How to be a Tool: Storytelling Across Disciplines (000027)

Davone Tines

Isaac Winokur

2022 Spring (4 Credits) **Schedule:** W 0730 PM - 0930 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

How to be a Tool: Storytelling Across Disciplines. **Presenting data, advocating policies, and offering personal or historical narratives — is storytelling. Compelling storytelling requires tools. No matter the story, whether it be a personal narrative, a math problem, or political demands, how one tells a story is crucial to move ideas toward action. This course gives you a tool kit to do so.**

How to be a Tool **is co-taught by visiting lecturer-mentors, Davóne Tines and Zack Winokur, who work in music-theater, opera and dance, along with guest performers, thinkers, scholars, and creators. This course is for students interested in these performative fields, especially those in the social sciences and fields outside the humanities, and engages capacious cross-disciplinary exchange. Each student will work on an independent project of their own initiation that pushes the boundaries of critical and scholarly presentation, performance and messaging. Project development will be bolstered by lively collective conversation, in-class studio time, and sustained one-on-one dialogue with the faculty mentors.**

Course Notes:

Enrollment capped at 10 and open to all students; no art or performance experience necessary.

To request enrollment, add the course to your Crimson Cart and submit a brief google form response via the link on the Canvas course website. If the meeting day or time is challenging due to your residing time zone, please contact iaskew@g.harvard.edu.

An info session will be hosted before the course registration deadline. Students interested in enrolling are encouraged to attend. Please visit the Canvas course website for updated info and Zoom links.

African and African American Studies

Subject: African & African Amer Studies

African & African Amer Studies 10 Section: LEC

Introduction to African American Studies (122910)

Henry Gates

Evelynn Hammonds

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course aims to provide an interdisciplinary examination of the complex array of African-American cultural and political practices from slavery to the present. The course will involve close readings of a variety of primary sources and classic texts that present key issues in African American thought and practice. The course will place special emphasis on debates concerning African American people with the goal of introducing students to the process and the methodology of interdisciplinarity. We will look at the way the debates function across disciplines to delve deeper into not only the complexity of African American life and thought but also the breadth of African American Studies itself.

Course Notes:

Required of concentrators in the African American Studies track. Students who transfer into the concentration after their sophomore year may substitute another African and African American Studies course already taken if the course addresses the materials covered in African and African American Studies 10, and the petition is approved by the Director of Undergraduate Studies.

Introduction to African Studies (123591)

Jacob Olupona

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces students to the rich diversity and complexity of Africa, including its historical dynamics, economic developments, social and political practices, and popular cultures. Throughout, we assume that Africa is not a unique isolate but a continent bubbling with internal diversity, historical change, entrepreneurial spirit, and cultural links beyond its shores. Our goal is to train students to think rigorously about Africa from interdisciplinary and transnational perspectives. We also aim to equip students with the analytical tools necessary for recognizing and deconstructing reductionist and stereotyped narratives of Africa. The course is open to all students who are interested in exploring various dimensions of African life,

politics, peoples and cultures from the past to the postcolony.

Course Notes:

Required of concentrators in African Studies track.

African & African Amer Studies 20 Section: LEC

Introduction to African Languages and Cultures (118883)

John Mugane

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is an introduction to Africans through African languages and cultures. The course explores how sub-Saharan Africans use language and cultural production to understand, organize, and transmit indigenous knowledge about the world to each other and to successive generations. Language serves as a road map to comprehending how social, political, and economic processes like kinship structures, the evolution of political offices, trade relations, and environmental knowledge develop. Oral histories and cultural and intellectual products like novels, music, poems, essays, films, and photographs offer opportunities to open eyes to, interact with, listen and speak to, and think alongside Africans they entrepreneurs, artists, authors, teachers, thinkers as they uncover, communicate, and debate the major topics and issues facing African societies and people today.

As a Social Engagement course, AAAS 20 will wed scholarly inquiry and academic study to practical experience and personal involvement in the community. Students will be given the opportunity to study Africans, their languages, and their cultures from the ground up, not only through textbooks and data sets but through personal relationships, cultural participation, and inquisitive explorations of local African heritage communities with Harvard's African Language Program instructors as guides. Throughout the semester you will be asked to employ video production, ethnographic research, creative writing, "social-portraiture," GIS mapping, and linguistic study as you engage with Africans, their languages, and their cultures. By examining individual lives of select Africans, linguistic debates, cultural traditions and interrogating their import in the daily lives of Boston-area Africans, we hope to bridge the divide between grand theories and everyday practices, between intellectual debates and the lived experiences of individuals, between the American academy and the African world. Ultimately, this course aims to see and present Africans themselves as visible, audible and coherent articulators at the center of professional work and disciplinary study of Africa.

Sophomore Tutorial:Pan-African Diasporic Imaginations: History, Concepts, Artistic Expressions (123590)

Ingrid Monson

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the long history of creating pan-African solidarity among peoples of African descent in the Caribbean, North America, Latin America and on the African continent. Beginning with the Haitian Revolution and its lessons for understanding

making history of diasporic past we examine the transformation of African identities under slavery, the economics of racial capitalism and then explore the origins of Pan-African thought. We examine the differences between Marcus Garvey's and W.E.B. Du Bois's pan-African visions and the influence of these ideas on anti-colonial struggles in Africa and the Civil Rights and Black Power movements. In the second half of the course we examine artistic expressions in music, theater, and film, first in the 60s and 70s in North American, and then more in more recent works of Afro-futurism and hip hop in the U.S. Brazil, and Nigeria

Course Notes:

Required for concentrators in African and African American Studies. Open to all undergraduates.

A Different Shade of Brown: South Asians, Race, and Representation in the United States (218790)

Vivek Bald

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This course will focus on both the lived experiences of South Asians in the United States and images of South Asians in U.S. popular culture from the late 19th century to the present. We will read primary and secondary historical sources and look critically at a range of different media - from newspapers, print advertising and political pamphlets at the turn of the 20th century to film, TV, and the Internet in the 21st - tracing out how migrants and immigrants from the subcontinent went from being exotic curiosities to "undesirable aliens" to "model minorities" to "terrorist threats". We will examine dynamics of immigrant exclusion and inclusion; processes of racialization and experiences of racial violence; relationships between South Asians, African Americans, and other communities of color; and the various ways contemporary South Asian Americans are representing and asserting themselves through activism, the arts, media, and popular culture.

Social Justice and the Documentary Film (219732)

Vivek Bald

2022 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course, students will watch, analyze, discuss and write about a series of documentary films tied to movements for social justice; they will also work in teams over the course of the semester to produce their own short issue-based documentaries. We will focus particularly on two historical moments in which social protest and new media technologies combined in generative and subversive ways: the period of the late 1960s and early 1970s, when hand-held sync-sound 16mm film cameras first became accessible – including to those engaged in or aligned with the Anti-War, Black Power, Xicanx, Puerto Rican, Asian American, Native American, Feminist, Labor, and Queer Liberation movements; and the past two decades, in which the ubiquity of cell-phone cameras, social media, and the internet as a streaming platform have helped fuel the rapid growth of new and ongoing movements for justice, including Black Lives Matter, #metoo, and the immigrant rights movement. As we consider each film and each moment, we will assess the makers' goals and intentions, the choices they made in terms of how to shoot, edit, and narrativize different political moments and struggles, and how their films, historical or contemporary, resonate and create meaning for audiences in the present. Limited to 20.

Fiction Writing: Workshop (219702)

Jamaica Kincaid

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This class is open to anyone who can write a letter, not an e-mail, a letter, just a plain simple letter, to someone who lives far away from you and who has no idea really of who you really are, except that you are, like them, another human being. I have not quite yet settled on the books we will read but we will see some films: The Four hundred Blows, Black Girl, The Battle of Algiers, The Mack, a documentary about the Motown singing group, The Temptations.

Class Notes: **AAAS 113x is the same course as ENGLISH Cvr. Admission by application only, and the application process is run through the English Department. For information on specific application requirements and instructions, please see the full course listing on the English Department website. DEADLINE: for all Spring 2022 workshops, applications will open January 7 and are due via Submittable by 11:59pm on Saturday, January 15. Students will be notified of admissions decisions by 4:00pm on Wednesday, January 19. Workshops will meet the first week of classes.**

African Literature Now: Themes, Contexts, and Directions (218818)

Timothy Ogene

2021 Fall (4 Credits) **Schedule:** MF 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is an introduction to major themes, contexts, and directions in contemporary African writing. It will examine the place of contemporary African literature within the global literary marketplace, and within the broader frames of the global contemporary. While paying attention to regional, historical, and linguistic diversities, the texts are also inclusive in the range of questions they raise and address, including but not limited to the lived experiences of "Afrindian" communities in Africa, the lives of African migrants abroad, the afterlives of the Cold War, and the current debate around African (tangible) heritage on the global stage. Primary texts will include works by Teju Cole, Neema Shah, Helon Habila, Vamba Sherif, Danai Gurira, Chimamanda Ngozi Adichie, Dinaw Mingestu, Tarek Eltayeb, Petina Gappah, Igiaba Scego, Tope Folarin, and others. This course is suitable for students with a general interest in contemporary African literary and cultural studies.

Introduction to African Popular Culture (218819)

Timothy Ogene

2021 Fall (4 Credits) **Schedule:** MF 0345 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will introduce students to defining trends, movements, and practices in twentieth and twenty-first century popular culture in Africa. Focusing on the lives, interventions and innovative practices of key figures in music, television, fashion, dance, and publishing, we will examine the socio-political and the historical in relation to broader aesthetic and stylistic links to the rest of the world. This will be discussed in the larger context of colonial and postcolonial class formation, the afterlives of Cold War cultural diplomacy, access to education and accumulation of socio-political capital, the emergence of new conceptions of self and nationhood in relation to the global, new modes of cultural circulation, and the new lives of rediscovered archives. Figures such as Fela Kuti, Ousmane Sembene, Fela Sowande, J.D. 'Okhai Ojeikere, Miriam Makeba, Duro Olowu, Charley Boy, Dele Momodu, and William Onyeabor will be discussed alongside new figures, with a focus on lines of influence, self-fashioning, and the interface between the socio-political and the commercial. The ubiquitous power of diasporic/Afropolitan presence (and

performance of access) will be considered alongside the local and vernacular/indigenous, and the cosmopolitan and secular will be discussed alongside the traditional and religious. The steady rise/use of social media platforms as generative, where new forms of culture-driven protests and negotiation of identities unfold, will be considered alongside the history of audio-visual communication and the emergence of modern African celebrity culture. This course is suitable for students with a general interest in the production, circulation, and consumption of culture in modern Africa.

Black Womens Voices in the #MeToo Era (207805)

Linda Chavers

2022 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

When accepting the Oscar for Best Actress in 2015 Patricia Arquette said the following: "The truth is, right under the surface, there are huge issues that are at play that do affect women, and it's time for all the women in America and all the men that love women and all the gay people and all the people of color that we all fought for to fight for us now."
This course examines why such statements are part of a larger and longer tradition of disappearing black women and why they are popular in the cultural zeitgeist. Through extensive reading and tough discussion this class examines the current discourse around sexual harassment and assault from the #MeToo movement through the informed lens of Harriet Jacobs's slave narrative Incidents in the Life of a Slave Girl. Both "texts" involve navigating spaces of subjugation and supremacy and yet one voice has remained steadily ignored in mainstream audiences. We will also look at the intersection of race and gender that Incidents reveals and trace how these remain intact or not through today.

How Sweet is it to be Loved By You: Black Love and the Emotional Politics of Respect (110293)

Jamaica Kincaid

Marcyliena Morgan

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The word 'love' is almost never used in any portrayal or description of the African American community's daily life in contemporary media and in the social sciences. But love, as a human experience, is central to our understanding of what it means to be a vital member of a culture and society and thus respected, nurtured, etc. This seminar examines the love that difference makes. It is a comprehensive study of the representation of gender, love and sexuality in African American and African Diasporan culture. It introduces students to some of the principal questions of feminist theory, as viewed from the social sciences and humanities including anthropology, psychology, media studies and literature. Love, in all its many forms: familial, erotic, romantic, fraternal, is abundant, sometimes dominant, in black culture in the form of song, film, poetry and rhyme, and literature. This course will review and analyze the 'look of Black love' in the humanities and social sciences and writings on intersubjectivity, family, language, culture and ritual. It will also look at the absence of love within and toward the African American community as well as love's role in movements like Black Lives Matter. We will closely read, watch and listen to some of the many Black artists who have looked deeply at this thing called Love. How Sweet it Is explores and analyzes Black Love from disciplinary, social and cultural perspectives including: family, romance, gender, sexuality, racism, and physical and emotional health, institutions and space, place and home.

Studies in Afropolitanism (219716)

Timothy Ogene

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will consider various forms of Afropolitanism in contemporary African and Afro-diasporic literatures and cultures. We will discuss the global genealogies of Afropolitanism, referencing the histories of global cosmopolitan practices with a focus on Kwame Anthony Appiah's notion of a "rooted cosmopolitanism" and Ngũgĩ wa Thiong'o's concept of a "globalectical imagination." Authors and critics to read will include Teju Cole, Alain Mabanckou, Jamal Mahjoub, Namwali Serpell, Achille Mbembe, Abiola

Irele, Carla Coetzee, Emma Dabiri, and more. Visual artists to consider will include Yinka Shonibare, Wangechi Mutu, Njideka Akunyili Crosby, Julie Mehretu, Jadé Fadojutimi, and more. This course is open to students with a demonstrated interest in Africa and its relationship to the rest of the world.

Hiphop Worldwide (126710)

Marcyliena Morgan

2022 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This reading seminar takes up the question of how and why Hiphop art, culture and politics has taken over and dominated American public, youth, popular culture and African American discourse in general. *I AM HIPHOP* is a vivid exploration into the origins, culture, style, art and enduring influence of hiphop as a uniquely American black cultural art form adapted around the globe. It explores how hiphop language ideology has penetrated the 'arts' and American culture by identifying and reframing life in the 21st century. Readings will be on theoretical, ideological and philosophical arguments embedded in hiphop artistic practices in the U.S. and throughout the world. We will examine hiphop's influence in all genres including the arts, social sciences, business, etc. The course will examine how people throughout the world incorporate hiphop edicts to disseminate public and popular ideologies to represent individuals, neighborhoods, cities and nations.

African Religion in the Diaspora (216732)

Jacob Olupona

2022 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course focuses on the history and phenomenology of African peoples' religious experiences in the Americas. The historical and social processes that led to the emergence of African diasporic religions in Latin America and the Caribbean will form the core of our reading materials. We will examine the role of myth, ritual, arts, and symbols as well as the social and political processes that explain the evolution of Black Atlantic religious traditions as formed by African indigenous traditions, African Christianity, and African Islam. Using historical, ethnographic, and textual sources, the course will illuminate the lived religious experiences of enslaved Africans as well as new immigrant diaspora communities in South America, the Caribbean, and the USA. We will examine Africana religious parallels and divergences in religious practice and social identity. Guest lecturers will offer their expertise on the various religious processes and expressions of African peoples in the Americas, while contributing to broader conversations about the future of African religions in the diaspora and the sociopolitical challenges we face in today's world, particularly how the devotees of these traditions face forms of racial, ethnic and religious discrimination in their various countries.

Explorations in Afro-Latin American Art (218685)

Alejandro de la Fuente

Thomas Cummins

2022 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar explores how visual artists and the visual arts have contributed to debates on race, citizenship, and nation in Latin America, from the colonial period to the present. We approach the history of art in Latin America primarily through the production of images of afro-decendants and works by artists of African descent. We will offer a critical and historical analysis of the racialized biases of the existing canon, as well as the need for new research strategies, new methods, and new sources. We also study the contributions of artists and intellectuals who claim connections to Afro-Diasporic cultural practices or participate in broader debates about race and inclusion in Latin American societies.

By combining approaches centered on authorship and on thematic influences and representations, the seminar explores different conceptualizations of Afro-Latin American Art and highlights the possibilities of this field within the art history of Latin America. We cover different geographic areas, different socio-cultural groups as well as different political conditions. We will address various media, including painting, sculpture, architecture, printmaking, photography, video, and installation and study how this artistic production has evolved over time. The course follows a rough chronological order that becomes more media specific as we enter the end of the 19th-century and finishing in the 21st. For this seminar, a social historian of slavery and race and an art historian of colonial Latin America join forces to explore the contours of this field from multidisciplinary perspectives. Undergraduate students are welcome to join the seminar, previous consultation with the instructors.

The Long Civil Rights Movement in American History (218543)

Andrew Pope

2021 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

African Americans led a decades-long struggle for liberation during the twentieth century. The civil rights

movement encompassed a range of economic, social, and political demands. The fight against Jim Crow bound together these demands under the framework of a single movement for much of the century. Together we will study the role of Black women, how violent and non-violent strategies worked in tandem, the relationship between the civil rights movement and other movements domestic and abroad, among other topics related to the struggle to end Jim Crow and envision a different America. The course re-examines parts of the movement that are well-known, like Martin Luther King Jr. or non-violent direct action, as well as lesser-known elements of the movement like African American sharecroppers in the Communist Party, the role of sexuality in the movement, or how Black Power advocates shaped modern America. Taken as a whole, the course will examine the long history of the civil rights movement and how it transformed American society.

MEDICINE. SCIENCE, AND EMPIRE (108677)

Jean Comaroff

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This class examines the changing place of medicine in the long history of modernity. Focusing on key moments the birth of the clinic, the colonial encounter, the consolidation of medicine as profession, the age of genomics and biocapital, and the empire of global health it explores the distinctive role of medical knowledge and practice in the making of modernist persons, identities, economies, and political vocabularies. Readings are drawn from anthropology and the wider social sciences, with cases from Africa, Asia, Europe, and North America. The course is a mix of lecture and discussion.

Landscape Fieldwork: People, Politics, Practices (219717)

Gareth Doherty

2022 Spring (4 Credits) **Schedule:** F 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Landscape fieldwork offers the means to understand the complexities of landscapes. Through a people-centered approach, this lecture course explores landscape architecture's ethical and political power to shape the world. A central premise of the course is that experiential knowledge—gained from the embodied engagement of landscape fieldwork—can help to revise how we understand and use western canons of landscape knowledge and offer new possibilities for the design imagination.

The course is structured in five parts, each of which consists of 3–4 class sessions focused on a particular site, including smaller-scale public spaces, border landscapes, sacred groves, archipelagos, and regions. We will concentrate in the postcolonial and Islamic worlds—the Arabian Peninsula, the Caribbean, Brazil and West Africa, and Western Europe. We will study diverse literatures, ethnographies, and interviews, using and critiquing established landscape ethnographic methods. In doing so, we apply the descriptive, participatory, and reflective aspects of ethnography to design, and the imaginative, projective, and prescriptive capacities of design to ethnography. By cultivating this design/ethnographic ground, this course opens up new possibilities for understanding the present and imaging the future.

This course provides students with training in ethnographic fieldwork methods that can be applied in other academic and professional projects. On completion of the course, students will be equipped to conduct their own landscape fieldwork projects, either alone or collectively. During the semester, students will:

Apply landscape fieldwork as a tool for knowledge-building

Develop theoretical positions arising from fieldwork

Identify non-written forms of note taking

Experiment with visualizing social phenomena and the lived experiences of spaces

Produce and analyze collective ethnographic data

Imagine and recommend design and policy propositions informed by fieldwork

Grades are based on participation, completion of assignments, a remote fieldwork project, and a final design proposal.

There are no prerequisites. Undergraduates as well as masters and doctoral students are welcome to enroll.

The course is cross-listed between the Department of Landscape Architecture, the Department of Anthropology, and the Department of African and African American Studies. Where possible, the synergy between fields will be cultivated to maximize exchange between them.

Poverty, Race, and Health (123435)

David Williams

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course critically examines the health status of the poor, and of African Americans and other socially disadvantaged racial and ethnic groups in the US. Attention will be focused on the patterned ways in which the health of these groups is embedded in the social, cultural, political, and economic contexts, and arrangements of US society. Topics covered include the meaning and measurement of race, the ways in which racism affects health, the historic uses of minorities in medical research, how acculturation and migration affects health, and an examination of the specific health problems that disproportionately affect nondominant racial groups.

Theory and Race in the Americas (218312)

Jesse McCarthy

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course surveys myths, theories, discourses, and debates surrounding the meaning of race and its role in the historical formation of the "New World" in the Americas. Beginning with the origins of racial theory in Renaissance and Enlightenment Europe, we will follow their evolution and expansion into scientific and culturalist discourses in the nineteenth century, and through the dramatic transformations of the twentieth century leading up to the present. Readings will range from canonical scholars, orators, social scientists, and philosophers up to the most contemporary thinkers. Along the way, we will read work by Ottobah Cugoano, W.E.B. Du Bois, C.L.R. James, Hortense Spillers, Paul Gilroy, Sylvia Wynter, Walter Rodney, Frantz Fanon, Denise Ferreira da Silva, James Baldwin, Cedric Robinson, Angela Davis, Imani Perry, Khalil Muhammad, Saidiya Hartman, Charles Mills, Jackie Wang, Michel-Rolph Trouillot, Audre Lorde and Cornel West among others. The course places an emphasis on building foundations in the historiography and

intellectual genealogy of racial discourses as they have been constructed, reproduced, contested, reimagined, and ultimately disseminated throughout the American hemisphere and beyond.

Africa Rising? New African Economies/Cultures and Their Global Implications (108680)

Jean Comaroff

2021 Fall (4 Credits) **Schedule:** M 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course, which is offered every semester, is taught in conjunction with, and as part of, the African Studies Workshop at Harvard (ASW). It consists of two components: (i) a public session, held every Monday afternoon at 2.00-4.00, at which a speaker invited from outside the university, a member of the Harvard faculty, or an advanced graduate student will present a pre-circulated paper to an audience similarly composed of faculty, visiting scholars, students, and Africanists from other institutions in the greater Boston area. (The pre-circulated papers are usually sent out, latest, by the Wednesday before it is to be presented.) *You can view videos of previous African Studies Workshops on this link: https://vimeo.com/247907896. Each session includes a brief introduction to the paper by its author, a commentary by a discussant, and an open conversation, in which students are given the floor first, followed by anyone else present; (ii) an under/graduate student seminar component, to be held every Monday at 9.45-11.30am, at which the instructors will introduce and contextualize the topic of the paper to be presented later in the day at the public session, after which members of the class will have an opportunity to discuss it in depth. (In some instances, texts relevant to the topic, drawn from the contemporary Africanist canon, will be suggested as supplementary reading.)

The theme of the course derives from a story in The Economist in 2011 under the title, "Africa Rising." It argued that the continent has come to epitomize both the "transformative promise of [capitalist]growth and its bleakest dimensions." During the spring semester, we shall explore Africa's changing place in the world – and the new economies, legalities, socialities, and cultural forms that have arisen there; this in relation to the papers presented in the public sessions of the ASW. We shall also interrogate the claim that the African present is a foreshadowing of processes beginning to occur elsewhere; that, therefore, it is a productive source of theory about current conditions world-wide.

Africa Rising? New African Economies/Cultures and Their Global Implications (108694)

Jean Comaroff

2022 Spring (4 Credits) **Schedule:** M 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The theme of the course explores Africa's changing place in the world and the new forms of economy, law, society and culture that have arisen there; this in relation to cutting-edge research presented in the public sessions of the African Studies Workshop. We also examine the claim that the African present foreshadows processes beginning to unfold elsewhere across the globe; that it is a productive source of theory and insight about current global conditions.

The course consists of two components: (i) an under/graduate student seminar, held every Monday at 12.00 -- 1.20, at which the topic of the paper to be presented later in the day at the public workshop is contextualized and discussed in depth; (ii) a public session, the African Studies Workshop, Monday 6.00 – 7.30, at which a speaker from outside the university will present a pre-circulated paper to an audience composed of students, faculty, and Africanists from across campus and from other institutions in Boston or elsewhere.

American Studies

Subject: American Studies

American Studies 201

Themes in American Studies (118017)

Robert Reid-Pharr

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course will be divided into two parts. In the first we will examine the works of a group of contemporary scholars (Tiya Miles, Lisa Lowe, Marisa Fuentes, Sarah Haley, Saidiya Hartman, Jose Munoz, and Daphne Brooks) who are deeply interested in the function of gender in our societies and whose work is either exclusively or largely focused on the Americas. More importantly, each of the individuals whose work we will examine is deeply committed both to using traditional archives in innovative and unexpected ways and to expanding radically what we mean when we use the word "archive." We will not attempt to survey the massive amount of American-focused and archivally based work on gender. Instead, the goal of the course is to familiarize students with key texts as a prelude to their beginning to develop their own rich theoretical apparatuses and starting the process of defining their own fields of inquiry. Thus, in the second part of the course students will begin work with archival materials (located at Harvard or elsewhere) that will hopefully prove useful to them as they move forward in their careers. These efforts will culminate with a public conference that will take place at the end of the semester.

Topic: **The American Gender Archive**

Course Notes:

Required of first and second-year graduate students in American Studies and open to others by permission of the instructor. Students can take this course for credit in WGS.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Sophomore Tutorial in Archaeology (113567)

Amy Clark

2022 Spring (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will focus on archaeological thinking, the cognitive skeleton of the discipline of archaeology, the principles and the logic that are the foundation of all archaeological conclusions and research. Central to this is an understanding of research design, archaeological theory and interpretation, culture and material culture; as well as an understanding of how to examine and construct an archaeological argument.

Anthropology 97Z

Sophomore Tutorial: Anthropology as Social Theory and the Social Theory of Anthropology (143028)

Malavika Reddy

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Anthropology 97z is a course about what social theory is, how to read it and how it relates to the discipline of anthropology.

The course encourages students to think expansively about the sources and boundaries of "theory," guiding them through three approaches to the theorization of social life:

First, we work from early anthropological conceptualizations of society, culture and race to trace the impacts of these concepts on the formation of the discipline and on contemporary life, more broadly;

Second, we consider the insights that a Marxist approach to theory and anthropological analysis can generate;

Third, we think with Audre Lorde's discussion of the 'erotic' to see what aspects of social life it opens up.

The course will tackle the study of these concepts and theories in three ways: by relating them to the philosophical traditions that they engage, by situating them within the political projects in which they operate and by analyzing the anthropological insights they enable. An aim of the class will be to understand and disrupt the roots of the discipline, while articulating the importance of 'anthropology disrupted' to the contemporary world.

Course Notes:

Required of all concentrators. Weekly 2-hour sections to be arranged.

Anthropology 98A

Junior Tutorial in Anthropology (205494)

Michelle Choi

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

This course is focused on preparing students to do anthropological fieldwork and develop their own research projects. Through concrete case studies and practical exercises students will be introduced to different approaches to developing research problems, conducting research, and ethnographic writing. Topics covered will include defining research questions and objects of study, situating projects within scholarly literature, and bringing together research data and analysis in different forms of anthropological writing.

The aim of the course is not an exhaustive overview of research design but to familiarize students with some of the key practices and concerns of anthropological research and writing. The course seeks to guide students in reading anthropological texts, understanding the range of data and its representations, unpacking the analytical moves being made in the text, and thinking through the implications of such presentation.

The course is divided into two main components. The first focuses on a case study of a developing anthropological work by the instructor. Through select readings related to their topic of interest and original research documents (proposals, fieldnotes, media, news reports, photographs, analytical essays, among others) students will learn the process of turning a research question into an anthropological project. The case study is also meant to prepare students for the experience of conducting their own research and serve as an example of how to transform research findings into anthropological writing.

Simultaneously, this course is also a research practicum in which students will apply what they have learned to design their own anthropological projects and share with each other research goals, experiences, and components of their emerging work. Through structured assignments, seminar workshops, and regular individual meetings with their instructor students will produce an original research essay based on their research over the course of the semester.

Course Notes:

Required of all concentrators in Anthropology.

Anthropology 98B

Junior Tutorial for Thesis Writers in Anthropology (205522)

Michelle Choi

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This individual tutorial is for anthropology students intending to write a senior thesis, and is normally undertaken with an advanced graduate student during the second term of junior year. Students will have weekly meetings with the project advisor for the purposes of developing the appropriate background research on theoretical, thematic, regional, and methodological literature relevant to their thesis topic, and fully refining their summer research proposal. The tutorial's final paper will be comprised of a research proposal representing the research undertaken during the semester.

Anthropology 99A

Thesis Tutorial in Anthropology - Senior Year (205184)

Michelle Choi

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

This is a full year research and writing seminar limited to senior honors candidates. The course is intended to provide students with practical guidance and advice during the thesis writing process through structured assignments and peer feedback on work-in-progress. It is intended to supplement not replace faculty thesis advising (with the requirement of consulting regularly with the advisor built into the assignments) and, most importantly, allow students to share their work and experiences with other thesis writers in a collegial and supportive environment. The seminar will be run jointly by the Department of Anthropology Assistant Director of Undergraduate Studies and the Writing Tutor. Part one of a two part series.

Anthropology 1033

Archaeology of Inequality (218808)

Jess Beck

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In 2018, Oxfam reported that the 26 richest people on the planet had the same net worth as half of the global population. The rampant wealth disparities in the modern world lead us to ask whether inequality is an inescapable component of all societies. Through its unique access to the deep time of human prehistory, archaeology allows us to question myths and just-so stories about the origins and inevitability of inequality. In this course, we will examine how different ways of making a living, from food procurement to economic and political organization, have worked to either amplify or diminish inequalities in human communities. This course will cover topics that resonate in the past and present: How do elites justify their monopolization of power and resources? Are there alternatives to hierarchy in large-scale communities? What strategies have past people used to evade the inequitable demands of states and empires? This course will explore how archaeologists draw upon multiple lines of evidence—including material culture, architecture, and the remains of ancient plants, animals, and people—to develop a holistic understanding of inequality in past societies.

Anthropology 1038

Game of Stones: The Archaeology of Europe from Handaxes to Stonehenge (215108)

Amy Clark

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Game of Stones: The Archaeology of Europe from Handaxes to Stonehenge Buried beneath modern cities, Roman amphitheaters, and Medieval churches lie subtle traces of Europe's earlier occupants: campsites littered stone tools and animal bones, human bodies preserved in bogs and frozen in ice, and cave walls decorated with extinct animals. This course will explore European prehistory from the first settlement of Europe by Homo erectus, around a million years ago, to the building of Stonehenge, c. 2000 B.C. We will cover some of those most exciting topics in archaeology today: How similar were Neanderthals to us and why did they go extinct? When and why did groups subsisting on hunting and gathering take up farming?

And finally, for what purpose were large stone monuments such as Stonehenge and Newgrange built?

Bias in Archaeology (218190)

Rowan Flad

Jess Beck

2022 Spring (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This seminar will focus broadly on bias in archaeology, covering issues of bias in authorship, citations, accessibility, popular media coverage, fieldwork, training and education, hiring and promotion and other related topics. We will also address recent research that focuses on disrupting patterns of bias in some of these areas. Students will engage in original research or synthesize research topics in one or more of these areas for their final project.

Course Notes:

This course is offered in both a graduate and an undergraduate level. Please review the course syllabus prior to enrolling in the course to determine which section to enroll in.

Anthropology 1130

Archaeology of Harvard Yard (121141)

Diana Loren

Patricia Capone

2021 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Archaeological data recovered from Harvard Yard provide a richer and more nuanced view of the 17th through 19th century lives of students and faculty in Harvard Yard, an area that includes the Old College and Harvard Indian College. Students will excavate in Harvard Yard, process and analyze artifacts, and report on the results. Additional topics to be covered include regional historical archaeology, research design, surveying, archival research, stratigraphy, and artifact analysis.

Class Notes: **Students seeking to enroll in Anthropology 1130 should send a brief statement introducing themselves and their interest in the course to us at pcapone@fas.harvard.edu and dloren@fas.harvard.edu.**

Please include the following:

- Name

- Year

- Concentration (or prospective concentrations)

- Statement of interest in A1130

- Commitment to taking both A1130 (fall) and A1131 (spring).

We will conduct a course lottery using these statements. If you have any further questions, please let us know.

Archaeology of Harvard Yard II: Laboratory Methods and Analysis (123195)

Patricia Capone

2022 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Open to students who participated in the fall term investigations in Harvard Yard, this course focuses on the detailed analysis of the materials recovered in the excavations, within the context of archival and comparative archaeological and historical research. The analysis will also include an evaluation of the results of the ground-penetrating radar surveys conducted prior to the excavations, as part of the research design for the next season of investigations of the Indian College site.

People of the Sun: The Archaeology of Ancient Mexico (109568)

Jennifer Carballo

2021 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides a broad overview of the archaeology of ancient Mexico and Central America, focusing on the Indigenous cultures of highland Mexico such as the Aztecs and Zapotecs, as well as their predecessors and contemporary descendants. Topics include the origins of food production and early cuisine; development of regional exchange networks; rise of towns, temples, and urbanism; emergence of states and empires; and resilience of Indigenous lifeways through conquest and colonial periods. Peabody Museum collections are incorporated into class discussions and assignments.

Anthropology 1190

American Invasions: Archaeological Tales of Encounter, Exploration, and Colonization, 1492-1830 (125450)

Matt Liebmann

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In 1492 Native Americans discovered Europeans, changing the world forever. The European invasion of the Americas triggered demographic, economic, and ecological changes on an unprecedented scale. The subsequent movement of people, plants, animals, and goods prompted global shifts in population, exploitation of resources, and the transformation of environments on both sides of the Atlantic. What can anthropology and archaeology tell us about early encounters between Native Americans and Europeans? Why did the European conquest of the Americas play out as it did? This course investigates these questions through the sites where first contacts occurred, the objects exchanged by Indigenous peoples and settler-colonists, and the scars that remain in the ground. Through investigations of first contacts, politics, epidemics, Indigenous resistance, and ecological changes, Anthropology 1190 presents a sweeping continent-wide treatment of the historical archaeology of Native America between 1492-1800.

Anthropology 1201

Human Osteology & Bioarchaeology (219703)

Jess Beck

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Knowledge of human osteology is key for fields such as archaeology, biological anthropology, forensic anthropology, anatomy, and medicine. This course introduces students to human skeletal anatomy and the field of bioarchaeology, the study of human skeletal remains from archaeological sites. The first half of the course provides an introduction to skeletal anatomy for anthropologists and biologists and covers the entire human skeleton, with sections on growth, development, and pathology. The skeletal anatomy of select non-human mammals is used to demonstrate the functional morphology of each bone. This second half of the course introduces students to the basic methods of human skeletal analysis, including assessing the age, sex, health, and stature of an individual using their bones. The grade for this course will be based on a combination of participation, quizzes, larger assessments, and the maintenance of a "bone notebook" in which students sketch and describe individual skeletal elements. Students taking the course at the graduate level will also submit a final research paper that examines a topic of bioarchaeological significance in a region and/or period pertinent to their own academic research.

Prehistoric Technology: Ancient China (218180)

Rowan Flad

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course we examine prehistoric technology through the lens of case studies from Chinese archaeology. We will begin with a focus on general concepts in the archaeology of technology. After providing this thematic foundation, we explore specific examples of technologies that have become a focus of archaeological attention in China: lithics, ceramics, plant and animal domesticates, architecture, hydrological engineering, textiles, metallurgy, divination technology and writing. Through this focus on technology, the course provides an overview of Chinese prehistory and the basis for our current understanding of the origins and early developments in Chinese civilization. Other important themes referenced in the class include the emergence and migration of modern hominins, the origins of agriculture, animal domestication, and sedentary villages, early urbanism, changes in burial practices and religion, ritual, writing, and production, the development of complex society, and the presentation of archaeological information in modern contexts.

The Pyramids of Giza: Technology, Archaeology, History (127050)

Peter Manuelian

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Focuses on the Pyramids, Sphinx, and tombs at Giza (ca. 2500 BC), in the context of ancient Egyptian history, art, and archaeology. The HU-MFA Expedition excavated Giza, resulting in today's Giza Project at Harvard. Seminar takes place in Harvard's Visualization Center with 3D viewing of the Giza Necropolis on a 23-foot screen, and consists of introductory lectures, student presentations, and field trips. Topics range from challenges of archaeological information processing to Old Kingdom mortuary art and architecture, to issues of ownership and repatriation. Students will also contribute to the (real world) Giza Project at Harvard.

Class Notes: **Note: Due to classroom capacity limits, only 18-20 students can be admitted to the course.**

Borderlands: Limit Situations and Religious Experience (219707)

Davíd L. Carrasco

Michael Jackson

2022 Spring (4 Credits) **Schedule:** T 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course explores the ambiguous and unstable borderlands – social, psychological, geographical, and spiritual - of human existence. Drawing on empirical studies of transnational migration, displacement, marginality, culture contact, the colonial encounter, rites of passage, and limit experience, and using such key theoretical concepts as liminality, transculturation, contact zone, indeterminacy, and plurality, we will explore the destructive and constructive dimensions of what Karl Jaspers calls 'border situations' (grenzsituationen) and Gloria Anzaldúa calls the 'new mestizaje'. Consideration will also be given to the transfigurative experience of carrying out ethnographic fieldwork in other societies, innovations in writing and art that do justice to borderland and borderline experiences, as well as the conditions of the possibility of genuinely mutual dialogue and understanding between people and societies that history has cast into relations of traumatic inequality.

Challenging Collections: Critical Reflections on Collecting Through Harvard's History (218189)

Diana Loren

Ilisa Barbash

Ingrid Ahlgren

2022 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Harvard's museum collections have often been used to interrogate the world outside of "us": peoples, events, places, and things. This course reverses that gaze and asks what the collections and the processes of collecting reveal about the history of Harvard and its institutional identity as "the" place of learning. In this course, we unpack the historical circumstances surrounding the arrival of particular collections of photographs and objects at Harvard's Peabody Museum: such ones related to imperial desires, scientific inquiry, academic curiosity, and the violence of colonialism. How does critically examining this past inform present action and future strategies in contemporary museum practice at the Peabody Museum? This is a hands-on collections course that will be taught at the Peabody Museum and will include visits to other museums, archives, and libraries on campus.

Davíd L. Carrasco

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

What is Religion? Why does it show up everywhere? Using archaeology, religious studies and social thought, this course will study the major themes in the history of religions including 'encountering the holy', 'sports and ritual', 'crossing borders', 'sacrifice as creation', 'pilgrimage and sacred place', 'suffering and quest for wisdom', 'music and social change', 'violence and cosmic law'. Readings from Native American, African American, Latinx/+, Jewish, Buddhist, Christian, Hindu traditions. Focus on the tension between individual encounters with the holy and the social construction of religion. Readings from Gloria Anzaldua, Toni Morrison, Judith Sherman, Arthur Kleinman, Popul Vuj, Mircea Eliade, Michael D. Jackson.

The Law and Its Limits (215111)

Malavika Reddy

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 14

We often talk about the power of law to shape our worlds but what about its powerlessness? An axiom of contemporary life is that societies need law to address social, political and environmental ills. Yet, in the face of entrenched problems, including expanding who belongs, tackling inequality, and confronting environmental crisis, law often appears impotent or, worse, detrimental. This course grapples with the simultaneous hunger for and weakness of law, its power and its powerlessness, by guiding students through an exploration of the following questions. How, why and to whose benefit or expense is the legal posed as an answer to political and social problems? What can we learn from situations in which law harms? Who resists law? How does legal process transform conflict and define the terms of its resolution? What is the relationship between law and violence? The course will seek answers to these questions via an engagement with the ethnographic – close readings of a variety of judicial processes -- and the theoretical. In so doing, the course will be guided by three objectives: 1. to introduce students to the anthropological study of law; 2. to compile a toolkit of methods and concepts with which social scientists have studied law; and 3. to trouble commonsense pieties about law and its place in social life.

The Price of Solidarity: Value, Sacrifice, Capital (218708)

Julia Fierman

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This seminar in social anthropology presents value and the exchange of value as the foundations of economic, social, moral, and political life. The authors we read will argue that the exchange of value(s) between humans creates social solidarity. We are tied to our communities and friends through relationships of debt and expenditure; we give a gift with the expectation of receiving something in return, binding the gift giver and receiver in a social relationship that extends over space and time. For sociologist Marcel Mauss, even gestures of altruism are an attempt to create value and establish (or reinforce) relationships of alliance. We begin the semester with Mauss's bold contention that no gift is given selflessly; we give in order to receive something in return. Mauss's The Gift: Forms and Function of Exchange in Archaic Societies is a foundational text of economic social thought; he and the authors who follow him on the syllabus, foreground how social relationships of all sorts are governed by exchange, including relationships between the state and the pensioned worker (Mauss), between friends (Julian Pitt-Rivers), and between members of a community (Roberto Esposito). We then examine the moral and spiritual side of exchange through a close investigation of sacrifice and expenditure through the works of various philosophers, such as Jacques Derrida and Soren Kierkegaard. Ethnographic forays into value supplement these texts and foreground how notions of exchange, obligation, and expenditure guide religious, economic, and political cosmologies across societies. In the last third of the semester we turn to capitalist commodity production and the reified "money-form," which Karl Marx argues are socially alienating and economically exploitative. We reflect on productions of value in the context of globalized capitalism and neoliberalism.

Punishment Culture (218191)

Kaya Williams

2022 Spring (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

What is punishment, and what might attention to punitive practices teach us about the cultures in which they are used? Modern American culture is so saturated with punishment that it is difficult to know where to begin such an investigation. From childhood education to mass incarceration and from the crafting of financial futures to the training of horses and dogs, punishment appears everywhere to be both clearly visible on the surface and right at the heart of the matter. In many cases, punishment is the thread that connects allegedly disparate institutions and produces allegedly unforeseen forms of violence. This course seeks to follow that thread: asking first after punishment's long history in Western culture and then after its multitudes of present uses and effects.

Anthropology 1707

Ethnic Studies, Anthropology, and the Transpacific Ethnography of Asian America (218758)

Joyhanna Garza

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Ethnic studies is the critical interdisciplinary study of race, ethnicity, and indigeneity as understood from the intellectual, political, and cultural histories and perspectives of minoritized groups in the United States. Ethnic studies scholars analyze the social dynamics of race, racism, and various forms of institutionalized violence including the historical and lasting legacies of colonialism, chattel slavery, US imperialism, white supremacy, and more. In particular, Asian American studies, like other ethnic studies traditions, was originally conceived as a unifying political project which problematizes dominant narratives about US exceptionalism. The historical emergence and sustained ties of the field to grassroots activism call for imaginative reconfigurations of solidarity within and beyond the borders of the academy. Given the urgency of the contemporary political moment and heightened conversations around race and especially gendered racial violence, what might anthropology stand to gain from an overt engagement with ethnic studies? Furthermore, how might anthropology's longstanding interest in local meaning, knowledge, and practices disrupt hegemonic or US-centric notions of the ethnic Other? By foregrounding scholarship that traverses ethnic studies, Asian American studies, and anthropology, this course is designed to highlight the ways that histories of minoritized groups overlap and are connected. The selected texts are primarily ethnographic works which explore the following themes: intersectional and transnational approaches to race and gender; histories of empire and settler colonialism; gendered and classed labor; historical and ongoing political struggle and solidarity; citizenship, community, and belonging.

Anthropology 1709

The Anthropology of Power: Sovereignty, Hegemony, and Resistance (218709)

Julia Fierman

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

What does it mean when we speak of "political power"? We know, from the work of many anthropologists, that power is not a question of the state. The political anthropologist Pierre Clastres wrote about non-state societies with a deep sense of law, tradition, and propriety that actively combat the emergence of a state system. In an age where we feel constantly surveilled, it is clear that power can be invisible, yet palpable; physical force is not necessary to encourage obedience among a population. In other words, power, specifically political power, is quite a complicated manner. At a moment in global history when traditional political paradigms are being increasingly called into question, this seminar asks us to reflect on power and politics from historical and cultural perspectives that broaden our conception of political identity and political participation. By focusing on the themes of sovereignty, hegemony, and resistance, we move away

from traditional notions of power as that which is yielded by individual authority figures or state actors—although, we will certainly spend time reflecting on traditional paradigms of sovereignty. Instead, we contemplate the many shapes political power takes in geographically and ideologically diverse contexts. In doing so, the following questions emerge: Why do so many seem willing to kill and die for political causes? What does it mean to have a political identity? Where is the boundary between complicity and resistance? We will approach these questions through a combination of political theory and ethnography that will place political philosophers in conversation with anthropologists with the aim of elucidating the genealogy of shared preoccupations across the disciplines.

Neoliberalism: Empire, Extraction, and the Making of the Global Social Order (218192)

Salmaan Keshavjee

Jason Silverstein

Lindsey Zeve

2022 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This course is designed primarily for advanced undergraduates and graduate students who are interested in the relationship between neoliberalism, the global social order, and inequities in health and wellbeing. It examines neoliberalism as a political ideology that, paradoxically, both sustains and masks deeply extractive social relations of production whose harms and benefits are unevenly distributed across time, place, and communities. The course is designed to enable students to develop the skills and knowledge necessary to understand, theorize, and critique how neoliberal regimes of governance shape polities and sociopolitical subjectivities, structure and constrain life opportunities, and perpetuate enduring forms of social injustice.

