previous mathematics course at the level of Mathematics 19ab, 21ab, or a higher number. For students from 19ab or 21ab, previous or concurrent enrollment in Math 101 or 102 or 112 may be helpful. Freshmen who did well in Math 22a, 23a, 25a or 55a fall term are also welcome to take the course.**

Mathematical Foundations of Statistical Software (156000)

Paul Bamberg (he)

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Presents the probability theory and statistical principles which underly the tools that are built into the open-source programming language R. Each class presents the theory behind a statistical tool, then shows how the implementation of that tool in R can be used to analyze real-world data. The emphasis is on modern bootstrapping and resampling techniques, which rely on computational power. Topics include discrete and continuous probability distributions, permutation tests, the central limit theorem, chi-square and Student t tests, linear regression, and Bayesian methods.

Mathematics in the World (159763)

Joseph D. Harris

2022 Spring (4 Credits) **Schedule:** WF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An interactive introduction to problem solving with an emphasis on subjects with comprehensive applications. Each class will be focused around a group of questions with a common topic: logic, information, number theory, probability, and algorithms.

Recommended Prep:

Mathematics 19b or 21b or 22a,b or 23a; or an equivalent background in mathematics. More importantly, students should have a broad mathematical curiosity and be eager to brainstorm during in-class

problem solving sessions.

Set Theory: The HOD Analysis (110111)

Peter Koellner

2022 Spring (4 Credits) **Schedule:** TR 0600 PM - 0715 PM

Instructor Permissions: None **Enrollment Cap:** n/a

One of the most striking developments in set theory over the last 50 years is the emergence of an intimate relationship between determinacy, large cardinals, and inner models. This culminated in the HOD analysis, where the three strands are woven together in perfect unity. In this course, after a brief review of inner model theory, we will give a detailed account of the HOD analysis, up through the analysis for L(R), and we shall give a glimpse of more recent work and what remains to be done.

Lauren Williams

2021 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will survey one of the most exciting recent developments in algebraic combinatorics, namely, Fomin and Zelevinsky's theory of cluster algebras. Cluster algebras are a class of combinatorially defined commutative rings that provide a unifying structure for phenomena in a variety of algebraic and geometric contexts. Introduced in 2001, cluster algebras have already been shown to be related to a host of other fields of math, such as quiver representations, Teichmuller theory, Poisson geometry, and total positivity. Cluster structures in Grassmannians have in particular been linked to integrable systems and physics. In the first part of the course I will cover the basics of cluster algebras and total positivity. In the second part of the class I will discuss recent developments and applications of the theory, including positroids, amplituhedra, and KP solitons.

Mathematics 254R

Arithmetic Dynamics (218252)

Niki Myrto Mavraki

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will explore the interplay between number theory and dynamical systems by discussing dynamical analogs of classical theorems and conjectures in arithmetic geometry. We will also illustrate how dynamics can be used to prove number theoretic results.

Mathematics 259Y

Concentration Inequalities in Statistical Physics and Random Matrices (218244)

Horng-Tzer Yau

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The first half of this class consists of reviews and proofs of several commonly used concentration inequalities in high dimensional probability theory. These include Bernstein's and Chernoff's inequality and the logarithmic Sobolev inequality. The second half of the class will address applications of these inequalities in graph theory, spin glasses and random matrices.
References for concentration inequalities include Vershynin's note on "High-Dimensional Probability: an introduction with applications in data science" and the chapter on the logarithmic Sobolev inequality in my book "Dynamical approach to random matrix theory".

Rationality Questions in Algebraic Geometry (218253)

Dori Bejleri

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Given a collection of algebraic equations, can we find a parametrization of the set of solutions by rational functions? This is one of the most fundamental questions in algebraic geometry and leads to the notion of rationality and its various generalizations (stable rationality, unirationality, rational connectedness). In this class we will survey some classical results, recent breakthroughs and open problems in the study of rationality. Possible topics include the Lüroth problem, decomposition of the diagonal, the degeneration method, the behavior of rationality in families, (stable) rationality of hypersurfaces, etc.

Computational Techniques in Number Theory and Algebraic Geometry (108246)

Noam D. Elkies

2021 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In number theory and algebraic geometry one often constructs a remarkable object without giving a good way to compute it explicitly, even when the object is as down-to-earth as an integer or a polynomial. We develop some of the techniques, tools, tactics, and tricks that often let us exhibit and study such objects. Most of our motivating examples are low-dimensional moduli spaces of various kinds and the structures they parametrize.

Topics in Hodge Theory (218254)

Salim Tayou

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is an introduction to Hodge theory, which is a powerful framework for studying algebraic varieties and a very active area of research. We will start by introducing Hodge structures (pure and mixed), variations of Hodge structures, their period domains and degenerations of Hodge structures. Our next focus will be the study of Hodge loci. We will prove their algebraicity properties using tools from o-minimal geometry. Other topics may include: fields of definition of Hodge loci, Shimura varieties, and typical and atypical intersections.

Hochschild and Cyclic Homology (219978)

Dylan Wilson

2022 Spring (4 Credits) **Schedule:** WF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An example oriented course on Hochschild homology, an invariant of algebras. Depending on the interests of the students, we will explore some subset of: deformation theory, index theory, trace methods in K-theory, Koszul duality, homology of Lie algebras, factorization homology, connections to field theories and quantization, connections to p-adic Hodge theory and prismatic cohomology, and connections to chromatic homotopy theory. Basic homological algebra (e.g. derived functors) assumed, other material will be developed as needed.

Positivity in Matroid Theory (218255)

Christopher Eur

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Matroids are combinatorial objects that capture the essence of linear independence. Algebraic geometry has furnished fruitful tools for studying them, leading to resolutions of many long-standing conjectures. We survey these developments, starting with elementary matroid theory, and ending with the most recent breakthroughs. Along the way, we will meet various techniques in combinatorial algebraic geometry, such as toric geometry and tropical Hodge theory.

Geometry and Complexity Theory (218256)

Austin Conner

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A discussion of topics in complexity theory using the tools of algebraic geometry and representation theory. Possible topics: rank and border rank of tensors and the complexity of matrix multiplication; circuit complexity of linear maps and matrix rigidity; circuit complexity of polynomials and the permanent vs determinant problem.

A strong background in linear algebra is required. Some experience in algebraic geometry and/or representation theory would be helpful but is not required.

Riemann-Hilbert Problem (218257)

Cesar Cuenca

2022 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The class will cover the theory of the Riemann-Hilbert problem that is sufficient for the study of the asymptotic expansion of orthogonal polynomials. This will lead to the universal local behavior of certain log-gas systems with a general class of potentials. If time permits, we will also discuss the discrete version of the Riemann-Hilbert problem and its applications to asymptotic representation theory.

Algebraic Curves I (218250)

Joseph D. Harris

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The theory of algebraic curves is one of the oldest and best-understood in algebraic geometry. At the same time, it's also an area of tremendous recent activity and attractive open problems.

In this course, I hope to describe what's known about algebraic curves, and also to talk about areas of current research. The course should be accessible to anyone with a year of algebraic geometry (e.g., Chapter 4 of Hartshorne is more than enough), and lots of thesis problems will be available for any student who wants one.

Medical Sciences

Subject: Microbiology

Microbiology 201

Molecular Biology of the Bacterial Cell (126271)

David Rudner
Tom Bernhardt
Simon Dove
Deepali Ravel
Sophie Helaine

2022 Spring (4 Credits) **Schedule:** TR 1000 AM - 1159 AM

Instructor Permissions: Instructor **Enrollment Cap:** 100

This course is devoted to bacterial structure, physiology, genetics, and regulatory mechanisms. The class consists of lectures and group discussions emphasizing methods, results, and interpretations of classic and contemporary literature.

Course Notes:

The Spring 2022 version of this course will include in person lectures and paper discussions as well as asynchronous paper reading and problem set assignments.

Class Notes:

T/TH, 10:00am - 12:00pm
Meeting Dates: Jan 25 - Apr 26
Meeting Location: NRB 1031

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Microbiology 202

Mechanisms of Bacterial Pathogenesis and Host Immune Response (126269)

Marcia Goldberg
Jonathan Kagan
Deepali Ravel
Michael Starnbach
Darren Higgins
Sophie Helaine
Amy Barczak

2021 Fall (4 Credits) **Schedule:** TR 1000 AM - 1159 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course focuses on molecular mechanisms of bacterial pathogenesis and the host response to infection. The class consists of lectures and group discussions emphasizing themes of pathogenesis, methods, results, and interpretations of classic and contemporary literature. Subjects including bacterial secretion systems, mechanisms of entry into host cells, biofilm formation, and motility are viewed primarily from the pathogen's perspective, whereas topics including inflammasome activation, TLR signaling, and adaptive immune responses provide a host-centric view. Additional sessions are spent examining current methods of antibiotic discovery and vaccine development.

The course also introduces students to the wide diversity of pathogenic bacteria. Organisms discussed include pathogenic E. coli, Shigella species, Vibrio cholerae, Listeria monocytogenes, Chlamydia trachomatis, Pseudomonas aeruginosa and Staphylococcus aureus, as well as a discussion of the challenges presented by currently unculturable species. Where relevant, connections will also be made with pathogenesis and immune responses to viruses (particularly SARS-CoV-2), parasites, and fungi.

Course Notes: **Designed to complement Microbiology 201; however, students who have not taken Microbiology 201 previously are welcome. Designed for graduate students in their first year or beyond, however undergraduates with specific interest in the field may also enroll.**

Class Notes: **Schedule: T/ Th, 10:00am - 12:00pm**
Meeting Dates: Sept. 2 - Dec. 2, 2021
Meeting Location: NRB 1031

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Microbiology 205

Mechanisms of Microbial Pathogenesis (146757)

Sanjat Kanjilal

Kristen Hysell

2021 Fall (4 Credits) **Schedule:** TR 0830 AM - 1159 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Microbes occupy every niche of our environment and our bodies. They shape the way we develop, mature, and stay healthy. A subset of these organisms lead to states of infection, some of which have shaped the very foundations of our society. While the 20th century saw remarkable reductions in the burden of infectious diseases, they remain very much a part of our world, as evidenced by the COVID-19 pandemic. In HST 040, we will provide students an overview of the major microbial pathogens that students will encounter frequently in medical practice, their intrinsic microbiological properties, their epidemiology and their manifestations of infection. Along the way, we will have interactive discussions around the decision-making processes to help the patient with infection, modern diagnostics, and the operation of the clinical microbiology laboratory in the 21st century. Students will also meet patients who will provide their lived experiences with acute and chronic infections. Finally, we will discuss a wide range of research topics scaling from host / microbiome interactions at the molecular level, to next generation viral and bacterial diagnostics, to applications of AI models for predicting antibiotic resistance, to global pandemic simulations and health disparities manifested through infectious diseases. In addition to the core clinical and research material, students will also have opportunities to gain skills in scientific communication

through engagement with the wider public and their classmates.

Course Notes:

Offered jointly with the Medical School as HT 040.

Class Notes:

T/ Th, 8:30am - 12:00pm
Meeting Dates: Sept. 7 – Dec. 13, 2021
Meeting Location: Building C 114 Cannon

Recommended Prep:

A background course in molecular biology is strongly encouraged.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Microbiology 210

Microbial Sciences: Chemistry, Ecology, and Evolution (125823)

Michael Gilmore

2022 Spring (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology.

Course Notes:

Also offered as Organismic and Evolutionary Biology 290.

Class Notes:

Fri., 9:45am – 11:45am
Meeting Dates: Jan 28 – Apr 22
Meeting Location: Natural History Museum, Harvard College Campus

Recommended Prep:

For graduate and advanced undergraduate students, Life Sciences 1a and 1b or their equivalent are required, or permission of instructor. MCB 60 or equivalent is recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Microbiology 213

Social Issues in Biology (122708)

Richard Born

David Glass

2022 Spring (4 Credits) **Schedule:** R 0500 PM - 0659 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The course covers historical and contemporary readings about controversial issues related to biology and the social responsibility of scientists. Building on last year's virtual course, we've expanded our course faculty to include colleagues from a variety of disciplines in far-flung geographical locations: Jill Fisher on racial inequalities in testing new pharmaceuticals; Emily Hamilton on the public perception of vaccinations; Sarah Lewis on the legacy of Louis Agassiz and the Zealy Daguerreotypes; and Christine Korsgaard on the ethics of animal experimentation. Our goal is to provide future scientists with a background for considering the ethical and social implications of biology.

Course Notes:

Offered jointly with the Medical School as MG 722.0.

Class Notes:

TH., 5:00pm - 7:00pm
Meeting Dates: Jan 27 – Apr 21
Meeting Location: Tosteson Medical Education Ctr. (TMEC) – TMEC 448 Conference Rm

Recommended Prep:

Some background in genetics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Microbiology 300

Advanced Topics in Microbiology and Molecular Genetics (111409)

Rosalind Segal

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

A series of reading and discussion seminars, each running for a half term (7 weeks). Two seminars, which can be taken in different terms, are required for credit.

Course Notes:

Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0605 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Microbiology 302QC

Introduction to Infectious Disease Research: Infectious Diseases Consortium Boot Camp (109380)

Dyann Wirth

Deepali Ravel

2022 Spring (2 Credits) **Schedule:** TWRF 0900 AM - 0459 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This January boot camp course provides a fun, informative introduction to the breadth of infectious disease research carried out at Harvard and beyond. Our goals are to introduce life science graduate students to potential thesis research areas while also giving you exposure to other topics and tools you'll encounter in the broader infectious disease research community. Students will also have the chance to meet faculty, students, and fellows in infectious disease roles across the university. The course will focus on several aspects of infectious diseases:

1. Underlying biology of infectious diseases and the diverse pathogens that cause them
2. Modern approaches to studying infectious diseases, including experimental biology, epidemiology, outbreak investigation, bioinformatics, and clinical microbiology

3. Modern approaches to developing new interventions, including drugs, vaccines, diagnostics, and public health measures
4. Societal impacts of infectious disease and historical perspectives on infectious disease research and injustice in infectious disease research

Course Notes: **This course is designed for life sciences graduate students but is open for cross-registration from other students. The Winter 2022 version of this course will be taught primarily through synchronous in-person lectures, discussions, and workshops. Interested students with questions about accessibility or prerequisites should contact the course directors as soon as possible.**

Class Notes: **This is a January intensive course.**

Meeting Dates: Jan 18 – Jan 21
Tues – Fri, 9:00am – 5:00pm
Location: Some sessions of this course will be held in-person, and other sessions will be held online. The instructor will reach out with specific classroom information.

The Human Microbiome: Comprehensive experimental design and methodologies (207117)

Aleksandar Kostic

Abigail Devlin

2022 Spring (2 Credits) **Schedule:** MW 0100 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This is a comprehensive introduction to the study of human microbial communities and their functions relevant to human physiology. Topics covered include metagenomics, mechanistic interactions of the microbiome with metabolism, the immune system, and the gut-brain axis. Rather than lectures, this course is primarily a critical discussion of the literature.

Class Notes: **Spring 1 QC**
M/W, 1:00pm - 2:30pm
Meeting Dates: Jan 24 – March 9
Meeting Location: Folin Wu Room, C Building

Subject: Speech & Hearing Sciences

Speech & Hearing Sciences 200

Introduction to Sound, Speech, and Hearing (108212)

Satrajit Ghosh

Sunil Puria

Hideko Nakajima

2021 Fall (4 Credits) **Schedule:** W 1100 AM - 1159 AM
TR 0300 PM - 0430 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Speech and hearing are fundamental to our ability to communicate, yet in the US alone millions of people suffer from some form of speech or hearing impairment. As engineers and scientists, it is important to

understand the underlying principles of speech and hearing. The goals of this course are to introduce students to the acoustics, anatomy, physiology, and mechanics related to speech and hearing and to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of bioengineering. Particular attention will be paid to how humans generate and perceive speech. Topics include acoustic theory of speech production, basic digital speech processing, control mechanisms of speech production and basic elements of speech and voice perception. These fundamental topics will be explored through applications and challenges involving acoustics, speech recognition, and speech disorders, which are especially relevant given the ubiquity of recording and playback devices such as smartphones and home assistants. On the hearing side, topics include acoustics and mechanics of the outer ear, middle ear, and cochlea, how pathologies affect their function, and methods for clinical diagnosis. Surgical treatments and medical devices such as hearing aids, bone conduction devices, and implants will also be covered.

Course Notes:

This course is taught as course in consort with HST.714J at the Massachusetts Institute of Technology.

Class Notes:

T/W/TH
W, 11:00am - Noon (recitations), T/TH, 3:00pm – 4:30pm (lectures)
Meeting Dates: Sept. 8 – Dec. 9, 2021
Meeting Location: MIT, 46-5056

Recommended Prep:

Mathematical methods in science (Applied Mathematics 21a or Mathematics 21a) or equivalent. Calculus and introductory physics. Rigid body mechanics (Physics 11A), or Electrical circuits (Engineering Science 154) or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students

Speech & Hearing Sciences 201

Biology of the Inner Ear (108213)

M. Liberman

Stephane Maison

2021 Fall (4 Credits)

Schedule: M 0100 PM - 0229 PM
TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 12

Normal biology, biophysics, physiology and morphology of the inner ear, its sensory innervation and efferent control systems, and the mechanisms underlying sensorineural hearing loss and balance disorders. Material is presented through lectures, laboratory exercises and discussions of the primary literature.

Class Notes:

Meeting Dates: Sept. 2 – Dec. 2, 2021
Schedule: M, 1:00pm - 2:30pm, T/ Th, 9:00am - 10:15am

Recommended Prep:

Introductory neurobiology recommended.
Lecture notes will be available online.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration

Speech & Hearing Sciences 202

Clinical Aspects of Speech and Hearing (108217)

Ramon Franco

David Jung

2022 Spring (4 Credits) **Schedule:** MW 0500 PM - 0659 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Clinical approach to speech and hearing disorders as practiced by physicians, audiologists, speech clinicians, and rehabilitation specialists. Includes virtual observation of patient care in clinic and operating rooms, as well as lectures, discussion groups, and laboratory experience in audiological and vestibular testing.

Course Notes:

Classes to be held in person at Mass Eye and Ear unless otherwise indicated. Class meeting times may change according to physician, OR, and clinic schedules.

Class Notes:

M/W, 5:00pm - 7:00pm
Meeting Dates: Jan 31 – April 27
Meeting Location: Massachusetts Eye and Ear, ENT Conference Room

Recommended Prep:

Anatomy of Speech and Hearing, Acoustics of Speech and Hearing, or permission of the course director

Additional Course Attributes:

Attribute	Value(s)

Anatomy of Speech and Hearing (108218)

Barbara Fullerton

James Heaton

2022 Spring (4 Credits) **Schedule:** MTWRF 0900 AM - 1259 PM

Instructor Permissions: Instructor **Enrollment Cap:** 14

This course covers anatomy of the head and neck with videos of some of the detailed anatomy. We will stress structures important in speech and hearing. Lecture topics include basic neuroanatomy, imaging, surgery and cancer of the head and neck.

Course Notes:

This an intensive January course and is 4 credits. It is offered jointly with MIT as HST 718. Students should be comfortable with basic biology. Students not enrolled in the SHBT program must get permission from the course director to register for the course.

Class Notes: **This is a January intensive course.**

Meeting Dates: Jan 4 – Jan 28
Mon-Fri, 9:00am – 1:00pm (class will start on a Tuesday, 1/4)
Breakdown: Lecture: 9:00am-10:15am, Anatomy Lab: 10:15am-1:00pm
Please Note: Schedule runs outside the J-Term semester dates. Class sessions will begin on January 4 and will run until January 28.
Location: This course will be held in-person, in the TMEC. The instructor will reach out with specific classroom information.

Additional Course Attributes:

Anne Takesian
Joshua McDermott
Daniel Polley
Bertrand Delgutte
Lisa Goodrich
Julie Arenberg
Robert Richardson

2022 Spring (4 Credits) **Schedule:** MWF 0930 AM - 1129 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Neural structures and mechanisms mediating the detection, localization and recognition of sounds. General principles are conveyed by theme discussions of auditory masking, sound localization, musical pitch, cochlear implants, cortical plasticity and auditory scene analysis.

Course Notes:

Offered jointly with MIT HST.723.

Class Notes: **M/W/F, 9:30am – 11:30am**

Meeting Dates: Jan 24 – May 6

Meeting Location: Mass Eye and Ear Sloane Conference Room (3rd floor of MEE, 243 Charles Street) and Bldg. 46, Rm 5193 (MIT)

Recommended Prep:

Neurobiology 200 or permission of the instructor.

Subject: Genetics

Genetics 201

Principles of Genetics (113752)

Fred Winston
Maxwell Heiman
Tom Bernhardt
Steven McCarroll
Jenna Galloway
Stephanie Mohr

2021 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1020 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An in-depth survey of genetics that covers basic principles and modern approaches. We will draw on examples from various systems, including bacteria, yeast, Drosophila, C. elegans, zebrafish, mouse, and human.

Course Notes:

Intended for first-year graduate students.

Class Notes:

M/W/F, 9:00am – 10:20am
Meeting Dates: Lectures will be in the Cannon Room, beginning Wed., Sept. 1 through Dec. 9. There will also be eight discussion sections during the semester. All problems sets and exams will be posted on the course website during the semester.
Meeting Location: Cannon Room, Building C 114

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 228

Genetics in Medicine - From Bench to Bedside (121745)

David Sweetser

2022 Spring (4 Credits) **Schedule:** F 0200 PM - 0459 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Focus on translational medicine: the application of basic genetic discoveries to human disease. Each three-hour class will focus on a specific genetic disorder and the approaches currently used to speed the transfer of knowledge from the laboratory to the clinic. Each class will include a clinical discussion, a patient presentation if appropriate, followed by lectures, a detailed discussion of recent laboratory findings and a student led journal club. Lecturers will highlight current molecular, technological, bioinformatic and statistical approaches that are being used to advance the study of human disease. There is no exam. Students will present one paper per session in a journal club style. Attendance and active participation for the duration of all class meetings is required. If you are unable to attend class, or cannot be present for the entire session you are expected to contact the course instructor. Two incomplete or missed sessions will

result in a failing grade.

Please do not sign up if you know you will have to miss 2 or more sessions. For more information visit https://ecor.mgh.harvard.edu/Default.aspx?node_id=375

Course Notes:

Due to social distancing constraints and room size enrollment for this course is limited to a maximum of 25. Undergraduates wishing to enroll should contact the instructor at dsweetser@mgh.harvard.edu to request permission and give a description of their previous genetics training.

Class Notes:

Fri., 2:00pm – 5:00pm
Meeting Dates: January 28 – April 22
Meeting Location: O'Keefe Auditorium, MGH

Recommended Prep:

Genetics 201 or equivalent.

Genetics 302QC

Teaching 101: Bringing Effective Teaching Practices to your Classroom (127555)

Bradley Coleman

Vanessa Aller

David Ginnings

2022 Spring (2 Credits) **Schedule:** R 0200 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

A course for development of practical skills for effective teaching. Primary focus is hands-on experience, but with the opportunity to explore online teaching options with objective-oriented lesson planning and execution, with emphasis on active learning techniques and how they can be applied in both large and small enrollment classes.

Course learning objectives:
By the end of this course, participants will be able to:

- **Who are your learners: Describe your learners and define their needs.**
- **Identify instructional goals: Describe strategies for cultivating course climates that are student-centered and inclusive**
- **Map the educational experience: Create assessments, in-class activities, and instructional methods that align with course objectives**
- **Deliver educational experiences: Facilitate discussions and other learning activities in small- and large-group contexts**
- **Assess and revise: Collect and apply constructive feedback from students and colleagues to improve teaching effectiveness**
- **Incorporate technology and active learning models into your teaching**

Course Notes:

In addition to the live sessions, each week will require 1-2 hours of asynchronous classwork which may include written or recorded work to be submitted on Canvas prior to the live session.

Class Notes: **Spring 1 QC**

TH., 2:00pm – 4:00pm
Meeting Dates: Jan 24 – April 10
Meeting Location: Tosteson Medical Education Ctr. (TMEC) – TMEC 104 Peabody Classroom

Recommended Prep:

This course is complementary to CELLBIO 306qc: Teaching 100, but neither course is a prerequisite for the other. Postdocs and other Harvard affiliates who are not current students may be allowed to audit as space allows. Please contact the instructors to request permission to audit.

FAS: Course Level	Graduate Course

Genetics 314

The Origin of Cellular Life (120754)

Jack Szostak

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 314

The Origin of Cellular Life (120754)

Jack Szostak

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Genetics 315

Molecular Genetics of Inherited Disorders (112919)

James Gusella

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 315

Molecular Genetics of Inherited Disorders (112919)

James Gusella

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 316

Transcription Factors and DNA Regulatory Elements (117269)

Martha Bulyk

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 316

Transcription Factors and DNA Regulatory Elements (117269)

Martha Bulyk

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 317

Signaling Networks in Development and Disease (111381)

Jordan Kreidberg

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Genetics 317

Signaling Networks in Development and Disease (111381)

Jordan Kreidberg

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 318

Genome Structure (114865)

George Church

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Genetics 318

Genome Structure (114865)

George Church

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 319

Genetic epidemiology of behavior and cognition (124059)

Elise Robinson

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 320

Genetics of Common Human Disease (126368)

Mark Daly

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Genetics 320

Genetics of Common Human Disease (126368)

Mark Daly

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 321

Genetic Analysis of Growth and Homeostasis (118751)

Norbert Perrimon

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 321

Genetic Analysis of Growth and Homeostasis (118751)

Norbert Perrimon

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 322

Vertebrate Pattern Formation (113859)

Clifford Tabin

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Genetics 322

Vertebrate Pattern Formation (113859)

Clifford Tabin

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt

No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Genetics 323

Molecular Biology of V(D)J Recombination (143860)

Marjorie Oettinger

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Genetics 323

Molecular Biology of V(D)J Recombination (143860)

Marjorie Oettinger

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 325

Human Genetics, Genomics and Complex Traits (117273)

Joel Hirschhorn

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 325

Human Genetics, Genomics and Complex Traits (117273)

Joel Hirschhorn

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 325L

Kleinstiver lab (215769)

Benjamin Kleinstiver

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Genetics 325L

Kleinstiver lab (215769)

Benjamin Kleinstiver

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Genetics 326

Human Molecular and Cancer Genetics (114753)

David Kwiatkowski

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 326

Human Molecular and Cancer Genetics (114753)

David Kwiatkowski

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 327

Systems Biology of Mammalian Cell Fate Decisions (126370)

Suzanne Gaudet

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 327

Systems Biology of Mammalian Cell Fate Decisions (126370)

Suzanne Gaudet

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 328

Lymphocyte Differentiation, Recombination, DNA Repair, Cancer (111897)

Frederick Alt

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 328

Lymphocyte Differentiation, Recombination, DNA Repair, Cancer (111897)

Frederick Alt

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Genetics 329

Genetic Analysis of Synaptic Transmission (117637)

Joshua Kaplan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 329

Genetic Analysis of Synaptic Transmission (117637)

Joshua Kaplan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Genetics 331

Developmental Oncobiology and Cancer Stem Cells (126371)

Zhe Li

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Genetics 332

Combining genetic and biochemical approaches to elucidate mechanisms underlying cancer (115971)

Karen Cichowski

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Genetics 332

Combining genetic and biochemical approaches to elucidate mechanisms underlying cancer (115971)

Karen Cichowski

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 333

Computational biology of transcriptional and epigenetic regulation (109352)

Xiaole (Shirley) Liu

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 333

Computational biology of transcriptional and epigenetic regulation (109352)

Xiaole (Shirley) Liu

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 334

Genomics and the Genetics of Human Disease (117271)

Raju Kucherlapati

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Genetics 334

Genomics and the Genetics of Human Disease (117271)

Raju Kucherlapati

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Genetics 335

Genetics, epigenetics, gene regulation, evolution, disease (114764)

Chao-ting Wu

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll

Genetics 335

Genetics, epigenetics, gene regulation, evolution, disease (114764)

Chao-ting Wu

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 336

Developmental Biology of Hematopoiesis (120540)

Leonard Zon

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Genetics 336

Developmental Biology of Hematopoiesis (120540)

Leonard Zon

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 337

Human Molecular Genetics (120637)

Stuart Orkin

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 337

Human Molecular Genetics (120637)

Stuart Orkin

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Virology

Virology 200

Introduction to Virology (116413)

Jonathan Abraham

Philip Kranzusch

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0345 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Introduction to virology. The lecture component reviews the basic principles of virology and introduces the major groups of human viruses. Weekly discussion groups critically analyze selected papers from the literature.

