African and African American Studies

Subject: Hausa

Hausa AA

Elementary Hausa (126307)

John Mugane

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

A study of Hausa a most widely used native language and lingua franca in West Africa at the Elementary level (First year part 1). Contact hours supplemented by digital resources. Emphasis on written expression, reading comprehension, and oral fluency. Students are strongly encouraged to complete both terms of this course (parts AA and AB) within the same academic year.

Course Notes: Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the department to learn more.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: African & African Amer Studies

African & African Amer Studies 10

Introduction to African American Studies (122910)

Cornel West

2019 Spring (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

This course will examine canonical texts of the Afro-American intellectual tradition. W.E.B.Du Bois,

Lorraine Hansberry, and James Baldwin will set the scene and stage for other towering figures such as Walker, Douglass, Morrison, Wright, Drake, Frazier, Lorde, Wilson, Gates, Cooper, Baraka (Jones), Malcolm X, and others.

Course Notes: Required of concentrators in the African American Studies track. Students who transfer into the concentration after their sophomore year may substitute another African and African American Studies course already taken if the course addresses the materials covered in African and African American Studies 10, and the petition is approved by the Director of Undergraduate Studies.

African & African Amer Studies 11

Introduction to African Studies (123591)

Jacob Olupona

2018 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to the general outlines of African archeology, history and geography, as well as key concepts in the study of African health, social life , economic situation, arts, and politics. Our aim is to give students a fundamental vocabulary and interdisciplinary methodology for the study of Africa. Throughout, we assume that Africa is not a unique isolate but a continent bubbling with internal diversity, historical change, and cultural connections beyond its shores. The course is open to all students who are interested in exploring various dimensions of African life and cultures in ancient and modern periods.

Course Notes: Required of concentrators in African Studies track.

African & African Amer Studies 20

Introduction to African Languages and Cultures (118883)

2018 Fall (4 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

This introduction to African languages and cultures explores how sub-Saharan Africans use language to understand, organize, and transmit (culture, history, etc.) indigenous knowledge to successive generations. Language serves as a road map to comprehending how social, political, and economic institutions and processes develop: from kinship structures and the evolution of political offices to trade relations and the transfer of environmental knowledge. As a Social Engagement course, AAAS 20 will wed scholarly inquiry and academic study to practical experience and personal involvement in the community. Students will be given the opportunity to study Africans, their languages, and their cultures from the ground up, not only through textbooks and data sets but through personal relationships, cultural participation, and inquisitive explorations of local African heritage communities. Throughout the semester you will be asked to employ video production, ethnographic research, creative writing, "social-portraiture," GIS mapping, and linguistic study as you engage with Africans, their languages, and their cultures. By examining linguistic debates and cultural traditions and interrogating their import in the daily lives of Boston-area Africans, we hope to bridge the divide between grand theories and everyday practices, between intellectual debates and the lived experiences of individuals, between the American academy and the African world. Ultimately, this course aims to place Africans themselves in the center of the academic study of Africa.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Societies of the World.

African & African Amer Studies 97

Sophomore Tutorial: Concepts, Themes and Theories in African American Studies (123590)

Jacqueline Rivers

2019 Spring (4 Credits)

Schedule: M 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This seminar introduces a wide range of key concepts that appear as themes throughout the study of African American life and research on peoples of African descent. Topics such as the social construction of race, intersectionality, the African diaspora, nationalism and other ideas are critical to understanding African American studies from an interdisciplinary perspective. The focus will be on ideas relevant to the social sciences and to the historical development of the African American experience. This course provides a grounding in important ideas, as presented in the iconic original texts, that students will encounter as they continue their pursuit of African American Studies.

Course Notes:

Required for concentrators in African and African American Studies.
Open to all undergraduates.

Additional Course Attributes:

Attribute	Value(s)

African & African Amer Studies 100X Section: 01

Into the Fire: The Black Intellectual, 1968-2018 (207719)

Jesse McCarthy

2018 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM**Instructor Permissions:** Instructor**Enrollment Cap:** 30

If the role of the intellectual is to speak on behalf of those who are voiceless and disempowered then the black intellectual tradition arguably constitutes the original and most enduringly vital intellectual tradition in the United States. This course traces the history of that tradition from the Civil Rights Movement to the present. We will consider a broad range of works by writers, philosophers, activists, scholars, poets, and filmmakers who have sought to impel historic change, record violence, articulate political dissent, celebrate artistic and sexual freedom, and inspire radical imagination. Authors include Malcolm X, Martin Luther King Jr., Angela Davis, James Baldwin, Audre Lorde, Amiri Baraka, Alice Walker, Stuart Hall, Essex Hemphill, Cornel West, bell hooks, Imani Perry, Margo Jefferson, Claudia Rankine, Jesmyn Ward and Ta-Nehisi Coates, as well as films by Isaac Julien, Spike Lee, and Tanya Hamilton among others

Introduction to Black Poetry (207721)

Jesse McCarthy

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

When we speak of a tradition of black poetry what do we mean? How did those who made this literature think of their own practice, relate to each other, and to their audiences? How has black poetic practice evolved and responded to different social, cultural, and political crises? This course will introduce important figures in this tradition, and the debates that have dominated its production, reception and practice, as well as its relations to other cultural forms, including popular music, performance, dance, film and the visual arts. We will read a selection of some of the most significant works in their historical context, covering a broad sweep from the 18th century to the present day touching on major movements including the Harlem and Chicago Renaissance, *négritude*, The Black Arts Movement, Black Feminism, and the Dark Room Collective. Authors include Phillis Wheatley, Paul Laurence Dunbar, Jean Toomer, Langston Hughes, Sterling Brown, Una Marson, Robert Hayden, Gwendolyn Brooks, Aimé Césaire, Nicolás Guillén, Amiri Baraka, Lucille Clifton, Audre Lorde, Derek Walcott, Harryette Mullen, Nathaniel Mackey, Rita Dove, Jericho Brown, Tracy K. Smith, Ed Roberson, Claudia Rankine, Terrance Hayes, M. NourbeSe Philip, Fred Moten, and Kevin Young.

The History of African Americans From the Slave Trade to the Civil War (144199)

Vincent Brown

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course surveys African American History from the first migrations of Africans to the Americas during the Transatlantic Slave Trade to the eve of the U.S. Civil War. Atlantic in scope, our studies will consider black US history in the context of broader regional variations, highlighting both the distinctive and the unexceptional features of black society, culture, and politics. Lectures, readings, discussions, and assignments will emphasize several key themes: the indispensability of slavery to the colonial development of the Americas, the entrenchment of race as a mode of categorical belonging and discrimination, the continuity of multivalent struggles for dignity, freedom, and equality, and the shaping force of gender, geography, and imperial warfare in the transformations of the period. Special attention will be paid to the interpretive possibilities of representing this history in the form of data, argumentative prose, storytelling, and works of visual art.

This course will examine the sociohistorical legacy of chocolate, with a delicious emphasis on the eating and appreciation of the so-called "food of the gods." Interdisciplinary course readings will introduce the history of cacao cultivation, the present day state of the global chocolate industry, the diverse cultural constructions surrounding chocolate, and the implications for chocolate's future of scientific study,

international politics, alternative trade models, and the food movement. Assignments will address pressing real world questions related to chocolate consumption, social justice, responsible development, honesty and the politics of representation in production and marketing, hierarchies of quality, and myths of purity.

Mass Incarceration in Historical Perspective (156254)

Elizabeth Hinton

2018 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

40

Today 1 in 3 African American boys will spend part of their lives behind bars, a profound reflection of the limitations of law and democracy in the United States. By examining the connections between race and the development of legal and penal systems over time, this course investigates the historical process that eventually gave rise to the mass incarceration of black and Latino Americans in the late twentieth century. The course is structured according to the major punitive changes that often emerged after the expansion of constitutional and civil rights for African Americans. Our historical consideration will provide us the necessary background to address the ongoing consequences of racial disparities in the criminal justice system and the momentous public policy implications of this dynamic.

Faulkner, Interracialism and Popular Television (208092)

Linda Chavers

2018 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

What could Scandal or How To Get Away with Murder possibly have in common with the works of William Faulkner? This course puts our classic literature in conversation with current canonical pop culture. Each week we will examine how Shonda Rhimes's hit television shows Scandal and How To Get Away With Murder resurrect the same charged topics of interracial sex, black personhood and white anxieties that William Faulkner described and imagined in his novels Absalom, Absalom and Light in August. All of these texts tackle themes such as othering, violence as liberation and the spectre of interracialism but what do they say about them in particular? What does Rhimes highlight about this? Faulkner? What is achieved textually versus visually? This course looks at how all of these expressions discuss the highly charged topic of race and blackness and offers a lens through which to look at our daily life.

19th century Black Women Slave Narratives and the 21st century #MeToo Movement: (207805)

Linda Chavers

2019 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

What would happen if we genuinely paid attention to the history of American slavery? What threads could we pull from it about gender, sex and power? This course examines the current discourse around sexual harassment and assault from the #MeToo movement through the informed lens of Harriet Jacobs's slave narrative *Incidents in the Life of a Slave Girl*. Both "texts" involve navigating spaces of subjugation and supremacy and yet one voice has remained steadily ignored in mainstream audiences. We will also look at the intersection of race and gender that *Incidents* reveals and trace how these remain intact or not through today. We will also look at the life of Sally Hemings in the #MeToo context.

Zora Neale Hurston and the Anthropology of Race (208035)

Marla Frederick

2018 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course takes up the major writings of anthropologist, Zora Neale Hurston, "A Genius of the South." It places her oeuvre in its historical context, situated amongst 20th century debates in sociology and anthropology about the meanings of race, blackness, culture, Africanness and cultural retentions. Trained in the Columbia school of anthropology by Frans Boas, "the Father of American Anthropology," the course explores how Hurston's approach to the study of African American life was influenced by Boas' emergent theories of race. Given Hurston's non-traditional sojourn as a scholar of the American South, a committed fiction writer and a central figure of the Harlem Renaissance, the course further examines her unique, and at times confounding, contributions to the social and political order of her day. By placing her work in conversation with other notable anthropologists we examine the rich tradition of scholars who have attempted to make sense of race in the context of the Americas.

Hiphop and Don't Stop. I Am Hiphop: Build, Respect, Represent (126710)

Marcyliena Morgan

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This reading seminar takes up the question of how and why Hiphop art, culture and politics has taken over and dominated American public, youth, popular culture and African American discourse in general. *I AM HIPHOP* is a vivid exploration into the origins, culture, style, art and enduring influence of hiphop as a uniquely American black cultural art form adapted around the globe. It explores how hiphop language ideology has penetrated the 'arts' and American culture by identifying and reframing life in the 21st century. Readings will be on theoretical, ideological and philosophical arguments embedded in hiphop artistic practices in the U.S. and throughout the world. We will examine hiphop's influence in all genres including the arts, social sciences, business, etc. The course will examine how people throughout the world incorporate hiphop edicts to disseminate public and popular ideologies to represent individuals, neighborhoods, cities and nations.

The Hiphop Cipher: "These are the Breaks" (108837)

Marcyliena Morgan

2018 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

The Hiphop Cipher is an in-depth look at hiphop culture and production. It is for students who are familiar with hiphop as a cultural and artistic movement and enterprise and/or have taken courses on hiphop and popular music and culture. The focus of the course will be the year 1995. The course will closely examine a particular issue and topic and includes guest lecturers and master classes on areas or issues in hiphop culture, art, scholarship and performance. Fall Winter 2018 will feature Artist in Residence and Grammy Winning producer 9th Wonder (Patrick Douthit).

These are the Breaks: The connection between vinyl from the 60's, 70's and 80's and birth of what we now know as hip-hop music, is a connection that is known by producers, DJ's and collectors of music, but not to academia. Various political, cultural, and social movements of the 1960's created an environment for the

stories of soul, jazz, and funk produced in the 1970's, which in turn created the platform for our most treasured hip-hop albums (Illmatic, The BluePrint, The Chronic, College Dropout, The Minstrel Show). "Diggers" from around the world travel from country to country, from record shop to basement, in search of the original "breaks" used for these albums, in some cases for 10+ years. This course examines the important break beats in hiphop and the cultural, political and social movements and contexts that the beats, songs and production represented.

Class Notes: This course will be held in the Hiphop Archive

Race, Racism, and American Politics (204051)

Lawrence Bobo

2018 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course takes up the questions of whether, how much (if at all), and why racial group identity and racism influence American political discourse, behavior and policy-making regarding issues of importance to African American communities. The course will also consider the future of debates within African American political thought and politics in the coming post-Obama era. The focus will be primarily on the post World War II era, especially the post-Civil Rights period to the present day. Among the topics we will address are: Obama and the racial divide in America, the rise of the Tea Party, the new politics of immigration, and the rhetoric of "law and order" in American politics and its connection to the mass incarceration. Readings will consider how sociologists, political scientists, and historians have tried to understand the complex and changing role of race and racism in American politics and policy-making.

Learning Languages: Communication, Acquisition, Translation and Authorship from Africa and Beyond (207977)

John Mugane

2018 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This interdisciplinary, experimental, social engagement course explores the foundations of language learning and communicative competence from an African perspective. What do language learners at Harvard have to learn from the polyglots of rural Cameroon, the transnational traders of the Sahara Desert, the code-switching "beach boys" of the Swahili Coast, and the code-mixing/code-scrambling urban

dweller? How might studying language acquisition, communicative commerce, and the pragmatics of association and affiliation from Africa help to make us better language learners, translators, and global citizens in an increasingly connected world? What does it mean to "know" a language? How is "fluency" best achieved? Is language best understood as a "skill" as an "opportunity" as a "space" -what? What happens when we start to think of language not just as an avenue but as a locus of knowledge production, wealth generation and cultural participation. How does fluency (competence and performance) through social engagement learning compare to fluency attained through scholarly study? Calling into question dominant Western modes of language teaching and learning, this course explores new theoretical, methodological, and practical approaches to language learning, translation, and intellectual engagement. This course will allow students to bring their own linguistic questions and projects into the classroom, while at the same time studying the Harvard African Language Program's ongoing experiment in language teaching and learning. Encouraging hands-on, practical language learning, the course will offer students the opportunity to attain new linguistic capacities and strategies through "shock language lessons," to practice collaborative translations with language speakers and tradition bearers, and to undertake their own communicative adventures in local communities. Readings will include a wide range of interdisciplinary texts, including Nigerian novels, Anthropological theory, Swahili rap lyrics, historical Linguistics, Zulu praise poetry, Colonial-era grammars, and STS (science and technology studies) ethnographies. Coursework will include translations of foreign language texts, reading responses, social engagement work, and a final analytic or creative project.

This course is a historical survey of the centuries-old Christian traditions in Africa. It begins with an outline of the trajectory of Christianity's origins and presence in Africa from its beginning in ancient Mediterranean lands through the early period of European missionaries to the contemporary period. The course provides the ethnography of the old mission churches, indigenous independent African churches, and contemporary evangelical and Pentecostal Charismatic movements. The course explores the role of Christianity in relation to historical, cultural, social, and material realities of the African continent. It examines a broad range of topical issues related to conversion, missionization, and the development and growth of Christian agencies in Africa in relation to the construction of social, theological, and religious identities, as well as Christianity's response to cultural pluralism, nationhood, citizenship, and civil society.

From R & B to Neo Soul: Black Popular Music and Cultural Transformation (124607)

Ingrid Monson

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

The course focuses on the history of African American popular music from Ray Charles to P-Funk to Erykah Badu with particular emphasis on its long-term impact on American culture. The rise of classic R & B, Soul, Motown, Funk, the Philly Sound and Neo-Soul are featured. Key artists include Ray Charles, Aretha Franklin, the Supremes, Curtis Mayfield, James Brown, Stevie Wonder, George Clinton, Michael Jackson, Prince, Jill Scott, Erykah Badu, Usher, Alicia Keys, and D'Angelo. The course is especially concerned with tracing the interrelationships among music, politics, spirituality, and race relations during the Civil Rights and Black Power years and their legacy for today. During these years the sound of African America indelibly shaped mainstream American popular culture in far reaching and transformative ways.

30

This seminar offers a dynamic survey of U.S.-based social movements, over the past century. We will emphasize intersectional and international dynamics, and how they animate and complicate our major narratives of activism and organizing. While highlighting the 'long civil rights movement' for Black freedom, we will also consider overlapping feminist, labor, LGBT and immigrant causes as well as more right-wing ones. As we move across each decade and issue focus, we will ask how each movement had transnational dimensions, as well as how race, gender, class, sexuality, or other axes of inequality were braided together. For example, we will consider how African-American migrations produced encounters with Puerto Rican migrants and Haitian politics. We will examine stories of union organizing centered on Latinx and queer workers, as they experienced changing immigration policies or were employed aboard globe-traveling ships. We will learn how Black-freedom organizer Ella Baker responded to gendered labor issues, from domestic workers in the Bronx to military service in Asia. We will see how global events from World War II to Vietnam shaped the political lives of LGBT voices from James Baldwin to Sylvia Rivera. And we will trace recent waves of feminism as they have navigated issues of welfare advocacy, South Africa solidarity, immigrant detention, and Black Lives visions. We will follow these intersectional and international concerns into our own 2010s historical era. Students will get an introduction to a century of social history and diverse movements, be exposed to a range of cross-movement biographical portraits, as well as gain exposure to innovative and interdisciplinary approaches.

The African Diaspora: Time, Space, and Belonging (211170)

Youssef J. Carter

2019 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This seminar examines how "diaspora" has emerged in conceptual terms and has been used to describe a specific process of becoming and belonging, particularly for people who have dispersed, or have been dispersed, into multiple spaces around the globe while at the same time maintaining a sense of connectedness (solidarity) through the circulation of homeland paraphernalia, political views, and other devices that act as connective tissue. We will review literatures that focus on transborder practices, and on the ways in which communities engaging in these practices imagine themselves. We begin by tracking a genealogy of 'diaspora' in both historical and contemporary dimensions in order to then analyze how it applies in global African context. This seminar also focuses on how identities become contested and untethered from state boundaries via diasporic and transnational solidarities, but also on how people discursively situate, or localize, themselves into particular geographic and temporal contexts. Here, we address the theme of mobility through analyzing scholarship on transborder practices within a globalized

world, and diasporic existences. We review anthropological writings that center upon the many entanglements that "glocal" communities face as they circulate around multiple diasporic nodes and engage multiple social, political, and religious worlds. Diaspora, here, is not taken for granted and the assumption is not held that diasporas exist automatically, but rather, that their formations are particularized, locally-shaped, and inflected as purposeful camaraderies via interactions (real or imagined) between and among sites in ever-evolving networks. Diasporas are not merely sites where static relations to homeland are simply enacted and maintained—the interactions in and throughout diasporic networks tend to be more complex and multiple. Diasporas do not just produce mobility, they are themselves variable in the sense that they continually shift in size, orientation, and perhaps even representation. Collective envisionings of homeland that configure a solidarity amongst similarly dispersed people can even, over time, downgrade from diaspora to simple dispersion. Our central aim, then, is to deepen our understanding of not only the diaspora concept, but also investigate the social and political components of dispersion.

Social Revolutions in Latin America (110501)

Alejandro de la Fuente

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course seeks to explain why social revolutions have taken place in Latin America and analyzes their impact on the region. The objective is for students to gain a critical understanding of the origins, development, and impact of revolutionary movements in Latin America during the twentieth century. We will try to identify: (1) the historical factors that led to revolutions in the region (the so-called revolutionary situations); (2) the strategies followed by different movements and how successful they were; (3) the programs and policies instituted by the different revolutionary governments; (4) the social and political forces opposed to those policies, including international forces; and (5) the ability of these revolutionary movements to hold on to power for extended periods of time. The course examines several case studies, which may include Mexico, Cuba, Chile, Nicaragua, the Zapatista uprising in Chiapas, and the so-called "Bolivarian revolution" of Venezuela. Our goal is to identify similarities and differences among these cases.

Martin Luther King, Jr. and the Question of Conscientious Citizenship (207580)

Jonathan Walton

Brandon Terry

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

What does it mean to be a conscientious citizen? What are our responsibilities as civic-minded, morally-engaged members of overlapping communities? This course seeks to answer such questions by exploring the ethical, religious, and political thought of arguably the greatest public intellectual and activist that the United States ever produced, Martin Luther King, Jr. In interrogating King's body of public philosophy, as well as its leading critics and interpreters, we will pursue a body of questions that remain essential to thinking through the problems of citizenship in the current age. Students will debate: How should we think about the tensions between conscience and community? How ought we think about the alignment of moral ends with practical and political means (e.g., violence, law, civil disobedience, coercion, revolution, rebellion, etc.)? Is there room for public profession of faith in political discourse or is it a conversation stopper? Lastly, given the persistence of evil and injustice, can suffering in service of justice be redemptive or does such hope simply reify the structures of injustice?

Majesty and Mythology in African Art (207767)

Suzanne Blier

2018 Fall (4 Credits)

Schedule: M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 30

This course serves as an introduction to key themes in Africa art framed around both questions of rulership and the array of mythological forms that define these and other arts. The course also examines what these arts reveal about the nature of power, society, and religion in Africa more generally. The diverse ways that Africans have employed art and architecture to define individual and group identity will also be examined. Among the topics that will be discussed are palace and community architecture, regalia, women, divine kingship, cosmology, enthronement ceremonies, history, and the importance of art in diplomacy and war. The importance of broader art and architectural connections between Africa and other world areas will be engaged as well, bringing into play issues of colonialism, the global economy, questions of display, and current concerns with art appropriation and return.

Class Notes: The instructor has asked for the class to be held in the Sackler.

Africa Rising? New African Economies/Cultures and Their Global Implications (108680)

John Comaroff

Jean Comaroff

2018 Fall (4 Credits)

Schedule:

M 0600 PM - 0845 PM

M 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

In a story titled *Africa Rising* (2011), *The Economist* argued that the continent epitomizes both the "transformative promise of [capitalist] growth and its bleakest dimensions." This workshop will explore Africa's changing place in the world - and the new economies, legalities, socialities, and cultural forms that have arisen there. It will also interrogate the claim that the African present is a foreshadowing of processes beginning to occur elsewhere; that, therefore, it is a productive source of theory about current conditions world-wide. The workshop, open to faculty and students, will meet Mondays from 6:00-8:00. 15 students will be permitted to take it as a course; they will also meet on Mondays, 12:00-1:30. Grades will be based on participation and a term essay.

Class Notes:

Class meets on Mondays from 12pm - 1:30pm and 6pm - 8pm.

Additionally, it will be held in the Barker Center Locke Room (rm. 230)

Entrepreneurship in Africa (110092)

2019 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is designed to help students develop an understanding of the socio-economic revolution in the emerging African market. The goal will be to inspire and equip budding social entrepreneurs with knowledge and skills specific to context, challenges and innovation in enterprises that advance the continent with strong social impact. Designed as a seminar course, and team taught by faculty from across the Harvard schools, each session will focus on a theme - Agriculture & Food, Energy, Healthcare and Education - that affect development across the African Continent. The course will explore the unique challenges and opportunities of launching and growing an enterprise in the African context. Students will examine conditions in North, West, East, Central and Southern Africa and study how the current environments - political, social, technological and economic - can impact entrepreneurs' approach to growth, scalability and partnerships as they launch new businesses or social ventures. The course will explore questions such as how social entrepreneurship theory manifests in practice, how Africa's challenges are identified and solutions developed, the evolving role of leadership, ethics, governments, and social sector development in Africa and how entrepreneurs can leverage their ideas to create systems and policy level social change in Africa. The course will meet weekly including a 1-hour weekly group section focused on a final project. Students will work in teams to produce a final project business plan for a social enterprise or a strategy paper that addresses a business and development need specific to a region in Africa. The course will be open for cross-registration to all Harvard graduate students, limited by capacity to undergraduate students.

This graduate readings seminar surveys African American history from the slave trade through the early twentieth century. We will examine the experiences of African Americans alongside the history of race relations in a larger American context. Topics include slavery, abolition, and the transition to freedom; regional and cultural differences among African Americans; black politics; and issues of gender and class in black communities. We will also discuss the nature of historical inquiry and differing modes of historical interpretation.

Jean Comaroff

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course is a practicum designed to help students craft effective research and grant proposals, learn how to constructively critique others' proposals, and develop enduring collaborative relationships. Many writing problems are fundamentally thinking and design problems. For this reason, conceptual structure, project design, and methodological choices will occupy a great deal of our time. The first half of the semester will focus on Wenner-Gren-type proposals, the second half on proposals for the National Science Foundation and similar funders.

Theory and Race in the Americas (211217)

Marla Frederick

2019 Spring (4 Credits)

Schedule: W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

This course explores myths and theories of race that have informed the construction and development of social caste and class in the Americas. Reading classical works on race from scholars like DuBois and Hurston to more contemporary works by scholars like Hartman and Gregory, we examine the entrenchment yet mutability of race in the context of the Americas. Looking at both religion and the social sciences, the course explores the ways in which race was first predicated upon religious myths and ideas and then codified through science and the law. In this way we appreciate the infusion of race in the very fabric and shaping of the Americas. Readings, discussions and assignments will emphasize several key themes: race, slavery, diaspora, racism, respectability and resistance. We take an interdisciplinary approach that bridges anthropology, philosophy, religion, sociology and political science. In part we will explore the disciplines' role(s) in making and unmaking race and racism.

Twi AB

Elementary Twi (159869)

John Mugane

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Twi is one of the regional languages of the Akan speaking peoples of Ghana, constituting the largest ethnic group in Ghana. Twi is fast becoming the *lingua franca* of the country. This course aims to help students acquire the Twi language at the basic or elementary level. Students are strongly encouraged to take both parts of the course within the same academic year. The curriculum builds throughout the year.

Course Notes:

Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the department to learn more.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Meets Foreign Lang Req	Twi

Sophomore Tutorial in Archaeology (113567)

Jason Ur

2019 Spring (4 Credits)

Schedule: M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 10

This course will focus on archaeological thinking, the cognitive skeleton of the discipline of archaeology, the principles and the logic that are the foundation of all archaeological conclusions and research. Central to this is an understanding of research design, archaeological theory and interpretation, culture and material culture; as well as an understanding of how to examine and construct an archaeological argument.