Activist, Collaborative, and Engaged Interventions in Anthropology (215944)

Andrea Wright

2022 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

What approaches and methodologies do anthropologists use to examine and strengthen theories and practices oriented towards community? What responsibilities do anthropologists have to the people and places with which they work? Can and should anthropologists engage in research that is community driven, politically conscious, and centrally concerned with the transformation of our social conditions? The urgency of the ongoing global pandemic and continued injustice and violence underscore the importance of connecting the work we are doing inside the classroom with the work being done in our local and global communities. This work is not apolitical or individual, and we must analyze the inherent inequalities and social dimensions of what it means to conduct engaged scholarship embedded within particular contexts. By employing a hands-on approach to engaged anthropology, this course will explore these questions and more. We will begin the semester by learning the theoretical and methodological underpinnings of anthropology as a discipline and engaged anthropology as an intervention. Readings will focus on ethnographic, scholarly, and public-facing works that illustrate how culture, social relations, and systems of power shape the experiences, practices, and interactions of individuals and their communities as they strive to establish and maintain collaborative relationships in pursuit of a more just world. The course will culminate in a community or campus-based project on a critical topic chosen by the student.

Anthropology 1781

What Is Latin America?: Politics, Culture, Identity (218707)

Julia Fierman

2021 Fall (4 Credits) **Schedule:** M 0600 PM - 0845 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar focuses on the anthropology of Latin America in the context of late capitalism to understand the political, economic, and cultural consequences of particular modes of production and the social worlds they create. Through the genre of ethnography, we examine these consequences by focusing in on the major thematic foci of anthropologies of Latin America: labor, political economy, illiberal governance, crime and policing, political violence, poverty, and corruption. We will read several texts that address each theme, often providing insight into these topics from different geographical contexts within Latin America. In doing so, we will contemplate what it means to examine Latin America as a discreet region, interrogating the structural similarities that supposedly unite this extremely diverse part of the world, while also noting differences and inconsistencies that are often obscured when we mistakenly consider it to be a homogenous part of the world. We will also understand Latin America, and the academic study of Latin America, in the context of global North-South relations, as we are attentive to how scholarship has both problematized and reinforced the structural inequalities of the North-South binary. At the same time, this course's focus on Latin America in the context of late capitalism places the provocative texts we will read together in conversation with broader global debates about the effects of globalization and the expansion of neoliberalism on communities across the globe.

Anthropology 1802

Language, Race, and Ethnicity (219705)

Joyhanna Garza

2022 Spring (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This course examines the co-articulations of race, ethnicity, and language across various historical, societal, and institutional contexts. Furthermore, we examine the ways in which racialized bodies come to be constructed as engaging in specific linguistic practices, and conversely, how linguistic practices come to stand as a proxy for racialized speakers. By drawing attention to the historical and contemporary processes that structure the co-naturalization of language and race across diverse settings, this course brings together linguistic anthropological literature on language ideologies (and language and race) as well as theorizations of race from ethnic studies and critical race theory. By exposing students to both traditional and current models of language and ethno-racial identity, the course critically examines the treatment of race as an isolatable dimension while attending to the material dimensions of language. The scholarly work interrogate various sites of racial, ethnic, and linguistic negotiation. Crucially, this course aims to destabilize taken-for-granted notions about race and language and to examine the ways in which hegemonic power formations are reinforced or otherwise reconfigured in seemingly fleeting and/or mundane practices.

Anthropology 1824

Race and Genetics: American Biopolitics (213467)

Anna Jabloner

2021 Fall (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar examines the increasingly convoluted relationship between genetics/genomics and race in the United States. In this contemporary moment, geneticists are debating definitions or "locations" of race on the human genome. Some draw on older racial classifications, others claim that the complexities of human ancestry cannot be captured by race. In this course, we will read social scientific studies of race categories in genetics and genomics, as well as scholarship on the meanings of race as identity category in American society. Rather than define what race really is or pass judgments on biology, our goal will be to understand a) the historically and culturally specific relationship between race and genetics, and b) the political stakes and charged conditions and implications of the current entanglements of genomic science and race categories in American

society.

Where Science Meets Society: Introduction to STS (213469)

Anna Jabloner

2022 Spring (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The German word for science literally means "knowledge made." In line with this meaning, STS approaches science as practice. The interdisciplinary field asks empirically and methodologically how knowledge is made, how truths become truths, and how matters come to matter and to be matters of fact. This course serves as basic introduction to STS, highlighting key political interventions, theoretical contributions, and the field's recent ascent into a burgeoning academic inter-discipline.

Digital Ethnographic Methods (219706)

Joyhanna Garza

2022 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

The abrupt physical closures of 2020 continuing into the present moment have brought into sharp relief the urgency of taking the digital seriously as a mode by which sociality – however constrained – is created and maintained. Rather than posit a singular method of digital ethnography, this course is designed to expose students to different methods and theoretical entry points into ethnography in order to enable students to identify the methods which work best for their present and future research purposes. Hence, the course features the work of diverse practitioners of digital ethnography – with an emphasis on deeply contextualized online practices. Such works discuss an array of digital platforms and theoretical engagements including concepts which digress from the traditional interests of anthropological inquiry. Crucially, this course approaches digital spaces as far-from-neutral and instead as deeply ideologically laden sites that require an attention to various systems, including those which structure everyday life beyond the virtual. Thus, the course emphasizes the blurriness between offline and online practices, communities, and worlds, while highlighting critical methodological interventions in ethnography more broadly. Students will gain hands-on training in the digital research process by way of weekly exercises throughout the semester. This is also a reading-intensive course where students are encouraged to "read for method." I ask that you review the syllabus carefully and decide for yourself if you can commit to the

workload this semester.

Care in Critical Times (216164)

Andrea Wright

2021 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

What is care? How can and do communities mobilize care as a social intervention, political act, and tool for building intimacy, healing, and hope? Now, more than ever, it is imperative that we care for ourselves and our communities, but caring is not an apolitical or individual act and we must analyze the inherent inequalities and social dimensions of what it means to give and receive care. Employing a feminist mode of inquiry and an engaged anthropology approach, this course requires students to not only ask how they might engage in caring acts with their own communities, but to complete a locally based community project that brings care, in all its multifariousness, to the fore. Readings will focus on ethnographic, scholarly, and public-facing works that illustrate how culture, social relations, and systems of power shape the experiences, roles, practices, and interactions of individuals and their communities in the exchange of care.

Anthropology 1991

Anthropology of the Future (219704)

Michelle Choi

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Humans have long been fascinated with anticipating, speculating, preparing, and waiting for the unknown future. 'The future' has a pervasive presence in our lives, when we forecast the local weather, plan the national economy, promise in legal contracts, imagine in science fictions, aspire in political movements, trade in futures markets, and much more. More than ever, the future is both an excitement and anxiety-inducing topic of interest to scholars and experts in domains ranging from public health, national security, urban design, to environmental science. What can anthropology offer to this increasing fascination with the future? In this undergraduate-level seminar course, we explore how the uncertain future is being engaged

with in various corners of the world through the lens of ethnography. The course first begins with a theoretical and methodological grounding for an anthropological study of the future. We then move on to the latest anthropological scholarship on the future, in fields ranging from the economy, media, health, to the environment. This seminar engages students in questions such as: How is the past informing our engagements with the future? What do our future anticipations reveal about social problems and concerns facing us in the present? Do these imagined futures reflect differences in race, class, gender and/or generation? How do politics, ethics and affects come together to make a particular future matter (or not matter)? How is the privileging of some futures over others affect how present day resources are used? This course will offer students an ethnographically grounded understanding of contemporary changes and developments (e.g. surveillance capitalism, platform labor, digital activism, and climate change) that are re-configuring our collective futures and sharpen students' critical understanding of future-oriented thinking and action in the contemporary world.

GIS & Spatial Analysis In Archaeology (120580)

Jason Ur

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 24

An introduction to the GIS and remote sensing methods used by archaeologists to document and analyze datasets at the scale of the site and the region. This class will involve the hands-on use of printed maps, aerial photography, satellite imagery, digital terrain models, GPS-based observations, and UAV (drone) photogrammetry to approach archaeological research questions. Students will gain competence in creating spatial data for fieldwork, print publication, and online visualization (web maps and 3D modeling), and in basic spatial analysis of archaeological datasets. Labs will use data from the instructor's Middle Eastern case studies, but students will be responsible for assembling a GIS database for their own region of interest.

Lithic Technology (108968)

Amy Clark

2021 Fall (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Stone tools represent the oldest known human technology. They represent the most abundant and

arguably one of the most informative elements of the archaeological record for reconstructing ancient human behavior over the last 3.3 million years. In this graduate seminar that is open to undergraduates with permission, students are provided with a solid methodological and theoretical grounding in how to interpret stone (lithic) tools. The course includes hands-on training in how to identify and analyze stone tools, qualitative and quantitative approaches to process and interpret lithic data, and detailed discussions of current theoretical perspectives that use stone tools to understand broader questions about the evolution and diversity of human behavioral adaptations. The course will draw heavily on the analysis of archaeological collections from New World and Old World stored at Harvard's Peabody Museum, capped by student-devised experimental research projects.

Course Notes:

Archaeology and Heritage (160955)

William Fash

2022 Spring (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The links between archaeology, cultural heritage, and nation building have been fundamentally important to archaeological practice since the origins of the discipline. The uses and abuses of archaeology by the state over the past fifty years have been criticized by all manner of social scientists, journalists, local communities and indigenous people in countries across the globe, in dozens of books, hundreds of articles, and The International Journal of Heritage Studies. Archaeological practice and heritage management continue to be the topic of lively theoretical and legal debates by multiple stakeholders with competing claims to the past. The ideological uses and commodification of archaeological heritage by diverse factions has led many archaeologists to become actively involved in creating sustainable solutions that promote responsible heritage stewardship in this dynamic context. The members of the seminar will read and discuss theoretical schema, practice and critiques from the Americas and the Old World in examining innovative approaches to archaeological heritage management. The focus in this seminar will be on finding a 'third way' to address the valid claims of local communities and indigenous peoples, vis-à-vis the ways central governments construct their own origin myths and legitimation of the state through archaeological research and its presentation to the public.

Paperwork (212905)

Malavika Reddy

2021 Fall (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

How does paper work in contemporary life? This course approaches this question by focusing on the paperwork, files, and record keeping practices of three organizational forms – bureaucracy, the corporation, and the nation-state. The aim of the class is for students to develop, in relation to their research sites and questions, a media theory of paperwork, a conceptual toolkit to make visible and to theorize an often-overlooked form. Tacking among ethnography, history and social theory, this course examines how paperwork – from forms, reports and memoranda to identity papers, receipts and business cards – mediate and materialize the collective projects that produce them. What is the relation of power and paper, and how might this question help us locate and understand the mundane materiality of social life?

The course begins with a discussion of methods. With what conceptual and ethnographic tools have social scientists made sense of paper forms? The class is then divided in thirds: the first examines the relationship of documents and bureaucracy; the second asks about the ways in which paperwork makes people and power; and the final section considers how paper artifacts construct pasts and (purportedly paperless) futures.

Feminism and Anthropology (213468)

Anna Jabloner

2022 Spring (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course considers the relationship between feminism (as activist realm, as theoretical field, in its institutionalized form as gender studies) and anthropology. We will begin with early ethnographic writing by women and about women, and analyze some of the interventions feminists hope to make in anthropology. We will then examine the relationship between feminism and anthropology through two topics: kinship and politics. Our course will consider how feminist anthropologists have connected the study of kinship, culture and nature, and carved out a place for the anthropological study of gender relations. In our study of kinship, the politics of reproduction and of labor will be important issues, such as the question of who gets to be related to whom, and whose work counts as what. In our study of politics, we will look at specific feminist statements and consider their impact on, and relationship with, the field of anthropology. Finally, our course will investigate more recent work on nature and biology, as well as (queer) gender and sexuality, in order to speculate on the futures and potentials of feminist anthropologies.

Introduction to Feminist Science Studies (218183)

Anna Jabloner

2021 Fall (4 Credits) **Schedule:** W 0900 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar is an introduction to the interdisciplinary field of feminist science studies. As the feminist movements of the 1970s began to change the American political landscape, academic feminists began inquiries into the marginalization of women in science – a debate philosopher Harding called "the woman question in science." Feminist scientists began to examine sex, gender and race bias in their own disciplines. In consequence, they raised questions about androcentric – male-centered – epistemologies underlying Western science (alongside a growing critique of Eurocentrism). Harding called this debate the "science question in feminism." Since then, feminist science studies scholars have worked up a critical literature on sex, gender, race, class, and disability in genetics, primate studies, botany, physics, as well as in the humanities and social sciences. We will seek to understand what motivated feminist science studies' emergence and its main intervention areas, and we will highlight the field's relevance in the current moment as calls to decolonize the academy are being debated. As you learn about this field, my goal is for you to develop skills for thinking critically and conceptually about all knowledge production. Whether you are an anthropologist, natural scientist or STS researcher, you can use this class methodologically to consider how feminist approaches enable social justice-oriented trajectories across all fields of research.

Landscape Fieldwork: People, Politics, Practices (107371)

Gareth Doherty

2022 Spring (4 Credits) **Schedule:** F 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Landscape fieldwork offers the means to understand the complexities of landscapes. Through a people-centered approach, this lecture course explores landscape architecture's ethical and political power to shape the world. A central premise of the course is that experiential knowledge—gained from the embodied engagement of landscape fieldwork—can help to revise how we understand and use western canons of landscape knowledge and offer new possibilities for the design imagination. The course is structured in five parts, each of which consists of 3–4 class sessions focused on a particular site, including smaller-scale public spaces, border landscapes, sacred groves, archipelagos, and regions. We will concentrate in the postcolonial and Islamic worlds—the Arabian Peninsula, the Caribbean, Brazil and West Africa, and Western Europe. We will study diverse literatures, ethnographies, and interviews, using and critiquing established landscape ethnographic methods. In doing so, we apply the descriptive, participatory, and reflective aspects of ethnography to design, and the imaginative, projective, and prescriptive capacities of design to ethnography. By cultivating this design/ethnographic ground, this course opens up new possibilities for understanding the present and imaging the future. This course provides students with training in ethnographic fieldwork methods that can be applied in other academic and professional projects. On completion of the course, students will be equipped to conduct their own landscape fieldwork projects, either alone or collectively. During the semester, students will: 1. Apply landscape fieldwork as a tool for knowledge-building 2. Develop theoretical positions arising from fieldwork 3. Identify non-written forms of note taking 4. Experiment with visualizing social phenomena and the lived experiences of spaces 5. Produce and analyze collective ethnographic data 6. Imagine and recommend design and policy propositions informed by fieldwork Grades are based on participation, completion of assignments, a remote fieldwork project, and a final design proposal. There are no prerequisites. Undergraduates as well as masters and doctoral students are welcome to enroll. The course is cross-listed between the Department of Landscape Architecture, the Department of Anthropology, and the Department of African and African American Studies. Where possible, the synergy between fields will be cultivated to maximize exchange between them.

Course Notes: **Offered jointly with the Graduate School of Design as GSD 3336.**

Remaking Life and Death (211109)

Anya Bernstein

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course is a critical reading graduate seminar focusing on how defining the boundaries between life and death became a matter of profound political, cultural, and scientific debate. Guided by the concepts of bio- and necropolitics, we will explore the shifting relations between body and person, human and time, and technology and biology while attending to the changing political, biomedical and religious contexts. The course includes readings from a number of anthropological subfields, including medical anthropology, anthropology of science and technology, religion, politics, and the Anthropocene. We will discuss the range of issues, from the classic studies of mortuary rituals to political lives of dead bodies to technoscientific reconfigurations of the human and of life itself.

Ethnographic and Critical Media Studies Approaches to Digital Media (218720)

E. Gabriella Coleman

2022 Spring (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This class will conjoin recent ethnographies and media studies books on digital media with complementary pieces on politics, language, communication, and/or technology. The book selection will expose students to cutting edge research by anthropologists and critical internet and digital media scholars who address issues of labor, visual culture, journalism, algorithms, race, class, activism, indigeneity, and feminism while the additional text, in the form of an article or chapter, will expose students to classical or more theoretical texts around questions of labor, publics, and technology. Pairing these texts together will allow students to familiarize themselves with and critically rethink theoretical paradigms and arguments around technology and politics vis-a-vis empirically grounded studies and ethnographies covering a range of issues about the use and abuse of digital technologies during contemporary times and in different areas of the world.

Genealogies of Social Anthropology at Harvard (218352)

Byron Good

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course is designed for students beginning graduate study in social and cultural anthropology and is required for all first-year Social Anthropology graduate students. It is intended to provide critical skills for reading in and contributing to social and cultural theory. It offers a selective overview of theoretical and empirical trends in the discipline of anthropology, focusing on intellectual connections between writing and research of faculty members at Harvard and different theoretical genealogies within the discipline at large. Rather than providing a single historical overview of the classic anthropological corpus, the course will provide an opportunity to read selected writings by faculty members in the Department, as well as writings that faculty members recommend that represent a stream of anthropological writing with which they identify, and to discuss these in the seminar with each faculty member. The course asks what has counted for anthropologists as legitimate research questions, forms of research, ways anthropologists have situated themselves in the field, and approaches to ethnographic writing.

The hope is that students will begin to re-assemble elements of the discipline's past and present in the form of their own vision of a scholarly agenda for the discipline's future. Ultimately, the course is designed to prepare students to answer questions such as the following: What should be specifically anthropological questions in the 21st Century? How should anthropology define itself in relation to other scholarly projects, especially those in other social sciences? What is the relationship between generating knowledge, social critique, and forms of engagement? What should define anthropology's central intellectual problematics? And thus, what are the primary historical genealogies within anthropological theorizing, and where do the students in the class position themselves within those genealogies?

Course Notes:

Required of candidates for the PhD in Social Anthropology. Not open to undergraduates.

Anthropology 3626

Research Design/Proposal Writing (116522)

Anya Bernstein

2021 Fall (4 Credits) **Schedule:** T 0600 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course is part seminar, part practicum. Its purpose is to help students conceptualize and design a research project, to craft effective research and grant proposals, and to prepare for ethnographic and archival work. The first and longest part of the course will focus on formulating a researchable project, in all its various elements; how to write a statement of problem, to frame arguments/theses, to situate work in the appropriate anthropological literature/s, to develop a methodological approach, and techniques, commensurate with the objectives and claims of the study, and to make a case for its significance and contribution to the discipline. To the extent time permits, the class will also pursue a secondary objective: imparting professional skills, primarily in the area of writing and publishing, but also in oral presentation, that will be useful to students throughout their professional lives.

Course Notes:

By permission only. The class is open to third year social anthropology students who have done most of the background reading for their PhD dissertation research and are actively working on a formal research proposal, of which they have a draft in hand.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Anthropological Research Methods (108949)

Kaya Williams

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 17

This course offers a conceptual overview of research methods used by anthropologists. We will hear from faculty members their experience of doing fieldwork—from formulating a research question, choosing a site, entering the field

to ethical issues they face in the field. Students will not only learn about but also practice these various methods and reflect on their projects in lights of the discussion about methods. To that end, students will complete several exercises and craft a method paper for their own project.

Course Notes:

This course is limited to graduate students in anthropology.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Anthropology 3636

Pedagogy in Anthropology (214587)

Ajantha Subramanian

Matt Liebmann

2022 Spring (2 Credits) **Schedule:** M 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course has two aims: 1) to provide graduate students with the necessary training to be effective Teaching Fellows at Harvard, and 2) to give you the tools to develop your own approach to critical pedagogy in the field of Anthropology. Required for graduate students in the Spring of their second year. Classes will also be advertised to all Anthropology graduate students as optional Pedagogy Workshops for professional development. While discussions will be tailored to the unique challenges of teaching in Anthropology (across Archaeology and Social Anthropology), students will also be prepared to TF outside of Anthropology. Workshop-style classes are interspersed with formal office hours throughout the semester. Office hours are designed for one-on-one or small-group consultation with the Pedagogy Fellow in conjunction with course requirements.

Requirements: **Course open to Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)

Applied Computation

Subject: Applied Computation

Applied Computation 207

Systems Development for Computational Science (128105)

Fabian Wermelinger

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing and data sciences. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to adapt basic tools and approaches to solve computational problems in academic or industrial environments.

Recommended Prep:

Students are expected to have basic programming experience (Computer Science 50).

Applied Computation 209A

Data Science 1: Introduction to Data Science (109898)

Pavlos Protopapas

Natesh Pillai

2021 Fall (4 Credits) **Schedule:** F 0945 AM - 1100 AM
MW 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part one of a two part series.

Course Notes:

Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements: **Not to be taken in addition to Computer Science 109, or Computer Science 109A, or Statistics 121, or Statistics 121A.**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll

Applied Computation 209B

Data Science 2: Advanced Topics in Data Science (203547)

Pavlos Protopapas

Mark Glickman

2022 Spring (4 Credits) **Schedule:** MWF 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two part series.

Course Notes:

Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.

Recommended Prep:

CS 109a, AC 209a, or Stat 121a required.

Requirements: **Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking APCOMP 209B) AND (Cannot take APCOMP 209B, if already taken APCOMP 209 OR CS 109 OR CS 109B OR STAT 121 OR STAT 121B)**

Applied Computation 211

Models, Algorithms and Data (218913)

Petros Koumoutsakos

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The class presents fundamental computing concepts bridging models algorithms and data. The course will present a unifying approach to stochastic methods for modeling, search, optimization and data driven uncertainty quantification. Class projects will emphasize the steps necessary to transfer algorithms to software in multi- and many-core computer architectures.

Course Notes:

This course is also offered as Applied Mathematics 211. Students may not take both for credit. Total class capacity of 30 includes students in both AM 211 and AC 211.

Recommended Prep:

Linear algebra, partial differential equations, probability, optimization, object-oriented programming, parallel computing.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Computation 215

Advanced Practical Data Science (215121)

Pavlos Protopapas

2021 Fall (4 Credits) **Schedule:** TR 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course aims to review existing Deep Learning flow while applying it to a real-world problem. Then we will build and deploy an application that uses the deep learning model to understand how to productionize models. This course follows the CS109 model of balancing between concept, theory, and implementation. Split into three parts; the course starts with the review of Deep Learning concepts for data and modeling and how to apply them to different tasks, including vision and language tasks. The next part will be Development, where you use the models you trained in part 1 and incorporate them into real-world applications. Finally, you will Deploy the application in Google Cloud Platform (GCP). The three parts will cover in detail topics such as Transfer learning, Containerization using Docker, and Scaling deployments using Kubernetes. At the end of this module, you will build efficient deep learning models and design, build and deploy applications that scale.

Recommended Prep:

AC 209A, AC 209B

Applied Computation 221

Critical Thinking in Data Science (207093)

Michael Smith

2022 Spring (4 Credits) **Schedule:** MW 1115 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 75

This course examines the wide-ranging impact data science has on the world and how to think critically about issues of fairness, privacy, ethics, and bias while building algorithms and predictive models that get deployed in the form of products, policy and scientific research. Topics will include algorithmic accountability and discriminatory algorithms, black box algorithms, data privacy and security, ethical frameworks; and experimental and product design. We will work through case studies in a variety of contexts including media, tech and sharing economy platforms; medicine and public health; data science for social good, and politics. We will look at the underlying machine learning algorithms, statistical models, code and data. Threads of history, philosophy, business models and strategy; and regulatory and policy issues will be woven throughout the course.

Course Notes:

This does not count as a technical or disciplinary course for SEAS PhD students, nor for SEAS masters-degree students outside of CSE and Data Science.

Recommended Prep:

CS 109A, Introduction to Data Science or equivalent by instructor approval.

Applied Computation 295

Deep Learning for NLP (218882)

Christopher Tanner

2021 Fall (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 35

How can computers understand and leverage text data and human language? Natural language processing (NLP) addresses this question, and in this course students study the current, best approaches to it. No prior NLP experience is needed, but it is welcomed. This course provides students with a foundation of

advanced concepts and requires students to conduct significant research on an NLP topic of their choosing. The aim is to produce a short paper worthy of submitting to an NLP conference. Assessment also includes pop quizzes, homework assignments, and an exam. The course starts with language representations and modelling, followed by machine translation (converting text from one language to another). Next, students learn about transformers (e.g., BERT and GPT-2), which are incredibly powerful deep learning models that currently yield state-of-the-art results in nearly every NLP task. We end the semester by covering tasks concerning bias and fairness, adversarial approaches, coreference resolution, and commonsense reasoning.

Course Notes: **AC 295 is also offered as CS 287r. Students may not take both for credit.**

Class Notes: **Students should complete the Course Application Form on the course website to indicate your prior experience and interest.**

Recommended Prep: **At least one class with substantial object-oriented programming; basic foundation in probability and calculus (Statistics 110 or equivalent); and basic knowledge of Machine Learning (e.g., CS181, CS109A, CS109B, or MIT 6.036, or equivalent). No prior NLP experience necessary.**

Computational Science and Engineering Capstone Project (156202)

Christopher Tanner

2022 Spring (4 Credits) **Schedule:** R 0945 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The capstone course is intended to provide students with an opportunity to work in groups of 3-4 on a real-world project. Students will develop novel ideas while applying and enhancing skills they have acquired from their core courses and electives. By requiring students to complete a substantial and challenging collaborative project, the capstone course will prepare students for the professional world and ensure that they are trained to conduct research. There will be no additional homework. There will be several mini-lectures, focusing on supplemental skills such as technical writing, public speaking, reading research papers, using version control software, identifying biases, etc. Since the projects concern real-world projects, datasets will likely be messy, and there is a focus on effectively communicating your progress to both the staff and partner organization.

Interdisciplinary Seminar in Applied Computation (109339)

Daniel Weinstock

2022 Spring (2 Credits) **Schedule:** WF 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course, centered on the Institute for Applied Computation Science (IACS) seminar series, will provide broad exposure to cutting-edge topics, applications, and unifying concepts in Computational Science & Engineering. Students will read, present and discuss journal articles related to IACS talks, attend the seminars and meet with visiting speakers. Possible topics to be covered include scientific visualization, computational approaches to disease, mathematical neuroscience, computational archeology, and computational finance.

Subject: Applied Mathematics

Applied Mathematics 10

Computing with Python for Scientists and Engineers (213407)

Efthimios Kaxiras

Logan McCarty

Georgios Neofotistos

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is a systematic introduction to computing (with Python and Jupyter notebooks) for science and engineering applications. Examples of applications are drawn from a broad range of disciplines, including physical, financial, and biological-epedemiological problems. The course consists of two Modules: 1. Basics: essential elements of computing, including types of variables, lists, arrays, basic recursive operations (for, while loops, if statement), definition of functions, file handling and simple plots, numerical differentiation, fitting of curves and error analysis, plotting and visualization tools in higher dimensions. 2. Advanced: root finding, series expansions, numerical integration, solving simple ordinary and partial differential equations, use of random numbers for sampling and simulations, such as Monte Carlo integration and random walks. Course work consists of attending lectures and labs, weekly homework assignments, a mid-term project and a final project; while work is developed collaboratively, coding assignments are submitted individually.

Recommended Prep:

Mathematics 1b is a prerequisite, although it can be taken concurrently (particularly for sophomores). Some limited concepts from Mathematics 21a are used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, using Python, and starts from the level of a complete beginner.

Applied Mathematics 22A

Solving and Optimizing (211334)

Steven Gortler

2021 Fall (4 Credits) **Schedule:** MWF 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course covers a combination of linear algebra and multivariate calculus with an eye towards solving systems of equations and optimization problems. Students will learn how to prove some key results, and will also implement these ideas with code.Linear algebra: matrices, vector spaces, bases and dimension, inner products, least squares problems, eigenvalues, eigenvectors, singular values, singular vectors. Multivariate calculus: partial differentiation, gradient and Hessian, critical points, Lagrange Multipliers.

Course Notes:

Not to be taken in addition to AM21b or Math21b. Some overlap with AM21a and Math21a. Can be used in conjunction with Stat110 to fulfill the mathematics requirements for computer science.

Recommended Prep:

Mathematics 1b or an equivalent background in mathematics.

Applied Mathematics 22B

Integrating and Approximating (212922)

Dina Obeid

2022 Spring (4 Credits) **Schedule:** MWF 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Multivariable and vector calculus, supplemented with numerical methods. Multivariate calculus: multiple integration, functions of two or three variables, approximating functions. Parameterized curves, line and surface integrals. Vector calculus: gradient, divergence and curl, Green's, divergence theorems. Complex numbers. Select differential equations topics.

Recommended Prep:

Either Math 1b or placement into Math 21a.

Requirements: **Prerequisite APMTH 22A**

Introduction to Applied Mathematics (122564)

Cengiz Pehlevan

2022 Spring (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course provides an introduction to the problems and issues of applied mathematics, focusing on areas where mathematical ideas have had a major impact on diverse fields of human inquiry. The course is organized around two-week topics drawn from a variety of fields, and involves reading classic mathematical papers in each topic. The course also provides an introduction to mathematical modeling and programming.

Class Notes: **Course limited to 30 students. Sections will meet Friday, 12:00pm-1: 15pm.**

Recommended Prep:

Mathematics 1b is a prerequisite, although it can be taken concurrently. Some limited concepts from Mathematics 21a / Applied Mathematics 21a will be used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, and starts from the level of a complete beginner.

Applied Mathematics 91R

Supervised Reading and Research (121692)

Margo Levine

Sarah Iams

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Supervised reading or research on topics not covered by regular courses. For AM concentrators, work may be supervised by faculty in other departments. For non-concentrators, work must be supervised by an AM faculty member. Students must receive the approval of an (Associate) Director of Undergraduate Studies and obtain their signature before submitting AM91r forms.

Course Notes:

Students cannot take AM 91r and 99r simultaneously with the same supervisors. Normally may not be taken more than twice. May be counted once for concentration credit in Applied Mathematics (as a breadth course). May be taken in either term. When project work from APMTH 91R is used to satisfy the honors modeling requirement, a paper describing the project must be submitted to the concentration for evaluation by the end of the final exam period in the semester in which the 91R is undertaken. For further information, write am-advising@seas.harvard.edu.

Statistical Inference for Scientists and Engineers (132127)

Jeffrey Paten

2021 Fall (4 Credits) **Schedule:** MW 1245 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 55

Introductory statistical methods for students in the applied sciences and engineering. Random variables and probability distributions; the concept of random sampling, including random samples, statistics, and sampling distributions; the Central Limit Theorem; parameter estimation; confidence intervals; hypothesis testing; simple linear regression; and multiple linear regression. Introduction to more advanced techniques as time permits.

Recommended Prep:

Nonlinear Dynamical Systems (121989)

Sarah Iams

2022 Spring (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 45

An introduction to nonlinear dynamical phenomena, focused on identifying the long term behavior of systems described by ordinary differential equations. The emphasis is on stability and parameter dependence (bifurcations). Other topics include: chaos; routes to chaos and universality; maps; strange attractors; fractals. Techniques for analyzing nonlinear systems are introduced with applications to physical, chemical, and biological systems such as forced oscillators, chaotic reactions, and population dynamics.

Recommended Prep:

Mathematics 21a and 21b, or Applied Mathematics 21a and 21b.

Introduction to Scientific Computing (120198)

Dina Obeid

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Many science and engineering problems don't have simple analytical solutions or even accurate analytical approximations. Scientific computing can address certain of these problems successfully, providing unique insight. This course introduces some of the widely used techniques in scientific computing through examples chosen from physics, chemistry, biology, computer science and other fields. The purpose of the course is to introduce methods that are useful in applications and research and to give the students hands-on experience with these methods. The main programming language will be Python.

Course Notes:

Applied Mathematics 111 is also offered as Engineering Sciences 111. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 111.

Recommended Prep:

Applied Mathematics 21a and 21b, or Mathematics 21a and 21b, or permission of instructor.

Mathematical Modeling (118021)

Zhiming Kuang

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes:

Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Recommended Prep:

Prerequisite: Applied Mathematics 21a and 21b, or Mathematics 21a and 21b or permission of instructor. Taking APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115 is recommended but not required.

Convex Optimization and Its Applications (219745)

Yiling Chen

2022 Spring (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This course focuses on recognizing, formulating, and solving convex optimization problems that arise in applications. We will introduce basic convex analysis, discuss convex optimization theory, introduce tools and methods for solving convex optimization problems, and touch on some advanced topics. We will explore all these in the context of applications. The objective is to give students the theoretical training to recognize and formulate convex optimization problems and provide students with the tools and methods to solve the problems in their own applications of interest.

Recommended Prep:

Linear algebra (AM 21b or Math 21b/22a/25a/55a or equivalent), linear programming (AM 121 or equivalent) and some basic understanding of probabilities.

Applied Mathematics 205

Advanced Scientific Computing: Numerical Methods (110684)

Christopher Rycroft

2021 Fall (4 Credits) **Schedule:** MW 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An examination of the mathematical foundations of a range of well-established numerical algorithms,

exploring their use through practical examples drawn from a range of scientific and engineering disciplines. Emphasizes theory and numerical analysis to elucidate the concepts that underpin each algorithm. There will be a significant programming component. Students will be expected to implement a range of numerical methods through individual and group-based project work to get hands-on experience with modern scientific computing.

Recommended Prep:

Familiarity with linear algebra and calculus; basic programming knowledge at the Computer Science 50 level.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Quantitative Reasoning with Data	Yes

Applied Mathematics 207

Advanced Scientific Computing: Stochastic Methods for Data Analysis, Inference and Optimization (127561)

Weiwei Pan

2021 Fall (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 55

Develops skills for computational research with focus on stochastic approaches, emphasizing implementation and examples. Stochastic methods make it feasible to tackle very diverse problems when the solution space is too large to explore systematically, or when microscopic rules are known, but not the macroscopic behavior of a complex system. Methods will be illustrated with examples from a wide variety of fields, like biology, finance, and physics. This class follows a "flipped-classroom" format; students are required to watch the lecture videos and study new materials prior to each class meeting (including the first class meeting).

Recommended Prep:

CS 50 or working proficiency in a computer programming language (python strongly recommended), as well as STAT 110 or a course in calculus based statistics and CS 109A, B.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll

Applied Mathematics 211

Models, Algorithms and Data (218606)

Petros Koumoutsakos

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The class presents fundamental computing concepts bridging models algorithms and data. The course will present a unifying approach to stochastic methods for modeling, search, optimization and data driven uncertainty quantification. Class projects will emphasize the steps necessary to transfer algorithms to software in multi- and many-core computer architectures.

Course Notes:

This course is also offered as Applied Computation 211. Students may not take both for credit. Total class capacity of 30 includes students in both AM 211 and AC 211.

Recommended Prep:

Linear algebra, partial differential equations, probability, optimization, object-oriented programming, parallel computing.

Additional Course Attributes:

Applied Mathematics 216

Inverse Problems in Science and Engineering (135919)

Michael P. Brenner

2022 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Many problems in science and engineering are inverse problems. Any experiment that requires an explanation can be couched thus - given the data, what is the theory/model that provides it - this is an inverse problem. In engineering, a given function (in a product/software ….) requires a design - again an inverse problem. This course will introduce a wide array of features of inverse problems from science and engineering - from oil prospecting and seismology to cognitive science, from particle physics to engineering design. We will then introduce deterministic and probabilistic algorithms for solving these problems. Much of the class will be spent studying how the recent revolution in deep neural networks can (and cannot) be used to solve such inverse problems. The class will have a substantial computational component -- part of every class session will contain instruction and computer implementation of the algorithms in question. Students will carry out final projects in their own area of interest. Programming will be taught and carried out in Python and Tensorflow.

Recommended Prep:

Linear algebra, Differential equations, Basic probability.

Neural Computation (212912)

Cengiz Pehlevan

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces advanced mathematical methods and models used in theoretical neuroscience and theory of neural networks. We will explore computations and functions performed by the brain, and how they are implemented by neurons and their networks. We will cover selected topics from deep learning theory; spiking neuron models; population codes; normative theories of sensory representations; models of synaptic plasticity; computing with dynamics in recurrent neural networks; attractor network models of memory and spatial maps; neural models of probabilistic inference in the brain and drift-diffusion models of decision making. Concrete examples of applications of these ideas to the brain will be discussed. Topics at the research frontier will be emphasized.

Recommended Prep:

APMTH 21A and APMTH 21B or equivalent.

Applied Mathematics 233

Interplay between Control and Learning (219746)

Na Li

2022 Spring (4 Credits) **Schedule:** MW 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This advanced graduate course will provide students with an introduction to current areas of research at the intersection of control and machine learning. The course will firstly focus on tailoring control tools to study algorithms in large-scale optimization and machine learning. Then students will study how to combine reinforcement learning and model-based control methods for control design problems. Examples of topics include: first-order and zeroth-order optimization; dissipation inequality; stability of dynamical systems and Lyapunov functions; LMI (Linear Matrix Inequality); robust control; model predictive control, adaptive control; MDP and reinforcement learning; control-oriented analysis tools for temporal difference learning and Q-learning; sample complexity; policy gradient and policy optimization; uncertainty quantification and safe learning; iterative learning control; regularization of model-free control via prior model-based design; and multiagent reinforcement learning.

Course Notes:

This is an advanced theory-intensive course. Open to advanced undergraduate students with permission of the instructor. Engineering Sciences 203 is also offered as Applied Mathematics 233. Students may not take both for credit.

Recommended Prep:

Optimization (AM/ES 121 or more advanced courses) and probability (ES 150 or Stat 110 or more advanced) are required. ES 202/AM 232 or equivalent is strongly recommended.

Requirements: **Graduate Students Only (Undergraduates can submit a request to enroll)**

Applied Physics

Subject: Applied Physics

Applied Physics 50A

Physics as a Foundation for Science and Engineering, Part I (108880)

Eric Mazur

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

AP 50A is the first half of a one-year, team- and project-based introduction to physics focusing on the application of physics to real-world problems. The course is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard calculus-based introductory physics course. Besides mastering course content and developing scientific reasoning and problem-solving skills, the course goals include strengthening self-directed learning and developing collaborative skills. The course involves synchronous and asynchronous class activities and project work. It is designed to provide maximum flexibility: You can complete the asynchronous activities at your convenience; for the synchronous class activities you have a choice of timing (Tu/Th 9 am or 1:30 pm) and modality (in person/online) and you can switch timing and modality during the semester; see the course Canvas site for details. Regardless of the modality you choose for the synchronous class activities, the project work and the project fairs are in person and the project fairs will take place during the regularly scheduled class periods.

Course Notes:

AP50a is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems.

Recommended Prep:

Physics prerequisite: None. Prior physics at the high-school or college level not required. Math prerequisite: Single-variable calculus at the level of Mathematics 1a (can be taken concurrently).

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes

Applied Physics 195A

Introduction to Solid State Physics (131331)

Julia Mundy

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); x-ray diffraction; electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); magnetism; superconductivity.

Course Notes:

APPHY 195A is also offered as PHYSICS 195A. Students may not take both for credit.

Recommended Prep:

Physics 15a, 15b and 15c or the equivalent. Physics 143a. Physics 181 and Physics 143b (taken concurrently) helpful but not required.

Applied Physics 195B

Introduction to Quantum Materials and Devices (215415)

Robert Westervelt

2022 Spring (4 Credits) **Schedule:** MWF 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an introduction to quantum materials and devices, including low-dimensional materials, single and double quantum dots, Josephson junctions, and graphene. Their behavior is explained using quantum and semiclassical transport, the Coulomb blockade, and superconductivity. Quantum devices offer new approaches for electronics and photonics.

Course Notes:

Formerly AP 171 and ENGSCI 171. Applied Physics 195B is also offered as Physics 195B. Students may not take both for credit.

Recommended Prep:

Applied Physics 195A or Physics 195A, and Physics 143A or ES 170.

Applied Physics 216

Quantum and Classical Electromagnetic Interaction with Matter (141253)

Donhee Ham

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The first half of the course will cover the interaction of quantized atoms with electromagnetic fields, introducing a number of basic concepts such as coherent Rabi transitions vs. rate-equation dynamics, stimulated & spontaneous transitions, and energy & phase relaxations. These will be then used to study a range of applications of atom-field interactions, such as nuclear magnetic resonance, molecular beam and paramagnetic masers, passive and active atomic clocks, dynamic nuclear polarization, pulse sequence techniques to coherently manipulate atomic quantum states, and laser oscillators with applications. We will also touch upon the interaction of quantized atoms with quantized fields, discussing the atom + photon (Jaynes-Cummings) Hamiltonian, dressed states, and cavity quantum electrodynamics. The second half will cover the classical interaction of electromagnetic fields with matter, with special attentions to collective electrodynamics in particular, magnetohydrodynamics and plasma physics with applications in astrophysics, space physics, and Bloch electrons in crystalline solids.

Recommended Prep:

Undergraduate-level electromagnetism and quantum mechanics are recommended.

Applied Physics 225

Introduction to Soft Matter (121403)

David Weitz

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will present a survey of soft matter physics, providing an overview of the richness and breadth of the field. The emphasis will be on the physics of the systems, rather than on the formalism. It will cover most of the fields of interest within soft matter physics, both current and through the history of the field. The course is intended to be of value to both experimentalists and theorists.

Recommended Prep:

Applied Physics 284 or Physics 262. Knowledge of basic thermodynamics, statistical mechanics and differential equations.

FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Applied Physics 282

Solids: Structure and Defects (142998)

Frans Spaepen

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Bonding, crystallography, diffraction, phase diagrams, microstructure, point defects, dislocations, and grain boundaries.

Course Notes:

Intended for students in applied mechanics, materials science, condensed matter physics, chemistry, and earth sciences.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 284

Statistical Mechanics (131392)

Vinothan Manoharan

2021 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Basic principles of statistical physics with applications including: the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical points, as illustrated by the gas-liquid transition and simple magnetic models; Bose-Einstein condensation.

Course Notes:

Also offered as Physics 262. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program.

Recommended Prep:

Physics 143a and Physics 181 or Engineering Sciences 181.

Additional Course Attributes:

FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 291

Electron Microscopy Laboratory (116509)

David Bell

2022 Spring (4 Credits) **Schedule:** M 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Lectures and laboratory instruction on transmission electron microscopy (TEM) and Cs corrected, aberration-correction microscopy and microanalysis. Lab classes include; diffraction, dark field imaging, X-ray spectroscopy, electron energy-loss spectroscopy, atomic imaging, materials sample preparation, polymers, and biological samples.

Course Notes:

Primarily for graduate students planning to use TEM for their research.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 295A

Introduction to Quantum Theory of Solids (143855)

David R. Nelson

2021 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is an introductory graduate level course in solid-state physics. Lattices and symmetries. Phonons. Electronic Structure of Crystals. Metals, semiconductors, and insulators will be covered. Electrical, optical, and thermal properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Additional topics from the theory of interacting electrons, including introduction to magnetism and superconductivity, and an introduction to topological insulators.

Course Notes:

PHYS/AP 295a is an introductory graduate-level course.

Recommended Prep:

Physics 181 or equivalent, Applied Physics 195 or equivalent, and a graduate level quantum mechanics course similar to Physics 251a. (Physics 251b would be helpful and may be taken concurrently.)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 295B

Quantum Theory of Solids (146948)

Ashvin Vishwanath

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A course on the application of the principles of many-particle quantum mechanics to the properties of solids. The objective is to make students familiar with the tools of second quantization and diagrammatic perturbation theory, while describing the theory of the electron liquid, the BCS theory of superconductivity, and theory of magnetism in metals and insulators. Modern topics on correlated electron systems will occupy the latter part of the course.

Course Notes:

Applied Physics 295b is also offered as Physics 295b. Students may not take both for credit.

Recommended Prep:

Physics 251a,b, an introductory course in solid state physics, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 296

Mesoscale and Low Dimensional Devices (204955)

Donhee Ham

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits.

Recommended Prep:

Undergrad level condensed matter physics (AP/P195).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 299QR

Special Topics in Applied Physics (2-unit version) (218911)

Federico Capasso

2022 Spring (2 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Supervision of experimental or theoretical research on acceptable problems in applied physics and supervision of reading on topics not covered by regular courses of instruction.

Course Notes:

2-unit version of AP 299r. Open to graduate students only. Students must arrange such work with a member of the School of Engineering and Applied Sciences. This course is graded and is ordinarily taken with the approval of the Committee on Higher Degrees. Applicants must file a project sheet approved by the advisor before the course registration deadline; contact gradprograms@seas.harvard.edu if you have any questions. Project sheets may be obtained at https://www.seas.harvard.edu/office-academic-programs/graduate-policies-procedures-and-forms/graduate-student-forms.