Course Notes:

There will be mid-term and final projects consisting of proposals based on laboratory rotations. http://www.courses.fas.harvard.edu/6075

Class Notes:

M/W, 1:30pm - 3:45pm
Meeting Dates: Sept 8 - Dec 13
Meeting Location: TMEC 447

Recommended Prep:

Pre-Requisite: Current Virology PhD student, or upon special consent

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

Virology 201

Virology (110546)

Benjamin Gewurz
Silvia Rouskin
Gaurav Gaiha
Sun Hur
Sizun Jiang
Jonathan Li
Aaron Schmidt
Todd Allen
James Cunningham
Joseph G. Sodroski
Smita Gopinath

2022 Spring (4 Credits) **Schedule:** R 0915 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The course focuses on the following areas of virology: (i) epigenetic regulation, (ii) RNA virus replication mechanisms, (iii) innate responses to viral infection, (iv) inhibition of viral infection. The course will comprise lectures as well as reviewing literature that describes fundamental breakthroughs relevant to these areas. Within those areas, the class will read and discuss papers dealing with virus structure, replication, pathogenesis, evolution, emerging viruses, chronic infection, innate and adaptive immunity, anti-viral drugs/vaccines. Special emphasis will be placed on preparing students to critically evaluate the literature, formulate hypotheses and design experiments.

Course Notes:

Course format will be lectures, literature-based critical reading and discussion. Prepare and defend a written research proposal. Offered jointly with the Medical School as MG 723.0.

Class Notes:

T/TH, 9:30am-11:00am
Meeting Dates: January 25 – May 3
Meeting Location: Tosteson Medical Education Ctr. (TMEC) – TMEC 446 and TMEC 140. Rooms vary based on dates, instructor to provide specific date and location information.

Recommended Prep:

Graduate standing and permission required.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

Virology 202

Proposal Writing (117649)

Daniel Lingwood

Todd Allen

Samuel Rabkin

Gaurav Gaiha

Smita Gopinath

2021 Fall (4 Credits) **Schedule:** W 0145 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Students will write, present, and evaluate research proposals in the areas of virus replication, viral pathogenesis and treatment and prevention of viral infections.

Class Notes:

W, 1:45pm – 4:00pm
Meeting Dates: Sept. 8 – Nov. 3, 2021
Meeting Locations:
Location varies by date.

General classroom meetings:

Group 1 meetings: Conference room 852 at the Ragon institute, 400 Technology Square, Cambridge (Sept 15; Sept 22; Sept 29; Oct 6; Oct 13; Oct 20).

Group 2 meetings: Conference room 750 at the Ragon institute, 400 Technology Square, Cambridge (Sept 15; Sept 22; Sept 29; Oct 6; Oct 13; Oct 20).

Group 3 meetings: Rm 3820, Simches Research Bldg, MGH, 185 Cambridge St. Boston (Sept 15; Sept 22; Sept 29; Oct 6; Oct 13; Oct 20).

Recommended Prep:

General background in biochemistry and virology.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Virology 300QC

Advanced Topics in Virology (127510)

Rosalind Segal

2021 Fall (2 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

A series of reading and discussion seminars, each running for a half term (7 weeks).

Course Notes:

Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Advanced Topics in Virology: Viral Oncology (127484)

James DeCaprio

2022 Spring (2 Credits) **Schedule:** TR 0430 PM - 0559 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Introduction to viral oncology and critical evaluation of key papers in viral oncology. Requirements include presentations, written critiques, and class participation.

Course Notes:

This is an intensive January course, limited to Virology students only.

Class Notes: **This is an intensive January course, limited to Virology students only.**

Meeting Dates: Jan 4 – Jan 20
Tue/Thurs, 4:30pm - 6:00pm
Please Note: Schedule runs outside the J-Term semester dates. Classes will be held on: 1/4, 1/6, 1/11, 1/13, 1/18, 1/20
Location: To be provided on course page

Subject: Neurobiology - Graduate

Neurobiology - Graduate 209

The Neurobiology of Disease (116455)

Edward Kravitz

Patricia Musolino

Beth Stevens

Susanna Mierau

2022 Spring (4 Credits) **Schedule:** M 0600 PM - 0829 PM
W 0700 PM - 0929 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

This highly rated course covers a major disease or disorder of the nervous system each week, including Alzheimer's, Huntington's and Parkinson's Diseases, Mood and Autism Spectrum disorder and others. The course is taught at the Harvard Medical School on Monday (6-8:30 PM) and Wednesday (7-9:30 PM) evenings. The Monday sessions involve patient presentations and "core" lectures describing clinical progression, pathology, and basic science underlying a major disease or disorder. On Wednesdays, students present material from original literature sources, and there is general discussion.

Course Notes:

Given in alternate years. Offered jointly with the Medical School as NB 713.0. For advanced undergraduate, graduate students, MD and MD/PhD students.

Class Notes:

M, 6:00pm – 8:30pm
W, 7:00pm – 9:30pm

Meeting Dates:
Mon.: Jan 24, Jan 31, Feb 7, Feb 14, Feb 28, Mar 7, Mar 21, Mar 28, Apr 4, Apr 11, Apr 18, Apr 25
Wed.: Jan 26, Feb 2, Feb 9, Feb 16, Feb 23, Mar 2, Mar 9, Mar 23, Mar 30, Apr 6, Apr 13, Apr 20, Apr 27

Meeting Location: Tosteson Medical Education Ctr. (TMEC) – TMEC 209 Mini Amphitheater

Recommended Prep:

Introductory neurobiology, biochemistry, and genetics/molecular biology recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 212

Mathematical Tools for Neuroscience (216813)

Eleanor Batty

John Assad

2021 Fall (4 Credits) **Schedule:** TR 0300 PM - 0429 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course aims to equip graduate students with the fundamental quantitative skills necessary for neuroscience research and to serve as a solid foundation for further computational neuroscience classes. The course is aimed at first-, second- or third-year students in the Neuroscience PhD program, and is open to other graduate students in the biosciences. This course will cover the basics of linear algebra, differential equations, probability/statistics, and machine learning (focusing on areas applicable to neuroscience). You will not need any math experience beyond high school calculus. Some amount of coding in Python is necessary for this class. This course will be a flipped classroom course with prerecorded lectures and students working together on problem sets & programming exercises during class time.

Class Notes: **Course Schedule: T/Th, 3:00pm - 4:30pm**
Meeting Dates: Sept. 3 – Dec. 9, 2021
Meeting Location: TMEC 330

Recommended Prep:

There will be some programming exercises in Python so some coding experience will be necessary (email instructor for advice on how to prepare).

Additional Course Attributes:

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1200 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of asynchronous, recorded lectures and synchronous in-class activities, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester, students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course builds upon this foundation to focus on broadly defined "networks of neural function"; as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Part one of a two-part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement. Non-PiN students may enroll in just the fall semester with the instructor's approval

Class Notes:

T/Th, 9:00am – 12:00pm
Meeting Dates: Sept 7 - Dec 16, 2021
Meeting Location: Warren Alpert (WAB) Room 236

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of asynchronous lectures and synchronous class discussions, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester (NB215A), students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course (NB215B) builds upon this foundation to focus on broadly defined "networks of neural function" as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Course Notes:

Full year course. Students may not enroll for the second semester unless they have completed the first semester; however, students may elect to take just the first semester. Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement.

Class Notes:

T/TH, 9:00am – 12:00pm
Meeting Dates: Jan 25 – April 28
Meeting Location: WAB 236

Recommended Prep:

Students must successfully complete first semester of course (NEUROBIO 215A).

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Full Year Course	Divisible Course

Neurobiology - Graduate 230

Visual Recognition: Computational and biophysical perspective (107755)

Gabriel Kreiman

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0459 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

How does cerebral cortex store information, compute and learn? How can we build prosthetic devices to fix or augment brain function? How can we build biologically inspired artificial intelligence? This course will examine these questions in the context of visual cognition. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision, artificial intelligence, brain-machine interfaces.

Course Notes:

Course website: http://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html
Neurobiology 230, Visual Recognition, brain-machine interfaces and artificial intelligence

Neuro 230 cannot be taken if Neuro 130 has been taken. Neuro 230 cannot be taken concurrently with Neuro 130.

Class Notes: **M, 3:00pm – 5:00pm**
Meeting Dates: Sept. 1 – Dec. 14, 2021
Meeting Location: BioLabs 2062

Recommended Prep:

Life Sciences 1a (or Life and Physical Sciences A) and Life Sciences 1b (or equivalent). Recommended: Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

This course will be held in Biolabs 2062.

Requirements: **Anti-Req: Cannot be taken for credit if NEURO 130 already complete.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 240

Biological and Artificial Intelligence (213361)

Gabriel Kreiman

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** 100

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others. Lectures will be taught by leading Harvard experts in the field.

Course Notes:

Jointly offered with the Faculty of Arts & Sciences as NEURO 140.

Class Notes: **T, 3:00pm – 5:00pm**
Meeting Dates: Jan 24 – Apr 27
Meeting Location: Please reach out to instructor for location information.

Recommended Prep:
Basic knowledge of multivariate calculus, differential equations, linear algebra, elementary probability theory, basic computer programming skills

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Neurobiology - Graduate 300

Advanced Topics in Neurobiology (117896)

Rosalind Segal

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Topics cover areas at the molecular, cellular, and systems levels in both basic and clinical neuroscience. A series of reading and discussion seminars, each running for a half term (seven weeks).

Course Notes:
Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Additional Course Attributes:

Quantitative Methods for Biologists (107877)

Michael Springer

Richard Born

2021 Fall (2 Credits) **Schedule:** MWF 1000 AM - 0359 PM
TR 0200 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The goal of this virtual camp is to introduce you to programming in the MATLAB environment and to show you the power this provides for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations. Some of you, upon encountering in the previous sentence words like "programming" and "numerical simulations," will feel the cold hand of fear grip your stomach, because you have never done any programming and, in fact, have tried to avoid math as much as possible. If so, YOU ARE PRECISELY THE PERSON WE HAD IN MIND as we were planning the course. We are aiming to help you break through this barrier of darkness and fear into the radiant sunshine of quantitative enlightenment. The true beauty of MATLAB, as we will personally demonstrate, is that it allows people who are not mathematically adept (e.g. some of the instructors of this course) to use powerful numerical methods and visualization tools to gain an understanding of concepts that are very difficult to grasp analytically.

Course Notes:

The camp is primarily designed for those of you with no prior programming experience. If you fit this description, you should definitely plan to take the course. It is critical to be familiar with a scientific programming language with which to improve your quantitative literacy throughout graduate school. We also suggest that you start working through the MOOC (https://www.edx.org/course/quantitative-methods-for-biology) that Mike created as an adjunct to the boot camp. It covers much of the same material as we will cover in class during the first week, but, as you all know, repetition is essential when learning a new language.

Class Notes: **M/W/F, 10:00pm-4:00pm (one-hour break from 2pm-3pm) EST**
T/Th, 2:00pm-4:00pm (drop-in/homework) EST
Meeting Dates: Aug. 9 – Aug. 20, 2021
Meeting Locations: M/W/F in Cambridge, MA in Maxwell-Dworkin G115,
T/TH in Longwood (Boston), MA in TMEC 227 or on zoom

Neurobiology - Graduate 307QC

Molecular Causes of Congenital Defects of the CNS (109113)

Mary Loeken

2022 Spring (2 Credits) **Schedule:** R 0300 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Congenital defects can be caused by inheritance of a defective gene, maternal infection, or prenatal exposure to environmental teratogens. Use of mutant mouse strains and genomic sequencing have been particularly useful in the rapid proliferation of our understanding of the cellular and molecular mechanisms by which congenital defects of the brain or nervous system arise, and how they lead to functional consequences that range from biochemical abnormalities to gross structural defects.

Course Notes:

Given every three years.

Class Notes: **Spring 1 QC**

TH, 3:00pm – 6:00pm
Meeting dates: Jan 27 – March 3
Meeting location: Tosteson Medical Education Ctr. (TMEC) – TMEC 333 Conference Rm.

Neurobiology - Graduate 308QC

Thinking about data: probability and statistics for the life sciences (205051)

Richard Born

Brian Healy

2021 Fall (2 Credits) **Schedule:** W 0500 PM - 0659 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Probability and statistics taught with an emphasis on using simulations and re-sampling methods to both analyze data and understand core statistical concepts. Prior to class, students will view online lectures from Dr. Brian Healy's biostatistics course. In class, we will focus on coding exercises to practice different approaches to analyzing real data sets, with an emphasis on resampling methods. Coding exercises may be carried out using either Python or MATLAB.

Course Notes:

This course will use a flipped design in which students will view video lectures from Dr. Brian Healy's Biostatistics Certificate Course (offered through Catalyst) prior to in-class programming exercises.

Class Notes:

Course Schedule: W, 5:00pm - 7:00pm
Meeting Dates: Sept. 1 – Oct. 20, 2021
Meeting Location: TMEC 447

Recommended Prep:

Students are required to have some experience in programming in either Python or MATLAB. Neurobiology 306QC can fulfill this requirement.

The Molecular Pathology and Current Therapies for Eye Diseases (109255)

Dong Chen
Petr Baranov
Corinna Bauer
Kin-Sang Cho
Shelley Fried
Daniel Sun
Mengyu Wang
Tatjana Jakobs

2021 Fall (2 Credits) **Schedule:** M 0300 PM - 0459 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The eye, as a window to the brain, presents an excellent model system to the study, diagnosis and evaluation of treatment strategies for neurodegenerative disorders in the central nervous system. A surge of progress resulting from studies in the disease mechanisms and the development of new imaging technology have led to a huge step forward in the therapies for diagnosing and treating retinal diseases and preventing blindness. This course will offer students an in-depth examination of current knowledge regarding ocular imaging, diagnosis, molecular pathology, and therapy, with an emphasis on recent breakthroughs and discussion of key literature in the field. The class consists of lectures and group discussions that focus on seminal papers selected from both the basic science and clinical ophthalmology, which will serve as a basis for teaching students basic concepts of ophthalmology and becoming familiar with advanced imaging tools and animal models of retinal diseases. Each session will review the landmark publications on a particular topic or disease. The class will foster discussion on the implications of studies in eye and other disease mechanisms and therapies.

Course Notes:

Offered in alternate years.

Class Notes: **M, 3:00pm - 5:00pm**
Meeting Dates: Sept. 6 – Dec. 6, 2021
Meeting Location: Schepens Eye Research Institute, 2nd-Floor Conference Rm, 20 Staniford St.

Recommended Prep:

Basic understanding for the anatomy of the eye

Neurobiology - Graduate 316QC

Probabilistic models for neural data: from single neurons to population dynamics (214540)

Jan Drugowitsch

2022 Spring (2 Credits) **Schedule:** W 0500 PM - 0659 PM

Instructor Permissions: Instructor **Enrollment Cap:** 100

Probabilistic models are a powerful approach for gaining an understanding of what drives the activity of individual neurons and neural populations. This course will dissect their modular, plug-and-play structure, from single-neuron models over generalized linear models to state space models for population dynamics. Students will learn their basic building blocks, and how to flexibly assemble them to suit their own data analysis needs.

Upon completion of the course, students should be able to (i) identify the model structure and associated assumptions of common models in the literature; (ii) apply existing probabilistic models to neural datasets; and (iii) flexibly design new models by re-using existing model components.

Class Notes: **Spring 1 QC**

Wed., 5:00pm – 7:00pm
Meeting dates: Jan 26 – March 23
Meeting location: Tosteson Medical Education Ctr. (TMEC) – TMEC 448 Conference Rm.

Recommended Prep:

The course has no hard prerequisites, but students are expected to have some understanding of linear algebra, calculus, and (Bayesian) probability theory. Furthermore, they should be comfortable with Python, which will be used for exercises.

Neurobiology - Graduate 322QC

Advances in synaptic, cellular and circuit neuroscience (218620)

Pascal Kaeser

Wade Regehr

2021 Fall (2 Credits) **Schedule:** T 0900 AM - 1045 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

In this literature analysis course, students will read, analyze, present and discuss primary research literature on synaptic, cellular and circuit neuroscience. The principal goals are to (a) enhance the students' understanding of the current state of knowledge of neuroscience, and (b) to provide experience in reviewing, critiquing and presenting primary research articles. The course is integrated with an existing journal club that was initiated in the Kaeser and Regehr laboratories and that attracts additional members of the broader neurobiology research community. In addition to the participation in the journal club, the course participants will obtain a brief conceptual introduction to each paper by a teaching assistant before the journal club, and they will participate in an extended Q&A and discussion session after each journal club, such that the discussed paper can be embedded with related current concepts on each topic.

Course Notes:

The course consists of an introduction (9.00-9.15), a journal club with additional participants (9.15-10.15), and a Q&A session with a teaching assistant and/or instructor (10.15-10.45)

Class Notes:

T, 9:00am – 10:45am
Meeting Dates: Sept. 14 – Nov. 16, 2021
Meeting Location: Goldenson 318

Recommended Prep:

Students should have completed NB215 or a similar foundational

neuroscience course.

Quantitative Methods for Biologists (Python) (219699)

Eleanor Batty

Richard Born

2022 Spring (2 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 35

The goal of this bootcamp is to introduce you to programming in Python and to show you the power this provides for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations. Some of you, upon encountering in the previous sentence words like "programming" and "numerical simulations," will feel the cold hand of fear grip your stomach, because you have never done any programming and, in fact, have tried to avoid math as much as possible. If so, YOU ARE PRECISELY THE PERSON WE HAD IN MIND as we were planning the course. We are aiming to help you break through this barrier of darkness and fear into the radiant sunshine of quantitative enlightenment. The true beauty of Python, as we will personally demonstrate, is that it allows people who are not mathematically adept (e.g. some of the instructors of this course) to use powerful numerical methods and visualization tools to gain an understanding of concepts that are very difficult to grasp analytically.

Class Notes: **Meeting Dates: Jan 10 – Jan 20**
Mon – Fri, 9:00am – 4:30pm (with one hour lunch break)

Location: This course will be remote. The course instructor will reach out with the zoom link and any additional information.
Course Note: Bootcamp will occur on M 1/10, W 1/12, F 1/14, T 1/18, and Th 1/20. Office hours and homework help on alternate days.

Neurobiology - Graduate 329L

The Genetic and Neural Basis of Sleep in Drosophila (109254)

Dragana Rogulja

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 329L

The Genetic and Neural Basis of Sleep in Drosophila (109254)

Dragana Rogulja

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 330

Effects of stress and other experiences on motivated behavior (115975)

William Carlezon

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 330

Effects of stress and other experiences on motivated behavior (115975)

William Carlezon

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 330DR

Graduate Research–Whipple Lab (218506)

Amanda Whipple

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Class Notes: **Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 347L

Computational cognitive neuroscience of learning and memory (205911)

Samuel Gershman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 347L

Computational cognitive neuroscience of learning and memory (205911)

Samuel Gershman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 348

Neural stem cells and cerebrospinal fluid (108355)

Maria Lehtinen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 348

Neural stem cells and cerebrospinal fluid (108355)

Maria Lehtinen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 349

Olfactory and Vomeronasal Systems Molecular and Developmental Neurobiology (115980)

Catherine Dulac

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Neurobiology - Graduate 349

Olfactory and Vomeronasal Systems Molecular and Developmental Neurobiology (115980)

Catherine Dulac

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 350

Development, degeneration, and circuitry of the vertebrate retina (146731)

Connie Cepko

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 350

Development, degeneration, and circuitry of the vertebrate retina (146731)

Connie Cepko

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 351

Neurogenetics of Disease (112135)

Louis Kunkel

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 351

Neurogenetics of Disease (112135)

Louis Kunkel

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 352L

Neural circuitry of sleep and sleep disorders (203807)

Thomas Scammell

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 352L

Neural circuitry of sleep and sleep disorders (203807)

Thomas Scammell

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Neurobiology - Graduate 353

Physiology, with an Emphasis on Ion Channels, Signal Transduction, and Imaging (134189)

David Clapham

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 353

Physiology, with an Emphasis on Ion Channels, Signal Transduction, and Imaging (134189)

David Clapham

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 354

Structural Biology of Signaling and Transport Through Biological Membranes (123145)

Rachelle Gaudet

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 354

Structural Biology of Signaling and Transport Through Biological Membranes (123145)

Rachelle Gaudet

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 355

A Biophysical Approach to System Function (107746)

Michael Do

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 355

A Biophysical Approach to System Function (107746)

Michael Do

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 356

Ion Channels in Neural Cell Membranes (144968)

David Corey

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 356

Ion Channels in Neural Cell Membranes (144968)

David Corey

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 357

Experience-Dependent Neuronal Circuit Maturation and Plasticity (123610)

Michela Fagiolini

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 357

Experience-Dependent Neuronal Circuit Maturation and Plasticity (123610)

Michela Fagiolini

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 358

Neurogenetics of Human Disease (121701)

Xandra Breakefield

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 358

Neurogenetics of Human Disease (121701)

Xandra Breakefield

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Neurobiology - Graduate 358L

Genomic analyses of brain cell function and dysfunction (205912)

Evan Macosko

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 358L

Genomic analyses of brain cell function and dysfunction (205912)

Evan Macosko

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Neurobiology - Graduate 359

Functional and Behavioral Interrogation of Neural Circuits in the Mammalian Olfactory System (126396)

Sandeep Datta

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 359

Functional and Behavioral Interrogation of Neural Circuits in the Mammalian Olfactory System (126396)

Sandeep Datta

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 360

Neural Signal Processing and Mechanisms of General Anesthesia (119842)

Emery Brown

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Neurobiology - Graduate 360

Neural Signal Processing and Mechanisms of General Anesthesia (119842)

Emery Brown

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Neurobiology - Graduate 361

Immunobiology of the Nervous System and its Tumors (116018)

Lois Lampson

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 361

Immunobiology of the Nervous System and its Tumors (116018)

Lois Lampson

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 362

Optical Imaging in Alzheimer's Disease (125535)

Brian Bacskai

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Neurobiology - Graduate 362

Optical Imaging in Alzheimer's Disease (125535)

Brian Bacskai

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 363

Axonal Development and Reorganization (120337)

Larry Benowitz

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Neurobiology - Graduate 363

Axonal Development and Reorganization (120337)

Larry Benowitz

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 363L

The genetics, biochemistry and physiology of forebrain inhibition (205895)

Gord Fishell

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Using genetic, physiological and molecular methods to understand how inhibitory interneuron subtypes are generated and subsequently integrated into neural circuits in both normal and pathophysiological conditions.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 363L

The genetics, biochemistry and physiology of forebrain inhibition (205895)

Gord Fishell

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Using genetic, physiological and molecular methods to understand how inhibitory interneuron subtypes are generated and subsequently integrated into neural circuits in both normal and pathophysiological conditions.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Neurobiology - Graduate 364

hypothalamic circuitry controlling sleep and circadian rhythms (131279)

Clifford Saper

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 364

hypothalamic circuitry controlling sleep and circadian rhythms (131279)

Clifford Saper

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Neurobiology - Graduate 365

Behavioral Pharmacology of Stimulant Drugs and Brain Dopamine Systems (121799)

Barak Caine

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 365

Behavioral Pharmacology of Stimulant Drugs and Brain Dopamine Systems (121799)

Barak Caine

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 367

Neocortical Development and Regeneration (113770)

Jeffrey Macklis

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Neurobiology - Graduate 367

Neocortical Development and Regeneration (113770)

Jeffrey Macklis

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 368L

Serotonin neurotransmission in behavior and psychopathology (203814)

Kathryn Commons

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Neurobiology - Graduate 368L

Serotonin neurotransmission in behavior and psychopathology (203814)

Kathryn Commons

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 369L

Statistical neuronal computations underlying complex decisions and behavior under uncertainty (203815)

Jan Drugowitsch

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biolog Chem & Molecular Pharm 200

Principles of Molecular Biology (116477)

Joseph John Loparo

Karen Adelman

Stirling Churchman

Frank Slack

Alan Brown

Ralph Scully

2021 Fall (4 Credits) **Schedule:** MWF 1100 AM - 1159 AM

Instructor Permissions: None **Enrollment Cap:** 78

Principles of Molecular Biology is a course organized around the Central Dogma of Biology with presentations covering fundamental aspects of DNA and RNA structure, their function, and their interactions with proteins. The course opens with a discussion of the physical and chemical properties that drive the interactions of proteins with nucleic acids. This is used as a basis for understanding the material presented in the subsequent six modules, which cover DNA replication, DNA repair, gene regulation, transcription, RNA processing, and translation. Throughout this course, an emphasis will be placed on how the structure of small molecular machines (proteins) define their function in the processes and pathways that are introduced.

Class Notes:

Schedule: M/W/F, 11:00am – 12:00pm
Meeting Dates: Sept. 1 – Dec. 6, 2021
Meeting Location: The course will meet in the Cannon room for the first day of class. After that, the main course room will be TMEC 227. Please see course page for breakdown.

Recommended Prep:

Intended primarily for graduate students familiar with basic molecular biology or with strong biology/chemistry background.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biolog Chem & Molecular Pharm 218

Molecular Medicine (122596)

Suneet Agarwal

2021 Fall (4 Credits) **Schedule:** T 0100 PM - 0259 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

A seminar on various human diseases and their underlying genetic or biochemical bases. Primary scientific papers discussed. Lectures by faculty and seminars conducted by students, faculty supervision.

Course Notes:

Faculty mentors will guide student-led discussions of the papers.

Jointly offered with the Medical School as HT 140. Go to canvas.hms. harvard to view contents for the course.

Class Notes: **Course Schedule: T, 1:00pm - 3:00pm**
Meeting Dates: Sept. 14 - Dec. 7, 2021

Recommended Prep:

College-level mastery of principles of cellular and molecular biology and genetics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biolog Chem & Molecular Pharm 230

Principles and Practice of Drug Development (114740)

Stan Finkelstein

Peter Sorger

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0600 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Critical assessment of the major issues and stages of developing a pharmaceutical or biopharmaceutical. Drug discovery, preclinical development, clinical investigation, manufacturing and regulatory issues considered for small and large molecules. Economic considerations of the drug development process.

Class Notes: **Wed., 3:00pm - 6:00pm**
Meeting Dates: Sept. 8 – Dec. 8, 2021
Meeting Location: MIT 4-237

Additional Course Attributes:

Attribute	Value(s)

Bruce Levy
D. Moody
Joseph Loscalzo
Raul Mostoslavsky
Sudha Biddinger
Marcia Haigis
Paul Schmidt

2022 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1029 AM

Instructor Permissions: None **Enrollment Cap:** 100

Cellular and organismal metabolism, with focus on interrelationships between key metabolic pathways and human disease states. Genetic and acquired metabolic diseases and functional consequences interactive lectures and critical reading conferences are integrated with clinical encounters.

Course Notes:

Enrollment is open to all HILS graduate students with adequate preparation in cell biology and biochemistry.

Class Notes:

M/W/F, 9:00am - 10:22am
Meeting Dates: Jan 24 – May 6
Meeting Location: Locations and rooms vary based on dates, the first two locations will be:

Monday (1/24/22): TMEC 106 Learning Studio
Wednesday (1/26/22): TMEC 106 Learning Studio

***The instructor to provide specific date and location information for remaining course dates.**

Recommended Prep:

Prerequisites for undergraduate students only. For undergraduates interested in this course, a knowledge of introductory biochemistry, genetics, and cell biology is required (MCB 63 or MCB 60 or LIFESCI50, and MCB 64 or equivalent); plus one year of organic chemistry (Chem 17/27 or 20/30). Please petition the course instructor for an exemption.