Course Notes: This course is offered via the Archaeology track within Anthropology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Social Sciences

Anthropology 97Z

Sophomore Tutorial in Social Anthropology (143028)

Steven C. Caton

2019 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

The course is designed as a foundational course with the specific purpose of introducing the principal social theorists whose work has been crucial to the discipline of social anthropology, that is: Marx, Durkheim, Weber, and Foucault. The first objective is to delineate the broad outlines of their thought and the central questions that informed their intellectual and political interventions. The second objective is to provide a solid grounding in the key concepts as well as the theoretical and methodological contributions of these social theorists. Finally, we will seek to demonstrate how contemporary anthropological theory continues to engage with their work.

Course Notes: Required of all concentrators. Weekly 2-hour sections to be arranged.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Social Sciences
FAS: Course Level	Primarily for Undergraduate Students

Anthropology 98A

Junior Tutorial in Anthropology (205494)

Philip Kao

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

This course is focused on preparing students to do anthropological fieldwork and develop their own research projects. Through concrete case studies and practical exercises students will be introduced to different approaches to developing research problems, conducting research, and ethnographic writing. Topics covered will include defining research questions and objects of study, situating projects within scholarly literature, and bringing together research data and analysis in different forms of anthropological writing.

The aim of the course is not an exhaustive overview of research design but to familiarize students with some of the key practices and concerns of anthropological research and writing. The course seeks to guide students in reading anthropological texts, understanding the range of data and its representations, unpacking the analytical moves being made in the text, and thinking through the implications of such presentation.

The course is divided into two main components. The first focuses on a case study of a developing anthropological work by the instructor. Through select readings related to their topic of interest and original research documents (proposals, fieldnotes, media, news reports, photographs, analytical essays, among others) students will learn the process of turning a research question into an anthropological project. The case study is also meant to prepare students for the experience of conducting their own research and serve as an example of how to transform research findings into anthropological writing.

Simultaneously, this course is also a research practicum in which students will apply what they have learned to design their own anthropological projects and share with each other research goals, experiences, and components of their emerging work. Through structured assignments, seminar workshops, and regular individual meetings with their instructor students will produce an original research essay based on their research over the course of the semester.

Course Notes: Required of all concentrators in Anthropology.**Class Notes:** Required of all concentrators in Anthropology.

Occasional plenary sessions scheduled for Wednesday's 6-8pm.

There is a mandatory organizational meeting for all juniors on Friday, September 7, at 11 AM in Tozzer 203.

Anthropology 98B

Junior Tutorial for Thesis Writers in Anthropology (205522)

Philip Kao

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This individual tutorial is for anthropology students intending to write a senior thesis, and is normally undertaken with an advanced graduate student during the second term of junior year. Students will have weekly meetings with the project advisor for the purposes of developing the appropriate background research on theoretical, thematic, regional, and methodological literature relevant to their thesis topic, and fully refining their summer research proposal. The tutorial's final paper will be comprised of a research proposal representing the research undertaken during the semester.

Class Notes: Strongly recommended for any anthropology junior intending to write a senior thesis. Taken in addition to the required fall term group junior tutorial, Anthropology 98a.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Social Sciences

Anthropology 99A

Thesis Tutorial in Anthropology - Senior Year (205184)

Philip Kao

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 30

This is a full year research and writing seminar limited to senior honors candidates. The course is intended to provide students with practical guidance and advice during the thesis writing process through structured assignments and peer feedback on work-in-progress. It is intended to supplement not replace faculty thesis advising (with the requirement of consulting regularly with the advisor built into the assignments) and, most importantly, allow students to share their work and experiences with other thesis writers in a collegial and supportive environment. The seminar will be run jointly by the Department of Anthropology Assistant Director of Undergraduate Studies and the Writing Tutor. Part one of a two part series.

Class Notes: There is a mandatory meeting for all senior thesis writers on Friday, September 7, at 1 pm, in Tozzer 203.

Anthropology 1010

The Fundamentals of Archaeological Methods & Reasoning (112378)

Matt Liebmann

Rowan Flad

2018 Fall (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

A comprehensive introduction to the practice of archaeology and major themes from our human past: how do archaeologists know where to dig? How do we analyze and understand what we find? What do we know about the origins of the human species, agriculture, cities, and civilization? The course integrates methods and theory, and utilizes Peabody Museum collections, to show how we reconstruct ancient diet, trade, and political systems. We also explore the role of archaeology in colonialism, modern politics, and film.

Course Notes: One 2 hour section per week.

Anthropology 1059

Deep History (205088)

Matt Liebmann

Daniel Smail

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Transcending disciplinary boundaries, "Deep History" brings the entirety of the human past together into a single historical narrative. Lectures and discussions enable students to anchor their understanding of the human past in tangible remains—a tool, a piece of ceramic or rock art, a shell-bead. These, in turn, provide models for students as they research objects of their own choosing. Spanning the world and traveling from the deep past to the present, this course offers students a chance to engage with a new kind of historical identity and provides a counterbalance to the short-termism common in our public sphere.

Course Notes: This course is equivalent to Anthropology 1059 . Credit may be earned for either History 1059 or Anthropology 1059, but not both.

Anthropology 1060

Archaeological Science (111192)

Richard Meadow

2019 Spring (4 Credits)

Schedule:

M 0700 PM - 1000 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Pressing issues in archaeology as an anthropological science. Stresses the natural science and engineering methods archaeologists use to address these issues. Reconstructing time, space, and human ecologies provides one focus; materials technologies that transform natural materials to material culture provide another. Topics include 14C dating, ice core and palynological analysis, GIS and other remote sensing techniques for site location, organic residue analysis, comparisons between Old World and New World bronze production, invention of rubber by Mesoamerican societies, analysis and conservation of Dead Sea Scrolls.

Class Notes: Richard Meadow is the contact person for this course at Harvard and provides the final grade to the Registrar for each participant registering for the course through Harvard. He must also approve student participation in the course, which is given through The Center for Materials Research in Archaeology and Ethnology, a Boston Area consortium based at MIT. The director of the program and the course head is Professor Heather Lechtman. For more information, please contact her at lechtman@mit.edu

Recommended Prep: One year of college-level chemistry or physics.

Urban Revolutions: Archaeology and the Investigation of Early States (113901)

*Jason Ur**Jeffrey Quilter*

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Examines the development and structure of the earliest state-level societies in the ancient world. Archaeological approaches are used to analyze the major factors behind the processes of urbanization and state formation in Mesopotamia, Egypt, Central Asia, the Indus Valley, and Mesoamerica. The environmental background as well as the social, political, and economic characteristics of each civilization are compared to understand the varied forces that were involved in the transitions from village to urbanized life. Discussion sections utilize archaeological materials from the Peabody Museum and Semitic Museum collections to study the archaeological methods used in the class.

Course Notes: No previous knowledge of archaeology is necessary.**Additional Course Attributes:**

Anthropology 1145

The Green Planet: Plants that changed human history (211105)

Ari Caramanica

2019 Spring (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course explores the role of several extraordinary plants in the emergence of complex society, the shaping of global economies through time, and the development of modern science. While plants have been featured in human history as a resource (shelter, fuel, fiber, food, or medicine) they also act as recursive agents: plants give shape to our lives, especially in the process of place-making, and are simultaneously shaped by these interactions. The course will begin with an introduction to botany for social scientists and continue with a 'close-reading' of a selection of plants, including sugar cane, *Prosopis*, Gingko, and the potato. This class looks beyond how plants end up on our plates and challenges students to consider the broader impacts of human-plant relations.

People of the Sun: The Archaeology of Ancient Mexico (109568)

William Fash

2019 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

When Europeans first arrived in what is today Mexico and Central America, they encountered indigenous cities and empires rivaling those of Europe at the time. This course examines the builders of these civilizations, focusing on the cultures of highland Mexico such as the Aztec and Zapotec, as well as their predecessors and contemporary descendants. Topics include the origins of food production; development

of regional exchange networks; rise of towns, temples, and urbanism; emergence of states and empires; and resilience of native lifeways through Conquest and Colonial periods. Peabody Museum collections are incorporated into class discussions and assignments.

Makings of Crisis: The Anthropology of Disaster, Past and Present (211104)

Ari Caramanica

2019 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

While floods, droughts, hurricanes, and famine, appear to be natural events, such disasters are largely social experiences. Traditional forms of hazard research rely on ecological or economic models of adaptation, adjustment, and response, often to the exclusion of an anthropological and deep-time perspective. In the current era of more frequent and intense climate-change related events, this course proposes a re-evaluation of the traditional approach. We will survey of some of the most infamous disasters in human history and re-trace the emergence of hazard research. The class will challenge students to question the role of culture in the creation of 'natural' disasters. Finally, the class is an introduction to foundational literature for students with interests in environmental policy, ecology, the Anthropocene, and the anthropology and archaeology of climate change and disaster.

Focuses on the Pyramids, Sphinx, and tombs at Giza (ca. 2500 BC), in the context of ancient Egyptian history, art, and archaeology. The HU-MFA Expedition excavated Giza, resulting in today's Giza Project at Harvard. Seminar takes place in Harvard's Visualization Center with 3D viewing of the Giza Necropolis on a 23-foot screen, and consists of introductory lectures, student presentations, and field trips. Topics range from challenges of archaeological information processing to Old Kingdom mortuary art and architecture, to issues of ownership and repatriation. Students will also contribute to the (real world) Giza Project at Harvard.

Responding to one of the major political, economic and religious developments of our times, this course locates the immigration crisis of the Mexico-U.S. borderlands within the epic context of human migration in history and global perspectives. The first part of the course will read and critique a series of books and articles about human migration, Mexican migrations to the U.S. in the last 120 years and the enigma and fluidity of national borders. The course will then develop a comparative perspective on immigration by comparing Mexican migrations with migrations from a) Latin America to the U.S, b) the African American migration within the U.S. from south to north, c) contemporary migrations from Africa to countries of the European Union. Questions such as 'what economic and political forces cause people to migrate?', 'do they migrate as individuals or families?', 'How do walls, fences and borders work and what do they mean?' and 'what is immigration reform-anyway?' will be explored. We will examine the profound economic and moral dilemmas facing migrants, families, children, sending and receiving countries. The course uses Professor Carrasco's concept of 'sacred bundles' to explore the question 'what cultural and religious resources help migrants survive the ordeal of migration and establish new identities?' Jointly offered with Harvard Divinity School as HDS 3140.

Course Notes:

Course has additional section hour to be arranged.

Class Notes:

The course will meet at Andover Hall, Room 116 - Sperry on the Harvard Divinity School Campus

Anthropological Investigations: Ways of Thinking and Being in the World (123339)

Stephen Scott

2019 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

How does social anthropology—the study and representation of contemporary societies through fieldwork and ethnographic writing—intervene in the contemporary world? This course offers an overview of social anthropology's central tenets and impact through focused explorations of contemporary anthropological

research and writing. We begin with an overview of social anthropology, its key concepts and methods, followed by three modules introducing anthropological perspectives on contemporary issues: (1) globalization and capitalism, with a focus on commodity chains; (2) public culture and mass media, focusing on the public mediation of religious movements and youth culture; and (3) technoscience and society, focusing on biomedicine and emergent biosocialities. Each three-weeklong module is comprised of theoretical readings, a series of case studies, and a book-length ethnography. The course is structured around a set of ethnographic exercises and writing assignments: a thick description, a media analysis, an interview, and an op-ed.

Course Notes: This course is offered via the Social Anthropology track within Anthropology.

Anthropology 1604

The Anthropology of Law (207708)

Ronald Niezen

2018 Fall (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

This course has two principal goals: The first is to introduce students to the key issues, concepts, and methods of the anthropology of law as a distinct field of research. This part of the course in the first several weeks covers the intellectual history of legal anthropology, outlining the legacy of the most influential approaches to the comparative and ethnographic study of legal systems. Second, the anthropology of law will be approached as a sub-discipline with important things to say about contemporary cultural contests, activism, group representation, and identity formation. It has emerged in the past decade or so as a particularly ground breaking field of research, in part because it has become central to understanding the changed dynamics of cultural expression and collective identity through new avenues of communication and transnational networking. In many parts of the world, legal systems are "pluralizing," often integrating local conceptions of justice with formal procedures and institutions. At the same time, more people and organizations than ever before are using the institutions and mechanisms of law to achieve conditions of equal access to the benefits of rights, recognition, and prosperity, above all through new standards and processes of human rights and environmental justice.

Class Notes: Professor Ronald Niezen is the William Lyon Mackenzie King Visiting Professor of Canadian Studies.

Indigeneity, Rights, and the Politics of Identity (207709)

Ronald Niezen

2019 Spring (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

18

It has been more than a half-century since the concept of 'indigenous peoples' became an international legal category that opened space for the social justice claims of peoples as individuals and collectivities with a common experience of marginalization, dispossession, discrimination, and contested cultural differences. This course will familiarize students with the key issues, concepts, and methods of anthropology as they relate to indigenous peoples. It will pay particular attention to the common challenges faced by indigenous peoples and discuss how indigenous peoples and organizations are using the institutions and mechanisms of NGO advocacy and law in their attempts to achieve equal access to the benefits of political recognition, development in their own terms, and a broader respect for collective human rights. Case studies will be drawn from Canada, Africa, Northern Europe, Latin America, Australia and the South Pacific.

Course Notes:

Advanced undergraduate seminar, limited enrollment (12-18)

Class Notes:

Professor Ronald Niezen will teach this course, William Lyon Mackenzie King Professorship of Canadian Studies, for 2018-19.

(Mis)Understanding Islam Today (203842)

Bilal Malik

2018 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course grapples with key controversies – suicide bombings, blasphemy, gender, Muslim minorities, Islamism – as a point of entry into understanding Muslim cultures and societies. Drawing on insights from Cultural Anthropology and related fields (Religious Studies, History, Government, Philosophy, Law), the course also encourages self-reflection on our own assumptions regarding religion, secularism, freedom, tolerance and violence. Finally, by dwelling on the case of cross-cultural (mis)understandings related to Islam, the course underscores that no matter what our personal objectives – social theorizing, developing policy, or being an engaged global citizen – there is value in understanding how historical and cultural contexts shape us all. No prior familiarity with Islam is required or assumed.

Course Notes:

Q-scores listed at <http://goo.gl/yKXrHE> and <https://goo.gl/vidcam>. Open to all concentrations/years; no prior familiarity with Islam or Anthropology is required/assumed. Eligible for Anthro/ NELC/ Hist&Lit credit and potentially for GenEd (under new policies). Offered by the Social Anthropology program (also offered as HSEMR-LE 75 - students may not take both classes for credit). Meeting time to be finalized on enrolled students' preference. See course site for details, or email bmalik@fas

Black Muslims: Race, Religion, and Culture in the United States (208329)

Youssef J. Carter

2018 Fall (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This seminar is an interdisciplinary examination of African-descended Muslims in the United States whereby we unpack the establishment of Black Muslim communities, simultaneous politics of race and religion, exegetical fissures, and questions of gender, citizenship and marginalization among others. We take a diasporic approach to our study of Black Muslimness by thinking with and beyond the African-American Muslim narrative in order to include how Black migrant communities (Africans, Caribbeans, etc.) have navigated life in the United States. Course themes include The Continuities and Contours of Black Muslimness, Islam in Africa, Atlantic Struggles and the Slave Trade, Black Religious Orthodoxies & Reversion Narratives, Muslims Navigating Race and Gender, The Complexities of Caribbean-American Muslimness, Islam and Hip-Hop in Blackamerican context, and Intra-religious difference.

The City Jail: Race and Incarceration in the United States (205306)

Kaya Williams

2018 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will investigate the conditions of mass incarceration in America through the figure of the municipal jail (which sees on average twelve million admissions annually). We will begin with the question "What is a jail?" and move from there to interrogate the cultural, economic, political and legal forces that shape the conditions of possibility for the 21st century jail. Taking as objects of study both the jail itself and the practice of incarcerating people in local jails, this course will combine scholarly work on U.S. criminal justice with a variety of non-academic texts including legal decisions, contemporary journalism, and documentary film. Over the course of the semester students will learn to "locate" the city jail in a number of different ways: within the complex political and economic structures of the American municipality, within the criminal justice system writ large, and within the country's long history of anti-black racism and struggles for freedom. Students will use the jail itself as a conceptual anchor from which to question the taken-for-granted terms of American practices of captivity

The Anthropology of Energy: Power, Politics and Pollution (207821)

Philip Kao

2019 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course will explore the topical and theoretical ways energy is emerging to become an important theme in contemporary anthropological research. Our increasing exploitation and extraction of planetary resources both above and below ground is leading cross-disciplinary researchers to revisit energy generation, usage, and conceptualization. Drawing from a range of energy ethnographies, students will study issues pertaining to energy exploration, labor, consumption, and even pollution. This course will examine the extent to which energy networks can be said to exist, and furthermore whether energy infrastructures, which are often invisible in daily social life, can be detected and even studied ethnographically. We will also

explore how energy politics and power articulate particular social and material relationships, and how various 'energy regimes' (including future energy sources and transformations) have unique consequences at the local community, state, and global-anthropocenic levels. Thus, a major aim of the course is to help students become more aware of the social and cultural effects of the energy industry, whilst also helping them discover ways to make energy issues more public, visible, and connected. Along these lines, students taking the course will be able to see how ideologies and the politics of energy and energy discourse continue to shape people's histories and futures in dynamic and uneven ways.

Anthropology 1795

Language and Politics (122440)

Stephen Scott

2019 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course draws on the anthropological study of language and culture to look at the role of language and communication in political formations. The first part develops a general approach to language and politics by focusing on the concept of ideology, more particularly, the relationship between linguistic ideologies and political ideologies. Subsequently, we will use this work to study the political dimensions of two broader semiotic processes: the semiotics of standardization in language and other cultural forms; the semiotics of publicity and the discursive construction of public authority. Throughout the course, we will see how linguistic and communicative practices and ideologies come to mediate the making of polities, publics, and peoples, and indeed the very forms that politics take, including the very meaning of the political within those forms.

Course Notes:

This course, when taken for a letter grade, meets the General Education requirement for Culture and Belief.

Race and Caste (207678)

Ajantha Subramanian

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Race and caste are two of the most enduring forms of social stratification. While their histories date well before the advent of political democracy, they have taken on new forms in the context of democratic social transformation and capitalist development. In this course, we will grapple with the meanings, uses, and politics of race and caste historically and in the contemporary moment. Drawing on mid-20th century sociological debates on race and caste as comparative categories, empirical work in history and anthropology that traces the legacies of imperialism and capitalism in shaping race and caste, and insights from anti-racist and anti-caste social movements, this course considers the intersections of (and divergences between) the two forms of stratification. What does thinking race and caste together illuminate about the nature of ascriptive identity and inequality today?

Enrollment Cap:

12

"The conquest of the earth, which mostly means the taking it away from those who have a different complexion or slightly flatter noses than ourselves, is not a pretty thing when you look into it too much."

(Joseph Conrad. *Heart of Darkness*. [1899]pp. 7)

Despite rich scholarship on postcolonialism and decolonization, indigenous communities, activists, critical theorists, and national liberation movements still use colonialism as a core concept to understand present social realities. Much scholarship on colonialism, however, still focuses on colonialism as a past historical reality, not to mention that most studies also use Euro-American models to understand various forms of colonial relations. Recent scholarship in anthropology has attempted to reorient the study of colonialism by considering the continuing legacy (or duress) of colonialism, ongoing settler colonialism, and cases of crypto-colonialism. Questions of rupture or continuity of colonialism increasingly becomes relevant as anthropology explores experiences of decolonization both inside and beyond the academia. Going beyond this trend, and based on more recent ethnographies of colonialism, this course will explore the usefulness of colonialism as a theoretical and political concept to understand the present forms of relations that are linked to domination and exploitation. This course suggests that, across these issues and around the

world, anthropology should extend its interest through a new conception of colonialism and coloniality that not only accounts for the variety of colonial experiences but also the presentness of colonial relations (something that I will call 'a colonial present'). Drawing on readings from anthropology, history, and literature, students will consider various specific contexts in which colonialism emerges, but primarily examine contemporary forms of colonialism in the 21st century. We will look at the language of development and human rights, the post in the postcolonial states, the work of global financial institutions, race and racial differences, gender orders in colonial societies, issues of archives, and how anthropology (including archaeology) has responded or should respond to the call for decolonization.

The Social and the Digital: Introduction to Internet Cultures (211106)

Veronika Kusumaryati

2019 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

The internet has become a ubiquitous part of contemporary life. With its power to shape peoples' experiences and interactions, the internet has become, as Tim O'Reilly calls it, a social platform (2014). But what does this entail? What are the implications of this notion to our identities, cultural practices, and social institutions? This course will address major themes in studies of the internet from anthropological perspectives. Anthropology, long known for the study of the exotic and the unfamiliar, will help students understand how the internet becomes, arguably, the most important social technology for our generation. While the internet is an emerging field of inquiry in anthropology, growing literature on the anthropology of/on the internet demonstrates two ways in which anthropology explores the possibility of studying the internet. First, anthropology offers sustained accounts on topics such as intimacies and relationships, identities, democracy, privacy, truth/information/knowledge, and corporations that have been transformed by the arrival of the internet. Secondly, anthropology offers ethnography as a research methodology to examine a range of internet phenomena. This course will thus combine both critical readings on the topics of the internet and a series of mini-research assignments to help students practice their ethnography of/on the internet.

Anthropology 1900

Counseling as Colonization? Native American Encounters with the Clinical Psy-ences (208154)

Joseph Gone

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0200 PM

American Indian, First Nations, and other Indigenous communities of the USA and Canada contend with disproportionately high rates of "psychiatric" distress. Many of these communities attribute this distress to their long colonial encounters with European settlers. Concurrently, throughout the 20th century, the disciplines and professions associated with mind, brain, and behavior (e.g., psychiatry, psychology, psychoanalysis) consolidated their authority and influence within mainstream society. These "psy-ences" promote their professional practices (e.g., diagnosis, psychotherapy) as plausible remedies for Indigenous social suffering, but many Indigenous communities remain skeptical of—and resistant to—these clinical approaches, primarily for cultural and political reasons. In this seminar, we will consider whether and how the concepts, categories, tools, and techniques of the mental health professions might be appropriately adapted and/or adopted for use with Indigenous communities in an increasingly globalized world. In recognition of the (post)colonial status of these populations, we will attend closely to alterNative cultural and spiritual approaches that have been identified and promoted by Indigenous people themselves as conducive to healing and wellness. This course is designed for upper-level undergraduate students interested in medical anthropology, professional psychology, pre-medicine, Indigenous studies, and related social and health sciences. Students will participate in regular seminar discussions, write routine responses to assigned readings, and submit major independent research papers addressed to the promotion of Indigenous well-being. Student engagement and exchange during class is essential, so routine attendance and participation are expected throughout the semester.

Laboratory Lives: Scientific Spaces, Selves, Subjects (204442)

Stephen Scott

2018 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Scientific laboratories have become important cultural sites for making new knowledge about the world, and in doing so, for remaking society, nature, and the relationship between the two. But what are scientific laboratories? How do they produce knowledge? How is the knowledge they produce shaped by nature and society, and how does that knowledge reshape society and nature? This course examines the scientific laboratory from an anthropological perspective, through key ethnographic, historical, and theoretical readings that explore the distinct spaces, selves, and subjects that make up "laboratory life." The first half of the class introduces the lab as a socio-historically situated cultural space dedicated to producing authoritative knowledge through experimental practices. The second half then takes a deeper look at the scientific selves and various human and nonhuman actors that inhabit these distinct experimental spaces, exploring issues of agency, objectivity, and experimentality as they are pursued and problematized at the lab bench. Course topics include: the emergence of the laboratory sciences and the figure of the scientific self in history; the normative dimensions of the experimental life as a calling and a profession; instruments, inscription practices, and scientific objectivity as both problem and epistemic virtue; the laboratory as a site of fact production, and experimentation as a social and semiotic process; the relationship between scientific labs, nature, and society at large, with comparison to other related spaces of knowledge, from cathedrals to artist's studios to the psychotherapist's couch; and finally the role of laboratories, models, and simulations in the politics of knowledge animating debates about global climate change. More generally, scientific laboratories have become important sites for social research in the growing field of science studies, a field to which anthropologists and their ethnographic methods have made important

contributions. This course explores these contributions.

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

At the macro level, schools are embedded in larger historical and social contexts, including liberalism, modernity, globalization, citizenship, and nationalism. At the micro-level, schools themselves comprise important cultural dynamics. This course examines schools at both levels to explore: Are schools sites of social stasis or social transformation? Do they create conditions of emancipation or do they further projects of subordination? What is 'learned' in schools beyond the stated objectives of educationists? What are the promises and limitations of social theory and ethnographic research for educational practice and policy? We will explore these questions by drawing on studies on various dimensions of education, based both in the United States and abroad.

Class Notes:

This discussion-based course is open to students of all years and concentrations, and is also available for cross-registration, but enrollment is limited and by instructor-permission. Eligible for GenEd (under new policies); see course site for details, or email bmalik@fas.

Kinship, Citizenship, and Belonging (156380)

George Paul Meiu

2018 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The domains of family life, kinship, and intimacy represent central sites for the construction and contestation of social and political belonging. This course introduces students to classic and contemporary theories of society, kinship, and citizenship by way of theorizing how economic production, sovereignty, and everyday life emerge through the regulation of relatedness. Anthropologists of the late nineteenth century and of the first half of the twentieth century turned kinship into a key domain for understanding social cohesion and political organization. In the past three decades -- following feminist, Marxist, and queer critiques -- anthropologists explored how discourses about kinship and the family anchored the

ideologies and practices of modernity, colonialism, nationalism, and globalization. In this course, we ask: What can various forms of kinship teach us about the politics of social reproduction and the making of citizenship -- its modes of belonging and exclusion -- in the contemporary world?