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll

All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Applied Physics 368

Topics on Condensed Matter Physics (113715)

David R. Nelson

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Applied Physics 368

Topics on Condensed Matter Physics (113715)

David R. Nelson

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Applied Physics 372

Biological Physics and Quantitative Biology (125419)

Daniel Needleman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Applied Physics 372

Biological Physics and Quantitative Biology (125419)

Daniel Needleman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 374

Signaling Processing and Systems Biology (126172)

Sharad Ramanathan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 374

Signaling Processing and Systems Biology (126172)

Sharad Ramanathan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 376

Nonlinear Dynamics of Soft Interfaces (110265)

Shmuel Rubinstein

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt

Applied Physics 376

Nonlinear Dynamics of Soft Interfaces (110265)

Shmuel Rubinstein

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 384

Topics in Atmospheric and Climate Dynamics (121287)

Zhiming Kuang

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 384

Topics in Atmospheric and Climate Dynamics (121287)

Zhiming Kuang

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Applied Physics 388

Climate Dynamics and Physical Oceanography (118649)

Eli Tziperman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 388

Climate Dynamics and Physical Oceanography (118649)

Eli Tziperman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 392

Experimental Soft Condensed Matter and Materials Physics (120887)

Vinothan Manoharan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 392

Experimental Soft Condensed Matter and Materials Physics (120887)

Vinothan Manoharan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

No FAINFO	300 or 3000 level class, do not generate FAINFO

Applied Physics 394

Experimental Studies of Interfaces and Surfaces (116593)

Cynthia Friend

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Applied Physics 394

Experimental Studies of Interfaces and Surfaces (116593)

Cynthia Friend

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll

Applied Physics 396

Topics in Materials Science (142229)

Michael Aziz

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Applied Physics 396

Topics in Materials Science (142229)

Michael Aziz

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 398

Materials Science (148042)

Frans Spaepen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 398

Materials Science (148042)

Frans Spaepen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Architecture, Landscape Arch, and Urban Planning

Subject: Design

Design 300 Section: 0005

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Giuliana Bruno

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Design 300 Section: 0005

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Giuliana Bruno

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Design 300 Section: 0007

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Jerold Kayden

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Design 300 Section: 0007

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Jerold Kayden

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Design 300

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Antoine Picon

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Antoine Picon

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Design 300 Section: 002

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

K. Hays

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 002

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

K. Hays

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Design 300 Section: 003

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Erika Naginski

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 003

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Erika Naginski

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 004

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Eve Blau

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 004

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Eve Blau

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Design 300 Section: 006

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Peter Galison

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 006

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Peter Galison

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Divisional Distribution	None

Design 300 Section: 008

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Alina Payne

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Design 300 Section: 008

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Alina Payne

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Design 300 Section: 009

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Christine Smith

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Design 300 Section: 009

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Christine Smith

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Design 300 Section: 011

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Joyce Chaplin

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Design 300 Section: 011

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Joyce Chaplin

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Design 300 Section: 012

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Edward Eigen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt

Design 300 Section: 012

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Edward Eigen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Design 300 Section: 013

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Sheila Jasanoff

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 013

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Sheila Jasanoff

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt

Design 300 Section: 015

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Diane Davis

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 015

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Diane Davis

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Design 300 Section: 016

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Neil Brenner

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

Design 302

Teaching (208326)

2022 Spring (4 Credits) **Schedule:**

Instructor Permissions: None **Enrollment Cap:** n/a

Provides teaching credit for students affiliated with Architecture, Urban Planning and Landscape.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 302

Teaching (208326)

2021 Fall (4 Credits) **Schedule:**

Instructor Permissions: None **Enrollment Cap:** n/a

Provides teaching credit for students affiliated with Architecture, Urban Planning and Landscape.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Design 303

Research Faculty Related (208327)

2022 Spring (4 Credits) **Schedule:**

Instructor Permissions: None **Enrollment Cap:** n/a

For students affiliated with Architecture, Landscape, and Urban Planning. May be used for faculty-related research, such as working in a lab or as a research associate.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll

Design 303

Research Faculty Related (208327)

2021 Fall (4 Credits) **Schedule:**

Instructor Permissions: None **Enrollment Cap:** n/a

For students affiliated with Architecture, Landscape, and Urban Planning. May be used for faculty-related research, such as working in a lab or as a research associate.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO

Design 304

Direction of Doctoral Dissertations in Architecture (111709)

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Indicates time spent researching, reading, or writing in relation to doctoral studies.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Art, Film, and Visual Studies

Subject: Art, Film, and Visual Studies

Art, Film, and Visual Studies 12 Section: 1

Drawing 1: Drawing as a Visual Language (203312)

Katarina Burin

2021 Fall (4 Credits) **Schedule:** MW 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

A studio course to build the skills of drawing incrementally and expand students' visual vocabulary. Drawings will be made from life, photographs and invention. Emphasis will be placed on enhancing our observational sensibilities through life drawing and the figure, focusing on all aspects of technical development, particularly the importance of line. The aim of this course is to expand drawing skills with intention and purpose.

Course Notes:

This class is for beginners or anyone furthering their skill level.

Making Things (203314)

Katarina Burin

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 13

Currently we find ourselves physically isolated, living through screens, missing a sense of touch. This class will provide a space in which to reflect upon our changing relationship to the physical world - to evaluate our engagement with objects, how we live with them and what we seek from them.

With a series of progressive hands-on assignments, we will learn how to think and make through a variety of materials and methods including paper, wood, casting and other non-traditional domestic materials. Each assignment will be a means through which to think about our personal processes of self-actualization through the adaptation, transformation and reiteration of materials and forms.

The course will progress through 4 units - Paper, Wood/Carving, Casting and a Final Project. During each session within a unit we will explore various material and conceptual concerns and formal construction techniques. A guest artist will visit us during each unit.

Course work will be very steady week to week throughout the term. Each week we will begin a project in class which will be due before the following class.

The rhythm of each course session will be similar - we will begin by looking at the assignment project from the previous course, will spend some time in a demo or discussion about a new element of the

material/technique we are exploring, introduce and work on the new assignment.

Course Notes:

This course is open to all, no prerequisites or experience necessary.

Class Notes: **NOTE: There will be required lab meetings for this course to be determined.**

Letters to a Young Artist, Part 1 (218299)

Carissa Rodriguez

2021 Fall (4 Credits) **Schedule:** M 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Studio course in interdisciplinary art with a focus on Institutional Critique– a form of conceptual art that questions the power structures underlying the circulation and display of art. Through assignments in sculpture, installation, mixed media, moving image and performance, students experiment with form and content and are introduced to critical methods and practices, as well as the pragmatics of exhibition-making. The course covers a social history of the studio, gallery, museum and artist-run spaces, with attention to art collectives and social justice movements that have challenged institutional structures. To complement our studio work, we look at 20th and 21st century art movements, highlighting BIPOC and LGBTQ+ artists of the canon. Guest artists, curators, and gallerists give presentations on their distinct roles in the field. Through a series of independent projects, students take practical and experimental leaps from art student to art world (one institution to another) and test the possibilities for shaping the terrain as artists.

Topic: **Studio Art**

Class Notes: **FALL 2021: Visit the Canvas course site for details about course preview period and the admissions process for this course.**

Introduction to Still Photography (111189)

Elle Perez

2022 Spring (4 Credits) **Schedule:** WF 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course provides an introduction to the visual language of photography. Students will be introduced to the technical, conceptual, and historical aspects of the medium. We will focus on gaining familiarity with digital techniques and aesthetics through demonstrations and hands-on sessions that cover technical topics such as camera operation, proper image exposure, digital workflow (including RAW files and Camera Raw) Adobe Bridge and Photoshop, and digital printing techniques. Lectures and class discussions will provide historical context and an overview of historical and contemporary artists. Weekly photographic and written assignments will be given and regular critiques will be used to assess student work and progress. The class will conclude with a final project that reflects your individual and original interests, and a high level of engagement and investment with photography.

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.**

Info for Course Preview Period: Admission to this course is by application only, there are no interviews. Course Petitions are not accepted in lieu of an application, you must do the application to be considered - see Canvas course site.

Introduction to Photography (122184)

Sharon Harper

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This studio course will introduce you to the conceptual, artistic potential of photography. Your understanding and use of the medium will be contextualized within contemporary and historic photographic art practices. Your own art practice will be developed alongside technical skills. We will discuss topics such as the ethics of photographing people, how to make meaningful images amid the proliferation of digital images, and traits that are unique to photography. This class is organized around presentations on artists' work, presentations on photographic concepts, studio making assignments, individual meetings with the instructor and breakout meetings with peers to develop your practice, technical skill workshops, readings, reading discussions, group critiques, and visiting artist presentations. Curiosity, a strong work ethic and a sense of adventure are required. Technical skill development is supported by the class Teaching Assistant.

Course Notes:

No prior art experience necessary for enrollment in this class.

Class Notes:

SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.

Introduction to Documentary Production: The Camera Stylo (218678)

Akosua Owusu

2021 Fall (4 Credits) **Schedule:** TR 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Film critic Alexandre Astruc created the term "camera-stylo" in 1948 to suggest a new form of filmmaking in which the camera would function with the creative versatility of a pen: creating arguments, reflecting, querying, and telling stories. He was calling for a new genre of filmmaking. This production course is an introduction to the foundations of documentary storytelling and focuses on modes of filmmaking that defy classification. We will discuss the filmmaker as detective/examining evidenced material, the art of wandering/ straying, voice and text in films, and the camera-pen/action image as writing. Working individually or in small groups students are expected to complete three video assignments including a 5-7 minute final project. Students are also expected to view and discuss weekly screenings and keep a reflections journal.

Introduction to Non Fiction Videomaking (108859)

Joana Pimenta

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course is an introduction to documentary filmmaking. We will explore a range of approaches to nonfiction filmmaking through assignments which encompass video and sound recording and editing, cinematography and montage. Following introductory camera, sound and editing exercises, each student will spend the semester making a single nonfiction film on a subject of their choice. Class time will include technical workshops, film screenings, discussions of student work and occasional visiting filmmakers.

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.**

There will be a live Zoom meeting with Professor Joana Pimenta and Teaching Fellow Julia Sharpe on January 18 at 3pm (ET), followed by individual conversations with the interested students at 3.30pm; you will find the Zoom link on the Canvas Course site.

Approaching Narrative: Introduction to Filmmaking (127469)

Akosua Owusu

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

In this production course, students will learn the basic principles of narrative filmmaking, experiment with the visual language of cinema, and push the boundaries of their own moving image work. Students will be introduced to the aesthetic and formal elements of cinema and the terminology of film production. Techniques explored include cinematography, sound recording, and editing. In-class screenings and lectures will give an overview of different modes of filmmaking, including narrative, documentary, and experimental. Students will hone their powers of observation, communicate visual ideas with clarity and simplicity, explore personal storytelling, and develop the ability to read films as trained and informed viewers. Classes will consist of weekly critiques of student work. By the end of the course, students will be equipped with the necessary tools to produce two short 5-7 minute films with sync sound.

Course Notes:

First year students and those who have not yet taken any courses in film or video are strongly encouraged to take the course.

No prior filmmaking experience necessary.

Class Notes:

SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.

This course is limited to 10 students. Therefore, during Shopping Week (01/14 - 01/18) we will host a series of individual Zoom meetings for interested students where we will discuss with each person the course requirements and assignments. A meeting is mandatory in order to secure a spot in the class. We encourage you to review the syllabus and modules before scheduling a meeting.

If you are interested, please sign up for a Zoom meeting appointment; both links for the sign up and Zoom can be found on the Canvas course site. We will be accepting students based on creating a diverse class in ability and interest. Please petition the course on my.harvard.edu by 4PM on January 18th to be considered for a spot.

The Art of Film (115688)

Laura Frahm

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 80

This introductory course surveys the history of film and visual media in the 20th and 21st centuries. We will both explore the rise of major cinematic movements in their striving to define the "art of film" and shed light on the often overlooked parts and marginalized figures in the history of film. Building upon Rudolf Arnheim's concept of visual thinking, this class puts special emphasis on creative practices and visual exercises that introduce students to new forms of visual expression and argumentation. Weekly video

blogs, a visual essay, and a collaborative film festival project will further advance and diversify our multi-faceted approach to the history of film and visual media.

Course Notes:

This course is required for all students concentrating in or pursuing a secondary field in the film and visual studies area of AFVS.
.

All students wishing to undertake an AFVS 99 project,either a senior thesis or senior project, must have permission of the project adviser, chosen by the student, before being considered. The Director of Undergraduate Studies and the AFVS Honors Board must approve all AFVS 99 projects and theses in advance. Part one of a two part series.

Course Notes:

The first term of the AFVS 99: Senior Thesis/Project should always be AFVS 99A. If you are beginning your thesis or project off-cycle, meaning, in the spring term, enroll in AFVS 99A.

Optional for senior concentrators. Students must be enrolled in AFVS 99 to do a thesis. Students should arrange regular tutorial meetings with their project adviser. Senior theses and projects are led by individual faculty members; however the Director of Undergraduate Studies approves AFVS 99 in each student's Crimson Cart.

Drawing 2: Model Witness (203313)

Katarina Burin

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This studio art course foregrounds the medium of drawing, investigating its many potentials, both on and off the page. Drawing is positioned as model and as witness, and as something which carries ideas forward. It is experimental, light and flexible, while maintaining the ability to record direct process or be deeply specific.

Students will explore the potential of depicting both literal and metaphorical space, including the space of personal or collected memory, of future possibility and the imprint of time and process. Working in two-and three-dimensions we will strengthen our conceptual, technical and artistic visual skills.

Course Notes:

This course is open to anyone who has some experience with creative visual work.

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first**

consult the Canvas course site for information about the enrollment process and procedures.

Optional info session on Tuesday, January 18 at 11am - link on Canvas site. To be considered for enrollment, you must submit the requested form (available on Canvas site) by Tuesday, January 18 at 4pm.

Hoarding Fever/Archive Fatigue (Studio Course) (219697)

Katarina Burin

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Why do we decide to keep things? What politics hide in taxonomy? How do citizenship, colonialism, and death relate to our stuff? And what's the deal with Marie Kondo?

This studio course will use the discourses around Archive and research based practice as a starting point for developing work in a range of media. We will look at existing archives, develop our own collections as a form of artistic practice, and destabilize the authority of archives by considering informal, queer, pathologized forms of collecting. The course will include discussions and readings; visits to local collections in and outside the museum; and ample studio time to work with raw and found materials, alongside obsessive investigations and meandering digressions.

Course Notes:

This is an introductory studio course available to all levels of experience open for grad students and undergraduates. Hoarders and non-hoarders are welcome!

Class Notes:

SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.

Thinking With Your Hand: Intermediate Painting (216297)

Judith Belzer

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This studio class will support developing painters in their explorations of oil paints as powerful materials for connecting to and questioning the world around them, guided by the engagement of the senses. A willingness to commit to the studio as a lab for an expansive painting practice will be encouraged through directed prompts and open-ended project work. The class is designed for students who have had some studio art experience.

Course Notes:

At least one previous AFVS/VES course or previous studio experience recommended.

Class Notes: **FALL 2021:**

Please review the syllabus and introductory instructor video which will be posted on the AFVS120 Canvas site to learn about pre-requisites and whether this class is a good fit for you.

Consider attending a Zoom Q&A Info session on Wednesday, August 18 at 12pm EST and/or 5pm EST to find out more about this class.

To apply, fill out the questionnaire (also posted on AFVS120's course Canvas site) and submit by 11:59pm EST on Friday, August 20.

The class roster will be filled with a community of students that offers the broadest possible range of interests and backgrounds, class years, AFVS concentrators and students from other areas of study.

I look forward to meeting you soon, Judith

Art, Film, and Visual Studies 133

Sun & Shadow, Sculpture Studio (216299)

Nora Schultz

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This sculpture course considers "distance" and "access" as means of production. Throughout the past year we all gained new and specific experiences of distance that influenced our understanding and making of artworks. In which ways do these experiences have a longer impact on our encounter with sculpture? What do we consider the "land" in Land Art? Can a sculpture be imagined into existence? This course repositions both materiality and the artist, to ask what relationships explored through distance can be productive to accommodate a sculpture studio.

Class Notes:

FALL 2021:

Enrollment and Admission Policies

Enrollment in Sun & Shadow, Sculpture Studio is limited to 12 students. While we acknowledge priorities that the Department of Art, Film and Visual Studies (AFVS) gives to: AFVS concentrators, prospective AFVS concentrators, secondary field students, and graduate students who require a studio course (from AFVS, CMP or other programs or universities), we thrive for a most diverse and inclusive classroom. At least a third of available spots can be given to non-concentrators, and students from other fields and programs.

Students who are interested in taking the class are asked for a short mutual introduction. These introductions are meant to be informal conversations about students' interests in taking the course. The instructors don't come with specific expectations on students' interests, skills or pre-knowledge. Foremost, these short introductions offer the instructors guidance on what they can focus on in the curriculum and they offer students space for their questions.

Students can choose from three options to make this happen:

1. Fill out the introduction form that you will find on our Canvas site OR

(Deadline to submit the form is August 25, 5pm)

2. Visit the remote introduction meeting on Zoom, held on Monday August 23, 10:00am EDT – 11:00am EDT Visit the course Canvas site

for the Zoom link OR

3. Visit the remote introduction meeting on Zoom, held on Tuesday, August 24, 9:00am EDT – 10:30am EDT. Visit the course Canvas site for the Zoom link.

If you cannot join either of the meetings or submit the form, please contact the instructors by email before Aug 25, 5pm. (noraschultz@fas.harvard.edu, kwildman@fas.harvard.edu)

The deadline to apply for this limited-enrollment course is Tuesday, Aug. 24 by 11:59PM

Further schedule for the enrollment process:

Wednesday, Aug. 25 by 5:00PM: AFVS Deadline for students to confirm (or release) their spots in class; waitlist consulted.

Thursday, Aug. 26 by 11:59PM: College-wide deadline for students to be registered into fall 2021 courses

Wednesday, Sept. 1: Fall term courses begin, following a Monday schedule

THIS COURSE STARTS ON THURSDAY SEPT. 2, CARPENTER CENTER 203, 2nd floor studio.

Nah; or, gestures of resistance: Performance, Technology, and Refusal (216782)

chukwumaa --

E. Jane

2021 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

With a focus on opacity, refusal, and other gestures of resistance, this studio course will be an experimental testing ground for performance art using new media. We will study performances that refuse, subvert, and question oppressive structures often using new media and technology and the strategies these performances deploy. Students will work intensively to create performance works using sound, video, installation, and networked media (including the internet). Students should be prepared to think critically about the works they produce and be able to articulate their goals for their work. This course will include readings, class dialogue, lectures, screenings, critiques, and performances. This course is being offered by the sound and performance art duo SCRAAATCH.

Recommended Prep:

Previous AFVS or TDM course experience helpful, but not required.

Political Action as Art: A Survey of Artistic Activism (Studio Course) (218300)

Anthony Romero

2021 Fall (4 Credits) **Schedule:** T 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

"As political artists with real-world political goals, we need to engage with government systems. That's legislative art." - Why Artists by Laurie Jo Reynolds and Stephen F. Eisenman

"...the search for justice is a long durational performance." - Artivists (Artist-Activists), or, What's to Be Done? by Diana Taylor

Political Action as Art examines the work of contemporary Artist-Activists, with attention paid to the deployment of creative tactics in response to a wide range of systemic inequities. Our scope of study includes protest, rebellion, public policy, policing, border security, urban planning, political theory, as well as art historical perspectives of art and activism.

Letters to a Young Artist, Part 2 (218948)

Carissa Rodriguez

2022 Spring (4 Credits) **Schedule:** M 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Studio course in interdisciplinary art with a focus on Institutional Critique– a form of conceptual art that questions the power structures underlying the circulation and display of art. Through assignments in sculpture, installation, mixed media, moving image and performance, students experiment with form and content and are introduced to critical methods and practices, as well as the pragmatics of exhibition-making. The course covers a social history of the studio, gallery, museum and artist-run spaces, with attention to art collectives and social justice movements that have challenged institutional structures. To complement our studio work, we look at 20th and 21st century art movements, highlighting BIPOC and LGBTQ+ artists of the canon. Guest artists, curators, and gallerists give presentations on their distinct roles in the field. Through a series of independent projects, students take practical and experimental leaps

from art student to art world (one institution to another) and test the possibilities for shaping the terrain as artists.

Making Mischief: A Studio Based Seminar (205346)

Sharon Harper

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This class supports an independent photographic practice that is an extension of your own interests. The framework of the class will be a comparison of American documentary photographic strategies that arose on the East Coast and on the West Coast in the 1960s and 1970s in order to familiarize you with an array of artists and working methods. We will examine social and historic assumptions regarding photography during this time, and how those assumptions were challenged by emerging uses of photography. This class will ask you to experiment with various photographic strategies demonstrated by the artists we study to expand your understanding of the medium and facility with it. The class is organized around lectures, readings, class discussions, group critiques, guest artist presentations, individual meetings with the instructor and breakout meetings with peers to develop your practice. Technical skill development is supported by the class Teaching Assistant.

Class enrollment limited to 12 students

The Real World (Intermediate Photography) (218298)

Dannielle Bowman

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This class will focus on photographic and image-based work that is made outside of the studio, in the world. We will investigate ideas such as construction/the constructed image, documentary aesthetics, truth/fiction, neorealism (in film), and reliability in image-based works. We will look closely at photography, film and video works to investigate the conditions of their making and the effects the works have on us as individuals. This is not a documentary photography course.

Students will work on independent, image-based projects for the duration of the semester, sharing their work and progress in weekly critiques. Photo, video and other image-based works are welcome. Technical tutorials will be included as necessary.

This class will be structured around critiques, screenings, readings, lectures, visiting artist talks, and hopefully trips to galleries and museums.

Topic: **Photography**

Course Notes:

This course has additional lab time to be determined.

AFVS 146J: Where Are We Going?: The Photograph in Contemporary Art (Studio Course) (218656)

John Edmonds

2022 Spring (4 Credits) **Schedule:** T 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Through presentations, course readings and critiques, this studio course in photography will examine strategies photographers and artists working in photography used to accept, negate, refuse, reject, interrogate, subvert, rewrite and complicate the "documentary" nature of the medium and its role in contemporary art and society. Students will make work and examine the evolution of photography and media from the 1980's to the present, developing a language that expands photographic thinking to include its relationship with but not limited to: painting, sculpture, pop art, journalism, performance and film. Key texts include those written by: Roland Barthes, Andy Grundberg, Sarah Elizabeth Lewis, Hito Steyrl, Uri McMillan, Laura Wexler, Charlotte Cotton and Carol Squiers.

Topic: **Studio Art**

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.**

Film Directing: Approaching Fiction Now (114116)

Dominga Sotomayor Castillo

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course guides students through different issues and challenges in the filmmaking process from the initial development of ideas through to completion.

Throughout the semester, students will write and discuss their own short film scripts. At the end of the first semester, these projects will be ready to move through the pre-production process so

that they can be shot during the second semester.

Emphasis is placed on finding a voice, point of view and approaching the film language. There will be formal explorations and various assignments which impose restrictions.

Throughout several personal and group exercises different topics will be explored, such as: directing actors, composition, directorial authorship, as well as the role of camera work in conjunction with narrative structure.

In-class screenings and critiques of student assignments will form an important component of the course.

Recommended Prep: **AFVS 50 or two other AFVS courses in video or film production required.**

Film Direction: From Script to Screen (113516)

Dominga Sotomayor Castillo

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This production course is an advanced continuation of 150A. It is compulsory for students to have the first draft of their short screenplays on the first day of class. Content includes scene analysis and script revision, directing professional and non-professional actors, cinematography, blocking and mise-en-scène, sound design, editing and post-production. Students will be given assignments related to their written screenplays throughout the course, culminating in what will be their final project: the production of a narrative short film. Film professionals will occasionally be invited to conduct workshops or hold masterclasses with students.

Course Notes: **Students seeking to enroll should come to the first class meeting with a developed short narrative screenplay.**

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.**

The Essay Film (205136)

Alfred Guzzetti

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM
R 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

The essay film is a loosely defined, wide-ranging genre of nonfiction. Students in the course will divide their time between studying and making works in this genre. We will see and discuss well known works, such as Man with the Movie Camera and Sans Soleil, as well as a variety of lesser known films, including those that test the genre's limits. The practical assignments will center on using digital video to explore the possibilities of creating essays in the motion picture medium.

Class Notes: **FALL 2021: Students interested in taking this course should attend an**

introductory meeting on Tuesday, August 24 from 1pm to 1:30pm. Visit the Canvas site for the Zoom link and more information.

Please note that this course meets Tuesdays 12-2:45PM and Thursdays 12-4:15PM.

Experimental Animation: Intermediate Animation Course (115390)

Young Joo Lee

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This studio-based course explores animation as an artistic expression, different from a commercial studio production. We will study the examples of experimental animation works starting from earlier abstract, non-linear animation works, all the way to contemporary works. We will discuss how artists use animation and its evolving technology to explore deeply personal stories, political issues, and to imagine alternative worlds. Guided by in-class prompts, we will work with analogue materials and digital software to create original animations. The class will include screenings of contemporary artists' works in animation, as well as readings of related history and theories, which will help enrich our understanding of animation as a contemporary art form.

Class Notes:

FALL 2021:

Enrollment process:

Interested students can sign up (link on the Canvas site) for a slot to meet with the teaching team and do an informal interview. Available time slots are August 18 at 12-2pm (EST), August 23 at 12-4pm (EST) and August 24 at 12-4pm (EST).

If you cannot make it to these meeting times, reach out to the instructor to schedule a meeting or fill out the questionnaire on the course canvas site by August 23rd, 11:59pm.

The priority for the enrollment is given to AFVS concentrators and CMP students, as well as to the students who previously took the Fundamentals of Animation. However, the class is open to everyone who is interested in exploring animation as an artistic medium regardless of their major and year. The students who are admitted for enrollment will be notified by August 24th, 5pm. The notified students need to confirm their place by August 25th, 12pm (noon). This course requires instructor's permission for enrollment on my.harvard. In my.

harvard, send the petition to the instructor. After the petition is accepted, you will be able to enroll.

Observation and Intervention: Filmmaking as Inquiry (218297)

Julie Mallozzi

2021 Fall (4 Credits) **Schedule:** MW 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course will consider filmmaking as a means to interrogate and analyze the world. Bringing their own passion and topical expertise, students will learn how to use the techniques of filmmaking – including deep observation, montage, interviews, instigation, staging, and narration – to gain understanding around a line

of inquiry. We will work individually and in small groups through a series of exercises culminating in final projects. Throughout the course, we will screen examples of successful works and scrutinize the ethics and aesthetics of our roles as researcher/filmmakers.

Topic: **Filmmaking**

Course Notes:

There are no pre-requisites for this course; students with no prior filmmaking experience are encouraged to consider taking this course.

Class Notes: **FALL 2021: We ask prospective students to attend a Zoom info session during Course Preview Period on Monday, August 23, 12-1:00pm EST; complete a brief online application form; and sign up for an informal interview, which will take place August 23, 1-3pm, and August 24, 10am-12pm. Links for all three are available on the Canvas site. If you are unable to make it to the info session or interview times, please email the instructors about your interest in the course.**

NOTE: There will be a mandatory additional section to be scheduled.

Art, Film, and Visual Studies 157L

Immersive Experience as Art (216369)

Young Joo Lee

2022 Spring (4 Credits) **Schedule:** T 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course is a studio class that investigates immersive experience as a form of art. Utilizing moving images, sound, installation, and Virtual Reality, we will experiment and develop different methods to create immersive experiences. Starting with the history of immersive media, the class will discuss the relationship between the experience of art and technological development. We will screen examples of relevant artworks and analyze the technical aspects and conceptual background of these works. Throughout the semester, students will develop projects reflecting on the discussions and using the tools learned in the class. Critiques and presentations of the students' works are an essential part of the class.

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.**

Enrollment Procedure: There are two ways to enroll in this course.

Please email the instructor with a brief explanation of your interest in

the course, prior experience of creative work, and a short description (max. 4 sentences) of a project that you would like to develop if you have one.

There will be a course info Zoom meeting on January 14th from 4 - 5pm (EST). Click here or on the Canvas site for the link.

If you cannot make it to this meeting, but want to schedule a Zoom meeting, please sign up HERE.

Recommended Prep:

There is no prior knowledge of Unity 3D and Blender required, but it is helpful. Your knowledge and basic skills in visual art and digital media production are helpful in completing the assignments.

Sensory Ethnography 1 (123220)

Verena Paravel

2022 Spring (4 Credits) **Schedule:** TR 0600 PM - 0715 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Students use video and audio to produce short works about embodied experience, culture, and nature.

Course Notes:

Students must also be enrolled in AFVS 158BR, Sensory Ethnography 2.
No previous studio experience necessary.

Class Notes:

SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.

Course preview information session will be Sunday, Jan. 16 at 10-10:30AM ET on Zoom, followed by brief individual interviews. Interview sign-ups will be held during the info session.

There is a mandatory lab component for this course on Fridays to be determined.

Enter the Mediaverse (217449)

Lex Brown

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 8

Enter the Mediaverse is an experimental studio course at the intersection of meditation and movement practices, video-making, and critical media studies. We will approach the notion that "perception creates reality" from the perspective of the perceiver, perceived, and the perception-maker. Topics include consciousness, memory, hauntology, reality TV, artificial intelligence, politics in the age of media convergence, and personal development.

Students interested in this course should be ready to participate in critical thinking as well as mindfulness and movement activities. There will be four studio projects, writing reflections, and one final project in the course. We will be joined by guest speakers with diverse creative practices.

Class Notes:

FALL 2021:

Admission Requirements:

The course will be open to 8 students in their sophomore, junior, or senior year. Admission to the course will be done through the petition process. After you are given permission to enroll, enrollment is on a first-come, first-serve basis. There will be no holding spots or wait list.

Three 30-minute, informal info sessions will be held the week of August 16. In addition to attending one of the info sessions, interested students will be required to upload a short audio recording with answers to some basic questions. See Canvas site for details. If you are having technical problems or scheduling conflicts with the info sessions, please contact Valerie Werder.

This is a show tune, but the show hasn't been written for it yet. (217583)

chukwumaa --

E. Jane

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course is a sound studio/workshop exploring the way sound communicates narrative, examining the way sound aids narrative in drama and beyond as well instances where artists and musicians have created music for imagined dramas or conceptualized a song or album as a drama, which is what Nina Simone is describing in the line from the song "Mississippi Goddam" from which the course title is derived. Students will listen to Orson Welles' 1938 radio drama "The War of the Worlds", watch films, listen to songs, albums and soundtracks, and create stand-alone compositions that function or are conceptualized as radio dramas and soundtracks. Students should be prepared to think critically and experimentally about sound and the work they produce and be able to articulate their process and goals for their work. This class will include projects, readings, screenings, listening sessions, discussions, and workshops.

Invisible Adversaries: Video Course (218580)

Kenneth Tam

2021 Fall (4 Credits) **Schedule:** R 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

The name of the course is taken from a film by Austrian artist VALIE EXPORT, whose protagonist believes her mind and those of others around her are being colonized by invisible extraterrestrial forces. Imagined or not, these threats come to symbolize the myriad adversaries we all face, opponents that are a part of the various hegemonic and patriarchal systems that govern our lives. This class will look at moving-image artists whose work questions entrenched structures of power and authority, and will encourage students to think about how their own work can function as a space for radical imagination that has the potential to disrupt or transform. The need to respond to various forms of antagonism has always been artistically generative, and students will create video/moving-image works that thoughtfully respond to the issues they care most about. This class will show how artists have approached their adversaries not simply as enemies to overthrow, but as complex relationships that are deeply embedded within our personal and collective histories. Students should have some familiarity with shooting and editing video, though refresher tutorials will be offered. Class sessions will be used towards presentations, individual meetings, group discussions/critique, and general studio/post-production work, while supplemented by regular visits from guest artists/speakers working in video. Students will be expected to be deeply engaged with the course materials, and also in each other's work in order to create a space for mutual learning.

Course Notes:

At least one prior course in film or video recommended.

Remapping Latin American Cinema: Chilean Film/Video 1968-2022 (216313)

Haden Guest

Dominga Sotomayor Castillo

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM
W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This class explores multiple perspectives on Chilean cinema from 1968 to today, looking closely at the political engagement of documentary and narrative filmmakers while also exploring the rich dialogue between film and the other arts that has long animated filmmaking in the Southern Cone nation. A key goal will be to locate Chile on an alternate map of Latin American cinema defined less by national borders than by transnational currents at work across the region. This hybrid making and film studies class co-taught by Chilean filmmaker Dominga Sotomayor and film scholar Haden Guest will include filmmaker visits and interactive workshop

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.**

Visual Music (110045)

Laura Frahm

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course explores the history of visual music throughout the 20th century. By bringing together experimental and popular approaches to this new art form, we will survey early avant-garde experiments with color music alongside Disney animations and musical choreographies in the 1920s and 1930s. Second, we will dive into the post-war art scenes and pioneers of electronic music while simultaneously

tracing the rise of jukebox films in the 1950s and 1960s. Third, we will enter into the history of music videos and crossovers with video art since the early 1990s. Weekly video blogs and three visual music projects will further contribute to our survey of the multi-layered history of the interplay between film, video, animation, and music.

Class Notes: **FALL 2021: Please Join our Open Questions & Interview Session on August 24, 12pm; visit the Canvas course site for more details and the Zoom link.**

Queer (and Queering) Cinema (217515)

Dennis Lim

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course seeks to map a history and to expand the boundaries of what is commonly thought of as queer cinema. We will explore LGBTQ films within a variety of frameworks, including but not limited to queer history, theory, and politics, and across a range of modes and genres, from classical Hollywood to the experimental underground. Looking beyond a predominantly white Western canon, we will consider examples of queer films from around the world, and the cultural and cinematic contexts from which they emerged. Throughout the course we will also engage with larger issues of representation and resistance, the practice of queer reading, and the question of queer form and queer aesthetics.

Class Notes: **SPRING 2022: To take this limited-enrollment course, you must first consult the Canvas course site for information about the enrollment process and procedures.**

Interested students are invited to a live Zoom Course Preview Session on Tuesday, January 18, from 12–1 pm ET; Zoom link can be found on Canvas course site.

A note on enrollment: If you would like to enroll in this class, please complete the questionnaire (also on the Canvas course site) by 6 pm ET on January 18.

Political Cinema (216346)

Dennis Lim

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar surveys the landscape of global political cinema from the explosive 1960s to the unsettled present. Our central aims are to explore the relationship between cinema and politics, and to expand our understanding of the ways in which cinema can be political. Some questions we will ask: How can a film be political? Where do a film's politics reside? What does it mean to make films politically, and to read films politically? We will consider the connection between politics and form, the possibilities of cinema as politics, and cinema's representation of politics as well cinema's politics of representation.

Course Notes:

There are required weekly screenings for this course on Tuesdays from 12pm to 2:45pm in the Carpenter Center Lecture Hall.

In addition to the seminar and screenings, students will be asked to meet in small discussion groups once a week in their own time.

The Frankfurt School on Mass Media and Mass Culture (156172)

Eric Rentschler

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This seminar considers the Frankfurt School's deliberations on film, radio, television, and mass culture. We will devote the majority of the course to three seminal figures: Siegfried Kracauer, Walter Benjamin, and T. W. Adorno. More generally, we will focus on the debates catalyzed by the emergence of modern mass media and an industrialized visual culture; we will also reflect on the pertinence of these debates for our own contemporary culture of media convergence.

Course Notes:

This course is also offered through Germanic Languages and Literatures as German 154. Credit may be earned for either AFVS 189G or German 154, but not both.

Film Theory in France (218731)

Tom Conley

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Prior to the Lumière Brothers' invention of the cinématographe in 1895, France had witnessed precocious anticipations of the seventh art. Baudelaire, Bergson, Hugo, Villiers de l'Isle Adam, Mallarmé, Proust, Zola and other poets and writers considered moving words as moving images. From the beginning of 20th century and well into the 21st, film has been a motive and motor for "French theory." Our is to see how and why. Coordinating selected viewings and close readings, we will briefly study early and classical theory in Louis Delluc, Jean Epstein, Elie Faure; discern where theory and history thread their way through Georges Sadoul's History of Cinema; concentrate on André Bazin, often called the father of French theory; examine theoretically charged essays by New Wave artists or adherents: Alexandre Astruc, François Truffaut, Jean-Luc Godard, Luc Moullet; encounter the structuralist revolution and the imprint of psychoanalysis in theory in or about the tumult of May 1968: Barthes, Derrida, Foucault, Jean-Louis Comolli and the editorial collective of Cahiers du cinéma. In a later phase, we will consider Gilles Deleuze, Serge Daney and, with stress, Jacques Rancière.

Viewings will be in concert with theory: Lumière and Méliès for early work; Feuillade and Epstein in the 1920s; Eisenstein and Vertov in relation to Sadoul; Renoir (and his writings) in the 1930s, Welles, the American western, Flaherty, et al., who mark the legacy of Bazin; Godard's cinema as theory; Agnès Varda and cinéécriture; emergence of francophone cinema in Africa and elsewhere; classical and contemporary films seen (in the eyes of Rancière) liberating the spectator.

Course Notes:

This course includes mandatory weekly film screenings.

Matt Saunders

Jennifer L. Roberts

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM
R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Incorporating both studio and seminar instruction, this intensive course will explore printmaking's history,

trace its particular forms of intelligence, and test its future potential. The class will meet for three hours of studio and two hours of seminar/discussion per week. Assignments will include weekly readings, a short scholarly paper, and two studio projects. For the first half of the semester, students will pursue a rigorous grounding in a particular historical technique (etching/intaglio); in the second half students will translate what they have learned to another medium, thus exploring printmaking as an expanded field of practice.

Class Notes: **The course is designed for graduate students and advanced undergraduates in AFVS, History of Art and Architecture, or any related department.**

Studio Language (213421)

Nora Schultz

2021 Fall (4 Credits) **Schedule:** W 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

A course that is directed to specific themes in the studio practice of graduate students and junior/senior concentrators in AFVS. The foundation of the course will be discussions on intermedia and interdisciplinary work in the wider fields of art making and art theory, especially focusing on the intersection of text/language and visual work. The course investigates in theory and practice specific notions of conceptualizing, critique and "making" of artworks and in publishing and developing art and textual work.

Course Notes:

This course is for graduate students and undergraduates in their junior and senior years.

Class Notes: **FALL 2021:**

Enrollment and Admission Policies

Enrollment in Studio Language is limited to 12 students. While we acknowledge priorities that the Department of Art, Film and Visual Studies (AFVS) gives to AFVS concentrators, prospective AFVS concentrators, secondary field students, and graduate students who require a studio course (from AFVS, CMP or other programs or universities)—we strive for a most diverse and inclusive classroom. At least one third of the available spots can be given to non-concentrators, and to students from other programs and fields of study.

Students who are interested in taking the class are asked to provide a short introduction. These introductions are conducted informally (see below) and are meant to highlight the students' interest in taking this course. The instructors do not come with specific expectations on

students' interests, skills or on their pre-knowledge. Foremost, these short introductions offer the instructors guidance on what they can focus on in the curriculum; they also offer each student a space to articulate any preliminary questions they may have.

In order to introduce themselves students can either fill out the following introduction form:

https://forms.gle/XjRtwdqKuA4jrkjm8

or they can join one of these two remote introduction meetings on Zoom:

Monday August 23, 1:00 – 2:00 pm EST

Tuesday August 24, 12:00-1:30 pm EST

The Zoom links are published on the course Canvas site

If you can NOT join either of the meetings or submit the form, please contact the instructors by email before August 25th, 5pm. (noraschultz@fas.harvard.edu, vavarella@g.harvard.edu)

The deadline to apply for this limited-enrollment course is Tuesday, Aug. 24 by 11:59PM via email to noraschultz@fas.harvard. edu and vavarella@g.harvard.edu

THIS COURSE STARTS ON WEDNESDAY SEPTEMBER 8th , CARPENTER CENTER 203, 2nd floor studio.

Art, Film, and Visual Studies 233

Readymade, Repatriation, Reparations (218301)

David Joselit

2021 Fall (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course explores the politics of objects, and particularly artworks as they circulate. Readymades are ordinary things that are nominated as art; repatriation debates pivot on conflicting claims on cultural property based on nationality or culture; reparations can refer to the debt owed to persons that have been treated as objects, such as slaves. This course will consider these three relations—the mobility of art's definition; the stability of art's initial cultural context, and the debt owed to those submitted to the violence of objectification—within a unified ethical and aesthetic field.

Art After Nature: Animal, Vegetable, Mineral, Process (218531)

Carrie Lambert-Beatty

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Without starting from pre-determined categories (e.g. eco-art), how might we map artists' multiple, conflicting, and changing engagements with the more-than-human world? By thinking through a range of critical approaches, could we reframe art as a natural-cultural process? And, by researching specific practices of art-making, institution-building, or exhibition-creation, past, present, or even future, can we make tangible what it would mean to reframe art this way? The syllabus will focus on the period from the 1960s to the present, but students' individual research projects may take up cases from any place or period.

Art, Film, and Visual Studies 279 Section: 1

Materiality and Atmosphere: Media as Environments (203315)

Giuliana Bruno

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What is the place of materiality in our visual age of changing materials and media? How do media mediate material relations? Can media be understood as environments? This seminar investigates a "material and environmental turn" in philosophy and visual culture, focusing on the atmosphere of visual arts, architecture and media. Topics include: the life of objects, the haptic and ambiance, vibrant materialisms, plant thinking, elemental philosophy and screen media, light and projection, and the immateriality of atmosphere.

Course Notes:

Pre-requisite: A course in film or visual studies, art history, architecture studies or the equivalent course in cultural history or theory.

This course is jointly offered at the Graduate School of Design as HIS 4451; GSD students should enroll in the course via the GSD.

Class Notes: **This is an advanced seminar with pre-requisites. Preference for admission will be given to doctoral students in Film and Visual Studies. Students will be selected on the basis of an application posted on canvas and, if necessary, short interviews.**

Graduate Studio Workshop (211192)

David Joselit

2022 Spring (4 Credits) **Schedule:** W 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This graduate-level studio class is for advanced students in Film & Visual Studies and Critical Media Practice, who wish to develop their artistic practice in conjunction with their scholarship. Students develop individual and collaborative studio projects that explore the principles and potential of the visual and performing arts. Projects may be in drawing, painting, printmaking, sculpture, photography, video, film, installation, graphic design, or performance.

Class Notes:

Spring 2022: This course meets in the sculpture studio of the Carpenter Center on the second floor.

Astronomy

Subject: Astronomy

Astronomy 1

The Big Questions of Astronomy (113797)

David Charbonneau

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will discuss the big questions of astronomy that have engaged scientists and the general public alike for centuries: How did the universe begin? What is the ultimate fate of the Sun? How do planets form? Is there life outside the Solar system? Students will use telescopes to study the night sky and examine how the combination of astronomical observations and physical theory have led to an understanding of the vast and dynamic cosmos we inhabit.

Astronomy 2 Section: L01

Celestial Navigation (111305)

Philip Sadler

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM
T 0700 PM - 1000 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Never be lost again! Find your way on sea, land, or air by employing celestial and terrestrial techniques. Acquire expertise in using navigators' tools (sextant, compass, and charts) while learning the steps to the celestial dance of the sun, moon, stars, and planets. This 108-year-old course continues to rely on practical skills and collaborative problem-solving, while utilizing historical artifacts (instruments, maps, captains' logs) and student-built devices. Culminating in a day-long cruise to practice navigation skills.

Course Notes:

Minimal lecturing; predominantly practical activities with individual attention from teaching staff. Math beyond high school trigonometry and geometry unnecessary. This course is offered each year.

Astrosociology (205519)

Gerhard Sonnert

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 50

In an age of magnificent astronomical progress and discoveries, the increasing knowledge of the cosmos has manifold repercussions in society and culture. This course will examine how outer space-related phenomena impact, or potentially impact, society and culture, and vice versa. Especially in light of the proliferating discovery of exoplanets, an intriguing topic of astrosociology is presented by the possibility of the existence of extraterrestrial civilizations, their detection, communication with them, and even contact.

Stellar and Planetary Astronomy (118136)

Karin Oberg

2022 Spring (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an introduction to the physical principles describing the formation and evolution of stars and their planetary companions. Topics include thermal radiation and stellar spectra; telescopes; energy generation in stars; stellar evolution; orbital dynamics; the Solar system; and exoplanets. This course includes an observational component: students will determine the distance to the Sun, and use the Clay Telescope atop the Science Center to study stellar evolution and detect exoplanets.

Course Notes:

This course is offered each year.

Recommended Prep:

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16 or Physical Sciences 12a.

Requirements: **Prerequisite: Physics 15a, Physics 16, or Physical Sciences 12a. May be taken concurrently.**

Galactic and Extragalactic Astronomy (125884)

Daniel Eisenstein

2021 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course will introduce you to the physical principles describing galaxies and the composition and evolution of the Universe. We will cover a wide range of topics from nearby galaxies to quasars to the Big Bang.

The goals of the course are 1) to introduce you to the broad sweep of extragalactic astronomy and cosmology, including major concepts and common jargon, 2) to develop detailed applications of physics, particularly mechanics, to galaxies and cosmology, 3) to gain exploratory experience in observational astronomy.

Course Notes:

This course is offered each year.

Recommended Prep:

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics lla, Physics 15a, Physics 16, or Physical Sciences 12a, as well as a course in integral calculus, which may be taken concurrently, satisfied by Math 1b.

The Unity of Science: From the Big Bang to the Brontosaurus and Beyond (212793)

Irwin Shapiro

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM
TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Science is like a well-woven, ever-expanding fabric, designed to uncover Nature's secrets. This course emphasizes the strong connections between subfields of science,showing it as the never-ending and greatest detective story ever told, with evidence always the arbiter. These characteristics are exhibited in the semi-historical treatment of three main themes: unveiling the universe, the earth and its fossils, and the story of life.

Methods of Observational Astronomy (125880)

Edo Berger

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** 15

In this course we will learn the basic tools of modern astronomical research, including telescopes, detectors, imaging, spectroscopy, and common software. Emphasis will be placed on both the theory behind telescopes and their use, and hands-on experience with real data. Using this basic knowledge we will analyze science-level astronomical data from a wide range of telescopes and review the basic properties of stars, galaxies, and other astronomical objects of interest. The course includes a trip to the F. L. Whipple Observatory on Mount Hopkins, Arizona, to gather data with various telescopes.

Course Notes:

Introduction to General Relativity (218228)

Xingang Chen

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Recent exploration of black holes and gravitational waves have revealed the relativistic Universe like never before. This course will introduce students to the theory of general relativity and some of its key applications. Topics include: review of special relativity, physics in curved spacetimes, the Einstein field equations, gravitational lensing, black holes, gravitational waves and cosmology. Mathematics used in general relativity will be introduced along the way.