Biolog Chem & Molecular Pharm 236

Principles of Drug Action in People (156104)

Philip Cole
Sara Buhrlage
Catherine Dubreuil

2022 Spring (4 Credits) **Schedule:** TR 0330 PM - 0459 PM

Instructor Permissions: None **Enrollment Cap:** 100

This course will discuss principles of drug discovery drug modalities and drug pharmacology. In the first part of the course, fundamental aspects of receptor and enzyme targeting agents, drug mechanism, drug metabolism, pharmacokinetics and pharmacodynamics, small molecules, proteins, and nucleic acid drugs will be described. In the second part of the course, pharmacology of therapeutics that act on the cardiovascular, immunologic, and central nervous systems will be covered. The course will include frontier lectures on antiviral agents, cardiac drugs, and treatments for brain diseases and a journal club on specialized topics in drug discovery. A range of knowledgeable instructors enlisted from the Harvard Medical School faculty and pharmaceutical scientists will participate in teaching this course.

Class Notes: **T/TH, 3:30pm-5:00pm**

Meeting Dates: Jan 25 – 4/28

Meeting Location: Tosteson Medical Education Ctr. (TMEC) – TMEC 250 Mini Amphitheater

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students

Biolog Chem & Molecular Pharm 250

Biophysical and Biochemical Mechanisms of Protein Function (204396)

Andrew Kruse

Stephen Blacklow

Eric Fischer

Philip Cole

2022 Spring (4 Credits) **Schedule:** TR 1100 AM - 1159 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Biophysical and Biochemical Mechanisms of Protein Function focuses on the molecular mechanisms that underlie essential biochemical processes such as signal transduction. Major topics include biochemical thermodynamics and conformational equilibria, protein structure and folding, receptor pharmacology, allostery, and enzymatic mechanisms of signaling. The course includes both content lectures and research frontiers seminars focused on current research in biochemistry with an emphasis on signal transduction in therapeutically relevant pathways.

Class Notes: **T/TH, 11:00am – 12:00pm**
Meeting Dates: Jan 25 – Apr 28
Meeting Location: 125 (D) Armenise Amphitheater (on 3/24/22, TMEC 227)

Recommended Prep:

A foundational biochemistry course is recommended as a prerequisite (we expect students to have a solid understanding of the core concepts in biochemistry and molecular biology, including knowledge of the amino acids and their properties as well as the central dogma).

Translational Pharmacology: The Science of Therapeutic Discovery and Development (127474)

David Golan

Catherine Dubreuil

Mark Namchuk

2022 Spring (2 Credits) **Schedule:** MTWRF 1000 AM - 1159 AM

Instructor Permissions: Instructor **Enrollment Cap:** 56

This intensive course, held during three weeks in January (14 class days), covers principles of pharmacology and their translation into new drug discovery and development. Students participate in project groups, composed primarily of graduate students, to propose a drug development strategy from target choice through clinical trials. Most sessions include lectures, panel discussions, and/or case studies presented by Harvard faculty and faculty experts from the pharmaceutical and biotechnology industries; most afternoons are either unscheduled or provide scheduled time to work on the group project. Evaluation is based on written and oral presentations of the group project and on class participation. Enrollment may be limited.

Class Notes: **This is an intensive January term course.**

Meeting Dates: Jan 3 – Jan 21
Mon - Fri, 10:00am – 12:00pm, live in person content with some synchronous zoom sessions Course Note: Schedule runs outside the J-Term semester dates. Class sessions will begin on January 3 and will run through January 21.
Location: This course will be remote. Reach out to Catherine Dubreuil, catherine_dubreuil@hms.harvard.edu, for specifics.

Cell Fate Decisions in Development and Disease (108999)

Alan Cantor

2021 Fall (2 Credits) **Schedule:** W 0130 PM - 0329 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This quarter course will offer students an in-depth examination of current knowledge regarding mechanisms of cell fate decisions. It will examine these processes in the context of developmental cell plasticity, cellular reprogramming, and cancer. This will primarily be a literature-based course with examination and discussion of key studies in the field. Concepts involving the instructive role of lineage-specific transcription factors, transcription factor cross-antagonism, gene regulatory networks, multilineage priming, progenitor cell heterogeneity, pioneer factors, epigenetics, chromatin accessibility, chromatin remodeling factors, "super enhancers," stem cell bias, lineage identity maintenance, mitotic bookmarking, non-coding RNAs, cell polarity, asymmetric cell division, lateral inhibition, lineage plasticity, and cellular reprogramming will be explored.These ideas will be examined in the context of several different tissue systems and organisms.

Class Notes: **W, 1:30pm - 3:30pm**
Meeting Dates: Sept. 8 – Nov. 3, 2021
Meeting Location: Karp Family Research Building, Boston Children's Hospital, 7th Floor Conference Room

No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt

Biolog Chem & Molecular Pharm 329

Structure Biology of Cytoplasmic Signal Transduction (148041)

Michael Eck

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Biolog Chem & Molecular Pharm 330L

Protein aggregation and synaptic dysfunction (203803)

Dominic Walsh

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biolog Chem & Molecular Pharm 330L

Protein aggregation and synaptic dysfunction (203803)

Dominic Walsh

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biolog Chem & Molecular Pharm 331

Biochemistry and Biology of Neurodegenerative Diseases (117744)

Michael Wolfe

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biolog Chem & Molecular Pharm 331

Biochemistry and Biology of Neurodegenerative Diseases (117744)

Michael Wolfe

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biolog Chem & Molecular Pharm 333

Structural Biology of Mechanisms in Gene Regulation (110246)

Piotr Sliz

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biolog Chem & Molecular Pharm 333

Structural Biology of Mechanisms in Gene Regulation (110246)

Piotr Sliz

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biolog Chem & Molecular Pharm 334

RNA Mechanisms in Cancer and Quiescence (127373)

Shobha Vasudevan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biolog Chem & Molecular Pharm 334

RNA Mechanisms in Cancer and Quiescence (127373)

Shobha Vasudevan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biolog Chem & Molecular Pharm 335

Biochemical and Genetic Analysis of Eukaryotic Gene Expression (122931)

Stephen Buratowski

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biolog Chem & Molecular Pharm 335

Biochemical and Genetic Analysis of Eukaryotic Gene Expression (122931)

Stephen Buratowski

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biolog Chem & Molecular Pharm 336

Molecular mechanisms of transmembrane signaling (160764)

Andrew Kruse

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration

Subject: Biomedical Informatics

Biomedical Informatics 201

Concepts in genome analysis (208016)

Shamil Sunyaev

Michael Baym

Cheng-Zhong Zhang

Heng Li

2021 Fall (4 Credits) **Schedule:** MW 0230 PM - 0359 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course focuses on quantitative aspects of genetics and genomics, including computational and statistical methods of genomic analysis. We will introduce basic concepts and discuss recent progress in population and evolutionary genetics and cover principles of statistical genetics of Mendelian and complex traits. We will then introduce current genomic technologies and key algorithms in computational biology and bioinformatics. We will discuss applications of these algorithms to genome annotation and analysis of epigenomics, cancer genomics and metagenomics data. Proficiency in programming and basic knowledge of genetics and statistics will be assumed.

Class Notes: **M/W, 2:30pm - 4:00pm**
Meeting Dates: Sept. 1 – Dec. 1, 2021
Meeting Location: TMEC 250 Mini Amphitheater

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Immunology

Immunology 201

Advanced Topics in Immunology (148547)

Thorsten Mempel

Shiv Pillai

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0259 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

This course provides an intensive and in-depth examination of a selection of fundamental concepts in immunology. It takes advantage of the unique expertise of members of our Immunology faculty to illustrate

how these concepts have been established and continue to be developed based on seminal work in the field including contributions from their own laboratories.

Course Notes:

Intended for students who have had prior exposure to immunology on the undergraduate level. In the absence of such exposure, students must obtain the permission of the Course Director.

Class Notes:

T/Th, 1:30pm – 3:00pm EST
Meeting Dates: Sept. 2 – Dec. 2, 2021
Meeting Location: Modell 100A, Fred S. Rosen Lecture Hall

Recommended Prep:

A background in genetics and biochemistry strongly recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 202

Immune and Inflammatory Diseases (148503)

Wendy Garrett

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0359 PM

Instructor Permissions: None **Enrollment Cap:** 100

IMMUN 202 builds on IMMUN 201 and explores fundamental principles of immunology in the context of immune and inflammatory diseases. Through a series of lectures and discussion, students will survey a broad range of diseases in which the immune system is essential. Topics will include not only diseases that mobilize classical immunity but also conditions to which we now know the immune systems contributes. Students will use oral and written exercises to learn how to critically evaluate and synthesize major concepts and tools essential for the study of immunology.

Class Notes:

T/TH, 1:30pm – 4:00pm
Meeting Dates: Jan 25 – May 5
Mid-Term: Mar 22
Final: May 5
Meeting Location: Modell Cntr., Room 100

Recommended Prep:

Immunology 201 or its equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Final Assessment Category	Three-hour Exam

Immunology 203

Advances in Immunology (215751)

Daniel Lingwood
Shiv Pillai
Bruce Walker
Facundo Batista
Galit Alter
Judy Lieberman
Duane Wesemann

2022 Spring (4 Credits) **Schedule:** T 0230 PM - 0329 PM
R 0300 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Semester long course, intended for graduate students at Harvard and MIT, jointly taught by Harvard and MIT faculty members at the Ragon Institute of MGH, MIT, and Harvard.

Class Notes: **T/TH**
T: 2:30pm – 3:30pm, TH: 3:00pm – 4:00pm
Meeting Dates: 02/15, 02/17, 02/22, 02/24, 03/01, 03/03, 03/08, 03/10, 03/15, 03/17, 03/22, 03/24, 03/29, 03/31, 04/5, 04/07, 04/12, 04/14, 04/26, 04/28, 5/3, 5/5, 5/10
Meeting Location: Ragon Institute Auditorium (lecture), Ragon 980 (journal club)

Recommended Prep:
Students should have completed or be concurrently enrolled in a basic immunology course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 204

Critical Readings for Immunology (143254)

Duane Wesemann

2022 Spring (4 Credits) **Schedule:** R 1000 AM - 1259 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Original research articles from fields including immunology, biochemistry, genetics, and cell and developmental biology will be critically analyzed in an intensive small group format. Grading will be based on class participation and oral presentations.

Course Notes:
Required for first-year immunology students, open to second-year

immunology students. No auditors. Offered jointly with the Medical School as IM 703.0.

Class Notes: **TH, 10:00am – 1:00pm**
Meeting Dates: Jan 27 – April 27
Meeting Location: Modell Cntr, Room 100 and Modell 258

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Immunology 300

Advanced Topics in Immunology (141598)

Rosalind Segal

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Reading and discussion seminars each running for a half term (7 weeks). Two seminars, which can be taken in different terms, are required for credit. Topics include the role of intracellular and transmembrane protein phosphates in signal transduction.

Course Notes:

Intended for first- and second-year Immunology graduate students. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Call 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Additional Course Attributes:

Immunology 301

Immunology Seminar (142204)

Shiv Pillai

Galit Alter

2022 Spring (4 Credits)

Schedule: W 0400 PM - 0459 PM
W 1200 PM - 1259 PM
W 0230 PM - 0359 PM

Instructor Permissions: Instructor

Enrollment Cap: 20

Gives students exposure to research topics in Immunology. Students prepare for the weekly seminar through readings, discussions, and preparing brief write-ups. These discussions are facilitated by members of the Committee on Immunology.

Course Notes:

Required for, and limited to, first-year Immunology graduate students. All others will be evaluated for enrollment on a case by case basis. Attendance is required at the Meet and Greets, the discussions and the seminars.

Individual event timing can be found in class notes.

Class Notes:

Meet and Greet: W, 12:00pm – 1:00pm
Discussion Class: W, 2:30pm – 4:00pm
301 Seminars: W, 4:00pm – 5:00pm

Meeting Dates: Jan 26 – April 27
Meeting Locations:
Meet and Greet/Discussion Class: Modell Cntr, Room 100
301 Seminars: Armenise Amp.

Additional Course Attributes:

Immunology 305QC

Neuro-Immunology in Development, Regeneration and Disease (130342)

Isaac Chiu

Jun Huh

2022 Spring (2 Credits) **Schedule:** T 0400 PM - 0559 PM

Instructor Permissions: None **Enrollment Cap:** n/a

It is increasingly clear that the nervous and immune systems share parallel molecular pathways, and communication between neurons and immune cells plays significant roles in homeostasis and disease. This course will investigate current topics in neuro-immunology: CNS development, chronic pain, neuro-degeneration, immune modulation by neurons, neuron modulation by immune cells, neuro-glia interaction, allergy, auto-immunity, and infection. We will focus our discussions on molecular mechanisms shared by the immune and nervous systems and the molecular cross-talk between these two systems.

Course Notes: **Each class will cover a specific topic in neuro-immunology. Students should be prepared to lead discussions on pre-selected papers for each session.**

Class Notes: **Spring 2 QC**

Tue., 4:00pm – 6:00pm
Meeting Dates: Mar 8 – April 26
Meeting Location: Modell Ctr., 100A classroom

Cancer Immunology (130614)

Kai Wucherpfennig

Stephanie Dougan

Philip Kranzusch

Judith Agudo

2021 Fall (2 Credits) **Schedule:** M 0400 PM - 0559 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

There have been many exciting recent developments in the cancer immunology field, and multiple therapeutic approaches have shown efficacy against diverse types of cancer. This course will emphasize new mechanistic insights, specifically on the following topics: Mechanisms of spontaneous protective anti-tumor immunity; Key effector cell populations of anti-tumor immunity; Innate immune pathways in tumor immunity; Inflammation and tumor microenvironment; Immunosuppressive mechanisms in tumor immunity; Targeting of inhibitory receptors; Cancer vaccines.

Course Notes:

Must be PhD student at Harvard or postdoctoral fellow.

Class Notes:

Mechanisms and therapeutics of inflammation and resolution (218590)

Timothy Hla

Charles Serhan

2021 Fall (2 Credits) **Schedule:** R 1000 AM - 1159 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Even though physiological inflammation undergoes active resolution processes to return to normal homeostasis, abnormalities in specific mechanistic processes involving immune, vascular and parenchymal cells lead to many diseases ranging from asthma, fibrosis, cancer, autoimmunity to cardiovascular diseases. This course will focus on multicellular interaction networks, lipid mediators and signaling mechanisms in inflammatory and resolutive pathobiology. Topics such as pathogenetic mechanisms, mediators, Omics strategies and cellular heterogeneity will be covered. Discrete mediator networks, namely, eicosanoids, SPMs, S1P, and LPA that are therapeutically tractable and used to treat diseases will be highlighted. In addition, development of novel therapeutics to control inflammatory and resolution pathology will be discussed.

Class Notes: **Course Schedule: TH, 10:00am – 12:00pm**

Immunology 320QC

Innate immunity and viral infection of the lung. Coronaviruses, flu and lung superinfections (218592)

Ivan Zanoni

2021 Fall (2 Credits) **Schedule:** T 1030 AM - 1229 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course will focus on the innate immune response elicited in the lung in response to viral infections. Particular focus will be given to RNA viral infections such as coronaviruses and influenza viruses. The role of innate immune cells, interferons, and other immune mediators in resolving and/or aggravating the viral infection will be discussed. Also, how an initial response against the virus facilitates the development of secondary bacterial superinfections will be analyzed.

Course Notes:

Basic knowledge of immunology is expected in order to follow the content of this course.

Class Notes:

Course Schedule: T, 10:30am – 12:30pm
Meeting Dates: Nov. 9 – Nov. 30, 2021
Meeting Location: Modell 100A Fred S. Rosen Lecture Hall

Additional Course Attributes:

Immunology 336DR

Graduate Research-Manguso Lab (217884)

Robert Manguso

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Immunology 336DR

Graduate Research-Manguso Lab (217884)

Robert Manguso

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Class Notes: **Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Immunology 337

Influence of Initial Bacterial Colonization on the Development of the Mucosal Immune Systems (131243)

W. Allan Walker

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 337

Influence of Initial Bacterial Colonization on the Development of the Mucosal Immune Systems (131243)

W. Allan Walker

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 337L

Vascular and Cell Biology of Inflammation and Wound Healing (146665)

Christopher Carman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 337L

Vascular and Cell Biology of Inflammation and Wound Healing (146665)

Christopher Carman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Immunology 338DR

Graduate Research – Lynch Lab (219994)

Lydia Lynch

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Class Notes: **Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll

Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Immunology 339

Function and Regulation of Cellular Adhesion Mechanisms (144591)

Martin Hemler

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 339

Function and Regulation of Cellular Adhesion Mechanisms (144591)

Martin Hemler

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Immunology 339DR

Graduate Research – Quintana Lab (219995)

Francisco Quintana

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Class Notes: **Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.**

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 361L

Inflammation and Memory as Drivers of Barrier Tissue Ecology (217440)

Jose Ordovas-Montanes

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

Dissertation reserach under the supervision of members of the Department

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll

Immunology 361L

Inflammation and Memory as Drivers of Barrier Tissue Ecology (217440)

Jose Ordovas-Montanes

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

Dissertation reserach under the supervision of members of the Department

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll

FAS: Course Level	Graduate Course

Immunology 362

Chemokine and Lipid Chemoattractants in Immune Cell Trafficking in Normal Physiology and Disease (131559)

Andrew Luster

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 362

Chemokine and Lipid Chemoattractants in Immune Cell Trafficking in Normal Physiology and Disease (131559)

Andrew Luster

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Immunology 363

Regulation of Immune and Inflammatory Responses by the Leukocyte Immunoglobulin-like Receptor Family (131556)

Howard Katz

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

FAS Course Roll	FAS Course Roll

Immunology 363

Regulation of Immune and Inflammatory Responses by the Leukocyte Immunoglobulin-like Receptor Family (131556)

Howard Katz

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 364

T-cell Differentiation, Tolerance and Autoimmunity (131766)

Diane Mathis

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Immunology 364

T-cell Differentiation, Tolerance and Autoimmunity (131766)

Diane Mathis

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 365

The Sage Lab studies how the immune system regulates B cell responses in disease (213721)

Peter Sage

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Immunology 365

The Sage Lab studies how the immune system regulates B cell responses in disease (213721)

Peter Sage

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 366

Immune Mechanisms in Cardiovascular Disease (131558)

Andrew Lichtman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 366

Immune Mechanisms in Cardiovascular Disease (131558)

Andrew Lichtman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Immunology 366L

Innate Inflammation in the Respiratory Tract (213722)

Nora Barrett

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 366L

Innate Inflammation in the Respiratory Tract (213722)

Nora Barrett

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Human Bio & Translational Med

Human Bio & Translational Med 200

Pathology of Human Disease (107843)

Scott Lovitch

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1059 AM
R 1100 AM - 1259 PM

Instructor Permissions: None **Enrollment Cap:** 100

This course provides a comprehensive overview of human pathology with emphasis on mechanisms of

disease and modern diagnostic technologies. Topics include (1) general mechanisms of disease (inflammation, infection, immune injury, host response to foreign materials, transplantation, genetic disorders and neoplasia), (2) pathology of major organ systems, and (3) review of diagnostic tools from invasive surgical pathology to non-invasive techniques such as diagnostic imaging and molecular pathology. The objectives of this course are achieved through a set of integrated lectures and laboratories, as well as a student-driven term project leading to a formal presentation on a medical, socioeconomic, or technological issue in human pathology.

Course Notes:

Enrollment may be limited. Jointly offered with HMS as HT035.0

Class Notes:

Lecture: T/TH 9:00am - 11:00am
Lab: TH, 11:00am - 1:00pm
Meeting Dates: Feb 1 – May 12
Meeting Location: Tosteson Medical Education Ctr. (TMEC) – rooms vary based on dates, instructor to provide specific date and location information.

Recommended Prep:

General biology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Human Bio & Translational Med 235

Principles of Human Disease: Physiology and Pathology (109394)

Connie Cepko

2021 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1029 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course covers the normal physiology and pathophysiology of selected organs, through lectures, readings, tutorials based on clinical cases, and patient presentations. Human biology is emphasized, with some examples also drawn from model organisms. Recent therapeutic approaches, including RNAi, gene therapy, and genome editing will be covered.

Course Notes:

Course enrollment is open to graduate students from any program as well as undergraduates.

Class Notes:

M/W/F, 9:00am - 10:30am
Breakdown (subject to change): M/F – lectures, W – tutorials
Meeting Dates: Sept. 1 – Dec. 1, 2021

Recommended Prep:

Knowledge of introductory biochemistry, molecular biology, and cell biology required (MCB52 and MCB54 or equivalent and one year of organic chemistry for undergraduates is recommended).

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students

Human Bio & Translational Med 301QC

Case Studies in Human Biology and Translational Medicine (127520)

Marc Bonaca

Thomas Michel

2022 Spring (2 Credits) **Schedule:** MTWRF 0900 AM - 1029 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Two-week course that is required of and restricted to first-year LHB students. Each week of the course focuses on a different "case study" in translational medicine. This course will review models of therapeutic development from epidemiologic observations through clinical development with a focus on lipid lowering therapies and diabetes. Students will be engaged in interactive workshops and will attend lectures led by leading clinical researchers.

Course Notes:

This is an intensive January term course. Restricted to Leder students only.

Class Notes: **This is an intensive January term course. Restricted to Leder students**

only. Enrollment limited to 20. Instructor consent required.

Meeting Dates: Jan 10 – Jan 21
Mon - Fri, 9:00am-10:30am
Location: This course will be remote. The course instructor will reach out with the zoom link and any additional information.

Additional Course Attributes:

Human Bio & Translational Med 302QC

Imaging and Microscopy Methods in Biology and Medicine (107418)

Lev Perelman

2021 Fall (2 Credits) **Schedule:** R 0300 PM - 0459 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This quarter course will introduce students to modern imaging modalities used in biology and medicine, with emphasis on modalities most frequently employed in cellular and molecular biology. The course will offer an overview of the basic principles of light and electron microscopy and explain their resolution limits and sources of contrast. We will discuss modality-specific functionally relevant fluorescence molecular probes which can be used for live cell imaging. The course will provide a detailed review and theory of operation of modern advanced light microscopy techniques such as confocal, line-scanning, light sheet, STED, light scattering, multi-photon and superresolution microscopy. We will then discuss Raman and light scattering spectroscopy methods for monitoring induced pluripotent stem cell differentiation, genetic targeting in microscopy and CRISPR-based photoactivatable transcription systems and basic concepts of optogenetics. We will review specific optogenetic actuators and sensors, modern light delivery techniques and various applications from investigating brain functions to cardiac optogenetics. We will also offer an overview of medical imaging techniques, such as ultrasound, X-ray CT, MRI, PET/SPECT, and ultrasound imaging, along with emerging optical imaging and spectroscopy methods. Lectures will be supplemented by visual demonstrations of the microscopy systems and hands-on laboratory work and discussions of the operation principles of those systems.

Class Notes: **Course Schedule: TH, 3:00pm - 5:00pm**
Meeting Dates: Sept. 16 – Dec. 2, 2021

Darlene Dartt

Magali Saint-Geniez

2022 Spring (2 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an overview of the pathogenic process of prevalent ocular diseases. The goals of the course are: (i) to explore the structural and functional aspects of the eye relevant to understanding the pathology, (ii) to review the manifestations of the disease and its effects on vision, (iii) to discuss current views and research in the pathophysiology, and strategies for therapeutic intervention. For most sessions, the basic science and clinical topics will be presented by two faculty lecturers.

Class Notes: **Spring 1 QC**
Mon., 3:00pm – 5:00pm (schedule includes one Wednesday date)
Meeting Dates: January 24th, January 31st, February 7th, February 16th (WEDNESDAY), March 7, March 14th, March 21st, March 28th, April 4th, April 11th, April 25th, May 9th

Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 336

Cellular and molecular basis of vascular integrity in adult retina and brain (160776)

Joseph Arboleda-Velasquez

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 340

(LHB). Disease-Centered Tutorial Clinics (125582)

Jordan Kreidberg

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Human Bio & Translational Med 340

(LHB). Disease-Centered Tutorial Clinics (125582)

Jordan Kreidberg

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 341

Gene Regulation of Metabolism in Cardiovascular Health and Disease (126373)

Zoltan Arany

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 341

Gene Regulation of Metabolism in Cardiovascular Health and Disease (126373)

Zoltan Arany

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Subject: Medical Sciences

Medical Sciences 250AB

Human Functional Anatomy (120066)

Lee Gehrke

2021 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0559 PM

Instructor Permissions: Instructor **Enrollment Cap:** 48

Lectures, prosections, and donor cadaver dissections provide a thorough exploration of the gross structure and function of the human body. Fundamental principles of embryology and bioengineering promote analytical approaches to understanding the body's design.

Course Notes:

Open to qualified graduate students with research interests in organismic and evolutionary biology (OEB), with permission of the course director. The course has a minimum enrollment of 30. This course requires rental of a locker for a fee. Offered jointly with the Medical School as HT010, which is open to M.D. candidates in the Health Sciences and Technology Program, Harvard Medical School.

Class Notes: **Meeting Dates: Sept. 8 – Dec. 10, 2021**
Schedule: M/W/F, 1:30pm – 6:00pm
Course Breakdown: Lecture: 1:30pm-2:45pm; Laboratory: 3:00pm -6: 00pm
Meeting Location: Armenise Amphitheater (lecture) plus TMEC Anatomy Labs

Additional Course Attributes:

Medical Sciences 300QC

Conduct of Science (127507)

Kristin White

2021 Fall (2 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

This course is a required course for all DMS students and all who receive support from NIH training grants. The goal of this course is to inform students about the appropriate conduct of research and the many ethical and social problems that they may encounter during their research career in graduate school. The course consists of three lectures for the entire class and several highly interactive sessions with a small group of fellow students moderated by a faculty member. Some of the issues that will be discussed in this course include appropriate methods of collecting laboratory data, issues dealing with research misconduct, interactions with members of the laboratory and the mentor, and the ethical role of the scientist in society.

Course Notes:

All current G2 students must register for this course on their Fall Semester study cards. Specific enrollment instructions will be sent to current G2s and other eligible students prior to the first day of class. Please contact Bethany_Krevat@hms.harvard.edu, for enrollment inquiries. Restricted to HILS graduate students on the Longwood campus.

Class Notes: **Section Meeting Dates and Locations: To be determined by specific section leaders**

Lecture Dates and Locations:
Research Integrity: It's a Matter of Public Trust, Tuesday, September 28, 2021, at 3:00-4:30 p.m. EDT
Conflict Resolution Skills for the Researcher, Tuesday, October 12, 2021, at 3:00-4:30 p.m. EDT
Inclusive Excellence in Research: Creation of a Vibrant, Scientific Global Community, Tuesday, October 26, 2021, at 5:00-6:30 p.m. EDT

Please contact Bethany_Krevat@hms.harvard.edu, for enrollment inquiries. Restricted to HILS graduate students on the Longwood campus.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Medical Sciences 312QC

Graduate TF Training in the Biomedical Sciences (207116)

Bradley Coleman

2021 Fall (2 Credits) **Schedule:** TR 0300 PM - 0459 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

MED-SCI 312QC is designed to be an 'on the ground' training for Longwood-based teaching fellows. The course instructs graduate student teaching fellows in the pedagogy and course management skills required to be an effective TF. The course begins with three two-hour class sessions that focus on the basics of evidence-based teaching practice and practical strategies for working with students. As the semester progresses, students use their work as TFs as the basis for continued instruction and reflection on teaching best practices and the challenges of their application in real-world settings.

Course Notes:

Open to any HILS graduate student serving as a Teaching Fellow in the fall semester, pending approval of the Curriculum Fellow working in their course (or by special arrangement approved by the Director of the Curriculum Fellows Program).

All students interested in registering for MED-SCI 312QC should also register for the Graduate TF Training in the Biomedical Sciences nanocourse. Any interested student may attend the first three sessions of MED-SCI 312QC and receive nanocourse credit, regardless of whether they are a current TF.

Class Notes: **Initial Course Meetings: 3:00pm - 5:00pm on TH, Aug 26; T, August 31; TH, Sept 2**
Meeting Location: Contact instructor
Registration for Nanocourse: https://curriculumfellows.hms.harvard.edu/classes/graduate-tf-training-biomedical-sciences-0

PhD Pathfinder (161280)

Edward Chouchani

2021 Fall (2 Credits) **Schedule:** MTWRF 0500 PM - 0659 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

In this course, Ph.D. Pathfinder, students will learn about the many career paths available to people with advanced degrees in biomedical research including academia, biotech, patent law, science writing/publishing, consulting/business, education, and science policy/regulation.Students will also learn how to find opportunities on and off campus to take the next step in their career plans.