Materials in Ancient Societies: Ceramics (120535)

Richard Meadow

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course examines the technologies used in the production of ceramic vessels, bricks, tiles, and mortars in ancient and non-industrial societies. It also focuses on the laboratory-analytical techniques that enable reconstruction of these technologies.

The course has been designed to consider: (1) the principles of geology and of materials science and engineering that provide an understanding of the properties and behavior of clays (and other ceramic materials) as materials systems; (2) the activities involved in producing, using, and distributing ceramic

materials and ceramic products; (3) the culture-producing and culture-using aspects of ceramic technologies.

Laboratory sessions include microscopy with emphasis on petrography of ceramics and geological materials, mechanical testing of fired ceramics, and the appropriate methods for documenting and reporting the analyses of archaeological artifacts made from ceramic materials.

Class Notes: This course meets at MIT, with the first meeting taking place at 9 am on September 4, 2018 in the CMRAE Graduate Laboratory: MIT Room 16-536. During this first meeting, the weekly schedule for the class and labs will be determined. Contact Dr. Jennifer Meanwell at jmeanwel@mit.edu for further information. Open to graduate students and advanced undergraduate students. This course is offered via the Archaeology track within Anthropology. Contact Dr. Richard Meadow at meadow@fas.harvard.edu for answers to Harvard-specific questions relating to this course.

Recommended Prep: Pre-Registration is required. Please contact anthrouc@fas.harvard.edu for further information.

Archaeological Site Formation Processes (207822)

Christian Tryon

2019 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Archaeologists study 'sites' to understand what life was like in the past as well as to understand how things have changed over time. But what are these things we call sites? How were they formed, and why do we have them to study in the first place? What happens to 'things' buried in the ground for thousands of years, and how does the fragmentary nature of what preserves at these sites skew our interpretations of the past? In this course we will focus on an understanding of the many natural and cultural processes that affect the formation of the archaeological record. These range from geological studies of events such as floods and erosion and learning to recognize their distinctive stratigraphic signatures, neotaphonomic and biogeochemical studies of the life history of animals from death and disarticulation to fossilization and recovery, ethnoarchaeological and experimental observations of how, where, and how many humans discard refuse (a.k.a. 'artifacts'), and theoretical approaches to how our perceptions of something as basic as 'time' fundamentally alters how we can use the archaeological record. Every archaeological interpretation must begin with an understanding of how the record came to exist, and this course provides students an essential foundation to independently arrive at that understanding.

The Archaeology of Technology (211101)

Rowan Flad

2019 Spring (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar explores the concept of technology in archaeological contexts. We will begin with a focus on general concepts in the archaeology of technology – attempting to evaluate the various definitions of the term and their archaeological implications. This will involve a critical examination of how technology has been explored in archaeological contexts. In addition we will examine the dominant paradigms in studies of production and technology and debate the assumptions of these paradigms – including the relationships between technology and social complexity, "power," gender, value and identity. The course is designed for graduate students who wish to bring a cross-cultural perspective on technology to bear on their own research in a particular region. Advanced undergraduates are very welcome. The goal of the class is not to instill any one particular perspective on the archaeology of technology but instead to provide students with a broad exposure to many of the contemporary issues in the field.

Proseminar in Archaeology (125614)

Ari Caramanica

Richard Meadow

2018 Fall (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This graduate seminar reviews critical issues in archaeological approaches to small-scale societies, including methods and interpretations relating to the study of mobility, sedentism, seasonality, plant and animal exploitation, and migration.

Anthropology 2316

Religious Narratives: Shamans, Empires, Borderlands (211316)

David L. Carrasco

2019 Spring (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar is 1) an advanced introduction to the study of religion 2) through use of myths, storytelling, art, film and music 3) organized by three anthropological categories; shamanism, empire and borderlands. The course will break open these religious patterns to explore dreams and curers, psychoanalysis and words, center and periphery, class and gender, persuasion and coercion, sacrifice and prayer, bodies and blood, bridges and walls, colonialism and liberation. Each week's gathering will consist of lecture/student presentations/discussions of threads and knots in the texts and imagery. The course will read Ashis Nandy, Toni Morrison, Rodolfo Anaya, Marie Cardinal, Judith Sherman, Gloria Anzaldua, among others. Jointly offered with the Harvard Divinity School.

Class Notes: No Auditors permitted.

Theories and Discourses of Religion (211108)

Youssef J. Carter

2019 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This seminar examines how the study of religion(s) and religious traditions have yielded multiple theories through which scholars have sought to define and describe how systems of faith impact behaviors, intervene in political events, and shape social relations among practitioners and beyond. We begin by unraveling debates about how, or whether, one defines 'Religion' and what is at stake in endeavoring to categorize faith traditions in such a way that renders them legible to academic study. We highlight how social scientists have studied small-scale societies and larger global networks in order to grapple with questions of "the sacred" while also taking time to draw what might be useful, and also problematic, about the theories that emerged through their work. By reviewing the linkages between political realms, diasporic networks, state institutions and the varying traditions that shape them, we will review also how religion operates as a frame upon which discourses of belonging and citizenship are mobilized. This seminar is not merely concerned however with how religions incorporate individuals into social contexts for the sake of political concerns. Therefore, we also look at the poetics of the body by tracking how corporeal observances and modes of worship have been analyzed in order to think about the material body as a medium for transcendent experience, conjuring the otherworldly, and witnessing the unseen.

Course Notes: Advanced Undergraduate students welcome and encouraged.

Anthropology 2646

Infrastructure and its Imaginaries (205303)

Stephen Scott

2018 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Infrastructures are the sociotechnical unconscious of modern societies. Bridges, cables, and pipes, but also assemblages of affect, information, and value—infrastructures underpin everyday living by coordinating the flow of people, things, and knowledge. Infrastructures often remain unremarked, and only when they break down do we become aware of them. Recently, however, infrastructures have surfaced as a key problem in public life. In response, a growing body of scholarship has sought to rethink infrastructure, its politics and poetics. Drawing on classic and contemporary readings, this course takes up the anthropology of infrastructure. What is infrastructure? What new questions and concerns are raised by exploring sociocultural worlds through the optic of infrastructure? What concepts and methods are helpful for researching and writing about infrastructure? The first part of the course tackles these conceptual and methodological questions; the second part turns to recent ethnographies of infrastructure, exploring infrastructural politics; the third part looks at infrastructures in terms of the imaginaries they help stabilize and sustain.

Anthropology of Urbanism: Japan in Comparative Perspective (109413)

Theodore Bestor

2019 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course examines patterns of Japanese urbanism -- social, cultural, historical, and built-environmental -- through interdisciplinary discussion. It is open to graduate students in any department or programs. Students are required to attend lectures of SW 33 Tokyo; students in Anthro 2682 will participate in specialized discussion sections and will frame term projects tailored to their future research plans in close consultation with the professor. The seminar is equally open to graduate students with strong interests in urban anthropology, in urban design and planning, and in Japanese/Asian Studies in history, the social sciences, and the humanities.

Course Notes:

Students must also attend all lectures of Societies of the World 33 "Tokyo".

Anthropology 2695

Design Anthropology: Objects, Landscapes, Cities (107371)

Gareth Doherty

2019 Spring (4 Credits)

Schedule:

F 1030 AM - 0129 PM

Instructor Permissions: Instructor

Enrollment Cap:

6

In recent years, there has been a movement in anthropology toward a focus on objects, while design and planning have been moving toward the understanding of objects as part of a greater social, political, and cultural milieu. This seminar explores their common ethnographic ground. The course is about both the

anthropology of design, and the design of anthropology.

For designers, the goals will be to learn thick ethnographic observation and description; applying theoretical concepts in making connections between ethnographic data; and moving from ethnography to design proposals. Anthropologists will be challenged to think about different forms of fieldwork by collaborating with non-anthropologists and working toward a collective ethnography; using visual information to represent ethnographic information and insights; and applying anthropological skills to the study of objects, materiality, and design processes.

The seminars will be filled with different components and tasks, including lectures and synopses of the weekly topic, fieldwork-based exercises, learning how to take notes or record data using different media, analyzing ethnographic data, sharing thinking on individual projects, and discussing assigned readings.

Students will be expected to engage in two large projects over the course of the semester. The first is fieldwork centered on the border region between Ireland and Northern Ireland, March 15-24, with pairs of students carrying out an ethnography of specific communities. Class periods leading up to that fieldwork will prepare students-methodologically, ethnographically, and theoretically-for this exercise.

After fieldwork, students will analyze their findings in relation to certain conceptual themes that drive much of design anthropology but also bear on the specific nature of design problems and opportunities in Ireland and Northern Ireland. This will prepare students to complete the second large project of the course: a term essay or design proposal capturing their thinking on design anthropology and fieldwork in Ireland/Northern Ireland.

This course will include a trip to Derry-Londonderry, Northern Ireland and County Donegal in the Republic of Ireland for 16 students, 8 from the GSD and 8 from FAS. Travel will take place on March 15-24. FAS Students who travel in this course will need to make arrangements to pay \$300 with the Graduate School of Design's Department of Landscape Architecture. Students may enroll in only one traveling course or studio in a given term, and are responsible for the cost of all meals and incidentals related to the trip, including visas and any change fees related to modifications to the set flight itinerary.

Course Notes:

Offered jointly with the Graduate School of Design as GSD 3336.

Students enrolled in Anthro 2695 will need to make arrangements to pay \$300 for international travel, in addition to the costs of meal and incidentals with the Graduate School of Design's Department of Landscape Architecture. Students are responsible for obtaining the necessary visas. One set itinerary is made for the trip with no modifications. If students wish to modify the itinerary, it may be possible for them to do so in direct contact with the travel agent, and the student is responsible for any change fees incurred. Students will need to sign a travel waiver in the Department of Landscape Architecture and register their trip with Harvard Travel Assist.

Class Notes:

This course will include a trip to Derry-Londonderry, Northern Ireland and County Donegal in the Republic of Ireland for 16 students, 8 from the GSD and 8 from FAS. Anthropology 2710

Event, Time, Memory (116071)

Steven C. Caton

2019 Spring (4 Credits)

Schedule: W 1200 PM - 0245 PM**Instructor Permissions:** None**Enrollment Cap:** n/a

This course examines the way anthropology has looked at time theoretically and ethnographically. It begins with a comparison of the way different cultures have "classified" time and time reckoning,. This is then followed by the anthropology of the event as started by Marshall Sahlins' and his work on Captain Cook's arrival in the Pacific, and host of other analyses of the "event" that came after it (drawing inspiration from historiography). The third framework is the study of "memory," particularly the idea of collective memory, as it bears on both anthropological and historical analysis. The fourth framework has to do with different formulations of "temporalities" that infuse our experiences of "everyday" life. Besides anthropological readings, the course will draw from historiography and philosophy to inform what we mean by event, time, and memory.

Course Notes: No prior knowledge of anthropology is required. Graduates and undergraduates are welcome

Sonic Ethnography (108976)

Ernst Karel

2018 Fall (4 Credits)

Schedule: T 0300 PM - 0545 PM**Instructor Permissions:** Instructor**Enrollment Cap:** 12

This is a practice-based course in which students record, edit, and produce anthropologically informed audio works which interpret culture and lived experience. Listening sessions will provide a broad context of contemporary work using location recordings, and readings will situate the practice within the growing field of sound studies. In their projects, students will experiment with technical and conceptual strategies of recording and composition as they engage with questions of ethnographic representation through the sensory dimension of sound.

Course Notes: Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Recommended Prep: Experience in media production helpful but not required.

Anthropology 2727

Anthropology of Media, Critical Surveys (110009)

Veronika Kusumaryati

2018 Fall (4 Credits)

Schedule:

W 0600 PM - 0800 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is a critical survey of the principal studies in the anthropology of media. It will address the aesthetic and political debates across the history of this sub-discipline in anthropology whose central questions include: In what ways has anthropology engaged with media? What role do different types of media play in constituting the cultures and societies in which we live? How has the emergence of digital media transformed the anthropology of media? How do we as anthropologists go about researching media? The course begins with a critical look at anthropology itself to interrogate broader issues that are particularly endemic to the field, such as media production, consumption, and circulation, and issues of representations and power. Students will examine various media forms, from photography, radio, television, film, to the internet, and learn different anthropological theories and methods for conducting media research. Discussions and assignments in the course are geared towards a critical understanding of media. By the end of the course, students are expected to gain critical tools to analyze mass media and their role in advancing specific political, economic, and cultural interests, and to devise an intervention to existing media representations and relations of power.

Remaking Life and Death (211109)

Anya Bernstein

2019 Spring (4 Credits)

Schedule:

W 0600 PM - 0800 PM

Instructor Permissions: Instructor**Enrollment Cap:**

30

This course is a critical reading graduate seminar focusing on how defining the boundaries between life and death became a matter of profound political, cultural, and scientific debate. Guided by the concepts of bio- and necropolitics, we will explore the shifting relations between body and person, human and time, and technology and biology while attending to the changing political, biomedical and religious contexts. The course includes readings from a number of anthropological subfields, including medical anthropology, anthropology of science and technology, religion, politics, and the Anthropocene. We will discuss the range of issues, from the classic studies of mortuary rituals to political lives of dead bodies to technoscientific reconfigurations of the human and of life itself.

Madness and Globalization (207648)

*Byron Good**Alasdair Donald**Michael Fischer*

2018 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

While the term 'mental illness' evokes aseptic technical categories and medical nosologies, 'madness,' in its deliberate murkiness, embraces broader and deeper meanings, including 'post-colonial disorders' of individuals and societies. This course will analyze the ways in which diverse aspects of globalization impact, intersect and shape personal experiences of 'madness' – both mental illnesses and social disorders. Largely based on readings of ethnographic and cross-cultural literature, the course will examine, among other issues: the process of colonization, which racialized psychiatric interpretations of the individual's behavior and suffering; colonial and postcolonial

engagements with psychoanalysis; the postcolonial standardization of nosologies and treatments, based mostly on biomedical categories, and the complex negotiations of the meanings of modernity; the resulting cases of 'globalization' of approaches to mental health/illness in non-Western contexts; the attempt at the decolonization of anthropology and psychiatry alike; the impact of violence, forced migration and displacement on the the psychological equilibrium and mental health of individuals, and the globalization of PTSD; and the impact of neoliberal economic policies and ideologies, as well as the global mental health movement, on the world of the mentally ill.

Takes on Whiteness (211103)

Kaya Williams

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

What do we talk about when we talk about whiteness? We are working in times in which the effects of whiteness are hyper-visible and yet whiteness itself is difficult to address. Scenes of white supremacy dominate the national news and the dominance of whiteness in the spaces of our pedagogy and scholarship are no less glaring; and yet it is often unclear what exactly people mean by the word. This course will approach whiteness as an open question, systematically asking how and where whiteness makes its presence known and considering the limits of the language available to engage with whiteness practically and intellectually. The course will combine academic analyses of whiteness with popular representations and well-worn tropes, paying particular attention to the work whiteness does in the world. Because whiteness is on its surface a concept deeply tied to the visual, this course will seek to explore in particular the non-visual dimensions of whiteness, asking how whiteness can be felt, heard, and tasted as well as where it can be seen. This course will coincide with an end-of-semester event on campus that will focus on the ways in which whiteness shapes the conditions of research and pedagogy on campuses such as Harvard, and students in the course will participate in and help to document that event.

Research Design/Proposal Writing (116522)

Anya Bernstein

2018 Fall (4 Credits)

Schedule:

T 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course is part seminar, part practicum. Its purpose is to help students conceptualize and design a research project, to craft effective research and grant proposals, and to prepare for ethnographic and archival work. The first and longest part of the course will focus on formulating a researchable project, in all its various elements; how to write a statement of problem, to frame arguments/theses, to situate work in the appropriate anthropological literature/s, to develop a methodological approach, and techniques, commensurate with the objectives and claims of the study, and to make a case for its significance and contribution to the discipline. To the extent time permits, the class will also pursue a secondary objective: imparting professional skills, primarily in the area of writing and publishing, but also in oral presentation, that will be useful to students throughout their professional lives.

Course Notes:

By permission only. The class is open to third year social anthropology students who have done most of the background reading for their PhD dissertation research and are actively working on a formal research proposal, of which they have a draft in hand.

18

This team-taught course offers a conceptual overview of research methods used by anthropologists. Topics include: formulating a research question, writing field notes, interviewing, the ethics of fieldwork, multi-sited research, the use of archives and visual media, as well as more in-depth engagement with particular objects of study.

Course Notes: This course is limited to graduate students in anthropology.

Class Notes: This is a team-taught course with members of the Anthropology faculty.

Applied Computation

Subject: Applied Computation

Applied Computation 209A

Data Science 1: Introduction to Data Science (109898)

Pavlos Protopapas

Kevin A. Rader

2018 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part one of a two part series.

Course Notes:

Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements:

Not to be taken in addition to Computer Science 109, or Computer Science 109A, or Statistics 121, or Statistics 121A.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Computation 209B

Data Science 2: Advanced Topics in Data Science (203547)

Pavlos Protopapas

Mark Glickman

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in

Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two part series.

Course Notes: Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.

Recommended Prep: CS 109a, AC 209a, or Stat 121a required.

Requirements: Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking APCOMP 209B) AND (Cannot take APCOMP 209B, if already taken APCOMP 209 OR CS 109 OR CS 109B OR STAT 121 OR STAT 121B)

Applied Computation 221

Critical Thinking in Data Science (207093)

James Waldo

2019 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap: 75

This course examines the wide-ranging impact data science has on the world and how to think critically about issues of fairness, privacy, ethics, and bias while building algorithms and predictive models that get deployed in the form of products, policy and scientific research. Topics will include algorithmic accountability and discriminatory algorithms, black box algorithms, data privacy and security, ethical frameworks; and experimental and product design. We will work through case studies in a variety of contexts including media, tech and sharing economy platforms; medicine and public health; data science for social good, and politics. We will look at the underlying machine learning algorithms, statistical models, code and data. Threads of history, philosophy, business models and strategy; and regulatory and policy issues will be woven throughout the course.

Course Notes: This does not count as a technical or disciplinary course for SEAS PhD students, nor for SEAS masters-degree students outside of CSE and Data Science.

Recommended Prep: CS 109A, Introduction to Data Science or equivalent by instructor approval.

Additional Course Attributes:

Attribute	Value(s)

All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Computation 227

Computational Methods in the Physical Sciences (128101)

Sauro Succi

2018 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In this Course, we shall familiarize with the main computational methods which permit to simulate and analyze the behavior of a wide range of problems involving fluids, solids, soft matter, electromagnetic and quantum systems, as well as the dynamics of (some) biological and social systems.

The course consists of three main parts,

Part I : Fields on Grids

Part II : Mesoscale Particle Methods

Part III: Statistical Data Analysis and Learning

In Part I, we shall discuss the fundamentals of grid discretization and present concrete applications to a broad variety of problems from classical and quantum physics, such as Advection-Diffusion Reaction transport, Navier-Stokes fluid-dynamics, nonlinear classical and quantum wave propagation. Both regular and complex geometrical grids will be discussed through Finite Differences, Volumes and Elements, respectively.

In Part II we shall discuss mesoscale technique based on the two basic mesoscale descriptions: probability distribution functions, as governed by Boltzmann and Fokker-Planck kinetic equations, and stochastic particle dynamics (Langevin equations). The lattice Boltzmann method will be discussed in great detail, with applications to fluids and soft matter problems. Mesoscale particle methods, such as Dissipative Particle Dynamics will also be illustrated in detail.

Finally, in Part III, we shall present data analysis & learning tools of particular relevance to complex systems with non-gaussian statistics, such as turbulence, fractional transport and extreme events in general. An introduction to Physics-Aware Machine Learning will also be presented.

Recommended Prep: None, but basic notions of numerical analysis and scientific computing would help.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Computation 275

Computational Design of Materials (128103)

Boris Kozinsky

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will teach theoretical background and practical applications of modern computational methods used to understand and design properties of advanced functional materials. Topics will include classical potentials and quantum first-principles energy models, density functional theory methods, Monte Carlo

sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties, and machine learning approaches. Examples will be based on rational design of industrially relevant materials for energy conversion and storage, electronic and magnetic devices, and nanotechnology.

Course Notes: Applied Computation 275 is also offered as Applied Physics 275. Students may not take both for credit.

Recommended Prep: Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Computation 290R

Extreme Computing: Project-based High Performance Distributed and Parallel Systems (160444)

David Sondak

2019 Spring (4 Credits)

Schedule: TR 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 20

Computer simulations are recognized as an essential part of scientific and engineering pursuits. Their predictive power will play an ever more important role in scientific discoveries, national competitiveness, and in solving societal problems. For predictions of real-world problems, the ability to scale solution techniques, algorithms, and software to large-scale is of utmost importance. This course will explore the techniques, infrastructure, and algorithms used for extreme computing. The course will be organized into two modules, each focusing on a different aspect of fluid mechanics. The first module will focus on simulating turbulence in incompressible fluids using the finite element method, while the second module will focus on hemodynamic simulations using the Lattice Boltzmann Method. Both topics have important scientific and societal relevance and benefit enormously from large scale computing. The faculty from Harvard, in collaboration with visiting researchers from Sandia National Laboratories, Sapienza University, and the Institute for Calculus Applications in Italy, will conduct the lectures and lab sessions. Computing resources will be provided for the class projects.

Recommended Prep: Strong programming experience will be helpful.

Applied Computation 297R

Computational Science and Engineering Capstone Project (156202)

David Sondak

2019 Spring (4 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 45

The CSE capstone project is intended to integrate and apply the skills and ideas CSE students acquire in their core courses and electives. By requiring students to complete a substantial and challenging collaborative project, the capstone course will prepare students for the professional world and ensure that they are trained to conduct research. There will be no homework or lectures. Students will be dealing with real-world problems, messy data sets, and the chance to work on an end-to-end solution to a problem using computational methods.

Applied Mathematics 22A

Solving and Optimizing (211334)

Steven Gortler

2019 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course covers a combination of linear algebra and multivariate calculus with an eye towards solving systems of equations and optimization problems. Students will learn how to prove some key results, and will also implement these ideas with code.

Linear algebra: matrices, vector spaces, bases and dimension, inner products, least squares problems, eigenvalues, eigenvectors, singular values, singular vectors.

Multivariate calculus: partial differentiation, gradient and Hessian, critical points, Lagrange Multipliers.

Course Notes:

Not to be taken in addition to AM21b or Math21b. Some overlap with AM21a and Math21a.

Can be used in conjunction with Stat110 to fulfill the mathematics requirements for computer science.

Recommended Prep:

Mathematics 1b or an equivalent background in mathematics.

Introduction to Applied Mathematics (122564)

Doeke Hekstra

2019 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

35

This course provides an introduction to the problems and issues of applied mathematics, focusing on areas where mathematical ideas have had a major impact on diverse fields of human inquiry. The course is organized around two-week topics drawn from a variety of fields, and involves reading classic mathematical papers in each topic. The course also provides an introduction to mathematical modeling and programming.

Course Notes:

Course limited to 35 students. Sections Friday, 3:00pm-4:15pm.

Recommended Prep:

Mathematics 1b is a prerequisite, although it can be taken concurrently. Some limited concepts from Mathematics 21a / Applied Mathematics 21a will be used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, and starts from the level of a complete beginner.

Applied Mathematics 91R

Supervised Reading and Research (121692)

*Margo Levine**Sarah Iams*

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

An individual project of guided reading and research culminating in a substantial paper or other piece of work which can be meaningfully evaluated to assign a letter grade; may not be taken on a PA/FL basis. Students engaged in preparation of a senior thesis ordinarily should take Applied Mathematics 99r instead.

Course Notes:

May be taken as a half course in either term; normally may not be taken for more than two terms. Students should consult their advisers and concentration literature for further information and guidance. Applications must be signed by the student, by the faculty member supervising the project (who will recommend the grade), and by the Director of Undergraduate Studies, who will sign the student's study card once the project and its method of evaluation have been approved.

Applied Mathematics 99R

Thesis Research (115654)

Margo Levine

Sarah Iams

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Provides an opportunity for students to engage in preparatory research and the writing of a senior thesis. Graded on a SAT/UNS basis as recommended by the thesis supervisor. The thesis is evaluated by the supervisor and by two additional readers.

Course Notes:

May be taken as a half course in either term; normally may not be taken for more than two terms. The Director of Undergraduate Studies will sign the student's study card once a faculty member has agreed in writing to supervise preparation of the thesis, and reaffirmed this agreement if the course is to be repeated. Students should consult their advisers and concentration literature for further information and guidance.

Applied Mathematics 101

Statistical Inference for Scientists and Engineers (132127)

Robert D. Howe

2018 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

55

Introductory statistical methods for students in the applied sciences and engineering. Random variables and probability distributions; the concept of random sampling, including random samples, statistics, and sampling distributions; the Central Limit Theorem and its role in statistical inference; parameter estimation, including point estimation and maximum likelihood methods; confidence intervals; hypothesis testing; simple linear regression; and multiple linear regression. Introduction to more advanced techniques as time permits.

Recommended Prep: Math 21a or Applied Math 21a or equivalent.

Additional Course Attributes:

Applied Mathematics 104

Complex Analysis and Series Expansions for Applications to Science, Engineering and Finance (122094)

Efthimios Kaxiras

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduces fundamental concepts for solving real-world problems and emphasizes their applications through motivational examples drawn from science, engineering and finance. Topics: special distribution functions; series expansions of functions and their convergence; functions of complex variables, Taylor and Laurent expansions; wave (Fourier) and wavelet expansions and transforms, and their uses in solving differential equations and in signal analysis; connections to machine learning (neural networks), probabilities, random numbers and stochastic optimization methods.

Recommended Prep: Applied Mathematics 21a and 21b or Mathematics 21a and 21b.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Applied Mathematics 105

Ordinary and Partial Differential Equations (143432)

Margo Levine

2018 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Ordinary differential equations: power series solutions; special functions; eigenfunction expansions.
Elementary partial differential equations: separation of variables and series solutions; diffusion, wave and Laplace equations. Brief introduction to nonlinear dynamical systems and to numerical methods.