Course Notes:

This course is offered every other year in the Fall

Recommended Prep:

Multivariable calculus (e.g. Math 21A), linear algebra and differential equations (e.g. Math 21B), college-level Mechanics including special relativity (e.g. Physics 15A), and E&M (e.g. Physics 15B).

Astrophysics Laboratory (113262)

John Kovac

2022 Spring (4 Credits) **Schedule:** F 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Laboratory and observational projects in astrophysics. Students design and undertake two projects from a selection including: observational studies of the cosmic microwave background radiation, molecules in interstellar clouds, the rotation of the galaxy, galactic molecular sources with the submillimeter array (SMA), stars and clusters with the Clay Telescope; and laboratory experiments including super-conducting submillimeter detectors, x-ray CCDs, and hard x-ray imaging detectors and telescopes.

Course Notes:

Primarily for concentrators in astrophysics or combined concentrators

with physics. Students with physics as their primary concentration, but with a serious interest in astrophysics, may take this to satisfy their laboratory requirement (in lieu of Physics 191) upon petition to the Head Tutor in Physics. This course is offered each year.

Requirements: **Prerequisite Astronomy 191: Astronomy 16, OR Astronomy 17, OR Physics 15C**

Radiative Processes in Astrophysics (124966)

Ramesh Narayan

2021 Fall (4 Credits) **Schedule:** MW 0100 PM - 0230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course surveys radiation processes and their applications to astrophysical phenomena. Background material in electromagnetic theory, quantum mechanics, relativity and statistical mechanics is briefly reviewed as needed. Thermal and non-thermal radiative processes are discussed, including atomic and molecular transitions, bremsstrahlung, Compton scattering and synchrotron radiation.

Course Notes:

Open to seniors concentrating in Astrophysics or Physics. This course is offered each year.

Recommended Prep:

Physics 143a.

Astronomy 305

Topics in Origins of Life Research (161303)

Dimitar Sasselov

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

This semester we will lay out a plausible story of how life emerged on Earth from chemistry that led to the synthesis of molecular building blocks, which in turn self-assembled to form cells. I will do that by reviewing two recent papers – the required reading for this course [1,2]. Each week we will also use, as necessary, relevant papers to the topics to be discussed. The list of topics is enclosed in the syllabus, as are some of the papers.

Advanced Topics in Molecular Metabolism (218889)

Brendan Manning

2021 Fall (2 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

A quarter course focused on developing skills for critical reading of primary research literature in fields related to molecular metabolism. The course is geared toward PhD students in the life sciences with interest in the role of metabolism in physiology and disease, including those in BPH and other HILS PhD programs. Students will be required to read one research paper prior to each class and complete a paper review. Class time will involve short lectures/discussions on the background and technical aspects of the given study and detailed review of the published work, with each student describing an experiment or set of experiments, the results, and authors' interpretation, along with caveats and alternative explanations.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

Biological Sci in Public Hlth 208

Human Physiology (113276)

Nancy Long Sieber

2021 Fall (4 Credits) **Schedule:** MW 0945 AM - 1114 AM

Instructor Permissions: Instructor **Enrollment Cap:** 68

As an introduction to the principles governing function in the human body, this course is designed to provide a framework in physiology for future public health researchers and professionals who have not taken college level physiology courses. Emphasis is placed on the concept of homeostasis and on integrative aspects of physiology. Examples of pathophysiology and environmental physiology will highlight these processes.

Course Activities: Problem sets, exams, laboratory

Course note: students should have taken college level introductory biology before taking this class

Course Notes:

Offered jointly with the School of Public Health as EH 205

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EH Plans and Subplans

Wave 2 | PHD BPH, PHS SBS, PHS EPI & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/12/2021 11:00AM – 8/22/2021 11:59PM

Wave 2 | 8/23/2021 12:00AM – 8/26/2021 11:59PM

Wave 3 | 8/27/2021 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Sci in Public Hlth 210

Pathophysiology of Human Disease (112431)

Nancy Long Sieber

Kristopher Sarosiek

2022 Spring (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Surveys major human disease problems in the cardiovascular, respiratory, hematopoietic, reproductive, and gastrointestinal systems. Emphasis on understanding the pathophysiologic basis of common disease manifestations and the pathogenesis of the disease process.

Course Notes:

Offered jointly with the School of Public Health as EH 208.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Groups

Wave 1 | EH Department Students

Wave 2 | Open Enrollment

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 1/6/2022 11:00AM – 1/16/2022 11:59PM

Wave 2 | 1/17/2022 12:00AM – 1/20/2022 11:59PM

Wave 3 | 1/21/2022 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Recommended Prep:

Prior coursework in normal physiology is recommended but not mandatory

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Sci in Public Hlth 215

Principles of Toxicology (115767)

Jin-Ah Park

2021 Fall (4 Credits) **Schedule:** MW 0945 AM - 1114 AM

Instructor Permissions: Instructor **Enrollment Cap:** 32

The course is designed to expose students to the principles and methods that should be used to determine whether a causal relationship exists between specific doses of an agent and an alleged adverse effect, observed primarily in humans. Integration of principles and methods of toxicology is extremely important since the primary purpose of toxicology is to predict human toxicity. Toxicological data obtained in animal studies must be placed in proper relationship to the exposure observed in the human population. The course deals with organ systems and whole organisms but relies on an understanding of the mechanistic approaches covered in EH508. Key target organs, selected classes of toxic agents and the application of toxicological principles are covered. Students are assigned a topic for a short presentation.

Course Notes:

Offered jointly with the School of Public Health as EH 504.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Priority Wave Timing

Wave 1 | 8/12/2021 11:00AM – 8/22/2021 11:59PM

Wave 2 | 8/23/2021 12:00AM – 8/26/2021 11:59PM

Wave 3 | 8/27/2021 12:00AM – Enrollment Deadline (varies by session)

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Recommended Prep:

Organic chemistry and mammalian physiology or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Biological Sciences Communications (110521)

Brendan Manning

Zachary Nagel

2021 Fall (4 Credits) **Schedule:** MW 0230 PM - 0359 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Emphasis of this course is effective scientific communication. Students will develop skills in writing and critiquing grants and scientific papers, learn about the grant application process, and present seminars that focus on structure, language, and content appropriate for technical and lay audiences. Topics covered will apply to research in the biological sciences across various disciplines related to public health and medicine.

Course Notes:

Course intended for first year BPH PhD students only.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Course Roll	FAS Course Roll

Biological Sci in Public Hlth 222 Section: 01

The Biological Basis of Human Nutrition (111293)

Frank M. Sacks

Jeremy Furtado

Matthew Lee

2022 Spring (4 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course teaches the biochemistry and metabolism of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Contemporary topics are emphasized. Particular emphasis is given to current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer.

Course Notes:

Offered jointly with the Medical School as BPH 733.0 and with the School of Public Health as NUT 202.

Recommended Prep:

Introductory nutrition course. Prior familiarity with nutrition and the health sciences expected, as well as a basic knowledge of biochemistry and human physiology.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Sci in Public Hlth 250

Biology and Control of Vector-Borne Parasites (214578)

Daniel Neafsey

Flaminia Catteruccia

Deepali Ravel

Barbara Burleigh

2022 Spring (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This advanced readings course focuses on a group of vector-borne parasitic protozoa and helminths that are responsible for the highest burden of disease in developing countries. Central themes in the biology of transmission, parasite-host interactions and opportunities for control will be covered in the framework of the unique biology of eukaryotic parasites including Plasmodium, Leishmania, trypanosomes and schistosomes. Weekly lectures from Harvard faculty and invited speakers will enhance critical readings of the current literature and student-led discussions, and will emphasize experimental approaches and mechanisms of parasitic infection from the perspective of molecular and cellular biology, genomics, and evolution. Final group presentations of short research proposals will be required. The primary course goal

is for students to attain deep mechanistic understanding of select topics in vector-borne parasite biology and to be able to critically evaluate and explain to others the rationale and limitations of disease control measures.

The target audience for this course is early PhD students interested in parasite and vector biology as well as students in the Infectious Disease Epidemiology (ID-Epi) concentration or medical students.

Course Notes:

Offered jointly with School of Public Health as IID 250.

Recommended Prep:

Strong background in molecular biology, cell biology, genetics; ability to critically read primary experimental literature. If you are unsure of your preparation for this class, please contact the course director.

The content of this course is complementary to IID 201 but does not overlap; IID 250 will focus on biological/molecular aspects of parasitic disease control, whereas IID 201 focuses primarily on epidemiological and programmatic aspects of parasitic disease control. IID 201 is not a prerequisite for this course.

Additional Course Attributes:

Biological Sci in Public Hlth 302QC

Interdisciplinary Training in Pulmonary Sciences Part II (127599)

Quan Lu

2022 Spring (2 Credits) **Schedule:** T 0945 AM - 1044 AM
F 0101 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Class Notes: **THIS CLASS HAS PRIORITY ENROLLMENT**

Biological Sci in Public Hlth 304QC

Eradicating Malaria and Neglected Tropical Diseases (127601)

Jeffrey Dvorin

Manoj Duraisingh

Dyann Wirth

2021 Fall (2 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 45

This course is a survey to introduce core concepts and tools of disease eradication. We will discuss the current tools (or lack of tools), the evidence for their effective use, and their successes and failures, and we will discuss the policies and programs required to effectively use these tools for infectious disease control and eradication. In Session 1-6, we will focus on malaria as a context for introducing the many aspects of disease eradication. From Session 7-13, each session will focus on control and/or eradication of a new neglected tropical disease. Session 14-16 will then synthesize the course content and introduce new real-world challenges that will shape the implementation of disease control and eradication programs discussed in this course.

The class will meet twice a week, and each session will be divided into a didactic/lecture part and a discussion part. During the discussion, we will actively evaluate the evidence behind current global public health practices, emphasizing "cross-cutting" concepts and tools that are relevant to several of the diseases discussed in this course.

The tangible skills that will be obtained during this course include the ability to recognize, utilize, and critically evaluate strategies for disease eradication and the ability to effectively communicate a plan for systematic control and/or eradication of malaria and neglected tropical diseases.

Course Notes: **Offered jointly with the School of Public Health as IID 201**

Recommended Prep: **Background in biology required; knowledge of pathogenesis of infectious diseases desirable.**

Molecular Mechanisms of Aging (127931)

William Mair

2022 Spring (2 Credits) **Schedule:** MF 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

We will explore molecular mechanisms underlying aging and aging-related disease. Topics will include nutrient signaling and energy metabolism, genome stability and proteostasis, interventional approaches to extended longevity, and theories of aging including the free radical theory. Recent and classic literature will be critically discussed.

Course Notes:

This course will be taught every other year (odd years). Offered jointly with the School of Public Health as MET 212.

Recommended Prep:

Preference given to PhD students in HILS-affiliated programs (e.g., BPH, BBS, etc.)

BPH Student Internships (212709)

Flaminia Catteruccia

2022 Spring (2 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Internships are considered an integral part of a student's educational experience and should be viewed as a path toward a student's career development. As such, approved internships can receive academic credit via this course number.

Course Notes:

Ordinarily, each student will be limited to one internship during his/her PhD career. The internship must be discussed with the PI, DAC committee (or, program advisor, where applicable) and BPH program prior to approval. Not all students may be eligible for internships, due to program requirements, academic standing or advisor input.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biological Sci in Public Hlth 315

Molecular Genetic Analysis of Gene Expression and Drug Resistance in Parasitic Protozoan, Including (131484)

Dyann Wirth

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biological Sci in Public Hlth 318QC

Topics in Immunology and Infectious Diseases (214347)

Yonatan Grad

Smita Gopinath

2021 Fall (2 Credits) **Schedule:** MW 1130 AM - 1259 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The course will include student-led discussions that promote close reading, analysis, and evaluation of papers; attendance at the Department of Immunology and Infectious Diseases seminar series; and assessment of and discussion about oral science communication based on the seminars themselves. Lastly, the course will provide students with the opportunity to engage with leaders in the field. Topics will depend on the invited speakers' fields and the class' interests.

Course Notes:

Offered jointly with the School of Public Health as IID 220

Biomedical Engineering

Subject: Biomedical Engineering

Biomedical Engineering 110

Physiological Systems Analysis (150189)

Maurice Smith

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A survey of systems theory with applications from bioengineering and physiology. Analysis: differential equations, linear and nonlinear systems, stability, the complementary nature of time and frequency domain methods, feedback, and biological oscillations. Applications: nerve function, muscle dynamics, cardiovascular regulation. Laboratory: neural models, feedback control systems, properties of muscle, cardiovascular function.

Recommended Prep:

Engineering Sciences 53 (or equivalent); Physical Sciences 12b (or equivalent); and Math 21a and Math21b (or equivalents)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam
FAS Course Roll	FAS Course Roll

Biomedical Engineering 121

Cellular Engineering (119067)

Kit Parker

2021 Fall (4 Credits) **Schedule:** TR 1115 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes:

BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.

Requirements: **Prerequisite: LS1a (or LPS A); LS 1b; Math 21b (or equivalent); Physical Sciences 12a and 12b (or equivalents); and Engineering Sciences 53; AND Co-requisite: Biomedical Engineering 110**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 125

Tissue Engineering (121282)

David Mooney

2022 Spring (4 Credits) **Schedule:** MW 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Fundamental engineering and biological principles underlying field of tissue engineering, along with examples and strategies to engineer specific tissues for clinical use. Students will prepare a paper in the field of tissue engineering, and participate in a weekly laboratory in which they will learn and use methods to fabricate materials and perform 3-D cell culture.

Recommended Prep: **LS1a, Chem17 or 20, or biochemistry and cell biology background.**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 128

Introduction to Biomedical Imaging and Systems (204470)

Linsey Moyer

2022 Spring (4 Credits) **Schedule:** TR 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** 24

The course is designed as an introduction for students who want to gain both hands on training as well as an introduction to the physics and image reconstruction techniques involved in generating images. The course will introduce the fundamentals of the major imaging modalities including, but not limited to: electron microscopy, optical microscopy, x-ray, computed tomography, ultrasound, MRI, and nuclear imaging, as well as an overview of in vivo imaging and molecular imaging.

Recommended Prep: **Physics, Calculus; Basic biology helpful but not required.**

Requirements: **Prerequisite: Applied Physics 50b OR Physical Sciences 12b OR**

Physics 15b OR PHYSCI 3 AND Math1b or higher

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course

Biomedical Engineering 129

Introduction to Bioelectronics (211359)

Jia Liu

2022 Spring (4 Credits) **Schedule:** TR 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** 20

This course introduces bioelectronics and its applications in neuroscience, neuroengineering, cardiology, wearable technology, and so on. The focus is on the basic principles of bioelectricity, biochemistry, and physiological behaviors of biological systems and how to design electronic tools to precisely measure and control them. Key themes throughout the course will include bioelectricity, biochemistry, cellular and tissue physiological behavior, optogenetics, sensors, stimulators, circuits, signal processing, electronics-biology interface, and applications. This includes both the practical and theoretical aspects of the topic. Three experimental demonstrations will be included as part of the normal class meeting time. Given its broad coverage, students who enroll in this course are expected to have a substantial background in chemistry, biology, and electrical engineering (see recommended prep and course requirements).

Course Notes: **This course is intended for juniors and seniors.**

Class Notes: **The combined enrollment for BE 129 and ES 258 is 20 students.**

Recommended Prep: **LS1a or LPSa; AP 50b or PS 12b or Physics 15b; Math 1b or equivalent. Some background in chemistry and biology at the level of ES 53, and a strong background in electrical engineering at ES52, ES 50 or ES 152 is required.**

Requirements: **Prerequisite: ENG-SCI 50, ENG-SCI 52, or ENG-SCI 152**

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 130

Neural Control of Movement (122341)

Maurice Smith

2022 Spring (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Approaches from robotics, control theory, and neuroscience for understanding biological motor systems. Analytical and computational modeling of muscles, reflex arcs, and neural systems that contribute to motor control in the brain. Focus on understanding how the central nervous system plans and controls voluntary movement of the eyes and limbs. Learning and memory; effects of variability and noise on optimal motor planning and control in biological systems.

Course Notes:

Offered in alternate years.

Recommended Prep:

Mathematics 21b or Applied Mathematics 21b or equivalent, probability and statistics, Applied Physics 50a, Physical Sciences 12a, or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course

Biophysics

Subject: Biophysics

Biophysics 205

Computational and Functional Genomics (119807)

Shamil Sunyaev

Peter Sorger

2022 Spring (4 Credits) **Schedule:** MW 0230 PM - 0345 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Experimental functional genomics, computational prediction of gene function, and properties and models of complex biological systems. The course will primarily involve critical reading and discussion rather than lectures.

Class Notes: **Meets on Harvard Medical School Campus.**
Folin Wu Room, Bldg. C, Room 115,
240 Longwood Avenue, Boston.

Recommended Prep:
Molecular Biology (MCB 60 or equivalent), solid understanding of basic probability and statistics.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biophysics 206

Concepts in Cancer Genome Analysis (218831)

Gad Getz

2021 Fall (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: Department **Enrollment Cap:** 25

Cancer arises through a complex evolutionary process in which a series of genomic and epigenomic changes allow a cell lineage to gain fitness advantages such as increased growth rates, evasion of the immune system, and resistance to therapeutics. In this course, we will cover how analysis of next generation sequencing and other high throughput datasets can shed light on the different aspects of this process. Examples of topics include discovery of mutations that drive tumor development, mathematical modeling of clonal development, and use of single-cell sequencing techniques to survey the tumor immune microenvironment. We will focus on developing practical skills for applying statistical and computational methodologies to study these problems.

Topic: **Concepts in Cancer Genome Anal**

Course Notes:

200, Primarily for graduate students
Meets on Broad Institute/ MIT Campus

Class Notes: **Class meets at Broad Institute Campus, 415 Main Street, Kendall Sq. (Board Room, attached to the lobby).**

Recommended Prep:

Proficient programming skills (python, R, Matlab, Julia), basic probability (STAT110 or equivalent) and biology fundamentals

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Special Topics in Biophysics (117635)

Sahand Hormoz
Haribabu Arthanari
Adam Cohen
Radhika Subramanian
Venkatesh Murthy
Martha Bulyk

2022 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Biophysical topics emerging from special interest research not normally available in established curriculum. The 2021-22 year's course (Spring 2022) is focused across 4 topic blocks: Making Sense of High-Dimensional Data; Structural Biology and How it Relates to Function at the Molecular Level; Dynamical Systems in Biophysics; and Single-Molecule Biophysics

Course Notes:

Lectures, Problem Set, Research Papers and potential lab components.

Class Notes: **1st & 2nd Topic Block (Dr. Sahand Hormoz & Dr. Haribabu Arthanari) January 25th- March 3rd, meeting on Harvard Medical School Campus.**

Folin Wu Room, Bldg. C, Room 115, 240 Longwood Avenue, Boston.

From 3rd & 4th Topic blocks (Dr.AdamCohen & Dr.Radhika Subramanian) March 8th- April 21st, meets on Cambridge Campus, Biological Laboratories Bldg., Room 2025. See course Canvas site for more information.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 303

NMR Studies of Macromolecular Structure and Function (117817)

Gerhard Wagner

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 304

Basic Mechanisms of T cell Mediated Autoimmune Diseases (122044)

Kai Wucherpfennig

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 304

Basic Mechanisms of T cell Mediated Autoimmune Diseases (122044)

Kai Wucherpfennig

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 305

Experimental Atomic Physics, Biophysics, and Soft Matter Physics (122045)

Ronald Walsworth

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 305

Experimental Atomic Physics, Biophysics, and Soft Matter Physics (122045)

Ronald Walsworth

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Biophysics 306

Quantitative Models of Cellular Behavior to Investigate Protein Function (122046)

Jagesh Shah

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 306

Quantitative Models of Cellular Behavior to Investigate Protein Function (122046)

Jagesh Shah

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll

FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 307

Dynamics of Network Motifs in Single Living Human Cells (122047)

Galit Lahav

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 307

Dynamics of Network Motifs in Single Living Human Cells (122047)

Galit Lahav

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 309

Motile Behavior of Bacteria (111234)

Howard Berg

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 310

Sensory Information in Neuronal Processes (123176)

Naoshige Uchida

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 310

Sensory Information in Neuronal Processes (123176)

Naoshige Uchida

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 311

Digital Computer Applications in Biophysics (144404)

William Bossert

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 311

Digital Computer Applications in Biophysics (144404)

William Bossert

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 312

Multiphoton Microscopy in Imaging Alzheimer's Disease (123177)

Brian Bacskai

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 312

Multiphoton Microscopy in Imaging Alzheimer's Disease (123177)

Brian Bacskai

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll

FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 313

Neurobiology of Vocal Learning (124781)

Bence Olveczky

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 313

Neurobiology of Vocal Learning (124781)

Bence Olveczky

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 315

Structural Molecular Biology (111966)

Stephen Harrison

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 315

Structural Molecular Biology (111966)

Stephen Harrison

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 319

Analysis of Structure and Function of Nicotinic Acetylcholine Receptors (125771)

Adam Cohen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 319

Analysis of Structure and Function of Nicotinic Acetylcholine Receptors (125771)

Adam Cohen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 321

Physical Biology of Chromosomes (120940)

Nancy Kleckner

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 321

Physical Biology of Chromosomes (120940)

Nancy Kleckner

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 322

Structural Diversification of Very Long-Chain Fatty Acids (125775)

Vladimir Denic

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 322

Structural Diversification of Very Long-Chain Fatty Acids (125775)

Vladimir Denic

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 323

Transcriptional Regulatory Circuits and Neuronal Circuits in Visual Recognition (127669)

Gabriel Kreiman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 323

Transcriptional Regulatory Circuits and Neuronal Circuits in Visual Recognition (127669)

Gabriel Kreiman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 324

Conformational Changes in Macromolecules (125778)

Collin Stultz

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 324

Conformational Changes in Macromolecules (125778)

Collin Stultz

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 325

Physics of Macromolecular Assemblies and Subcellular Organization (125776)

Daniel Needleman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 325

Physics of Macromolecular Assemblies and Subcellular Organization (125776)

Daniel Needleman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 326

Statistical and Continuum Mechanics of Macromolecular Assemblies (125779)

L Mahadevan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 326

Statistical and Continuum Mechanics of Macromolecular Assemblies (125779)

L Mahadevan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Biophysics 327

Molecular Genetics (113737)

Frederick Ausubel

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 327

Molecular Genetics (113737)

Frederick Ausubel

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 329

Computational and Functional Genomics (113921)

George Church

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Biophysics 329

Computational and Functional Genomics (113921)

George Church

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 330

Principles of Self vs. Non-self RNA Discrimination by the Immune System (126673)

Sun Hur

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 330

Principles of Self vs. Non-self RNA Discrimination by the Immune System (126673)

Sun Hur

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 331

Communication of Information In and Between Cells and Organisms (126674)

Erel Levine

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 331

Communication of Information In and Between Cells and Organisms (126674)

Erel Levine

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 333

Topics in Biophysics and Molecular Biology (111143)

Brian Seed

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 333

Topics in Biophysics and Molecular Biology (111143)

Brian Seed

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 334

Decision Making in Cells and Organisms (126675)

Sharad Ramanathan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 334

Decision Making in Cells and Organisms (126675)

Sharad Ramanathan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 335

Developing novel single-molecule methods to study multi-protein complexes (127686)

Joseph John Loparo

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 335

Developing novel single-molecule methods to study multi-protein complexes (127686)

Joseph John Loparo

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 384

NMR Spectroscopy on Membrane-associated Proteins and Peptides (119221)

James Chou

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 384

NMR Spectroscopy on Membrane-associated Proteins and Peptides (119221)

James Chou

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Biostatistics

Subject: Biostatistics

Biostatistics 230

Probability I (119844)

Marcello Pagano

2021 Fall (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Notes:

Offered jointly with the School of Public Health as BST230.

Requirements: **Prerequisite: Biostatistics PhD Program**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 231

Statistical Inference I (119845)

Rui Wang

2022 Spring (4 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 17

Exponential families, sufficiency, ancillarity, completeness, method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, Neyman-Pearson theory, likelihood ratio, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency.

Course Notes:

Offered jointly with the School of Public Health as BST231.

Requirements: **Prerequisite: Biostatistics 230**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students

Biostatistics 232

Methods (119846)

Brent Coull

2021 Fall (4 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Notes:

Offered jointly with the School of Public Health as BST232.

Recommended Prep:

Signature of instructor required if prereq not met.

Requirements: **Prerequisite: Biostatistics PhD Program**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll

Biostatistics 234

Introduction to Data Structures and Algorithms (160641)

Georg Hahn

2022 Spring (4 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 24

Introduction to the data structures and computer algorithms that are relevant to statistical computing. The implementation of data structures and algorithms for data management and numerical computations are discussed.

Course Notes:

Offered jointly with the School of Public Health as BST 234.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biostatistics 235

Advanced Regression and Statistical Learning (119848)

Junwei Lu

2021 Fall (4 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimension reduction, and classification methods. Background in matrix algebra and linear regression required.

Course Notes:

Offered jointly with the School of Public Health as BST235.

Requirements: **Prerequisite: Biostatistics 231 AND Biostatistics 232**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll

Biostatistics 238

Principles and Advanced Topics in Clinical Trials (125262)

David Wypij

2022 Spring (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course focuses on selected advanced topics in design, analysis, and interpretation of clinical trials, including study design; choice of endpoints (including surrogate endpoints); interim analyses and group sequential methods; subgroup analyses; and meta-analyses.

Course Notes:

Offered jointly with the School of Public Health as BST 214 & BST 238.

Requirements: **Prerequisite: BIST 230 AND BIST 231 (may be taken concurrently)**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll

Biostatistics 240

Probability Theory and Applications II (119854)

Lorenzo Trippa

2021 Fall (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

A foundational course in measure theoretic probability. Topics include measure theory, Lebesgue integration, product measure and Fubini's Theorem, Radon-Nikodym derivatives, conditional probability, conditional expectation, limit theorems on sequences of random variables, stochastic processes, and weak convergence.

Course Notes:

Offered jointly with the School of Public Health as BST240.

Requirements: **Prerequisite: Biostatistics 231**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Biostatistics 241

Statistical Inference II (119855)

Rajarshi Mukherjee

2022 Spring (4 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Advanced topics in statistical inference. Limit theorems, multivariate delta method, properties of maximum likelihood estimators, saddle point approximations, asymptotic relative efficiency, robust and rank-based procedures, resampling methods, nonparametric curve estimation.

Course Notes:

Offered jointly with the School of Public Health as BST 241.

Requirements: **Prerequisite: Biostatistics 240**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 244

Analysis of Failure Time Data (119849)

L. Wei

2022 Spring (4 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods.

Course Notes:

Offered jointly with the School of Public Health as BST 244.

Requirements: **Prerequisite: BIOSTAT 233 AND BIOSTAT 240**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll

Biostatistics 245

Analysis of Multivariate and Longitudinal Data (119850)

Tom Chen

2021 Fall (4 Credits) **Schedule:** TR 1130 AM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 19

The multivariate normal distribution, Hotelling's T2, MANOVA, repeated measures, the multivariate linear model, random effects and growth curve models, generalized estimating equations, multivariate categorical outcomes, missing data, computational issues for traditional and new methodologies.

Course Notes:

Offered jointly with the School of Public Health as BST 245.

Requirements: **Prerequisite: Biostatistics 231**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 249

Bayesian Methodology in Biostatistics (119853)

Jeffrey Miller

2022 Spring (4 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

General principles of the Bayesian approach, prior distributions, hierarchical models and modeling techniques, approximate inference, Markov chain Monte Carlo methods, model assessment and comparison. Bayesian approaches to GLMMs, multiple testing, nonparametrics, clinical trials, survival analysis.

Course Notes:

Offered jointly with the School of Public Health as BST249.

Requirements: **Prerequisite: Biostatistics 231 AND Biostatistics 232**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 281

Genomic Data Manipulation (126944)

Eric Franzosa

Kelsey Thompson

2022 Spring (4 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Introduction to genomic data, computational methods for interpreting these data, and survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.

Course Notes:

Offered jointly with the School of Public Health as BST 281.

Requirements: **Prerequisite: BST 272 or BST 273**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 311

Teaching Assistant (211229)

2022 Spring (2 Credits) **Schedule:** TBD

Instructor Permissions: Department **Enrollment Cap:** n/a

Work with instructors in the department in laboratory instruction and other teaching-related duties.

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Irish Heroic Saga (122419)

Joseph Nagy

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A study of the ways in which the hero is represented in early Irish sources, especially in the saga literature. The texts reflect the ideology and concerns of a society which had been converted to Christianity, but continued to draw on its Indo-European and Celtic heritage. The biographies of the Ulster hero, Cú Chulainn, of his divine father, Lug, and of certain king-heroes are studied in depth. The wisdom literature, and archaeological and historical evidence will be taken into account.

Course Notes:

One additional discussion section per week to be arranged.

Celtic 111

Shapeshifting and Identity in Celtic Traditions (207727)

Catherine McKenna

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

In Irish, Welsh, Scottish and Breton narratives, humans turn into other kinds of animal (and animals into humans) for many different reasons—as punishment, as escape, as expression of their inner nature, among others. These stories are written into medieval manuscripts, recorded from oral storytellers in the twentieth century, recounted in contemporary film, and embedded in popular music. Is there a stable boundary between the animal and human worlds? We explore shapeshifting stories in all of these modes and media, reading them against a background of texts about animals and humans from their own times and ours. All of our readings are in English or English translation: no knowledge of a Celtic language is required.

Songs of the Highlander (125945)

Natasha Sumner

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to Scottish Gaelic poetry of the sixteenth to nineteenth centuries, this course explores poets' preoccupations and creative impulses in a time of regular conflict and drastic sociopolitical change. Critical issues we will consider include, but are not limited to, the role(s) of the poet in society, tradition and innovation, orality, and intertextuality. All texts will be read in English translation.

Celtic 240

Pursuing Diarmaid and Gráinne: Texts and Contexts (216041)

Natasha Sumner

2021 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Traditions about the love triangle among the aging military leader Fionn mac Cumhaill, his younger subordinate Diarmaid Ua Duibhne, and Gráinne, the daughter of Irish high king Cormac mac Airt, date as far back as the tenth century in the written corpus of Gaelic literature. The protagonists may have their roots in early Celtic deities, and a handful of medieval texts reference the events of the tale. As the story spread across the Gaelic world, it took on new forms. The most celebrated version, the lengthy prose text Tóruigheacht Dhiarmada agus Ghráinne (The Pursuit of Diarmaid and Gráinne), is thought to have taken shape in Ireland in the fourteenth century, around the same time as four lengthy poetic lays exploring aspects of the tradition emerged in Ireland and Scotland. The story also circulated orally, and the collected body of folklore about Diarmaid and Gráinne's elopement and Fionn's vindictive rage exceeds two hundred tales, songs, and anecdotes. Evidence of the story's continued popularity can be found in the over fifty creative adaptations that have come into being since the mid-nineteenth century, including poems, short stories, novels, dramas, a graphic novel, and a feature film. This graduate seminar will examine the development of this captivating body of narrative, following our tragic lovers as they wend their way through multiple forms and genres, and across seas and oceans, over the past c.1200 years. Situating our readings within the broader literary record, we will explore forms, themes, and parallels, and consider critical issues such as orality and intertextuality. Some translation will be required, but this is not primarily a reading course. Prerequisites: Participants should be competent in at least one Gaelic language (modern or medieval).

Recommended Prep:

Participants should be competent in at least one Gaelic language (modern or medieval).

Subject: Irish

Irish 132

Introduction to Modern Irish (119128)

Natasha Sumner

2021 Fall (4 Credits) **Schedule:** MTWR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Irish is the first official language of Ireland, and it has been officially recognized in Northern Ireland since 1998. Today Irish is spoken not only in the western 'Gaeltachtaí' (Irish-speaking regions), but also in cities like Dublin and Belfast. There is Irish-language television, film, radio, and print journalism, and many wonderful poets and fiction writers continue into the present a literary tradition that dates back to the sixth century.

The course introduces students to Irish as it is spoken and written today. Class work is participatory, and includes conversational role play and games as well as grammar study and drills. Audio and audiovisual resources reinforce pronunciation and aural comprehension. Songs, proverbs, and poems are an integral part of the course, introducing students to the vibrant oral and literary tradition of Gaelic Ireland. Meets 4 times a week.

Course Notes:

The combination of Irish 132 and 133r satisfies the language requirement. It is recommended in any case that this course be followed by Irish 133r. May not be taken Pass/Fail. Not open to auditors. Meets four times a week for an hour.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS: Meets Foreign Lang Req	Irish
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Irish 133R

Intermediate Modern Irish (119063)

Natasha Sumner

2022 Spring (4 Credits) **Schedule:** MTWR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

A continuation of Irish 132, developing students' fluency in spoken and written Irish. As our knowledge of the language expands, we venture into storytelling, journal writing and writing and performing short skits. Internet, audio and video resources complement the study of grammar and select prose texts.

Course Notes:

This course, when taken following Irish 132, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.

Recommended Prep:

Irish 132 or permission of instructor.

Requirements: **Prerequisite: IRISH 132**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS: Meets Foreign Lang Req	Irish
FAS: Course Level	For Undergraduate and Graduate Students

Chemical and Physical Biology

Subject: Chemical and Physical Biology

Chemical and Physical Biology 91

Research for Credit in Chemical and Physical Biology (122591)

Dominic Mao

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

91 is research for credit. It cannot be taken as a fifth course. To be eligible to enroll, you must have a Harvard-affiliated principal investigator agree to mentor you for the semester. For this reason, students must reach out to labs and interview with labs ahead of the start of the semester. Students are expected to work an average of 15 hours/week during term time.

Course Notes:

Limited to CPB concentrators. Students must have secured a position in a laboratory prior to enrolling in the course; the instructor will verify this with the faculty sponsor. Ordinarily may not be taken as a fifth course. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll

Chemical and Physical Biology 99A

Laboratory Research for Honors Thesis (122592)

Dominic Mao

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

Laboratory research in topics related to the CPB concentration, culminating in an undergraduate thesis submitted to the CPB undergraduate office for review by members of the Board of Tutors in Biochemical Sciences and the greater Boston research community. The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Notes:

Limited to students writing a thesis in CPB. Students are required to submit a written proposal to the CPB undergraduate office in the summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work."

Chemistry and Chemical Biology

Subject: Chemistry

Chemistry 17

Principles of Organic Chemistry (115137)

Eric Jacobsen

2021 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to organic chemistry, with an emphasis on structure and bonding, reaction mechanisms, and chemical reactivity.

Course Notes:

Open to freshmen with a score of 750 or higher in the College Boards or the Chemistry Placement Examination; and to students who scored 5 on the Chemistry Advanced Placement Examination; and to the students who achieved a grade of B or higher in either Physical Sciences 1, 10, 11, or another college-level introductory chemistry course. Others may enter only by permission of the instructor. The Chemistry 17/27 sequence is intended primarily for students in chemistry or the life sciences, who have completed LPSA or LS1a and one of the PS courses (PS1, PS10, PS11). The Chemistry 20/30 sequence is intended primarily for students planning a concentration in chemistry or the physical sciences. Either sequence satisfies the organic chemistry requirement for medical school. Students may not count both Chemistry 17 and Chemistry 20 for degree credit. On the other hand, Chemistry 27 and Chemistry 30 cover different material, so students interested in taking both courses may choose to do so via one of two sequences: Chemistry 17-27-30 or Chemistry 20-30-27. Chemistry 27 satisfies the biochemistry chemistry requirement for most medical schools.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 20

Organic Chemistry (124312)

Logan McCarty

2022 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to structure and bonding in organic molecules; mechanisms of organic reactions; chemical

transformations of the functional groups of organic chemistry; synthesis; determination of chemical structures by infrared and NMR spectroscopy.

Course Notes:

Chemistry 20/30 is an integrated two-semester sequence that prepares students to study chemistry and other physical sciences, whereas the Chemistry 17/27 sequence focuses on application of organic chemistry concepts to the life sciences. Either sequence satisfies the organic chemistry requirement for medical school and the chemistry concentration. The content of Chemistry 17 is accelerated and overlaps with topics from both Chemistry 20 and 30. Students may not count both Chemistry 17 and 20 toward the degree. However, Chemistry 27 and Chemistry 20/30 cover different material, so students may choose to take Chemistry 27 after completing the 20/30 sequence.

Recommended Prep:

Open to students who scored 4 or 5 on the Chemistry Advanced Placement Examination, or who successfully completed Life Sciences 1A or Life and Physical Sciences A. Others should contact the instructor to discuss their preparation.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Undergraduate Students
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 27

Organic Chemistry of Life (117558)

Emily Balskus

2022 Spring (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Chemical principles that govern the processes driving living systems are illustrated with examples drawn from biochemistry, cell biology, and medicine. The course deals with organic chemical reactivity (reaction mechanisms, structure-reactivity relationships), with matters specifically relevant to the life sciences (chemistry of enzymes, nucleic acids, drugs, natural products, cofactors), and with applications of chemical biology to medicine and biotechnology. An understanding of organic reactions and their "arrow pushing" mechanisms is required.

Course Notes:

Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.

Recommended Prep:

Chemistry 17 or Chemistry 30 or Chemistry 20 with permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam

FAS: Course Level	Primarily for Undergraduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 30

Organic Chemistry (118925)

Andrew Myers

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Continuation of Chemistry 20 with a greater focus on complex chemical reactivity and challenging problem solving. Carbonyl chemistry and pericyclic reactions are covered in particular detail, using principles of stereochemistry, stereoelectronic theory, and molecular orbital theory as a foundation. Students develop skills in planning organic chemical syntheses and are given an introduction to organometallic chemistry.

Course Notes:

The course has been updated to feature a problem solving and review session led by Prof. Myers, with a focus on challenging, collaborative problem solving using the week's lecture material. Students are expected to attend both lectures and the review session during the week (Lectures: Tuesday and Thursday, 10:30AM-11:45AM; Problem Session: Friday, Time TBD). In a typical week, there will be one problem set and two lecture integration problems. In addition to problem sets and laboratory work, the course will be assessed over three midterm examinations (1 hour each) and one final examination (3 hours). Office hours and help rooms will be available throughout the week. Recommended Prep: Chemistry 20 or the equivalent. Chemistry 27 and 30 may both be taken for degree credit. Students who have taken Chemistry 17 are welcome to take the course but should contact the teaching staff to discuss preparations at the start of the semester. Freshmen have taken Chem 30 and excelled at it, but it is recommended that any freshmen considering the course first contact the teaching staff to discuss their background preparation.

Chemistry 98R

Introduction to Research - Junior Year (112494)

Gregory C. Tucci

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Research under the direction of, or approved by, a member of the faculty of the Department of Chemistry. This is a junior tutorial.

Course Notes:

Open with permission of the instructor to junior chemistry majors who have satisfactorily completed the non-credit Introduction to Research Tutorial in the spring term of the sophomore year. In that non-credit spring term tutorial, taught Tu., Th., 1-2:30, students will attend introductory lectures and research seminars in order to acquaint themselves with departmental research programs. In the junior year, students who complete the non-credit tutorial and obtain placement in a research laboratory will undertake research as Chemistry 98r. Written permission of the research adviser must be filed at the office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card.

Chemistry 100R

Experimental Chemistry and Chemical Biology (123022)

Heidi Vollmer-Snarr

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Chem 100R is a project-based synthetic/physical organic, bioanalytical, and chemical biology research course. Students work in 2–4 person groups with course staff to conduct and contribute to cutting-edge, faculty-derived research. Throughout the semester students use electronic notebooks to keep track of their research findings, which they present in group meetings and write up in a formal research paper. As students learn to communicate technically with other scientists and peers, they also learn to communicate about the broader applications of their research to nonscientific audiences through science advocacy.

Course Notes:

This course is suitable for students with or without extensive laboratory experience, but must be a student's only for-credit research commitment during the enrolled semester. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration.

Class Notes: **Lab: Northwest 158**

Recommended Prep:

Chem 30, 27, or S-20ab; and permission of the instructor.

Additional Course Attributes:

Chemistry 101

Chemical Biology Towards Precision Medicine (124554)

Stuart Schreiber

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 125

Advances in chemistry and biology suggest new ways to discover *precision medicines* that address the underlying cause of disease – in a precise and personalized way – and thus to accelerate the understanding and treatment of human disease and to deliver the right medicine to the right patient at the right time and in the right location.

Chemical Biology Towards Precision Medicine **teaches students principles of chemical biology and human biology relevant to the discovery of safe and effective therapeutics, especially small-molecule therapeutics. The course will explore patient-based 'experiments of nature'* that illuminate disease. After the first half of the course on "Foundations" – foundational capabilities relevant to drug discovery from human and chemical biology – and a second half of the class will focus on "Applications" – different diseases for which human biology-based approaches offer promise. (These indications include: infectious disease (malaria; TB; HIV/AIDS), psychiatric disease (schizophrenia and bipolar disorder), neurodegenerative disease (Alzheimer's Disease; traumatic brain injury; prion disease; Parkinson's Disease), diabetes (Type-1 and Type-2) and metabolic disorders, cancer (targeted therapy; immuno-therapy; resistance), cardiovascular disease, inflammatory bowel disease, regenerative medicine, and aging.)**

Lecture materials will be presented asynchronously via recorded videos, while interactive, in-class learning at the regular class time will start with a high-level overview of the key concepts of the reading assignment (s) and class. We'll invite some experts on Chem 101's topics, including authors of the reading assignments, to join us during class time. There are two main purposes of in-class learning: 1) to assess your preparedness for the class and 2) to discuss interactively the topics, the evidence in support of the conclusions, and the implications of the studies for future novel and innovative research.

A primary goal of the class overall is to teach you how to identify opportunities for future research and to write, with guidance from the course Teach Fellows, two NIH-style research proposals (mid-term and final) working together in teams of up to 5 students/proposal. There will be no traditional exams in Chem 101 – instead, you will be evaluated on the basis of: 1) your class preparedness and participation; and 2) your participation in the team-based proposal-writing exercise.

The Chemistry and Biology of Therapeutics (110241)

Brian Liau

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will cover the chemical and biological principles that govern small molecule therapeutics. We will discuss small molecule conformational analysis, chemical forces that drive small molecule-protein interactions, and small molecule binding to proteins to affect disease states. We will also discuss how protein targets are identified and the frontiers of modern small molecule therapeutics. Protein targets include, but are not limited to kinases, proteases, GTPases, scaffolding proteins, epigenetic modifiers, metabolic enzymes and transcription factors. This course will teach students how to use modern computer modeling applications to perform structure-based design of small molecule ligands.

Chemistry 145

Experimental Inorganic Chemistry (109110)

Dilek Dogutan Kiper

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Chemistry 145 is a laboratory course designed to introduce students to inorganic laboratory synthesis, purification, and characterization techniques. Students will learn proper and safe techniques for handling and storing air, light, water-sensitive compounds, including the use of an inert-atmosphere glovebox and a Schlenk line. Synthesized compounds will be analyzed by various methods including infrared (IR), Electron Paramagnetic Resonance (EPR), paramagnetic and Nuclear Magnetic Resonance (NMR), and electronic absorption spectroscopies; and electrochemical techniques. Emphasis will be placed on rigorous adherence to the scientific method in the form of neat, comprehensive, clear entries in electronic laboratory notebooks hosted at Harvard Wiki including characterization data. Students will also develop the ability to read, understand, interpret, and explain the primary scientific literature, write research papers as manuscripts, and learn how to use different search engines, such as SciFinder, Web of Science.

Advanced Inorganic Chemistry (126035)

Daniel Nocera

2022 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The physical inorganic chemistry of transition elements will be discussed. The course will emphasize group theoretical methods of analysis and attendant spectroscopic methods (e.g., electronic, vibrational, EPR,

magnetic) derived therefrom. Connections between molecular structure and electronic structure and how that parlays into the properties of complexes and their reactivity will be illustrated throughout various modules, which will touch on advanced problems of interest in the subjects of catalytic, organometallic, coordination, solid state and bioinorganic chemistries.

The Quantum World (112976)

Suyang Xu

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Quantum mechanics is the fundamental principle of the microscopic world. Quantum mechanics allows us to understand the motion of electrons, atoms and molecules. Only with such understanding, we can rationally design and engineer quantum materials, in order to realize quantum technologies such as quantum information, quantum sensing, and quantum computation. In this class, you will learn the fundamental postulates of quantum mechanics and their implications for the structure and behavior of atoms and molecules. In particular, we will explore the mathematical framework behind molecular bonding, vibration, and rotation. We will also discuss how to probe the properties of atoms and molecules using tunable electromagnetic radiation, more commonly known as light!

Course Notes:

Applied Mathematics 21a and 21b, Mathematics 21a and 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; Physical Sciences 2 or Physics 11a, and Physical Sciences 3 or Physics 11b.

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to statistical mechanics, thermodynamics, and chemical kinetics with applications to problems in chemistry and biology.

Recommended Prep:

Chemistry 160 or Physics 143a, or equivalent. Math 21a, or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll

Chemistry 163 Section: 1

Frontiers in Biophysics (116159)

Adam Cohen

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This interdisciplinary course will explore the physical interactions that underpin life: the interactions of molecules, macromolecular structures, and cells in warm, wet, squishy environments. Topics will include Brownian motion, diffusion in a potential field, continuum mechanics of polymers, rods, and membranes, low Reynolds number flow, interfacial forces, electrostatics in solution. The course will also cover recently developed biophysical tools, including laser tweezers, superresolution microscopies, and optogenetics. Numerical simulations in Matlab will be used extensively.