A Ph.D. education provides students with fundamental knowledge about the principles and practice of the scientific method and promotes development of problem-solving skills in ways that are quite useful for many different professions. Students will have the opportunity to learn from experienced professionals representing each of these paths, to learn about strategies for career development, curriculum enrichment, and networking opportunities that will make them competitive for their career of choice.

The course is open to all Ph.D. students interested in learning about the range of career options available to biomedical Ph.Ds. The course includes talks, didactic sessions, workshops and networking events to promote interactions between students and invited speakers. There will be a special emphasis on helping students with their own skill self-assessment to assist in career and professional development. After each session there will be a small networking reception for both the students and lecturers.

Course Notes:

Students are required to attend all five sessions for course credit.

Class Notes:

M - F, 5:00pm - 7:00pm (with an additional hour afterwards for networking)
Meeting Dates: Oct. 18- Oct. 22, 2021 ***(these dates are tentative and are subject to change)***

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

Internships are considered an integral part of a student's educational experience and should be viewed as a path toward a student's career development. As such, approved internships can receive academic credit via this course number.

Course Notes:

Ordinarily, each student will be limited to one internship during his/her PhD career. The internship must be discussed with the PI and DAC committee (or, program advisor, where applicable) prior to approval. Not all students may be eligible for internships, due to program requirements, academic standing or advisor input.

Ordinarily, each student will be limited to one internship during his/her PhD career. The internship must be discussed with the PI and DAC committee (or, program advisor, where applicable) prior to approval. Not all students may be eligible for internships, due to program requirements, academic standing or advisor input.

Subject: Cell Biology

Cell Biology 201

Principles of Cell Biology (108339)

Susan Shao

Daniel Finley

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1159 AM

Instructor Permissions: None **Enrollment Cap:** 100

CB201 is a graduate level course in which students examine fundamental concepts and methodologies in cell biology with expert faculty from the field. Through content lectures, methods lectures, and discussion sections, students will explore a broad range of topics including: the molecular basis of cellular organization, subcellular compartmentalization, protein trafficking, chromosome organization and epigenetics, regulated ubiquitin-proteasome pathways, cell cycle regulation, cell death, and signal transduction.

By the end of this course, students should be able to:

-Evaluate primary scientific literature from a broad range of topics in cell biology;
-Identify current questions in cell biology and the co-evolving methodologies used to address those

questions;
-Design appropriate experimental approaches to address hypotheses related to cell biology;
-Analyze and effectively present experimental datasets produced from modern instrumentation

Course Notes:

Focus on current paradigms and approaches in cell biology. Offered jointly with the Medical School as CB 713.0.

Class Notes: **M/W/F, 10:30am - 12:00pm**
Meeting dates: Jan 24 – April 29
Meeting location: Tosteson Medical Education Ctr. (TMEC) – rooms vary based on dates, instructor to provide specific date and location information.
Please note that rooms may change due to construction

Recommended Prep:

Basic knowledge in biochemistry, genetics, and cell biology.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Development, Stem Cells and Regeneration (111215)

Andrew Lassar
John Flanagan
Guillermo Garcia-Cardena
Jordan Kreidberg
Jessica Lehoczky
Sean Megason
Olivier Pourquie
Vandana Gupta
Karl Koehler

2022 Spring (4 Credits) **Schedule:** MW 0200 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This class is evenly divided between lectures and conference sessions which cover the principals that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signaling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, limb development and regeneration, stem cell

maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify two interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, the goals of this course are for students to both learn about the molecular tool-kit that evolution has endowed to vertebrates (and other multicellular animals) AND to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes:

This course is offered as CELLBIO207 and also as DRB207. Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. Short research proposals are required in lieu of exams.

Class Notes:

M/W, 2:00p - 4:00p
Meeting Dates: Jan 24 - May 11
First Meeting Location: Lectures and discussion session will take place in ARM 527; student presentations sessions will take place on zoom.

Recommended Prep:

Introductory graduate-level courses in both Cell and Molecular Biology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 211

Molecular and Systems Level Cancer Cell Biology (116737)

Peter Sicinski

Jarrod Marto

Marc Vidal

2022 Spring (4 Credits) **Schedule:** MW 0100 PM - 0229 PM

Instructor Permissions: Instructor **Enrollment Cap:** 32

This semester long course aims to examine the molecular basis of cancer formation through the exploration of wide range of topics such as cancer epigenetics, tumor heterogeneity, cancer metabolism, system biology proteomic approaches to study cancer, immune therapy in cancer and therapeutic development. The topics are organized into eight modules and led by one faculty member. Each module consists of three sessions: an introductory lecture that provides an overview of the topic; a keynote lecture that talks about recent discoveries in the field; and, a group discussion that provides you with an opportunity to present and lead a discussion, think critically about the scientific questions in the field, and help you learn how to design experiments

Course Objectives:

- **Describe the molecular basis of cancer formation**
- **Identify big open questions in the research areas around these topics**
- **Explain different experimental approaches and techniques used in contemporary research**
- **Synthesize and implement knowledge while practicing presentation skills**
- **Practice giving peer evaluations and critique**

Course Notes:

Given alternate years with Cell Biology 212. Offered jointly with the Medical School as CB 704.0.

Class Notes:

M/W, 1:00pm – 2:30pm
Meeting dates: Jan 24 – Apr 27
Meeting location: Tosteson Medical Education Ctr. (TMEC) – rooms vary based on dates, instructor to provide specific date and location information.

Recommended Prep:

General knowledge of biochemistry, molecular genetics, and cell biology.

Additional Course Attributes:

Advanced Experimental Design for Biologists (127479)

David Glass

Randall King

Catherine Dubreuil

2022 Spring (2 Credits) **Schedule:** W 0600 PM - 0759 PM

Instructor Permissions: Instructor **Enrollment Cap:** 24

This course will focus on both the theory and practice of experimental design. The emphasis is on project planning and vetting, individual experimental design, and trouble-shooting. Special focus will be placed on methods to avoid experimental bias, and potential sources of inappropriate interpretation. Also the importance of system validation is especially emphasized.

Course Notes:

Special consent required - preference given to Therapeutics Certificate Program students.

Class Notes:

Cell Biology 306QC

Teaching 100: The Theory and Science of Teaching (107400)

Bradley Coleman

2021 Fall (2 Credits) **Schedule:** R 0830 AM - 1029 AM
R 0200 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

For many graduate students and medical educators, teaching will be part of their career, whether as mentoring, formal classroom teaching, or teaching in the hospital. In addition, the theory and research evidence accumulating in the disciplines of cognitive psychology, neuroscience, and from STEM classrooms, has turned the question of "How do we best teach science and medicine?" into its own scientific discipline. The Theory and Science of Teaching focuses on understanding why certain teaching methods are effective by examining the scientific research and theoretical frameworks that support these methods. We will read and discuss foundational educational and cognitive psychology texts and primary literature, and then develop course materials that allow us to put these ideas into practice.

Course Notes:

The course has been designed as a companion to Genetics 302qc: Teaching 101, but neither course is a prerequisite of the other.

Class Notes:

Thursdays
Remote section: 8:30am - 10:30am
In person section: 2:00pm -4:00pm
Meeting Dates: Sept. 16 – Nov. 18, 2021
Meeting Location: In person section - TMEC 128 Learning Studio (Castle)

Class will meet for 2 hours of synchronous discussion and learning activities each week. The in-person section will meet Thursdays from 2:00-4:00pm in Longwood and is intended for PhD students who must

take their classes in-person. The remote section will meet 8:30-10:30 over Zoom and is reserved for master's students. The content of the sections will be the same and both will share identical asynchronous learning components. This will include watching videos, reading a variety of materials, participating in discussion boards, creating sample materials, and writing learning reflections. The synchronous and asynchronous components combine to meet the course objectives and are equally important to students' learning.
Class begins September 16th with the release of the first asynchronous module. The first synchronous class meeting is September 30th.

Recommended Prep:

Make It Stick, by Brown, Roediger and McDaniel is required pre-reading and should be completed before the first day of class. A required asynchronous 'module 0' will be released on Canvas September, 16th.

This course will discuss the role of chromatin dynamics in modulating molecular and cellular processes. The genetic information encoded in our DNA is organized in a defined set of chromosomes, which are condensed about 10.000 fold in order to fit in the cell nucleus. This compaction occurs through packaging of the DNA around histone proteins, a structure known as chromatin. In what was thought to be a rigid structure, today we know that chromatin is an amazingly dynamic folding that plays a crucial role in controlling accessibility of factors to the DNA, and as such, it regulates a vast number of critical biological functions, including gene transcription, DNA replication, DNA repair and cellular identity. In this course we will attempt to cover some of the basic molecular mechanisms that play a role in regulating chromatin dynamics, and in turn how chromatin itself modulate biological processes, including basic mechanisms of inheritance. We will specifically discuss the role of DNA methylation, histone modifications, nucleosome dynamics and novel epigenetic modulators in the context of different biological processes for which chromatin accessibility appears to play a crucial role.

Course Notes:

The course consists of 12 sessions, 1.5 hr each session; 8 regular Sessions, 4 Discussion Sessions.

Class Notes:

Science of Mindfulness: A research based approach to understanding and practicing mindfulness (219915)

Neena Haider

2022 Spring (2 Credits) **Schedule:** WF 0900 AM - 0959 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course delves into the science behind mindfulness using a research- based approach to understand and impact of mindfulness on the mind and body. The course will include a discussion of published work as well as practical applications in a workshop format. Topics include power of breath, positive thinking, and impact of mindfulness on cognitive function. Workshop portions will include guided breath and guided meditation and learning how to focus the mind, and learn observation without judgment.

Cell Biology 318

Molecular Biology of Cell Growth Regulation and Transformation (112913)

John Blenis

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Cell Biology 319

Signaling Pathways in Cancer Cell Biology (109148)

Alex Toker

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Cell Biology 319

Signaling Pathways in Cancer Cell Biology (109148)

Alex Toker

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Cell Biology 321

Neuronal Pathfinding and Synaptogenesis (114269)

David Van Vactor

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Course Roll	FAS Course Roll

Cell Biology 321

Neuronal Pathfinding and Synaptogenesis (114269)

David Van Vactor

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Cell Biology 323L

Cellular lipid metabolism (203781)

Robert Farese

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 323L

Cellular lipid metabolism (203781)

Robert Farese

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Course Roll	FAS Course Roll

Cell Biology 325

Molecular and Cellular Regulators of Cancer Progression (127374)

Sandra McAllister

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Cell Biology 325

Molecular and Cellular Regulators of Cancer Progression (127374)

Sandra McAllister

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Cell Biology 326

Signal Transduction During Early Development (111066)

Malcolm Whitman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Graduate Course

Cell Biology 326

Signal Transduction During Early Development (111066)

Malcolm Whitman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Cell Biology 328

Single-Molecule Biology and Visualization of Cellular Dynamics (139184)

Tomas Kirchhausen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 328

Single-Molecule Biology and Visualization of Cellular Dynamics (139184)

Tomas Kirchhausen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

FAS Course Roll	FAS Course Roll

Cell Biology 329

The Ubiquitin-Proteasome Pathway (119495)

Daniel Finley

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 329

The Ubiquitin-Proteasome Pathway (119495)

Daniel Finley

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Cell Biology 330L

Lipid and Membrane Homeostasis (203804)

Tobias Walther

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Cell Biology 330L

Lipid and Membrane Homeostasis (203804)

Tobias Walther

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Cell Biology 332

Mass Spectrometry and Proteomics (115968)

Steven Gygi

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 332

Mass Spectrometry and Proteomics (115968)

Steven Gygi

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Cell Biology 333

Electron Microscopic Structure Determination (114751)

Thomas Walz

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Cell Biology 333

Electron Microscopic Structure Determination (114751)

Thomas Walz

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Cell Biology 334L

Adipocyte development and energy metabolism (203841)

Yu-Hua Tseng

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Cell Biology 334L

Adipocyte development and energy metabolism (203841)

Yu-Hua Tseng

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 339

Cell Morphogenesis and Regulation (113489)

Marc Kirschner

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 339

Cell Morphogenesis and Regulation (113489)

Marc Kirschner

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 343

Mechanisms of Mammalian Cell Differentiation and Gene Expression (111198)

Bruce Spiegelman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Cell Biology 343

Mechanisms of Mammalian Cell Differentiation and Gene Expression (111198)

Bruce Spiegelman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 344

Molecular Mechanism of Signal Transduction (117770)

Xi He

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Cell Biology 344

Molecular Mechanism of Signal Transduction (117770)

Xi He

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Cell Biology 345

Protein Transport Across the Endoplasmic Reticulum Membrane (119350)

Tom Rapoport

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Cell Biology 345

Protein Transport Across the Endoplasmic Reticulum Membrane (119350)

Tom Rapoport

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Cell Biology 348

Transcriptional Regulation and Epigenetics in Breast and Prostate Cancer (110253)

Myles Brown

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Cell Biology 348

Transcriptional Regulation and Epigenetics in Breast and Prostate Cancer (110253)

Myles Brown

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 349

Gene Silencing and Chromosome Structure (124315)

Danesh Moazed

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Cell Biology 349

Gene Silencing and Chromosome Structure (124315)

Danesh Moazed

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 353L

Regulated protein degradation (203806)

John Hanna

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Cell Biology 353L

Regulated protein degradation (203806)

John Hanna

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Cell Biology 354

Basic and Applied Mechanisms of Intracellular Transport (112504)

Victor Hsu

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Cell Biology 354

Basic and Applied Mechanisms of Intracellular Transport (112504)

Victor Hsu

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Cell Biology 358

Mechanisms of Tumor Metastasis (143098)

Bruce Zetter

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Cell Biology 358

Mechanisms of Tumor Metastasis (143098)

Bruce Zetter

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Cell Biology 359

Intracellular Signaling Pathways in the Regulation of Cell Growth and Differentiation (110416)

David Frank

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 359

Intracellular Signaling Pathways in the Regulation of Cell Growth and Differentiation (110416)

David Frank

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 360

Genetic Control of Apoptosis in Drosophila (115969)

Kristin White

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Cell Biology 360

Genetic Control of Apoptosis in Drosophila (115969)

Kristin White

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Cell Biology 365

Mechanism and Biology of Ubiquitin-like Protein Conjugation Cascades (128171)

Wade Harper

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Cell Biology 365

Mechanism and Biology of Ubiquitin-like Protein Conjugation Cascades (128171)

Wade Harper

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Subject: Developmental & Regen Biology

Developmental & Regen Biology 207 Section: 0001

Development, Stem Cells and Regeneration (111215)

Andrew Lassar
John Flanagan
Guillermo Garcia-Cardena
Vandana Gupta
Karl Koehler
Jordan Kreidberg
Jessica Lehoczky
Sean Megason
Olivier Pourquie

2022 Spring (4 Credits) **Schedule:** MW 0200 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This class is evenly divided between lectures and conference sessions which cover the principals that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signaling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, limb development and regeneration, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify two interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, the goals of this course are for students to both learn about the molecular tool-kit that evolution has endowed to vertebrates (and other multicellular animals) AND to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes:

This course is offered as CELLBIO207 and also as DRB207. Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. Short research proposals are required in lieu of exams.

Class Notes: **M/W, 2:00p - 4:00p**
Meeting Dates: Jan 24 - May 11
First Meeting Location: Lectures and discussion session will take place in ARM 527; student presentations sessions will take place on zoom.

Recommended Prep:

Introductory graduate-level courses in both Cell and Molecular Biology.

April Craft

2022 Spring (2 Credits) **Schedule:** MTWRF 1000 AM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This laboratory and lecture-based course is designed to provide a survey of model systems and technical approaches utilized in developmental, stem cell, and regenerative biology. Students will complete a series of virtual and in-person mini-rotations with laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and trainees to gain experience with a variety of models, experimental techniques, and research areas. Each day of the course will consist of an overview lecture followed by virtual lab tours, protocol observations or activities, and interactive discussions and/or case study sessions or hands-on laboratory activities and interactive discussions, designed to facilitate student, lab member, and PI interactions. The course will culminate in a social event with the larger DRB community and short, informal student-led (five minutes, five slides) brainstorming sessions inspired by a lab session of their choosing.

Course Notes: **This is an intensive January course. Open to first-year and second-year BBS students [HDRB undergraduates with approval of the course director]. Not repeatable for credit.**

Class Notes: **This is a January intensive course. Course meeting only on Jan 10; presentations only on Jan 21; optional DRB welcome party on Jan 20.**

Meeting Dates: Jan 10 – Jan 21
Mon - Fri, 10:00am-4:00pm. Please reach out to mara_laslo@hms.harvard.edu with any questions.
Location: This course will include virtual and in-person components. The instructor will reach out with the zoom link and any additional information.

Additional Course Attributes:

Subject: Biological & Biomedical Sci

Biological & Biomedical Sci 301

Embedded Teaching Practicum (for Graduate Teaching Fellows) (127207)

Ronald Heustis

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The Embedded Teaching Practicum serves to enhance the teaching experience for TFs and the learning experience for enrollees in the core BBS courses. While TFs serve different functions and experience teaching from different perspectives in each of our core courses, they collectively serve a vital role in helping with the delivery of a contemporary, high-quality and accessible education to HMS graduate

students. The embedded teaching practicum provides practice-based training in curriculum design, developing learning objectives, assessment development and DBER; facilitating a group discussion; professionalism in the classroom; minding and supporting student wellness; and preparation for teaching throughout and beyond time in graduate school. Teaching fellows are provided training and experience in the development of an early-career teaching philosophy. Required course for TFs working in BCMP 200; other TFs may register for this course pending approval of the Course Director.

Course Notes:

Time for this course varies by date; details of date and time to be shared by instructors. Sessions scheduled in August will be held to complete essential training prior to the start of the class; these will be held virtually to ensure students can participate remotely.

TFs should contact Jason Heustis, ronald_heustis@hms.harvard.edu. Required Course for TFs working in BCMP 200. Open to TFs serving in other BBS core classes. Registration for this class is limited to students serving as Teaching Fellows for BBS core. Class meetings will be scheduled during daytime and evening hours, and will be communicated by the instructor. TFs are required to participate in all synchronous and asynchronous components of the course in which they are serving as a TF.

Class Notes: **Time varies by date; details of date and time to be shared by instructors**
Meeting Dates: Aug. 10 – Dec. 15, 2021
Meeting Location: Shared by instructors

2022 Spring (4 Credits)

Schedule: T 0300 PM - 0559 PM
R 0400 PM - 0559 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

BBS 302 is an integrated literature analysis course comprised of two related components: (1) intensive faculty-led paper discussion on Tuesdays and (2) workshops with TFs to assess individual student skills in critically evaluating and reviewing the scientific literature on Thursdays.

Course Notes:

This course is required for first year BBS. It is open for enrollment only to BBS and BIG students.

Class Notes:

Meeting Dates:
Tuesdays: Jan 25, Feb 1, Feb 8, Feb 15, Feb 22, Mar 8, Mar 15, Mar 22, Mar 29, Apr 5
Thursdays: Jan 27, Feb 3, Feb 10, Feb 17, Feb 24, Mar 10, Mar 17, Mar 24, Mar 31, Apr 7

Meeting Locations: Tosteson Medical Education Ctr. (TMEC) – rooms vary based on dates, instructor to provide specific date and location information.

Meromit Singer lab (215771)

Meromit Singer

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

The Singer group focuses on elucidating gene networks that regulate T cell function in cancer and autoimmunity, as well as the mechanisms by which bi-directional interactions take place between the T

cells and their environment.

We use statistics, machine learning and algorithmic design to analyze high-throughput data generated in our lab (e.g. single-cell RNA-Seq) and model T cell regulation and function in tissue. We follow up on our predictions with in vivo perturbations (e.g. with CRISPR-Cas9) to validate and improve our models.

Instructor Permissions: None **Enrollment Cap:** n/a

A small group tutorial systematically guiding students in the writing of original, hypothesis-driven research proposals from initial topic selection through completion of a final draft.

Course Notes:

This course is open to second year BBS students. Others need

permission of the instructors. Dates, times and locations for Sessions 3 and 4 will be determined by the faculty running the small group sessions. Students will be able to sign up for their specific group on a first-come, first-served basis until the group limit (5 students) is reached. The BBS office will coordinate this process. Group assignments will be posted on the course website.

Class Notes:

Th, 2:00pm – 3:30pm
Meeting Dates: Sept. 9 – Dec. 17, 2021
Meeting Locations: Session 1 & 2 (lectures) NRB 350

Session 1 (lecture) will be held on Sept. 9, 2:00pm - 3:30pm
Session 2 (lecture) will be held on Sept. 30, 2:00pm - 3:30pm
Small group sessions will be scheduled by faculty instructors and will occur on Zoom.

Recommended Prep:

Medieval Studies

Subject: Medieval Studies

Medieval Studies 111

Sex, Love, and Marriage in the Middle Ages (205890)

Sean Gilsdorf

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This class explores the relationships of passion, love, and obligation that bound men and women over the course of nearly two millennia, from Rome in the first century B.C.E. to sixteenth-century Italy. In particular, it focuses on how those relationships were organized legally and institutionally, on the social roles created by such relationships, and on the connection (or lack thereof) between marriage, love, and sexual passion. Although marriage in the West long was viewed as an exclusively heterosexual estate, the course also considers how homosocial and homosexual desires have affected it throughout history.

Medieval Studies 117

English Legal History, 600-1600 (142694)

Charles Donahue

2021 Fall (4 Credits) **Schedule:** MW 0430 PM - 0559 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the legal and constitutional history of England from the Anglo Saxons to the end of the Tudor period, essentially 600 – 1600, including the development of private (e.g., contract, torts, property) and public law (e.g., criminal and constitutional law). No previous background in English legal history is assumed.

Course Notes:

Meets together with HLS 2165.

Constitutional and Legal History of Medieval Continental Europe (147748)

Charles Donahue

2022 Spring (4 Credits) **Schedule:** MW 0430 PM - 0559 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A survey of continental European constitutional and legal history from the fall of the Roman Empire to the "Rise of absolutism" at the beginning of the seventeenth century. Focuses on the main expressions of European legal culture over this long period of time. In each period an effort is made to relate the types of law produced to social, political, and religious history.

Medieval Studies 202

Latin Palaeography and Manuscript Culture (114765)

Sean Gilsdorf

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

A weekly seminar training students to read medieval Latin handwriting from a variety of text-types, regions, and periods, and to recognize and decipher the abbreviations commonly used by medieval scribes. Students also will encounter a range of medieval texts, learning more about the materials and formats of medieval written culture, and explore the diverse uses, genres, and formats of medieval writing as well as its textual and paratextual features. Students will be required to transcribe from manuscript samples in facsimile, as well as original documents in Houghton, throughout the semester.

Recommended Prep:

Completion of an intermediate Latin course or the equivalent.

At Cross Purposes: The Crusades in Material Culture (109230)

Evridiki Georganteli

2021 Fall (4 Credits) **Schedule:** R 1200 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Crusading expeditions in the Holy Land, Spain and Eastern Europe from 1096 until the end of the Middle Ages shaped the political, socio-economic and cultural map of Europe and the Middle East. This course explores the multifaceted encounters between crusaders, Byzantines, Jews, Armenians and Muslims through the material traces they left behind: architecture, Byzantine objects dispersed across Western Europe, coins, sculptures, frescoes, and manuscripts from the East and the West.

Creativity Research: Eccentrics, Geniuses, and Harvard Students (128215)

Shelley Carson

Jill Hooley

2021 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Examines human creativity from three perspectives: a) empirical research sources, b) case studies of eminent creative achievers, and c) ourselves as creative subjects. Topics include the definition and measurement of creativity, the creative process, the neuroscience of creativity, the creative personality, the role of family life and culture in creativity, the relationship of creativity to IQ, gender differences, and the relationship of creativity to psychopathology. The course format will consist of a combination of lectures, student presentations, and discussion. Students will write a final paper on the topic of their choice related to creativity.

Course Notes:

Course inquiries to Dr. Carson at shcarson@live.com. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery; see https://mbb.harvard.edu/seminars for lottery details.

What Disease Teaches about Cognition (109866)

William Milberg

2022 Spring (4 Credits) **Schedule:** T 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 14

This course seeks to reconcile the complicated and messy problems of patients with brain disease with the concise analysis of precisely defined cognitive functions in normal subjects. Students will learn to overlap cognitive functions on to the brain in disease - at the gross dissection and imaging levels - and to understand some of the complex interactions of individual cognitive operations in disease using the examples of famous landmark cases in the literature (e.g.Broca's Monsieur Leborgne, Phineas Gage, HM and others). The course will include a dissection of a human brain, an examination of how the actual brain maps onto two dimensional neuroimages, and discussions of how the classic lesion based maps of cortical function are related to contemporary maps based on functional neuroimaging.

Course Notes:

Course inquires to Dr. Milberg at william_milberg@hms.harvard.edu. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery; see https://mbb.harvard.edu/seminars for lottery details.

Functional Neuroimaging of Psychiatric Disorders: Insights into the Human Brain-Mind (160759)

David Silbersweig

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Functional brain imaging has revolutionized the study of systems-level behavioral neuroscience and psychiatric disorders, through the ability to localize and characterize distributed brain activity directly associated with perception, cognition, emotion and behavior in disorders where there are not gross brain lesions. This seminar will introduce students to translational neuroimaging methods at the interface of neuroscience, psychology and medicine. It will cover recent and ongoing advances in our understanding of fronto-limbic-subcortical brain circuitry across the range of psychiatric disorders (e.g. mood disorders, anxiety disorders, psychotic disorders, personality disorders, addictions). It will discuss new, emerging biological (as opposed to descriptive) taxonomies and conceptualizations of mental illness and its treatment. It will explore the implications of such knowledge for issues such as consciousness, meaning, free will, emotion, resilience, and religiosity. It will incorporate clinical observations, scientific data and readings, and examine future directions in brain-mind medicine.

Course Notes: **Course inquires to Dr. Silbersweig at dsilbersweig@partners.org. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery; see https://mbb.harvard.edu/seminars for lottery details.**

The Role of Music in Health and Education (205158)

Lisa Wong

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Music shapes the course of human history at both a micro and macro scale; The "universal language" has the power to connect people who share no other common ground. Its power to bind people together is intuitively understood, but only through recent neuroimaging advances over the past few decades have scientists been able to move past intuition to reveal its impact on the brain. In this course, we will examine the exciting progress of the fields of music, science, and social science, through a variety of lenses, and meet some of the experts in the field. Who are the key investigators and practitioners in today's emerging music/brain landscape? What are the latest discoveries about how music affects the brain? How does how we hear and listen impact our perception of music? Who are some of the key influencers in music and social change? This course invites students to deepen their relationship with music, exploring different aspects of the art form through the lens of neuroscience, education, medicine, music therapy, public health and social justice. By the end of this course, the learner will (1) understand the effect of music on the developing brain; (2) understand the mechanism of hearing music; (3) consider the pathophysiology of disordered movement and hearing and how music can be used therapeutically; and (4) understand how other disciplines can add to their knowledge of the therapeutic uses of music. Given the transdisciplinary nature of the work, students will be introduced to literature from different disciplines and use these resources to explore their own individual interests in music.

Course Notes:

Psychopaths and Psychopathy: Psychological, Neuroscientific, Legal, and Policy Issues (207090)

Ellsworth Fersch

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Psychopathy is often used to describe individuals who act in criminal even non-criminal predatory or conscience-less fashion. It is not, however, an official term in the Diagnostic and Statistical Manual of Mental Disorders, though antisocial personality disorder has in the past been described as encompassing psychopathy and sociopathy. Psychopathy was explored by Cleckley in his 1944 book The Mask of Sanity: and by Robert Hare in his 1999 book Without Conscience, and in his 2003 revision of his Psychopathy Check-list. My psychology department seminar on Psychopaths and Psychopathy a decade ago focused on behavioral research and case studies up to that time. By that time the American Psychiatric Association had issued a statement that psychopaths and those with antisocial personality disorder were not, for heuristic reasons, eligible for the insanity defense. Also, at that time, the determination that a convicted

killer was a psychopath was often a strong indicator that the death penalty was warranted. Since then neuroscience research has increasingly explored brain structure and brain function in relation to the disorder causing some professionals to reevaluate the applicability of former positions on insanity and other defenses. Related research has further examined social and philosophical factors, and further operationalized behavioral considerations. In this interdisciplinary discussion-based seminar, students from any of a number of concentrations will examine and discuss that newer research in the context of previous research, and will write and present a briefer case study as well as a longer paper about a topic of their choosing.