Recommended Prep: Applied Mathematics 21a and 21b, or Mathematics 21a and 21b.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 106

Applied Algebra (135449)

Salil Vadhan

2018 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to abstract algebra and its applications. Sets, subsets, and partitions; mappings, operations, and equivalence relations; groups, rings, and fields, polynomials, encryption, computer coding, application of modular arithmetic, combinatorial designs, lattices, application of trellis representation of lattices, fast algorithms.

Recommended Prep: Applied Mathematics 21b or Mathematics 21b.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 107

Graph Theory and Combinatorics (118482)

Leslie Valiant

2019 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Topics in combinatorial mathematics that find frequent application in computer science, engineering, and general applied mathematics. Specific topics taken from graph theory, enumeration techniques, optimization theory, combinatorial algorithms, and discrete probability.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Applied Mathematics 108

Nonlinear Dynamical Systems (121989)

Sarah Iams

2019 Spring (4 Credits)

Schedule: MW 0130 PM - 0245 PM
F 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 30

An introduction to nonlinear dynamical phenomena, covering the behavior of systems described by ordinary differential equations. Topics include: stability; bifurcations; chaos; routes to chaos and universality; approximations by maps; strange attractors; fractals. Techniques for analyzing nonlinear systems are introduced with applications to physical, chemical, and biological systems such as forced oscillators, chaotic reactions, and population dynamics.

Course Notes: Course enrollment limited to 30 students. Formerly Applied Mathematics 147.

Recommended Prep: Mathematics 21a and 21b, or Applied Mathematics 21a and 21b.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 115

Mathematical Modeling (118021)

Zhiming Kuang

2019 Spring (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes: Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Recommended Prep: Applied Mathematics 105, 108, 104 or Math 112 strongly recommended. Additional skills in analysis, algebra, probability, statistics and computer programming will increase the value of the course to students.

Additional Course Attributes:

Attribute	Value(s)

Applied Mathematics 120

Applied Linear Algebra and Big Data (113876)

Eli Tziperman

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Topics in linear algebra which arise frequently in applications, especially in the analysis of large data sets: linear equations, eigenvalue problems, linear differential equations, principal component analysis, singular value decomposition, data mining methods including frequent pattern analysis, clustering, outlier detection, classification, and machine learning including neural networks. Examples will be given from physical sciences, biology, climate, commerce, internet, image processing and more.

Course Notes:

Enrollment in this course is limited to 205 students and will be determined by a lottery if interest exceeds the limit.

Recommended Prep:

Applied Mathematics 21a,b or equivalent, Computer Science 50 or programming experience.

Additional Course Attributes:

Applied Mathematics 121

Introduction to Optimization: Models and Methods (123662)

Yiling Chen

2018 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to basic mathematical ideas and computational methods for solving deterministic and stochastic optimization problems. Topics covered: linear programming, integer programming, branch-and-bound, branch-and-cut, Markov chains, Markov decision processes. Emphasis on modeling. Examples from business, society, engineering, sports, e-commerce. Exercises in AMPL, complemented by Maple or Matlab.

Course Notes:

Applied Mathematics 121 is also offered as Engineering Sciences 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.

Recommended Prep:

Applied Mathematics 21b or Mathematics 21b (linear algebra) and some knowledge of probability and statistics at the level of Statistics 110 or Applied Mathematics 101 or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)

Applied Mathematics 201

Physical Mathematics I (112798)

Michael P. Brenner

2018 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to methods for developing accurate approximate solutions for problems in the sciences that cannot be solved exactly, and integration with numerical methods and solutions. Topics include: dimensional analysis, algebraic equations, complex analysis, perturbation theory, matched asymptotic expansions, approximate solution of integrals.

Recommended Prep: Applied Mathematics 104 and 105, or equivalent; basic programming knowledge at the Computer Science 50 level.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 203

Introduction to Disordered Systems and Stochastic Processes (156203)

Ariel Amir

2019 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The course will familiarize the students with various applications of probability theory, stochastic modeling and random processes, using examples from various disciplines, including physics, biology and economics.

Recommended Prep: Calculus and linear algebra, basic knowledge of probability theory. Knowledge of MATLAB will be helpful.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 205

Advanced Scientific Computing: Numerical Methods (110684)

Christopher Rycroft

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An examination of the mathematical foundations of a range of well-established numerical algorithms, exploring their use through practical examples drawn from a range of scientific and engineering disciplines. Emphasizes theory and numerical analysis to elucidate the concepts that underpin each algorithm. There will be a significant programming component. Students will be expected to implement a range of numerical methods through individual and group-based project work to get hands-on experience with modern scientific computing.

Recommended Prep: Familiarity with linear algebra and calculus; basic programming knowledge at the Computer Science 50 level.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 207

Advanced Scientific Computing: Stochastic Methods for Data Analysis, Inference and Optimization (127561)

Rahul Dave

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Develops skills for computational research with focus on stochastic approaches, emphasizing implementation and examples. Stochastic methods make it feasible to tackle very diverse problems when the solution space is too large to explore systematically, or when microscopic rules are known, but not the macroscopic behavior of a complex system. Methods will be illustrated with examples from a wide variety of fields, like biology, finance, and physics.

Recommended Prep: Basic knowledge of a computer programming language (preferably

Python), basic knowledge of statistics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 216

Inverse Problems in Science and Engineering (135919)

Michael P. Brenner

2019 Spring (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Many problems in science and engineering are inverse problems. Any experiment that requires an explanation can be couched thus - given the data, what is the theory/model that provides it - this is an inverse problem. In engineering, a given function (in a product/software) requires a design - again an inverse problem. This course will introduce a wide array of features of inverse problems from science and engineering - from oil prospecting and seismology to cognitive science, from particle physics to engineering design. We will then introduce deterministic and probabilistic algorithms for solving these problems. Much of the class will be spent studying how the recent revolution in deep neural networks can (and cannot) be used to solve such inverse problems. The class will have a substantial computational component -- part of every class session will contain instruction and computer implementation of the algorithms in question. Students will carry out final projects in their own area of interest. Programming will be taught and carried out in Python and Tensorflow.

Recommended Prep:

Linear algebra, Differential equations, Basic probability, some MATLAB experience.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students

Enrollment Cap:

15

The topic for the course this year will be the dynamics of fluid flow, on scales that range from MHD in stars to active matter flows in cells to 2D electron gases, and of course fluid flows on the human scale, with

which we will start. Specific content will include: Hydrodynamic Stability and Turbulence, Coherent Structures and Dynamical Systems, Methods for Numerical Simulation, Multiphase and Non-Newtonian Flows, Thin Film Flows, Biophysical, Geophysical and Astrophysical Flows, Active Matter Flows, Viscous Electronics. The course will meet for 150 minutes once a week, with 90 minutes devoted to lecture, and 60 minutes devoted to a discussion of 2-4 papers that build on the theory.

Recommended Prep: Prerequisites: Graduate standing and/or exposure to field theory at the level of electrodynamics, statistical mechanics, general relativity, continuum mechanics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 221

Advanced Optimization (107600)

Yaron Singer

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a graduate level course on optimization which provides a foundation for applications such as statistical machine learning, signal processing, finance, and approximation algorithms. The course will cover fundamental concepts in optimization theory, modeling, and algorithmic techniques for solving large-scale optimization problems. Topics include elements of convex analysis, linear programming, Lagrangian duality, optimality conditions, and discrete and combinatorial optimization. Exercises and the class project will involve developing and implementing optimization algorithms.

Recommended Prep: Applied Mathematics 21b or Mathematics 21b (linear algebra) and Applied Mathematics 121 or equivalent or permission of instructor. Comfort with programming.

Additional Course Attributes:

Attribute	Value(s)

Applied Mathematics 225

Advanced Scientific Computing: Numerical Methods for Partial Differential Equations (203586)

Christopher Rycroft

2019 Spring (4 Credits)

Schedule:

WF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course examines a variety of advanced numerical methods, with a focus on those relevant to solving partial differential equations that arise in physical problems. Topics include the finite volume method, finite element method, and interface tracking methods. Associated problems in numerical linear algebra and

optimization will be discussed. The course will examine the mathematical underpinnings of each method, as well as look at their practical usage, paying particular attention to efficient implementations on modern multithreaded and parallel computer architectures.

Recommended Prep: Intermediate programming ability at the level of CS50/51, APMTH 111, or APMTH 205. Knowledge of multivariable calculus, linear algebra, and partial differential equations.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 227

Computational Methods in the Physical Sciences (207546)

Sauro Succi

2018 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In this Course, we shall familiarize with the main computational methods which permit to simulate and analyze the behavior of a wide range of problems involving fluids, solids, soft matter, electromagnetic and quantum systems, as well as the dynamics of (some) biological and social systems.

The course consists of three main parts,

Part I : Fields on Grids

Part II : Mesoscale Particle Methods

Part III: Statistical Data Analysis and Learning

In Part I, we shall discuss the fundamentals of grid discretization and present concrete applications to a broad variety of problems from classical and quantum physics, such as Advection-Diffusion Reaction transport, Navier-Stokes fluid-dynamics, nonlinear classical and quantum wave propagation. Both regular and complex geometrical grids will be discussed through Finite Differences, Volumes and Elements, respectively.

In Part II we shall discuss mesoscale technique based on the two basic mesoscale descriptions: probability distribution functions, as governed by Boltzmann and Fokker-Planck kinetic equations, and stochastic particle dynamics (Langevin equations). The lattice Boltzmann method will be discussed in great detail, with applications to fluids and soft matter problems. Mesoscale particle methods, such as Dissipative Particle Dynamics will also be illustrated in detail.

Finally, in Part III, we shall present data analysis & learning tools of particular relevance to complex systems with non-gaussian statistics, such as turbulence, fractional transport and extreme events in general. An introduction to Physics-Aware Machine Learning will also be presented.

Recommended Prep: None, but basic notions of numerical analysis and scientific computing would help.

Information Processing and Statistical Physics (160447)

Yue Lu

2018 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course introduces students to several fundamental notions and methods in statistical physics that have been successfully applied to the analysis of information processing systems. Discussions will be focused on studying such systems in the infinite-size limit, on analyzing the emergence of phase transitions, and on understanding the behaviors of efficient algorithms. This course seeks to start from basics, assuming just undergraduate probability and analysis, and in particular assuming no knowledge of statistical physics. Students will take an active role by applying what they learn from the course to their preferred applications.

Course Notes: Applied Mathematics 254 is also offered as Engineering Sciences 254. Students may not take both for credit.

Recommended Prep: Analysis (Math 21a/b, or equivalent), Probability (Statistics 110, Engineering Sciences 150, or equivalent).

Applied Physics

Subject: Applied Physics

Applied Physics 50A

Physics as a Foundation for Science and Engineering, Part I (108880)

Kelly Miller

2018 Fall (4 Credits)

Schedule:

TR 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

AP 50a is the first half of a one-year, team-based and project-based introduction to physics. This course teaches students to develop scientific reasoning and problem-solving skills. AP50a topics include: kinematics; linear and rotational motion; conservation of momentum and energy; forces; gravity; oscillations and waves. Multivariable and vector calculus is introduced and used extensively in the course. Students work in teams on three, month-long projects, each culminating in a project fair.

Course Notes:

AP50a is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems. Lecture meets 9:00am-11:00am. Students must attend one 2-hour section on Friday. Section times will be assigned upon enrollment (9-11am, 11-1pm, 1-3pm, 3-5pm).

Recommended Prep:

Mathematics preparation at least at the level of Mathematics 1b concurrently is required. However, some elementary ideas from multivariable calculus are used and students are encouraged to take Applied Mathematics 21a or Mathematics 21a concurrently. This course can be taken concurrently with AM 21a to meet the calculus prerequisite.

Additional Course Attributes:

Attribute	Value(s)
FAS: General Education	Science of the Physical Universe
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
FAS: General Education	Science of Living Systems

Applied Physics 50B

Physics as a Foundation for Science and Engineering, Part II (108882)

Eric Mazur

Federico Capasso

2019 Spring (4 Credits)

Schedule:

TR 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

60

AP 50b is the second half of a one-year, team-based and project-based introduction to physics. This course teaches students to develop scientific reasoning and problem-solving skills. AP50b topics include:

electrostatics; electric currents; magnetostatics; electromagnetic induction; Maxwell's Equations; electromagnetic radiation; geometric optics; and, wave optics. Multivariable and vector calculus is introduced and used extensively in the course. Students work in teams on three, month-long projects, each culminating in a project fair. The twice-weekly class periods are all inclusive: there are no separate labs or discussion sections.

Course Notes: AP50b is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems. Students must attend one 2-hour section on Friday. Section times will be assigned upon enrollment (9-11am, 11-1pm, 1-3pm, 3-5pm).

Recommended Prep: A solid knowledge of multivariable calculus at the level of Applied Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.

Additional Course Attributes:

Attribute	Value(s)
FAS: General Education	Science of Living Systems
FAS: Course Level	Primarily for Undergraduate Students
FAS: General Education	Science of the Physical Universe
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 195

Introduction to Solid State Physics (131331)

Donhee Ham

2018 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); plasmonic excitations and screening; optical transitions; solid-state lasers; magnetism, spin waves, magnetic resonance, and spin-based devices; dielectrics and ferroelectrics; superconductivity, Josephson junctions, and superconducting circuits; electronic transport in low-dimensional systems, quantum Hall effect, and resonant tunneling devices.

Course Notes: APPHY 195 is also offered as PHYSICS 195. Students may not take both for credit.

Recommended Prep: Elementary quantum mechanics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Applied Physics 216

Quantum and Classical Electromagnetic Interaction with Matter (141253)

Donhee Ham

2019 Spring (4 Credits)

Schedule:

WF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The first half of the course will cover the interaction of quantized atoms with electromagnetic fields, introducing a number of basic concepts such as coherent Rabi transitions vs. rate-equation dynamics, stimulated & spontaneous transitions, and energy & phase relaxations. These will be then used to study a range of applications of atom-field interactions, such as nuclear magnetic resonance, molecular beam and paramagnetic masers, passive and active atomic clocks, dynamic nuclear polarization, pulse sequence techniques to coherently manipulate atomic quantum states, and laser oscillators with applications. We will also touch upon the interaction of quantized atoms with quantized fields, discussing the atom + photon (Jaynes-Cummings) Hamiltonian, dressed states, and cavity quantum electrodynamics. The second half will cover the classical interaction of electromagnetic fields with matter, with special attentions to collective electrodynamics in particular, magnetohydrodynamics and plasma physics with applications in astrophysics, space physics, and Bloch electrons in crystalline solids.

Recommended Prep: Undergraduate-level electromagnetism and quantum mechanics are recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 217

Foundations of Modern Optics (121975)

Lene Hau

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Optical systems and lasers have revolutionized both technology and basic research. We cover the fundamental physics of light and of light-matter interactions, including optical wave-propagation, ray optics, optical imaging and Fourier optics, quantization of electromagnetic fields, and nano-optics. We will illustrate the material with its applications in atomic physics and biological imaging.

Recommended Prep: Undergraduate course in electromagnetism: Physics 153 or similar.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Applied Physics 218

Electrical, Optical, and Magnetic Properties of Materials (121594)

Xin Li

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers the electrical, optical and magnetic properties of several technologically important materials systems. It provides a general introduction of structure-property relations; defect chemistry including Kroger-Vink diagram and charged point defect; ionic conductivity in electrochemical intercalation energy storage materials; optical properties of wide bandgap metal oxides; spin, charge and crystal structure coupling, and their ordering and disordering.

Recommended Prep: Introductory solid-state physics or equivalent course.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 225

Introduction to Soft Matter (121403)

Jennifer Lewis

Shmuel Rubinstein

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the physics of soft matter, also called complex fluids or squishy physics, includes the study of capillarity, thin films, polymers, polymer solutions, surfactants, and colloids,. Emphasis is on physical principles which scale bulk behavior. Students will understand the concepts, experimental techniques, and, especially, the open questions. Lecture notes are supplied in place of a textbook.

Recommended Prep: Applied Physics 284 or Physics 262. Knowledge of basic thermodynamics, statistical mechanics and differential equations.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 275

Computational Design of Materials (110087)

Boris Kozinsky

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will teach theoretical background and practical applications of modern computational methods used to understand and design properties of advanced functional materials. Topics will include classical potentials and quantum first-principles energy models, density functional theory methods, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties, and machine learning approaches. Examples will be based on rational design of industrially relevant materials for energy conversion and storage, electronic and magnetic devices, and nanotechnology.

Course Notes: Applied Physics 275 is also offered as Applied Computation 275. Students may not take both for credit.

Recommended Prep: Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 278

Computational Physics of Solids and Fields (208932)

Prineha Narang

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will introduce students to state-of-the-art techniques in computational physics of fields and solids, covering ground-state and excited-state phenomena. Further this course will explore transport methods including Boltzmann Transport Methods (and associated numerical challenges with 3D electron and phonon transport calculations), computational methods to study the electron-phonon interaction and finite temperature calculations. We will discuss how to leverage GPU-accelerated computing for computational physics and materials calculations.

This course will also intersect with computational electrodynamics with ab initio material response incorporated. We will study electron-phonon interactions in solids from the point of view of ab initio calculations (including, but not limited to Wannier function methods and strategies for k-point sampling with large energy mismatch) and explore the origin of temperature dependence of optical spectra in direct and indirect-gap semiconductors, relaxation rates of photoexcited carriers and implications of excited-states in transport observed in quantum materials. The class will also cover recently discovered classes of quantum materials and describe these using single-particle and many-body computational techniques. Finally, we will cover linking electrodynamical and photonic calculations with intrinsic properties of quantum materials.

Recommended Prep: Graduate quantum mechanics and introductory theory of solids class.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 282

Solids: Structure and Defects (142998)

Frans Spaepen

2018 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Bonding, crystallography, diffraction, phase diagrams, microstructure, point defects, dislocations, and grain boundaries.

Course Notes: Intended for students in applied mechanics, materials science, condensed matter physics, chemistry, and earth sciences.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 284

Statistical Mechanics (131392)

Vinothan Manoharan

2018 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Basic principles of statistical mechanics with applications, including the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical points, as illustrated by the gas-liquid transition and simple magnetic models; Bose-Einstein condensation.

Course Notes: APPHY 284 and Physics 262 are taught in alternate years. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program. Students may wish to take Physics 262 when this course is bracketed.

Recommended Prep: Ordinarily, Physics 143a, b, and Physics 181 or Engineering Sciences 181.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 291

Electron Microscopy Laboratory (116509)

David Bell

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Lectures and laboratory instruction on transmission electron microscopy (TEM) and Cs corrected, aberration-correction microscopy and microanalysis. Lab classes include; diffraction, dark field imaging, X-ray spectroscopy, electron energy-loss spectroscopy, atomic imaging, materials sample preparation, polymers, and biological samples.

Course Notes: Primarily for graduate students planning to use TEM for their research.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 292

Kinetics of Condensed Phase Processes (134488)

Frans Spaepen

2019 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Kinetic principles underlying atomic motions, transformations, and other atomic transport processes in condensed matter. Application to atomic diffusion, continuous phase transformations, nucleation, growth, coarsening and mechanisms of plastic deformation.

Course Notes: Intended for students in applied mechanics, materials science, condensed matter physics, chemistry, and earth sciences.

Recommended Prep: An undergraduate-level course in thermodynamics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 295A

Introduction to Quantum Theory of Solids (143855)

Eugene Demler

2018 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Electrical, optical, thermal, magnetic, and mechanical properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Metals, semiconductors, and insulators will be covered, with possible special topics such as superconductivity.

Course Notes: Applied Physics 295a is also offered as Physics 295a. Students may not take both for credit.

Recommended Prep: Applied Physics 195 or equivalent, and a graduate level quantum mechanics course similar to Physics 251a. (Physics 251b would be helpful and may be taken concurrently.)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 295B

Quantum Theory of Solids (146948)

Eugene Demler

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course presents theoretical description of solids focusing on the effects of interactions between electrons. Topics include Fermi liquid theory, dielectric response and RPA approximation, ferro and antiferromagnetism, RKKY interactions and Kondo effect, electron-phonon interactions and superconductivity.

Course Notes: Applied Physics 295b is also offered as Physics 295b. Students may not take both for credit.

Recommended Prep: Physics 251a,b, an introductory course in solid state physics, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 296

Mesoscale and Low Dimensional Devices (204955)

Philip Kim

2019 Spring (4 Credits)

Schedule:

WF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits.

Recommended Prep: Undergrad level condensed matter physics (AP/P195).

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 346

Interdisciplinary Dissertation Research (109412)

David Keith

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 346

Interdisciplinary Dissertation Research (109412)

David Keith

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 348

Mechanics in Earth and Environmental Science (113128)

James Rice

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 348

Mechanics in Earth and Environmental Science (113128)

James Rice

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 350

Experimental Physics in Low Dimensional Materials (156736)

Philip Kim

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 350

Experimental Physics in Low Dimensional Materials (156736)

Philip Kim

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 354

Physics of Bacterial Growth (156741)

Ariel Amir

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 354

Physics of Bacterial Growth (156741)

Ariel Amir

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 356

Special Topics in Theoretical Engineering (116189)

Michael P. Brenner

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 356

Special Topics in Theoretical Engineering (116189)

Michael P. Brenner

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 360

Nonlinear Laser Physics and Materials Engineering (133140)

Eric Mazur

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 360

Nonlinear Laser Physics and Materials Engineering (133140)

Eric Mazur

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 362

Photonics, Quantum Devices and Nanostructures (117862)

Federico Capasso

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 362

Photonics, Quantum Devices and Nanostructures (117862)

Federico Capasso

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 364

Experimental Soft Condensed Matter Physics (112454)

David Weitz

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 364

Experimental Soft Condensed Matter Physics (112454)

David Weitz

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 366

Experimental Condensed Matter: Ballistic Transport in Semiconductors, Nanostructures, and Tunneling (113769)

Venkatesh Narayanamurti

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 366

Experimental Condensed Matter: Ballistic Transport in Semiconductors, Nanostructures, and Tunneling (113769)

Venkatesh Narayanamurti

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 368

Topics on Condensed Matter Physics (113715)

David R. Nelson

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 368

Topics on Condensed Matter Physics (113715)

David R. Nelson

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 370

Experimental Condensed Matter: Synchrotron X-Ray Scattering Studies of Interfacial Phenomena (Liquid (144348)

2018 Fall (4 Credits)

Schedule:

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 372

Biological Physics and Quantitative Biology (125419)

Daniel Needleman

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 372

Biological Physics and Quantitative Biology (125419)

Daniel Needleman

2018 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 374

Signaling Processing and Systems Biology (126172)

Sharad Ramanathan

2019 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 374

Signaling Processing and Systems Biology (126172)

Sharad Ramanathan

2018 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 376

Nonlinear Dynamics of Soft Interfaces (110265)

Shmuel Rubinstein

2019 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 376

Nonlinear Dynamics of Soft Interfaces (110265)

Shmuel Rubinstein

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 384

Topics in Atmospheric and Climate Dynamics (121287)

Zhiming Kuang

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 384

Topics in Atmospheric and Climate Dynamics (121287)

Zhiming Kuang

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 388

Climate Dynamics and Physical Oceanography (118649)

Eli Tziperman

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 388

Climate Dynamics and Physical Oceanography (118649)

Eli Tziperman

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 392

Experimental Soft Condensed Matter and Materials Physics (120887)

Vinothan Manoharan

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 392

Experimental Soft Condensed Matter and Materials Physics (120887)

Vinothan Manoharan

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 394

Experimental Studies of Interfaces and Surfaces (116593)

Cynthia Friend

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 394

Experimental Studies of Interfaces and Surfaces (116593)

Cynthia Friend

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 396

Topics in Materials Science (142229)

Michael Aziz

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 396

Topics in Materials Science (142229)

Michael Aziz

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 398

Materials Science (148042)

Frans Spaepen

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 398

Materials Science (148042)

Frans Spaepen

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Architecture, Landscape Arch, and Urban Planning

Subject: Design

Design 300 Section: 0005

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Giuliana Bruno

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300 Section: 0005

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Giuliana Bruno

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 0007

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Jerold Kayden

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 0007

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Jerold Kayden

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Antoine Picon

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Antoine Picon

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Design 300 Section: 002

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

K. Hays

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 002

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

K. Hays

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 003

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Erika Naginski

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300 Section: 003

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Erika Naginski

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 004

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Eve Blau

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 004

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Eve Blau

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 006

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Peter Galison

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 006

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Peter Galison

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 008

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Alina Payne

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 008

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Alina Payne

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300 Section: 009

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Christine Smith

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Design 300 Section: 009

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Christine Smith

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 010

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Sonja Duempelmann

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300 Section: 010

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Sonja Duempelmann

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 011

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Joyce Chaplin

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Design 300 Section: 011

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Joyce Chaplin

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Design 300 Section: 012

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Edward Eigen

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Design 300 Section: 012

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Edward Eigen

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Design 300 Section: 013

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Sheila Jasanoff

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300 Section: 013

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Sheila Jasanoff

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Design 300 Section: 014

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Ali Malkawi

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 014

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Ali Malkawi

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 015

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Diane Davis

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Design 300 Section: 015

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Diane Davis

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Design 300 Section: 016

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Neil Brenner

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 016

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Neil Brenner

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 302

Teaching (208326)

2019 Spring (4 Credits)

Schedule:**Instructor Permissions:** None**Enrollment Cap:** n/a**Provides teaching credit for students affiliated with Architecture, Urban Planning and Landscape.****Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 302

Teaching (208326)

2018 Fall (4 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

Provides teaching credit for students affiliated with Architecture, Urban Planning and Landscape.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Design 303

Research Faculty Related (208327)

2019 Spring (4 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

Astronomy 2

Celestial Navigation (111305)

Philip Sadler

2018 Fall (4 Credits)

Schedule:

T 1130 AM - 0129 PM

T 0700 PM - 0759 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Never be lost again! Find your way on sea, land, or air by employing celestial and terrestrial techniques. Acquire expertise in using navigators' tools (sextant, compass, and charts) while learning the steps to the celestial dance of the sun, moon, stars, and planets. This 108-year-old course continues to rely on practical skills and collaborative problem-solving, while utilizing historical artifacts (instruments, maps, captains' logs) and student-built devices. Culminating in a day-long cruise to practice navigation skills.