Course Notes:

Primarily for advanced undergraduate students and graduate students with either biological or physical backgrounds.

Recommended Prep:

Chemistry 160, Chemistry 161, or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 165

Experimental Physical Chemistry (119035)

Khaled Abdelazim

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The goal of this course is to provide students with both detailed knowledge of established and fundamental methods of experimental physical chemistry and an introduction to selected state-of-the-art experiments that address contemporary scientific questions. You will learn about tools that are of broad utility in many areas of science and have fun discovering how to make these experimental apparatus work. The fundamental methods discussions will demonstrate how specific chemical phenomena can be used to interrogate complex molecular systems. Some of the experimental techniques introduced in this class are now employed in many different fields of fundamental and applied science and are considered the often cornerstones of modern day experimental nanoscience. The class will provide a hands-on introduction to physical methods and techniques used widely in chemistry and chemical physics research laboratories. Computer-based methods of data acquisition and analysis are used throughout.

For Spring 2021, there will be some emphasis on computational chemistry.

Course Notes:

Recommended as an efficient preparation for research in experimental chemistry, chemical physics, engineering sciences, and related disciplines.

Class Notes:

Lecture: Tuesday Science Center B10

Tue 3-4.15pm

Lab: Northwest 158

Wed 6-10pm or Thur 6-10pm

Recommended Prep:

Applied Mathematics 21a or 21b, Mathematics 21a or 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; one year of college physics. Chem 160 is recommended but not strictly required.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll

Chemistry 170 Section: 1

Chemical Biology (122175)

Christina Woo

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Applying chemical approaches to problems in biology. Topics include: physical properties of amino acids and proteins, synthesis and interrogating proteins with chemistry, natural proteins as chemical tools, unnatural amino acid incorporation, post-translational modifications, chemical glycoscience, chemical proteomics; physical properties of nucleic acids and DNA, interrogating nucleic acids with chemistry, engineering functional RNA, genomics and epigenetics, directed evolution, genome editing; drug discovery libraries and screening, macromolecular drugs, molecular glues.

Recommended Prep:

A strong background in organic chemistry and biochemistry.

Chemistry 177

The Chemistry, Biology, and Societal Implications of Genome Editing (216524)

David Liu

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The life sciences and medicine are undergoing a revolution stimulated by breakthrough advances in genome editing technologies. These technologies, including CRISPR, enable researchers and physicians to modify target DNA sequences in the genomes of living cells, including human cells and human embryos. This class will overview the chemistry and biology underlying recent and current genome editing agents. We will also discuss their current limitations, their potential to shape medicine, and some social and ethical implications of their use. In addition to attending lectures that present the chemistry and biology of genome editing, students will analyze recent reports from the scientific literature, and will present their analyses and reasoned opinions during the semester. Participants will also develop and present final projects on an aspect of genome editing to the class at the end of the semester. For advanced undergraduates and graduate students

Chemistry 255 Section: 1

Practical Crystallography in Chemistry and Materials Science (107709)

Shao-Liang Zheng

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Due to great technical advances, crystal structure analysis plays an increasingly important role in the structure determination of complex solids. This course involves the basic principles of crystallography and covers advanced aspects of practical crystal structure refinement. Topics include crystal symmetry, space groups, geometry of diffraction, structure factors, and structure refinement. Students will gain a working knowledge of x-ray crystallographic techniques, including how to: grow quality crystals, collect data, reduce data, determine a structure, visualize structure, utilize structural databases, publish crystallographic results. Watch Learning Crystal Structure Analysis at Harvard.

Course Notes:

Chemistry 40 or equivalent.

Scientific Teaching and Communications: Practicum (124905)

Sirinya Matchacheep

2021 Fall (2 Credits) **Schedule:** F 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course will teach graduate students how to communicate scientific concepts in the classroom. Students will focus on becoming effective teachers in discussion sections and in the laboratory. The course will emphasize hands-on experience in teaching and explaining scientific concepts. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes:

Required of all first-year graduate students in the Department of Chemistry and Chemical Biology.

Subject: Physical Sciences

Physical Sciences 10

Quantum, Statistical, and Computational Foundations of Chemistry (107367)

Lu Wang

Kang-Kuen Ni

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the fundamental theories of quantum mechanics and statistical mechanics and their role in governing the behavior of matter. The course begins with the quantum behavior of a single electron and develops the elements of the periodic table, the nature of the chemical bond, the bulk electronic and thermal properties of materials, and the thermodynamics of chemical reactions. Applications include semiconductor electronics, solar energy conversion, medical imaging, and the stability and dynamism of living systems. Calculus and numerical simulations will be used extensively.

Course Notes:

Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical school can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11.

Recommended Prep:

A strong background in chemistry (Chemistry AP score of 5, or equivalent preparation), mathematics at the level of Mathematics 1b (may be taken concurrently), and some familiarity with physics (force, energy, work, and electric charge).

Additional Course Attributes:

Attribute	Value(s)

FAS Divisional Distribution	Science & Engineering & Applied Science

Physical Sciences 11

Foundations and Frontiers of Modern Chemistry: A Molecular and Global Perspective (107368)

James Anderson

Gregory C. Tucci

Lu Wang

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The Physical Sciences hold the key to solving unprecedented problems at the intersection of science, technology, and an array of rapidly emerging global scale challenges. The course emphasizes a molecular scale understanding of energy and entropy; free energy in equilibria, acid/base reactivity, and electrochemistry; molecular bonding and kinetics; catalysis in organic and inorganic systems; the union of quantum mechanics, nanostructures, and photovoltaics; and the analysis of nuclear energy. Case studies are used both to develop quantitative reasoning and to directly link these principles to global strategies.

Course Notes:

Students are expected to have high school chemistry, or have completed Life and Physical Sciences A (LPS A) or Life Sciences 1a (LS 1a), or have received permission of the instructors. Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical students can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11. NOTE: Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep:

A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed.

Additional Course Attributes:

Life & Physical Sciences A

Foundational Chemistry and Biology (123833)

Gregory C. Tucci

Richard Losick

Sirinya Matchacheep

2021 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces fundamental concepts in chemistry and biology. Topics in chemistry include stoichiometry, acids and bases, aqueous solutions, gases, thermochemistry, electrons in atoms, and chemical bonding. The course also examines biological molecules, the transfer of information from DNA to RNA to protein, and cell structure and signaling.

Requirements: **Anti-req: Cannot be taken for credit if Life Sciences 1a, OR Physical Sciences 1, OR Physical Sciences 10, OR Physical Sciences 11, OR Chemistry 17 OR Chemistry 20 already complete**

Subject: Classical Philology

Classical Philology 244

Greek Epigraphy (146816)

Eric Driscoll

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is an introduction to Greek inscriptions, set in the context of ancient writing more broadly. We will begin by exploring the varied uses of writing in the ancient Near East (from Old Babylonian business correspondence to the monumental propaganda of the Achaemenid royal inscriptions), the origins of the Greek alphabet, and technologies of reading and writing in antiquity. The bulk of the course will comprise an exploration of the sub-discipline of Greek Epigraphy. Participants will explore fundamental methodological issues concerning ancient inscriptions, learn to work with them for research and teaching, and gain an understanding of "hardcore" epigraphic questions and editorial practices. A selection of significant documents, including the earliest inscribed potsherds, monumental poetic texts, public records and laws, and other inscriptions that shed light on narrative history, will be read and discussed.

Class Notes: **Undergraduates with sufficient preparation in ancient Greek (the equivalent of at least one 100-level course) are welcome to enroll. Interested students should contact the instructor for more information.**

Latin Elegy of the Augustan Period (218646)

Rachel Philbrick

2022 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A study of the developments in elegy from the early 20s BCE to Ovid's death in 17/18 CE. Beginning with a close look at the tropes and language of erotic elegy and the unique styles of the three major elegists of the era, we will track the use of the genre to encompass aetiology, didactic, invective, and more.

Modern Greek 10

Introduction to Modern Greek Texts (212818)

Calliopi Dourou

2021 Fall (4 Credits) **Schedule:** MWF 0300 PM - 0400 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is designed for students who possess an intermediate level in Modern Greek. It aims at further development of reading and listening comprehension as well as oral and written expression. The students will expand their vocabulary in thematic areas, such as technology, arts, environment, education, and politics. The course will also offer a targeted review of advanced grammatical phenomena, such as passive voice, indirect speech, and subordinate clauses. At the same time, the students will delve deeper into Modern Greek culture by being exposed to various cultural media, including prose (literary and journalistic), film, and music.

Course Notes:

Conducted in Modern Greek. It prepares students to take "MODGRK 100: Introduction to Modern Greek Literature" in the spring.

Recommended Prep:

Modern Greek Ba or Bb or equivalent. Consult with instructor.

Glimpses of Antiquity: Navigating the contours of Hellenism in Modern Greek Literature

Even as early as the fifteenth century, Greek intellectuals had increasingly begun to identify themselves primarily as *remnants of ancient Greece*. By calling attention to the impressive literary and philosophical achievements of their illustrious ancestors, as well as by foregrounding the continuity between the ancient past and the present, these renowned Hellenists, anticipating the much-coveted *regeneration* of Greece that

Adamantios Korais was later to promote so passionately at the dawn of the nineteenth century, were not ushering in a stridently novel conceptualization of Greek antiquity.

Far from being unprecedented, the view that the Byzantines were descended from the ancient Greeks, spawned primarily in the wake of the Fourth Crusade and the concomitant conquest of Constantinople in 1204, enjoyed considerable popularity already in the thirteenth century, when the Empire of Nicaea proudly played a leading role in the reconfiguration of the Byzantine past and dynamically consolidated the reputation of the Byzantines as the true heirs to the enduring legacy of classical Greece.

At this early date, the newly evoked association with the Byzantines' ancient Greek forebears was mostly intended to bring further *kudos* to the traditional identity of the Byzantines *qua* Romans. This association was later to develop into a full-blown alternative identity, which by the second half of the fifteenth century had come to overshadow—or sometimes even eclipse—the identification of the Byzantines as Romans, which had lasted a thousand years.

Against this rich backdrop of sharply shifting perceptions of the ancient Greek past and increased focus on re-elaborations of a Hellenic collective identity, this course will seek to explore the intriguing ways in which Greek writers endeavored to get to grips with their Hellenic heritage in subsequent centuries. Authors to be studied include the following: C. P. Cavafy, Odysseas Elytis, Andreas Kalvos, Kostis Palamas, Alexandros Papadiamantis, Iakovos Pitzipios, Yiannis Ritsos, Giorgos Seferis, Dionysios Solomos, Dido Sotiriou, Georgios Vizyenos.

Course Notes:

Conducted in Modern Greek. Permission of instructor required.

Classics Proseminar (113591)

Irene Peirano Garrison

2021 Fall (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This class aims to provide a basic introduction for beginning graduate students to the history, methods, and theories of Classics. Students will have the opportunity to learn about the specialized subfields and material resources pertinent to the study of ancient Greece and Rome at Harvard and beyond. In addition, the course lays a solid foundation for a thriving graduate career by introducing students to the wider network of resources, programs, and research cultures available to GSAS students.

Course Notes:

For new students working toward the PhD in the Department of the Classics. Open to other students by permission of instructor.

Subject: Greek

Greek 1

Introductory Ancient Greek 1 (203024)

Ivy Livingston

2021 Fall (4 Credits) **Schedule:** MTWR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Greek 1 is a starting point for those interested in learning to read ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes:

Students wishing to continue after Greek 1 should proceed to Greek 2, which continues the introductory sequence and prepares students for Greek 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep:

None. Greek 1 is an introductory course for students with no prior experience. Those who have studied Greek formally are not permitted to enroll in Greek 1, but should instead consider Greek Ax (Review and Reading) or Greek 1x (Accelerated Introduction to Greek); please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Greek 1X

Accelerated Introduction to Ancient Greek 1 (203257)

Ivy Livingston

2022 Spring (4 Credits) **Schedule:** MTWRF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Greek 1x is the first half of a two-semester intensive introduction to ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings at a more rapid pace than Greek 1. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes:

Students wishing to continue after Greek 1x should proceed to Greek 2x, which completes the accelerated introductory sequence and prepares students for Greek 10. No auditors. May be taken Pass/Fail.

Recommended Prep:

Prerequisites: None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Greek 1x with the permission of the course head.

Greek 10

Introduction to Ancient Greek Literature (203230)

Ivy Livingston

2021 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Greek 10 offers close reading and analysis of Greek literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.

Course Notes:

After Greek 10, students may take Greek courses at the 100-level, but are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@fas.harvard.edu) about their choice of course. Students may also take Greek 10 more than once, with the permission of the course head. Auditors allowed with permission of course head.

Recommended Prep:

Any one of the following: Greek 3; Greek 2x; Greek Ax. Students who have not studied Greek at Harvard should take the Greek Placement Exam and consult with the Preceptor in the Classics (livings@g. harvard.edu). Auditors allowed with permission of course head. May be taken Pass/Fail.

Greek 107

Thucydides (123306)

Eric Driscoll

2021 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course we will get to know one of the masterpieces of ancient Greek narrative prose, Thucydides' challenging yet seductive history of the Peloponnesian War. Readings in Greek will focus on Book II, but the rest of the *History* will be read in English, with discussions of Thucydides' narrative style; historical writing and truth; generic boundaries between history, literature, and scientific writing; and the nature of power and international conflict.

Recommended Prep:

Plato, Protagoras (108094)

Eric Driscoll

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

With its amusing cross-talk, rigorous philosophic analysis, and grand speeches, the *Protagoras* is one of the most varied and engaging of Plato's dialogues. The discussion ranges from mythology to psychology to political theory as Socrates and the "sophist" Protagoras duel over the nature of human virtue. In this course, we will attempt to read the entire text in Greek, with targeted review of vocabulary and grammar alongside discussion of the dialogue's literary and philosophical qualities.

Recommended Prep:

Greek 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Greek 137

Euripides as Anthropologist (218209)

Gregory Nagy

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Euripides as anthropologist. The *Hippolytus* and the *Bacchae*, with selections also from the satyr-drama *Cyclops*. The texts are to be read in the original Greek by language-track students (GREEK 137) but with

variations as to length of assignments for different students with different levels of preparation; also open to students who would read the dramas in translation (CLS-STDY 137). Students who chose the second option (CLS-STDY 137) would be encouraged to explore comparative or theoretical approaches to Euripides, and creative projects can be substituted for essay-writing. Students who are concentrators in non-Classics programs, not only Comparative Literature, History and Literature, and Social Studies but also any other program, are encouraged to join.

Class Notes: **The class will meet twice per week for 75 minutes each. All students will meet together for one class day per week, and for the second meeting, CLS-STDY and GREEK students will meet at different times.**

Recommended Prep:

Greek 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Greek 187

Greek Palaeography (160157)

Alexander Riehle

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Do you want to learn how to read the Greek classics from the manuscripts in which they survive?

This course offers an introduction to late antique and medieval Greek book culture and handwriting. On the basis of selected manuscripts of a variety of texts (for example, the Homeric epics, Plato's dialogues, classical tragedies and the Bible), we will trace the main lines of development of Greek script from the majuscule (uncial) of the earliest codices to the minuscule of Byzantine manuscripts and the type of early printed books in Renaissance Italy. Although the focus will be on deciphering, transcribing, and contextualizing handwriting in various styles, we will also discuss material aspects of the manuscripts (codicology), important institutions of book culture (scriptoria and libraries, education and schooling, patronage, etc.), as well as basic elements of transmission and text editing. In this context, we will look into important works of reference and useful online tools. Towards the end of the semester, we will examine a few original Greek codices from Harvard's manuscript collection at Houghton Library.

Course Notes:

Greek 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Class Notes: **Interested graduate students can take this course for graduate seminar credit. See syllabus for more details.**

Classical Archaeology 11

Roman Art (108693)

Adrian Staehli

2021 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides a broad overview of the history Roman art, architecture, and material culture from the time of the Republic through the Imperial period, to the age of Constantine. It offers basic knowledge about core categories of archaeological artifacts and remains within their topographical setting and within the context of Roman culture and society; it also includes issues of methods, theoretical approaches, and problems of current research.

Classical Archaeology 146

The Archaeology of Women and Gender in the Ancient World (218326)

Margaret Andrews

2021 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Women represent half of humanity, but they have been greatly underrepresented in studies of past cultures and societies. This course provides an introduction to aspects of women's lives in the cultures of ancient Mediterranean Greece and Rome. We will examine not only what women actually did and did not do in these societies, but also how they were perceived by their male contemporaries and what value to society they were believed to have. The course will focus on how women are reflected in the material and visual cultures, but it will incorporate historical and literary evidence as well. Through such a comparative and interdisciplinary approach, we will examine the complexities and ambiguities of women's lives in the ancient Mediterranean and begin to understand the roots of modern conceptions and perceptions of women in the Western world today.

The Roman Villa (107934)

Adrian Staehli

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In their villas, members of the Roman aristocracy indulged in a lifestyle of leisure and luxury, cultivated their passions for art, literature, scholarship or fish breeding, and refrained deliberately from business and political activities. The course explores the archaeological remains and artifacts—architecture, wall paintings, collections of sculpture, precious silver and gold ware—related to this particular Roman phenomenon of the so-called *villeggiatura*.

Classical Archaeology 163

The Polychromy of Ancient Sculpture (218343)

Adrian Staehli

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Statues in marble and bronze count among the most prominent artworks that survived from Greek and Roman antiquity. Since the first discoveries of classical sculptures in the Renaissance, ancient statues not only served as paragons for the perfect, idealized representation of the human body, they also largely coined the conventions of the visual appearance and materiality of contemporary sculpture: the whiteness of marble and the dark surface of bronze became the standards of statuary representation in modern art, and that didn't change until very recently, despite the fact that the original polychromy of ancient sculpture was discovered already in the 18th century and had been widely discussed throughout the 19th century. It is only in recent years that we learn through new investigation methods about the color traces of classical sculptures and are able to reconstruct their original polychromy.

The seminar investigates the current state of art of the evidence for the coloring of ancient sculpture, examines recent reconstructions of the polychromy of ancient marble and bronze statues, studies the semantics of color of hair, skin, and flesh in antiquity, provides an overview of the reception of classical sculpture in modern art, but also the impact of modern sculpture and aesthetic theories on the perception of classical statues, and reconstructs the historiography of the discovery and the scholarship on ancient polychromy, including its broad popular reception in the 19th century.

Recommended Prep:

The seminar addresses undergraduate students with previous

exposure to Classical Archaeology (or ancient art). Graduate students are welcome and may, by arrangement with the instructor, use the course to fulfill seminar requirements; it is expected that they are able to read either French or German scholarship.

Mythological Images (109962)

Adrian Staehli

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar investigates the visual "language" and narrativity of mythological images in ancient Greek and Roman art, with particular attention to the social practices, rituals, and contexts that framed the "consumption" of such images, and to the scholarly approaches that have been developed to foster the understanding of the language of ancient visual culture. The seminar will have a strong focus on images of the Trojan War as a dominant iconographic theme which we can follow from the very beginning of Greek mythological imagery to late antiquity.

Introduction to the Ancient Greek World (116729)

Natasha Bershadsky

2021 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course charts the outlines of what we now call ancient Greece, with its multitude of places, ways of life, and historical changes. We will survey the major transformations of that world, its foundational events, real and imagined, its great wars, and its most important social institutions and cultural traditions. We will also study everyday features, such as food and dress, to uncover the complex systems of signs to which they belonged. We will work with a wide variety of primary sources, both texts and images, and will learn about the challenges of interpreting them, assisted by selected items of scholarship. We will explore how

the ancient Greeks perceived the world and themselves in it, and will attempt to listen to the voices of women and slaves that are often muted in our primary sources. Learning about the insights and the blind spots of that civilization, about its mysteries and its drama, may ultimately also help us to know more about ourselves.

Course Notes:

Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Classical Studies 97B

Introduction to the Ancient Roman World (124050)

Harry Morgan

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course has three components: a chronological survey of Roman history from the beginnings to Late Antiquity; thematic explorations of key features of culture and daily life in Rome as well as other parts of Roman Italy and the provinces (including religion, law and government, elite society, Romanization, urban topography, etc.); and an introduction to the tools and methods available for research on the Roman world, with an emphasis on material culture and documentary sources.

Course Notes:

Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Regional Study: Sicily (156313)

Margaret Andrews

2022 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

An in-depth exploration of the cultural history of Sicily between the Bronze Age and the Norman conquest

focusing on questions of change, recurrence, and continuity within the dynamics of the Mediterranean across these two millennia.

Course Notes:

This course is required for concentrators in the Classical Civilizations track. Admission is by application only. Students interested in enrolling should contact the Director of Undergraduate Studies (classicsDUS@fas.harvard.edu).

Classical Studies 122

Identity and the Self in the Medieval Greek Tradition (218327)

Alexander Riehle

Dimiter Angelov

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar explores the construction and complexity of identities in the Greek tradition (300-1500). Students will read fascinating narratives, biographies, and autobiographies, and will learn how to analyze them from historical and literary perspectives. Questions for discussion include political, religious, and ethnic identity in late antiquity and Byzantium, the meaning of being "Roman" and "Greek," the plasticity of self-representation, and the interpretation of religion, gender, and class as both social and cultural categories.

Course Notes:

This course is also offered through the History Department as History 12V. Credit may be earned for either Classics 122 or History 12V, but not both.

Classics, Race, and Power (218207)

David Elmer

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The Greco-Roman world produced powerful expressions of freedom and democracy—and also witnessed the enslavement and oppression of vast numbers of people. The legacy of the classical world has exhibited a similar duality: it has inspired white supremacists as well as advocates for racial justice, imperialists as well as post-colonial nation-builders. Through study and discussion of the classical world itself (its history, art, and literature); its later reception by politicians, writers, artists, and activists; and Classics as a scholarly discipline, we will examine various ways in which classical antiquity has intersected with structures and ideologies of oppression—and has also animated acts of liberation and resistance.

Classical Studies 134

Roman Popular Culture (218328)

Harry Morgan

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Traditionally, when we study the culture of the ancient Romans, we study the culture of the 1%—the elites who produced the famous works of Latin literature, made Rome's laws, and commissioned its monuments. But what about the other 99%? What can we learn of their culture? In this course, we will examine the lives of ordinary Romans—the "plebs" — who spent their time in bars and brothels, theatres and circuses, workshops and apartment blocks. In our quest for Roman popular culture, we will be required to cast a broad net—to sample not only from the great works of Roman literature, but also from lesser-known sources of evidence, such as curse tablets, dice oracles, graffiti, fables, and jokebooks. By the end of the course, students will have a thorough understanding of what can (and cannot) be learned about Roman popular culture, what sources we can use to access that culture, and how this fascinating subject has been debated in modern scholarship.

Classical Studies 137

Euripides as Anthropologist (218208)

Gregory Nagy

2022 Spring (4 Credits) **Schedule:** M 1200 PM - 0115 PM
W 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Euripides as anthropologist. The *Hippolytus* and the *Bacchae*, with selections also from the satyr-drama *Cyclops*. The texts are to be read in the original Greek by language-track students (GREEK 137) but with variations as to length of assignments for different students with different levels of preparation; also open to students who would read the dramas in translation (CLS-STDY 137). Students who chose the second option (CLS-STDY 137) would be encouraged to explore comparative or theoretical approaches to Euripides, and creative projects can be substituted for essay-writing. Students who are concentrators in non-Classics programs, not only Comparative Literature, History and Literature, and Social Studies but also any other program, are encouraged to join.

Class Notes: **The class will meet twice per week for 75 minutes each. All students will meet together for one class day per week, and for the second meeting, CLS-STDY and GREEK students will meet at different times.**

Classical Studies 138

Athenian Democracy (218654)

Eric Driscoll

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course, students will explore some key political, institutional, and ethical questions related to democracy as such—What is a people? Who wields power in a democracy? Where does that power come from?—via study of the ancient Athenian democracy. Classical Athens, the city of Socrates and Plato, Aeschylus and Thucydides, developed a form of democratic government beginning in the very end of the sixth century BCE. In addition to learning how this democracy was achieved and functioned, we will consider its limitations and failures. Readings include the works of playwrights and historians, philosophers and pamphleteers, documents written by committees and orators, and select works of modern scholarship and democratic political theory, including cutting-edge work on the relevance of ancient democratic institutions for thinking about contemporary democracy.

Ancient Slavery (212903)

Harry Morgan

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course shines a spotlight on the enslaved populations of Greece and Rome—their thoughts and experiences, hopes and fears. The course draws on a wide range of ancient sources, both textual and visual, in order to reconstruct the lives of slaves in antiquity. We will consider how the ancient Greeks and Romans justified and normalized the institution of slavery in their literature, philosophy, art, and rhetoric. We will also explore the dark legacy of ancient slavery in modern times, and ask what can be learned from the comparison of slave systems across different periods and geographical regions. All readings, ancient and modern, are in English.

Polis Borders in Ancient Greece (218469)

Natasha Bershadsky

2022 Spring (4 Credits) **Schedule:** R 1200 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course explores ancient Greek polis borders and borderlands in multiple perspectives. Some of the topics to be discussed are borders as identity-making entities, and their role as separators and connectors; the demarcation of borders (and its absence); economic exploitation of the border resources, with particular attention to the interplay between state powers and individual agency, and its changes through time; border warfare; borderlands as loci where symbolic and real landscapes are superimposed, and different versions of the past compete; the Black hunter and affiliated questions; border cults of Artemis and its myths and rituals; border festivals; borderlands in ancient Greek drama; border fortification; border arbitrations. The course will combine thematic sessions with detailed case studies of important borderlands such as the Hiera Orgas, and examination of specific border dynamics in regions like Crete or Magna Graecia.

Subject: Medieval Latin

Medieval Latin 10

Introduction to Medieval Latin Literature (203237)

Jan Ziolkowski

2022 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Medieval Latin 10 offers close reading and analysis of post-classical literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.

Course Notes:

After Medieval Latin 10, students may take Latin courses at the 100-level, but are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@classics.harvard.edu) about their choice of course.

Recommended Prep:

Any one of the following: Latin 3; Latin 2x; Latin Ax. Students who have not studied Latin at Harvard should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Medieval Latin 105

A Germanic Hero and His Afterlife: Walter's Poem (118184)

Jan Ziolkowski

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Studies an epic about an early Germanic warrior, Walter of Aquitaine, in the late Roman era of Attila the Hun. Considers date and authorship, heroism and gender roles, tribal and racial rivalries (including Franks and Goths) in Charlemagne's time and later, manuscript transmission, and reception (from romanticism through the Nazi era). Sets the style and content of the poem into both Germanic and Latin contexts, with comparison of versions in Old Norse and other languages in translation and sources and analogues in Latin.

Recommended Prep:

Subject: Latin

Latin AX

Latin Review and Reading (122177)

Ivy Livingston

2021 Fall (4 Credits) **Schedule:** MTWR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Latin Ax is designed for students who have studied some Latin prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Latin grammar and apply that knowledge to the reading of short classical texts, both literary and non-literary (such as inscriptions). Students should leave the course able to read with the precision that is necessary to use primary sources in research.

Course Notes:

Students wishing to continue after Latin Ax should proceed to Latin 10. No auditors. May be taken Pass/Fail.

Recommended Prep:

Students considering Latin Ax should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Additional Course Attributes:

Latin 1

Introductory Latin 1 (203025)

Ivy Livingston

2021 Fall (4 Credits) **Schedule:** T 1030 AM - 1145 AM
R 1030 AM - 1145 AM
R 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Latin 1 is a starting point for those interested in learning to read the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings.

Course Notes:

Students wishing to continue after Latin 1 should proceed to Latin 2, which continues the introductory sequence and prepares students for Latin 3. Auditors allowed with permission of course head.
May be taken Pass/Fail.

Recommended Prep:

None. Latin 1 is an introductory course for students with no prior experience. Those who have studied Latin formally are not permitted to enroll in Latin 1, but should instead consider Latin Ax (Review and Reading) or Latin 1x (Accelerated Introduction to Latin); please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Latin 1X

Accelerated Introductory Latin 1 (203254)

Ivy Livingston

2022 Spring (4 Credits) **Schedule:** MTWRF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Latin 1x is the first half of a two-semester intensive introduction to the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings at a more rapid pace than Latin 1.

Course Notes:

Students wishing to continue after Latin 1x should proceed to Latin 2x, which completes the accelerated introductory sequence and prepares students for Latin 10.
No auditors. May be taken Pass/Fail.

Recommended Prep:

None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Latin 1x with the permission of the course head.

Latin 112A

Latin Literature: Texts and Contexts (120352)

Jared Hudson

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This year-long course is designed to help students develop a map of Latin literary culture. Students are allowed to take either or both halves of the course. The class prepares students to discuss Latin literature in its historical and cultural context with chronology, genre, theme, performance, and reception context as organizational frameworks. Through prepared translation of assigned text, reading practice sessions, and interpretative exercises, students will improve their reading fluency and enhance their ability to read and interpret a range of Latin texts. Latin 112a focuses on Latin literature from its earliest glimmers down to texts dating from the early Augustan period. Latin 112b focuses on literature of the Imperial Era. This course is designed for advanced readers of Latin with previous experience with a range of Latin authors and genres.

Latin 142

Latin Imperial Biography (218595)

Harry Morgan

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The genre of biography flourished under the Roman emperors, producing some of the great surviving works of Latin literature. In this class, we will take a deep dive into this exciting and colorful genre, focusing especially on Suetonius' masterpiece *The Twelve Caesars*, Aurelius Victor's much-neglected *Epitome de Caesaribus*, and the notoriously scandalous *Historia Augusta*. We will also survey the predecessors of Latin imperial biography (e.g., Cornelius Nepos' *Lives of Illustrious Men*), as well as examining—in translation—important works of imperial biography written in Greek, including Nicolaus of Damascus' *Life of Augustus*, Plutarch's *Lives of the Caesars*, and Eusebius' *Life of Constantine*.

Recommended Prep:

Latin 175

Doing things with Latin: Syntax and Stylistics (218242)

Irene Peirano Garrison

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a rigorous introduction to Latin syntax, to the styles of Latin prose, and to the practice, history, and ideology of stylistic analysis and Latin composition. Students will contribute to a creative history of written Latin at Harvard, engaging in translation, transcription, and creative response to 300+ years of doing things with Latin on campus. This component of the course will culminate in a final online class project, *The history and politics of Latin composition: 300 years of Latin at Harvard*. We will explore together the pedagogical value of written Latin including, but not limited to, the purely linguistic aspect. Together we will study how and why Latin composition has been a conduit for socialization, induction, contestation, and redemption, as well as (in some instances) marginalization or irreverence.

Recommended Prep:

Undergraduates with sufficient preparation in Latin (the equivalent of at least one 100-level course) are welcome to enroll. Interested students should contact the instructor for more information.

Subject: Ancient Studies

Ancient Studies 201

Economies of the Sacred (215990)

Giovanni Bazzana

Gojko Barjamovic

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This graduate seminar will focus on the economies and management of ancient religious institutions as well as the transferral of economic images and concepts in religious discourse. It deals with texts and material artifacts selected from a broad range of epochs and regions across the ancient world—from Mexico to China, but with focus on the Mediterranean and West Asia. We address the subject matter with an explicitly comparative approach through four thematic units that cut across geography and chronology: the political and cultural centrality of religious institutions though time and space, their deeply rooted economic functions in social life, the influence of these functions on sacred practices, and the intersection of social and economic obligations (value, debt, servitude) with ethical and religious thinking. This is an interdisciplinary course that focuses on developing research and communication skills across historical, literary and religious studies.

Tutorial - Sophomore Year (114038)

Thomas Wisniewski

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

How to make a sound demonstration in the field of literary analysis? What are the building blocks for a cogent approach to comparative studies? We'll pay attention to various scales of textual commentary, from the microscopic lens of close reading to the medium scope of thematic reading, with an eye to macroscopic trends in literary history and critical theory. We'll befriend texts ranging from various genres (poetry; fiction; drama) and relate form to content, historical context to contemporary significance, and join the dots connecting notions of authorship to reception theory.

Translating World Literature (212721)

Luke Leafgren

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course, students will read parallel English translations of poetry and prose from a dozen languages. By reading different translations of the same work, students will be able to examine the choices translators have made, consider the ethical responsibilities of the translator, and explore the role of translation in mediating the meaning of a text. The course will also incorporate readings on translation theory and practice. No foreign language expertise is required. Assignments will consist primarily of drafts and revisions of the student's own translations, though non-translation assignments will be available to students without reading knowledge of foreign language.

Mysticism and Literature (203092)

Luis Giron Negron

2022 Spring (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Examines trends, issues and debates in the comparative study of mystical literature. Close readings of primary works by Jewish, Christian and Muslim authors from the Middle Ages through the 16th century. Topics include poetry and mysticism; allegory, symbolism and Scripture; body and gender; apophasis vs cataphasis; exemplarity and autobiographism; language and experience. Also examines creative engagement of pre-modern mystical literature in selected works by modern authors (Borges, T.S. Eliot) and literary theorists (DeCerteau).

Argentine Tango: Poetry, Music, and the Dance (218356)

Thomas Wisniewski

2021 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

An introduction to the culture, history, music, literature, and dance of one of Latin America's richest historical and contemporary art forms, *Tango Argentino*: the fabulous dance of the past hundred years and,

for Martha Graham, the most beautiful. This seminar combines, in both theory and practice, a comparative arts study of tango with weekly studio training. We will analyze music, film, and literary texts from tango's origins in the early twentieth century to its more recent incarnations up to the present day. We will read literature (poems, short stories, essays, novels), listen to recordings (from iconic tango singers and orquestas típicas of the Golden Age to the tango nuevo of Astor Piazzolla and Pablo Ziegler and electronic contemporary ensembles), watch films (short videos, features, documentaries), and practice the dance in weekly lessons designed to offer a progressive introduction to improvised tango salón. Students will engage in critical and creative work drawing on both mind and body; assignments include a research paper, a creative project, and group presentations and performances. Limited enrollment; course application due the first week of the term.

Comparative Literature 121

From the 1001 Nights to the Arabian Nights: Adaptation, Transformation, Translation (123897)

Sandra Naddaff

2021 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Examines how the*1001 Nights*, popularly known in the West as the *Arabian Nights*, is transformed and adapted for different media and genres. Focuses on a variety of films, (e.g., *The Thief of Baghdad*, *Chu Chin Chow*, *Aladdin*), illustrations/images (e.g., Doré, Chagall, Matisse), musical and balletic renditions (e.g., Rimsky-Korsakov, Fokine), translations (e.g., Galland, Lane, Burton, Haddawy), and re-tellings of stories (e. g., Poe, Barth, Mahfouz, Sebbar, Zimmerman). Also considers the role of the *1001 Nights* in contemporary popular culture.

Isolation and Islands (160882)

Marc Shell

2022 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Islands, both a part of and apart from the main, offer ready-made laboratories for linguistic, biological and political investigation. Islandness as such encourages national literature, philosophy, and vacation. Our

seminar, with its ecological and philosophical focus, centers on fictional and factual islands as well as Canadian ice floes, the always changing marine coastlines of tidal islands, and Planet Earth itself. Critical readings include: Peter Sloterdijk's *Foams*, Judith Shalansky's *Atlas of Remote Islands*, Sigmund Freud's writings on his own world as "a little island of pain swimming in a sea of indifference," Immanuel Kant's "History of Lands and Islands," and Shell's *Islandology*. Literary and filmic works include Shakespeare's *Hamlet*, John Donne's argument that "No man is an island," Defoe's *Robinson Crusoe*, More's *Utopia*, Hae-Jun Lee's "Castaway on the Moon," Joseph Newman's "This Island Earth," and island travel (and vacation) literature chosen by us as a group. Requirements: one short paper and one term paper.

Travel Writing as World Literature: From Marco Polo to Italo Calvino (And Beyond) (218360)

Thomas Wisniewski

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A survey of literary masterpieces from Marco Polo to Italo Calvino (and beyond), this seminar offers students a thorough introduction to travel literature written around the world from 1300 to 2021. In reading a diverse geographical and linguistic range of travel writers, the course will also feature the work of the Danish writer, Karen Blixen, whose travel memoirs will be studied alongside the letters from Africa and selections from the European settings of her short fiction. Students will write a research paper and complete a creative project. The seminar will also offer the opportunity to collaborate on, and contribute original research to, a new documentary film on Blixen's 1959 transatlantic tour, including her trip to Harvard and Radcliffe.

Songmaking and the Idea of Lyric (212724)

Gregory Nagy

2021 Fall (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A re-examination of "Lyric" as occasion as well as genre. Central questions to be explored will include: how do the "lyrics" of composed song come alive in performance? For example, how do the two librettists of

Puccini's opera *La Bohème* contribute to the making of a masterpiece in song? Shared readings include *The Lyric Theory Reader: A Critical Anthology*, edited by Virginia Jackson and Yopie Prins. Students are free to select as their focus of research any particular "lyric" traditions, composed in whatever language. No previous knowledge of literary theory is presumed.

Comparative Literature 171

Counter-Imperialism and Asian-African Literatures (216023)

Annette Lienau

2022 Spring (4 Credits) **Schedule:** F 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The first Asia-Africa conference of newly independent states (held in Indonesia in 1955) was hailed by contemporary observers as an event as significant as the European renaissance in global importance. It inspired a sequence of political and cultural initiatives (including several African-Asian writers' conferences) in pursuit of new forms of cultural exchange and political brokering unmediated by former colonial centers. This course explores the historic tensions of this transition towards a post-colonial global order across two continents. It takes as its point of departure historic notions of African-Asian political and cultural solidarity to explore important questions about counter-imperial forms of autonomy and anti-colonial practices of lateral alliance and cultural exchange. Moving through a range of literary texts and historical documents that mark this historical transition and its internal tensions, the course invites you to engage with the comparative legacies of African-Asian independence movements and solidarity initiatives

as they rose to international circuits of recognition, with implications for enduring cultural debates across the Global South. To the extent that 20th century African-Asian independence movements were considered by many authors in the mid- to late- twentieth century to be politically ambiguous and perennially incomplete, the course more specifically raises the following questions: how did several influential, anti-colonial African and Asian authors and political figures consider the fields of culture and literature to be an extension of their own political engagements? How were the fields of literature and culture comparatively viewed as a way of advancing (anti-colonial) forms of revolutionary change, or of addressing entrenched social grievances and enduring global inequalities? How did writers in the wake of anti-colonial movements reconcile the ambiguities of national independence with the risks of neo-colonial or ethno-nationalist exploitations—at times pursued in the name of lateral solidarities and liberation? And how would counter-colonial efforts to develop transregional, African and Asian forms of cultural exchange contend with the paradox that their "common ground" or shared purpose both derived from and sought to transcend a colonial past? Readings for the course will include Richard Wright's The Color Curtain, an iconic account of the first Asian-African conference of independent states, on the cultural commonalities and uneven temporalities of African-Asian independence movements; theoretical texts on the cultural ambiguities of anti-colonial nationalisms (such as Fanon's The Wretched of the Earth); and essays by major anti-colonial, political figures such as Sukarno, Nasser, Nkrumah, and Senghor. Literary texts will include revolutionary poetry and prose works, from examples of the "strike novel" to writing that challenged the post-revolutionary emergence of dictatorial regimes and cultural censors across both continents. Course assignments will include three analytical papers.

Hyperreality (216046)

Panagiotis Roilos

2022 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The crisis of mimesis and representation in postmodernity—closely connected with social and existential alienation and technological development—often manifests itself in terms of "hyperreality," where any distinction between "the real" and "the simulacrum" is blurred. The boundaries between "reality" and "non-reality" and relevant concepts (e.g. originality, authenticity, mimesis, simulacrum) have been explored and challenged from different but comparable perspectives in philosophy, art, and literature since classical antiquity. This seminar will investigate discourses on, or inspired by "hyperreality" and its epistemological, ontological, and political implications, from antiquity to postmodernity. Authors and thinkers to be discussed include Plato, Descartes, Schopenhauer, Jean Baudrillard, Guy Debord, Gilles Deleuze, Félix Guattari, Umberto Eco, Fredric Jameson, Paul Virilio, Bruno Latour, Elizabeth Grosz, Niklas Bostrom, Lucian, Pedro Calderón de la Barca, Franz Kafka, Jorge Luis Borges, William Gibson, Philip K. Dick, Christine Broke-Rose, Italo Calvino, Don Dellilo, Julian Barnes.

Allegory (108896)

Panagiotis Roilos

2021 Fall (4 Credits) **Schedule:** M 0600 PM - 0800 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Investigates major landmarks in the development of allegorization and allegorical literary composition in European tradition. Starting with pseudo-Herakleitos and his allegorical hermeneutics of the Homeric epics, this seminar will study different theoretical explorations and literary manifestations of allegorical discourse from antiquity to modernity - from ancient Greek rhetoric to Prudentius to Byzantine literature to Dante to the Romantics to C. P. Cavafy to Benjamin and de Man. Topics to be addressed include: personification, ambiguity, hermeneutic double-tonguedness (amphoteroglosia), the interplay between allegory and other tropes and discursive modes (metaphor, metonymy, symbol, parody, satire).

Computer Science

Subject: Computer Science

Computer Science 1

Great Ideas in Computer Science (119953)

Henry Leitner

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the most important discoveries and intellectual paradigms in computer science, designed for students with little or no previous background. Explores problem-solving and data analysis using the Python programming language; presents an integrated view of computer systems, from switching circuits up through compilers and object-oriented design. Examines theoretical and practical limitations related to unsolvable and intractable computational problems, and the social and ethical dilemmas presented by such issues as software unreliability, algorithmic bias, and invasions of privacy.

Course Notes:

May not be taken for credit after completing Computer Science 50.

Additional Course Attributes:

Discrete Mathematics for Computer Science (128073)

Rebecca Nesson

2022 Spring (4 Credits) **Schedule:** MWF 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Widely applicable mathematical tools for computer science, including topics from logic, set theory, combinatorics, number theory, probability theory, and graph theory. Practice in reasoning formally and proving theorems.

Course Notes:

Covers material used in Computer Science 121 and Computer Science 124. Ordinarily, not to be taken after those courses or after courses such as Applied Mathematics 106, Applied Mathematics 107, Mathematics 101, and Mathematics 153.

Additional Course Attributes:

Computational Thinking and Problem Solving (219744)

Michael Smith

2022 Spring (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to computational thinking, useful concepts in the field of computer science, and the art of computer programming using Python. Significant emphasis is placed on class meetings and learning to use computers to solve complex, real-world problems. Concepts and techniques are introduced as they are needed to help solve the problems confronting us. Students will learn how to go from an ambiguous problem description to a running solution and will leave the class knowing how to instruct computers to do what they want them to do. Prior experience in computer science or computer programming is not necessary.

Additional Course Attributes:

Computer Science 50

Introduction to Computer Science (152514)

David J. Malan

Carter Zenke

2022 Spring (4 Credits) **Schedule:** T 0345 PM - 0630 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web programming. Languages include C, Python, and SQL plus HTML, CSS, and JavaScript. Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project. Designed for concentrators and non-concentrators alike, with or without prior programming experience. Two thirds of CS50 students have never taken CS before.

Class Notes:

Optional info sessions for interested students on Mon, Jan 17, 5pm–6pm EST, and Wed, Jan 19, 6pm-6:30pm EST; see cs50.harvard.edu for Zoom links.

This spring version of CS50 is primarily for students who are unable to take the course in fall term. All students, including concentrators and non-concentrators, are encouraged to take CS50 in fall term instead. See cs50.harvard.edu/spring for differences between fall term and

spring term. Students must register for and attend weekly class meetings either on Tuesdays, 3:45pm–6:30pm in Allston, or Wednesdays, 9am–11:45am in Cambridge. (Not both.) Instructor-led tutorials to be arranged. CS50 is ordinarily graded SAT/UNS, though students whose concentration requires letter grades should change their grading status to letter-graded by the term's fifth Monday. Students may take CS50 SAT/UNS to fulfill the Science and Engineering and Applied Science distribution requirement or the Quantitative Reasoning with Data requirement, but not both. First years may take both CS50 and a freshman seminar SAT/UNS.

Class Notes:

Additional Course Attributes:

Attribute	Value(s)

Computer Science 50

Introduction to Computer Science (152514)

David J. Malan

2021 Fall (4 Credits) **Schedule:** M 0130 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web programming. Languages include C, Python, and SQL plus HTML, CSS, and JavaScript. Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project. Designed for concentrators and non-concentrators alike, with or without prior programming experience. Two thirds of CS50 students have never taken CS before.

Class Notes: **This course ordinarily meets for lectures in Sanders Theatre on Mondays, 1:30pm–4:15pm, but the course's first two lectures will be on Wednesday, September 1, 2021, 1:30pm–4:15pm, and Wednesday, September 8, 1:30pm–4:15pm. Students who are simultaneously enrolled in another course, or shopping another course, that meets at the same or an overlapping time, may watch CS50's lectures online and attend the other course in person. (The Ad Board has already granted this exception for CS50; no other steps are required.) Students with other academic or athletic conflicts should email the course's heads. CS50 is ordinarily graded SAT/UNS, though students whose concentration requires letter grades should change their grading status to letter-graded by the term's fifth Monday. Students may take CS50 SAT/UNS to fulfill the Science and Engineering and Applied Science distribution requirement or the Quantitative Reasoning with Data requirement, but not both. First years may take both CS50 and a freshman seminar SAT/UNS. Graduate students are welcome to cross-**

register for CS50. All students are expected to attend an orientation meeting during the second week of term; students with conflicts may watch online. Required sections to be arranged. See cs50.harvard.edu for FAQs, syllabus, and what's new for Fall 2021.