Cognitive Neuroscience of Meditation (207091)

Sara Lazar

Michael Ferguson

2022 Spring (4 Credits) **Schedule:** M 0600 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Buddhist philosophy describes a model of how the mind works, as well as a method, mindfulness meditation, that can be used as a tool to transform consciousness and reduce mental distress. Neuroscientists have begun to study the impact of meditation on brain structure and function, often using Buddhist philosophy to guide their hypotheses. We will review and discuss how the science relates to Buddhist philosophy, using the four foundations of mindfulness as the primary framework. We will also compare and contrast the Buddhist model with modern scientific models of how conscious experience is created in the brain, in order to gain a more nuanced understanding of consciousness that integrates philosophy, neuroscience, and personal experience. No prior knowledge of Buddhism is required. The course will be a mixture of lecture, discussion of two primary scientific articles that are assigned each week, and formal powerpoint presentations by students. Students will write a final paper on a topic of their choice that is relevant to the themes of the course.

Course Notes:

Mind, Brain & Behavior 980V Section: 1

Neuroimaging and Big Data in Connectomics: Advances in Understanding the Wiring of the Brain (215757)

Lisa Nickerson

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The last decade has seen a revolution in mapping the human brain "connectome" of functional and structural wiring patterns that generate our emotions, thoughts, and behaviors. In this course, we will learn the basics of the magnetic resonance imaging (MRI) methods used for connectomics research - functional and diffusion MRI. Key methodological and interpretational issues for each technique will be examined to gain a deeper understanding of MRI measures of connectivity. We will discuss some of the key brain networks in the brain's connectome, and the links between the functional and structural wiring of the brain. Last, tremendous advancements in human brain connectomics have been made possible by efforts to collect "big" neuroimaging data in thousands and thousands of individuals. We will discuss some of these key open access resources for connectomics research, including: the Human Connectome Projects with petabytes of neuroimaging and phenotyping data collected in thousands of individuals across the entire lifespan and in numerous brain diseases; the Adolescent Brain Cognitive Development (ABCD) decade-long longitudinal study of childhood through adolescence in 10,000 kids, and the largest neuroimaging study in the world – the UK Biobank that is collecting imaging, genetics, medical records, and deep phenotyping data in 100,000 individuals. This wave of "big data" is providing exceptional opportunities for advancements in connectomics and in machine learning applications to human health, yielding breakthroughs every day in our understanding of how our brains work, and what makes us uniquely us when we are healthy and when we are sick.

Course Notes:

Course inquires to Dr. Nickerson at lisa_nickerson@hms.harvard.edu. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery; see https://mbb.harvard.edu/seminars for lottery details.

Mind, Brain & Behavior 980X

Translational Neuroscience: Limits of Adaptation from Extreme Environments to Clinical Practice (219973)

Gary Strangman

Vladimir Ivkovic

2022 Spring (4 Credits) **Schedule:** F 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Within the translational neuroscience paradigm, this course explores the concepts of neurobehavioral adaptation, stress, resilience, and neuropsychiatric disorders, in relation to the underlying neurophysiologic mechanisms that regulate them. What can we learn about the limitations of human neurobehavioral function through exposure and adaptation to extreme environments, as well as readaptation to "normal" environment, or onset of neuropsychiatric disorders?

We will explore neurobehavioral adaptations to extreme activities such as spaceflight, expeditionary (polar, underwater, desert exploration, military deployments), emergency response services (e.g. firefighting), and impact sports (e.g. football). The limits to neurobehavioral adaptations will be discussed in the broader context of mental and occupational health, gender differences, and understanding the etiology of neuropsychiatric conditions such as, depressive and anxiety disorders, post-traumatic stress disorder (PTSD), traumatic brain injury (TBI), Chronic Traumatic Encephalopathy (CTE), intracranial hypertension and stroke, etc. These will be augmented with insights from COVID-19 pandemic which placed a large portion of the world's population in an extreme environment defined by social and physical isolation/confinement, movement and travel restrictions, disruption of personal and professional activities, novel health risks, and behavioral adjustments.

Contemporary findings from research studies conducted in laboratory, occupational/extreme, and clinical environments will be discussed in the context of translational neuroscience paradigm including neurocognitive, neurophysiological, and psychoneuroimmunological considerations. Special focus will be placed on demonstrations of research/clinical application of novel technologies such as ambulatory brain and physiologic monitoring. Theoretical concepts and research findings will be evaluated relative to their utility in developing prevention and mitigation strategies in extreme environments, as well as translational implementation in clinical treatments for related medical conditions in the general population.

This course may be particularly interesting to Mind Brain and Behavior students pursuing careers in translational neuroscience, psychology, medicine, and related fields. This course features expert guest lecturers (e.g. NASA astronauts and researchers, Antarctic expeditionary physicians, underwater explorers, etc.), demonstrations of unique experimental methodologies and equipment (e.g. ambulatory brain and physiologic monitoring) used in extreme environments, and field visits to operational facilities such as Boston Fire Department Training Academy and/or Neural Systems Group (NSG) at Massachusetts General Hospital (directed by course head, Dr. Strangman).

Class Notes: **Course inquiries to Dr. Ivkovic at vivkovic@mgh.harvard.edu. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery; see https://mbb.harvard.edu/seminars for lottery details.**

Subject: Molecular & Cellular Biology

Molecular & Cellular Biology 60

Cellular Biology and Molecular Medicine (110424)

Dominic Mao

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

MCB 60 provides an introduction to the principles of molecular and cellular biology and their connections to biomedicine. The course explores how medical syndromes provide insights into biological processes and how biological mechanisms underlie human disease and physiology. Topics range from DNA repair, protein folding and vesicle transport to metabolism, cell migration, and cancer. Content for lecture topics comprising of reading and viewing material will be released weekly followed by mandatory, interactive live sessions with the instructors. Weekly sections will combine a laboratory that focuses on experimental design and data analysis, primary literature reading, and review of lecture materials.

Recommended Prep: **LS 1b recommended.**

Requirements: **Prerequisite - LS1A, LPSA, or LS50**

Biochemistry and Molecular Medicine (110450)

Alain Viel

Jessica Liu

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course integrates an introduction to the structure of macromolecules and a biochemical approach to cellular function. Topics addressing protein function will include enzyme kinetics, the characterization of major metabolic pathways and their interconnection into tightly regulated networks, and the manipulation of enzymes and pathways with mutations or drugs. An exploration of simple cells (red blood cells) to more complex tissues (muscle and liver) is used as a framework to discuss the progression in metabolic complexity. Students will also develop problem solving and analytical skills that are more generally applicable to the life sciences.

Cell Biology in the World (110451)

Jessica Liu

Sam Kunes

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The goal of this course is to highlight the connection between science, society, and the individual. We believe the narrative form is a powerful way to interweave these elements and enhance student learning. We also value student agency: learning through activities that are meaningful and relevant to learners.

This course teaches fundamental concepts in cell biology using individual life histories drawn from different parts of the world. Together, these life histories focus on key aspects of human development, growth, aging and disease while providing a nuanced view of the interplay between the life sciences, geography, and culture.

Physical Biochemistry: Understanding Macromolecular Machines (114796)

Monique Brewster

Maxim Prigozhin

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The course aims to develop fundamental concepts of biochemistry as they apply to macromolecules, including protein and nucleic acid structure, thermodynamics and kinetics, ligand interactions and chemical equilibria. The course will also emphasize how these concepts are used in studies of the structure and function of biological molecules, including examples from metabolism. The course will consist of synchronous, interactive lectures and a weekly synchronous section. In section, students will undertake a discovery-based laboratory research project in which they will apply these concepts toward understanding the structure and function of the ATPase domain from the ABC transporter associated with antigen processing (TAP).

Requirements: **Prerequisite: (LPS A OR LS 1a) AND (CHEM 20 OR CHEM 17)**

Cell Biology Through the Microscope (109851)

Ethan Garner

Jeff W. Lichtman

Michel Becuwe

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 24

MCB 68 explores three fundamental fields of eukaryotic cell biology: chromosome segregation, cell motility, and neuroscience. Each topic is approached from a historic and technical perspective. Students will discover these systems as the scientific field did, learning how each successive advance in microscopy revealed new biological details. Students will come away with a theoretical and hands-on understanding of microscopy as well as a grasp of the biological findings each technology revealed.

Recommended Prep:

An additional introductory course in biology (e.g., MCB 60, MCB 80 or SCRB10) is recommended but not required. The course design, level, and content is best suited for students in their sophomore year

Requirements: **Prerequisite: LS 1a OR LPS A**

Neurobiology of Behavior (117711)

Jeff W. Lichtman

Kathleen Quast

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic lecture videos with live Tuesdays and Thursdays featuring guest lectures, hands-on demonstrations, and review sessions in addition to small

discussion sections.

Course Notes:

The course is open to students with little formal training in biology.

Requirements: **Anti-Requisite: Cannot be taken for credit if MCB 81 or NEURO 80 already complete.**

Molecular & Cellular Biology 100

Experimental Research in Molecular and Cellular Biology (160364)

Alain Viel

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100

Recommended Prep:

LPS A or LS 1a or permission of the instructor. Students interested in a neurobiology project will need MCB 80 or permission of the instructor.

Mathematics in Biology (117342)

Elena Rivas

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

MCB111 is meant for biologists who want to learn mathematical principles relevant to current biological

research, as well as for mathematically oriented students who want to explore applications in biology. The course theme is mathematical modeling of biological processes, with a special emphasis on probabilistic models and inference. More than half of the course covers topics on information theory, Bayesian inference, statistics, probabilistic modeling, and neural networks. The last section of the course covers dynamical systems in biology, including random walks, feedback control, and molecular population dynamics. Each week-long unit is devoted to one specific topic, and is based in one or more scientific papers selected from the recent literature. The best way to learn in this course is through the homework. They are very hands-on, and usually require coding to implement some mathematical concept through a particular biological example. For instance, one unit is devoted to maximum likelihood methods in the context of Quantitative Trait Loci analysis; another unit explores probabilistic models in the context of inferring ancestry and recombination breakpoints from genomic reads in fly populations. More information about the course can be found at mcb111.org.

Recommended Prep:

Mathematics 19 or higher.

Cellular Basis of Neuronal Function (114789)

Ryan W. Draft

Kathleen Quast

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 26

The essential function of a neuron is to processe complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits.

This course will have an associated weekly 2 hour lab scheduled ad hoc after enrollment on Monday, Thursday, or Friday.

Requirements: **Pre-requisite: MCB/NEURO 80 or Instructor Approval.**
Anti-requisite: Cannot be taken for credit if NEURO 115 is already complete

Neurobiology of Vision and Blindness (207772)

Joshua Sanes

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The visual system fascinates biologists, in part because humans are such visual animals. This also makes loss of vision a pressing concern: many Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer's or AIDS. For these reasons, as well as because of Its relative accessibility, the visual system is a favored model for studying fundamental aspects of neurobiology, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in the structure, function and development of the mammalian visual system, and then use them as a basis for considering causes of blindness and potential cures.

Recommended Prep: **MCB 80 or NEURO 80 is recommended.**

Requirements: **Pre-requisite: MCB/NEURO 80 or Instructor Approval.**

Principles of Cell Physiology (218679)

Nicholas Bellono

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How do cells communicate and respond to their environment? MCB 175 explores foundational principles in cell physiology and membrane biophysics, including ion channel structure and function; transport mechanisms; electrical signaling in the brain and nonexcitatory cells; second messengers; organellar signaling. We delve into these core concepts through examples of signaling mechanisms in specialized cell types, disease states, and organismal adaptations. Through reading and discussing primary literature and scientific writing assignments, students strengthen skills in critical thinking, interpretation of data, and experimental strategy. Students also give presentations and design a research project based on course topics.

Nancy Kleckner

2022 Spring (4 Credits) **Schedule:** TR 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Chromosome morphogenesis in prokaryotic and eukaryotic organisms. Topics will include chromosome structure, interactions between chromosomes (sisters and homologs), DNA recombination and repair, topoisomerases, transposable elements and site-specific recombination, epigenetic inheritance. Genetic, cytological, and biochemical approaches will be integrated. Lecture, reading, and discussion of classical and current literature and consideration of future experimental directions.

Course Notes:

If you have not taken MCB 60 and LS1B or the equivalent you may request permission of the instructor.

Recommended Prep:

LS1b and MCB60 or equivalent or permission of instructor.

Requirements: **Prerequisite: LS 1b AND MCB 60**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

FAS: Have You Considered	Have You Considered: HCOL
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll

Molecular & Cellular Biology 208

Talking about Science (121320)

Jeff W. Lichtman

Richard Losick

Michael Greenberg

2022 Spring (4 Credits) **Schedule:** M 0430 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Teaches advanced students how to give a good research talk while exposing them to seminal scientific discoveries. Emphasis will be on speaking style, lecture organization, and use of video projection tools.

Course Notes:

In addition to lecture material from the instructor, students will present experiments from Nobel Prize-winning work. The presentations will be critiqued in class by the participants. Open to second year graduate students or with permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 231

Computational Neuroscience (117859)

Haim Sompolinsky

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep:

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements: **Anti-Requisite: Cannot be taken for credit if NEURO 131 already complete.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Molecular & Cellular Biology 265

Introduction to the Principles and Practice of Macromolecular Crystallography (219922)

Rachelle Gaudet

Kevin Dalton

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Through readings, discussions, demonstrations, and practice with sample data and freely available software, the course provides a foundation in the theory and modern practice of X-ray crystallography as applied to macromolecules. This course is targeted at students who are interested in the practice of X-ray crystallography, structural biology, and molecular biophysics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll

Molecular & Cellular Biology 290B

Current Topics in Molecular, Cellular and Organismal Biology (159566)

Vladimir Denic

2022 Spring (2 Credits) **Schedule:** T 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This class teaches students how to publicly present scientific papers to a diverse audience with emphasis on contextualizing the scientific problem under discussion, critically presenting the essential data, and using an engaging presentation style. Required for all first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 291

Genetics, Genomics and Evolutionary Biology (124899)

Craig Hunter

James Mallet

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course covers the fundamentals of classical genetics, molecular genetics, macro- and microevolution, phylogenetics, and developmental evolution. The emphasis is on major concepts and terminology, reading landmark primary literature, and acquainting students with research techniques.

Course Notes:

Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Molecular & Cellular Biology 292

Cellular Biology, Neurobiology and Developmental Biology (124900)

Amanda Whipple

Bence Olveczky

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The biology of the individual cell lies at the heart of multi-cellular phenomena such as development and neural function. This course will emphasize critical evaluation of the primary literature, experimental design and scientific writing.

Course Notes:

Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Program, but open to graduates of all programs.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll

Molecular & Cellular Biology 293

Biochemistry, Chemical and Structural Biology (124901)

Doeke Hekstra

Daniel Needleman

2022 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will introduce basic principles in general, organic and physical chemistry, including kinetics and thermodynamics, as well as macromolecular structure. Concepts will be illustrated with examples taken from the visual system.

Course Notes:

Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 294

Interesting Questions in Physical Biology (122422)

Nancy Kleckner

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Physical biology can be defined as a discipline that seeks to understand biological processes through the lens of physics and engineering. Faculty and students will unite to review current research with the aim of identifying and pondering interesting emerging questions in this area. Combination of lecture and discussion format. Comprises a series of two-week modules, most of which are given by a one or a pair of faculty drawn from MCB, Physics and SEAS.

Course Notes:

Intended primarily for first year graduate students in the EPB PhD track of the MCO program but available to other graduate students and advanced undergraduates as space permits.

Additional Course Attributes:

Instructor Permissions: None **Enrollment Cap:** n/a

This is a semester-long course aimed to help you reflect on your teaching goals and practices. The course will cover topics such as: active learning, backward design, student feedback and evaluation, equity and inclusion, disciplinary transparency, and content delivery. The course will meet once a week and is designed to minimize work outside of class time. It is intended for graduate students in the life sciences and adjacent fields.

Scientific Integrity (156950)

Polina Kehayova

Naoshige Uchida

2021 Fall (2 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 10

MCB 350 is a discussion forum on scientific integrity using case studies to examine basic ethical and regulatory requirements for conducting research, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction. Students are required to complete a pre-course assignment, attend all lectures including the final lecture in February, participate in class discussions, and complete a final course evaluation. A certificate will be issued upon successful completion of the course.

Course Notes: **According to NIH Guidelines, students are required to take a Scientific Integrity Refresher Course every four years (*MCB 351).**

Class Notes: **This course meets for 2 weeks at the beginning of December and is by invitation only.**

Microscopy (156952)

Jeff W. Lichtman

Douglas Richardson

2022 Spring (2 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course presents the fundamental concepts that underlie modern light microscopy in a rigorous but non-mathematical way for biological applications. The students will learn about the four major frameworks for light (ray optics, wave optics, electromagnetism, and quantum optics). The ways lenses work, the theory of resolution, and the optical design of the compound microscope will be described. The course will also describe the photo-physical principles that underlie fluorescence and genetically encoded fluorescent proteins, and light detector and imaging strategies. Scanning (confocal and 2P), light sheet and super-resolution microcopies will also be described. We will end with a tour of the Harvard Center of Biological

Imaging.

Molecular & Cellular Biology 354

Introduction to Model Organisms (160493)

Craig Hunter

2021 Fall (2 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 20

Model organisms are embedded in our scientific culture, from text books on the discovery of genetic material, to mod-encode genome projects. This quarter course is a means to formally introduce an enormously successful experimental scientific approach that has revealed uncountable new biological mechanisms for the last 70 years. Students in this class will engage in hands-on learning exercises to become familiar with commonly used model organisms. They will learn about the genesis of each model system and compare and contrast the features and available experimental approaches that govern whether a particular organism is an appropriate model for different biological phenomena.

Course Notes: **Limited to first year graduate students in the MCO Ph.D. program.**

Class Notes: **This course will consist of a lecture date and 2 days of labs, and admission is by invitation only. If you have any questions about the course please reach out to Professor Craig Hunter.**

Visualizing, Analyzing and Presenting Macromolecular Structures with PyMOL (160523)

Rachelle Gaudet

2022 Spring (2 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

PyMOL is one of the most popular software programs to display and explore high-resolution structures of macromolecules. It is readily used to create publication-quality figures, and movies and animations of structural information. In this course, you will learn the basics of PyMOL and be able to display, explore and present three-dimensional structures of macromolecules. With this basic training, you will be able to

generate high-quality images and simple movies, and have the resources to learn more on your own to generate more complex displays.

Class Notes: **This will class will take place on March 14 and 15 (there are four sessions, 9:30am-noon and 1:30pm-4pm both days) - which are Monday and Tuesday of spring break.**

Subject: Life Sciences

Life Sciences 1A

An Integrated Introduction to the Life Sciences: Chemistry, Molecular Biology, and Cell Biology (121189)

Daniel Kahne

Rachelle Gaudet

Monique Brewster

Rebecca LaCroix

Sien Verschave

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What are the fundamental features of living systems? What are the molecules imparting them and how do their chemical properties explain their biological roles? The answers form a basis for understanding the molecules of life, the cell, diseases, and medicines. In contrast with traditional presentations of relevant scientific disciplines in separate courses, we take an integrated approach, presenting chemistry, molecular biology, biochemistry, and cell biology framed within central problems such as the biology of viral infections.

Course Notes:

For more information about the assignment process, please see the course website in the fall. This course, in combination with Life Sciences 1b, constitutes an integrated introduction to the Life Sciences.

Class Notes:

The first lecture for all students will be held on Thursday, September 2nd at 1:30 pm. Weekly section consists of discussion (75min) and lab (75min) at an assigned time. Section assignments will be sent out by course staff during the week of September 6th; students will be asked to submit their preferred section times in advance.

An Integrated Introduction to the Life Sciences: Genetics, Genomics, and Evolution (121191)

Hopi Hoekstra

Andrew Berry

Monica Boselli

Emma Maria Ostapovich

Pardis Sabeti

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How are observable characteristics of organisms influenced by genetics? How do genomes change over time to produce the differences we see among species? This course takes an integrated approach, showing how genetics and evolution are intimately related, together explaining the patterns of genetic variation we see in nature, and how genomics can be used to analyze variation. In covering Mendelian genetics, quantitative genetics, and population genetics, this course will emphasize developments involving our own species.

Course Notes:

This course, in combination with Life Sciences 1a, constitutes an integrated introduction to the Life Sciences.

Integrated Science (159706)

Andrew Murray

Michael Desai

Emma Nagy

Cassandra Extavour

Benjamin de Bivort

2021 Fall (8 Credits) **Schedule:** MTWRF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

This is an intensive two-semester, double course that introduces the natural sciences as an integrated whole to students who have a very strong interest in science. Our goal is to teach students how to solve scientific problems by drawing methods and concepts from biology, chemistry, physics, and mathematics. The course uses examples from biology as an integrating theme, principles from physics and mathematics to reduce complex problems to simpler forms, and computer simulation to allow students to develop their intuition about the behavior of the dynamical systems that control the physical and biological universe. The course includes bootcamps to introduce students to biological experiments and the computer language, Python. Each semester will include a project lab, in which students will work in small teams to do original research on unsolved biological problems.

Experimental Research in the Life Sciences (119061)

Alain Viel

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series.

Course Notes:

Location of the first meeting will be announced on the course website. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience. The course may only be repeated once and the second enrollment must be approved by the instructor.

Recommended Prep:

Students interested in a neurobiology project will need MCB 80 or permission of the instructor. Please also note that students cannot take MCB 100 and LS 100 at the same time.

Requirements: **Prerequisite: LPS A OR LS 1a**

Music

Subject: Music

Music BHFA

Graduate Musicianship (112235)

Joseph Jakubowski

2021 Fall (2 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

This musicianship course encompasses multiple sections, which follow independent paths of study based on the general exam requirements of different degree programs. Students may expect to engage with music from across a wide range of historical and cultural contexts, covering topics such as functional harmony or post-tonality, while also branching into popular and non-Western music-theoretical systems and styles based on student research interests. In weekly assignments, students will learn how to apply analytical tools through close readings of music examples, and they will further aim to forge connections between theory and practice through sight-singing and ear-training activities. Students should plan to consult with the professor at the beginning of the semester to establish which areas of musicianship will be prioritized in their course of study. Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Notes:

Required of all graduate students. This requirement must be met before admission to the General Examination.

Music 1

Introduction to Western Music, from Bach to Beyoncé (114594)

Michael Uy

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 105

This course introduces you to a variety of Western art music repertories, and a range of ways to think, talk, and write about them. While we explore some of the great "classics" of the Western musical canon, including works by male composers such as Bach, Beethoven, and Stravinsky, we also discover the critical roles played by renowned female performers, patrons, and writers, as well as the significant impacts made by artists of color, such as Pulitzer-prize winner Kendrick Lamar, and Beyoncé. Ending in the present day, we investigate what music means in a global context, and a world increasingly shaped by new technologies and digital networks. During the semester, you will build a robust vocabulary to analyze music and talk about it. You will gain an understanding of social, political, and cultural histories of art music, and deepen your awareness of the role of music in your life. Finally, by the end, you'll possess a strong command over a substantial repertory. No prior knowledge of music history or musical notation is necessary. Students are graded on the improvements they make in engaging with the material. By the end of class, you'll be more prepared for a lifetime of informed and hopefully enjoyable music listening.

Music 4

Introduction to Composition (111353)

Yvette Jackson

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Open to students with little or no prior experience in composition. Explores ways of thinking about and organizing basic compositional elements such as melody, harmony, rhythm and instrumental color, as well as developing skills of score preparation and analytical listening. The primary focus of the course is a series of short compositional exercises, culminating in a somewhat longer final project.

Recommended Prep:

Some prior experience in music theory or permission of the instructor.

Music 10A

Harvard-Radcliffe Orchestra (110112)

Federico Cortese

2021 Fall (2 Credits) **Schedule:** M 0700 PM - 0900 PM
F 0300 PM - 0530 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This is an experiential learning course. The ensemble gives several concerts each year, sometimes joining with the chorus to perform large-scale works. Students are required to attend all rehearsals and certain special Saturday "retreats" announced in advance. Students are expected to practice the music outside the rehearsal time. Grades are based on attendance and participation.

Course Notes:

The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Recommended Prep:

Two contrasting movements or pieces chosen by candidate.

Music 14A

Harvard-Radcliffe Collegium Musicum (110114)

Andrew Clark

2021 Fall (2 Credits) **Schedule:** TR 0430 PM - 0630 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The Harvard-Radcliffe Collegium Musicum ("Collegium") performs a dynamic and innovative repertoire for mixed voices (SATB), ranging from classical masterpieces to new compositions by renowned, emerging, and student composers. Through creative projects, tours, and community engagement, the ensemble fosters a passionate community of student musicians. Collegium frequently partners with local arts organizations, as well as the other Harvard Choruses—the Harvard Glee Club, and the Radcliffe Choral Society.

This academic year marks Collegium's 50th anniversary as well as its return from a year of virtual connection and music-making. Throughout the COVID-19 pandemic and concomitant social unrest, Collegium has striven to reimagine choral practice while COVID-19 is dissipating. Collegium aspires to nurture our roots in early European music and the traditional Western music canon, while also learning from historically neglected traditions, including Black choral music and polyphonic styles from around the world.

In addition to being an accredited FAS course, Collegium is an independent 501(c)(3) organization, allowing members to gain valuable experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. Graduates frequently embark on related careers, and lifelong arts and music education advocacy.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Notes:

Course Notes: Audition required. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Harvard-Radcliffe Collegium Musicum (160655)

Andrew Clark

2022 Spring (2 Credits) **Schedule:** TR 0430 PM - 0630 PM

Instructor Permissions: None **Enrollment Cap:** 60

The Harvard-Radcliffe Collegium Musicum ("Collegium") performs a dynamic and innovative repertoire for mixed voices (SATB), ranging from classical masterpieces to new compositions by renowned, emerging, and student composers. Through creative projects, tours, and community engagement, the ensemble fosters a passionate community of student musicians. Collegium frequently partners with local arts organizations, as well as the other Harvard Choruses—the Harvard Glee Club, and the Radcliffe Choral Society.

This academic year marks Collegium's 50th anniversary as well as its return from a year of virtual

connection and music-making. Throughout the COVID-19 pandemic and concomitant social unrest, Collegium has striven to reimagine choral practice while COVID-19 is dissipating. Collegium aspires to nurture our roots in early European music and the traditional Western music canon, while also learning from historically neglected traditions, including Black choral music and polyphonic styles from around the world.

In addition to being an accredited FAS course, Collegium is an independent 501(c)(3) organization, allowing members to gain valuable experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. Harvard Glee Club (110115)

Andrew Clark

2021 Fall (2 Credits) **Schedule:** MWF 0445 PM - 0615 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Founded in 1858, the Harvard Glee Club (a tenor-bass ensemble) performs music written in the male chorus tradition. HGC collaborates with arts groups on campus and across the world through national and international tours. Through excellence in performance, student-management, education, community, tradition, and service, the Glee Club offers a unique musical experience for all members.

The Harvard Glee Club sustains its core virtues of glee, good humor, unity, and joy, and sings timeless and timely choral works from a variety of eras and cultures. Enrichment opportunities in individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire may be explored optionally as students desire. Glee Club members will also design and implement community engagement projects guided by Harvard's Mindich Program for Engaged Scholarship, including collaborations with the Ashmont Boy Choir in Dorchester.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Notes: **Audition required. The group is open to tenor and bass singers; we**

welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. Founded in 1899, the Radcliffe Choral Society is Harvard's oldest women's organization and one of the country's preeminent collegiate treble (SSAA) choruses.