Course Notes:

Minimal lecturing; predominantly practical activities with individual attention from teaching staff. Math beyond high school trigonometry and geometry unnecessary. This course is offered each year.

Class Notes:

Class meets during lunch each Tuesday in the Classroom and again just after dinner the same day in Phillips Auditorium.

Additional Course Attributes:

Attribute	Value(s)
FAS: General Education	Science of the Physical Universe
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: General Education	Science of Living Systems

Astronomy 5

Astrosociology (205519)

Gerhard Sonnert

2018 Fall (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

In an age of magnificent astronomical progress and discoveries, the increasing knowledge of the cosmos has manifold repercussions in society and culture. This course will examine how outer space-related phenomena impact, or potentially impact, society and culture, and vice versa. Especially in light of the proliferating discovery of exoplanets, an intriguing topic of astrosociology is presented by the possibility of the existence of extraterrestrial civilizations, their detection, communication with them, and even contact.

Course Notes:

This course is being offered in anticipation of approval as a GenEd course in Fall 2018.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Astronomy 16

Stellar and Planetary Astronomy (118136)

John Johnson

2019 Spring (4 Credits)

Schedule:

MWF 0300 PM - 0415 PM

Instructor Permissions: Department**Enrollment Cap:**

36

This course provides an introduction to the physical principles describing the formation and evolution of stars and their planetary companions. Topics include thermal radiation and stellar spectra; telescopes; energy generation in stars; stellar evolution; orbital dynamics; the Solar system; and exoplanets. This course includes an observational component: students will determine the distance to the Sun, and use the Clay Telescope atop the Science Center to study stellar evolution and detect exoplanets.

Course Notes:

This course is offered each year.

Recommended Prep:

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16 or Physical Sciences 12a.

Requirements:

Prerequisite: Physics 15a, Physics 16, or Physical Sciences 12a. May be taken concurrently.

Additional Course Attributes:

This course provides an introduction to the physical principles describing galaxies and the composition and evolution of the Universe. Topics include the interstellar medium; star clusters; the structure and dynamics of the Milky Way; other galaxies; clusters of galaxies; active galaxies and quasars; cosmology; and the early universe. This course includes an observational component: In addition to observing galaxies with the Science Center Clay Telescope, students will use the millimeter-wavelength telescope at the Harvard-Smithsonian Center for Astrophysics to measure the rotation velocity of the Milky Way galaxy and

to determine its mass.

Course Notes: This course is offered each year.

Class Notes: The Friday class listing is temporary so students wishing to register for the course should plan that attendance on Fridays may not be required. This will be confirmed at the first class or earlier.

Recommended Prep: An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16, or Physical Sciences 12a.

Requirements: Prerequisite: An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 15a, Physics 16, or Physical Sciences 12a.REQ; Astronomy 17

Research Tutorial in Astrophysics (112487)

Xingang Chen

2018 Fall (4 Credits)

Schedule: T 0600 PM - 0715 PM
M 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This junior tutorial introduces students to research at the forefront of astrophysics, and provides opportunities for students to meet with research scientists and individuals active in science policy, education, and journalism. Students meet weekly for a lecture and discussion over dinner with a guest speaker, preceded by a reading and a preparatory seminar. Students will be mentored throughout the term on a research project of their choosing. The Harvard-Smithsonian Center for Astrophysics is home to one of the largest groups of astronomers in the world, providing extensive opportunities for undergraduate research.

Requirements: Prerequisite: Astronomy 16 OR Astronomy 17

Additional Course Attributes:

Methods of Observational Astronomy (125880)

Edo Berger

2019 Spring (4 Credits)

Schedule:

MW 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

In this course we will learn the basic tools of modern astronomical research, including telescopes, detectors, imaging, spectroscopy, and common software. Emphasis will be placed on both the theory behind telescopes and their use, and hands-on experience with real data. Using this basic knowledge we will analyze science-level astronomical data from a wide range of telescopes and review the basic properties of stars, galaxies, and other astronomical objects of interest. The course includes a trip to the F. L. Whipple Observatory on Mount Hopkins, Arizona, to gather data with various telescopes.

Course Notes: This course is offered each year.

Class Notes: This lab meets for two hours 12 pm - 2 pm on Mondays and Wednesdays

Recommended Prep: Astronomy 16 or Astronomy 17.

Requirements: Prerequisite: Astronomy 16 OR Astronomy 17

Astronomy 191

Astrophysics Laboratory (113262)

John Kovac

2019 Spring (4 Credits)

Schedule:

F 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Laboratory and observational projects in astrophysics. Students design and undertake two projects from a selection including: observational studies of the cosmic microwave background radiation, molecules in interstellar clouds, the rotation of the galaxy, galactic molecular sources with the submillimeter array (SMA), stars and clusters with the Clay Telescope; and laboratory experiments including super-conducting submillimeter detectors, x-ray CCDs, and hard x-ray imaging detectors and telescopes.

Course Notes: Primarily for concentrators in astrophysics or combined concentrators with physics. Students with physics as their primary concentration, but with a serious interest in astrophysics, may take this to satisfy their laboratory requirement (in lieu of Physics 191) upon petition to the Head Tutor in Physics. This course is offered each year.

Class Notes: The first meeting of this course will be in Pratt Conference Room which is the ground floor of the Perkin Building at 60 Garden Street. Class times may change depending on the availability of the enrollees.

Requirements: Prerequisite Astronomy 191: Astronomy 16, OR Astronomy 17, OR Physics 15C

Interstellar Medium and Star Formation (118138)

Karin Oberg

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The interstellar medium (ISM) is the reservoir of gas and dust between stars. It is the nursery of new stars and planets, and the depository of energy and material from stellar winds and supernovae. This course will treat the often extreme physics and chemistry of the interstellar medium under its observed range of temperatures, densities, and radiation fields. It will cover the processes that govern the interactions between the ISM, stars and their host galaxies, including star and planet formation, and feedback from stellar deaths. The observational and laboratory methods and results that underpin the theories of interstellar environments will be highlighted.

Course Notes: This course offered in alternate years.

The Science of Teaching Science (117515)

Philip Sadler

2019 Spring (4 Credits) **Schedule:** T 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Learn the secrets of lecturing well, leading discussions, connecting to real-world applications, and creating

tests in any scientific discipline as we focus on relevant educational research and case studies, plus engage in practical classroom activities.

Course Notes: Open to graduate students in all areas of science. Assignments help illustrate research findings from life, earth, and physical science education. Undergraduates with an interest in teaching at the pre-college level may be admitted with instructor permission. This course offered each year.

Recommended Prep: Experience as a teaching fellow or tutor.

Astronomy 305

Topics in Origins of Life Research (161303)

Dimitar Sasselov

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course will cover a broad range of contemporary topics in origins of life research through a set of 10 two-week modules taught by members of the Origins of Life Initiative faculty.

Enrolled students will be required to attend at least six of the offered modules over the course of two semesters. The course will meet twice per week, and each two week module will be comprised of a stand-alone topic with a single assignment.

Class Notes: The course schedule for 305 is a bit complicated. Please consult the syllabus on this site:

Human Physiology (113276)

Stephanie Shore

2018 Fall (4 Credits)

Schedule: MW 0945 AM - 1114 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An introduction to the principles governing function in the human body designed to provide a framework in physiology for future public health researchers and professionals who have not taken college level physiology courses. Emphasis on the concept of homeostasis and on integrative aspects of physiology. Examples of pathophysiology and environmental physiology highlight these processes.

Course Notes: Offered jointly with the School of Public Health as EH 205. Required lab.

Class will take place in Kresge G2

Recommended Prep: College-level introductory biology or permission of the instructor.

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | All EH Degree Students, PHS EPI

Wave 2 | PHD BPH & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Enrollment Cap:

n/a

Emphasis of this course is effective scientific communication. Students will develop skills in writing and critiquing grants and scientific papers, learn about the grant application process, and present seminars that focus on structure, language and content appropriate for technical and lay audiences. Topics covered will apply to public health concerns in biological sciences across various disciplines.

Course Notes: Required for all first year BPH PhD students.

Class will take place in Building 2, Conference Room 102.

Additional Course Attributes:

Biological Sci in Public Hlth 222

The Biological Basis of Human Nutrition (111293)

Frank M. Sacks

2019 Spring (4 Credits)

Schedule:

TR 0200 PM - 0329 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A review of the biochemistry of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Contemporary topics are emphasized. Particular emphasis given to current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer. Recommended dietary intakes of selected nutrients are discussed in order to understand their limitations.

Course Notes: Offered jointly with the Medical School as BPH 733.0 and with the School of Public Health as NUT 202.

Recommended Prep: Introductory nutrition course. Prior familiarity with nutrition and the health sciences expected, as well as a basic knowledge of biochemistry and human physiology.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Enrollment Cap: n/a

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Course Notes: Offered jointly with the School of Public Health as EH 513.

Class runs from 1/28/19-5/17/19.

Class Notes: Offered jointly with the School of Public Health as EH 513.

Biological Sci in Public Hlth 304QC

Ecological and Epidemiological Control of Parasitic Diseases (127601)

Dyann Wirth

Manoj Duraisingh

Jeffrey Dvorin

2018 Fall (2 Credits)

Schedule:

MWF 0200 PM - 0329 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Provides an introduction to ecological and epidemiological concepts basic to the control of infectious agents. Considers important parasitic diseases of particular significance in the developing areas of the world. Epidemiological principles of vector-associated diseases are elucidated through study of entities such as malaria and schistosomiasis.

Course Notes: This class is in Fall 1 which starts on 8/28/17 and ends on 10/20/17.

Offered jointly with School of Public Health as IID 201.

Class Notes: Offered jointly with School of Public Health as IID 201.

Recommended Prep: Background in biology required; knowledge of pathogenesis of infectious diseases desirable.

Fall 1 course. Class runs from 9/4/18-10/26/18.

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong

foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Course Notes: Offered jointly with School of Public Health as EH 512.

Class runs from 9/4/18-12/21/18

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | EH Degree Students

Wave 2 | BPH PHD & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 08/16/2018 01:00PM – 08/28/2018 11:59PM

Wave 2 | 08/29/2018 12:00AM – 08/30/2018 11:59PM

Wave 3 | 08/31/2018 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Class Notes: Offered jointly with School of Public Health as EH 512.

Tuberculosis (127603)

Sarah Fortune

2019 Spring (2 Credits)

Schedule:

TR 0200 PM - 0329 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a comprehensive survey course on tuberculosis featuring lectures by some of the leading

authorities in the field. The course is designed for students from diverse backgrounds, with the goal of teaching cross-disciplinary thinking and communication. It frames the global TB epidemic as a multi-scale problem, introducing students to the challenges posed by the basic biology of the organism, the clinical challenges of TB care and the health systems challenges associated with a disease that disproportionately impacts resource limited populations. The course will use case-based teaching - posing current questions that students will be asked to address from the perspective of key constituents in the field. Students will be evaluated on the basis of class participation and a written response to a problem in the field.

Course Notes: Offered jointly with School of Public Health as IID 202.

Spring 1 - which runs from 1/28/19 - 3/15/19.

Class Notes: Offered jointly with School of Public Health as IID 202. The course will be taught in Kresge Kresge 202A at the HSPH campus during spring 1 (1/23/17 - 3/17/17)

Biomedical Engineering

Subject: Biomedical Engineering

Biomedical Engineering 110

Physiological Systems Analysis (150189)

Maurice Smith

2018 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A survey of systems theory with applications from bioengineering and physiology. Analysis: differential equations, linear and nonlinear systems, stability, the complementary nature of time and frequency domain methods, feedback, and biological oscillations. **Applications:** nerve function, muscle dynamics, cardiovascular regulation. **Laboratory:** neural models, feedback control systems, properties of muscle, cardiovascular function.

Recommended Prep: Applied Mathematics 21b or Mathematics 21b or equivalent.
Physiology at the level of Engineering Sciences 53 suggested.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Biomedical Engineering 121

Cellular Engineering (119067)

Kevin K. Parker

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes: BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.

Recommended Prep: Inorganic chemistry, cell biology, physics, and mathematics at the level of Applied Mathematics 21 or Mathematics 21. Suggested courses include organic chemistry and molecular biology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biomedical Engineering 125

Tissue Engineering (121282)

David Mooney

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Fundamental engineering and biological principles underlying field of tissue engineering, along with examples and strategies to engineer specific tissues for clinical use. Students will prepare a paper in the field of tissue engineering, and participate in a weekly laboratory in which they will learn and use methods to fabricate materials and perform 3-D cell culture.

Recommended Prep: Biochemistry or cell biology background.**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biomedical Engineering 128

Introduction to Biomedical Imaging and Systems (204470)

Linsey Moyer

2019 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor**Enrollment Cap:**

24

The course is designed as an introduction for students who want to gain both hands on training as well as an introduction to the physics and image reconstruction techniques involved in generating images. The course will introduce the fundamentals of the major imaging modalities including, but not limited to: electron microscopy, optical microscopy, x-ray, computed tomography, ultrasound, MRI, and nuclear imaging, as well as an overview of in vivo imaging and molecular imaging. This course also includes a lab section every other week.

Course Notes: Enrollment limited to 24 students.**Recommended Prep:** Physics, Calculus; Basic biology helpful but not required.**Requirements:** Prerequisite: Applied Physics 50b OR Physical Sciences 12b OR Physics 15b OR PHYSCI 3 AND Math1b or higher**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Primarily for Undergraduate Students
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science

Biomedical Engineering 129

Introduction to Bioelectronics (211359)

Jia Liu

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to bioelectronics and its applications in neuroscience, neuroengineering, cardiology, wearable technology and so on. The focus is on the basic principles of bioelectricity, biochemistry and physiological behaviors of biological systems and how to design tools to precisely measure and control them. Key themes throughout the course will include bioelectricity, biochemistry, cellular and tissue physiological behavior, optogenetics, sensors, stimulators, circuits, signals, biointerface and applications. This includes both the practical and theoretical aspects of the topic.

Recommended Prep: Applied Physics 50b (OR Physical Sciences 12b, OR Physics 15b), and Math 1a or equivalent. Some background in chemistry and biology at the level of ES 53 is helpful but not required.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Biomedical Engineering 130

Neural Control of Movement (122341)

Maurice Smith

2019 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Approaches from robotics, control theory, and neuroscience for understanding biological motor systems. Analytical and computational modeling of muscles, reflex arcs, and neural systems that contribute to motor control in the brain. Focus on understanding how the central nervous system plans and controls voluntary movement of the eyes and limbs. Learning and memory; effects of variability and noise on optimal motor planning and control in biological systems.

Course Notes: Offered in alternate years.

Recommended Prep: Mathematics 21b or Applied Mathematics 21b or equivalent, probability and statistics, Applied Physics 50a, Physical Sciences 12a, or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biomedical Engineering 191

Introduction to Biomaterials (110020)

Jennifer Lewis

Neel Joshi

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

24

A biomaterial is any form of matter that is produced by or interacts with biological systems. One of the pillars of biomedical engineering is to use naturally derived and synthetic biomaterials to treat, augment, or replace human tissues. This course examines the structure, properties and processing of biomaterials.

Recommended Prep: Physical sciences 1, Math 1b.

Requirements: Prerequisite: (LS 1A or LPS A or PS 1 or PS 11) AND (Math 1b or higher)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Biophysics

Subject: Biophysics

Biophysics 170

Evolutionary and Quantitative Genomics (121318)

Leonid Mirny

2018 Fall (4 Credits)

Schedule:

MW 1100 AM - 1229 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Aims to develop deep quantitative understanding of basic forces of evolution, molecular evolution, genetic variations and their dynamics in populations, genetics of complex phenotypes, and genome-wide association studies. Application of these foundational concepts to cutting edge studies in epigenetics, gene regulation and chromatin; cancer genomics, and microbiomes. Modules consist of lectures, journal club discussions of high impact publications, and guest lectures that provide clinical correlates. Homework assignments and final projects aim to develop hands-on experience and understanding of genomic data from evolutionary principles.

Course Notes:

Also listed as HST.508

Meets on MIT Campus for 2018 Fall semester.

Mondays & Wednesdays 11:00 am-12:30pm. Bldg/Rm to be announced.

http://web.mit.edu/hst.508/HST.508_Biophysics_170/Welcome.html

Class Notes:

Meets on MIT Campus, Mondays & Wednesdays, 11:00 am -12:30 pm.

Biophysics 204

Structural Biology From Molecules to Cells (119219)

Stephen Harrison

2019 Spring (4 Credits)

Schedule:

MW 0100 PM - 0230 PM

Instructor Permissions: Instructor

Enrollment Cap:

50

Imaging of molecules and of molecular localization in cells, including x-ray and electron crystallography, electron microscopy of single molecules, and high-resolution light microscopy. Lectures and student presentations of selected papers from the literature.

Class Notes:

Location for Spring 2019 course offering: Harvard Medical School
Campus

TMEC (Tosteson Medical Education Center) Building, Room 423. 240
Longwood Avenue, Boston

There are a handful of course dates during the semester that will need to meet in an alternate classroom. Specific details provided at the first meeting of class.

Biophysics 205

Computational and Functional Genomics (119807)

Martha Bulyk

Shamil Sunyaev

Suzanne Gaudet

2019 Spring (4 Credits)

Schedule:

MW 0230 PM - 0400 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Experimental functional genomics, computational prediction of gene function, and properties and models of complex biological systems. The course will primarily involve critical reading and discussion rather than lectures.

Class Notes:

Meets on Harvard Medical School Campus.

Folin Wu Room, Bldg. C, Room 115, 240 Longwood Avenue, Boston.

Recommended Prep:

Molecular Biology (MCB 52 or equivalent), solid understanding of basic probability and statistics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biophysics 242R

Special Topics in Biophysics (117635)

James Hogle

Rachelle Gaudet

2019 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Biophysical topics emerging from special interest research not normally available in established curriculum. This year's focus will be on Membrane Protein Structure.

Course Notes:

Weekly lectures with discussion sections.

Class Notes:

In Spring 2019, this course will focus on cellular membranes and

membrane proteins, although many of the topics are readily generalizable to other biological systems. We will focus on in-depth discussions of contemporary primary literature, with lectures to provide background knowledge and context prior to each reading and discussion. Students will learn about various computational and experimental techniques applied in studies of membrane proteins at the molecular and cellular level, including structure determination (including cryoEM), molecular dynamics simulations, sequence analyses (coevolution), protein dynamics using single-molecule fluorescence and microscopy, protein engineering (optogenetic tools). Students will also have opportunities to develop skills in structure visualization using PyMOL, proposal writing, and peer review.

Additional Course Attributes:

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 310

Sensory Information in Neuronal Processes (123176)

Naoshige Uchida

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 311

Digital Computer Applications in Biophysics (144404)

William Bossert

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 311

Digital Computer Applications in Biophysics (144404)

William Bossert

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 312

Multiphoton Microscopy in Imaging Alzheimer's Disease (123177)

Brian Bacskai

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 312

Multiphoton Microscopy in Imaging Alzheimer's Disease (123177)

Brian Bacskai

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 313

Neurobiology of Vocal Learning (124781)

Bence Olveczky

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 313

Neurobiology of Vocal Learning (124781)

Bence Olveczky

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 314

Structure of Viruses and Viral Proteins (119788)

James Hogle

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 314

Structure of Viruses and Viral Proteins (119788)

James Hogle

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 315

Structural Molecular Biology (111966)

Stephen Harrison

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 315

Structural Molecular Biology (111966)

Stephen Harrison

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 319

Analysis of Structure and Function of Nicotinic Acetylcholine Receptors (125771)

Adam Cohen

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 319

Analysis of Structure and Function of Nicotinic Acetylcholine Receptors (125771)

Adam Cohen

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 321

Physical Biology of Chromosomes (120940)

Nancy Kleckner

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 321

Physical Biology of Chromosomes (120940)

Nancy Kleckner

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 322

Structural Diversification of Very Long-Chain Fatty Acids (125775)

Vladimir Denic

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 322

Structural Diversification of Very Long-Chain Fatty Acids (125775)

Vladimir Denic

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 323

Transcriptional Regulatory Circuits and Neuronal Circuits in Visual Recognition (127669)

Gabriel Kreiman

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 323

Transcriptional Regulatory Circuits and Neuronal Circuits in Visual Recognition (127669)

Gabriel Kreiman

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 324

Conformational Changes in Macromolecules (125778)

Collin Stultz

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 324

Conformational Changes in Macromolecules (125778)

Collin Stultz

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 325

Physics of Macromolecular Assemblies and Subcellular Organization (125776)

Daniel Needleman

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 325

Physics of Macromolecular Assemblies and Subcellular Organization (125776)

Daniel Needleman

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 326

Statistical and Continuum Mechanics of Macromolecular Assemblies (125779)

L Mahadevan

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 326

Statistical and Continuum Mechanics of Macromolecular Assemblies (125779)

L Mahadevan

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 327

Molecular Genetics (113737)

Frederick Ausubel

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 327

Molecular Genetics (113737)

Frederick Ausubel

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 329

Computational and Functional Genomics (113921)

George Church

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 329

Computational and Functional Genomics (113921)

George Church

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 330

Principles of Self vs. Non-self RNA Discrimination by the Immune System (126673)

Sun Hur

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 330

Principles of Self vs. Non-self RNA Discrimination by the Immune System (126673)

Sun Hur

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 331

Communication of Information In and Between Cells and Organisms (126674)

Erel Levine

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 331

Communication of Information In and Between Cells and Organisms (126674)

Erel Levine

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 333

Topics in Biophysics and Molecular Biology (111143)

Brian Seed

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 333

Topics in Biophysics and Molecular Biology (111143)

Brian Seed

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 334

Decision Making in Cells and Organisms (126675)

Sharad Ramanathan

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 334

Decision Making in Cells and Organisms (126675)

Sharad Ramanathan

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 335

Developing novel single-molecule methods to study multi-protein complexes (127686)

Joseph John Loparo

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 335

Developing novel single-molecule methods to study multi-protein complexes (127686)

Joseph John Loparo

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 348

Protein Kinases, Reversible Protein Phosphorylation (114665)

Raymond Erikson

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 348

Protein Kinases, Reversible Protein Phosphorylation (114665)

Raymond Erikson

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 368

Probing Polymers with Nanospores, Experimental Condensed Matter Physics (115668)

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 379

Theoretical Population Genetics (116575)

John Wakeley

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 379

Theoretical Population Genetics (116575)

John Wakeley

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 384

NMR Spectroscopy on Membrane-associated Proteins and Peptides (119221)

James Chou

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 384

NMR Spectroscopy on Membrane-associated Proteins and Peptides (119221)

James Chou

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 386

Synaptic Plasticity and Neuronal Networks (118091)

Florian Engert

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 386

Synaptic Plasticity and Neuronal Networks (118091)

Florian Engert

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 387

Structural Studies of the Stereochemistry of Signaling and Transport through Biological Membranes (118092)

Rachelle Gaudet

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 387

Structural Studies of the Stereochemistry of Signaling and Transport through Biological Membranes (118092)

Rachelle Gaudet

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 390

Regulation of Mitosis (118096)

Andrew Murray

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 390

Regulation of Mitosis (118096)

Andrew Murray

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 391

Computational Methods in Genetics, Genomics and Proteomics (118097)

Shamil Sunyaev

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 391

Computational Methods in Genetics, Genomics and Proteomics (118097)

Shamil Sunyaev

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 392

Biophysics of Mechanosensation (119222)

David Corey

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 392

Biophysics of Mechanosensation (119222)

David Corey

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 393

The Mechanics and Regulation of Mitosis (119223)

David Pellman

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 393

The Mechanics and Regulation of Mitosis (119223)

David Pellman

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 394

Experimental Biophysics (119225)

Mara Prentiss

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 394

Experimental Biophysics (119225)

Mara Prentiss

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 395

Biophysics of Cell Adhesion and Vascular Shear Flow (119226)

Timothy Springer

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 395

Biophysics of Cell Adhesion and Vascular Shear Flow (119226)

Timothy Springer

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 396

Behavioral Neuroscience and Neurophysiology (119227)

Aravinthan Samuel

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 396

Behavioral Neuroscience and Neurophysiology (119227)

Aravinthan Samuel

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 397

Research in Integrin Signaling, Cytoskeleton, and Control of Angiogenesis (120730)

Donald Ingber

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 397

Research in Integrin Signaling, Cytoskeleton, and Control of Angiogenesis (120730)

Donald Ingber

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 399

Biomolecular Nanotechnology (122042)

William Shih

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 399

Biomolecular Nanotechnology (122042)

William Shih

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biostatistics

Subject: Biostatistics

Biostatistics 230

Probability Theory and Applications I (119844)

Marcello Pagano

2018 Fall (4 Credits)

Schedule:

MW 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Notes: Offered jointly with the School of Public Health as BST230.

Class Notes: A weekly 90-minute lab.

Requirements: Prerequisite: Biostatistics PhD Program

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 231

Statistical Inference I (119845)

Robert Gray

2019 Spring (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

Exponential families, sufficiency, ancillarity, completeness, method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, Neyman-Pearson theory, likelihood ratio, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency.

Course Notes: Offered jointly with the School of Public Health as BST231.

Class Notes: Weekly 90-minute lab

Requirements: Prerequisite: Biostatistics 230

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 232

Methods I (119846)

Brent Coull

2018 Fall (4 Credits)

Schedule:

MW 0800 AM - 0930 AM

Instructor Permissions: Instructor**Enrollment Cap:**

30

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Notes: Offered jointly with the School of Public Health as BST232.**Class Notes:** A weekly 90-minute lab.**Recommended Prep:** Signature of instructor required if prereq not met.**Requirements:** Prerequisite: Biostatistics PhD Program**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 234

Introduction to Data Structures and Algorithms (160641)

*Christoph Lange**Curtis Huttenhower*

2019 Spring (4 Credits)

Schedule:

MW 1130 AM - 0100 PM

Instructor Permissions: Instructor**Enrollment Cap:**

35

Introduction to the data structures and computer algorithms that are relevant to statistical computing. The implementation of data structures and algorithms for data management and numerical computations are discussed.