Computer Science 51

Abstraction and Design in Computation (112960)

Stephen Chong

Brian Yu

2022 Spring (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Fundamental concepts in the design of computer programs, emphasizing the crucial role of abstraction. The goal of the course is to give students insight into the difference between programming and programming well. To emphasize the differing approaches to expressing programming solutions, you will learn to program in a variety of paradigms -- including functional, imperative, and object-oriented. Important ideas from software engineering and models of computation will inform these different views of programming.

Class Notes: **Course includes 5 required lectures for both sections of CS 51 at 12: 45-2:00pm on January 25, January 27, March 8, April 21, and April 26 in the SEC building, Room 1.321. Students are expected to attend all of the lectures that they can. The lectures will also be made available on video shortly after each lecture for review and for viewing by those unable to attend the lecture.**

Systems Programming and Machine Organization (123623)

Eddie Kohler

2021 Fall (4 Credits) **Schedule:** TR 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Fundamentals of computer systems programming, machine organization, and performance tuning. This course provides a solid background in systems programming and a deep understanding of low-level machine organization and design. Topics include C and assembly language programming, program optimization, memory hierarchy and caching, virtual memory and dynamic memory management, concurrency, threads, and synchronization.

Class Notes: **This course has been approved to allow for simultaneous enrollment.**

Recommended Prep:

CS50 or some experience programming in C.

Privacy and Technology (125407)

James Waldo

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 48

What is privacy, and how is it affected by recent developments in technology? This course critically examines popular concepts of privacy and uses a rigorous analysis of technologies to understand the policy and ethical issues at play. Case studies: database anonymity, research ethics, wiretapping, surveillance, and others. Course relies on some technical material, but is open and accessible to all students, especially those with interest in economics, engineering, political science, computer science, sociology, biology, law, government, philosophy.

Systems Development for Computational Science (216324)

Fabian Wermelinger

2021 Fall (4 Credits) **Schedule:** TR 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing and data sciences. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to adapt basic tools and approaches to solve computational problems in academic or industrial environments.

Recommended Prep:

Students are expected to have basic programming experience (Computer Science 50).

Computer Science 109A

Data Science 1: Introduction to Data Science (109899)

Pavlos Protopapas

Natesh Pillai

2021 Fall (4 Credits) **Schedule:** F 0945 AM - 1100 AM
MW 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements: **Not to be taken in addition to Applied Computation 209, or Applied Computation 209A, or Statistics 121, or Statistics 121A.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
Quantitative Reasoning with Data	Yes
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
Full Year Course	Divisible Course

Computer Science 109B

Data Science 2: Advanced Topics in Data Science (203546)

Pavlos Protopapas

Mark Glickman

2022 Spring (4 Credits) **Schedule:** MWF 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.

Recommended Prep:

CS 109a, AC 209a, or Stat 121a required.

Requirements: **Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking CS 109B) AND (Not to be taken in addition to CS 109, OR APCOMP 209, OR APCOMP 209B, OR STAT 121, OR STAT 121B.)**

Computer Science 120

Introduction to Algorithms and their Limitations (218613)

Salil Vadhan

2021 Fall (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 96

An introductory course in theoretical computer science, aimed at giving students the power of using mathematical abstraction and rigorous proof to understand computation. Thus equipped, students will be able to design and use algorithms that apply to a wide variety of computational problems, with confidence about their correctness and efficiency, as well as recognize when a problem may have no algorithmic solution. At the same time, they will gain an appreciation for the beautiful mathematical theory of computation that is independent of (indeed, predates) the technology on which it is implemented.

Class Notes: **Enrollment is limited to 96 students.**

Recommended Prep: **Experience with proofs and discrete mathematics at the level of Computer Science 20, and Python programming at the level of Computer Science 50.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 121

Introduction to Theoretical Computer Science (119064)

Madhu Sudan

Adam Hesterberg

2021 Fall (4 Credits) **Schedule:** MW 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Computation occurs over a variety of substrates including silicon, neurons, DNA, the stock market, bee colonies and many others. In this course we will study the fundamental capabilities and limitations of computation, including the phenomenon of universality and the duality of code and data. Some of the questions we will touch upon include: Are there functions that cannot be computed? Are there true mathematical statements that can't be proven? Are there encryption schemes that can't be broken? Is randomness ever useful for computing? Can we use the quirks of quantum mechanics to speed up computation?

Course Notes: **Students may not receive credit for both CS 121 and CS 125.**

Class Notes: **This course has been approved to allow for simultaneous enrollment.**

Recommended Prep: **Experience in formal mathematics at the level of CS 20. A "Homework**

Zero" is posted on last year's course website http://madhu.seas.harvard.edu/courses/Fall2020. It is highly recommended that students complete it before the first lecture.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Simultaneous Enroll Exception	Exempt

Computer Science 124

Data Structures and Algorithms (115384)

Adam Hesterberg

2022 Spring (4 Credits) **Schedule:** MW 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Design and analysis of efficient algorithms and data structures. Algorithm design methods, graph algorithms, approximation algorithms, and randomized algorithms are covered.

Course Notes:

Students will not receive credit for both CS 124 and CS 125.

Recommended Prep:

Computer Science 50 or equivalent is strongly recommended; Computer Science 20 or equivalent mathematical background, including knowledge of how to write proofs, is strongly recommended; Computer Science 51 or 61 is helpful.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 127

Cryptography (109566)

Boaz Barak

2021 Fall (4 Credits) **Schedule:** MW 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Cryptography is as old as human communication itself, but has undergone a revolution in the last few decades. It is now about much more than "secret writing" and includes seemingly paradoxical notions such as communicating securely without a shared secret, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as fully homomorphic encryption and software obfuscation. This is a proof-based course that will be best appreciated by mathematically mature students.

Course Notes:

This course will be offered in both an undergraduate and graduate versions. The graduate version will involve an additional project.

Recommended Prep:

Comfort with mathematical proofs at the level of CS121, CS124 or similar. Please contact the instructor if you're unsure if your background is sufficient.

Additional Course Attributes:

Economics and Computation (128164)

David Parkes

2021 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The interplay between economic thinking and computational thinking as it relates to electronic commerce, social networks, collective intelligence and networked systems. Topics covered include: game theory, peer production, reputation and recommender systems, prediction markets, crowd sourcing, network influence and dynamics, auctions and mechanisms, privacy and security, matching and allocation problems, computational social choice and behavioral game theory. Emphasis will be given to core methodologies, with students engaged in theoretical, computational and empirical exercises.

Course Notes:

Formerly Computer Science 186

Recommended Prep:

Applied Math 21b, Computer Science 51 or equivalent, Statistics 110, and one of Computer Science 181, Computer Science 182, Economics 1011a, Economics 1052, or Economics 1056.

Computing Hardware (113856)

Vijay Janapa Reddi

2022 Spring (4 Credits) **Schedule:** MW 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on *digital* devices and systems, and it complements ENG-SCI 152, which focuses on devices and systems that use analog electronics. Topics include: combinational and sequential logic; computer architecture; machine code; and altogether the infrastructure and computational framework composing a MIPS processor. Consideration is given in design to interactions between hardware and software systems. Students will design application specific hardware for an embedded system.

Recommended Prep:

CS50 or programming experience required.

Additional Course Attributes:

Computer Science 148

Design of VLSI Circuits and Systems (110990)

Gage Hills

2022 Spring (4 Credits) **Schedule:** MW 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Presentation of concepts and techniques for the design and fabrication of VLSI systems and digital MOS integrated circuits. Topics include: basic semiconductor theory; MOS transistors and digital MOS circuits design; synchronous machines, clocking, and timing issues; high-level description and modeling of VLSI systems; synthesis and place and route design flows; and testing of VLSI circuits and systems. Various CAD tools for design, simulation, and verification are extensively used.

Course Notes:

Offered in alternate years.

Recommended Prep:

Computer Science 141 or permission of instructor.

Requirements: **Prerequisite: Computer Science 141**

Additional Course Attributes:

Programming Languages (119629)

Nada Amin

2022 Spring (4 Credits) **Schedule:** TR 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Comprehensive introduction to the principal features and overall design of both traditional and modern programming languages, including syntax, formal semantics, abstraction mechanisms, modularity, type systems, naming, polymorphism, closures, continuations, and concurrency. Provides the intellectual tools needed to design, evaluate, choose, and use programming languages.

Recommended Prep:

Computer Science 51; Computer Science 121 is recommended. Students must have good programming skills, be very comfortable with recursion, proofs, basic mathematical ideas and notations, including sets, relations, functions, and induction.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 153

Compilers (131493)

Stephen Chong

2021 Fall (4 Credits) **Schedule:** MW 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Implementation of efficient interpreters and compilers for programming languages. Associated algorithms and pragmatic issues. Emphasizes practical applications including those outside of programming languages proper. Also shows relationships to programming-language theory and design. Participants build a working compiler including lexical analysis, parsing, type checking, code generation, and register allocation. Exposure to run-time issues and optimization.

Class Notes: **This course has been approved to allow for simultaneous enrollment.**

Recommended Prep:

Computer Science 51 or 61.

Operating Systems (113847)

James Mickens

2022 Spring (4 Credits) **Schedule:** MW 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course focuses on the design and implementation of modern operating systems. The course discusses threads, processes, virtual memory, schedulers, and the other fundamental primitives that an OS uses to represent active computations. An exploration of the system call interface explains how applications interact with hardware and other programs which are concurrently executing. Case studies of popular file systems reveal how an OS makes IO efficient and robust in the midst of crashes and unexpected reboots. Students also learn how virtualization allows a physical machine to partition its resources across multiple virtual machines. Class topics are reinforced through a series of intensive programming assignments which use a real operating system.

Recommended Prep:

Computer Science 61.

Data Systems (119249)

Stratos Idreos

2021 Fall (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

We are in the big data era and data systems sit in the critical path of everything we do. We are going through major transformations in businesses, sciences, as well as everyday life - collecting and analyzing data changes everything and data systems provide the means to store and analyze a massive amount of data. This course is a comprehensive introduction to modern data systems. The primary focus of the course is on the modern trends that are shaping the data management industry right now: column-store and hybrid systems, shared nothing architectures, cache conscious algorithms, hardware/software co-design, main-memory systems, adaptive indexing, stream processing, scientific data management, and key-value stores. We also study the history of data systems, traditional and seminal concepts and ideas such as the relational model, row-store database systems, optimization, indexing, concurrency control, recovery and SQL. In this way, we discuss both how and why data systems evolved over the years, as well as how these concepts apply today and how data systems might evolve in the future. We focus on understanding concepts and trends rather than specific techniques that will soon be outdated - as such the class relies largely on recent research material and on a semi-flipped class model with a lot of hands-on interaction in each class.

Recommended Prep:

Computer Science 51 and Computer Science 61.

Design of Useful and Usable Interactive Systems (123971)

Krzysztof Gajos

2022 Spring (4 Credits) **Schedule:** MW 0215 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 71

The course covers skills and techniques necessary to design innovative interactive products that are useful, usable and that address important needs of people other than yourself. You will learn how to uncover needs that your customers cannot even articulate. You will also learn a range of design principles, effective creativity-related practices, and techniques for rapidly creating and evaluating product prototypes. You will also have several opportunities to formally communicate your design ideas to a variety of audiences. You will complete two large team-based design projects.

Machine Learning (148156)

Finale Doshi-Velez

2022 Spring (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to machine learning, providing a probabilistic view on artificial intelligence and reasoning under uncertainty. Topics include: supervised learning, ensemble methods and boosting, neural networks, support vector machines, kernel methods, clustering and unsupervised learning, maximum likelihood, graphical models, hidden Markov models, inference methods, and computational learning theory. Students should feel comfortable with multivariate calculus, linear algebra, probability theory, and complexity theory. Students will be required to produce non-trivial programs in Python.

Recommended Prep:

Computer Science 51 or 61, Statistics 110, Applied Math 22a or Math 21ab (or equivalent).

Artificial Intelligence (110661)

Ariel Procaccia

2021 Fall (4 Credits) **Schedule:** MW 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Artificial Intelligence (AI) is already making a powerful impact on modern technology, and is expected to be even more transformative in the near future. The course introduces the ideas and techniques underlying this exciting field, with the goal of teaching students to identify effective representations and approaches for a wide variety of computational tasks. Topics covered in this course are broadly divided into problem solving, multi-agent systems, reasoning with uncertainty, and machine learning. Special attention is given to ethical considerations in AI and to applications that benefit society. For more information please see the course website.

Recommended Prep:

Students must have previously taken Statistics 110 (Probability) or an equivalent course. Experience with Python programming and a good understanding of time complexity (including big O notation) are assumed.

Additional Course Attributes:

Introduction to Computational Linguistics and Natural-language Processing (117372)

Stuart Shieber

2021 Fall (4 Credits) **Schedule:** MWF 1115 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Natural-language-processing applications are ubiquitous: Alexa can set a reminder if you ask; Google Translate can make emails readable across languages; Watson outplays world Jeopardy champions; Grover can generate fake news, and recognize it as well. How do such systems work? This course provides an introduction to the field of computational linguistics, the study of human language using the tools and

techniques of computer science, with applications to a variety of natural-language-processing problems such as these. You will work with ideas from linguistics, statistical modeling, and machine learning, with emphasis on their application, limitations, and implications. The course is lab- and project-based, primarily in small teams, and culminates in the building and testing of a question-answering system.

Recommended Prep:

Programming ability and computer science knowledge at the level of CS51; knowledge of discrete mathematics, including basic probability, statistics, and logic at the level of CS20; some familiarity with Python programming.

Computer Science 205

High Performance Computing for Science and Engineering (128104)

Fabian Wermelinger

2022 Spring (4 Credits) **Schedule:** TR 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

With manufacturing processes reaching the limits in terms of transistor density on today's computing architectures, efficient utilization of computing resources must exploit parallel execution to maintain

scaling. The use of computers in academia, industry and society is a fundamental tool for (scientific) solving problems while the "think parallel" mindset of code developers is still lagging behind. The aim of this class is to introduce the student to the fundamentals of parallel programming and its relationship on computer architectures by introducing techniques to analyze performance and scaling of parallel applications. Various forms of parallelism are discussed and exploited through different programming models with focus on shared and distributed memory programming. The course is application oriented and includes a group project where students will apply topics discussed in class to a real application.

Recommended Prep:

Students are expected to have basic programming experience and understanding of algorithms (e.g., CS50/CS51/CS107) and be familiar with C, C++ or similar, and have basic knowledge of Linux including using the command line.

Optimized Democracy (217635)

Ariel Procaccia

2022 Spring (4 Credits) **Schedule:** MW 1115 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 45

The course examines the mathematical and algorithmic foundations of democracy, running the gamut from theory to applications. The goal is to provide students with a rigorous perspective on, and a technical toolbox for, the design of better democratic systems. Topics include computational social choice (identifying optimal voting rules), fair division with applications to political redistricting (avoiding gerrymandering) and apportionment (allocating seats on a representative body), sortition (randomly

selecting citizens' assemblies), liquid democracy (transitively delegating votes), and weighted voting games (analyzing legislative power through cooperative game theory).

Recommended Prep:

Students should have a basic understanding of probability theory and algorithms. Examples of concepts that are useful to know include Markov chains, concentration inequalities, NP-hardness and linear programming. Mathematical maturity (following proof sketches in real time) is expected. Although this is primarily a graduate course, undergraduate students who have previously taken Stat 110 and CS 124 (or similar courses) are very welcome.

Computing at Scale (160624)

H. Kung

2021 Fall (4 Credits) **Schedule:** MW 0345 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Scaling computation over parallel and distributed computing systems is a rapidly advancing area of research receiving high levels of interest from both academia and industry. The objective can be for high---performance computing and energy---efficient computing ("green" data center servers as well as small embedded devices). In this course, students will learn principled methods of mapping prototypical computations used in machine learning, the Internet of Things, and scientific computing onto parallel and distributed compute nodes of various forms. These techniques will lay the foundation for future computational libraries and packages for both high---performance computing and energy---efficient devices. To master the subject, students will need to appreciate the close interactions between computational algorithms, software abstractions, and computer organizations. After having successfully taken this course, students will acquire an integrated understanding of these issues. The class will be organized into the following modules: Big picture: use of parallel and distributed computing to achieve high performance and energy efficiency; End---to---end example 1: mapping nearest neighbor computation onto parallel computing units in the forms of CPU, GPU, ASIC and FPGA; Communication and I/O: latency hiding with prediction, computational intensity, lower bounds; Computer architectures and implications to computing: multi---cores, CPU, GPU, clusters, accelerators, and virtualization; End---to---end example 2: mapping convolutional neural networks onto parallel computing units in the forms of CPU, GPU, ASIC, FPGA and clusters; Great inner loops and parallelization for feature extraction, data clustering and dimension reduction: PCA, random projection, clustering (K---means, GMM---EM), sparse coding (K---SVD), compressive sensing, FFT, etc.; Software abstractions and programming models: MapReduce (PageRank, etc.), GraphX/Apache Spark, OpenCL and TensorFlow; Advanced topics: autotuning and neuromorphic spike---based computing. Students will learn the subject through lectures/quizzes, programming assignments, labs, research paper presentations, and a final project. Students will have latitude in choosing a final project they are passionate about. They will formulate their projects early in the course, so there will be sufficient time for discussion and iterations with the teaching staff, as well as for system design and implementation. Industry partners will support the course by giving guest lectures and providing resources. The course will use server clusters at Harvard as well as external resources in the

cloud. In addition, labs will have access to state---of---the---art IoT devices and 3D cameras for data acquisition. Students will use open source tools and libraries and apply them to data analysis, modeling, and visualization problems.

Recommended Prep:

(1) programming experience (Python, MatLab or C/C++ should be fine); (2) basic knowledge in systems and machine organization; (3) familiarity in data structures and algorithms; and (4) maturity in mathematics (e.g., undergraduate linear algebra and statistics). For students with strong interest in the subject matter and related research topics, one of these four requirements may be waived. Labs and extra support will provide preparation in the first weeks of the semester to help students quickly obtain the background necessary to excel in the course.

Computer Science 248

Advanced Design of VLSI Circuits and Systems (121984)

Gage Hills

2022 Spring (4 Credits) **Schedule:** MW 0215 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Presentation of concepts and techniques for the design and fabrication of VLSI systems and digital MOS integrated circuits. Topics include: basic semiconductor theory; MOS transistors and digital MOS circuits design; synchronous machines, clocking, and timing issues; high-level description and modeling of VLSI systems; synthesis and place and route design flows; and testing of VLSI circuits and systems. Various CAD tools for design, simulation, and verification are extensively used.

The contents and course requirements are similar to those of Computer Science 148, with the exception that students enrolled in Computer Science 248 are expected to do a substantial design project and paper discussions on advanced topics.

Course Notes:

Offered in alternate years.

Recommended Prep:

Computer Science 141 or permission of instructor.

Advanced Topics in Programming Languages (114807)

Nada Amin

2021 Fall (4 Credits) **Schedule:** TR 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Seminar course exploring recent research in programming languages. Topics vary from year to year. Students typically read and present research papers, undertake a research project.

Class Notes: **For Fall 2021, the seminar will be a hands-on exploration of programming language systems for various purposes (reflection, verification, relational/logic programming, …). Each student will design and implement their own system (for example, a virtual machine and/or programming language and/or framework) in the language of their choice for the purpose of their choice.**

Recommended Prep:

Computer Science 152 or permission of the instructor.

Systems Security (160579)

James Mickens

2021 Fall (4 Credits) **Schedule:** MW 0215 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores practical attacks on modern computer systems, explaining how those attacks can be mitigated using careful system design and the judicious application of cryptography. The course discusses topics like buffer overflows, web security, information flow control, and anonymous communication mechanisms such as Tor. The course includes several small projects which give students hands-on experience with various offensive and defensive techniques; the final, larger project is open-ended and driven by student interests.

Topics in Data Visualization (211349)

Johanna Beyer

2022 Spring (4 Credits) **Schedule:** MW 0345 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course covers advanced topics in data visualization. Over the course of the semester, we will examine seminal works and recent state-of-the-art research in information visualization, scientific visualization and visual analytics. Students will work on a semester-long visualization project that will allow them to visualize their own data sets and write a short paper about their project. We will employ peer-feedback and formal design critiques to analyze each other's work.

Course Notes:

Enrollment limited to 30 students. Instructor permission needed.

Recommended Prep:

CS 171, CS 179, CS 279, or some data visualization experience. Please contact course staff if you are unsure about the course pre-requisites.

Adaptive Methods in Machine Learning (213653)

Yaron Singer

2021 Fall (4 Credits) **Schedule:** F 0945 AM - 1230 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course is focused on adaptive methods in machine learning. The standard paradigm in machine learning assumes there is a training set of labeled examples and the goal is to learn a prediction rule that can be used on new examples. This course covers methods where the goal is to perform an adaptive search over existing models to identify a strategy that performs well. The course covers the two paradigms of pure exploration and regret minimization. These two paradigms belong to the more general framework of reinforcement learning. We will study some high-level concepts of reinforcement learning and cover additional models as time permits (e.g., Markov decision processes, Monte Carlo tree search). The course is a seminar and includes presentation of research papers by students. Students will be primarily evaluated through their presentations, assignments, and a final project.

Topics in Machine Learning: Advancements in Probabilistic ML, Programming Models for ML, Causality (156936)

David Parkes

Ben Adlam

Zelda Mariet

Roland Snoek

Alexander Wiltschko

Steven Yadlowsky

2022 Spring (4 Credits) **Schedule:** F 1245 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This course provides broad exposure to a diverse set of active research topics in machine learning. We will discuss recent papers across a range of advanced subjects (Probabilistic Machine Learning, ML Applications in Science, and Causality) that are the current research interests of the instructors.Students can select one of these subjects to explore in-depth in the form of a course project. After the first lecture, each week two students will lead the discussion of the papers chosen for that week. Ideally the presentations will motivate the area, put the work in context, and describe the innovations from the papers. Then we will discuss the work as a group. One instructor will help facilitate the discussion and provide guidance about the content of the presentations.

Class Notes: **Students should complete this petition to enroll form by January 18. The form is also available on the course website.**

Recommended Prep:

Stat 111 or equivalent, CS 181 or equivalent, and familiarity with calculus and linear algebra (e.g., AM 22a or Math 21ab, or equivalent).

Computer Science 282R

Topics in Machine Learning: Task-focused Generative Models and Inference (156936)

Finale Doshi-Velez

2021 Fall (4 Credits) **Schedule:** MW 0945 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Generative models are attractive ways to summarize structure in data because they tell stories of how the data came to be. For example, a generative model of a disease might say the disease comes in two variants, each with its own distribution of infectiveness that governs the spread we see in the data. In general, however, we may not be able to model all of the patterns in the data. In this case, we will have to choose which patterns to model, and how faithfully. How do we decide what stays and what goes? In this course, we will examine a class of techniques for task-focused generative models and inference, which determine these trade-offs based on some knowledge of what the model may be used for in future (e.g. with patterns are most important to model to make a treatment decision).

We will begin with basic generative models and inference, and then dive into task-focused approaches via readings, coding assignments, and a final project. Along the way, we'll learn what works when, and where the research questions are.

Recommended Prep:

While no experience with task-focused generative modeling is expected, students will be expected to be comfortable with basic ideas of Bayesian inference, including Markov Chain Monte Carlo and variational inference.

Multi-Robot Systems: Control, Communication, and Security (216508)

Stephanie Gil

2022 Spring (4 Credits) **Schedule:** MW 1245 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The ability to connect devices over long distances, via the internet, changed our world. The second phase of this revolution, that we are still living in today, came about when these devices became wireless. Now we are at the cusp of a new phase of this evolution where devices are connected, wireless, and controlled – i.e. the robot revolution.

Multi-robot systems are becoming more pervasive; from future autonomous vehicle fleets, to drones, to manufacturing robots. As a result, the question of how to control, coordinate, and secure these systems has been a growing topic in the robotics literature in recent years. In this seminar-style course we will do a deep dive into this topic by reviewing classic and recent results in multi-agent planning and control literature. We will cover a wide gamut of applications from control of groups of flying drones, to decision making in autonomous car networks, to space exploring CubeSats.

This class will treat both the theory and the practical applications behind multi-robot systems. Students with mathematical inclinations and exposure to graph theory, probability theory, linear algebra, and algorithms will derive the most benefit from this course.

Course Notes:

This course is a graduate-level seminar course. Motivated advanced undergraduate students are also welcomed!

Recommended Prep:

It will be assumed that students have a strong command of calculus and basic probability theory. An understanding of mathematical optimization methods is preferable. A background in algorithms, dynamics/controls, and intro to robotics would be beneficial.

Deep Learning for NLP (112867)

Christopher Tanner

2021 Fall (4 Credits) **Schedule:** TR 0945 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 35

How can computers understand and leverage text data and human language? Natural language processing (NLP) addresses this question, and in this course students study the current, best approaches to it. No prior NLP experience is needed, but it is welcomed. This course provides students with a foundation of advanced concepts and requires students to conduct significant research on an NLP topic of their choosing. The aim is to produce a short paper worthy of submitting to an NLP conference. Assessment also includes pop quizzes, homework assignments, and an exam. The course starts with language representations and modelling, followed by machine translation (converting text from one language to another). Next, students learn about transformers (e.g., BERT and GPT-2), which are incredibly powerful deep learning models that currently yield state-of-the-art results in nearly every NLP task. We end the semester by covering tasks concerning bias and fairness, adversarial approaches, coreference resolution, and commonsense reasoning.

Course Notes:

CS 287r is also offered as AC 295. Students may not take both for credit.

Class Notes: **Students should complete the Course Application Form on the course website to indicate your prior experience and interest.**

Recommended Prep:

At least one class with substantial object-oriented programming; basic foundation in probability and calculus (Statistics 110 or equivalent); and basic knowledge of Machine Learning (e.g., CS181, CS109A, CS109B, or MIT 6.036, or equivalent). No prior NLP experience necessary.

Biologically-inspired Multi-agent Systems (120238)

Radhika Nagpal

2021 Fall (4 Credits) **Schedule:** WF 0345 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Surveys biologically-inspired approaches to designing distributed systems. Focus is on biological models, algorithms, and programming paradigms for self-organization. Topics vary year to year, and usually

include: (1) swarm intelligence: social insects and animal groups, with applications to networking and robotics, (2) cellular computing: including cellular automata/amorphous computing, and applications like self-assembling robots and programmable materials, (3) evolutionary computation and its application to optimization and design.

Course Notes:

Geared toward graduate students of all levels as well as advanced undergraduates. Preference given to graduate students or upper-level concentrators.

Recommended Prep:

Students should have a familiarity/experience with computer systems (e.g. software, networking) and algorithms/analysis through classes and/or internship experiences. Background in biology not required.

David Parkes

John Girash

2021 Fall (2 Credits) **Schedule:** R 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is designed for entering computer science Ph.D. students. The goals of the course are three-fold: (1) to introduce students to research around the CS area, (2) skills building, and (3) cohort building. We will lead sessions on skill building (paper reading, presentation, meaning of research) and soft skill building (advising relationships, academic culture, mental health, supporting your peers), as well as research and professional oriented discussions with a broad mixture of CS faculty members. We will also "visit" and discuss one or two CS colloquia. This is a full-year, 4-unit course, meeting once a week in each of the fall and the spring. Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Notes:

CS290 will satisfy a CS 200-level technical elective (one of the 10 required classes for the CS PhD degree). Non G1 CS PhDs may petition to take the course.

Requirements: **Graduate Year 1 Comp-Sci PHDs Only**

Graduate Research with Procaccia (216720)

Ariel Procaccia

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 324

Human-Computer Communication through Natural, Graphical, and Artificial Languages (111666)

Stuart Shieber

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 324

Human-Computer Communication through Natural, Graphical, and Artificial Languages (111666)

Stuart Shieber

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 325

Communicating with Machines About Data (212951)

Elena Glassman

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 325

Communicating with Machines About Data (212951)

Elena Glassman

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

Computer Science 326

Intelligent Interactive Systems and Human-Computer (126331)

Krzysztof Gajos

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Computer Science 326

Intelligent Interactive Systems and Human-Computer (126331)

Krzysztof Gajos

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 327

Tools for Reliable Meaningful Efficient Communication (160962)

Madhu Sudan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Computer Science 327

Tools for Reliable Meaningful Efficient Communication (160962)

Madhu Sudan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Computer Science 328

Mathematical Logic, Theory of Computation (133437)

Harry Lewis

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 328

Mathematical Logic, Theory of Computation (133437)

Harry Lewis

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 332

Complexity of Quantum Many-Body Systems: Area Laws and Hardness of Approximation (219961)

Anurag Anshu

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Computer Science 335

Complexity, Algorithms, Cryptography, and Convex Programming (206566)

Boaz Barak

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 335

Complexity, Algorithms, Cryptography, and Convex Programming (206566)

Boaz Barak

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 344

Computer Architecture: Modeling and Design (116858)

David Brooks

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 344

Computer Architecture: Modeling and Design (116858)

David Brooks

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Computer Science 345

Datacenter networking (117839)

Minlan Yu

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 345

Datacenter networking (117839)

Minlan Yu

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Computer Science 346

High-Performance Computer Systems (117841)

Michael Smith

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Computer Science 346

High-Performance Computer Systems (117841)

Michael Smith

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Computer Science 348

Computer Vision (120091)

Todd Zickler

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 348

Computer Vision (120091)

Todd Zickler

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Computer Science 351

Research in Programming Languages, Design and Implementation (216721)

Nada Amin

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration

Computer Science 351

Research in Programming Languages, Design and Implementation (216721)

Nada Amin

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration

Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 356

Computational Complexity, Parallel Computation, Computational Learning, Neural Computation (113027)

Leslie Valiant

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Computer Science 356

Computational Complexity, Parallel Computation, Computational Learning, Neural Computation (113027)

Leslie Valiant

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Computer Science 358

Computational Complexity, Cryptography, and Pseudorandomness (115136)

Salil Vadhan

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Computer Science 358

Computational Complexity, Cryptography, and Pseudorandomness (115136)

Salil Vadhan

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Computer Science 360

On-line Algorithms and Randomized Algorithms (109883)

Michael Mitzenmacher

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 360

On-line Algorithms and Randomized Algorithms (109883)

Michael Mitzenmacher

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Computer Science 361

Topics in Distributed Systems (119043)

James Waldo

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Computer Science 361

Topics in Distributed Systems (119043)

James Waldo

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Computer Science 362

Software Systems: Security, Performance, and Robustness (160959)

James Mickens

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Computer Science 362

Software Systems: Security, Performance, and Robustness (160959)

James Mickens

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Computer Science 364

Programming Languages and Security (126329)

Stephen Chong

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Computer Science 364

Programming Languages and Security (126329)

Stephen Chong

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Computer Science 372

Topics in Theory for Society (204561)

Cynthia Dwork

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 372

Topics in Theory for Society (204561)

Cynthia Dwork

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll

Computer Science 374

Graduate Research with Gonczarowski (219962)

Yannai Gonczarowski

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Computer Science 376

Computer Graphics (121071)

Steven Gortler

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Computer Science 376

Computer Graphics (121071)

Steven Gortler

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Computer Science 378

Sketching Algorithms for Massive Data (110261)

Jelani Nelson

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 378

Sketching Algorithms for Massive Data (110261)

Jelani Nelson

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Computer Science 380

Algorithms for Social Data (110263)

Yaron Singer

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Computer Science 380

Algorithms for Social Data (110263)

Yaron Singer

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 382

Natural Language Understanding and Generation (160961)

Alexander Rush

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 382

Natural Language Understanding and Generation (160961)

Alexander Rush

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 384

Advanced Control, Estimation, and Analysis of Robots and Dynamical Systems (160963)

Scott Kuindersma

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll

Computer Science 384

Advanced Control, Estimation, and Analysis of Robots and Dynamical Systems (160963)

Scott Kuindersma

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 385

Artificial Intelligence for Social Good (213680)

Milind Tambe

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Computer Science 385

Artificial Intelligence for Social Good (213680)

Milind Tambe

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Computer Science 386

Machine Learning (160970)

Finale Doshi-Velez

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 386

Machine Learning (160970)

Finale Doshi-Velez

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 387

Statistical Reinforcement Learning (214477)

Susan Murphy

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Computer Science 387

Statistical Reinforcement Learning (214477)

Susan Murphy

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Computer Science 388

Multi-Robot Systems Coordination and Control (216671)

Stephanie Gil

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Computer Science 388

Multi-Robot Systems Coordination and Control (216671)

Stephanie Gil

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Earth and Planetary Sciences

Subject: Earth & Planetary Sciences

Earth & Planetary Sciences 6

Introduction to Environmental Science and Engineering (216015)

Steven Wofsy

Bryan Yoon

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will provide students with an introduction to environmental science and engineering by providing an overview of current environmental issues, including climate change, air pollution, and water pollution. Students critically evaluate underlying science and knowledge limitations, and explore the nexus between scientific knowledge, regulatory frameworks, and engineering solutions to some of the world's most pressing environmental problems. The course will emphasize the interconnected biological, geological, and chemical cycles of the earth system including the multi-dimensional impacts of human activity.

Course Notes:

EPS 6 is also offered as ESE 6. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans.

Recommended Prep:

The course presumes basic knowledge in chemistry, physics, and mathematics at the high school level. Students will acquire additional skills and knowledge in these areas, as applied to environmental problems, as well as learning basic data analysis and coding skills.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 10

A Brief History of the Earth (203888)

Jerry Mitrovica

Rebecca Fischer

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is an introduction to Earth and Planetary science for EPS concentrators and an overview, for those outside the field, of the critical events and processes that have shaped the Earth's evolution and its place in the solar system. The course is designed to highlight the processes, from tectonic plate to microbial scale, that drive the Earth's response to (internal and external) perturbations and we will explore both the time

scale of those perturbations and the limits of the Earth's resilience. By considering the full sweep of geological time, from the early Earth to the modern world, the course will take advantage of a series of natural experiments to compare the Earth system during periods with and without atmospheric oxygen, animals, land plants and polar ice sheets, and to compare it, on occasion, with other terrestrial planets.

Course Notes:

This course includes a mandatory lab component.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 50

The Fluid Earth: Oceans, Atmosphere, Climate, and Environment (128224)

Ann Pearson

Marianna Linz

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces students to the fluid Earth, emphasizing Earth's weather and climate, the carbon cycle, and global environmental change. The physical concepts necessary for understanding the structure, motion and energy balance of the atmosphere, ocean, and cryosphere are covered first, and then these concepts are applied in exploring major earth processes. Examples from Earth's past history, on-going changes in the climate, and implications for the future are highlighted.

Course Notes:

Course includes lectures twice a week, a one hour section, and lab. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 53

Marine Geochemistry (126174)

David Johnston

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to low temperature biogeochemistry. We will focus on key biogeochemical elements and look to understand the linkages between the biosphere, atmosphere and hydrosphere. The course begins with a description of marine geochemistry (alkalinity and chemical fluxes) and works toward understanding

isotopic fractionation and what it can tell us about the environment. We will explore biogeochemistry over a range of physical and temporal scales.

Course Notes:

This course includes a weekly two-hour lab to be arranged. This course fulfills the EPS sub-discipline requirement of either Atmosphere(s) and Oceans or Earth History and Geobiology. Given in alternate years. Formerly offered as EPS 186. Students who have taken EPS 186 cannot take EPS 53 for credit.

Recommended Prep:

A course in college chemistry is recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 54

Minerals and Rocks of the Earth and Planets (219734)

Rebecca Fischer

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Minerals and rocks are the building blocks of the Earth and other planets, and understanding their properties and occurrences has applications to many diverse areas of Earth and planetary sciences. This course provides a comprehensive foundation of mineralogy and introductory petrology for students of Earth and planetary sciences, materials science, chemistry, or related fields. Topics include: bonding; symmetry; crystallography; deep Earth mineralogy; planetary mineralogy; petrology; and the bonding, structures, geology, and significance of a wide range of mineral and rock types. Weekly lab sections will cover crystal structures, symmetry, and the identification of a variety of common minerals and rocks.

Course Notes:

Once weekly lab section, 2 hours long.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Undergraduate Students

Earth & Planetary Sciences 56

Geobiology and the History of Life (108969)

David Johnston

Javier Ortega-Hernandez

Nadja Drabon

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

Course Notes:

Course includes a weekly three-hour lab to be arranged and one field trip.
EPS 56 is also offered as OEB 56. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

Recommended Prep:

EPS 10, OEB 10, or Life Sciences 1b, or permission of instructor.

Earth & Planetary Sciences 101

Global Warming Science 101 (214499)

Eli Tziperman

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the science of global warming/ climate change, meant to assist students to understand issues that often appear in the news and public debates. The course is meant for any STEM student with a basic math preparation, not assuming prior science courses. Topics include: the greenhouse effect, and consequences of the rise of greenhouse gasses including sea level rise, ocean acidification, heat waves, droughts, glacier melting, hurricanes, forest fires and more. Throughout, an ability to critically evaluate observations, predictions and risk will be emphasized. The students will be involved in in-class quantitative analysis of climate observations, feedbacks and models via python Jupyter notebooks that will be provided.

Course Notes:

This course fulfills the E-PSCI sub-discipline requirement of Atmosphere(s) and Oceans. E-PSCI 101 is also offered as ESE 101. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 101. AB students may enroll in either E-PSCI 101 or ESE 101 to meet their concentration requirements.

Recommended Prep:

Basic calculus and ordinary differential equations, as covered for example by Math 1b, Math 19a, Math 21b. A minimal previous exposure to programming in any programing language is sufficient, python will be introduced a part of the course.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
Quantitative Reasoning with Data	Yes
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 102

Data Analysis and Statistical Inference in the Earth and Environmental Sciences (216019)

Roger Fu

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Statistical inference, deterministic and stochastic models of data, denoising and filtering, data, visualization, time series analysis, image processing, Monte Carlo methods. The course emphasizes hands-on learning using real data drawn from atmospheric and environmental observations, applied by students in projects and presentations.

Course Notes:

EPS 102 is also offered as ESE 102. Students may not take both for credit.

Recommended Prep:

Math 21 or Applied Math 22 a and b or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 112

Thermodynamics by Case Study (161215)

Scot Martin

2022 Spring (4 Credits) **Schedule:** MW 1200 PM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes:

EPS 112 is also offered as ES 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. Total class capacity of 18 includes students in both ES 112 and EPS 112.

Meets on Monday and Wednesday from 12pm to 12:50pm for all 18 students. Also meets on Friday in one of two separate 50-min blocks of 9 students for discussion. Friday meeting times will be determined according to enrolled students' availability. Please see course page for lottery instructions.

Earth & Planetary Sciences 121

Geology and Evolution of Planetary Crusts (218585)

Stein Jacobsen

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

The course explains how and why solid planets develop crusts. Chemical and isotopic analyses of rocks and minerals are used to understanding the origin and evolution of planetary crust and their surface environments. Through the study of primitive meteorites, martian meteorites, lunar samples and terrestrial rocks, it is shown how timescales, origin and evolution of planets and their crusts can be inferred from studies of rocks and minerals. Virtual field trips to the Earth's crusts and other planets basaltic crusts will illustrate how they formed and evolved.

Earth & Planetary Sciences 131

Introduction to Physical Oceanography and Climate (111361)

Eli Tziperman

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Observations and fundamentals of ocean dynamics, from the role of the oceans in global climate and climate change to beach waves. Topics include the greenhouse effect, oceans and global warming; El Niño events in the equatorial Pacific Ocean; currents: the wind driven ocean circulation and the Gulf stream; coastal upwelling and fisheries; temperature, salinity, the overturning circulation and its effect on global climate stability and variability; wave motions: surface ocean waves, internal waves, tsunamis and tides; ocean observations by ships, satellites, moorings, floats and more.

A field trip to the Woods Hole Oceanographic Institution on Cape Cod will be held during the course, which will be an opportunity to learn about sea-going oceanography. Software for scientific computation and graphics will be introduced (students may choose either Matlab or python), which will be used for some homework assignments.

Course Notes:

EPS 131 is also offered as ESE 131. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans. Given in alternate years.

Recommended Prep:

Mathematics 21a, 21b; Physical Sciences 12a, Physics 15a or Applied Physics 50a; or equivalents/ permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes

Earth & Planetary Sciences 134

Climate Change Debates: The Reading Course (126141)

Peter Huybers

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The atmospheric carbon dioxide concentration is now the highest it has been in at least 800,000 years, raising concerns regarding possible future climate changes. This reading course will survey the science of global change from the perspective of scientific debates within the climate community. Specifically, the course will involve guided reading and discussion of papers that present contentious view points on the science of global change, with the goal of students learning how to scientifically evaluate such points of view. Students are given weekly writing assignments and need to prepare presentations and lead some of the weekly discussions.

Course Notes:

Given in alternate years. Course includes a weekly section to be arranged. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

Mathematics 21a,b or equivalent, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 138

Mysteries of Climate Dynamics (204007)

Brian Farrell

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

We will study the evidence in the climate record for dramatic changes in the climate system and delve into how these challenge our understanding of climate dynamics. Case studies will include the dim early sun paradox, the Snowball Earth, Equable Climates, Glacial/Interglacial and Stadial/Interstadial transitions and ENSO.

Course Notes:

This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. EPS 138 is also offered as ESE 138. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in EPS 138. AB students may enroll in either EPS 138 or ESE 138 to meet their concentration requirements.

Recommended Prep:

Mathematics 21 or Applied Mathematics 22A and 22B; Physical Sciences 12; or permission of instructor.

Additional Course Attributes:

Earth & Planetary Sciences 141

Isotope and Trace Element Geochemistry and Geochronology (122074)

Stein Jacobsen

2022 Spring (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The origin of the element and isotope distribution in the Earth and the Solar System. Closed system radioactive decay, isotope fractionation, mass balance and mixing. Application of Rb-Sr, Sm-Nd, U-Th-Pb, Lu-Hf, Re-Os and K-Ar isotope systems for geochronology and as tracers for geological processes. Noble gas geochemistry. Extinct nuclides. Cosmogenic nuclides. U-Th-series nuclides. Planetary isotopic evolution. Stable isotope geochemistry. Application of H, C, N, O, and S isotopes as tracers of geochemical and biogeochemical processes.

Course Notes:

Course includes a weekly two-hour lab to be arranged. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Recommended Prep:

A course in college-level chemistry or equivalent; EPS 51 or EPS 110; or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)

Earth & Planetary Sciences 145

Introduction to Igneous Petrology and Petrogenesis (121458)

Charles Langmuir

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How igneous rocks form and reveal the processes and fluxes involved in the circulation of the solid Earth. The course begins with the essential elements of igneous petrology, rock description and nomenclature, mineralogy, phase diagrams, processes of melting and crystallization, trace elements. We then consider the formation of igneous rocks at modern igneous settings, spreading centers, convergent margins and ocean islands. We conclude with investigations of igneous phenomenon of the past, such as large igneous flood basalt provinces, anorthosites, komatites and the igneous history of the Moon.

Course Notes:

Includes a weekly three-hour lab to be arranged. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.

Additional Course Attributes:

Attribute	Value(s)

FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 160

Space Science and Engineering: Theory and Applications (160957)

Robin Wordsworth

2021 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course is an introduction to the challenges involved in designing spacecraft for observation of Earth and exploration of other planets. Topics covered include basic atmospheric and planetary science, key principles of remote sensing, telemetry, orbital transfer theory, propulsion and launch system design, and thermal and power management.

Course Notes:

EPS 160 is also offered as ESE 160. Students may not take both for credit. Undergraduate engineering students should enroll in ESE 160. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Recommended Prep:

Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences 12a and 12b (or equivalents)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 161

Applied Environmental Toxicology (216018)

Elsie Sunderland

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will examine the theory and practical application of environmental chemistry and toxicology for assessing the behavior, toxicity and human health risks of chemical contaminants in the environment. The goals of the course are to: (a) illustrate how various sub-disciplines in environmental toxicology are integrated to understand the behavior of pollutants; (b) demonstrate how scientific information is applied to inform environmental management decisions and public policy through several case studies; and (c) provide an introduction to the legislative framework in which environmental toxicology is conducted. This course will be directed toward undergraduate students with a basic understanding of chemistry and calculus and an interest in applied science and engineering to address environmental management problems.

Course Notes:

EPS 161 is also offered as ESE 161. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Additional Course Attributes:

Attribute	Value(s)

Earth & Planetary Sciences 166

State-of-the-art Instrumentation in Environmental Sciences (216017)

Frank Keutsch

2022 Spring (4 Credits) **Schedule:** MWF 0945 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will showcase how novel technologies have allowed fascinating new insights into key aspects of our environment that are of high societal importance. Students will gain both an understanding of topics such as climate change and air pollution as well as detailed knowledge of the design and underlying principles of environmental instrumentation, especially via the hands-on laboratory sessions.