RCS promotes excellence in women's choral music and celebrates the extraordinary community formed through its music-making. The ensemble fosters the appreciation and enjoyment of women's choral music through the commissioning of new works for women's voices and exploring music from Medieval chant and Renaissance polyphony to Romantic partsongs and folk music from around the globe.

As a student run and managed 501(c)(3) non-profit, singers are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. he course offers voluntary opportunities for singers to cultivate their musicianship in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire. Students may also participate in RCS's student-lead a cappella group, 'Cliffe Notes.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Notes:

Audition required. The group is open to soprano and alto singers; we welcome, value, and support students of all gender identities. Harvard Jazz Band (000018)

Yosvany Terry

2021 Fall (2 Credits) **Schedule:** MW 0715 PM - 0915 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The Harvard Jazz Band was created in 1971 by Director of Bands Tom Everett when he first arrived at the University. Passionate that exposure to this unique American art form be part of students' education, he created a rag-tag jazz band of primarily Harvard [marching] Band recruits. Since its inception, the Harvard Jazz band has served as the vehicle for students across disciplines to study and learn the jazz canon. Over the years, the Jazz Band has focused on the literature of Duke Ellington and complete retrospective concerts of the music of Charles Mingus, Charlie Parker, Gerry Mulligan, Lee Konitz, Benny Carter, Buck Clayton, Clark Terry, J. J. Johnson, and Julius Hemphill. Other literature has ranged from the classic arrangements of Count Basie and Fletcher Henderson to the modern jazz of Gil Evans and Charles Mingus, the contemporary ensemble improvisations of Barry Guy and Lester Bowie, and the jazz-rock of Michael Gibbs, Russ Gershon Harvard '81, Rufus Reid, George Cables and Cassandra Wilson. In 2015, Yosvany Terry was appointed Director of Jazz Bands. Under his direction, the Harvard Jazz Band continues this tradition of focusing on a program of study that provides students with a grounding in a wide range of iconic and new literature. Students are required to take both parts of the course within the same academic year. The curriculum builds throughout the year.

Course Notes:

The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Music 20

Opera (204418)

Carolyn Abbate

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 45

This lecture course will explore opera, a theatrical genre with a 400-year history, which is still a living and vibrant art. Opera has always been multimedia: Its marvelous singing, and its music, is shaped by drama, by characters, visual spectacles in staging, and theater architecture and machinery. Operatic performance, by engaging and even overwhelming multiple senses, challenges us to question intellectual truisms like critical detachment, sober analysis. Opera has always inspired intense passion in audiences. For some, it is the most beautiful and moving musical genre that has ever existed. For others, it can involve tedium and acoustic strangeness. Opera's special acoustic is defined by its singers, who are often called "gods" ("divas" and "divos"), with voices that are the most powerful unamplified human sonic force in existence. We will look at opera as it evolved over time from its origins in Italy into a global phenomenon, considering works by famous composers (including Mozart, Wagner, and Verdi) as well as obscure corners and byways. Students will be experiencing live opera performances (in class and on field trips), and opera as technological art in recordings, film, and other media. No previous music courses, no expertise in music theory or ability to read music, are required.

Course Notes:

No previous music courses, no expertise in music theory or ability to read music, are required. Please be advised that sections will be scheduled at the following times: Thursdays 3:00-4:00 pm and 4.30-5.30pm, Fridays 1:30-2.30 pm and 3:00 -4:00 pm

Music 51A

Theory Ia (125212)

Joseph Jakubowski

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

Harmony is just one of many powerful tools that can be enacted in order to understand, hear, perform, and create music. Alongside this parameter of music is rhythm, meter, phrase, voicing, orchestration, ensemble, text, counterpoint, and many other modes of engagement. The 51 sequence in the Music Department explores, through elements and parameters of music theory and musicianship, what makes music compelling to us as listeners, performers, and composers. Students will explore concepts of music theory through direct engagement with existing repertoire, unfolding the foundations of tonal music from melody and harmony to rhythm and meter and from expectation and implication to style and genre. The course returns to a few core questions throughout: How is tonal music constructed? How do its systems generate expectations, associations, and styles? What is the relationship of structure and meaning to theories and associations? How do aspects of pitch, rhythm, meter, timbre, etc., combine in a complete musical work, and how does music theory present a composite analysis of such a work? Why would we want to examine music in this way and what can it teach us about writing, performing, listening, and talking about music?

Course Notes:

For this course a placement exam is required, which is offered the

Friday (August 30) before classes begin. Please see the Canvas course website for M51a for more information. Music 51a is highly encouraged for concentrators, especially those who wish to take additional and more advanced theory courses in the department. Students interested in theory are encouraged to take the placement exam in their freshman year. Dual degree students are likewise encouraged to take Music 51a and Music 51b.

Recommended Prep:

Basic theory and ear-training skills, ability to read music, Music 2, or equivalent experience.

Music 51B

Theory Ib (125213)

Robert Morrison

2022 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

In Music 51b, students will build on knowledge and skills acquired in the fall semester (51a), gaining greater familiarity with advanced theoretical and analytical approaches, including in-depth studies of melodic line, harmonic color, musical time, and formal design. Western classical repertoire will be a central focus, but we will also consider the broader resonance of tonal techniques with popular and non-Western music styles. Weekly coursework will include a combination of aural skills, music analysis, and composition exercises, preparing students to create a short piece that will be performed live in concert at the end of the semester.

Course Notes:

You must either place directly into Music 51b via the August placement test or pass 51a in order to register for this course. If more than two semesters have passed since completing 51a, you will need permission from the Instructor to register for the course; this may include a quick refresher test. This course, when taken for a letter grade, meets the Distribution Requirement for Arts and Humanities.

Recommended Prep:

Music 51a or equivalent.

Thinking about Music (204975)

Alexander Rehding

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Performing music, listening to music, composing music, playing music – these are all familiar activities. By comparison, thinking about music is far less mainstream, sounds stuffy, and does not really seem to offer as much pleasure, as pastimes go. Music 97T is here to prove those assumptions wrong. We will explore music philosophy (which has grappled with sounds ranging from Ancient Greek modes to hip-hop), and which asks basic questions like, does music have an ethics, can experiencing music change how we see the world? Or, can music even be grasped in words? We will take an objective look at the way academic disciplines box music of every and all kinds in, but can also expand our horizons about music's workings and its social roles and realities. And we'll explore "vernacular thinking," which is the conviction that thinking about music may not take place in words, or take forms conventionally understood as philosophy or analysis, and may come from people outside our intellectual boxes.

(re)Facing (g)Odds: Black Improvisational Music and Dance (219671)

Esperanza Spalding

2022 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

(re)Facing (g)Odds: Black improvisational music, and dance

Through a north American jazz lens, this immersive research-performance course charts and explores the histories, connections, evolutions and fissures between Black improvisational-dance and live improvisational-music. Guided and informed by elder/expert teach-ins, archival research, audio and video transcription, dance-based ancestral recall, physical improv, performance devising, failure and iteration, members of this class will develop and curate performances and performance-environments where improvisational-dance, and live improvisational-music are reintegrated.

Part lecture series, part lab, and part performance-workshop, students in this class will learn and practice through a combination of:

listening-to/watching - conversations and live-explorations between Prof. Spalding and visiting scholars, practitioners, and elders in improvisational-dance and jazz idioms. (such as, but not limited to: Terri Lyne Carrington, Donald Eno Washington, Shamel Bell, Joh Camara, Intisar Abioto, Maurice Chestnut)

transcribing (sound and movement) - Each week, we will transcribe (within, and out-of class) rhythms, melodies, forms, gestures, steps, movements, group-performance-structures, and more, from archival audio and video recordings, as well as from in-class demonstrations and teachings.

integrating prompts, transcriptions and research into new, exploratory performance – Each 3rd week of class, students will prepare and offer an iteration of their own dance and live-music performance, guided by the prompts of our guest lecturers/elders/scholars/practitioners, and Prof. Spalding.

Students in this course will explore, iterate and learn alongside Prof. Spalding, as she researches and develops her own forthcoming dance/music project "Off Brand(g)Odds".

The final for this course will be a live concert/experience, created and performed by students, and featuring selected guest teachers/elders/guides.

Thank you for your interest.

Prof. Spalding, along with her colleagues and mentors, are very much looking forward to learning, sharing, and exploring with students and mentors through this course.

Those interested in this course must offer a 50-100 word story, essay, poem, manifesto, or equivalent, about why they are interested in this course. Additionally, students must send two (2) separate recordings or videos of their playing and/or dancing/movement. The recordings of students' playing and/or dancing/movement must be at least 2:00 minutes in length, and no longer than 4:

00 minutes in length.

(please ensure all materials are shared in a format that does not require a password, or permission to view/open).

These application materials must be received by (01/17/22)

Music 123R

Performing Bach Cantatas (127668)

Andrew Clark

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This seminar, co-taught by Andrew Clark and Edward Jones, presents an in-depth study of "Bach's most ambitious compositional project" (Christoph Wolff, 2021). Written over a span of just ten months, Johann Sebastian Bach's second cantata cycle manifests his consummate compositional mastery and ingenuity for the purpose of a radical exploration of the human psyche. Bach's musical ideas illuminate, penetrate, and sometimes contradict the theology of the time, and his searing insights into human nature make this music as pertinent to today's secular audiences as to his own Lutheran congregations.

Focusing on one cantata per week—corresponding to the timetable followed by Bach in the Fall of 1724—our journey will mirror the weekly routine of the composer and his students in Leipzig.

Through listening, reading, studying, and performance, students will gain a deeper understanding not only of Bach's musical universe and compositional acumen, but also of the practical demands of composing, copying, rehearsing, and performing such works on a weekly basis. In addition, students will learn from internationally renowned Bach scholars and practitioners visiting the course throughout the semester.

The course will culminate in a class performance of selected works from the chorale cantata cycle and a final written or creative project that further examines a topic drawn from our work.

Recommended Prep:

Ability to read music.

Intensive Conducting (126275)

Federico Cortese

2022 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The course offers some basic tools of conducting, such as score study, understanding of the musical text and style, gestural communication and clarity, how to approach the challenges of rehearsing. Each student will receive weekly podium time, and will also learn by observing while playing/singing in the ensemble. Repertoire from the symphonic and operatic canon will be chosen based on the individual needs and interests of the selected students, as well as on the availability of players/singers. A possible focus on Italian opera may be added if enough singers are enrolled. All interested students are encouraged to send an email to the course head or the TA before the beginning of the semester, and to attend the first class meeting. The target number of students is 6-10. No audition required. The selection of the applicants, if necessary, will be made based on experience and music background. Since a conducting class is largely an individual training course, no general syllabus will be provided at this time. A more detailed weekly plan, tailored to the students selected, will be posted after the first few meetings.

Topic: **Intensive Conducting**

Course Notes:

The course is open to advanced conductors, singers, and pianists.
See below the specific requirements.

For all participants – advanced musicianship.
For conductors – experience in conducting, some abilities in piano recommended (limited admission).
For singers – participants should be engaged in classical vocal studies and preferably have some experience with Italian operatic arias.
For pianists – advanced skills, some experience accompanying singers recommended.

Recommended Prep:

Yosvany Terry

2022 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Art Blakey's Jazz Messengers. **The Jazz Messengers were more than just a musical group; they were one of the greatest institutions in modern jazz, paving the way for several generations of musicians to develop new and original approaches to composition and improvisation. This course will introduce students to the Jazz Messengers and the concept of hard bop created by artists searching for new musical expressions, as a necessary evolutionary step after Be-Bop in modern Jazz. Students will be become familiar with the Jazz Messengers' repertoire, gaining insight and practical experience by first playing and memorizing their songs, and, afterwards, transcribing and studying the recordings of key compositions. Additionally, students will gain proficiency in performing compositions by some of the Messengers' most prolific alumnae, including pianist Horace Silver, saxophonist Wayne Shorter, pianist Cedar Walton, saxophonist Benny Golson, and trumpeter Freddie Hubbard. Each week the students will make presentations on the selected class readings which are intended to deppen their understanding of the music by providing the social context in which this music was developed. Finally, students will select, rehearse, and perform some of the Jazz Messenger compositions in an end-of-semester concert.**

***West African Musical Traditions: Lukumí*. With a focus on the Lukumí or Yoruba musical tradition as it arrived from the Old Yoruba Kingdom to Cuba and the Caribbean, this course is designed to familiarize students with the key structural elements in West African music and how to recognize them in modern jazz. Students will be given tools that will allow them to demonstrate these key concepts in both their improvisational work and assigned compositional exercises. Through coursework, students will deepen their knowledge, understanding and appreciation of important rhythms, melodic patterns, and phrase models, but the fundamental goal is to enable them to feel these elements before and apart from their interpretation of written music. This attention to improvisation will develop the student's creative abilities and introduce them to methods of music composition. Exercises that involve the clapping and singing of specific rhythmic patterns will help students approach sight-reading in an intuitive and responsive way, because strong ear-training and musicianship skills are key requirements for successful interpretations of and improvisations on the score. By examining instructional DVDs, historical and contemporary recordings, scholarly books and articles, and through the analysis and discussion of class material, the class will collectively develop a more thorough understanding of the principles guiding modern jazz musicians and composers. Students will be expected to contemplate and practice on their instruments the repertoire given to them between class meetings. The West African Ensemble's repertoire consists primarily of original compositions by Lionel Lueke (Benin), Avishai Cohen (Israel), Dafnis Prieto (Cuba), Edward Simons (Venezuela), and Yosvany Terry (Cuba). Other composers will be explored in accordance with the time limits and the direction of each class. Students will participate in a weekly section in addition to our Tuesday afternoon meetings.**

Music Theory & Interpretation (114188)

Suzannah Clark

2021 Fall (4 Credits) **Schedule:** R 0900 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This course focuses on how analyzing music through the lens of different music-theoretical models brings out different—and sometimes contradictory—interpretations. Students will be introduced to a range of advanced modern-day theoretical models. Armed with these theoretical perspectives, the emphasis of the course will be on exploring how our musical analyses influence the way we listen to performances and recordings, and how we might imagine the music ought to go if we were to perform it ourselves. Our repertoire will include songs by Schubert, Schumann, and Liszt and instrumental music by Haydn, Mozart, Schubert, Schumann, and Brahms. Some of these composers also read theory treatises written by their contemporaries, and thus we shall also consider how a historical appreciation of music theory can foster new ways of understanding, hearing, and performing some of the most famous musical works of the eighteenth and nineteenth centuries.

For students interested in performing, there will be opportunities to apply these concepts to pieces you already know, are learning in other music courses, or wish to get to know. Writing assignments will develop

techniques in music journalism, concert and recording reviews, program notes, and academic writing.

Recommended Prep:

Music 51 or equivalent.

Sound Studies (218277)

Robert Morrison

2021 Fall (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Sound Studies in Theory and Practice. **What can we learn by "thinking sonically" about the world? This course takes sound as a jumping point for making socially, artistically, and critically engaged research-creation projects with a variety of technologies. There will be a strong emphasis on practical skills, with short weekly assignments and a larger project covering methods for working across a wide range of genres, including field recording and soundscape composition, sound art, DJ sampling techniques, podcasting, and sonic ethnography. Extending from these activities, we will draw out historical and cultural perspectives on sound by reading authors working in the transdisciplinary zone of sound studies and auditory culture. Our goal will be a synthesis of theory and practice, where we learn to use the tools and techniques of audio production to pursue research interests in sound, culture, and technology.**

There are no prerequisites for this course and students from outside the music department are welcome to enroll. Classes will be held twice weekly—once in a two-hour lecture format to discuss readings and introduce new techniques needed for upcoming projects, then again in a one-hour TF-led section to apply skills and collectively workshop audio material. To facilitate the practice-based components of this course, students will be able to check-out professional recording equipment (mics, stands, recorders) and have access to software tools (Live, Logic, Final Cut Pro) from Harvard's Sound Lab. Students will also hear from special guests invited to give workshops at the Sound Lab, and in their projects, they will be encouraged to take advantage of other Harvard resources, such as the Hiphop Archive, ArtLab, and Sensory Ethnography Lab, which offer access to primary sources, exhibits, workshops, and more. Enrollment will be limited to twelve students to ensure access to available resources

Class Notes: **Section will be on Monday.**

Advanced Composition (119812)

Chaya Czernowin

2022 Spring (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

In this course, students will be engaged with different modalities of creation through composing, listening, and discussing. At times students will become storytellers in sound, at other times, they will try to create meaningful musical phrases by using one tone only. The class offers space for experimentation and provides ways of discoveries and out-of-the-box thinking as one works with sound and sonic ideas. Students will work within their aesthetic preferences while also being challenged to grow by going beyond their comfort zone and imagining new possibilities. The final project will be a class concert.

Songwrighter's Apothecary Lab (206929)

Esperanza Spalding

2022 Spring (4 Credits) **Schedule:** T 0715 PM - 0915 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Songwrighter's Apothecary Lab.

'If one of my friends is ill, I'd like to play a certain song and he will be cured' -John Coltrane

Half songwrighting workshop, and half guided-research practice, the Songwrighters' Apothecary Lab (SAL), offers a structure for the collaborative development of new compositions designed to offer enhanced therapeutic benefit to listeners. The course is rooted in a transdisciplinary station, orienting itself towards archives and literature that study healing strategies drawn from a diverse range of music-based creative and therapeutic practices.

SAL asks that students come prepared to (a) identify particular ailments that they seek to understand and address (b) delve into literature that studies music-based healing methodologies that would be applicable to the particular ailment, and (c) participate each week in the creation of songs and sonic structures that incorporate the research reviewed.

As members of the lab, students will alternate each week between the roles of researcher (surveying fields related to psychology, music, neuroscience, and health; identifying repeatable musical phenomena associated with specific therapeutic benefits), and songwrighter (where the aforementioned findings will be synthesized into new musical works, compositional/performance practice). Guest lecturers and senior scholars from the fields of neuroscience, music therapy and music, will regularly review our process and work, to offer feedback and guidance.

Class Notes:

***Please note:* all class meetings will be held at the Harvard ArtLab, 140 N. Harvard Street, Allston, MA.**

Students who are interested in petitioning to take this course should fill out the linked Google Form as soon as possible.

The Harvard New Music Ensemble (111399)

Claire Chase

2021 Fall (4 Credits) **Schedule:** W 0700 PM - 0900 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The Harvard New Music Ensemble (Music 180) is a new course for instrumentalists, vocalists and electronic musicians interested in the performance of contemporary ensemble music. The ensemble will be led by Professor Chase, and a wide range of guest artists in the fields of improvisation, composition, and "conduction" (conducted improvisation) will be invited to play with the ensemble over the course of the semester. This is a performance-based course for students who are committed to tackling challenging new works and learning new forms of collaboration, cooperation and multigenre music-making.

Existing repertoire of the 20th and 21st centuries will be rehearsed and performed alongside new works expressly written for the ensemble, including a special commission by the Harvard University Committee on the Arts (HUCA) by the New York-based artist Tariq Al-Sabir, which will be tailor-made for the members of our ensemble and workshopped with the composer. Other HNME Fall 2021 commissions include new ensemble works by Mari Kimura and Susie Ibarra. Regular concerts will be given by HNME throughout the

semester in both traditional and non-traditional venues, both online and offline.

The Harvard New Music Ensemble will be a member of New Music Equity Action, a national coalition of artists, ensembles and administrators who are committed to dismantling inequity in our field.

Course Notes:

If you have taken 172R or 185R, you are most welcome to apply to take this course, as the course content and repertoire are distinct from previous courses taught by Professor Chase.

All interested students must complete the pre-screening questionnaire no later than August 25. Questionnaire link on Canvas site.

This course will have its first class meeting on Wednesday, September 1.

Class Notes: **Please note that this class will have its first meeting on Wednesday, September 1 in spite of the "Monday" schedule.**

Music 189R

Chamber Music Performance (153042)

Jessica Bodner

Daniel Chong

Kee-Hyun Kim

Ken Hamao

2022 Spring (4 Credits) **Schedule:** T 0730 PM - 0930 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Through auditions, students will be divided into chamber music ensembles by the Parker Quartet, and have weekly coachings with members of the Parker Quartet and pianist Katherine Chi. Instrumentalists and vocalists are welcome to audition; however, duos or vocal-only ensembles are not allowed. Students will be expected to rehearse between each coaching and to participate in class meetings throughout the semester. There will be a final jury evaluation prior to the final public performances, to be held sometime during Reading Period--all students are required to be available. Students who do not meet the requirements in the Course Notes below may take the course for Pass/Fail credit. Please check audition dates and other mandatory meetings/classes on the Canvas Music 189R home page.

Course Notes:

Students who are currently in the NEC/Harvard dual program or have been a past winner of the Parker Quartet Guest Award do not need to audition for the Fall 2021 semester. However, ALL students must fill out a questionnaire and submit it through Music 189's Canvas page.

Any other students who have enrolled in the course in past school years are required to re-audition. Students intending to enroll in both Harvard-Radcliffe Orchestra and Music 189R must audition for each course separately. While students may request to be placed with certain peers, final group assignments will ultimately be at the discretion of the instructors. This course is offered for letter-grade credit only when students are involved in one or more of the following: a Concentrator in Music; enrollment in a Department of Music course concurrently or in a previous semester (other than 189R); a member of a faculty-led music ensemble in the same semester; a student of the NEC/Harvard dual program. Students who do not meet one of these requirements may take the course for Pass/Fail credit, which must be done by petition after the first week of class.

The Sacred Sounds of Black Folk: The Black Choral Tradition (118783)

Emmett Price

2022 Spring (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

"They that walked in darkness sang songs in the olden days – Sorrow Songs – for they were weary at heart."

- W.E.B. DuBois, *The Souls of Black Folk*

This course explores the brilliant resilience and demonstrative hope of the Black folk through an exploration of the Black Choral Tradition. From the Sorrow Songs of slavery (spirituals) to the Good News of Gospel Music, to the Conservatory Concert Stage and beyond, the sacred sounds of Black folk will be experienced through three interpretive lenses: the message, the messenger(s) and the approach used to

communicate. This semester's journey will borrow from the fields of musicology, ethnomusicology, black studies, literature, history and theology to engage in two areas of inquiry: what does sacred sound like? And, how do we learn to hear it? Through an assortment of weekly reading, listening and writing assignments students will experience what scholar, Samuel A. Floyd, Jr. coined, the power of Black Music and the call for equality and justice for all. Students do not have to be musically literate or performance-oriented to take this course. Students, should, however be courageous to accept the invitation to explore in an experiential manner, the sacred sounds of Black Folk.

"Serious study of African-American music requires getting to know the music, which means listening to it and, if possible, performing it. One should sing the slave songs, the hymns, the "tunes" of jazz pieces, the themes of classical compositions."

- Eileen Southern, *The Music of Black Americans: A History*

Music and Cognition. **This seminar provides a broad introduction to topics in music psychology and cognition, a field that seeks answers to fundamental questions about music, mind, and culture. How does music make us feel things, remember experiences, and empathize with others? Why do we want to move to music—to dance, tap feet, and bob heads? How do our minds make sense of the complexity of sounds as coherent music? What roles do biology and culture play in music psychology? What goes on in the embodied mind when we perform, improvise, compose, listen, or dance?**

We will survey four main areas of inquiry: pitch and timbre perception; musical time and movement; meaning, emotion, and interpretation; and creative practices (performance, improvisation, composition, imagination). Crucially, we'll also explore challenges to mainstream music cognition, including how to address cultural differences, animal musical abilities, and the question of what music is and what it can do.

Students will gain familiarity with the main questions and arguments of the field. Beyond theory, we will explore how ourselves and others can apply psychology and cognition to performance, composition, and appreciation of music in our lives.

A background in music performance, music theory, musicology—and/or psychology and cognition—are advantageous but not required. Likewise, fluency in music notation is not required but won't hurt. Experience with an instrument, singing, or dancing will be helpful: individual interests will inform our discussions and activities as the course goes on.

Course Notes:

Undergraduates and graduate students from all fields are welcome.

19th and 20th Century Music: Seminar (118450)

Carol Oja

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0200 PM

Instructor Permissions: Department **Enrollment Cap:** n/a

This reading-intensive seminar is intended to give you a fundamental knowledge of contemporary intellectual currents engaged with the study of musical practices in Latin America. We will examine major areas that have informed scholarship on Latin American music, including queer studies, performance studies, decolonization/decoloniality project, cultural diplomacy, critical race theory, disability studies, actor-network theory, and Latinx studies. The goal of this course is to gain a better understanding of the web of disciplinary discourses surrounding Latin American music scholarship both in their socio-political context and in dialogue with contemporary research in musicology and the humanities at large.

Upon successful completion of this class students will be able to:

- **Demonstrate an awareness of the diversity and complexity of musical practices across Latin America**
- **Develop the ability to recognize and differentiate contemporary intellectual trends in Latin American music studies and their relation to broader questions in the humanities**
- **Develop the ability to recognize and differentiate musical genres from the region**
- **Understand the place of music and dance as expressive culture and its relation to other aspects of social life within the Latin American context**

Current Issues in Music Theory (124044)

Alexander Rehding

2021 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

What does Music Theory mean in the 21st century? What are the current debates? How might the field change in the near future? We will examine recent and contemporary discussions in (and about) the field, and we will attempt to trace some of the recent history of the field in order to better understand the present state of affairs.

The stage for our discussions is set by the controversial 2019 SMT plenary lecture "Reframing Music Theory," which drew attention to the racial, ethnic, gender, and biopolitical power imbalances in the field. We will approach these power structures from the postcolonial perspective of Empire – examining hegemonic traditions, alternative trends and counter-movements that may lead into a more diverse and inclusive future.

Topics in Music Theory (116618)

Robert Morrison

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Popular Music Analysis. **In this seminar, we will engage with a variety of analytical approaches to popular music, covering traditional parameters like form, harmony, and rhythm, as well as a wider gamut of theoretical topics associated with contemporary sonic practices, such as timbre, groove, flow, affect, hermeneutics, intermediality, and studio production practices. Weekly assignments will provide opportunities to analyze music from a diverse cross-section of styles and genres, including rock, hip hop, and electronica, to name a few. Methods for transcribing sound and interpreting spectrograms will be used as a practical way of knowing and communicating about non-notated music; likewise, composition, performance, and listening activities will be integrated as regular learning modalities. But even as we employ these analytical tools, we will undertake a reflexive critique of the very same methods and approaches, revisiting discourse over the last four decades on the relevance of analysis to popular music, the politics of transcription, and the micro-politics of listening. Special attention will be given to how attitudes toward race, gender, class, and geography have inflected not only the performance, production, and consumption of popular music, but also its analytical treatment in academic contexts. Together, we will consider how recent discourse around "reframing music theory" impacts the subfield of popular music analysis, mapping strategies to help guide future research and pedagogical development.**

Course Notes:

Open to undergraduates with permission of instructor.

Theory and Analysis of Music in Visual Multimedia (117503)

Frank Lehman

2022 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Theory and Analysis of Music in Visual Multimedia. **Can music structure our experience of a movie? What is more useful for bridging together multiple films across a franchise: recurrent themes or a consistent compositional style? How does a video game's soundtrack contribute to—or frustrate—a player's sense of agency? In this class, we explore a variety of analytical methods for understanding screen music, both on its own terms and as a component within a larger multimedia text. Emphasis is placed on recent film, television, and video game scoring practices. Analytical approaches drawn from traditional music theory are explored (tonal structure and design, theme, topic) as well as more recent perspectives (harmonic transformation, timbre, gesture, affect and embodiment). Throughout, students will develop their own methodologies to grapple with the unique qualities and demands of screen music. Special importance placed on developing musical transcription skills. Specific repertoire ranges extensively, and will be partially determined by student interest; expected case-studies include both high and low sci-fi (Star Wars, The Matrix, Annihilation, Foundation) and an assortment of AAA and independent/art video games. Substantial readings from recent texts in film music theory and ludomusicology.**

Colloquium on Teaching Pedagogy (125863)

Richard Wolf

2021 Fall (2 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course serves as an introduction to teaching at Harvard and beyond. It constitutes a forum for studying learning, designing instruction, practicing teaching, and communicating about successes and

challenges in your classroom. This course is exclusively for third-year graduate students in music

Course Notes:

Required of all third year music department graduate students. This course must be taken Sat/Unsat. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Additional Course Attributes:

Composing Electronic Music with Max/MSP. **We will explore creative compositional approaches to Max/MSP. Multichannel sound treatment and ambisonics spatialization, instrumental score composition with the bach library, and rehearsal/concert patch organization with parameter handling and storage. Prior creative use of Max/MSP is highly encouraged as this course will not cover the language basics. Each student will create a personal project with the possibility of performance at the Hydra concert in early December.**

Course Notes:

Contact instructor before shopping week. Section meets on Thursdays at 3:00pm.