Course Notes: Offered jointly with the School of Public Health as BST 234.**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biostatistics 235

Advanced Regression and Statistical Learning (119848)

Rajarshi Mukherjee

2018 Fall (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimension reduction, and classification methods. Background in matrix algebra and linear regression required.

Course Notes: Offered jointly with the School of Public Health as BST235.

Class Notes: A weekly 90-minute lab.

Requirements: Prerequisite: Biostatistics 231 AND Biostatistics 233

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biostatistics 238

Principles and Advanced Topics in Clinical Trials (125262)

David Wypij

2019 Spring (4 Credits)

Schedule:

MW 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course focuses on selected advanced topics in design, analysis, and interpretation of clinical trials, including study design; choice of endpoints (including surrogate endpoints); interim analyses and group sequential methods; subgroup analyses; and meta-analyses.

Course Notes: Offered jointly with the School of Public Health as BST 214 & BST 238.

Requirements: Prerequisite: BIST 230 AND BIST 231 (may be taken concurrently)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 241

Statistical Inference II (119855)

Rui Wang

2019 Spring (4 Credits)

Schedule:

TR 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Advanced topics in statistical inference. Limit theorems, multivariate delta method, properties of maximum likelihood estimators, saddle point approximations, asymptotic relative efficiency, robust and rank-based procedures, resampling methods, nonparametric curve estimation.

Course Notes: Offered jointly with the School of Public Health as BST 241.

Class Notes: Weekly 90-minute lab.

Requirements: Prerequisite: Biostatistics 240

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 244

Analysis of Failure Time Data (119849)

L. Wei

2019 Spring (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

22

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods.

Course Notes: Offered jointly with the School of Public Health as BST 244.

Class Notes: Weekly 90-minute lab.

Requirements: Prerequisite: BIOSTAT 233 AND BIOSTAT 240

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biostatistics 245 Section: 1

Analysis of Multivariate and Longitudinal Data (119850)

Sebastien Haneuse

2019 Spring (4 Credits)

Schedule:

TR 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

The multivariate normal distribution, Hotelling's T², MANOVA, repeated measures, the multivariate linear model, random effects and growth curve models, generalized estimating equations, multivariate categorical outcomes, missing data, computational issues for traditional and new methodologies.

Course Notes: Offered jointly with the School of Public Health as BST 245.

Class Notes: Weekly 90-minute lab.

Requirements: Prerequisite: Biostatistics 231 AND Biostatistics 235

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 281

Genomic Data Manipulation (126944)

Curtis Huttenhower

Eric Franzosa

2019 Spring (4 Credits)

Schedule:

MW 0345 PM - 0515 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Introduction to genomic data, computational methods for interpreting these data, and survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.

Course Notes: Offered jointly with the School of Public Health as BST 281.

Class Notes: Weekly 90-minute lab.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 282

Introduction to Computational Biology and Bioinformatics (126946)

Xiaole (Shirley) Liu

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Basic biological problems, genomics technology platforms, algorithms and data analysis approaches in computational biology. There will be three major components of the course: microarray and RNA-seq analysis, transcription and epigenetic gene regulation, cancer genomics.

This course is targeted at both biostatistics and biological science graduate students with some statistics and computer programming background who have an interest in exploring genomic data analysis and algorithm development as a potential future direction.

Course Notes: Offered jointly with the School of Public Health as BST 282.

Recommended Prep: Biostatistics degree program or Computational Biology and Quantitative Genetics degree program

Requirements: Prerequisite: STAT 110 OR CS 50 OR BIOSTAT PhD Students

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Graduate Students

Biostatistics 311

Teaching Assistant (211229)

2019 Spring (2 Credits)

Schedule: TBD

Instructor Permissions: Department **Enrollment Cap:** n/a

Work with instructors in the department in laboratory instruction and other teaching-related duties.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 350

Research (119866)

Corwin Zigler

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

For doctoral candidates who have passed their written qualifying examination and who are undertaking advanced work along the lines of fundamental or applied dissertation research in the department.

Class Notes: Members of the faculty of the department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 350

Research (119866)

Corwin Zigler

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

For doctoral candidates who have passed their written qualifying examination and who are undertaking advanced work along the lines of fundamental or applied dissertation research in the department.

Class Notes: Members of the faculty of the department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Celtic Languages and Literatures

Subject: Welsh

Welsh 128

Introduction to Modern Welsh (113699)

Catherine McKenna

2018 Fall (4 Credits)

Schedule:

MTWR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the Welsh language as spoken and written today, designed for those with little or no prior knowledge of this vibrant Celtic language. Intensive conversation practice is provided, and students learn to write fluently. Internet, audio and video exercises using dialogue, music and film augment a contextualized grammatical survey, and use of authentic literary texts increases as the course progresses.

Course Notes:

The combination of Welsh 128 followed by Welsh 129r satisfies the language requirement. It is recommended in any case that this course be followed by Welsh 129r. May not be taken Pass/Fail. Not open to auditors.

Class Notes:

Catherine McKenna and others

Additional Course Attributes:

Attribute	Value(s)
FAS: Meets Foreign Lang Req	Welsh
FAS Divisional Distribution	Arts and Humanities
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Welsh 129R

Intermediate Modern Welsh (114118)

Catherine McKenna

2019 Spring (4 Credits)

Schedule:

MTWR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Direct continuation of Welsh 128, developing and deepening students' knowledge of, and skill in, the modern spoken and written language. By the end of the semester students will be able to converse, read and write in a number of registers of idiomatic Welsh (academic, literary, informal). Various media, featuring dialogue, music and film, augment the advanced grammatical survey. Central cultural and historical issues are discussed.

Course Notes:

This course, when taken following Welsh 128, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.

Class Notes:

Catherine McKenna and others

Recommended Prep:

Welsh 128 or permission of instructor.

Welsh 225A

Medieval Welsh Language and Literature (113537)

Catherine McKenna

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Introduction to the language and culture of medieval Wales, with particular attention to narrative prose literature and its Celtic, Welsh and Norman contexts. By the end of the term we will have read in the original one of the *Four Branches of the Mabinogi* and selections from other texts.

Course Notes: It is suggested that this course be followed by Welsh 225b.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Welsh 225B

Medieval Welsh Poetry (113711)

Catherine McKenna

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Continued readings in medieval Welsh prose and an introduction to Welsh poetry down to 1400. Continued study of grammar and practice in translation, as well as an introduction to the manuscript sources of the poetry and their cultural contexts, and the intricacies of medieval Welsh poetics.

Recommended Prep: Welsh 225a or equivalent preparation in Middle Welsh.

Celtic 105

The Folklore of Gaelic Ireland (160495)

Natasha Sumner

2019 Spring (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to the traditional stories, lore, customs, and music of Gaelic Ireland. Since collecting began in the eighteenth and nineteenth centuries, Ireland has amassed one of the most extensive collections of folklore in the world. Prominent tradition bearers and collectors will be introduced, and issues of collecting will be considered. Theoretical approaches will be explored to gain a deeper understanding of the material. All texts will be read in English translation.

Celtic 106

The Folklore of Gaelic Scotland (127369)

Natasha Sumner

2018 Fall (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to the traditional stories, lore, customs, and music of Gaelic Scotland and Nova Scotia. Scottish Gaelic folklore exploded onto the world stage in the 1760s with the publication of Macpherson's 'Ossianic' epics, which he alleged to have translated from Gaelic originals. The ensuing controversy motivated scholars to seek out and record Gaelic folklore. The treasure trove they discovered has amazed those interested in traditional cultures ever since. This course introduces prominent collectors, tradition bearers, and their traditions. Issues of collecting are considered, and theoretical approaches are explored to gain a deeper understanding of the material. All texts are available in English translation.

Celtic 111

Shapeshifters and Manbeasts in Celtic Traditions (207727)

Catherine McKenna

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In Irish, Welsh, Scottish and Breton narratives, humans turn into other kinds of animal (and animals into humans) for many different reasons—as punishment, as escape, as expression of their inner nature, among others. These stories are written into medieval manuscripts, recorded from oral storytellers in the twentieth century, recounted in contemporary film, and embedded in popular music. Is there a stable boundary between the animal and human worlds? We explore shapeshifting stories in all of these modes and media, reading them against a background of texts about animals and humans from their own times and ours. All of our readings are in English or English translation: no knowledge of a Celtic language is required.

Celtic 121

The Art of Storytelling in Medieval Ireland (207728)

Joseph Nagy

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

60

An exploration of what we know about storytelling and storytellers in Ireland of the Middle Ages. Also to be considered are: notions of narrative genres; the hero as storyteller, the storyteller as hero; the interface among native Irish, Classical, and biblical notions and repertoires of story; the "visuals" of story; stories as linked together in cycles, or as "prequels" and "sequels." Readings will be in English/translation. No previous knowledge of Irish or Celtic tradition required.

Celtic 194

The World of the Celtic Bard (126775)

Catherine McKenna

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the role of the bard in the Celtic-speaking societies of Wales, Ireland and Scotland. Through the study of narrative sources concerning the origin and nature of poets and poetry, theoretical and legal texts, and, most especially, bardic poems from the early Middle Ages through the eighteenth century, we examine the physical, public and political power of a medium--poetic verse--now associated with "power" in the private and emotional sense only. We study bardic poems in various modes--eulogistic,

satiric, commemorative, prophetic--and we examine the circumstances that support the institution of bardic poetry and those that contribute to its decline. Among the issues to be considered are patronage, convention, the relationship of rhetoric and truth, and the functions of poetic form. All readings in English translation, but there will be some exposure to the forms of bardic poetry in the original languages.

Celtic 350

Teaching Colloquium (207928)

*Catherine McKenna**Joseph Nagy**Natasha Sumner*

2019 Spring (4 Credits)

Schedule:

W 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

A workshop course focused on the craft of teaching, at Harvard and beyond, in Celtic languages and literatures and related subject areas. Topics include syllabus design, classroom discussion, responding to student writing, and assessment. The course includes visiting speakers and analytic visits to classes. Required of G2 students in Celtic; open to all students in the department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course

Subject: Irish

Irish 132

Introduction to Modern Irish (119128)

Natasha Sumner

2018 Fall (4 Credits)

Schedule:

MTWR 0900 AM - 1015 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to Irish as it is spoken and written today. Class work is participatory, and includes conversational role play and games as well as grammar study and drills. Audio and audiovisual resources reinforce pronunciation and aural comprehension. Songs, proverbs, and poems are an integral part of the course, introducing students to the vibrant oral and literary tradition of Gaelic Ireland.

Course Notes:

The combination of Irish 132 and 133r satisfies the language requirement. It is recommended in any case that this course be followed by Irish 133r. May not be taken Pass/Fail. Not open to auditors.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Arts and Humanities
FAS: Final Assessment Category	Three-hour Exam

FAS: Meets Foreign Lang Req	Irish
FAS: Course Level	For Undergraduate and Graduate Students

Irish 133R

Intermediate Modern Irish (119063)

Natasha Sumner

2019 Spring (4 Credits)

Schedule:

MTWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A continuation of Irish 132, developing students' fluency in spoken and written Irish. As our knowledge of the language expands, we venture into storytelling, journal writing and writing and performing short skits. Internet, audio and video resources complement the study of grammar and select prose texts.

Course Notes:

This course, when taken following Irish 132, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.

Class Notes:

Natasha Sumner and others

Recommended Prep:

Irish 132 or permission of instructor.

Requirements:

Prerequisite: IRISH 132

Chemical Biology 399

Introduction to Laboratory Research (121170)

Daniel Kahne

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course is intended for Chemical Biology lab rotations.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 399

Introduction to Laboratory Research (121170)

Daniel Kahne

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course is intended for Chemical Biology lab rotations.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 2200

Introduction to Chemical Biology (124812)

Ralph Mazitschek

Stephen Haggarty

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course will provide a survey of major topics, technologies, and themes in Chemical Biology, with hands-on exposure to a variety of experimental approaches.

Course Notes: Intended for first-year graduate students in the Chemical Biology Program; permission of the instructor required for all others.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry and Chemical Biology

Subject: Chemistry

Chemistry 17

Principles of Organic Chemistry (115137)

Christina Woo

2018 Fall (4 Credits)

Schedule:

MWF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to organic chemistry, with an emphasis on structure and bonding, reaction mechanisms, and chemical reactivity.

Course Notes:

Open to freshmen with a score of 750 or higher in the College Boards or the Chemistry Placement Examination; and to students who scored 5 on the Chemistry Advanced Placement Examination; and to the students who achieved a grade of B or higher in either Physical Sciences 1, 10, 11, or another college-level introductory chemistry course. Others may enter only by permission of the instructor. The Chemistry 17/27 sequence is intended primarily for students in chemistry or the life sciences, who have completed LPSA or LS1a and one of the PS courses (PS1, PS10, PS11). The Chemistry 20/30 sequence is intended primarily for students planning a concentration in chemistry or the physical sciences. Either sequence satisfies the organic chemistry requirement for medical school. Students may not count both Chemistry 17 and Chemistry 20 for degree credit. On the other hand, Chemistry 27 and Chemistry 30 cover different material, so students interested in taking both courses may choose to do so via one of two sequences: Chemistry 17-27-30 or Chemistry 20-30-27. Chemistry 27 satisfies the biochemistry chemistry requirement for most medical schools.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Core Curriculum	Science A
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam

Chemistry 20

Organic Chemistry (124312)

Logan S. McCarty

2019 Spring (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to structure and bonding in organic molecules; mechanisms of organic reactions; chemical transformations of the functional groups of organic chemistry; synthesis; determination of chemical

structures by infrared and NMR spectroscopy.

Course Notes: Chemistry 20/30 is an integrated two-semester sequence that prepares students to study chemistry and other physical sciences, whereas the Chemistry 17/27 sequence focuses on application of organic chemistry concepts to the life sciences. Either sequence satisfies the organic chemistry requirement for medical school and the chemistry concentration. The content of Chemistry 17 is accelerated and overlaps with topics from both Chemistry 20 and 30. Students may not count both Chemistry 17 and 20 toward the degree. However, Chemistry 27 and Chemistry 20/30 cover different material, so students may choose to take Chemistry 27 after completing the 20/30 sequence.

Recommended Prep: Open to students who scored 4 or 5 on the Chemistry Advanced Placement Examination, or who successfully completed Life Sciences 1A or Life and Physical Sciences A. Others should contact the instructor to discuss their preparation.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Core Curriculum	Science A
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 27

Organic Chemistry of Life (117558)

Brian Liao

2019 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Chemical principles that govern the processes driving living systems are illustrated with examples drawn from biochemistry, cell biology, and medicine. The course deals with organic chemical reactivity (reaction mechanisms, structure-reactivity relationships), with matters specifically relevant to the life sciences (chemistry of enzymes, nucleic acids, drugs, natural products, cofactors), and with applications of chemical biology to medicine and biotechnology. An understanding of organic reactions and their "arrow" pushing mechanisms is required.

Course Notes: Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.

Recommended Prep: Chemistry 17 or Chemistry 30 or Chemistry 20 with permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: General Education	Science of Living Systems
FAS: Course Level	Primarily for Undergraduate Students
FAS: Core Curriculum	Science A
FAS: General Education	Science of the Physical Universe
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Final Assessment Category	Three-hour Exam

Chemistry 30

Organic Chemistry (118925)

Andrew Myers

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Continuation of Chemistry 20. Fundamental principles and advanced topics in organic chemistry. Carbonyl chemistry and pericyclic reactions are covered in particular detail, using principles of stereochemistry, stereoelectronic theory, and molecular orbital theory as a foundation. Students learn about strategies in multi-step organic synthesis and are given an introduction into organometallic chemistry. Laboratory: an introduction to organic chemistry laboratory techniques and experimental organic synthesis.

Course Notes:

Chemistry 20 or equivalent.

Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.

Recommended Prep:

See notes section

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS: Core Curriculum	Science A
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 40

Inorganic Chemistry (123126)

Theodore Betley

2019 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to basic concepts of inorganic chemistry. Develops principles of chemical bonding and molecular structure on a basis of symmetry, applying these concepts to coordination chemistry (highlighting synthesis), organometallic chemistry (applications to catalysis), materials synthesis, and bioinorganic processes.

Course Notes:

Chemistry 17 or 20

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 60

Foundations of Physical Chemistry (114811)

Roy Gordon

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A compact introduction to major principles of physical chemistry (statistical mechanics, thermodynamics, and chemical kinetics), concurrently providing mathematical and physical foundations for these subjects and preparation for Chemistry 160 and 161.

Recommended Prep: Physical Sciences 1, 10, 11 or equivalent; completion or concurrent enrollment in Mathematics 21a or Applied Mathematics 21a; completion or concurrent enrollment in Physical Sciences 2, 12a or Physics 15a or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 91R

Introduction to Research (113865)

Gregory C. Tucci

Charles Lieber

2019 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Reading and/or laboratory work related to one of the research projects under way in the department.

Course Notes: Open to a limited number of chemistry concentrators who are accepted as research students without having taken Chemistry 98. Written permission of the sponsor must be filed at the Office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card. Must be taken Sat/Unsat.

Class Notes: Hours to be arranged
Gregory C. Tucci and members of the Department

Additional Course Attributes:

Attribute	Value(s)

Chemistry 98R

Introduction to Research - Junior Year (112494)

Gregory C. Tucci

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Research under the direction of, or approved by, a member of the faculty of the Department of Chemistry. This is a junior tutorial.

Course Notes: Open with permission of the instructor to junior chemistry majors who have satisfactorily completed the non-credit Introduction to Research Tutorial in the spring term of the sophomore year. In that non-credit spring term tutorial, taught Tu., Th., 1-2:30, students will attend introductory lectures and research seminars in order to acquaint themselves with departmental research programs. In the junior year, students who complete the non-credit tutorial and obtain placement in a research laboratory will undertake research as Chemistry 98r. Written permission of the research adviser must be filed at the office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card.

Class Notes: See Course Notes

Chemistry 98R

Introduction to Research - Junior Year (112494)

Gregory C. Tucci

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Research under the direction of, or approved by, a member of the faculty of the Department of Chemistry. This is a junior tutorial.

Course Notes:

Open with permission of the instructor to junior chemistry majors who have satisfactorily completed the non-credit Introduction to Research Tutorial in the spring term of the sophomore year. In that non-credit spring term tutorial, taught Tu., Th., 1-2:30, students will attend introductory lectures and research seminars in order to acquaint themselves with departmental research programs. In the junior year, students who complete the non-credit tutorial and obtain placement in a research laboratory will undertake research as Chemistry 98r. Written permission of the research adviser must be filed at the office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card.

Class Notes:

See Course Notes

Hourse to be arranged: Gregory Tucci and members of the Department

Spring: Tu, TH at 1:00 pm

Chemistry 99R

Tutorial - Senior Year (113976)

*Gregory C. Tucci**Charles Lieber*

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Research under the direction of, or approved by, a member of the faculty of the Department of Chemistry.

Course Notes: Open to seniors accredited by the Department as honors candidates. Students enrolled in Chemistry 99r have the option of writing a thesis. Written permission of the research adviser must be filed at the office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card.

Chemistry 100R

Experimental Chemistry and Chemical Biology (123022)

Heidi Vollmer-Snarr

2019 Spring (4 Credits)

Schedule:

M 1200 PM - 0100 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A laboratory course where students carry out research and gain exposure to the research process. Projects will be drawn directly from faculty covering a range of methodologies in chemistry and chemical biology. Students will regularly discuss their progress and write formal reports.

Course Notes:

Note: Chem 100r must be a student's only for-credit research commitment during the enrolled semester.

Suitable for students either with or without extensive laboratory experience, but may not be taken concurrently with other research courses.

Prerequisite: Chemistry 30 or Chemistry 27, and permission of the instructor

Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience.

First Course Meeting will be on September 10th at 12:00 pm in Northwest B106

Class Notes:

The first course meeting will be on Monday, January 28th at 12:00 pm in Northwest B106. Chem 100r must be a student's only for-credit research commitment during the enrolled semester. This course is suitable for students either with or without extensive laboratory experience, but may not be taken concurrently with other research courses. Prerequisite: Chem 27 or 30, and permission of the instructor. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration.

Chemistry 105 Section: 1

Advanced Organic Chemistry (109454)

Eric Jacobsen

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Advanced reactivity principles in organic chemistry. Students learn to 1) identify and propose mechanisms for common organic, organometallic, and catalytic reactions; 2) manipulate and analyze three-dimensional molecular structures. 3) rationalize the principal factors controlling rate and selectivity in organic reactions.

Course Notes:

Prerequisites: Chem 30 or equivalent

Additional Course Attributes:

Attribute	Value(s)

Small Molecules and Biological Processes (110241)

Matthew Shair

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Small molecules are extraordinarily useful tools to investigate biological processes, perturb cell states and treat human diseases. They are complementary to many biological techniques (e.g. expression of mutant proteins, RNAi, genome editing and antibodies) in that they are fast-acting, typically cell permeable, easily reversible, and they can engage multiple targets simultaneously. In this course, we will discuss how these

useful small molecules are discovered, how they have revealed deep insights into biological processes, and how they are employed as therapeutics.

Chemistry 135

Experimental Synthetic Chemistry (112954)

Heidi Vollmer-Snarr

2019 Spring (4 Credits)

Schedule:

M 0100 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

An introduction to the experimental problems encountered in the synthesis, isolation, purification, characterization, and identification of organic and organometallic compounds. Students perform a variety of chemical syntheses which encourage technical proficiency, and develop an understanding of both the theory and practice of laboratory synthesis and spectroscopy.

Course Notes:

Recommended as preparation for research in experimental organic and organometallic chemistry (Chemistry 98r and 99r), or related disciplines. Recommended: Chemistry 30; permission of the instructor may be granted for those who have completed 17/27. Lab times are T or W, 12-8, plus Th or F 1-5, with labs beginning the third week of the term.

Class Notes:

The first course meeting will be on Monday, January 28th at 12:00 pm in Northwest B106. Chem 135 is recommended as preparation for research in experimental organic and organometallic chemistry (Chem 98r and 99r), or related disciplines. Prerequisite: Chem 30; permission of the instructor may be granted for those who have completed Chem 17/27. Lab times are T or W, 12-8 (or another mutually agreed upon eight-hour block), plus Th or F 1-5 (or another mutually agreed upon four-hour block); Labs begin the third week of the term.

Chemistry 145

Experimental Inorganic Chemistry (109110)

Theodore Betley

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to experimental problems encountered in the synthesis, isolation, purification, characterization, and identification of inorganic compounds, with an emphasis in air-free synthetic techniques and spectroscopic characterization methods specifically applicable to complexes containing transition metals.

Course Notes: Chemistry 40 and either Chemistry 27 or 30, or permission of the instructor.

Recommended Prep: See Notes section

Additional Course Attributes:

Attribute	Value(s)

Chemistry 154

Advanced Inorganic Chemistry (126035)

Daniel Nocera

2019 Spring (4 Credits)

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 50

The physical inorganic chemistry of transition elements will be discussed. The course will emphasize group theoretical methods of analysis and attendant spectroscopic methods (e.g., electronic, vibrational, EPR, magnetic) derived therefrom. Connections between molecular structure and electronic structure and how that parlay into the properties of complexes and their reactivity will be illustrated throughout various modules, which will touch on advanced problems of interest in the subjects of catalytic, organometallic, coordination, solid state and bioinorganic chemistries.

Chemistry 156

Materials Chemistry (207680)

Jarad Mason

2018 Fall (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 50

This course will survey topics in materials chemistry, emphasizing how atomic-level interactions dictate the bulk properties of matter. Basic chemical principles will be applied to discuss the design, synthesis, and characterization of inorganic and organic materials. Specific topics will include: electronic, optical, and magnetic properties of inorganic solids, nanomaterials, micro and mesoporous materials, phase-change materials, amorphous solids and glasses, polymers, and membranes. The primary literature will be used to highlight key historical discoveries and significant recent results relevant to each of these areas.

Chemistry 160

The Quantum World (112976)

Kang-Kuen Ni

2018 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

We live in a quantum world. Many essential properties of atoms, molecules and materials stem from their quantum mechanical nature. In this course, we will focus on the quantum mechanical aspects of physical chemistry. The basic principles of quantum mechanics will be introduced in tandem with concepts such as molecular bonding, vibrations, and rotations. The fundamentals of molecular spectroscopy will be seen in the light of quantum mechanics. The second half of the course will introduce molecular electronic structure and properties and what goes behind the sciences in quantum chemistry packages. A large portion of the materials for evaluation will be take-home programming exercises written in interactive Python (iPython).

Course Notes:

Applied Mathematics 21a and 21b, Mathematics 21a and 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; Physical Sciences 2 or Physics 11a, and Physical Sciences 3 or Physics 11b.

Chemistry 163

Frontiers in Biophysics (116159)

Adam Cohen

2018 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This interdisciplinary course will explore the physical interactions that underpin life: the interactions of molecules, macromolecular structures, and cells in warm, wet, squishy environments. Topics will include Brownian motion, diffusion in a potential field, continuum mechanics of polymers, rods, and membranes, low Reynolds number flow, interfacial forces, electrostatics in solution. The course will also cover recently developed biophysical tools, including laser tweezers, superresolution microscopies, and optogenetics. Numerical simulations in Matlab will be used extensively.

Course Notes: Primarily for advanced undergraduate students and graduate students with either biological or physical backgrounds.

Recommended Prep: Chemistry 160, Chemistry 161, or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Chemistry 255

Practical Crystallography in Chemistry and Materials Science (107709)

Shao-Liang Zheng

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

Due to great technical advances, crystal structure analysis plays an increasingly important role in the structure determination of complex solids. This course involves the basic principles of crystallography and covers advanced aspects of practical crystal structure refinement. Topics include crystal symmetry, space groups, geometry of diffraction, structure factors, and structure refinement. Students will gain a working knowledge of x-ray crystallographic techniques, including how to: grow quality crystals, collect data, reduce data, determine a structure, visualize structure, utilize structural databases, publish crystallographic results. Watch [Learning Crystal Structure Analysis at Harvard](#).