The development of novel instrumentation, driven by technological advances, is transforming observations and revolutionizing the environmental sciences. For example, they introduce new observables and extend the spatial and temporal coverage and resolution of (Earth) observations. This course will highlight how state-of-the-art instrument design has enabled these fascinating advances by focusing on the engineering as well as physics and chemistry principles that are central to this success. A central component of the course consists of laboratory sessions that provide hands-on experience on important aspects of instrumentation, ranging from data acquisition, instrument control software, basic electronic filtering all the way to learning design concepts and operation of spectroscopic, mass-spectrometric and separations instrumentation. There will also be a tour of some of the laboratories using state-of-the-art environmental instrumentation at Harvard. The course and especially the laboratory experiments contain aspects from various engineering disciplines including environmental, electronic and mechanical engineering.

Course Notes:

EPS 166 is also offered as ESE 166. Students may not take both for credit.

Recommended Prep:

Math 1a, b; PS 11 or equivalent; PS 12a, b (or Physics 15a, b or AP 50a, b)

Earth & Planetary Sciences 168

Human Environmental Data Science: Agriculture, Conflict, and Health (216421)

Peter Huybers

2021 Fall (4 Credits) **Schedule:** T 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The purpose of this course is to develop understanding and guide student research of human and environmental systems. In class we will explore agriculture, conflict, and transmissible disease. Study of each topic will involve introduction data, mathematical models, and analysis techniques that build toward addressing a major question at each interface: Have agricultural systems been adapted to climate change? Has drought caused conflict? And does the environment influence the spread of COVID-19? These questions are diverse, but are addressed using common analytical frameworks. Analytical approaches include simple mathematical models of feedback systems, crop development, and population disease dynamics; frequentist statistical techniques including linear, multiple linear, and panel regression models; and Bayesian methods including empirical, full, and hierarchical approaches. You will be provided with sufficient data, example code, and context to come to your own informed conclusions regarding each of these questions. Furthermore, topics covered in class will pro-vide a template for undertaking independent research projects in small teams. Research will either extend on topics presented in class or address other human-environmental questions. Historically, such student projects have sometimes led to senior theses or publication in professional journals.

Course Notes:

The course is designed for upper-level undergraduates. Enrollment is by instructor permission. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

There are no specific prerequisites but a background in environmental, physical or life sciences; experience in coding or statistical analysis; and/or facility with differential equations is useful.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Biogeochemistry (117399)

Ann Pearson

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to biological and organic chemistry of the Earth's environment. Primary focus on formation, processing, and preservation of organic carbon, with emphasis on paleoenvironmental applications and on processes occurring at the molecular level.

Course Notes:

This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology. Given in alternate years.

Recommended Prep:

A course in college-level chemistry or equivalent. Chemistry 17 or 27 also recommended, but optional. EPS 53 strongly recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 200

Atmospheric Chemistry and Physics (111855)

Daniel Jacob

Steven Wofsy

2021 Fall (4 Credits) **Schedule:** WF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Tropospheric and stratospheric gas and aerosol chemistry. Carbon, nitrogen, oxygen, and mercury cycles. Implications for climate change, air quality, ecosystems.

Course Notes:

Intended to be an introductory survey of atmospheric chemistry to serve first-year Ph.D. students in the atmospheric sciences as well as students specializing in other areas of Earth & Planetary Sciences or Environmental Science & Engineering. Undergraduate students may take EPS 200 with permission of the instructors.

Recommended Prep:

Mathematics 21 or Applied Math 22, basic college physics and chemistry.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 203

Earthquakes and Faulting (121615)

Miaki Ishii

Brendan Meade

John Shaw

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Earthquake phenomenology in the context of plate tectonics. Continuum mechanics and elastic deformation; seismic wave radiation. Earthquake cycle models and constraints from tectonic geodesy. Earthquake geology and paleoseismology. Source physics, fault friction, rupture dynamics. Deformation rates and fault system structure. Quantitative seismic hazard analysis.

Course Notes:

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Given in alternate years.

Recommended Prep:

Mathematics 21a or Mathematics 21b or Applied Math 22a or Applied Math 22b

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 208

Physics of Climate (122549)

Zhiming Kuang

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Overview of the basic features of the climate system (global energy balance, atmospheric general circulation, ocean circulation, and climate variability) and the underlying physical processes.

Course Notes:

This course includes a computer lab to be arranged.

Recommended Prep:

Applied Mathematics 105 (may be taken concurrently); Physics 15 or Physical Sciences 12a,b; or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 236

Environmental Modeling and Data Analysis (120783)

Steven Wofsy

Daniel Jacob

2021 Fall (4 Credits) **Schedule:** WF 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Graduate-level introduction to environmental modeling and data analysis: data visualization, statistical inference, Bayes Theorem, optimal estimation, adjoint methods, Monte Carlo methods, time series analysis, denoising; principles and numerical methods for chemical transport and inverse models.

Course Notes:

Focused on computer-based projects. Suitable for: graduate students and advanced undergraduates in Earth and Planetary Sciences, Environmental Science and Engineering, Applied Math, Chemistry, and Physics. At MIT: EAPS, Civil & Environmental. Helpful to have preparation in differential equations, or atmospheric science, but not required.

Recommended Prep:

Applied Mathematics 105; a course in atmospheric chemistry (EPS 133 or 200 or equivalent); or permission of the instructors.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 237

Planetary Radiation and Climate (205144)

Robin Wordsworth

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Atmospheric radiative transfer is at the heart of understanding the climate of Earth and other planets. This course covers basic stellar and planetary physics, quantum spectroscopy, molecular and aerosol scattering, satellite retrieval theory, cloud, CO2 and H2O climate feedbacks, and extreme climate phenomena such as the runaway greenhouse, Nuclear Winter and Titan's methane cycle. As a final course outcome, you will learn to construct a line-by-line radiative-convective climate model from first principles.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 240

Isotope and Trace Element Geochemistry and Geochronology (111063)

Stein Jacobsen

2022 Spring (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The origin of the element and isotope distribution in the Earth and the Solar System. Closed system radioactive decay, isotope fractionation, mass balance and mixing. Application of Rb-Sr, Sm-Nd, U-Th-Pb, Lu-Hf, Re-Os and K-Ar isotope systems for geochronology and as tracers for geological processes. Noble gas geochemistry. Extinct nuclides. Cosmogenic nuclides. U-Th-series nuclides. Planetary isotopic evolution. Stable isotope geochemistry. Application of H, C, N, O, and S isotopes as tracers of geochemical and biogeochemical processes.

Course Notes:

Course includes a weekly two-hour lab to be arranged. Given in alternate years.

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 245

Petrological Approaches to Understanding the Earth's System (125469)

Charles Langmuir

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The course studies the igneous processes at spreading centers, convergent margins and hot spots, and explores their influences on mantle, crust, ocean and atmosphere and the constraints they provide for the plate tectonic geochemical cycle.

Course Notes:

Includes a weekly three-hour lab to be arranged. Given in alternate years.

Recommended Prep:

EPS 145 or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 258A

Planetary Dynamics: Gravitational Fields (215880)

Jeremy Bloxham

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The giant planets account for over 99% of the mass of our Solar System, excluding the Sun. First, we consider what we can learn about these planets from Earth-based observations, such as their orbits, mean radius and shape. How do such observations constrain their density, and hence composition and formation? Additionally, Earth-based observations reveal atmospheric zonal flows and the presence of magnetic fields, which provide additional insight. Second, we consider the role of observations from spacecraft, which provide spatial detail of the planets' gravitational and magnetic fields. Finally, we consider what additional observations are needed to more completely understand these planets.

Course Notes:

Given in alternate years or upon announcement.
Students can take EPS 258a and EPS 258b in either order.

Recommended Prep:

A course in mechanics, plus differential equations and electromagnetism at the 100-level.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 261

Sea Level Change (126477)

Jerry Mitrovica

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The physical processes responsible for sea level changes over time scales extending from hours to hundreds of millions of years. Long-term sea-level trends: geological observations, physical mechanisms and eustasy, dynamic topography. Sea-level change on an ice age Earth (glacial isostatic adjustment, GIA): observations, viscoelastic loading, mantle viscosity structure, the Last Glacial Maximum (LGM), interglacial sea-level change, archaeological applications, ongoing GIA. Ocean tides: equilibrium and non-equilibrium effects, tidal dissipation. Modern global sea level change: tide gauges and geodetic/altimetry/gravity observations (e.g., GNSS, GRACE, ICESat, CryoSat), ice melting and thermal expansion, ocean dynamics, sea-level fingerprinting, storm surges, coastal impacts and tipping points, adaptation strategies, case studies (Hurricane Katrina, Tuvalu, Bangladesh, Nile Delta).

Course Notes:

Given in alternate years.

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Recommended Prep:

College-level physics and math courses are required. Open to undergraduate students only with permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 262

Theoretical Seismology (107767)

Miaki Ishii

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course covers theoretical basis for body-wave seismology. The topics covered include continuum mechanics, equations that govern description of seismic waves, seismic source representation, and ray theory.

Course Notes:

Every other year/upon announcement

Recommended Prep:

EPS166, AM201 (or equivalent), AM202 (or equivalent), and classical mechanics (i.e., Hamiltonian and Lagrangian)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 262

Theoretical Seismology: Part 3. Low-Frequency Seismology 2 (107767)

Miaki Ishii

2021 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course covers theoretical basis for low-frequency seismology. The topics covered include inferences of one-dimensional structure, source theory, synthetic seismograms, and lateral variations.

Course Notes:

Every other year/upon announcement

Recommended Prep:

Part 1 and 2 of EPS262

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 265

Introduction to Seismology (219530)

Miaki Ishii

2021 Fall (4 Credits) **Schedule:** TR 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to seismology with a focus on conceptual understanding of seismic phenomena. Emphasis will be on earthquakes, e.g., detection, mechanism, characteristics, statistics, hazard, and relationship to dynamics. Broader topics such as the types of seismological data and inferences of the Earth's internal structure also will be covered.

Course Notes:

Course includes a weekly three-hour lab to be arranged and one field trip. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.

Recommended Prep:

Mathematics 21ab, 23ab, 25ab, or applied math 22ab.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 275

Topics in Precambrian Geology (218700)

Nadja Drabon

2021 Fall (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

In this seminar we will discuss current controversies pertaining to the geological evolution of the early Earth. Of the Hadean Eon (4.6 to 4.0 Billion years ago), almost no rock record is preserved and minerals are rare. From the limited evidence available, two major hypothesis have emerged for the nature of the early Earth: (A) Earth was more similar to today than previously thought and plate tectonics commenced shortly after Earth's formation. (B) The Hadean Earth was very different from today and was dominated by long-lived protocrust and an absence of significant plate tectonic activity. We will discuss these two hypothesis and their traces in the mineral record (isotopes, mineral inclusions, trace and rare earth element geochemistry). This discussion will include questions about the habitability of the early Earth, the role of meteorite impacts, and possible similarities to other planetary bodies. We will be reading and discussing controversial papers every week and students will design their own final projects

Course Notes:

This course is primarily for graduate students and is also available to advanced undergraduate students.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 287

Biogeochemistry (119062)

Ann Pearson

2022 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to biological and organic chemistry of the Earth's environment. Primary focus on formation, processing, and preservation of organic carbon, with emphasis on paleoenvironmental applications and on processes occurring at the molecular level.

Course Notes:

Given in alternate years.

Recommended Prep:

A course in college-level chemistry or equivalent. Chemistry 17 or 27 also recommended, but optional. EPS 53 strongly recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 301

Teaching-Related Work (211358)

2021 Fall (2 Credits) **Schedule:**

Instructor Permissions: None **Enrollment Cap:** n/a

Enrollment is open to any EPS Ph.D. student who holds a Teaching Fellow (TF) appointment and is engaged in teaching a course.

Course Notes:

Teaching Fellows may enroll in 4 units of E-PSCI 301 for a .25 FTE TF appointment, or up to 8 units for a .5 FTE TF appointment. TFs should not enroll in the course in which they are teaching.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

No FAINFO	300 or 3000 level class, do not generate FAINFO

Subject: Science

Science 5

An Introduction to Computation for Contemporary Science (219554)

Brendan Meade

Jeremy Bloxham

2022 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

From climate change and COVID to biological evolution and exoplanets, computation is an essential element of modern science. It allows us to find insights in a sea of data, ask principled questions about the future, and perform experiments without a laboratory. In this class, we'll learn the practice of computer programming, and quantitative questioning, through both data-driven and model-oriented case studies focused on the earth, the universe, and living systems. To explore these topics we'll use the Python

programming language to create dynamic computational notebooks that interweave code, images, comments, questions, and analysis. This introductory class will illuminate how computation is changing the nature of science, and provide undergraduate students with the experience and tools to engage in scientific research.

Recommended Prep:

This course is designed as an accessible introduction to modern computer programming and does not require previous programming experience. Math experience beyond high school algebra, trigonometry, and pre-calculus is unnecessary.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Not Available for Cross Registration

Korean BA

Elementary Korean (124296)

Hi-Sun Kim

2022 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1130 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This introductory course is designed to provide a basic foundation in modern Korean language and culture by focusing on the balanced development of the interpersonal (speaking), interpretive (listening & reading), and presentational (formal speech & writing) skills. Students in Korean Ba begin by learning the complete Korean writing system (Hangul), which is followed by lessons focusing on basic conversational skills, cultural competence, and grammatical structures. To provide sufficient opportunities to apply what has been learned in class, there are small group drill sessions, language tables, and a number of other cultural activities.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS: Final Assessment Category	Three-hour Exam
FAS: Meets Foreign Lang Req	Korean

Elementary Korean for Advanced Beginners (114383)

Hi-Sun Kim

2021 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Korean Bxa is an accelerated course designed for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills, but haven't had sufficient opportunity to develop their knowledge of basic reading, writing, and grammar. This course will cover important grammatical structures covered Elementary Korean (Ba and Bb) for the purpose of providing tools to build upon the existing level of each student's Korean language ability.

Class Notes: **A 30 minute discussion section (2-3 students) for focused language skill practice will be scheduled on either Tuesdays OR Thursdays after classes begin. (Suggested 30 min section time will be between 1:30-2:**

45pm)

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam

Korean 120A

Intermediate Korean (117220)

Ahsil Noh

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1130 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Korean 120a is the first half of the intermediate course designed for students who have successfully completed Elementary Korean or students who have an equivalent proficiency level. This course aims to increase students' ability to communicate in Korean in a wide range of daily life situations with an equal focus on expanding and on consolidating students' knowledge of the fundamental grammar of Korean. Students are introduced to reading and listening materials of increasing complexity on a variety of topics in modern Korean society and culture. In addition, in order to develop a deeper understanding of the basic structures of the Korean vocabulary, simple Chinese characters will be introduced in this course.

Recommended Prep:

Korean Bb or equivalent.

Korean 123xb is a continuation of Korean Bx and is for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills. It is an accelerated course covering important grammatical structures and materials from Intermediate Korean (120a and 120b) for the purpose of providing tools to build upon the basic foundation of student's Korean language ability. Hence, this class is designed to meet the linguisitic needs that are unique to heritage language students to (i) increase accuracy in grammar, (ii) develop basic reading writing skills, and (iii) expand vocabulary through introduction of Chinese characters. Upon completion of this course, students will be fast-tracked into an upper-level course (e.g. Korean 130a).

Class Notes: **First week of classes to be held online - check Canvas for more information.**

A 30 minute discussion section (2-3 students) for focused language skill practice will be scheduled on either Tuesdays OR Thursdays. (The times offered will be between 1:30-2:30pm)

Korean 130A

Pre-advanced Korean (111235)

Jee Hyun Lee

2021 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Korean 130a is designed for students who have completed Intermediate Korean 120b or have equivalent

proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring the these topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

Class Notes: **A 30 minute discussion section (2-3 students) for focused language skill practice will be scheduled on either Tuesdays OR Thursdays after classes begin. (Suggested 30 min section time will be between 12: 00pm – 1:00pm)**

Recommended Prep:

Korean 120b or equivalent.

Korean 130XA

Pre-Advanced Modern Korean for High-Proficiency Learners (218165)

Jee Hyun Lee

2021 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Korean 130xa is designed for students who have received significant exposure to Korean language and culture and thus have near-native listening and speaking skills, but intermediate or high-intermediate level in grammar and vocabulary used in advanced reading and writing. The goals of this course is to focus and address the linguistic needs that are unique to students with such background: (i) increase in accuracy and usage of complex grammar, (ii) development in reading and writing skills in various topics, (iii) deeper understanding of Korean history, society, and culture, and (iv) expansion of vocabulary through Chinese characters for advanced reading. Thus, this course will cover important basic and complex grammatical structures needed to improve and develop formal language skills in reading, writing, and presentations. Upon completion of this course, students will continue to Korean 130b.

Class Notes: **Related Sections A 30 minute discussion section (2-3 students) for focused language skill practice will be scheduled on either Tuesdays OR Thursdays after classes begin. (Suggested 30 min section time will be between 10:30am – 11:30am)**

Korean 140A

Advanced Korean (116633)

Ahsil Noh

2021 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Korean 140a is designed to enhance students beyond the high-intermediate level in reading, speaking, and writing skills in order to begin understanding socio-cultural and historical issues of contemporary Korea. Hence, the aim of the course includes (i) comprehending authentic materials from contemporary Korean mass media, (ii) following essential points of oral and written discourses that are linguistically complex, (iii) discussing concrete topics relating to major issues of contemporary Korean society and culture through supporting opinions, refutations, hypotheses, and detailed explanations of ideas, and (iv) writing about a variety of topics of Korean culture and society in detail with significant accuracy in grammar and structure. Furthermore, further development of knowledge in Chinese characters, idioms, proverbs, maxims, will be covered in this course.

Class Notes: **Related Sections A 30 minute discussion section (2-3 students) for**

Introduction to the Study of East Asia: Issues and Methods (145419)

Melissa M. McCormick

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This interdisciplinary and team-taught course provides an introduction to several of the approaches and methods through which the societies and cultures of East Asia can be studied at Harvard, including history, philosophy, literary studies, political science, film studies, anthropology and gender studies. We consider both commonalities and differences across the region, and explore how larger processes of imperialism, modernization, and globalization have shaped contemporary East Asian societies and their future trajectories.

Course Notes:

Required of sophomore concentrators and secondary field candidates. Open to freshmen. EAS 97ab may not be taken Pass/Fail.

Economic Governance in East Asia (218174)

Daniel Koss

2022 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

East Asia has given rise to models of development with distinct visions for the relationship between the state and the market. Hallmarks of the designs are powerful ministries, gigantic conglomerates, state-supervised labor unions, and spectacular corruption. The first part of the tutorial revisits four decades of "miraculous" growth in Japan and the Asian Tiger economies (South Korea, Taiwan, Hong Kong, and Singapore), in order to illuminate underlying development strategies from a political science perspective, including through theories of late industrialization and varieties of capitalism. The second part of this course focuses on China, whose strategists have drawn on its neighbors' experience. It highlights the vast differences between economic regions in China (the Pearl River versus the Yangtze Delta, versus lagging Western regions), as well as the significant transformation of the country's approach over the last three decades. Students will develop a deeper comprehension of phenomena such as national champions, tycoons in the digital economy, Communist party control, international expansion, and slogans such as "Made in China 2025." Throughout the course, we will occasionally go back in time to historical foundations of economic governance. This junior tutorial provides individualized support in the research process toward a final paper.

Course Notes:

This course counts toward the Junior Tutorial requirement for East Asian Studies concentrators.

Major Religious Texts of East Asia (143833)

Ryuichi Abe

2022 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course aims at enabling students to read and analyze in depth major religious texts of East Asia, representing diverse traditions and genres. The course encourages students to take up their reading of texts not only as ways to acquire knowledge on Asian religious traditions, but as practice, labor, and play in which their ordinary way of understanding/experiencing the world and themselves will be challenged, reaffirmed, and renewed.

Introduction to Digital Tools and Methods in East Asian Humanities (218278)

Kwok-leong Tang

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is designed for students in East Asian humanities with no prior background in digital literacy. It will introduce digital tools and methods used for the acquisition, transformation, analysis, and presentation of data. Coding is not required. Students completing the course will be able to integrate and apply the tools and methods into their research.

Hands-on practices will be the major core of this course. Although students will expose to a wide range of tools, we use Konstanz Information Miner (KNIME), an open access analytics platform, as the axle of the course. Students will learn concepts and build workflows in different aspects of digital scholarship.

Class Notes: **This course will be taught by Kwok Leong Tang, Lecturer in East Asian Languages and Civilizations.**

Buddhism, Japanese Arts and Culture (218302)

Ryuichi Abe

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is designed to enable students to analyze a wide range of Japanese cultural creations - including the traditional Noh theater, classical and modern Japanese paintings, and contemporary anime – by illustrating the influence of Buddhism both in their forms and at their depths. The first part of the course is a study of major Buddhist philosophy and its impact on Japanese literature. The second part observes Buddhist ritual practices and their significance for Japanese performing arts. The last part traces the development of Japanese Buddhist art, and considers the influence of Buddhism on diverse contemporary popular Japanese art media.

Historical Legacies in East Asian Politics (218171)

Daniel Koss

2021 Fall (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How does the historical past shape politics in the present? East Asia and its recent political developments provide a most striking universe of cases, where legacies of the past influence both domestic politics and international relations. Located at the intersection of history and political science, this course is grounded in theories of institutional development, introducing concepts such as path dependence, critical junctures, and unintended consequences. Beginning with China, the course discusses explanations of development successes grounded in grand narratives going far back in time; the impact of cultural norms, imperial techniques of statecraft, revolutionary practices; the uses and abuses of history in the service of the party

state; and the long-term impact of Christian missionaries, Japanese colonizers, and a decade of warfare. Through the case of Japanese domestic politics, we explore how tradition is transmitted through habits and memories of individuals; through institutions such as the perennial ruling party; and through a broadly defined civil society. As examples of critical junctures, we will discuss North Korea's early postwar history and South Korea's democratization process, discovering their enduring influences on both political systems. Turning to international relations, this course asks whether foreign and security policy is the result of a deeply rooted strategic culture, how diplomats maneuver the divisions over historical guilt of World War II, and what narratives such as the "century of humiliation" reveal about actors' strategic thinking. Throughout the course, we will pay attention to regional linkages.

Political Geography of China (212563)

Daniel Koss

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Putting Chinese politics on the map, this course asks how the government deals with the enormous challenges of ruling over a vast terrain with a diverse population, encompassing super-rich urban metropolises as well as poor rural peripheries. We begin with statecraft traditions from the late imperial era; and end with China's place on the future global maps of the 21st century. Topics include: macro-regions; priority zones of governance; Special Economic Zones; the Chinese equivalent of "blue states and red states;" rising inequality; ethnic minorities and borderlands; economic development models; urbanization and city planning; collective action in digital space; domestic and international migration; environmental politics; and the geo-politics of the "One Belt One Road" initiative. We will set aside class time for a hands-on introduction to producing and interpreting maps of China.

China and the African Continent (215837)

Daniel Koss

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

As Africa faces daunting challenges, the "Beijing model" invites intriguing alternative visions to the poorly performing designs by traditional foreign actors in the region. Moving from Chinese farm households in Mozambique to state-owned copper mines in Zambia, military bases in East Africa and the United Nations headquarters, this seminar critically assesses the potential for China's presence to transform Sub-Saharan Africa. After identifying the intellectual stakes (week 1), and discussing anecdotal glimpses from the grassroot-levels (week 2), the class deals with traditional development assistance, along with Maoist attempts to revolutionize the "world countryside" – resulting in legacies such as a China-trained guerilla fighter serving as the President of Zimbabwe. We then discuss the current footprint of Beijing, including its influence on elite politics, Chinese public and private business interests, and the diversity of the one million Chinese migrants to Africa. Four sessions specialize on (1) resource extraction versus opportunities for human capital development (2) debt-traps of Western and Eastern origins (3) emerging tensions over human rights policies (4) and the military dimension, including China's role in Peace-Keeping Operations. Finally, the course addressees how the Chinese presence may transform established multilateral institutions, and the challenges associated with African migration to China. Social science research will be read alongside journalistic accounts and primary documents, such as leaked diplomatic cables and strategy papers. Will Africa become "Beijing's Second Continent," of the neo-colonial or tributary kind? What promises does the China model hold for Africans? How do the partners on both continents react to experiences of disillusionment and retreat? The assignments are designed to train students for public policy work and require close group collaboration.

The Lotus Sutra: Texts, Narratives, and Translations (212644)

Ryuichi Abe

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This is a seminar aimed at a small number of advanced graduate students. The *Lotus Sutra* is arguably the most popular sutra in the history of Buddhism in *East Asia.* Its richness in metaphors and parables makes the sutra extremely important in understanding the influence of Buddhist scriptural texts on the development of East Asian literary traditions. Responding to its significance in East Asia, a large number of translations are produced in Western languages. Yet even undergraduate students at Harvard College typically find the most readable English translation, such as the one by Leon Hurvitz and Burton Watson, beyond the reach of their understanding. A large part of the problem in English versions of the sutra is that they fail to bring to the fore the most seminal strands for the development the sutra's narratives that run throughout the sutra's chapters. Unfortunately, existing secondary scholarly writings on the sutra do not help students much because they more often than not uncritically rely on Hurvitz' and Watson's translations and repeat the errors there.

This seminar aims at illustrating such essential strands of sutra's narrative by reading the original Chinese text side by side with the foundational sutra commentaries written by the patriarchs of Chinese Buddhist doctrinal schools – such as Zhiyi and Jicang. The goal of the seminar is threefold: first, it strives to help students improve their ability to interpret and translate Buddhist scriptural texts written in Buddhist literary Chinese; second, it aims at helping students learn how to use the axial commentarial texts in Chinese Buddhist doctrinal traditions; three, it will help students horn their pedagogical skill in teaching undergraduate student how to study Buddhist sutras through their English translation.

Prerequisite: Literary Chinese and instructor's permission. Enrollment limited to 12.

Recommended Prep:

Literary Chinese and instructor's permission.

Advanced Readings in East Asian Art (212646)

Melissa M. McCormick

2021 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a seminar for advanced graduate students in East Asian art (and adjacent fields) focusing on reading secondary and primary sources in Japanese, as well as recent scholarship and theoretical texts in English. The topic will change each semester to accommodate the research projects, general exam fields, and interests of the participants. In addition to examining the state of the field of East Asian art history, the goal is to provide instruction in practical areas such as deciphering calligraphic texts (*kuzushiji*), improving bibliographic skills, and mastering specialized terminology.

EALC Teaching Practicum (212681)

Wai-yee Li

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is intended for graduate students in the Department of East Asian Languages and Civilizations, who are either first-time teachers or first-time teaching fellows (TF) in the department. While convened by the EALC PF, who will serve as a resource on weeks that are departmentally specific, invited experts trained in each week's topics will primarily run the course. It will begin by providing students with a tool-kit for effectively fulfilling their role as TF in the remote learning environment. This will include strategies for online teaching, managing and engaging students in the virtual classroom, and effective grading and feedback methods. The course will then transition into more specific topics that may arise in the classroom, and finally expand to consider broader issues that we all face when teaching in East Asian Studies departments.

The course will meet for a total of 9 times. We will meet weekly for weeks 1-4 and bi-weekly for the remainder of the semester, in two-hour sessions. There are a total of 9 sessions, as well as the expectation that participants complete the Bok Center's self-paced Canvas site before the first course meeting. Students must successfully complete the course before advancing to their general exams. Each meeting will focus on a specific skill and is intended to give students the chance to not only think about how they want to teach, but also the opportunity to put those ideas into practice before stepping into the classroom. Beyond its specific weekly agendas, the course is intended to provide a comfortable space to voice concerns, discuss anxieties, identify fears, and share successes. Students are encouraged to raise issues about teaching and professional growth. The syllabus is flexible and can respond to student needs and concerns as the semester progresses, so please be sure to provide your feedback as we go along.

The course is primarily intended for students currently in the fall semester of their G3 year, although G2 students are also welcome to enroll in the course. For G3 students, this is a chance to use actual materials from your assigned course to prepare for leading discussion sections in parallel with the demands of the semester. For G2 students, who will not yet have a teaching assignment, you will be asked to consult with your advisor about what course you are most likely to teach in the coming year, obtain a syllabus used

in previous years for that course, and prepare for class activities based on those readings and potential lecture topics. Class requirements regarding collecting midterm feedback and class observation/recording may be completed during the following academic year without repeating the course.

Traditional Japanese Literature: From Mythology to (Early) Modernity (204985)

David Atherton

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Poetry written by gods, incestuous aristocratic romances, exorcist theater, samurai fantasy novels, fart literature: traditional Japanese literature has something for everyone, and invites us to rethink our assumptions about what literature is and how creativity works. From the most ancient myths up to the 19th century arrival of Western style modernity, we will explore together the relationships between high art and pulp fiction, the stage and the page, words and illustrations, manuscript and print, language and the

sacred. We will probe the literary imagination of beauty, nature, desire, and heroism, and ask what Japanese literature can tell us about what it is to be human.

This course explores the literature of the Edo period, a time that saw the emergence of a dynamic market for popular literature, the rise of new dramatic forms such as kabuki and puppet theater, the heyday of comic linked verse and satirical poetry, striking innovations in travel writing and the essay, and radically new approaches to the literature of Japan's past. Surveying a diverse range of prose, poetry, and drama, we will explore such relationships as those between text and image, stage and page, orality and literacy, print and manuscript, high and low, literature and politics, and Japan and the continent.

Modern History of Rural China: Proseminar (218175)

Michael Szonyi

2022 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

China's transformation over the last century from a predominantly rural society to an increasingly urban one is one of the most significant changes in the history of the modern world, and one that has enormous implications for the future of humanity. As a subject of scholarly enquiry, understanding this transformation is essential to a full understanding of modern Chinese history, to an appreciation of how China's modern historical experience is distinctive (and not), and to an informed understanding of many political claims made about contemporary China. The first half of the course is oriented around a set of historiographical debates; the second around some productive approaches to future scholarship. Students taking the course should gain a new understanding of modern Chinese history, skills in evaluating historical arguments and controversies, and abilities to incorporate social themes into historical narratives.

Class Notes: **NOTE ON ADMISSION TO THE COURSE: Because of the unexpected level of interest in this course, it may be necessary to lottery for admission. Please submit a petition on my.harvard. You have the option of adding a message - please explain your reason for wanting to take this course, and how it fits into your program of studies. (If you have already submitted a petition and now need to add a message, do not worry - this will not affect your priority.) Please attend the first class on Thursday (no advance reading is required), at which point I will decide whether a lottery is necessary. I will run the lottery immediately so you will know by the end of the week whether you are admitted.**

Korean History 141 Section: 01

Landscapes of Power in Modern Korea (218365)

Bridget Martin

2021 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course, we will explore key themes in Korean Studies through the lens of landscape. While Pyongyang is commonly imagined as a stage for socialist propaganda, Seoul's urban space functions as a set for South Korean films and television series. Meanwhile, North Korea has been observed by much of the world through stolen "glimpses" and through powerful technologies of seeing such as the satellite. How are power relations embedded in the organization of space and in different ways of seeing and representing space? We will address the themes of socialist/capitalist space, peninsular division, urbanism, militarism, heritage, nature, and religion. Students will learn basic theoretical approaches in the interpretation of cultural landscapes, and they will learn to work with geographical concepts such as space, place, scale, and perspective.

Class Notes: **This course will be taught by Dr. Bridget Martin, Lecturer in East Asian Languages and Civilizations.**

The Greatest Chinese Novel (108229)

Wai-yee Li

2021 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The Story of the Stone (also known as The Dream of the Red Chamber) by Cao Xueqin (1715?-1763) is widely recognized as the masterpiece of Chinese fiction. It is also a portal to Chinese civilization. Encyclopedic in scope, this book both sums up Chinese culture and asks of it difficult questions. Its cult status also accounts for modern popular screen and television adaptations. Through a close examination of this text in conjunction with supplementary readings and visual materials, the seminar will explore a series of topics on Chinese culture, including foundational myths, philosophical and religious systems, the status of fiction, conceptions of art and the artist, ideas about love, desire and sexuality, gender roles, garden aesthetics, family and clan structure, and definitions of socio-political order.

Chinese Literature 141 Section: 01

Forbidden Romance and Modern China (218179)

David Wang

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces students to a unique dimension of literature in modern China: "romance" and the legitimacy of its representation. The word "romance" is taken here to mean multiple things: amorous engagement in fiction and lived experience, its discursive representation, particularly in the form of narrative, and its institutional implementation (gender, marriage, family, law, nation/state, etc.) and disavowal.

It examines how the modern lure of free will and emancipated subjectivity drove writers to redefine terms of affect, such as love, feeling, desire, passion, sexuality, loyalty, dedication, and sacrifice. It also looks into how the moral, legal and political consequences of affect were evoked in such a way as to traverse or fortify consensual boundaries and their literary manifestations.

The extant paradigm of modern Chinese literary studies highlights the twin subjects of enlightenment and revolution. By contrast, sentiment, particularly in the domain of intimacy, has been downplayed as something trivial and irrelevant to the master narrative. This course intends to contest such a notion, calling attention instead to the "structure of feeling" (in Raymond Williams's terminology) that has given form to Chinese subjectivity. It focuses on the ways modern Chinese constructed and transgressed the conditions of romantic feeling, and wrote in response to emotive, intellectual and political provocations.

A romance most likely becomes "forbidden" when imported temptation clashes with indigenous pursuit. By exploring "forbidden romance" in both Chinese fiction and reality, the course first views China not so much as a rising political entity but as a site of varied literary productions and cultural contestations. With famous examples and constituents of Chinese forbidden romance as emotive expression, the course offers a range of interpretations of drastic transformations that the Chinese society undergoes. The course treats literature as a useful chronicle of the "dangerous power" of sentimental imagination and affective engagement. With such dangerous power and in the name of love, the modern Chinese entertains (or even repeats) a unique cycle of enlightenment and revolution—disenchantment and enchantment, iconoclasm and mystification—in the pursuit of a modernity with Chinese characteristics.

David Wang

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course aims to investigate modern Chinese literary thought by examining a range of writings, debates, and provocations from the 1910s to the 1960s. The course will guide students to read criticism by figures such as Liang Qichao, Lu Xun, and Wang Guowei; it also calls attention to writings that are less associated

with literary criticism, such as those by Zhang Taiyan, Chen Yinke, and Li Zehou. Above all, The course seeks to examine the linkages between these critical discourses with both premodern Chinese literary thought and Western intellectual traditions.

Subject: Korean Literature

Korean Literature 110 Section: 01

Literature and Literary Culture of Premodern/Traditional Korea (156592)

Si Nae Park

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This undergraduate lecture course examines the literature and literary culture of pre-20th-century Korea. The course materials consist of a wide range of literary artifacts, some of the key scholarship for contextualization, and first-hand experiences with objects held by the Harvard Art Museums, Harvard Map Collections, and Harvard-Yenching Library. Through slow and deep reading, discussion, and diverse written assignments including creative writing, students are invited to deepen their understanding of not only pre-20th-century Korea itself but also pre-20th-century Korea within the larger context of East Asia and in the global context by exploring questions as follows: Who were writers in pre-twentieth century Korea, and what writing systems did they use? What inspired them and what were the ways in which they expressed their literary inspiration? How did social and aesthetic codes and practices and philosophical questions shape literary artifacts? What did literature, literary fame, and creativity/originality mean to them, and how does "literature then" correspond with and at the same time diverge from "literature now" for us in the 21st century? How did books circulate? What can the physical conditions of literary artifacts and pertinent material things tell us about the literature and society of pre-20th century Korea? How do we know what we know about pre-20th-century Korea's literature and literary practices? Who generated English translations of premodern Korean literary artifacts, and how have motivations for English translation changed over time? How useful and limiting are national boundaries such as "Korea/Korean," "Japan/Japanese," and "China/Chinese" for the understanding of literary cultures in history? How are textual artifacts from pre-20th-century Korea being (re)invented in the name of cultural heritage and as resources for K-content? All readings are in English. No prior knowledge of the Korean language is expected. You will learn to taste the flavor of the texts in their original languages through translated texts. Graduate students may take this course for credit in consultation with the instructor in advance.

Continuation of Chinese 140xa.

This course aims at further developing students' ability to use Chinese in a more advanced way. Students will be introduced to a wide variety of topics and literary genres through in-depth reading and focused discussion of classical works of Chinese literature. The course will focus on accurate comprehension of texts, expansion of vocabulary for expressing more refined and sophisticated ideas, and development of ability to process complex sentence structures used mainly in formal speech and literary writing.

The objectives of this course include: 1) enabling students to gain a deeper understanding of Chinese cultural conventions and social norms in specific social and historical backgrounds, 2) building students' ability to "read between the lines" and discern the subtle connotations often present in Chinese speech and writing, 3) enhancing students' writing skills and improving students' ability to express opinions and feelings in a more accurate, appropriate and coherent manner, and to offer more detailed and vivid descriptions and narrations.

Japanese 106A

Classical Japanese (110782)

David Atherton

2021 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This class teaches students how to read classical Japanese, the standard written form of the Japanese language from ancient times into the 20th century. It is the language of classical poetry, great works of prose like the *Tale of Genji*, and dramatic forms like the noh and kabuki theaters. It is the language in which the emperor announced Japan's surrender in 1945, and it is even used by many Japanese poets to this day. By the end of the semester, students will have learned the fundamental grammar, usage, and vocabulary of the classical language, enabling them to read any of the texts above—and many more—with the aid of a dictionary. We will also read together through portions of canonical classical texts throughout the course.

Because modern Japanese evolved from classical Japanese, students will deeply enrich their understanding of the modern language along the way.

Recommended Prep:

Japanese 130b.

Chinese Buddhist Texts - Readings in Medieval Buddho-Daoist Documents: Seminar (125643)

James Robson

2021 Fall (4 Credits) **Schedule:** W 0600 PM - 0845 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar focuses on the careful textual study and translation of a variety of Chinese Buddho-Daoist texts through the medieval period.

Course Notes:

Offered jointly with the Divinity School as 3233.

Class Notes: **This year the course will focus on reading the work of the Tiantai Buddhist patriarch Zhanran 湛然 (711–782). The course will be team taught by Prof. Robson and Prof. Robert Sharf at UC Berkeley and students from Harvard and Berkeley will meet together (yet virtually), which is the reason for the later meeting time.**

Recommended Prep:

Reading knowledge of classical Chinese required.

East Asian Media Studies (159551)

Alexander Zahlten

2022 Spring (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the explosion of media in East Asia and the resulting forms of media production, circulation and consumption that transform everyday life, economy and politics. From pop culture phenomena such as K-Pop, fan fiction and internet platforms such as Sina Weibo, 2channel or DC Inside, from mobile phone culture to video games and social networks used in political protests, complex media forms and practices are developing with lightning speed across the region and exerting global influence. The starting point of the course are questions such as: What effects does this intense new media environment have in East Asia? How are ways of thinking and behaving adjusting to completely new forms of media? What are the consequences for the future of East Asia? How do media influence us in ways that go beyond the films, music, games, news or other forms that they supply us with?

The Art of Engaging Presentations (123508)

Shigehisa Kuriyama

2021 Fall (4 Credits) **Schedule:** T 0600 PM - 0845 PM

Instructor Permissions: None **Enrollment Cap:** n/a

EAFMS 200 is a practical course designed to help graduate students hone their skills in presenting academic research. It has a concrete goal: by its conclusion each student should not only command an enhanced repertory of presentational skills, but should also have crafted one highly polished presentation—an engaging, persuasive, and memorable talk ready to be presented at a conference or on campus visit for a job. Students will work toward this goal throughout the term, continuously building and refining their presentations by incorporating regular, repeated feedback from both classmates and the instructor as well as the new ideas and techniques explored each week.

EAFMS 200 is open to graduate students of all levels of presenting experience and may be taken SAT/UNSAT. The only prerequisite is that students already have research to present.

EAFMS 200 will not be offered in 2022-23.

Media Mix: Representations and Meaning Between Media in Japan: Seminar (108471)

Alexander Zahlten

2022 Spring (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces ways of understanding the complex media systems we live in. Drawing on a wide range of media theories it maps different histories of the interconnection of media in Japan, from "old" to "new" media. The course will explore the early ties between theater, literature and cinema, fascist media strategies, the popularization of the media mix by anime and publishing companies, current routes between manga, anime, light novels, films and games, or the emerging platform economy. It will consider the consequences of media mix for, among others, our understanding of nation, gender, memory, and the concept of world.

Basic Japanese language skills are recommended, though not required, for this course.

Chaghatay 120A

Intermediate Chaghatay (218156)

Aizezi Gulina

2022 Spring (4 Credits) **Schedule:** MWF 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A continuation of Chaghatay B. This course aims to develop learners' reading, transliterating, transcribing, and analyzing skills. Mainly focuses on reading the primary sources materials. These firsthand manuscript passages include selections from different time periods (fourteenth to early twentieth century), different places (both Eastern & Western Turkestan), and different genres (religious, historical, literature, legal, healing and medical etc.).

This will provide learners with an excellent basis as they move forward with their own research.In this

course learners will be able to (1) read original handwritten Chaghatay materials; (2) distinguish different genres;(3) transliterate and transcribe manuscripts, as well as practicing linguistic annotation and translation into English; and (4) analyze each reading materials.

Economics

Subject: Economics

Economics 10A

Principles of Economics (Microeconomics) (113326)

Jason Furman

David Laibson

2021 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Economists study human behavior using a combination of models and data. Ec 10a introduces students to economic models by using intuitive discussions, graphical analysis, and, in some cases, very basic algebra. The models study individual decision-making and markets, and range from classical approaches like supply and demand to more recent approaches that consider informational limitations and behavioral mistakes. We will also use data to understand the strengths and weaknesses of these models. The course also discusses the role that ethics and values play in people's choices and in policy discussions, including an understanding and critique of approaches like utilitarianism and libertarianism. The goal of the course is to provide students with a set of tools that will help them develop answers for themselves on how to make better choices and participate in debates on major public policy issues in areas including tax policy, inequality, discrimination and racial justice, the environment, and the economic problems associated with the COVID crisis.

Course Notes:

Ec 10a is the first half of an integrated sequence that continues with the study of macroeconomics in Ec 10b. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the College. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Either Ec 10a or 10b fulfills the Social Sciences divisional distribution requirement. It is not necessary for students to take both halves of Ec 10 to fulfill this divisional requirement.

Discussion sections will be held at various times throughout the day on Thursdays and Fridays. Course staff will solicit time preferences from enrolled students before making section assignments during the first week of class.

Class Notes: **This course has been approved to allow for simultaneous enrollment.**

Recommended Prep:

There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Ec 10a is strongly recommended in advance of Ec 10b which covers macroeconomics

Economics 10A

Principles of Economics (Microeconomics) (113326)

Anne Le Brun

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Economists study human behavior using a combination of models and data. Ec 10a introduces students to economic models by using intuitive discussions, graphical analysis, and, in some cases, very basic algebra. The models study individual decision-making and markets, and range from classical approaches like supply and demand to more recent approaches that consider informational limitations and behavioral mistakes. We will also use data to understand the strengths and weaknesses of these models. The course also discusses the role that ethics and values play in people's choices and in policy discussions, including an understanding and critique of approaches like utilitarianism and libertarianism. The goal of the course is to provide students with a set of tools that will help them develop answers for themselves on how to make better choices and participate in debates on major public policy issues in areas including tax policy, inequality, discrimination and racial justice, the environment, and the economic problems associated with the COVID crisis.

Course Notes:

Ec 10a is the first half of an integrated sequence that continues with the study of macroeconomics in Ec 10b. Students taking the spring version of Ec 10a may enroll in Ec 10b in the same semester. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the College. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Ec 10a or 10b fulfill the Social Sciences divisional distribution requirement. It is not necessary for students to take both halves of Ec 10 to fulfill this divisional requirement.

Recommended Prep:

There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Ec 10a is strongly recommended in advance of Ec 10b which covers macroeconomics

Economics 10B

Principles of Economics (Macroeconomics) (109894)

Jason Furman

David Laibson

2022 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Ec 10b continues the curriculum presented in Ec 10a, moving to the study of macroeconomics including the growth of the overall economy, business cycles, and economic crises. Ec 10b explains what economists do and do not understand about these issues by developing analytical approaches and examining data, including studying the global financial crisis and the economic crisis caused by COVID-19. The course also explains how policy makers can dampen economic fluctuations using monetary policy (i.e., government influence over interest rates and government regulation of banks), fiscal policy (e.g., government control of spending and taxation), and financial rescues in economic crises. We will also discuss how macroeconomic policies work in an international context, including the factors that affect exchange rates, trade deficits, international capital flows, and how these link economies around the world. Like Ec 10a, Ec 10b introduces students to economic models and discusses both how they are supported and how they are contradicted by available data.

Course Notes:

Ec 10b is the second half of an integrated sequence that begins with the study of microeconomics in Ec 10a. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Ec 10a or 10b fulfill the Social Sciences distribution requirement for the General Education program. It is not necessary for students to take both halves of Ec 10 to fulfill this requirement.

Recommended Prep:

There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Taking Ec 10a which covers microeconomics and is taught in the Fall is strongly encouraged but is not a formal prerequisite.

Using Big Data to Solve Economic and Social Problems (208364)

Nadarajan Chetty

Gregory Bruich

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in Economics or Statistics, making it suitable both for students exploring Economics for the first time and more advanced students. Topics include equality of opportunity, education, innovation and entrepreneurship, health care, climate change, and crime. In the context of these topics, the course will also provide an introduction to basic methods in data science, including regression, causal inference, and machine learning. The course will include discussions with leading practitioners who use big data in real-world applications.