Recommended Prep:

At least one year of practice with Max MSP (medium proficiency).

Listening, Creativity, and Imagination (218677)

Yvette Jackson

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar joins theories from sound studies, music composition, sonic arts, and psychoacoustics by engaging multimodal listening practices as a means of discovery. The art of listening will be exemplified and explored through the writing and creative works of practitioners from various disciplines such as Hildegard Westerkamp, Pauline Oliveros, Rick Altman, Neil Verma, Karen Collins, and Dylan Robinson. Analysis of audio fiction, film soundtracks, interactive and audio/video game music, installation, performance, and ritual will guide us in (re)contextualizing the affective and narrative impacts of our objects of study. Students will focus on listening, interpreting, writing, and creating in order to synthesize and build on course concepts.

Class Notes:

This is a graduate seminar. Undergraduates may enroll with consent from the instructor. Students from outside of music are encouraged to join.

Music and Philanthropy. **Philanthropy, or the desire to promote human welfare through donations of money, time, labor, and influence, is a central means of assisting art that might not otherwise exist if left to the capitalist marketplace. The roots of philanthropy come from some measure of charity, generosity, and social conscience, just as its existence is rooted in ever increasing global wealth and power inequality. With the exercise of any source of economic, social, or cultural capital, an examination of power is necessary. In this course, we will understand what role philanthropy has played in supporting music in the United States and Western Europe through historical and present-day case studies, including the philanthropy of individual patrons like Isabella Stewart Gardner, non-profit organizations, and large institutions like the Ford and Rockefeller Foundations. Guest visitors to the class will deepen our awareness of how decisions are made on personal and practical levels. We will engage in historical, theoretical, and moral discussions concerning philanthropy and its role in civil society, in order to gain a better understanding of how money speaks in music, as well as learn how to think cri*tically about the impact and efficacy of philanthropic endeavors.***

Course Notes:

Open to undergraduates with permission of instructor.

Music, Philosophy, and Efficacy (219673)

Carolyn Abbate

2022 Spring (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 8

This seminar takes on issues that are imperative for music and sound studies here and now. Topics we deal with include: unknowability, historicity, posthumanism, ineffability; we will scrutinize hopeful cultural reveries about musical praxis, consider music-making as vernacular philosophy, and ask questions about music's (and sound's) efficacy. Participants in the seminar are encouraged to become skeptical about claims for music's significance and power(s), but also to develop a sense for new possibilities and paths forward in our field. Enrollment by instructor permission.

Class Notes: **Enrollment by instructor permission.**

Near Eastern Languages and Civilizations

Subject: Yiddish

Yiddish AA

Elementary Yiddish I (114058)

Sara Feldman

2021 Fall (4 Credits) **Schedule:** MTWR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Introduction to Yiddish language, literature, and culture. In the course of the year, students will acquire a thorough grounding in Yiddish grammar and will develop strong foundational reading, writing, speaking, and comprehension skills. The course will introduce students to the 1000-year history of Yiddish culture in Eastern Europe, the United States, and around the world. Students will learn about the past and present of this culture through exposure to Yiddish literature, music, theater, film, radio, oral history, and the Yiddish internet—an introduction to the dynamic world of Yiddish culture and scholarship that exists today. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes:

For students with little or no knowledge of Yiddish. This course meets for 5 hours per week during the window listed. Yiddish AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Recommended Prep:

No prerequisites; knowledge of Yiddish not assumed.

Critical Readings in Egyptology (218196)

Peter Manuelian

2021 Fall (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

A weekly seminar for undergraduates and graduates in which we read and discuss a selection of important "classic" and key new books (and a few selected articles) relevant to the field of Egyptology (including Egyptomania and more recent "decolonizing" literature). The seminar targets students in Egyptology, but those in Assyriology, Classics, Divinity, History, Hebrew Bible, Religion, and other fields might also find it interesting and relevant. We will rehearse skills in critical reading, writing scholarly reviews, debating, and will engage with relevant literature, largely selected by students themselves, that we would not otherwise find the time to read.

The Modern Middle East, Real and Imagined: An Introduction (107349)

Malika Zeghal

2021 Fall (4 Credits) **Schedule:** M 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An introduction to Middle Eastern Studies focusing on the modern period (19th and 20th centuries). Lectures will be broadly sequenced according to historical chronology but will be thematically organized. They will provide some historical context for each topic examined, as well as present specific examples through primary sources, visual sources, and numerical data when relevant. This course is designed to give students an overall good grasp of the history of the modern Middle East and of some of the major themes in modern Middle Eastern Studies. Students will critically engage with some of the most important topics that resonate in that area of the world. We will cover topics such as reformism, economic development, colonialism and nationalism, authoritarianism and democratization, sectarianism, culture, gender, literature and the arts, as well as the role of religion in politics. Most of these topics, in one way or another, will speak to the construction of nation-states in the Middle East and to the challenges they have been confronting. This is not a survey course. In particular, it will not be exhaustive in its coverage of the region in space or time, and in its coverage of topics. Students in search of a specific topic, country, or period are strongly encouraged to take a look at the syllabus prior to enrolling to make sure their specific interests will be covered. Assigned readings will consist of primary and secondary sources. Students will be exposed to first-hand accounts by protagonists in the history of the Middle East (primary sources) as well as to the diversity of approaches that the scholarly literature (secondary sources) has taken across disciplines, e.g. anthropological studies, quantitative analysis, philology and textual studies. The larger aim of the course is to develop students' critical thinking in dealing with the history, cultures, politics, and political economies of the contemporary Middle East.

Required for all NELC concentrators in The Modern Middle East. This course is primarily for

undergraduates. Graduate students must request instructor's permission before enrolling. There are no prerequisites for this course.

Course Notes:

A required course for undergraduates pursuing a secondary field in Modern Middle Eastern Studies.

Modern Middle East 121

Revolutions in the Modern History of the Middle East (219925)

Samir Seikaly

2022 Spring (4 Credits) **Schedule:** WF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The modern History of the Middle East is dotted with political revolutions, starting with the great Arab Revolt of 1916, and intermittently going on until the Arab Spring of 2011 – and, possibly beyond that. The course will begin with an overview of the theoretical conceptualism of revolution, in particular as it relates to the Middle East. Following that, a comparative look at a series of revolutionary outbreaks during the 1910s to 1950s will be undertaken and will be compared and contrasted with the recent uprisings associated with the Arab Spring. Students will read both secondary studies and primary sources in translation.

Middle Eastern Lives: Narratives of the Self in Middle Eastern Studies.

The seminar aims to study the lives of individuals who shaped the modern Middle East. Emphasis will be placed of major political and cultural figures who played a key role in the making of the nation-state and national identity formation. Figures include: Herzl, Ataturk, Muhammad Abdu, Nasser, N. Sadawi, and S. Ebadi, etc. Course will include discussion on self-narrative genres such as [auto]biographies, memoirs, and diaries/journals.

Course Notes:

Required for students pursuing the AM in Middle Eastern Studies. Open to graduate students and upper-level undergraduates concentrating in the Modern Middle East.

Enrollment: limited to 15

The Arab Nadha (219924)

Samir Seikaly

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar examines the genesis and evolution, in the course of the nineteenth century and beyond, of a distinct Arab discourse scripted, at the time of its inception and thereafter, as "al-Nahda". As such it will be subjected to critical autopsy with a view to identifying its contested origins, native or alien, its content, authentic or derived, as well as its substantive impact, real or presumed. This exercise will involve student reference to the two, somewhat dated but seminal texts by Albert Hourani (Arabic Thought in the Liberal Age, 1798-1939) and Hisham Sharabi (Arab Intellectuals and the West, 1875-1914) but greater reliance will be attributed to more recent collections of Nahda literature, including those by Stephen Sheehi, Peter Hill and Jens Hanssen. Translated Nahda books or anthologies will also figure in reading assignments.

Recommended Prep:

3 years of Arabic or instructor's permission

Islamic Civilizations 111

Transforming Tradition: Islamic Education in the Modern Muslim World (219927)

Mary Elston

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

What counts as Islamic knowledge, how should it be transmitted, and who gets to decide? Muslim communities have grappled with these questions since the early days of Islam, yet in the 19th and 20th centuries such questions took on particular significance in the context of European colonialism, the emergence of Islamic reform movements, and the rise of mass education. In this course, we will explore how Muslims have approached these questions through an investigation of the history and diverse practices, concepts, and institutions that have constituted 'Islamic education' in the Muslim world. The primary focus of the course will be on the modern period (19th and 20th centuries), but we will begin with an examination of the development and evolution of madrasa education in the medieval and early modern periods. Through secondary scholarship and primary sources, we will investigate the historical processes through which institutions of religious education became the object of colonial aspirations, state-sponsored reforms, and Islamist critiques in diverse locales such as Egypt, India, Pakistan, Iran, Yemen, and Turkey. Questions that we will consider include: What is a tradition and how does it change? How did the place of Muslim religious scholars transform in the modern period? How did debates about modernity, authenticity, and religious authority shape Islamic educational institutions in the 19th and 20th centuries?

Islamic Civilizations 145A

Introduction to Islamic Philosophy and Theology: The Classical and Medieval period (121928)

Khaled El-Rouayheb

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0515 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Islamic Civilizations 145A is an introduction to some of the key problems and figures in medieval Islamic theology and philosophy. The main topics covered will be: The rise of theological controversies in early Islam and the crystallization of theological factions; the rise of an Arabic tradition of Neo-Platonized Aristotelianism with such figures as Farabi (d. 950) and Avicenna (d.1037); the confrontation between the theological and Aristotelian traditions in such works as *The Incoherence of the Philosophers* by the theologian al-Ghazali (d.1111) and the response by Averroes (d.1198); the powerful influence of philosophy on later Islamic theology; the anti-Aristotelian, Platonist philosophy of "Illumination" of Suhrawardi (d. 1191), and the mystical monism of Ibn Arabi (d.1240) and his followers.

Any student is welcome who would like to know more about the vigorous and long-lived Islamic traditions of theology and philosophy. No prior knowledge of Islam is presupposed, and all readings will be in English. Assigned readings, additional handouts and announcements for the course will be available through the course web site.

Course Notes:

Offered alternate years with Islamic Civilizations 145b. Though the two

courses can be taken in either order, 145a covers the 8th-15th centuries and 145b covers the 19th-20th centuries. Offered jointly with the Divinity School as 3602a.

Islamic Civilizations 170

Islam, Modernity and Politics (109243)

Ousmane Oumar Kane

2021 Fall (4 Credits) **Schedule:** F 0900 AM - 1059 AM

Instructor Permissions: Instructor **Enrollment Cap:** 18

The aim of this seminar is to study the evolution of Islamic thought and political practices in Muslim societies from the 19th to the early 21st centuries. Attention will be devoted to the patterns of interaction between the Muslim World and the West because it is our assumption that these patterns contribute to influence ideological formations and modes of religious/political mobilizations in the Muslim World. By the end of the eighteenth century, much of the Muslim World was in "decline" whereas European imperial powers, mainly France and Great Britain, were on the rise. The course will explore the response of Muslim societies and intellectuals to the rise of European prominence. The major 19th century reformist movements that appeared in the Muslim World will be discussed, ranging from movements advocating mild reform to those rejecting all influence of "Western civilization" and advocating a return to the Tradition of Muhammad. In the twentieth century, virtually all the Muslim World came under European colonial domination. During colonial rule and after, the Muslim world experienced major transformations which affected the nature and administration of law, politics and society. It is in this context, that the new Islamic revival that some have called "Islamism" was articulated as an alternative to Westernization. The course will address the rise of contemporary "Islamism," as an alternative to Western domination and modernization/Westernization. The major theorists of political Islam as well as the different trajectories of "Islamism" in diverse Muslim societies will be covered. The impact of political Islam in the West will also be addressed. The final part of the course will assess the trajectories of political Islam and address the ongoing debates on post-Islamism, secularism and modernity.

Course Notes:

Offered jointly with the Divinity School as 3368.

Critical Perspectives on the Dynamics and Development of Islam in Africa (205305)

Ousmane Oumar Kane

2022 Spring (4 Credits) **Schedule:** F 1100 AM - 0100 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An estimated 450 to 500 million Muslims live in Africa—close to a third of the global Muslim population. The overwhelming majority of them live in the northern half of the continent, above the equator. The spread of Islam increased the contact between the peoples of North Africa, the Sahara, and parts of sub-Saharan Africa. The course is designed to provide an understanding of the spread of Islam and the formation and transformation of Muslim societies in Africa. It is organized in two parts. The first part of the course will focus on the history of Islamization of Africa, and topics will include the ways in which Islam came to Africa, the relationships of Islam to trade, the growth of literacy in Arabic and Ajami, the rise of clerical classes and their contribution to State formation in the pre-colonial period. The second part of the course will feature guest lecturers who will present cutting edge research on the transformation of Islam in postcolonial Africa.

Course Notes:

Offered jointly with the Divinity School as 3357.

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores traditions of devotional poetry in South Asia through the lens of three genres: the qawwali, concerts of mystical poetry; sufiana kalam, Sufi romantic epics and folk poems; and the ginans, songs of wisdom. In addition to playing a central role in traditions of worship, these genres, through the poetic knowledge they convey, have shaped the worldviews and the personal and communal norms of millions in South Asia and beyond. Frequently subverting constructions of power, knowledge and authority, they have fostered communal harmony by promoting common frameworks for moral, cultural and aesthetic understandings. Since these genres share language, music, symbols and styles of worship with other Indic traditions, we will also examine their relationships with the so-called sant and bhakti traditions. Special attention will be given to the impact of contemporary ideologies of nationalism, globalization and the revolution in media technology on the form and function of these genres and their relationship with contemporary communities of faith.

Course Notes:

Offered jointly with the Divinity School as 3375

Historical Background to the Contemporary Middle East: Religion, Literature and Politics (110914)

Gojko Barjamovic

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

What defines the Middle East? What long-term historical and cultural developments can we trace in the region? How do these affect contemporary global order and policy? This team-taught course in the NELCdepartment will address these three fundamental questions of great present relevance by introducing students to the ancient and modern peoples, languages, cultures, and societies of Western Asia and North Africa. The study of this diverse region is uniquely aided by a deep-time perspective afforded by thousands of years of vibrant art, writing and cultural artefacts. Relying on the classic expertise integral to area studies, the course brings together faculty from a variety of disciplines – from history and archaeology to literature and philology, and from sociology and economy to the political sciences – in a common endeavour to explore the rich cultural complex of the region through four key topics: history, religion, literature and politics.

Course Notes:

Formerly NEC 97r, this course satisfies the NELC Sophomore Tutorial requirements.

The History of the Book: Using Harvard's Greatest Treasures to Study the Material Text (219718)

David Stern

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

You have been reading books since first grade if not earlier, but how much do you actually know about the physical object you've been reading—*the book, the material artifact*? Drawing on a great deal of recent scholarship and the incredible treasures in Houghton Library's Special Collections, this course will study the history of the book in Western culture from its earliest stages in cuneiform tablets through ancient scrolls, hand-written medieval manuscripts of all types, early and late printed books down through children's books of the nineteenth and twentieth centuries, and modernist artists' books of the twentieth and twenty-first centuries including recent ones utilizing digital technology. The heart of the course will be weekly assignments in which students in groups of three each will be asked to intensively examine books in Houghton's reading room and then report on them in the weekly seminar. Books studied in class will include papyrus fragments of Homer and the Old and New Testaments; Hebrew scrolls; early Qur'an leafs; Greek and Latin codices; Books of Hours and many other illuminated and decorated medieval manuscripts; the Gutenberg Bible; Copernicus, Galileo's and Vesalius' scientific works; censored books; the First Folio edition of Shakespeare; Alice in Wonderland; and Mallarmé's *Un coup de dés*. For the final paper, each student will choose a book from Houghton's collection and write a biographical study of its "life."

All readings for the course are on the Modules section of the Canvas site, which is organized by the weekly sessions. Each module includes an Assignment sheet with the specific readings and books to be studied for the session.

For a full description of each session of the course, see the Course Plan posted under the first module, or click here.

No previous background in book history is required for this course.

· Note: Because of space requirements in Houghton, the class has to be capped at fifteen students. The course is primarily intended for undergraduates but depending on enrollment, graduate students may be admitted if there is room; if they are interested, they should contact the instructor. All students wishing to take the course should write a short (one paragraph) statement explaining their interest and send it to the instructor BEFORE JANUARY 19, 2022 at dstern@fas.harvard.edu

Additional information will be shown if available from the Registrar.

NELC Doctoral Colloquium: Research, Resources and Pedagogy (203473)

Justine Landau

2021 Fall (2 Credits) **Schedule:** T 0600 PM - 0715 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This practical colloquium addresses major issues of research and teaching competence. Designed to introduce G-1 students to the Ph.D. requirements, to methodological issues and examples of ongoing scholarship in NELC, it further offers opportunity for reflection on the art of teaching (leading discussion sections, designing syllabi, giving lectures, etc.). Questions covered will include: How to choose coursework? How to prepare for qualifying and general exams? What are the challenges of language training? How does one prepare and write a prospectus? How to use the library resources most efficiently? What type of investment does recourse to digital and quantitative methodology require? How best to prepare for professional life after the Ph.D., both inside and outside of academia? In addition, NELC faculty will informally present their respective fields (main issues and methods), in broad strokes through their current research, and advanced Ph.D. students will present their prospectus for discussion and feedback before submitting it to the faculty.

Shady Nasser

2022 Spring (2 Credits) **Schedule:** T 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course consists of a series of workshops in which NELC doctoral students in their G3-year will develop a strong foundation of skills to prepare them for their first teaching at Harvard and to enhance the effectiveness of their teaching in the long term. Each session will inculcate best practices for major Teaching Fellow roles and introduce key topics in pedagogy, such as teaching languages (ancient and modern), communicating with students, and grading and providing feedback on student work. In addition, a few sessions throughout the semester will be devoted to workshopping the dissertation prospectuses of NELC PhD students prior to their presentations to the faculty; these sessions afford a chance to share feedback and to learn about the research of other NELC doctoral students.

Subject: Modern Hebrew

Modern Hebrew BA

Elementary Modern Hebrew I (114218)

Irit Aharony

2021 Fall (4 Credits) **Schedule:** MTWRF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The course introduces students to the phonology and script as well as the fundamentals of morphology and syntax of Modern Hebrew. Emphasis is placed on developing reading, speaking, comprehension and writing skills, while introducing students to various aspects of contemporary Israeli society and culture. This is an indivisible course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes:

Offered jointly with the Divinity School as 4015A. Not open to auditors. Cannot be taken pass/fail. Modern Hebrew BA/BB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. In specific cases the instructor will consider approval of enrollment in MOD-HEB BB and MOD-HEB 120A as fulfillment of the one-year language requirement, depending on the student's proficiency level.

Additional Course Attributes:

Attribute	Value(s)

This course is a survey of Persian literature in Persian with a focus on the 19th and the 20th centuries. We begin with methods of reading literary Persian texts and continue to classical poetry, folk literature, travelogues, letters, political satire, drama, fiction, and modern poetry. There is occasional incorporation of film depending on interest. Knowledge of Persian is required. Students must have successfully completed Intermediate Persian BB at Harvard or passed the placement test for the equivalent. Instructor's permission is required if former Persian studies are outside Harvard.

Course Notes:

Formerly Persian 131r and Persian 132r.

Recommended Prep:

Persian BA/BB sequence, or equivalent, or permission of the instructor.

Introduction to Pre-Islamic Iranian Literature (218883)

Barakatullo Ashurov

2021 Fall (4 Credits) **Schedule:** F 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This survey course is designed to introduce students to the literatures of Pre-Islamic Iran represented by a vast array of literary works survived in different forms and mediums. The geographical context of the course is set within the historical boundaries of the Persian Empire and its chronology covers the period spanning from the rise of the Achaemenids to the Arab conquest of the Iranian plateau and the fall of the Sassanid dynasty (ca. 500 BCE and 651 CE).

In addition, the course will introduce and discuss the continuity of literary forms, genres and traditions in the early centuries of the Islamic Era when New Persian literatures re-introduced and built upon the themes of the former.

The course is built on a combination of historical-cultural and philological methods. Every week, in addition to the literature surveyed, we will also cover the historical and cultural contexts in which these literatures emerged.

Literary and Visual Narrative in the Persian Epic Tradition (107672)

Justine Landau

2021 Fall (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Foundational to Iranian cultural identity and a masterpiece of world literature, the *Shahnameh* of Abolqasem Ferdowsi (*ca.* 940 – 1019) can be said to epitomize the essential features of Persian epic, much like Homer's *Iliad* and *Odyssey* for Greek. With its unique combination of mythical, heroic and historical components, the Persian *Book of Kings* is also one of the most widely illustrated narratives in the Islamicate arts of the book. Alongside the reading of the *Shahname* in Dick Davis' authoritative English translation, students will become acquainted with the great Persian epic as a living tradition of telling and retelling in written, visual and oral form. Topics include the elements of marvel, romance and ethics characteristic of the epic genre, and the relationship between the text of the poem and its manuscript illustrations.

Recommended Prep:

Knowledge of Persian not required. Lectures and readings will be in English, and a separate section will be arranged for students with adequate reading knowledge of Persian.

Himmet Taskomur

2022 Spring (4 Credits) **Schedule:** F 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces Ottoman Paleography and Diplomatics in order to give students the tools and skills to read, understand, and interpret varieties of archival materials, legal documents, as well as chancery writings (tarassul) produced by the Ottoman bureaucracy, both in Ottoman Turkish and Arabic. Throughout the course, students will hone their reading skills of six scripts and their codified usages and gain a firm understanding of the Ottoman bureaucracy and its paper trails. The course will address all aspects of document production focusing on their linguistics features, materiality, aesthetics, and employment of rhetorical strategies; as well as their intra-bureaucratic usage and public consumption. While the primary focus of the course is on archival materials in Ottoman Turkish, the course also addresses the needs of

students who work on Arabic documents produced by the regional bureaucracies of the Ottoman Empire.

Recommended Prep:

Turkish 150 or permission of the instructor.

Themes in Arabic Literature (122191)

Shady Nasser

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will introduce students to the major writers, canonical works, and important literary movements of Arabic Literature from late antiquity up to the modern period. The course will be structured thematically with special focus on the historical context and cultural tradition within which literary works fit and resonated. We will consider the development of various literary genres over time (poetry and *qa□īda* form, narratives, fiction, Belles-lettres, *maqāma*, shadow plays and Drama, etc.) as well as the most important recurring themes in the literature (travel, wine, asceticism, erotica, heroism, conservatism, innovation, nationalism, etc.). Selected works of literature will be read in translation, but students with Arabic may work with the original texts in a separate section. Texts will often be discussed vis-à-vis parallel themes in other works of literature whenever relevant (e.g. The Qur'anic and Biblical Joseph, Ma□arrī's *Epistle of Forgiveness* and Dante's *Divine Comedy*, Ibn Ba□□ū□a and Marco Polo's travelogues, etc.) with special attention to the influence of Western Literature on Modern Arabic poetry and prose.

The course is open to both undergraduates and graduate students; there may be extra assignments for graduate students.

Subject: Ancient Near East

Ancient Near East 106

Ancient Mesopotamian Literature: 2000 Years of Early Storytelling (211195)

Laura Hawkins

2022 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will present an overview of literature from ancient Mesopotamia, the world's earliest civilization and the birthplace of the first writing system. We will be exploring themes of creation and origins, myths and epics, death and the afterlife, religion, lamentation, humor, and more, as a way to understand some of the fundamental aspects of Mesopotamian society. Comparative texts from other regions or time periods will be brought in to add richness and depth to our discussions. Class sessions are structured heavily around weekly readings and discussions. All texts will be read in translation so no knowledge of Akkadian or Sumerian is required.

Introduction to the Hebrew Bible/Old Testament 2: Latter Prophets and Writings (126065)

Andrew Teeter

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

A critical introduction to the literature and theology of the Hebrew Bible, considered in light of the historical contexts of its formation and the interpretive contexts of its reception within Judaism and Christianity. The course, the second part of a divisible, year-long sequence, will focus on the Latter Prophets and the Writings.

Course Notes:

Offered jointly with the Divinity School as HDS 1103.

Ancient Near East 128

Ancient Egypt and the Hebrew Bible/Old Testament (109893)

Bernd Schipper

2022 Spring (4 Credits) **Schedule:** T 1200 PM - 0159 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The quest for the cultural influence of Pharaonic Egypt on the Hebrew Bible is as old as scholarly interest in the Bible itself. Starting with ancient historians such as Herodotus or Diodorus, and extending from the Renaissance era up to the present, scholars have been searching for traces of Egypt in the literature of the Hebrew Bible. This lecture course begins with a brief overview of cultural contacts, investigating the connections between various pieces of literature such as Psalm 104 and the Egyptian Hymn to Aten, Proverbs 22-24 and the Instruction of Amenemope, as well as less well-known literature like Psalm 20 and an Aramaic-Demotic Papyri from Ptolemaic Egypt, or the 'Apocalyptic' Prophecy of the Potter and the Oracle on Egypt in Isaiah 19.

Course Notes:

Offered jointly with the Divinity School as 1122.

Food and Identity in Ancient Israel (218547)

Julia Rhyder

2022 Spring (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Food and eating profoundly shaped social, religious, economic, and cultural life in antiquity. This course will explore how dietary practices established social bonds and ethnic boundaries in ancient Israel, as well as the importance of food in mediating the Israelites' relationships with God, animals, and the environment. The course will be structured around key themes that concern patterns of eating in ancient Israel and the Near East, including food prohibitions, sacrifice, royal banquets, commensality, and trade. We will be particularly concerned with identifying key historical developments that affected Israelite culinary practice

and ideas about food, with a view to understanding how food became closely connected to issues of identity in ancient Judaism. Students will also be introduced to anthropological approaches to food, diets, and commensality, and learn to reflect critically on how such theoretical lenses might be applied to the study of ancient dietary patterns. Hebrew not required.

Bible and Empire (218545)

Julia Rhyder

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the importance of empire for the study of the Hebrew Bible and its history of reception. Surveying the major hegemonic expansionist states, or "empires," that shaped the history of ancient Israel, the course is structured around key themes such as borderlands, migration, warfare, and cultural hybridity. Particular attention is paid to the relevance of postcolonial theory for biblical exegesis, with the aim of strengthening students' skills in judiciously applying socio-scientific models to the study of ancient texts. We also consider the Bible's place in more contemporary imperial settings: its use in supporting the interests of imperialism, as well as its mobilization against such interests. All ancient texts will be read in translation.

Subject: Akkadian

Akkadian AA

Introductory Akkadian I (114320)

Gojko Barjamovic

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the Semitic language of Akkadian, primarily through the Old Babylonian dialect and cuneiform writing system as used during the time of Hammurabi (c. 1750 BCE). Students learn the fundamentals of grammar and the writing system, as well as the most common cuneiform signs in official and cursive script. Readings span a variety of genres, including private letters, judicial documents, literary and religious texts, divinatory compendia, legal code, and royal inscriptions. The course also briefly introduces students to examples of texts from other periods and dialects of the Akkadian language for cultural and comparative purposes. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Subject: Sumerian

Sumerian AA

Introductory Sumerian I (115449)

Piotr Steinkeller

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course provides an introduction to the Sumerian language, a language isolate spoken in ancient Mesopotamia and probably the world's first written language. Although several aspects of Sumerian remain debatable, students learn the fundamentals of the grammar and writing system as well as the most common cuneiform signs in a variety of lapidary and cursive contexts. Many of the texts that are covered are a variety of dedicatory inscriptions from the time of Gudea (ca. mid-twenty-second century BCE) and the subsequent Ur III dynasty (ca. twenty-first century BCE), but other genres and time periods are sampled as well. This study of the Sumerian language also includes some background on the culture and history of the Sumerians.