Course Notes: Chemistry 40 or equivalent.

Chemistry 267

Surface and Interfacial Phenomena (144246)

Cynthia Friend

2019 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

General principles governing surface and interfacial phenomena are developed using treatment of surface

electronic and geometric structure as a foundation. The course will treat both theoretical and experimental tools for the investigation of surface structure. Selected spectroscopic techniques will also be treated, with emphasis on surface phenomena. The latter part of the course will develop principles of absorption, reaction, and growth phenomena illustrated through current literature topics.

Course Notes: Recommended for graduate and advanced undergraduate students in Chemistry, Applied Physics, and related areas with interest in Materials Chemistry and Engineering, Surface Chemistry, Applied Physics, and other areas dependent on properties and behavior of interfaces.

Recommended Prep: Chemistry 160 and 161 or equivalent; Applied Mathematics 21a or Mathematics 21a; one full course in physics or equivalent.

Subject: Physical Sciences

Physical Sciences 1

Chemical Bonding, Energy, and Reactivity: An Introduction to the Physical Sciences (122574)

Hongkun Park

Sirinya Matchacheep

2019 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The course covers the chemistry and physics underlying molecular phenomena in the world. Starting from a single electron, the course will build up to atoms, molecules, and materials. Interactions of molecules are studied through thermochemistry, equilibria, entropy and free energy, acids and bases, electrochemistry, and kinetics. Applications include physical principles in biology, global energy demands, and modern materials and technology.

Course Notes:

A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

This course is part of an integrated introduction to the physical science intended for students who plan to pursue a concentration in the physical or life sciences and/or to satisfy a pre-medical requirement in general/inorganic chemistry. Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep:

A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

Additional Course Attributes:

FAS: Course Level	Primarily for Undergraduate Students

Physical Sciences 10

Quantum and Statistical Foundations of Chemistry (107367)

Eugene Shakhnovich

2018 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the fundamental theories of quantum mechanics and statistical mechanics and their role in governing the behavior of matter. The course begins with the quantum behavior of a single electron and

develops the elements of the periodic table, the nature of the chemical bond, and the bulk properties of materials. Applications include semiconductor electronics, solar energy conversion, medical imaging, and the stability and dynamism of living systems. Calculus will be used extensively.

Course Notes: Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical school can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11.

Recommended Prep: A strong background in chemistry (Chemistry AP score of 5, or Physical Sciences 1, or equivalent preparation), mathematics at the level of Mathematics 1b (may be taken concurrently), and some familiarity with physics (force, energy, work, and electric charge).

Additional Course Attributes:

Attribute	Value(s)
FAS: General Education	Science of the Physical Universe

Physical Sciences 11

Foundations and Frontiers of Modern Chemistry: A Molecular and Global Perspective (107368)

James Anderson

Gregory C. Tucci

Lu Wang

2019 Spring (4 Credits)

Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

The Physical Sciences hold the key to solving unprecedented problems at the intersection of science, technology, and an array of rapidly emerging global scale challenges. The course emphasizes a molecular scale understanding of energy and entropy; free energy in equilibria, acid/base reactivity, and electrochemistry; molecular bonding and kinetics; catalysis in organic and inorganic systems; the union of quantum mechanics, nanostructures, and photovoltaics; and the analysis of nuclear energy. Case studies are used both to develop quantitative reasoning and to directly link these principles to global strategies.

Course Notes: Students are expected to have high school chemistry, or have completed Life and Physical Sciences A (LPS A) or Life Sciences 1a (LS 1a), or have received permission of the instructors. Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical students can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11. NOTE: Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep: A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed.

Foundational Chemistry and Biology (123833)

*Gregory C. Tucci**Michael Mavros**Martin Samuels*

2018 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course introduces fundamental concepts in chemistry and biology. Topics in chemistry include stoichiometry, acids and bases, aqueous solutions, gases, thermochemistry, electrons in atoms, and chemical bonding. The course also examines biological molecules, the transfer of information from DNA to RNA to protein, and cell structure and signaling.

Course Notes:

Students should use their scores on the Chemistry and Biology Placement Tests to determine whether to enroll in Life and Physical Sciences A or Life Sciences 1a. This course assumes fluency with high school algebra. Students who have completed Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, Physical Sciences 11, Chemistry 17 or Chemistry 20 may not take Life and Physical Sciences A for credit.

Requirements:

Anti-req: Cannot be taken for credit if Life Sciences 1a, OR Physical Sciences 1, OR Physical Sciences 10, OR Physical Sciences 11, OR Chemistry 17 OR Chemistry 20 already complete

Classical Philology 216

Greek Epistolography (207689)

Alexander Riehle

2018 Fall (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to Greek letter-writing as a medium of communication and literary genre from the archaic period to the Renaissance. We will read a broad range of texts, including early historiography and tragedy, literary letters of the classical period, Hellenistic and Roman papyrus letters, the Pauline Epistles, epistolary novels, late antique and Byzantine letter-collections, letter-writing manuals, and the prose and verse letters of Renaissance humanists. Topics discussed: oral vs. written communication, materiality, form and function, genre, fictionality, narrative.

Class Notes:

Class will meet from 9:45 to 11:45 a.m.

Classical Philology 268

Sociolinguistics and the Latin Language (207468)

Kathleen Coleman

2019 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Sociolinguistics studies the effects of social factors such as gender, class, region, occupation, and bilingualism on language and, conversely, the role of language in shaping human relations via power structures, gender dynamics, group identity, etc. In a language like Latin, where there are no native speakers to observe, a wide range of textual evidence must be employed, including—but not limited to—legal documents, bureaucratic reports, personal correspondence, informal graffiti, literary texts that purport to replicate the patterns of everyday speech, and much else. The seminar will address this material within the framework of research pioneered by scholars such as J. N. Adams, Eleanor Dickey, Rolando Ferri, Hilla Halla-aho, Bruno Rochette, and others.

Classical Studies 97A

Introduction to the Ancient Greek World (116729)

Paul Kosmin

2018 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This course will provide a broad overview of Greek history and culture from the Bronze Age through the Hellenistic period. We will survey major political, social, and cultural transformations, as well as major achievements in literature, material culture, and philosophy. Students will acquire familiarity with a wide variety of primary sources (all read in translation), key examples of Greek art and architecture, and selected secondary literature as they learn to appreciate a civilization that is considerably stranger and more complex than the image conveyed by modern commonplaces about "the Greeks."

Course Notes:

Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Class Notes:**Class will meet from 9:00 to 10:15 a.m.****Class will normally meet in sections during Friday session.****Additional Course Attributes:**

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the reception of classical literature by colonized peoples in such contexts as India, South Africa, Nigeria, and the Caribbean. Our aim is to discover the roles of Roman and above all Greek texts in responses to French, British, and American colonialism. The first half of the course adopts Sophocles' *Antigone* as a case study: in addition to reading the Greek tragedy, we will read four adaptations of the play to consider its legacy, including Femi Osofisan's *Tegonni* (Nigeria) and Tom Paulin's *Riot Act* (Ireland). The second half of the course alternates between additional ancient texts and adaptations, such as Aeschylus's *Oresteia* and Yaël Farber's *Molara* (South Africa) and Plato's *Apology* and Gandhi's *Story of a Soldier of Truth* (India). Major assignments include performances of scenes from *Antigone* and a research paper. All texts will be read in English.

Class Notes: Class will meet from 9:00 to 10:15 a.m.

This course considers how identity increased, limited, controlled, or otherwise shaped the mobility of individuals and groups in the Roman world, including women, slaves, freedpeople, and diaspora communities (e.g., Romans in non-Roman contexts, and also Jews). We will identify the structures that produced differences in mobility and consider how such groups understood and represented themselves in a variety of media as possessing a specific, shared identity and community. The course will draw on a

range of primary sources, including inscriptions and literary texts (both poetry and prose), covering the period from the third century BCE to the third century CE and derived from the entire Roman world, with a particular focus on well-studied and demographically diverse locales such as the island of Delos. Since interdisciplinary methodology and discussions about how to employ it will be central to our investigations, all primary texts will be read in translation, so as to open up the course to students from any department. Students who wish to read texts in Latin or Greek are welcome to join an optional session that will be scheduled after the start of the semester.

Class Notes: Class will meet from 12:00 to 2:00 p.m.

Modern Greek BA

Intermediate Modern Greek: Culture and Civilization (159842)

Calliopi Dourou

2018 Fall (4 Credits)

Schedule: MTWR 0900 AM - 1000 AM

Instructor Permissions: None

Enrollment Cap: n/a

Aims at further development of skills in speaking, comprehension, reading, and writing. Selected readings in prose (literary and journalistic), poetry, folksongs, modern music, and theater serve as an introduction to aspects of modern Greek literature and culture. The course is conducted in Greek and focuses on topics selected by the instructor and the students in the first term. Grammar is reviewed in the context of readings. Instruction is supplemented by online instruction.

Course Notes: Part one of a two part series.

Class Notes: Class will meet from 9:00 to 10:00 a.m.

Recommended Prep: An elementary knowledge of modern Greek equivalent to that of Modern Greek Aa and Ab.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

Modern Greek 100

Advanced Modern Greek: Introduction to Modern Greek Literature (123852)

Calliopi Dourou

2018 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Special Topic: From Book to Film: Cinematic Representations of Modern Greek Literature. How do words translate into images? Can the interpretively fraught perspective of an author lend itself to the sensorily rife gaze of a director? Is it possible for an enthralling book to evolve into an equally astounding film? These are some of the questions that will be addressed in this course, as students gain knowledge about significant events in Modern Greek history that have long preoccupied and inspired acclaimed authors and distinguished filmmakers alike. Through engagement in narrative analysis and interpretation students will also be encouraged to whet their critical reading and writing skills. Authors include: Ioanna Karystiane, Nikos Kazantzakes, Strates Myriveles, Alexandros Papadiamantes, Kosmas Polites, Giorgos Skampardones, Dido Soteriou, Kostas Tachtses, and Georgios Vizyenos. Directors include, among others: Jules Dassin, Michales Kakoyannes, Kostas Koutsomytes, and Panteles Voulgares.

Course Notes: Conducted in Modern Greek. Permission of instructor required.

Class Notes: Class will meet from 3:00 to 5:00 p.m.

Recommended Prep: Modern Greek Ba and Bb or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Subject: Greek

Greek AX

Ancient Greek Review and Reading (122172)

Ivy Livingston

2018 Fall (4 Credits)

Schedule:

T 0900 AM - 1000 AM

MRF 1030 AM - 1130 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Greek Ax is designed for students who have studied some Greek prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Greek grammar and apply that knowledge to the reading of short texts. Students should leave the course able to read with the precision that is necessary to use primary sources in research.

Course Notes:

Students wishing to continue after Greek Ax should proceed to Greek 10. No auditors. May be taken Pass/Fail.

Class Notes:

Class will meet from 1:30 to 2:30 p.m.

Recommended Prep:

Prerequisites: Students considering Greek Ax should take the Greek Placement Exam and consult with the Preceptor in the Classics

Additional Course Attributes:

Attribute	Value(s)
HCOL: Foreign Lang Citation	Ancient Greek
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	None
FAS: Meets Foreign Lang Req	Ancient Greek
FAS: Course Level	For Undergraduate and Graduate Students

Greek H

Introductory Greek Prose Composition (118190)

Ivy Livingston

2018 Fall (4 Credits)

Schedule:

MWF 0130 PM - 0230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Practice in the translation of sentences and connected prose passages into Attic Greek; review of forms and syntax; readings of selections from prose authors, with an introduction to stylistic analysis.

Class Notes: Class will meet from 1:30 to 2:30 p.m.

Recommended Prep: 100-level Greek prose reading course

Additional Course Attributes:

Attribute	Value(s)
HCOL: Foreign Lang Citation	Ancient Greek
FAS Divisional Distribution	Arts and Humanities
FAS: Meets Foreign Lang Req	Ancient Greek
All: Cross Reg Availability	Available for Harvard Cross Registration

Greek K

Advanced Greek Prose Composition (113714)

Gregory Mellen

2019 Spring (4 Credits)

Schedule:

F -

Instructor Permissions: None

Enrollment Cap:

n/a

Composition in the prose style of various authors and genres, with selected readings representing the development of classical Greek prose and its analysis by scholars ancient and modern.

Recommended Prep: Greek H or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
HCOL: Foreign Lang Citation	Ancient Greek
FAS Divisional Distribution	Arts and Humanities
FAS: Meets Foreign Lang Req	Ancient Greek

All: Cross Reg Availability	Available for Harvard Cross Registration

Greek 1

Introductory Ancient Greek 1 (203024)

Ivy Livingston

2018 Fall (4 Credits)

Schedule:

MTWR 0130 PM - 0230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Greek 1 is a starting point for those interested in learning to read ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes:

Students wishing to continue after Greek 1 should proceed to Greek 2, which continues the introductory sequence and prepares students for Greek 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Class Notes:

Class will meet from 1:30 to 2:30 p.m.

Recommended Prep:

None. Greek 1 is an introductory course for students with no prior experience. Those who have studied Greek formally are not permitted to enroll in Greek 1, but should instead consider Greek Ax (Review and Reading) or Greek 1x (Accelerated Introduction to Greek); please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Additional Course Attributes:

Attribute	Value(s)
HCOL: Foreign Lang Citation	Ancient Greek
FAS Divisional Distribution	None
FAS: Final Assessment Category	Three-hour Exam
FAS: Meets Foreign Lang Req	Ancient Greek
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Greek 1X

Accelerated Introduction to Ancient Greek 1 (203257)

Ivy Livingston

2019 Spring (4 Credits)

Schedule:

MTWRF 1030 AM - 1130 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Greek 1x is the first half of a two-semester intensive introduction to ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings at a more rapid pace than Greek 1. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes:

Students wishing to continue after Greek 1x should proceed to Greek 2x, which completes the accelerated introductory sequence and prepares students for Greek 10. No auditors. May be taken Pass/Fail.

Recommended Prep: Prerequisites: None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Greek 1x with the permission of the course head.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Greek 10

Introduction to Ancient Greek Literature (203230)

Ivy Livingston

2019 Spring (4 Credits)

Schedule:

MW 1200 PM - 0100 PM

R 1200 PM - 0100 PM

Instructor Permissions: None

Enrollment Cap: n/a

Greek 10 offers close reading and analysis of Greek literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.

Course Notes:

After Greek 10, students may take Greek courses at the 100-level, but are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@fas.harvard.edu) about their choice of course. Students may also take Greek 10 more than once, with the permission of the course head. Auditors allowed with permission of course head.

Recommended Prep:

Any one of the following: Greek Ab (prior to Fall 2016); Greek 3; Greek 2x; Greek Ax. Students who have not studied Greek at Harvard should take the Greek Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu). Auditors allowed with permission of course head. May be taken Pass/Fail.

Greek 110

Plato's *Euthydemus* (108094)

Russell Jones

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Plato's *Euthydemus* is a fun but enigmatic dialogue. We will tackle the whole of it in a close, semester-long reading. We'll give sustained attention to matters of syntax, as well as to the relationship between style and content in the text. And, of course, we'll attempt to understand the work as a whole as well as in its details. In doing so, we should become more fluent readers of Greek as well as more skillful interpreters of Plato.

Class Notes:

Class will meet from 1:30 to 2:45 p.m.

Recommended Prep:

Greek 10 or equivalent.

History of Greek Literature II (119867)

Alexander Riehle

2018 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course offers a survey of Greek literature from around 400 BC to 400 AD through the lens of rhetorical discourse. We will read extracts from a broad range of texts from the Classical, Hellenistic, Roman and Late Antique periods. The selection will include exemplary orations (e.g., Demosthenes' *First Philippic*), inserted speeches in narrative texts (e.g., Pericles' famous funeral oration as rendered by Thucydides, Jesus' *Sermon on the Mount* according to the Gospel of Matthew), a panegyric poem (Theocritus' *Idyll 17*), texts about rhetoric and rhetoricians (Aristotle's *Rhetoric*, Philostratus' *Lives of the Sophists*, Lucian's satire *Teacher of Rhetoric*), and rhetorical exercises (Synesius' *Encomium of Baldness* which he wrote in response to Dio's *Encomium of Hair*). The close reading and translation of the excerpts will be

accompanied by discussions of genre in relation to historical contexts, performance, and discursive and linguistic (dis)continuities.

Class Notes: Class will meet from 9:00 to 10:15 a.m.

Latin AX

Latin Review and Reading (122177)

Ivy Livingston

2018 Fall (4 Credits)

Schedule:

MTWR 1030 AM - 1130 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Latin Ax is designed for students who have studied some Latin prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Latin grammar and apply that knowledge to the reading of short classical texts, both literary and non-literary (such as inscriptions). Students should leave the course able to read with the precision that is necessary to use primary sources in research.

Course Notes:

Students wishing to continue after Latin Ax should proceed to Latin 10. No auditors. May be taken Pass/Fail.

Class Notes:**Class will meet from 10:30 to 11:30 a.m.****Recommended Prep:**

Students considering Latin Ax should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Latin 1 Section: LEC

Introductory Latin 1 (203025)

Ivy Livingston

2018 Fall (4 Credits)

Schedule: MTWR -**Instructor Permissions:** None**Enrollment Cap:** n/a

Latin 1 is a starting point for those interested in learning to read the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings.

Course Notes: Students wishing to continue after Latin 1 should proceed to Latin 2, which continues the introductory sequence and prepares students for Latin 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Class Notes: Latin 1 will meet four times per week for up to 75 minutes each day: MTWTh. Three sections/times are available: 9:00 a.m., 10:30 a.m., and 1:30 p.m. Please attend any section until the Course Registration Deadline (September 12th, 2018).

Recommended Prep: None. Latin 1 is an introductory course for students with no prior experience. Those who have studied Latin formally are not permitted to enroll in Latin 1, but should instead consider Latin Ax (Review and Reading) or Latin 1x (Accelerated Introduction to Latin); please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Additional Course Attributes:

Attribute	Value(s)

Latin 1X

Accelerated Introductory Latin 1 (203254)

Ivy Livingston

2019 Spring (4 Credits)

Schedule: MTWRF 0130 PM - 0230 PM**Instructor Permissions:** None**Enrollment Cap:** n/a

Latin 1x is the first half of a two-semester intensive introduction to the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings at a more rapid pace than Latin 1.

Course Notes: Students wishing to continue after Latin 1x should proceed to Latin 2x, which completes the accelerated introductory sequence and prepares students for Latin 10.
No auditors. May be taken Pass/Fail.

Recommended Prep: None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Latin 1x with the permission of the course head.

Julius Caesar: Leader, Linguist, Man of Letters (122966)

Gregory Mellen

2018 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0100 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Mercurial and enigmatic to his contemporaries, Julius Caesar remains in many ways a mystery despite his central place in Roman history. This course will examine Caesar's role in the politics, literature, and linguistic debates of his day. We will read extensive selections from the *commentarii*, with an eye to Caesar's propagandistic self-presentation and his unique narrative style. We will also examine the fragmentary remains of Caesar's oratory, letters, and linguistic writings. Readings from other ancient authors in translation (Cicero, Suetonius) and from modern scholarship will help to frame our discussion of a figure who changed the shape (unwittingly?) of both Roman history and the Latin language.

Class Notes:**Class will meet from 12:00 to 1:00 p.m.****Additional Course Attributes:**

Latin Epigraphy (123625)

Kathleen Coleman

2018 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to Latin inscriptions, both public and private, from the late Republic to the early Christian period. Every surviving category will be sampled, from casual graffiti and laconic epitaphs to colonial charters and senatorial decrees, via apothecaries' stamps, military diplomas, shop signs, milestones, and much else. Participants will learn how to transcribe, supplement, and translate these texts, and interpret them within their social and cultural context. Special attention will be paid to their Latinity, which is often unorthodox. The course will include visits to museum collections and a demonstration of the process of making an epigraphic "squeeze."

Course Notes:

May be taken for graduate credit as <http://www.courses.fas.harvard.edu/78532>>Classical Philology 219. Latin Epigraphy with permission of the instructor.

Subject: Classical Archaeology

Classical Archaeology 10

Introduction to the Classical Archaeology of Greek Antiquity (108583)

Adrian Staehli

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0230 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

The course provides a broad overview of the development of Greek art, architecture, and material culture from the end of the "Dark Ages" through the Archaic and Classical periods to the Hellenistic age. It offers basic knowledge about core categories of archaeological artifacts and remains within their topographical setting and the context of Greek culture and society, and includes issues of archaeological method and problems of current research.

Course Notes:

This course is a basic introduction to Greek art and archaeology and is specifically designed for undergraduates; graduate students are

welcome, but the course does not count toward the Classical Archaeology course requirements for graduate students in the Classics or the History of Art and Architecture.

Class Notes: Class will meet from 1:30 to 2:30 p.m.

Classical Archaeology 147

'Reading' Visual Media: The Trojan War in Classical Art (207706)

Adrian Staehli

2019 Spring (4 Credits)

Schedule: M 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

The seminar explores visual representations of the Trojan War in different media of Greek and Roman antiquity from the beginning of mythical imagery in 7th century BC Greece to Late Antiquity, by paying particular attention to the social contexts and practices which framed the 'consumption' of such images.

Prerequisites: the seminar addresses graduate students as well as undergraduates with previous exposure to Classical Archaeology, Classical Philology, or Ancient History; graduate students are expected to read German scholarship.

Additional Course Attributes:

Attribute	Value(s)

Classical Archaeology 162

The Greek Symposion (207664)

Adrian Staehli

Susanne Ebbinghaus

2018 Fall (4 Credits)

Schedule: M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This seminar explores the Greek cultural practice of the symposion—the formal drinking party of the male élite—in the archaic and classical period (7th to 4th century BC), by focusing on Greek painted pottery and its images, which provide the most abundant information about the social rituals of the symposion. The seminar takes place at the occasion of the exhibition "Animal-Shaped Vessels from the Ancient World" at the [Harvard Art Museums](#), a major exhibition focusing on animal-shaped drinking vessels as prestige objects and performative props used at feasts and drinking parties, and will also draw on the Museums's rich collections of Greek painted pottery.

Class Notes: Class will meet from 3:00 to 5:00 p.m.

Classical Archaeology 183

Money and Coinage in the Ancient World (203780)

Carmen Arnold-Biucchi

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This is a hands-on course about the development of the ancient economy from barter and ingots to coinage. It is intended as an introduction to Greek and Roman coins as primary sources for the study of ancient history. Students will also learn the basics of numismatic methodology by handling and studying ancient coins from the collection in the [Harvard Art Museums](#). We will not only look at the different mints and coinages and what their production can tell us about the ancient economy, but also focus on the meaning of the designs (coin types) and examine how their imagery was used to advertise the different city-states or promote the accomplishments of kings and emperors.

Classical Archaeology 225

Hellenistic Sculpture (207705)

Adrian Staehli

2019 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Greek sculpture of the Hellenistic period (i.e. from the end of the 4th to the 1st century BC) has become again, in recent years, an exciting area of research with a renewed focus on questions of the spatial setting and staging of sculpture, the involvement of the beholder, the manipulation of the experience of perception through specific artistic means that play with appearance and reality, with mimetic illusion and deception, and with new modes of expression and visual narration, which responded to expectations of beholders familiar with new, sophisticated ideas of aesthetic experience which we see reflected in contemporary epaphrastic poetry.

Recommended Prep:

The seminar addresses primarily graduate students; undergraduates with previous exposure to Classical Archaeology are more than welcome, but they are – like the graduate students – required to read German scholarship

Subject: Medieval Latin

Medieval Latin 10

Introduction to Medieval Latin Literature (203237)

Adam Trettel

2019 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Medieval Latin 10 offers close reading and analysis of post-classical literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.

Course Notes: After Medieval Latin 10, students may take Latin courses at the 100-level, but are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@classics.harvard.edu) about their choice of course.

Recommended Prep: Any one of the following: Latin Ab (prior to Fall 2016); Latin 3; Latin 2x; Latin Ax. Students who have not studied Latin at Harvard should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Medieval Latin 106

Augustine Confessions (108587)

Adam Trettel

2019 Spring (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course will serve as an introduction to the historical context, language, and narrative of Augustine's *Confessions*. In the first half of the course, we will be focusing especially on *conf.* I–IV, where Augustine recounts events from his infancy up to the time of his young adulthood; we will then read a series of selections from the later books of *conf.* Larger themes to be discussed include late Roman educational practices, Augustine's theory of language, his attitude to friendship and sexuality, the role Manichaeism played in his intellectual formation, and his methods of organizing his thoughts.

Recommended Prep: Latin Ba, Latin Bb, Latin Bam, Latin Bbm, Latin 10, Medieval Latin 10,

or equivalent.

Subject: Medieval Greek

Medieval Greek 115

Introduction to Byzantine Greek (121896)

Alexander Riehle

2019 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to the language of late antique and Byzantine Greek texts. This "Medieval Greek" should not be understood as a particular, "intermediate" stage in a supposedly linear development from Ancient to Modern Greek, but rather as a conventional designation of a broad continuum of linguistic registers, ranging from highly archaizing usages ("Atticism") to the so-called vernacular. In the surviving texts, these registers may vary significantly, depending on the author and his (or rarely, her) audience, the genre and other contextual factors. Through a close reading of representative literary and "sub-literary" texts from various periods and genres, the course intends to give students a first impression of this diversity and multi-layeredness of Greek writing in late antiquity and the Middle Ages. Although the main focus will be on grammatical and lexical analysis, we will also discuss related aspects of composition and style.

Topic: Repeat for credit

Recommended Prep: Greek Ba, Greek Bb, Greek 10, or equivalent.