Personal Finance: Making Better Decisions and Building a Better Financial System (218117)

John Campbell

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 80

People face a daunting array of problems in managing their financial lives. Taking out student loans, managing bank accounts and credit cards, financing a home purchase with a mortgage, and saving for retirement are all major challenges. There is evidence that many people lack the skills they need to meet these challenges. This course has three goals. The first objective is to give participants a basic grounding in financial literacy: principles of finance that we can use in our own lives. The second objective is to introduce research on the ways in which households use the financial system, emphasizing common financial mistakes and financial products that seem prone to misuse. We will learn to read papers from the academic economics literature, focusing on the papers' central ideas and empirical findings. The third objective is to explore ways in which the financial system can be improved to make it easier and safer to use. We will discuss the role of financial advisers, technological solutions ("fintech"), and public policy interventions including disclosures, default choices ("nudges"), and regulations restricting access to

financial products.

The course has no prerequisites but enrollment will be capped at 80 students, if necessary using a lottery with preference for seniors but no preference for economics concentrators.

Behavioral Economics of Risk and Learning (156369)

Tomasz Strzalecki

2022 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

The seminar will focus on theoretical and experimental issues in behavioral economics. We will focus on two topics: risk and learning. How much risk are people willing to take and how their beliefs change in

response to new data, so things like certainty effect, overconfidence, confirmation bias, belief polarization, stereotyping, etc. We will study relationships between mathematical models of individual behavior and the kinds of behavior we can observe in the lab. We will design experiments to test various theories and also study the types of behavior for which we don't have good models yet, and try to understand what a good model would look like. This is a junior tutorial.

Recommended Prep:

Prior knowledge of behavioral economics will be useful but not necessary. The course will focus on analytical methods and therefore requires knowledge of probability and statistics.

Field Experiments (212568)

Amanda Pallais

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Field experiments (experiments that take place in real-world settings) are increasingly being used to analyze public policies, make business decisions, and test theories. The most recent economics Nobel Prize recognized experiments' role in alleviating global poverty. This class will dive into how to design a field experiment and learn about some of the most exciting recent experimental research. It will also use experiments to learn about the research process. We will discuss how to frame a question so that the research informs policy, when to trust research discussed in the popular press, and how to interpret and apply results to improve decision-making.

Using Markets to Solve Social Problems (218817)

Roland Fryer

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will demonstrate how one can use the power of the free market to address some of the most important social and economic problems of our time, with a particular focus on issues that plague minority communities. The course will give students an introduction to social finance and impact investing in a manner that does not require prior coursework in Economics. It is intended not only for those interested in

finance, but also for students with an entrepreneurial spirit. Students will study situations in which market-based approaches were used to solve problems in areas such as education, economic mobility, healthcare, food instability, and the future or work. In the context of these topics, the course will provide an introduction to basic ideas in finance including venture capital, private equity, and other alternative investments. The course will include discussions with leading investors and entrepreneurs who are determined to have positive social impact and culminates in a team-based capstone project.

Strategy, Conflict, and Cooperation (123893)

Robert Neugeboren

2022 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Game theory is the study of interdependent decision-making. In the early days of the cold war, game theory was used to analyze an emerging nuclear arms race; today, it has applications in economics, psychology, politics, the law and other fields. In this course, we will explore the "strategic way of thinking" as developed by game theorists over the past sixty years. Special attention will be paid to the move from zero-sum to nonzero-sum game theory. Students will learn the basic solution concepts of game theory -- including minimax and Nash equilibrium -- by playing and analyzing games in class, and then we will take

up some game-theoretic applications in negotiation settings: the strategic use of threats, bluffs and promises. We will also study the repeated prisoner's dilemma and investigate how cooperative behavior may emerge in a population of rational egoists. This problematic -- "the evolution of cooperation" -- extends from economics and political science to biology and artificial intelligence, and it presents a host of interesting challenges for both theoretical and applied research. Finally, we will consider the changing context for the development of game theory today, in particular, the need to achieve international cooperation on economic and environmental issues.

The course has two main objective: to introduce students to the fundamental problems and solution concepts of noncooperative game theory; and to provide an historical perspective on its development, from the analysis of military conflicts to contemporary applications in economics and other fields. No special mathematical preparation is required.

Economics 1057

Game Theory with Applications to Social Behavior (203555)

Erez Yoeli

Moshe Hoffman

2021 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Game theory is the formal toolkit for analyzing situations in which payoffs depend not only on your actions (say, which TV series you watch), but also others' (whether your friends are watching the same show). You've probably already heard of some famous games, like the prisoners' dilemma and the costly signaling game. We'll teach you to solve games like these, and more, using tools like Nash equilibrium, subgame perfection, Bayesian Nash equilibrium, and the one-shot deviation principle.

Game theory has traditionally been applied to understand the behavior of highly deliberate agents, like heads of state, firms in an oligopoly, or participants in an auction. However, we'll apply game theory to social behavior typically considered the realm of psychologists and philosophers, such as why we speak indirectly, in what sense beauty is socially constructed, and where our moral intuitions come from.

Each week, students are expected to complete a problem set, to read 2-3 academic papers, and to complete a 1-2 page response to short essay questions ('prompts') on these readings. All assignments can be completed in groups of two. Tutorials are not required but are highly recommended for students without a substantial background, especially in math. There will also be a final exam.

Great Theorems of Microeconomic Theory (160362)

Jerry Green

2021 Fall (4 Credits) **Schedule:** W 0430 PM - 0630 PM
F 0430 PM - 0600 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course surveys the most important results in microeconomics that have shaped the field in the years since WWII. It has two objectives: (i) To understand how the questions were posed, who the innovative researchers were, and what external influences drove them to approach the subject as they did. This ¼ of the course is the modern history of micro-economic thought. (ii) The major results themselves. This ¾ of the course is quite technical. The lectures will explain and introduce these results in their historical context, and provide the mathematical background. Class participants will present proofs of the results in section.

The major theorems covered come from choice theory under certainty and uncertainty, general equilibrium theory, non-cooperative game theory, cooperative game theory, social choice, and the economics of incentives and mechanism design.

Course requirements comprise three papers, several short problem sets, and an in-class presentation - but no final exam. Section presentations will also be a component of the grade.

Class Notes: **Section meetings will take place in B82.**

Economics 1123

Introduction to Econometrics (123033)

Gregory Bruich

2022 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to multiple regression techniques with focus on economic applications. Discusses extensions to discrete response, panel data, and time series models, as well as issues such as omitted variables, missing data, sample selection, randomized and quasi-experiments, and instrumental variables. Also develops the ability to apply econometric and statistical methods using computer packages.

Course Notes:

Students may take both Economics 1123 and Statistics 139 for credit. However, Statistics 139 will not count as the econometrics requirement for the economics concentration. Only one course can count towards EC credit; either Economics 1123 or Economics 1126. Both courses

can count towards college credit regardless of the order they are taken.

Recommended Prep:

Statistics 100 and 104.

Authoritarian Superpower: The Political Economy of Modern China (219753)

David Yang

2022 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The rise of China is undoubtedly one of the great dramas of the 21st century. This course provides an overview of China's economy and its politics, as well as China's relationship with the world. We aim to understand modern China with an appreciation of China's past and its connection to other parts of the globe.

The course offers insights on a number of puzzles of a rising authoritarian superpower, and overturns several conventional wisdoms in political economy. In the course, you will learn about topics such as: (1) What drives China's economic development? What explains its rise? (2) What are the key forces of stability and forces of change in modern China? (3) How does China engage with the world, and what are the implications of China's rise for the world?

The objectives of the course are three-fold: (1) to learn about important institutional and contextual knowledge of China; (2) to use China as a lens to understand authoritarian regimes, as well as basic political economy frameworks that are more generally applicable; and (3) to learn about empirical methods through exposure to big data on China, frontier academic research, and occasionally case-study style discussions.

The Economics of Development and Global Health (219614)

Matthew Basilico

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Why are some places poorer than others? Why do some places have better health than others? In this class, we will harness the core development and health economics literature to approach some of the most fundamental questions facing humanity today. We will review the historical determinants of our present-day puzzles, including critical relationships between economic development and health. We will consider challenges affecting health and development including political institutions, micro development, environmental change, and psychological wellbeing. Methodologically, the course will review canonical approaches in applied econometrics, and will cover theories in development, macro-growth, and health. It will also consider perspectives on our core questions from neighboring disciplines, including social theory, anthropology and psychology.

Course Notes:

A research paper option is available for this class which can be used to fulfill the writing requirement for Economics concentrators.

Recommended Prep:

Economics 10a and 10b, familiarity with introductory statistics (e.g. Stat 100, 104 or 110), and calculus are recommended but not required.

Economics 1410

Public Economics: Designing Government Policy (117818)

Stefanie Stantcheva

Stan Veuger

2021 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course analyzes what role the government plays and should play in a market economy, especially those policies that work through taxes and government spending. It

covers topics such as tax and welfare policy, unemployment insurance, social security, environmental protection, and state and local policy. The course emphasizes recent empirical research on policy issues and will teach students how to conduct such studies.

The first half of the course, taught by Professor Stantcheva, will cover the basic principles of public economics. These principles will be used to shed light on current questions and debates on tax policy, the provision of public goods, and social insurance.

The second half of the course, taught by Professor Veuger, will highlight recent empirical research on business taxation, the regulatory state, political economy, and multilevel government. In this part of course we will also see how the theoretical and empirical approaches covered in the course can be and have been used to inform and assess the economic policy response to the COVID-19 crisis, in particular in the United States and Europe.

Course Notes:

Students should have some knowledge of basic calculus and statistics, but there is no formal mathematics prerequisite. Offered jointly with the Kennedy School as SUP-125. This course offers an optional writing requirement which if completed will satisfy the concentration writing requirement.

Recommended Prep:

Economics 1010a or 1011a or permission of the instructors. Familiarity with multivariate calculus and econometrics (at the level of economics 1123 or 1126) is desirable.

Analytic Frameworks for Policy (107613)

Richard Zeckhauser

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 3

This course develops abilities in using analytic frameworks in the formulation and assessment of public policies. It considers a variety of analytic techniques, particularly those directed toward uncertainty and interactive decision problems. It emphasizes the application of techniques to policy analysis, not formal derivations. Students encounter case studies, methodological readings, modeling of current events, the computer, a final exam, and challenging problem sets.

Course Notes:

Jointly offered with the Kennedy School as API-302.

Class Notes: **Location: HKS Littauer 150**

Political Economics (125716)

Andrei Shleifer

2022 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Discusses several research areas in political economy, including the origins of the state, comparative

political systems, culture, mobility, democracy, ethnicity, corruption, rule of law, and regulation.

The main purpose of this course is for each student to write a serious empirical paper, preferably with new data, in the field of political economics. The course relies on frequent (approximately 5 times over the semester) office hour meetings with the instructor, as well as meetings with the TF. To enable such frequent interactions, the course is limited to 18 students.

In light of Covid restrictions, there is a new procedure for joining the class. The course requires an application form due January 18 at 5 PM, linked in the syllabus. The application should contain at most a brief paragraph about your interest, and more importantly your cv/resume. We are looking for a class with diverse interests. The instructor will select the class by noon on January 19th and notify all applicants.

Course Notes:

A research paper is required. This course meets the concentration writing requirement.

Recommended Prep:

Economics 1010a1, 1010a2, or 1011a.

Economics and Morality (211204)

Benjamin Enke

2021 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Questions related to morality pervade the economic and political discourse. However, traditionally, economists have paid little attention to the structure and consequences of people's moral concerns. This course introduces students to research in an emerging field that studies the determinants and consequences of heterogeneity in moral reasoning through the lens of economics. The main objective of the class is to highlight (i) how moral reasoning matters for economic and political outcomes, and (ii) how economic needs in turn generate particular moral systems. To understand the bidirectional relationship between economics and morality, we will study empirical research papers that consider questions such as: What is the difference between universalizing and relational approaches to moral reasoning, and how do these matter for economics? How do Americans' moral intuitions vary across space and over time? What is the role of moral values in U.S. presidential elections, or for policy preferences related to redistribution? Why do Republicans and Democrats give to different types of charities? What are the functional economic origins of morality? How and why are moral systems culturally variable? From a methodological viewpoint, the class uses standard empirical economics techniques to study morality-related concepts and ideas from psychology and anthropology.

Economics 1499

Macroeconomic Policy in the Post-COVID Era (217408)

Lawrence H. Summers

Paul Tucker

2021 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

With real interest rates negative for nearly a decade and nominal interest rates close to zero, and fiscal deficits and debt-to-GDP ratios at unprecedented levels, we are in a new era for macroeconomic policy making. This seminar course will focus on macroeconomic policy issues posed by secularly low real interest rates (secular stagnation?), COVID-19, and government debt accumulation. The focus will be on the application of rigorous macroeconomic analysis to policymaking.

The objective of the class is to expose students to the kind of thinking and work done by practicing macroeconomists. The centerpiece of the class will be student research papers, 25- to 30-pages, on macroeconomic topics, developing, applying, or testing relevant economic theory. Students will work closely with one of the course instructors and an economics PhD student on their papers. During seminar meetings, students will present and lead discussions of major recent research papers, and present their

ongoing work.

Examples of topic areas for papers might include: The role of risk premiums vs. savings-investment gaps in explaining interest rate fluctuations; the influence of social insurance on aggregate demand; Ricardian equivalence and the impact of fiscal policy in raising long run demand; the implications of low rates for target returns on institutional portfolios, financial stability, and creative destruction; saving gluts and current account surpluses; the risks of destabilizing deflation; and lessons from the Japanese experience.

Class Notes: **Admission is by permission of the instructors. Interested students should send a transcript and a 250-word statement of why they want to take the class to lhs@lawrencesummers.com by August 26th. This course is oriented towards students with a serious interest in economic and financial policymaking and research. Some exposure to quantitative material is appropriate for students taking this class, but there are no specific prerequisites. The teaching fellows will provide close advice in carrying out research. This class is open to seniors writing theses on related topics.**

Market Power in the New Economy (217793)

Myrto Kalouptsidi

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course studies firms, markets and competition, in the context of today's (globalized) world. Nowadays, in the majority of markets, a handful of firms interact strategically and compete in numerous dimensions, including prices, products offered, advertising and investment. We will use formal models in order to address questions like: Why are markets organized the way they are? How does market organization affect firm behavior, such as firm production or pricing? How does the behavior of firms in turn affect the market structure? How does government policy shape firm behavior and market structure? What is the impact on welfare? Through the use of both theory and data, we will attempt to answer these questions.

The course will proceed in three parts. We will first tackle decentralized markets; i.e. markets where many small firms compete in an ad hoc fashion (e.g. taxis, oceanic shipping, real estate). A recent and growing phenomenon in this setup is the emergence of platforms, such as Uber and Lyft, Uber Freight, Airbnb, etc. We will discuss their impact on markets and societal welfare.

Then, we will introduce key concepts from the field of Industrial Organization in order to study oligopolistic markets. Through the use of models (mainly game theory) but also empirical analysis, we will explore the strategic interactions between firms and the impact of market power on society. Using these tools, we will study collusion and mergers. We will rely on game theory to analyze the strategic environment under study.

Finally, we will study market power in global markets. In a strong recent trend, governments around the world are engaging in industrial policy (e.g. Made in China 2025). What are the rationales behind these initiatives? Are they effective? What is their impact on both domestic and global societal welfare? In this last part of the course we will focus on the role of governments in shaping global competition.

The goal of this class is to get you engaged in topics of current interest and heated policy debates; "what is market power and how does it affect the world?", "how has uber changed transportation?", "does industrial policy work?" but also to get you to think about these questions through the rigorous lens of an economist

armed with a good combination of formal modeling and empirical tools.

Financial Crises and Recessions of the 21st Century (207618)

Karen Dynan

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will explore the dramatic financial and macroeconomic developments that the United States has experienced over the last two decades. We will look at research on what factors precipitated the boom and bust in the housing market in the early 2000s and how the resulting mortgage crisis rippled through the global financial system and ultimately generated the most severe economic downturn since the Great Depression. We will analyze the policies put in place to stabilize the financial system, limit the economic fallout, and reduce the likelihood of future financial crises. The course will also examine the response of the financial system and the economy to the onset of the COVID-19 pandemic, with particular attention to how these developments and the appropriate policy responses compare with past episodes.

Keynes (107388)

Stephen Marglin

2021 Fall (4 Credits) **Schedule:** TR 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the birth, death, and resurrection of The General Theory of Employment, Interest and Money from the Great Depression (1929-1939) to the Great Recession (2008-?). A major goal is to lay out a coherent argument that, for all its theoretical innovation, The General Theory did not deliver: the argument why a market system, even an idealized system with all of the warts removed, may fail to provide jobs for willing workers. In the process we will examine the orthodoxy that Keynes attacked and that resurfaced in the 1960s and 70s; the key concepts underlying the models implicit in The General Theory; and the attempts of the Keynesian mainstream to make peace with both Keynes and orthodoxy. We will also explore the applicability of The General Theory to the long run. A final section will view the present economic difficulties through a Keynesian lens.

Recommended Prep:

Economics 1010b or 1011b, or permission of instructor; a year of college calculus allowing students to understand mathematical notation and concepts (derivatives, maximization, etc.) even though mathematics will be used very sparingly.

Transitioning to Research (113716)

Jeffrey A. Miron

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course helps launch graduate students who are transitioning from classes to research. The course has four main goals: developing research-relevant skills and routines; establishing domain-specific knowledge that provides the context for your research agenda; building experience presenting research at all stages of development; and facilitating production of the Ec 3000 paper.

Recommended Prep:

Students should have completed enough coursework that they are turning their attention to research. The course is best suited to rising or newly minted G3s, but anyone is welcome. Even those students who have begun research successfully will benefit from this course.

Additional Course Attributes:

Microeconomic Theory I (112942)

A. Gitmez

2021 Fall (4 Credits) **Schedule:** MW 0830 AM - 0945 AM

Instructor Permissions: Instructor **Enrollment Cap:** 52

A comprehensive course in economic theory designed for doctoral students in all parts of the university. Topics include consumption, production, behavior toward risk, markets, and general equilibrium theory. Also looks at applications to policy analysis, business decisions, industrial organization, finance, and the legal system. Undergraduates with appropriate background are welcome, subject to the instructor's approval.

Recommended Prep:

Multivariate calculus and one course in probability theory. Thorough background in microeconomic theory at the intermediate level.

Economics 2035

Psychology and Economic Theory (156371)

Matthew Rabin

2021 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economics. Topics include ways utility theory can be improved--such as incorporating reference dependence, news utility, social preferences, self image, and other belief-based tastes--and ways we can relax assumptions of perfect rationality--such as incorporating focusing effects, limited attention, biased prediction of future tastes, present-biased preferences, biases in probabilistic judgment, and errors in social inference. The course will emphasize (a) careful interpretation and production of new evidence on relevant departures,(b) formalizing this evidence into models that can, with discipline and rigor, generate sharp predictions using traditional economic approaches, and (c) exploring economic implications of those models presented. Although we will primarily emphasize (b), the course is meant to be useful to students whose interests lie anywhere in this spectrum, under the premise that all such research will be improved by a greater appreciation of the full spectrum. The course is intended for PhD students in the Business Economics and Economics programs and others who have a solid background in microeconomic theory at the level of introductory PhD courses in these programs. While obviously appropriate to those wishing to specialize in "behavioral economics", the course is also designed for those interested in doing research in particular fields of economics. And while the course centers on theoretical models (learning and evaluation will center around solving formal problem sets), the theory is focused towards its empirical implementability and economic relevance, so that the course is also designed for those interested in theory-influenced empirical research.

Course Notes: **This course is cross listed with HBS as HBSDOC 4155.**

Class Notes: **Please read the past syllabus on Professor Rabin's web page to see the advanced prerequisites and eligibility for taking this course, and contact Professor Rabin before enrolling if your eligibility is not clear.**

Experimental Economics (123849)

Benjamin Enke

2021 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course provides an introduction to experimental methods and their applications in economics. We will focus on (i) the use of lab experiments in establishing causal effects, testing models, and illuminating mechanisms; (ii) field experiments in behavioral economics; and (ii) the measurement of preference

parameters and behavioral traits in lab-in-the-field settings. Topics include bounded rationality, wishful thinking, moral values and social image concerns, gender, the measurement of preferences in lab and large-scale survey settings, and the explanatory power of behavioral traits for field behaviors. We will cover methodological topics including the relationship between experiments and theory, simple process-tracing techniques, internet experiments, and surveys. Students will become acquainted with the full process of designing an experiment, and class discussions will place heavy emphasis on the development of early-stage research ideas. The course is intended not just for those with an interest in behavioral and experimental economics per se, but also for those who wish to measure behavioral parameters in non-lab settings in applied work or to conduct field experiments.

Course Notes: **Open to undergraduates with permission of the instructor.**

A Computer Science Toolbox for Modern Economic Theory (219636)

Yannai Gonczarowski

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How can we use tools from machine learning theory to design better auctions? Can we use cryptography to better implement matching mechanisms? And how should we approach formally proving that welfare in Nash equilibria for many games is not "much worse" than in the social optimum? This course explores the application of diverse ideas, techniques, and solution aesthetics from theoretical computer science to derive meaningful new insights into classic economic problems. The three main themes are approximation theorems (including bounding the loss in revenue or welfare due to lack of information, to strategic behavior, or to impracticality of the optimal solution); various notions of complexity (including computational complexity, communication complexity, and machine-learning sample complexity); and cryptographic tools (including cryptographic commitments, multiparty computation, and zero-knowledge proofs). Economic applications mostly include analysis of equilibria, pricing, and mechanism design. No

prior knowledge in computer science is required.

Recommended Prep:

Basic microeconomic theory at the level of MWG.

Market Design (110312)

Scott Kominers

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

This course explores the theory and practice of market design. Key topics include auctions, labor market matching, school choice programs, online markets, organ exchange systems, financial market design, and matching with contracts. The first half of the course will introduce market design and its technology; subsequent weeks will discuss recent papers alongside their classical antecedents.

Recommended Prep:

Prior graduate or advanced undergraduate course work in at least one of microeconomics, game theory, or algorithms will be useful, but is not strictly necessary.

Economics 2110 Section: 1

Econometrics I (120668)

Gregory Bruich

2021 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 45

Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2110 (fall) reviews probability and statistics, then covers the fundamentals of modern econometrics, with a focus on regression methods for causal inference in observational and experimental data. Prerequisites: undergraduate courses in probability and statistics, regression analysis, linear algebra, and multivariate calculus.

Course Notes:

Enrollment limited to PhD candidates in economics, business economics, health policy, public policy, and political economy and government (PEG).

Recommended Prep:

The two-course sequence is open only to qualified PhD students from HKS, HBS, GSE, and HSPH, but occasionally others may be admitted at the discretion of the instructor (if the instructor is convinced that such individuals can perform well and would not negatively affect the nature and pace of the course).

Additional Course Attributes:

Econometric Methods II (205523)

Tim Layton

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2115 (spring) covers topics (different methods) in current empirical research. Faculty members from across the university will teach modules each covering a different method of causal inference, including but not limited to instrumental variables, panel data methods, and regression discontinuity and kink designs. The course will emphasize a mixture of theory and application, with problem sets focused on the replication or extension of recent papers utilizing these methods.

Course Notes:

This course is designed for PhD candidates in health policy, public policy, education policy, the Business School DBA program. Qualified undergraduates are also permitted to take the course with permission of the instructor.

Recommended Prep:

Prerequisite: Economics 2110 or the equivalent.

Additional Course Attributes:

Economics 2120 Section: 1

Principles of Econometrics (115026)

Elie Tamer

2021 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Linear predictor as approximation to conditional expectation function. Least-squares projection as sample counterpart. Splines. Omitted variable bias and panel data. Bayesian inference for parameters defined by moment conditions. Finite sample frequentist inference for the normal linear model. Statistical decision theory and dominating least squares with many predictor variables; applications to estimating fixed effects (teacher effects, place effects) using panel data. Asymptotic inference in the generalized method of moments framework. Likelihood inference using information measures to define best approximations within parametric models. Instrumental variable models and the role of random assignment; applications include models of demand and supply and the evaluation of treatment effects.

Course Notes:

Enrollment is limited to PhD students in the Economics Department, Business Economics program, and PEG program. Other students wanting to enroll in the course should contact the instructor.

Recommended Prep:

probability at the level of Statistics 110; linear algebra.

Econometric Methods (120662)

Yuan Gao

2022 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course continues the first year sequence in econometrics and covers a variety of topics and ideas that are important for pursuing and interpreting empirical research in economics. The first half of the course covers core econometric approaches that are important for a wide range of applications, including identification analysis, asymptotic approximations, large sample theory for estimation and hypothesis testing, and the bootstrap. The second part of the course examines a range of complementary topics and new developments, including reasons why canonical econometric methods may be unreliable (such as model misspecification, identification failure, and the incidental parameters problem) and extensions of and alternatives to the traditional econometric paradigm (such as partial identification, Bayesian inference, nonparametrics, and machine learning). Economic applications will be discussed throughout. Enrollment limited.

Class Notes: **Taught by Visiting Professor Wayne Gao**

Recommended Prep:

Economics 2120 or equivalent.

Historical Economic Growth (218227)

David Weil

2022 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines the historical process of economic growth with an eye toward understanding both the massive rise in the standard of living that occurred in much of the world over the last 250 years and the large differences in average income levels that are observed among countries. Topics addressed include technological change, technology transfer, and appropriate technology; accumulation of human capital in the forms of education and health; institutional persistence and change; demographic transition; changing gender roles; spatial agglomeration and variation in both income and population density; and the link between geographic characteristics and economic outcomes. The approach taken will be mostly empirical and quantitative, with theoretical models introduced as appropriate.

Macro-Finance: Rational and Behavioral (125372)

Xavier Gabaix

2021 Fall (4 Credits) **Schedule:** MW 0600 PM - 0715 PM

Instructor Permissions: None **Enrollment Cap:** n/a

(1) Bounded rationality: we'll go over a behavioral version of basic microeconomics (consumer theory, Arrow Debreu), basic macroeconomics (real and monetary) and public economics.

(2) Macroeconomics with heterogeneity: we'll study how microeconomic shocks can generate macro fluctuations; network models in macro-finance; models of the income distribution.

(3) Finance: we'll study unified macro-finance models. First, with perfect financial markets: we'll review unified models of stocks, bonds, options and exchange rates. Second, with imperfect financial markets: we'll study how this sheds light on financial crises and currency movements. Time permitting, we'll review some behavioral finance, merging all three themes.
The course is geared toward two types of students, and has accordingly two tracks, "behavioral" and "finance", with corresponding emphasis in the homework and exam.

Economics 2450B

Public Economics and Fiscal Policy II (118658)

Nathaniel Hendren

2022 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course will focus on a range of topics in public economics including welfare estimation of tax and expenditure policies, including income and commodity taxation, corporate taxation, public goods, education, and place-based policies. We will also discuss foundations for government intervention, including market failures such as externalities and asymmetric information. Throughout, the focus will be on using theoretical models to motivate empirical analyses to uncover the desirability of government intervention in the economy and to quantify the welfare impacts of such policies.

Recommended Prep: **Students are strongly encouraged to take Economics 2450a before taking 2450b.**

Requirements: **Prerequisite: (Economics 2010a AND Economics 2010b) OR (Economics 2020a AND Economics 2020b)**

Additional Course Attributes:

Attribute	Value(s)

Health Economics (126074)

David Cutler

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 35

This course surveys topics in health economics. It touches on public sector issues, the industrial organization of health care markets, interactions between health and labor markets, and health in developing countries. Theory and empirical work are presented.

Course Notes:

A graduate level microeconomics class at the level of Economics 2010 or 2020 is required for enrollment. Students unsure about the adequacy of their background should contact the instructor.

Theoretical and Empirical Perspectives on Entrepreneurship: Organizational Economics and Growth (161299)

Josh Lerner

Shai Bernstein

2022 Spring (4 Credits) **Schedule:** W 0530 PM - 0830 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Entrepreneurship--the formation and growth of new firms--is a complex phenomenon that has historically attracted relatively little academic attention. In recent years, however, scholars in a variety of disciplines have been devoting increasing attention to this topic. This course explores the emerging work in this dynamic area. Reflecting the complex nature of entrepreneurship, the course will touch on literature in a variety of academic disciplines. The 2019-20 class focuses on works from the industrial economics, labor economics, organizational economics, economic geography, macroeconomics and sociology literatures; the 2020-21 class focuses on works from the corporate finance and behavioral economics literatures. Students taking the course for credit will be expected to complete three referee reports and a paper proposal. This course is cross listed as HBS 4351.

Philosophy of Education (218916)

Catherine Elgin

2021 Fall (4 Credits) **Schedule:** M 0830 AM - 1020 AM
W 0900 AM - 1000 AM

Instructor Permissions: None **Enrollment Cap:** n/a

What is education? What are its goals? Why is education of value? Are these questions that can be settled once and for all, or do their answers depend on historical and cultural factors? In an effort to answer these questions, we will study works of philosophers such as Plato, Rousseau, Wollstonecraft, Du Bois, Washington, and Dewey. Two papers are required.

No prerequisites; no previous work in philosophy is required. Open to any student who wants to think seriously about the fundamental nature and purposes of education.

The Politics of Education in the Developing World (218917)

Emmerich Davies

2021 Fall (4 Credits) **Schedule:** MW 1000 AM - 1115 AM

Instructor Permissions: None **Enrollment Cap:** n/a

How do teachers' unions impact education policy? What role does democracy have on access to and the quality of education? What is the effect of decentralization on parental participation and educational outcomes? This course will explore these and other questions as we consider the role that political constraints play in the provision of education across the developing world. We will ask who the key actors, interests, and incentives are in education politics through individual case studies, political science theory, and empirical examples. The course will also have a strong emphasis on writing with a project that hones students' ability to convey ideas for diverse popular audiences. Through this course, students will learn to identify and critique power relations, the incentives of actors, the options such circumstances present, and how to best engage diverse actors in education policy making. The course emphasizes real-world examples and policies, and students will gain a broader understanding of the incentives and constraints political actors face in the developing world and how to engage such contexts effectively.

Learning Goals:

*** Understand the role of power, institutions, and actors in shaping the distribution of education politics**
*** Learn to write for a variety of audiences, including the general public, through class assignments.**

*** Develop in-depth understanding of one or more education systems and why resources are distributed the way they are.**

Career Focus:

This course is appropriate for students in all programs with an interest in understanding the role that politics, in particular educational institutions and actors, have in shaping how education resources are distributed globally. Through readings, course activities, and assignments, students will learn to identify how power operates and critique its operation, as well as understand the incentives and incentives of actors in the education space.

Education Studies 121

Educational Outcomes in Cross-National and Cross-Cultural Perspectives (218918)

Paul Harris

2022 Spring (4 Credits) **Schedule:** R 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

A great deal of thinking about the relationship between psychology and education asks what psychology can contribute to the improvement of education. For example, can psychology help to improve the way that we teach reading? Can it help to close the gap in achievement between particular groups? Do preschoolers have ideas or dispositions that help--or hinder--their progress in school? However, one can also ask about the effects of education on psychological processes. There is enormous cross-national and cross-cultural variation in the length and type of education that children receive. A major goal of this course is to help students understand the effects of such variation on the ways that people think--and feel. A secondary goal is to alert students to the ways in which those effects can be measured and to underline the contribution that different methods--experiments, large-scale surveys, and participant observation--can make to our understanding of such effects. The final goal is to underline how educational provision and its impact vary dramatically across the globe.

Learning Goals:

There is enormous variation in the length and type of education that children receive. A major goal of this course is to help you think about and understand the effects of such variation on the way that children end up thinking - and the values they hold. A secondary goal is to alert you to the ways in which those effects can be measured and to underline the contribution that different methods - small-scale experiments, large surveys, qualitative and observational studies - can make to our understanding of such effects. The final goal is to underline how far educational provision and its impact have varied in the course of history and currently vary across the globe.

Career Focus:

This course is co-listed at HGSE and The Harvard Chan School of Public Health. It is designed for masters and doctoral level students from across the University who are interested in the design, testing, and implementation of innovative, science-based strategies to promote the healthy development of young children facing adversity. Aspiring innovators and change agents with an interest in early childhood policy and practice are especially welcome.

Recommended Prep:

No prerequisites; some background in either psychology or international education desirable.

The History of African American Education (218919)

Jarvis Givens

2021 Fall (4 Credits) **Schedule:** T 0130 PM - 0420 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The history of Black education is more than a story of "separate and unequal" schools, or the controversy between Booker T. Washington and W.E.B. Du Bois. It is more than a history of failure and insufficiency. While the 19th-century Common School Movement emerged as the early foundations of American education, Black people were excluded from this right of citizenship given their position as legally and civically unfree. Despite this exclusion, African Americans (enslaved and otherwise) recognized that education would be a critical site in their quest for freedom and therefore strategized accordingly. Moving beyond popular recollections, this course analyzes historical narratives, enduring debates, thematic trends, and key court cases and policy to interrogate the development of Black education from the 19th century through the Black Power era of the 1970s. The course sits with questions such as: What did it mean for African Americans to conceptualize education as freedom in the slavery context? How did these early ideas shape Black theoretical perspectives on schooling moving forward? What can Black America's critiques of educational policies and practices tell us about the relationships among education, power, and anti-Blackness more broadly? In taking this course, students can expect to become well versed in the history of Black education; to explore connections between the social foundations of schooling, racial ideology, and structures of domination; and to learn foundational practices in historical research methods.

Permission of instructor required. Enrollment is limited. Enrollment procedure will be posted on the course website.

Foundations of Schooling and Teaching (218921)

Beth Simpson

2022 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The purpose of this course is to engage in an in depth investigation of the work of teaching. The course is designed for students who intend to enter the profession of teaching for the first time. Specifically, students will look at teachers' work in relation to students, the curriculum, and the school and the policy settings in which they are situated. This course strikes a balance between understanding focal topics from a theoretical and empirical perspective and investigating them from a practical, more hands on approach. The latter is achieved through the frequent use of case studies, videos of teaching practice, and reference to students' experiences in classroom settings.

Learning Goals:

The purpose of this course is to engage in an in-depth investigation of the work of teaching. The course is designed for students who intend to enter the profession of teaching for the first time. Specifically, we will look at teachers' work in relation to students, their families, the curriculum, the school, and the policy settings in which all of these things are situated.

Career Focus:

This course is designed for students in the Undergraduate Teacher Education Program. HGSE students who consider themselves novice teachers or who are interested in learning the basics of teaching would be well-suited for this course. Over the course of the semester, this class provides students the opportunity to critically examine effective instructional practices for novice teachers and to develop and articulate their own philosophies of teaching and learning.

Permission of instructor required. Enrollment is limited to 30. Students currently involved in fieldwork in local school settings given preference. Required for students in the Undergraduate Teacher Education Program. Open to Ed.M. students. Enrollment procedure will be posted on the course website.

Educating Incarcerated Youth: Practice, Research, Policy, and Advocacy (218923)

Lynette Tannis

2021 Fall (4 Credits)		**Schedule:**	F 0130 PM - 0415 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	n/a

Our nation's incarcerated youth are arguably our most disenfranchised population. They are disproportionately children of color, children with special needs, children living in poverty, and children who identify as LGBTQ+ or non-conforming. Many of them dropped out – or were forced out of school and funneled through the school-to-prison pipeline. Each year, more than 1,000,000 cases are heard throughout our nation's juvenile courts. Depending on the nature of the offense, some children are automatically transferred to an adult court and serve their time in adult facilities. With this system in place, annually, more than a 100,000 children are incarcerated in juvenile and adult facilities throughout the United States. Due to a primary institutional focus on safety and security, children who need education as a means to lead productive lives and to positively contribute to society often receive little exposure to high-quality educational programs. What must we do to ensure the opportunity gap these children face does not continue to persist? The premise of this course is that teachers, school leaders, and other educators must be prepared to work effectively with this disadvantaged and often ignored population. This course provides a lens for examining our nation's juvenile justice educational settings, practical tools for teaching and leading in institutional settings, and a space for urgent dialogue about how we, as a society, will address the learning needs and equitable treatment of marginalized youth. Students will engage with juvenile justice educators and juvenile justice experts and will reflect on effective practices for the education of youth who are incarcerated.

Learning Goals:

Assess the relationships/connections between the failures of traditional (public, private, charter) schools and juvenile justice schools

Have a better understanding of the incarcerated youth population and the educational structures for their schooling
Learn effective strategies for teaching and leading in classrooms and schools with marginalized youth
Analyze the practices, research, and policies that hinder or further enhance educational programs for incarcerated youth
Learn effective strategies to advocate for this population

Career Focus:

Teaching
School or systems-level leadership
Policies
Research
Advocacy

Flavor Molecules of Food Fermentation: Exploration and Inquiry (156947)

Pia Sorensen

2022 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 28

Microorganisms produce a diverse array of specialized small molecules as part of their metabolic processes. In this course we will study the production, properties, and characterization of these molecules through the lens of food fermentation. In particular, we will focus on the small molecules that contribute taste and aroma in fermented foods. Students will experience the scientific inquiry process in a creative way by designing and implementing their own research project based on a fermented food of their choosing. Still a field with much potential for discovery, interested students are invited to continue their research project in the summer.

Class Notes: **This class will meet in the CGIS Knafel Cafe, ground floor of 1737 Cambridge St.**

Recommended Prep:

Ls1a , LPSA or equivalent; first semester Organic Chemistry recommended but not required.

Humanity and its Futures: Systems Thinking Approaches (204471)

Fawwaz Habbal

Vikram Mansharamani

2022 Spring (4 Credits) **Schedule:** M 1245 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

As citizens in a rapidly changing world facing increasingly complex challenges, the skills that tomorrow's leaders need are increasingly crossing disciplinary silos. Humanity's most pressing problems are interconnected, involve competing interests, and defy simplification into single disciplines. Reductionist approaches focused on linear understanding must be balanced against the integrative logic of systems-oriented thinking. Depth must be balanced with breadth.
This course will give students an appreciation for the complexities of today's most intractable problems, and in so doing, help students develop a methodology for navigating the world they will face. After an overview of systems thinking and its emphasis on interconnections and feedback loops, the course will

explore several issues and the complications they generate. Over the course of the semester, topics including epidemics, inequality, human displacement, and food systems will be addressed.
The course will employ multiple methods of learning, with course preparation varying from reading novels to watching videos to reviewing academic papers. Each case will include an overview of the issue and why it matters, before exploring existing disciplinary approaches to address the challenge. Prior thinking is evaluated both in terms of its rigor and is effectiveness. What worked and didn't work? Why?
Students will learn to employ systems thinking using a multi-disciplinary method to evaluate possible solutions. This future-oriented analysis will emphasize the necessity to zoom out and paint a mosaic of possible unintended consequences and roadblocks that may impede progress. By the end of the course, students should have developed a robust framework for integrating economic, political, technical, ethical, and social lenses into an analysis of complex problems and their potential solutions.

Marko Loncar

Chris Lombardo

2022 Spring (4 Credits) **Schedule:** MW 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The main course objectives are to introduce students to the exciting and powerful world of electrical engineering and to explain how gadgets that we use every day actually work. After taking ES 50, you will be able to leverage the power of electricity to build systems that sense, control and program the physical world around you. Examples include intelligent and autonomous systems (robots), audio amplifiers (e.g. guitar amp), interactive art installations, light-shows, mind-controlled machines, and so on.

Recommended Prep:

Enthusiasm, curiosity and desire to build things! Previous engineering or programming experience is NOT needed. The amount of high school physics required is minimal, and is limited to basic concepts only.

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Course Roll	FAS Course Roll

Engineering Sciences 51

Computer-Aided Machine Design (148434)

Aidin Panahi

2022 Spring (4 Credits) **Schedule:** MWF 1245 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

An introductory course in the design, fabrication, and assembly of mechanical and electromechanical devices. Topics include: Engineering graphics and tolerances; Structural design and material selection; Machine elements and two-dimensional mechanisms; DC motors; Design methodology. Emphasis on hands-on work and team design projects using professional solid modeling CAD software and numerically controlled machine tools.

Course Notes:

Intended for freshmen and sophomores.

Recommended Prep:

High school calculus; high school physics.

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 51

Computer-Aided Machine Design (148434)

Caglar Ozturk

2021 Fall (4 Credits) **Schedule:** MWF 0215 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

An introductory course in the design, fabrication, and assembly of mechanical and electromechanical devices. Topics include: Engineering graphics and tolerances; Structural design and material selection; Machine elements and two-dimensional mechanisms; DC motors; Design methodology. Emphasis on hands-on work and team design projects using professional solid modeling CAD software and numerically controlled machine tools.

Course Notes:

Intended for freshmen and sophomores.

FAS: Have You Considered	Have You Considered: HCOL
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 53

Quantitative Physiology as a Basis for Bioengineering (122339)

Linsey Moyer

2021 Fall (4 Credits) **Schedule:** MWF 1115 AM - 1230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is designed as an introduction to thinking as a bio/biomedical engineer and is recommended for first years and sophomores but open to all students. Simple mathematical models are used to represent key aspects of organ systems function. Core engineering concepts are explored through mechanical and electrical examples within the human body. The primary focus is on quantitative descriptions of organ systems function and control in terms of physical principles and physiologic mechanisms. It includes a foundation in human organ systems physiology, including cardiovascular, pulmonary, and renal systems. Emphasis will be given to understanding the ways in which dysfunction in these systems gives rise to common human disease processes.

Course Notes:

Open to first-year students.

Recommended Prep:

Calculus at the high school level

Requirements: **Co-req or pre-req: Applied Physics 50a OR Applied Physics 50b OR Physical Sciences 12a OR Physical Sciences 12b OR Physics 15a OR Physics 15b OR PHYSCI 2 OR PHYSCI 3**

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Have You Considered	Have You Considered: HCOL
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 91HFR

Humanitarian Design Projects (208045)

Chris Lombardo

2022 Spring (2 Credits) **Schedule:** M 0600 PM - 0715 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Multi-year long team projects that provide an engineering experience working with partner communities on real-world problems. Projects provide exposure to problem definition, quantitative analysis, modeling, generation of creative solutions utilizing appropriate technology, engineering design trade-offs, and documentation/communication skills. These projects will be implemented with our project partners after the appropriate design and approvals have been obtained.

Course Notes:

Part two of a two-part series. Students are strongly encouraged to enroll in ENG-SCI 91HFRA in the fall and ENG-SCI 91HFRB in the spring within the same academic year. Enrollment limited.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 91R

Supervised Reading and Research (109477)

Zhiming Kuang

Chris Lombardo

Linsey Moyer

Bryan Yoon

2022 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Guided reading and research.

Course Notes:

An ES91r project must possess engineering content at a level similar to other technical engineering courses at SEAS and include many, but not necessarily all, of the following elements: modeling, simulation, design, measurement, and data analysis.

Normally open to candidates accepted for work on a specific topic by a member of the faculty of the School of Engineering and Applied Sciences. Normally may not be taken for more than two terms; may be counted for concentration in Engineering Sciences with prior approval and if taken for graded credit. Applicants must file a project application form prior to the course registration deadline to receive permission to enroll. Project application forms may be obtained from the SEAS website or the Office of Academic Programs, Pierce Hall 110.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 94

Entrepreneurship and Innovation: Practical and Academic Insights (217639)

Josh Lerner

2022 Spring (4 Credits) **Schedule:** WF 0345 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

Entrepreneurship is increasingly transforming our society and economy. This course aims to provide for undergraduates an introduction to entrepreneurship and its implications for innovation. The class will primarily consist of case study discussions, but will include some traditional lecture sessions that build on academic papers to provide more frameworks. As such, it draws primarily on materials from the introductory MBA course at Harvard Business School, "The Entrepreneurial Manager" (TEM). Students will be expected to come to class prepared to discuss the cases.

Class Notes: **Prospective students are invited to a course preview on Monday, January 17 at 2:00PM ET. See the course website for Zoom link.**

Additional Course Attributes:

Engineering Sciences 95R

Startup R & D (109272)

Paul Bottino

2022 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Students do field-based work in entrepreneurship to develop their existing startup and explore new ideas and opportunities for startup design. The course is for students seeking innovation experience as a founder of a startup. Students may work individually; teams are preferred. Requires self-directed, independent work and active outreach to mentors, customers, and partners for guidance and feedback in addition to that provided by the instructor. Students will share their work regularly and engage in a peer-to-peer feedback forum. The coursework is customized to the needs of each student and their startup role and includes development of product, technology, market, business, organization and leadership.

Course Notes:

Enrollment limited; permission of instructor required.

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 96

Engineering Problem Solving and Design Project (144983)

Fawwaz Habbal

Federico Capasso

Kelly Miller

Kit Parker

Jeffrey Paten

2022 Spring (4 Credits) **Schedule:** MW 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Semester-long team-based project providing experience working with clients on complex multi-stakeholders real problems. Course provides exposure to problem definition, problem framing, qualitative and quantitative research methods, modeling, generation and co-design of creative solutions, engineering design trade-offs, and documentation/communication skills. Ordinarily taken in the junior year.

Course Notes:

Preference given to SB candidates.

Class Notes:

ES 96 is offered at two times: Section 001, Mon/Wed at 3:00-5:00pm in Cambridge; Section 002, Mon/Wed at 9:45-11:45am in Allston. Students should enroll in only 1 of the 2 sections (times).

For Section 002 (morning in Allston): Students will be assigned to one of two sub-sections. The first class on Monday, Jan. 24 will meet in SEC Room 1.413. The instructors will inform you of the classroom for subsequent meetings.