Course Notes:

Sumerian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

The Jewish Library: Four Jewish Classics (214616)

David Stern

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Judaism is a famously text-centric religious culture, founded not only on a single book, the Hebrew Bible, but profoundly involved in the study and ritual use of other classic texts like the Babylonian Talmud, the Prayerbook, Biblical commentaries like that of Rashi, and the Passover Haggadah. This course will study the development of these four books and their transformation from texts into books with distinct physical and material features. In the case of each book, the text will be studied historically-- "excavated" for its sources and roots, and its subsequent development over the centuries—and holistically, as a canonical document in Jewish tradition. Class time will be devoted primarily to learning to read the primary sources in translation; supplementary secondary readings will provide historical and cultural context The seminar will also include regular visits to Houghton Library to look at manuscripts, early printed editions, and facsimiles of these books in order to study the changing shapes these books have taken as a key to understanding how they were studied and used, and to consider the relationship of materiality to textuality. While each book will raise its own set of issues, we will repeatedly deal with three basic questions: What makes a "Jewish" text? How do these books represent different aspects of Jewish identity? What can these books tell us about the canonical books of other religious traditions?No previous background in either Judaism or Jewish history is required. All readings in English translation. While this course is not a formal introduction to Judaism, it does aim to introduce students to Judaism and Jewish culture from inside its classic texts.

How Jews Read (and Write) (218694)

David Stern

2021 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

No activity is more closely associated with Jews than the practice of reading, and no text has been read by Jews more intensively and in more different ways than the Bible. This course will explore the history of Jewish Biblical interpretation from antiquity, beginning with Philo of Alexandria's allegorical commentaries, to the early modern period, culminating in Spinoza's Tractatus Theologico-Politicus. And because the practice of reading is intimately connected with the way a text is inscribed—whether in a scroll, a handwritten codex, or a printed book—this course will also treat the history of the Bible as a material text along with its physical features. All readings will be in translation. In addition to Philo and Spinoza, readings will include the Dead Sea Scrolls, Rabbinic midrash, Karaite commentary, and selections from medieval Jewish exegetes as well as examples of Ancient Near Eastern, Greco-Roman, and Christian interpretation which have had an impact on Jewish interpretations. The class will meet for two hours a week. For those students able to read texts in Hebrew, there will be an an additional special section which will meet for another hour to an hour and a half per week in which primary texts will be read in the original language. Students who wish to take the additional section should contact the instructor for special instructions about registering.

Jewish Boundaries and Identities (218486)

Shaye Cohen

2021 Fall (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is about Jewish self-perception of Jewish difference. Jews have long seen themselves, and have long been seen by others, as "different" or distinctive. Whether this is good or bad, advantageous or disadvantageous, is often a point of debate among the Jews themselves and between the Jews and their non-Jewish neighbors. In this course we will study some aspects of this theme, concentrating on the repercussions of the biblical commandment "not to walk in their ways" (Leviticus 18:3, 20:23). All texts read in translation; if there is interest and demand we can also set up a time for reading texts in Hebrew.

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0459 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A close critical reading of Genesis 37-50 and the Book of Esther in Hebrew. Emphasis on literary design and religious messages and on the influence of the story of Joseph upon the Book of Esther.

Course Notes:

Offered jointly with the Divinity School as 1802.

Recommended Prep:

Three years of Hebrew or the equivalent, and a good acquaintance with the historical-critical method.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Meets Foreign Lang Req	Hebrew
FAS Divisional Distribution	Arts and Humanities

Hebrew 236

The Song at the Sea: Seminar (120897)

Jon Levenson

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0459 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A close reading of Exodus 13:17-15:21 and parallel biblical texts in the context of the Hebrew Bible and the ancient Near East.

Course Notes:

Offered jointly with the Divinity School as 1816.

Recommended Prep:

An introductory course in the critical study of the Hebrew Bible and a solid command of Hebrew grammar (any period).

Additional Course Attributes:

Attribute	Value(s)
FAS: Meets Foreign Lang Req	Hebrew
FAS Divisional Distribution	Arts and Humanities

Hebrew 258

The History of God: Evidence from the Psalms (218548)

Julia Rhyder

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The Israelite deity, with an unpronounceable name, may seem to have no history, having simply existed from the beginning of time. However, closer examination of the biblical evidence reveals a complex story of how a wilderness god associated with storms and warfare gradually emerged as the one God of Israel. This course analyzes key texts of the book of Psalms that, in extolling the qualities of the Israelite deity, reveal different aspects of his character: his nature as a storm god and warrior; his geographical links to the south of Israel, between the Negev and Egypt; his adoption of the traits of a sun god, linked to the domains of law and justice; and his emergence as the head of the heavenly council and creator of the world. The course presumes basic proficiency with Biblical Hebrew.

Syriac BB

Intermediate Syriac II (214623)

Ute Possekel

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1129 AM

Instructor Permissions: Instructor **Enrollment Cap:** 9

Readings in classical Syriac prose and poetry. Emphasis on developing skills in grammar, vocabulary, and reading unpointed Syriac. Texts to be read include Aphrahat, the *Life of Mar Aba*, a sixth-century pastoral letter on christology, and East Syriac biblical commentary. Introduction to the study of Syriac manuscripts. Prerequisite: Elementary Syriac or permission of instructor.

Animal Behavior (207534)

Bence Olveczky

Naomi Pierce

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

A review of the behavior of animals under natural conditions, with emphasis on both mechanistic and evolutionary approaches. Topics include classical ethology; behavioral endocrinology; behavioral genetics; learning and memory; communication; orientation, migration and biological rhythms; optimal foraging; evolutionary stable strategies; sexual selection; parental investment and mating systems; selfishness, altruism, and reciprocity; and sociality in vertebrates and invertebrates.

Requirements: **Anti-Requisite: Cannot be taken for credit if OEB 57 already complete.**

Neurobiology of Behavior (207476)

Jeff W. Lichtman

Kathleen Quast

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic lecture videos with live Tuesdays and Thursdays featuring guest lectures, hands-on demonstrations, and review sessions in addition to small discussion sections.

Requirements: **Anti-Requisite: Cannot be taken for credit if MCB 80 already complete.**

The Neurobiology of Sleep and its Role in Mental Health (207615)

2021 Fall (2 Credits) **Schedule:** M 0600 PM - 0715 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The scientific study of sleep is both highly in terdisciplinary and among the most unifying of topics in psychology and the neurosciences. In the past several decades, exciting new discoveries on the neurobiology of sleep have been facilitated by technologies such as functional neuroimaging and molecular genetics. Sleep science exemplifies the translational approach in biomedical science whereby investigators in human and animal research work together to continually advance the field of sleep medicine. Scientific findings increasingly point to the importance of sleep for mental health and optimum performance, as well as to sleep disruption as both a result and potential cause of mental illness. In psychiatric neuroscience, sleep is an area in which many fundamental questions remain unanswered due

to the unique challenges of studying human sleep.

Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Food for Hungry Minds: The Neural Basis of Feeding Behavior (218589)

2021 Fall (2 Credits) **Schedule:** R 0430 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

We are what we eat - but how do we decide what, when, and how much to eat? In this course, we will learn about neural circuit principles and cutting-edge techniques by discussing primary research in the neuroscience of feeding. In doing so, we will explore reward, sensation, memory, decision-making, motivation, and more; and how these processes are altered in diseases.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Making Sense of Our Senses (218608)

2021 Fall (2 Credits) **Schedule:** W 0730 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Our brain is continuously bombarded with inputs from our senses, all of which need to be funneled through the primary sensory areas. These areas are not merely a first point of entry but already represent surprisingly complex aspects of the outside world. In this course, we will study how and why they are

structured as they are. We will compare the variety of solutions brains have found for organizing sensory information and ultimately discuss what ideas and tools biologists has for understanding deeper areas in the brain.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Cellular Basis of Neuronal Function (207530)

Ryan W. Draft

Kathleen Quast

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 26

The essential function of a neuron is to processe complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits.

This course will have an associated weekly 2 hour lab scheduled ad hoc after enrollment on Monday, Thursday, or Friday.

Requirements: **Pre-requisite: MCB/NEURO 80 or Instructor Approval.**
Anti-requisite: Cannot be taken for credit if MCB 115 is already complete

Introductory Computational Neuroscience (205105)

Eleanor Batty

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 36

What happens in our brains when we recall a memory? How does the composition of ion channels in a cell

affect its function? How do millions of neurons interact to produce a process as complex as vision? This course will provide a broad overview of the burgeoning field of computational neuroscience, which tries to answer these questions, and how our brains work generally, by using theoretical modeling and data analysis techniques that draw on mathematics, physics, computer science, and more. Students will learn and practice both classical approaches and recent advancements through lectures, in-class activities, programming assignments, and a project. Topics covered include biophysical models of neurons, sensory processing, neural population dynamics, memory, deep and reinforcement learning, and techniques to analyze experimental data, among others. Basic programming experience (Python will be used) and familiarity with linear algebra at the level of Math 21b will be assumed, although there will be math review sections.

Recommended Prep:

Neuroscience - Undergraduate 141

The Physics of Sensory Systems in Biology (207730)

Aravinthan Samuel

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Living organisms use sensory systems to inform themselves of the sights, sounds, and smells of their surrounding environments. Sensory systems are physical measuring devices, and are therefore subject to certain limits imposed by physics. Here we will consider the physics of sensory measurement and perception, and study ways that biological systems have solved their underlying physical problems. We will discuss specific cases in vision, olfaction, and hearing from a physicist's point of view.

Requirements: **Prerequisite: MATH 21A and MATH 21B and cannot be taken for credit if PHYSICS 141 already complete.**

Neurobiology of Vision and Blindness (207773)

Joshua Sanes

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Vision system fascinates biologists, in part because we are such visual animals. In fact, Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer's or AIDS. For these reasons, as well as because of Its relative accessibility, the visual system is a favored model for studying neural circuitry, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in visual development, structure and function, and then use them as a basis for considering causes of blindness and potential cures.

Recommended Prep: **MCB 80 or NEURO 80 is recommended.**

Requirements: **Pre-requisite: MCB/NEURO 80 or Instructor Approval.**
Anti-requisite: Cannot be taken for credit if MCB 143 is already complete.

Neurobiology of Perception and Decision Making (212830)

Naoshige Uchida

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

One of the current goals of neuroscience is to understand neuronal circuits underlying perception and behavior. Recent advances in neuroscience have allowed us to glimpse neuronal processes that link perception and decision making. How is sensory information processed in the brain? How does an animal choose its action? How does an animal learn from ever-changing environments and adjust their behavior? The course will examine neurophysiological studies in perception and decision-making.

Class Notes: **If you have not taken MCB/Neuro 80 you MUST ask the instructor for permission to take the course**

Experience-Based Brain Development: Causes and Consequences (212831)

Takao Hensch

2022 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Requirements: **Anti-Requisite: Cannot be taken for credit if MCB 146 already complete.**

Additional Course Attributes:

Neuroscience - Undergraduate 170

Brain Invaders: Building and Breaking Barriers in the Nervous System (207770)

Laura Magnotti

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Requirements: **Prerequisite: (LPS A OR LS 1a) AND MCB/NEURO 80 or Instructor Approval.**
Anti-requisite: Cannot be taken for credit if MCB 170 is already complete

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Neuroscience - Undergraduate 231

Computational Neuroscience (207731)

Haim Sompolinsky

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep:
Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements: **Anti-Requisite: Cannot be taken for credit if MCB 131 already complete.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll

Neuroscience - Undergraduate 1202

Modern Neuroanatomy (212832)

Randy Buckner

2021 Fall (4 Credits) **Schedule:** M 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

How does the global architecture and local organization of brain systems support behavioral and cognitive functions? In this class, classical and newer neuroanatomical discoveries will be discussed that cover what defines brain areas; how areas are organized into parallel, distributed circuits; how distinct areas and systems are organized; and how anatomical form relates to function. Anatomy in the human brain and from model systems (worm, mouse, barn owl, and monkey) will be used to illustrate principles. Newer techniques and analytical approaches will be discussed including micro-scale and macro-scale connectomics. The goal of this class is to survey examples of how emerging understanding of neuroanatomy provides insight into function. Each class will consist of lecture and discussion.

Requirements: **Anti-Requisite: Cannot be taken for credit if PSY 1202 already complete.**

Additional Course Attributes:

Neuroscience - Undergraduate 1401

Computational Cognitive Neuroscience: Building Models of the Brain (207732)

Samuel Gershman

2022 Spring (4 Credits) **Schedule:** WF 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 48

"What I cannot create, I do not understand." This course applies Richard Feynman's dictum to the brain, by teaching students how to simulate brain function with computer programs. Special emphasis will be placed on how neurobiological mechanisms give rise to cognitive processes like learning, memory, attention, decision-making, and object perception. Students will learn how to understand experimental data through the lens of computational models, and ultimately how to build their own models.

Recommended Prep:

Students be comfortable with a numerical programming language (e.g., Python, Matlab, R). Psychology concentrators should have taken Science of Living Systems 20 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, PSY 18, Science of Living Systems 15, MCB 80 or MCB 81 before enrolling in this course; or permission of instructor.

Requirements: **Anti-Requisite: Cannot be taken for credit if PSY 1401 already complete.**

Subject: Independent Study

Independent Study 1

Independent Study (150200)

Leslie Rith-Najarian

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

Topic: **Kirkland House**

Course Notes:

A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course.
The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Additional Course Attributes:

Independent Study (150200)

Michael Uy

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

Topic: **Dunster House**

Course Notes:

A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course.
The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Organismic and Evolutionary Biology

Subject: Organismic & Evolutionary Biol

Organismic & Evolutionary Biol 10

Foundations of Biological Diversity (144594)

Brian Farrell

Elena Kramer

Ann Pearson

Mansi Srivastava

Mark Cornwall

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An integrated approach to the diversity of life, emphasizing how chemical, physical, genetic, ecological and geologic processes contribute to the origin and maintenance of biological diversity. Topics to be covered include the evolution of metabolic pathways, multicellularity and structural complexity; causes and consequences of differences in diversity over space and time; the role of species interactions (including symbioses) as an evolutionary force; and the evolution of humans and their impact on the environment.

Recommended Prep:

Knowledge of introductory molecular, cellular biology, and genetics is recommended.

Genetics and Genomics (130236)

Daniel Hartl

Robin Hopkins

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Fundamental concepts in genetics and genomics forming a critical foundation for biology approached from two perspectives: (1) as a body of knowledge pertaining to genetic transmission, function, mutation, and evolution in eukaryotes and prokaryotes; and (2) as an experimental approach providing a toolkit for the study of biological processes such as development and behavior. Topics include structure, function, transmission, linkage, mutation, and manipulation of genes; genetic approaches in experimental studies of biological processes; and analysis of genomes in individuals and populations. Related ethical issues also discussed include genetically modified organisms, gene therapy, genetic testing, personalized medicine, and genetic privacy.

Geobiology and the History of Life (130331)

David Johnston

Javier Ortega-Hernandez

Nadja Drabon

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

Course Notes:

OEB 56 is also offered as E-PSCI 56. Students may not take both OEB 56 and E-PSCI 56 for credit.

Recommended Prep:

EPS 21, 22, or Life Sciences 1b; or permission of instructor.

Organismic & Evolutionary Biol 60

Fundamentals of Marine Biology (217833)

Aaron Hartmann

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will explore the fundamentals of marine biology, and in doing so, learn about the complex lifestyles of organisms whose home spans three quarters of our planet. We will take a process-driven approach, focusing first on the fundamentals: the interrelated processes of marine physiology, ecology, and evolution. What biological processes help organisms succeed in the marine environment? How do species traits vary throughout the different environments in the world's oceans? How do gradual and rapid changes in the ocean environment alter the "rules of life" for marine species? As we build our understanding of these fundamentals throughout the course, we will use them as lenses to view, disentangle, and understand larger patterns in the oceans. In particular, we will focus on the diversity and distributions of biological functions, patterns of biodiversity, and the growing threats to marine life. Leaning will be assessed via a first-third exam, a short paper, and a final presentation and paper. Ultimately, you will come away with a new understanding of the unique challenges and incredible opportunities that arise from life in saltwater.

Class Notes: **This course will be held online through Friday, February 4.**

Plant Systematics and Evolution (144583)

Charles Davis

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

An introduction to the diversity and evolution of vascular plants. The course focuses mainly on flowering plants because of their dominant role on the earth, but lycophytes, ferns, and gymnosperms are studied as well. A phylogeny of vascular plants provides the framework for their evolution and diversification. Related subjects, including plant habitats, biogeography, phylogenetics, herbaria, nomenclature, and pollination biology are also presented in lecture and laboratory.

Course Notes:

There will be a weekly 3-4 hour lab on Thursday afternoons; time to be determined at first class meeting. There are two midterms, a final, and frequent lab quizzes. Included in the course will be an optional spring break field trip (location TBA) to study plant diversity in a natural setting.

Recommended Prep:

OEB 10 or permission of instructor.

The Mouse in Science and Society (161184)

Kathleen Pritchett-Corning

2022 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Mice remain the most popular vertebrates used in biomedical R&D today, with tens of millions of lab mice produced annually in the United States alone. At the same time, mice are commonly studied for their own characteristics that continue to enhance our knowledge about innate mammalian behavior, predator-prey dynamics in changing ecosystems, and reservoir hosts for emerging diseases, to name a few. This course intends to provide a strong foundation in mouse biology, both basic and applied, as well as exposure to cultural and political aspects of the current impact of mice (real or fictitious) on contemporary societal values. Instructors: Kathleen Pritchett-Corning.

Conservation Ecology and Practice (208260)

David Foster

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The conservation of land and waters has become a major tool in determining the patterns of land use, conserving biodiversity, combating global change, and ensuring that the benefits of nature are secured for society. With a focus on the U.S., this course will examine the history and changes in conservation rationale and approach, the ecological theory and research that helps guide conservation planning and execution, and the policies, finances, and practice that enable land conservation to be a powerful agent of landscape change. In place of weekend field trips we will host a series of regional and national experts in diverse aspects of conservation theory and practice—ecology, policy, finance, planning, and economics—from academia and the public and private sectors, to explore the approaches, challenges, successes and future of land conservation.

Arthropod biology: Arachnids and myriapods, their biology and evolution (216472)

Gonzalo Giribet

2022 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course aims to introduce the evolutionary history and biology of arachnids, myriapods and related groups via a combination of learning their taxonomy and anatomy as well as their role as model organisms to understand phenomena such as segmentation or appendage specification. We aim to then use the knowledge acquired to study aspects related to web evolution, sociality, parental care, use of defensive secretions, and other behaviors that have made arthropods the most successful group of terrestrial organisms.

The Developmental Basis for Evolutionary Change (144999)

Mansi Srivastava

Clifford Tabin

Matthew Harris

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

A lecture course in evolutionary developmental biology. This course will focus on the molecular and cellular bases of how embryos generate adult body plans in order to understand how form, physiology, and life history strategies are modulated over the course of evolution. We will discuss insights from both invertebrate and vertebrate animal model systems as well as plants. We will investigate the forces driving change at both micro- and macro-evolutionary time scales. Particular emphasis will be placed on how changes in development underlie major evolutionary transitions and the origin of innovation in organismal evolution. The course will also emphasize learning of experimental design, molecular tools, and phylogenetic methods currently used by researchers in the field of evolutionary developmental biology.

Recommended Prep:

Life Sciences 1A (or LPS A) and 1B, or permission of instructor. OEB 10 or MCB 60 are helpful, but not required. Open to students from any concentration.

Organismic & Evolutionary Biol 128 Section: SEM

From Darwin to Derrida: The Evolution of Meaning and Purpose (216473)

David Haig

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The seminar will read my recent book (of the same name as the course) intended for a general educated readership. The seminar would be suitable both for science students and for non-science students who wish to learn some evolutionary biology. Natural selection is a purposeless process that has evolved purposive creatures. The key innovation in the evolution of life was the origin of a textual record of past choices of natural selection contained within genetic sequences. The information in genes comes from the environment that selects. The textual record evolves as organisms are judged by the performance of the text in environmental context.

Genes and Behavior (145857)

Yun Zhang

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Behavior is inheritable and regulated by genes. This lecture course explores causal links between genes and behavioral traits, aiming to provide mechanistic understanding of how gene products control and influence behavioral outputs. The course will start with discoveries of genes whose mutations contribute to

neurological diseases and psychiatric disorders, followed by main research approaches used to investigate genetic basis of behavior and brain function. The class will then have in-depth lectures and discussion on genes that regulate several behavioral traits including olfaction, itch and pain, circadian rhythm, sexual behavior, sleep, learning and memory.

Recommended Prep:

Life Sciences 1a or permission of the instructor

Biology of Insects (142688)

Naomi Pierce

2021 Fall (4 Credits) **Schedule:** W 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the major groups of insects. The life history, morphology, physiology, and ecology of the main taxa are examined through a combination of lecture, lab, and field exercises. Topics include the phylogeny of terrestrial arthropods with a review of the extant orders, an analysis of abiotic and biotic factors regulating populations, including water balance, temperature, migration, parasitism, mutualism, sociality, insect/plant interactions, medical entomology, and the use of insects in biological control.

Global Change Biology (143485)

Paul Moorcroft

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines how natural and anthropogenic changes in the earth system are affecting the composition and the functioning of the world's land and ocean ecosystems. Topics include: the ecological impacts of natural and anthropogenic changes in the earth's physical environment, and the effects of introduced species, species extinctions, land-use change, agriculture, and fishing.

Recommended Prep:

OEB 10 or OEB 53 and Mathematics 1a required. OEB 55 is

recommended.

Comparative Biomechanics (145006)

Andrew Biewener

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

1. **An exploration of how animals and plants contend with their physical environment, considering their biomaterial properties, structural form, and mechanical interaction with the environment. Through lectures, seminar discussions, and student presentations based on readings, students are introduced to topics related to biomechanical performance.**

Course Notes:

One 1.5-hour lab/primary literature discussion per week with hours to be arranged.

Biology and Diversity of Birds (143846)

Scott Edwards

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the biology of birds. Covers the fossil record and theories for avian origins, physiology and anatomy, higher-level systematics and field characters of the ~27 orders, speciation processes, nesting and courtship behavior, vocalizations, mating systems and sexual selection, cooperative breeding, demography and conservation. Optional field trip during spring break. Laboratories will consist of gross anatomy, bird watching excursions in the Cambridge area, field techniques and specimen preparation, and systematic study of avian groups using the collections of the Museum of Comparative Zoology.

Course Notes:

OEB 10 or OEB 53 or permission of the instructor. Students in their

third and fourth years are encouraged to enroll in the course.

Organismic & Evolutionary Biol 207

The Fishy Aspects of the Human Body (211177)

Stephanie Pierce

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Explore how the human body evolved through an analysis of the award-winning non-fiction book, *Your Inner Fish: A Journey into the 3.5 Billion-Year History of the Human Body*, by evolutionary biologist Neil Shubin. We will read and discuss each chapter in turn and discover how different parts of the human body can be traced back to creatures that lived eons ago. By the end of the course students will gain a better appreciation for how all life on Earth is interrelated and how our own bodies are a result of millions of years of evolutionary history.

Course Notes:

Undergraduates are particularly encouraged to consider this course. It provides a foundation in evolution and anatomy/development/genetics that would be applicable for many concentrations and career paths, e. g., IB, HEB, MCB, and human and veterinary medicine. The course is also designed for a broad student audience with various levels of prior knowledge (from expert to novice) and thus can fulfill divisional distribution requirements for non-science majors across the College. Some examples from prior years include: Political Science, History and Philosophy of Science, African and African American Studies, Global Health and Health Policy, East Asian Studies, Women, Gender and Sexuality, Government, etc.

Organismic & Evolutionary Biol 212R

Advanced Topics in Plant Physiology (131261)

Noel Holbrook

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

A critical discussion of current research in plant physiology including measurement techniques, modeling, and

experimental approaches. In 2021, the focus will be on how mechanical forces are sensed and integrated during morphogenesis. The goal will be to understand how mechanical stresses arising from growth, gravity, and wind influence plant development. This is a course for anyone who likes to look at plants and wonders why they have the forms they do? We will consider "form" to encompass both external shape and the structure of internal vascular tissues. Topics include gravity sensing, proprioception, mechanical sensing and actuation, reaction wood, phyllotaxy, root/soil interactions, tendrils and circumnutation. Requirements: an interest in plants and mechanobiology/biomechanics; some background in cell and molecular biology will be helpful.

Recommended Prep:

OEB 52, OEB 120, or permission of instructor.

Organismic & Evolutionary Biol 218

Ecosystem Restoration (215786)

David Moreno Mateos

2022 Spring (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 6

Given the current speed of habitat and species loss caused by human development, the restoration of degraded ecosystem is one of the greatest challenges humankind is facing. For this reason, the United Nations declared the current decade (2021-2030) as the UN Decade on Ecosystem Restoration. This global effort will need from experts on ecosystem science, management and design to have a deep understanding of how ecosystems recover from human disturbance and how we can use this knowledge to increase the currently limited performance of restoration practice. This course is particularly suited for students with interests in nature conservation, the natural component of landscape architecture, or ecosystem management in a broad sense. This course is cross-listed with the Department of Organismic and Evolutionary Biology, which will allow students from both disciplines to exchange their knowledge in a multidirectional learning environment where we all will address real world restoration cases. In this year's edition, we will focus on the restoration of New England's ecosystems. We will work in parallel to an ongoing research project to understand the recovery of New England's ecosystem over the last 300 years since the abandonment of most of the farms created by the original settlers. Through research, we will learn how forests and other ecosystems have changed during this time to apply that knowledge to a real restoration project that students will develop. We will have key inputs from guest lectures coming from restoration companies with many years of experience restoring ecosystems worldwide. They will help us find targeted tools to support and design ecosystems both in urban and natural environments in the New England context. We will increase our understanding of what nature is for humans and the Earth system and will increase our connection to it through self-guided field trips. At least, one previous course in ecology or a similar topic is required. This course will arm you with one of the most important tools to work with and for nature in the coming decades.

Course Notes:

This course is jointly listed with the GSD as SCI 6481.

Course structure: We will meet once a week on Friday at 8:00 AM for two hours. The main structure of the course is divided into two main parts. The first part will be a discussion about the readings that will be

assigned, which will focus on gaining a scientific and practical understanding of restoration. The second part will focus on case study analysis and a restoration project developed by students' teams. Additionally, we will have guest lecturers from restoration companies and the academia and self-guided field trips to local restoration efforts in students' residence areas.

Class Notes: **This course will be held online through Friday, February 4.**

Topics in Neurogenetics (145012)

Yun Zhang

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The goal of the class is to achieve an advanced understanding of the molecular and cellular mechanisms that regulate behavior. We will discuss key findings in the field, as well as the cutting-edge techniques used in these studies. The topics include decision-making, human olfaction, memory formation, inheritance of learned behavior, and mental illnesses, etc.

Course Notes:

The course is primarily planned for new graduate students, but it is also open to interested senior undergraduates who have taken OEB 57 or MCB 80 and obtained permission from the instructor.

Comparative Genomics (145414)

James Mallet

2021 Fall (4 Credits) **Schedule:** R 0900 AM - 1130 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This discussion-based course will survey modern ideas about evolution and speciation, and how they have changed as a result of genomic approaches. As well as readings and discussions in class, the course will utilize some live online video sessions with major players in the field of evolutionary and comparative

genomics.

Recommended Prep:

A first year genetics and if possible an evolution or population genetics course (e.g. LS1B, OEB 53 or OEB 242), or equivalent. Please contact instructor for exceptions.

Microbial Sciences: Chemistry, Ecology and Evolution (124109)

Michael Gilmore

2022 Spring (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology. Course will limit enrollment to 20 students.

Course Notes:

Also offered as Microbiology 210.

Recommended Prep:

For advanced undergraduates, Life Sciences 1a and 1b are required, or permission of instructor. MCB 60 is recommended.