Tutorial - Sophomore Year (114038)

Annette Lienau

2019 Spring (4 Credits)

Schedule: F 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

How to make a sound demonstration in the field of literary analysis? What are the building blocks for a cogent approach to comparative studies? We'll pay attention to various scales of textual commentary, from the microscopic lens of close reading to the medium scope of thematic reading, with an eye to macroscopic trends in literary history and critical theory. We'll befriend texts ranging from various genres (poetry; fiction; drama) and relate form to content, historical context to contemporary significance, and join the dots connecting notions of authorship to reception theory.

The Politics of Yiddish (207574)

Saul Zaritt

2018 Fall (4 Credits)

Schedule:

W 1200 PM - 0200 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

A bastardized German, a jargon, a woman's vernacular, an old world language, a dying and ghostly tongue, a Hasidic language, a queer language, a radical language—these are just a few of the ways that Yiddish has been labeled over its one-thousand-year history. This course will trace the shifting politics attached to Yiddish from its early modern beginnings as a language of translation between Jewish and non-Jewish cultures to its postwar vacillation between a language of mourning and nostalgia, Jewish American humor, Hasidic isolation, and contemporary Jewish radicalism. Through poetry, fiction, essay, and film, we will discuss what it might mean to discover "the secret language of the Jews" at the origins of Jewish socialism and at the foundations of diaspora nationalism. All texts will be read in translation.

Child Sacrifice, Pros and Cons: The Binding of Isaac in Jewish, Christian, Islamic, and Modern Lit (160331)

David Stern

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Child Sacrifice-- specifically, the story of the parent's sacrifice of the first-born child-- lies at the heart of Western religion and culture. The Biblical narrative in Genesis 22, known as the Binding of Isaac, is one of the most famous and problematic tales in the Bible. The same narrative is foundational to Christianity. Later Jewish tradition has interpreted the Biblical text in countless ways from the ancient period down to the present day. The narrative figures prominently in Islam from the Qur'an on. And the Biblical story has been criticized and critiqued since the Middle Ages as a barbaric narrative. Recent works have blamed it for the ubiquity of child abuse in Western society, and it has become a ubiquitous motif of anti-war and protest poetry all over the world. This course will use the interpretive career and literary history of Genesis 22 as a lens through which to study the place of this foundational narrative in Western culture.

Readings will include Biblical texts, Euripides' Iphigeneia in Aulis, Philo of Alexandria, ancient Jewish sources, the New Testament, St. Augustine and other Christian exegetes, the Qur'an and later Islamic traditions, Kierkegaard's Fear and Trembling, Martin Buber, Kafka, Bob Dylan, Yehuda Amichai, and Leonard Cohen, among many other modern writers and poets.

Ghostwriters and Ventriloquists: Postwar Jewish American Culture (203082)

Saul Zaritt

2018 Fall (4 Credits)

Schedule:

F 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course takes ideas of the "ghostwriter" and the "ventriloquist" as a lens through which to read postwar Jewish American culture. In the wake of the Holocaust, Jewish American writers and cultural producers began to feel a responsibility to a lost civilization that seemed to haunt their every creative act. Even as they achieved worldwide fame, these artists felt both burdened and inspired by old world ghosts. Often the very success of a given work was attributed to the ways in which it reanimated and revoiced ghosts in order to alternately dazzle and comfort audiences. This course asks: How do strategies of ghostwriting and ventriloquy compensate for trauma and loss? In what ways do such reenactments modify an original text? Through analysis of postwar texts and films in English and Yiddish (in translation), this course studies how specters of the past function both as arbiters of cultural value and as reminders of the discontinuities and traumas of the Jewish American present. Films include *Tevya*, *Fiddler on the Roof*, *The Diary of Anne Frank*, and the TV series *Transparent*. We will read texts by Sholem Aleichem, Isaac Bashevis Singer, Philip Roth, Cynthia Ozick, Grace Paley, and others.

W.G. Sebald's Intertextuality (207619)

Judith Ryan

2019 Spring (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Selected works by W.G. Sebald will serve as starting points for thinking about intertextuality in the decade leading up to the twenty-first century. We will read two short selections from *Vertigo* (Schwindel. Gefühle), one narrative from *The Emigrants* (*Die Ausgewanderten*), the entirety of *The Rings of Saturn* (*Die Ringe des Saturn*), and relevant sections of *Austerlitz*. How and why does Sebald make use of previous texts in these creative prose works? What theories of intertextuality might help us understand his often baffling texts? Should we classify Sebald as a belated modernist or a postmodern writer? Two sessions of the course will be conducted in Houghton Library, where we will examine Michael Hulse's typescript translations and Sebald's hand-written corrections. No previous knowledge of Sebald's works or of intertextuality/intermediality is required.

Course Notes:

Lectures and discussion in English; students will read the texts in the original German or in English translation according to their abilities.

Class Notes:

This course meets 12:45-2:45pm

What's Love Got to Do With It; Love Poetry of the Middle Ages and Early Modernity (108791)

Luis Giron Negron

2019 Spring (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Does love have a history? This course will explore a particularly rich, multiseccular episode in the literary history of this emotion: the efflorescence and varieties of love poetry, both lyrical and narrative, in Europe and the Middle East from the Middle Ages through the 16th century. Weekly discussions will center on close readings of selected love poems and versified narratives from a variety of literary traditions, including: Provençal troubadour lyric; French chansons, the Germanic Minnesang and the Galician-Portuguese cantigas (the question of amour courtois); Ibero-Romance and colloquial Arabic jarchas; the Italian dolce stil novo; the Petrarchan sonnet and its early modern heirs in Portugal, England and Spain; Arabo-Andalusian and Hispano-Jewish qaṣīd and muwashshaḥāt, medieval Latin love lyric; Persian Sufi and Christian mystical love poetry; Dante's Vita nuova; and selections from two other erotological classics in narrative verse, *Libro de buen amor* and *Roman de la Rose*. Discussions will be framed by an overview of both premodern discussions on love – how love is conceptualized at the intersection of philosophy, theology and medicine by Jewish, Christian and Muslim thinkers– and contemporary scholarly debates on the origins and development of medieval love literature.

Course Notes: Offered jointly with the Divinity School as 3725.

Mysticism and Literature (114368)

Luis Giron Negron

2018 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Examines trends, issues and debates in the comparative study of mystical literature. Close readings of primary works by Jewish, Christian and Muslim authors from the Middle Ages through the 16th century. Premodern authors include Saint John of the Cross, Saint Theresa of Ávila, Mechtild of Magdeburg, Hadewijch, Pseudo-Dionysius, Dante Alighieri, Bernard of Clairvaux, Margery Kempe, Bahya ibn Paquda, Solomon ibn Gabirol, Yehudah Halevi, Moses de León (Sefer ha-Zohar), Maulana Rumi, al-Hallaj, Ibn Farid, Ibn al-'Arabi, and Fariduddin Attar. Topics include poetry and mysticism; allegory, symbolism and Scripture; body and gender; apophasis vs cataphasis; exemplarity and autobiographism; language and experience. Also examines creative engagement of pre-modern mystical literature in selected works by modern authors (Borges, T.S. Eliot, Rilke), scholars of religion (Bernard McGinn, Moshe Idel, Annemarie Schimmel) and literary / cultural theorists (Michel de Certeau, Michael Sells).

Course Notes: Offered jointly with the Divinity School as 3802.

14 Things (A Secret History of Italian Design) (207623)

Jeffrey Schnapp

2019 Spring (4 Credits)

Schedule:

R 1000 AM - 0100 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Fourteen Things explores intertwinings between design, science, technology, society, art, and culture by means of the "excavation" of fifteen objects from different periods in the history of modern Italian design, from the turn of the 20th century to the present. Combining micro- and macro-perspectives, it approaches design history from a broad aesthetic, historical, and socio-anthropological standpoint. The seminar combines readings from contemporary Thing Theory, material culture studies, and design history, with materials from literature, popular culture, and media. It is built around a chronologically ordered sequence of case studies of exemplary things: artifacts designed for purposes of sitting, drinking, lighting, walking, moving about, cooling down, cooking and cleaning, writing and calculating, or media viewing.

Peripheral Modernisms (207621)

David Damrosch

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The past several years have seen ambitious attempts to rethink modernism as a global phenomenon rather than a largely Anglo-American and West European movement. Center-periphery relations have often been foregrounded in these efforts, and in critiques of them. Building on theoretical statements and critiques by Jorge Luis Borges, Kenzaburo Oe, Franco Moretti, Pascale Casanova, Emily Apter, Eric Hayot, and Susan Stanford Friedman, this seminar will explore the politics of language, periodization, and center-periphery relations both within and beyond the West, in works by Higuchi Ichiyo, James Joyce, Lu Xun, Ryunosuke Akutagawa, Virginia Woolf, Djuna Barnes, Borges, Kukrit Pramoj, Pramodya Ananta Toer, and Derek Walcott.

Living the Lives of Others: Reading Beyond the Hermeneutics of Suspicion (Grad Seminar in Gen Ed) (207624)

Diana Sorensen

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A Graduate Seminar in General Education focused on creating a Gen Ed course that will show that literary reading has the power to transform our understanding of alterity, to experience the lives of others, entering the minds of characters and often transforming our assumptions. The driving question is how to construct a course that would lead undergraduates to enter the civic sphere equipped to read differently, led by a hermeneutics of hope and recognition. We will begin with a critical assessment of the hermeneutics of suspicion, and then consider emerging reading criticism such as surface reading, reparative reading, enchanted reading, materialist reading and assembly reading.

Course Notes: The seminar will design and develop a General Education course on these themes for undergraduates. Interested students should contact the instructor before the start of the term.

Comparative Literature 255

Dysfunctional Family as National Allegory in the Middle Eastern Novel (109673)

William Granara

2018 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The radical changes following the emergence of the modern nation state in the Middle East have been most graphically illustrated in the novel. This course examines the trope of the family in flux in narrating the destabilization of traditional social structures, shifting loyalties, and conflicting articulations of identity. The course interrogates the F. Jameson and A. Ahmad debates on 'thirdworld' and 'national allegory' in reading selected novels of the post WWII period to the present, from Turkey, Iran, Israel, and the Arab World. Authors include Naguib Mahfuz, Mohamed Shukri, Hanan Shaykh, Sahar Khalifa, Amos Oz, Elif Shafak, and Mahmoud Dowlatabadi.

Course Notes: All readings in English translation, but students are encouraged to read in the original. Course will count for NELC concentration and citation in Modern Middle Eastern Studies. Open to Undergraduates.

Class Notes: This course meets 3-5pm

Thinking and Writing Transculturally (123880)

Karen Thornber

2019 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores approaches to literature and transculturation in the context of new understandings of human and textual border creation and crossings. Topics include the ethics of dividing cultural products along ethnic, linguistic, and national lines on the one hand and classifying phenomena as global on the other, and the possibilities and ramifications of cross-cultural study. We also examine the relationship between creative production/literary scholarship and ethnic studies, empire and (post)colonialism, identity, travel/migration/exile/diaspora, labor, war, trauma, multilingualism, translingualism, literary reconfiguration (adaptation, intertextuality), and world literature. Course readings are drawn from Africa, Asia, and the Americas. New syllabus for 2019.

Ritual Poetics (203241)

Panagiotis Roilos

2019 Spring (4 Credits)

Schedule:

R 0600 PM - 0800 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the interaction between ritual modes of signification, (written as well as traditional oral) literature, and performance. The seminar proposes an interdisciplinary approach to the topic on the basis of anthropological research and literary and cultural theory. Specific literary examples are discussed in transhistorical and comparative contexts, ranging from ancient Greek tragedy to avant-garde literature.

Class Notes: This course meets 6-8pm

Computer Science

Subject: Computer Science

Computer Science 1

Great Ideas in Computer Science (119953)

Henry Leitner

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the most important discoveries and intellectual paradigms in computer science, designed for students with little or no previous background. Explores problem-solving using high and low-level programming languages; presents an integrated view of computer systems, from switching circuits up through compilers and GUI design. Examines theoretical and practical limitations related to unsolvable and intractable computational problems, and the social and ethical dilemmas presented by such issues as software unreliability and invasions of privacy.

Course Notes: May not be taken for credit after completing Computer Science 50.

Additional Course Attributes:

Attribute	Value(s)
FAS: General Education	Empirical and Mathematical Reasoning
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Computer Science 20

Discrete Mathematics for Computer Science (128073)

Rebecca Nesson

2019 Spring (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Widely applicable mathematical tools for computer science, including topics from logic, set theory, combinatorics, number theory, probability theory, and graph theory. Practice in reasoning formally and proving theorems.

Course Notes: Covers material used in Computer Science 121 and Computer Science 124. Ordinarily, not to be taken after those courses or after courses such as Applied Mathematics 106, Applied Mathematics 107, Mathematics 101, and Mathematics 153.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Core Curriculum	Quantitative Reasoning
FAS: Course Level	Primarily for Undergraduate Students
FAS: General Education	Empirical and Mathematical Reasoning

All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 50

Introduction to Computer Science (152514)

David J. Malan

2018 Fall (4 Credits)

Schedule:

F 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches you how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web development. Languages include C, Python, SQL, and JavaScript plus CSS and HTML. Problem sets inspired by real-world domains of biology, cryptography, finance, forensics, and gaming. Designed for concentrators and non-concentrators alike, with or without prior programming experience. 68% of CS50 students have never taken CS before.

Class Notes:

Students may simultaneously enroll in CS50 and another course that meets at the same time, watching CS50's lectures anytime online and attending the other course in person. To do so, students should enroll in the other course via my.harvard.edu and then email enrollment@fas.harvard.edu to have CS50 manually added to their crimson carts as well. The Ad Board has already granted this exception for CS50; no other steps are required. CS50 is ordinarily graded SAT/UNS, though students taking CS50 to fulfill old Gen Ed requirements or whose concentration requires letter grades should change their grading status to letter-graded by the term's fifth Monday. First years may take both CS50 and a freshman seminar SAT/UNS. All students are expected to attend an orientation meeting either on Tue 9/11, 4:30pm–5:45pm, in Northwest Science B103 or on Wed 9/12, 6pm–7:15pm, in Science Center D; students with conflicts may watch online. Required sections to be arranged. See cs50.harvard.edu for FAQs.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: General Education	Empirical and Mathematical Reasoning
FAS: Core Curriculum	Quantitative Reasoning
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 51

Abstraction and Design in Computation (112960)

Stuart Shieber

2019 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Fundamental concepts in the design of computer programs, emphasizing the crucial role of abstraction. The goal of the course is to give students insight into the difference between programming and

programming well. To emphasize the differing approaches to expressing programming solutions, you will learn to program in a variety of paradigms -- including functional, imperative, and object-oriented. Important ideas from software engineering and models of computation will inform these different views of programming.

Course Notes: Formerly Introduction to Computer Science II.

Class Notes: The first meetings of the course will be January 29 and 31 at 10:30 in Menschel Hall, downstairs in the Harvard Art Museums building (Fogg), 32 Quincy Street.

Students should have programming ability and computer science knowledge at the level of CS50; mathematical sophistication at the advanced high school level. FAS students in doubt about their preparation for the course may find the self-evaluation "preparation check" of interest. It is available in [PDF form on Canvas](#), along with the [answer key](#), under Files > Reference.

Computer Science 61

Systems Programming and Machine Organization (123623)

Eddie Kohler

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Fundamentals of computer systems programming, machine organization, and performance tuning. This course provides a solid background in systems programming and a deep understanding of low-level machine organization and design. Topics include C and assembly language programming, program optimization, memory hierarchy and caching, virtual memory and dynamic memory management, concurrency, threads, and synchronization.

Recommended Prep: CS50 or some experience programming in C.

Additional Course Attributes:

Applied Ethical and Governance Challenges in AI (203579)

Jonathan Zittrain

Joichi Ito

2019 Spring (4 Credits)

Schedule:

T 0500 PM - 0700 PM

Instructor Permissions: Instructor

Enrollment Cap:

22

This course will pursue a cross-disciplinary investigation of the development and deployment of the opaque complex adaptive systems that are increasingly in public and private use. We will explore the proliferation of algorithmic decisionmaking, autonomous systems, and machine learning and explanation; the search for balance between regulation and innovation; and the effects of AI on the dissemination of information, along with questions related to individual rights, discrimination, and architectures of control.

Course Notes:

This course is jointly listed with HLS and HKS, and does not count for concentration credit in Computer Science. Enrollment by application. The link to the course application can be found at <https://goo.gl/forms/ijFh75qlcFtiyaiZ2>. Applications will be due by November 11.

Internet & Society: The Technologies and Politics of Control (203578)

Jonathan Zittrain

Jordi Weinstock

2019 Spring (4 Credits)

Schedule:

M 0500 PM - 0700 PM

Instructor Permissions: Instructor

Enrollment Cap:

22

This course offers a rigorous introduction to the field of cyberlaw. We will investigate the evolving nature of online architecture and activities, and the ways in which law has been, and will be, leveraged to influence them.

Course themes include the complex interaction between Internet governance organizations and sovereign states, the search for balance between the ease of disseminating information online and the interest of copyright holders, privacy advocates, and others in controlling that dissemination, and the roles of intermediaries and platforms in shaping what people can and cannot do online. The course will entail an intense array of learning and teaching methods. Students will be expected to participate in a variety of activities. May include Berkman Center fellows and affiliates.

Course Notes:

This course will be taught jointly by Professor Jonathan Zittrain and Mr. Jordi Weinstock. This course is jointly listed with HLS and HKS, and does not count for concentration credit in Computer Science. The link to the course application can be found at <https://goo.gl/forms/1Wc92mnMUDTN9CXI2>. Applications will be due by November 11.

Law for Algorithms: A Research and Discussion Forum (210870)

Cynthia Dwork

2018 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Human-designed algorithms -- from the digital to the genetic -- reach ever more deeply into our lives, creating alternate and sometimes enhanced manifestations of social and biological processes that yield powerful levers for good and ill amidst a sea of unforeseen consequences. This cross-cutting, interdisciplinary, course connects concepts of proof, verifiability, privacy, security, and trust in computer science with legal concepts of autonomy, consent, governance, and liability in law, and examines interests at the evolving intersection of DNA technology and the law.

Course Notes:

The course consists of weekly meetings to be attended simultaneously by faculty, students and scholars based at Harvard, Berkeley, Columbia and Boston University, with an optional research project. Sessions will be held every Thursday 3-5pm EST. Additional Faculty: Martha Minow (HLS), Ran Canetti (BU), Daniela Caruso (BU), Stacey Dogan (BU), Shafi Goldwasser (UC Berkeley), and Patricia Williams (Columbia).

Class Notes:

Starting on September 13 the class will meet in Maxwell Dworkin G125.

CS+X: Software Engineering in the Arts and Humanities (207609)

David J. Malan

2018 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Introduction to applications of computer science (including web technologies, visualization, and database design) to domains in the arts and humanities. Emphasis on principles of software engineering and best practices, including code reviews, source control, and testing. Languages include JavaScript and SQL. Students work in teams to design and implement solutions to problems proposed by faculty from departments across campus. Offered jointly with Yale University.

Class Notes:

Enrollment limited; apply at cs.harvard.edu/100. COMPSCI 100 will meet at 1 Story Street #306 (not Maxwell Dworkin G125).

Recommended Prep:

CS50 or equivalent required.

Computer Science 109A

Data Science 1: Introduction to Data Science (109899)

*Pavlos Protopapas**Kevin A. Rader*

2018 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep: Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements: Not to be taken in addition to Applied Computation 209, or Applied Computation 209A, or Statistics 121, or Statistics 121A.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 109B

Data Science 2: Advanced Topics in Data Science (203546)

Pavlos Protopapas

Mark Glickman

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes: Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.

Recommended Prep: CS 109a, AC 209a, or Stat 121a required.

Requirements: Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking CS 109B) AND (Not to be taken in addition to CS 109, OR APCOMP 209, OR APCOMP 209B, OR STAT 121, OR STAT 121B.)

Computer Science 121

Introduction to Theoretical Computer Science (119064)

Boaz Barak

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Computation occurs over a variety of substrates including silicon, neurons, DNA, the stock market, bee colonies and many others. In this course we will study the fundamental capabilities and limitations of computation, including the phenomenon of universality and the duality of code and data. Some of the questions we will touch upon include: Are there functions that cannot be computed? Are there true mathematical statements that can't be proven? Are there encryption schemes that can't be broken? Is randomness ever useful for computing? Can we use the quirks of quantum mechanics to speed up computation?

Course Notes: Students may not receive credit for both CS 121 and CS 125.

Recommended Prep: Experience in formal mathematics at the level of CS 20. A "Homework Zero" will be posted on the course website <http://www.boazbarak.org/cs121/> by July 1st. It is highly recommended that students complete it before the first lecture.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam

Networks (160409)

Yaron Singer

Michael Mitzenmacher

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Networks—of social relationships, economic interdependencies, and digital interactions—are critical in shaping our lives. This course introduces models and algorithms that help us understand networks. Fundamental concepts from applied mathematics, microeconomics, and computer science will be presented through the lens of network science, in order to equip students to usefully analyze the "big data" generated by online networks. Applications discussed include the viral spread of ideas, maximizing influence, and the contagion of economic downturns. Concepts and tools covered include game theory, graph theory, data mining, and machine learning.

Recommended Prep: Linear Algebra, Calculus, probability (either their courses or their equivalents): AM 21a, AM 21b, Statistics 110.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 136

Economics and Computation (128164)

David Parkes

2018 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The interplay between economic thinking and computational thinking as it relates to electronic commerce, social networks, collective intelligence and networked systems. Topics covered include: game theory, peer production, reputation and recommender systems, prediction markets, crowd sourcing, network influence and dynamics, auctions and mechanisms, privacy and security, matching and allocation problems, computational social choice and behavioral game theory. Emphasis will be given to core methodologies, with students engaged in theoretical, computational and empirical exercises.

Course Notes: Formerly Computer Science 186

Recommended Prep: Applied Math 21b, Computer Science 51 or equivalent, Statistics 110, and one of Computer Science 181, Computer Science 182, Economics 1011a, Economics 1052, or Economics 1056.

Additional Course Attributes:

2018 Fall (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Computer networking has enabled the emergence of mobile and cloud computing, creating two of the most important technological breakthroughs in computing of the past decade. We expect three major focuses in the next ten years. First, we will witness the emergence of 5G wireless mobile networks, which will begin to replace the current 4G networks as early as 2020. Second, cyber security will receive unprecedented attention from industry. Third, blockchain technology, which has powered Bitcoin, is creating a new trusted network infrastructure that will allow information to be distributed but not copied. While these areas are each rich in intellectual content on their own, they will also interplay with one other, creating interesting opportunities for those versed in all three. In order to play a role in this era of network-based computing, students must have a thorough understanding of these networking technologies and applications. Beyond teaching the basic networking protocols, which have become very mature and can be treated as a black box, in CS 143, we will teach new networking issues and topics of significance. This focus on upcoming wireless, network security, and blockchain advancements is the motivation for CS 143 this semester. Students in the course will read and discuss basic material as well as the latest literature, work on homework assignments, gain hands-on experience through network programming, and have the opportunity to present the concepts and insights learned through a final project.

Recommended Prep: CS50 (or programming experience) and strong interest in the subject matter. Lab sessions will be provided to give extra support.

Additional Course Attributes:

Attribute	Value(s)

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Deep neural networks (DNNs) are becoming a popular tool in data-driven applications. One of the next frontiers is distributed DNNs over computer networks for improved scaling (e.g., for scaling training as in federated learning) and parallel DNNs over processor arrays for low-latency inference in real-time applications. To this end, there is a need to understand issues such as communication, computation, and accuracy trade-offs. This research-oriented course will address this relatively new, yet rapidly advancing, topic. We will survey the main approaches, with a unique focus on the interplay between deep learning models, parallel and distributed computing architectures, and the hardware structures of end devices. The class will be organized into the following eight modules:

Motivations for parallel and distributed deep learning; Parallelism available in deep neural networks; Review of background concepts in deep learning, computer networks, computer architectures, and FPGA/ASIC hardware accelerators; Deep dive case studies in parallel and distributed training and inference (e.g., distributed federated learning and quantized low-latency and energy-efficient inference); Full-stack design optimization for inference in which deep learning models, computing architectures, and hardware circuits are simultaneously optimized; Collaborative deep learning inference between the cloud, edge, and client machines; Privacy and security protocols, and the novel use of blockchains in support of parallel and distributed deep learning; and Emerging technologies in deep learning such as automated neural architecture search and neuromorphic computing. Students working in 2- or 3-person teams will do a substantial project in these and other related areas.

Course Notes:

Preference given to upper-class undergraduates or graduate students in computer science or in business.

Recommended Prep:

Basic courses in networking (e.g., CS 143) and AI (e.g., CS 181 or 182), programming experience (e.g., CS 51), some research experience, and a strong interest in the subject matter. Lab sessions will be provided to give extra support.

Computer Science 161

Operating Systems (113847)

Eddie Kohler

James Mickens

2019 Spring (4 Credits)

Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course focuses on the design and implementation of modern operating systems. The course discusses threads, processes, virtual memory, schedulers, and the other fundamental primitives that an OS uses to represent active computations. An exploration of the system call interface explains how applications interact with hardware and other programs which are concurrently executing. Case studies of popular file systems reveal how an OS makes IO efficient and robust in the midst of crashes and unexpected reboots. Students also learn how virtualization allows a physical machine to partition its resources across multiple virtual machines. Class topics are reinforced through a series of intensive programming assignments which use a real operating system.

Recommended Prep: Computer Science 61.

Additional Course Attributes:

Computer Science 165

Data Systems (119249)

Stratos Idreos

2018 Fall (4 Credits)

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

We are in the big data era and data systems sit in the critical path of everything we do. We are going through major transformations in businesses, sciences, as well as everyday life - collecting and analyzing data changes everything and data systems provide the means to store and analyze a massive amount of data. This course is a comprehensive introduction to modern data systems. The primary focus of the course is on the modern trends that are shaping the data management industry right now: column-store and hybrid systems, shared nothing architectures, cache conscious algorithms, hardware/software co-design, main-memory systems, adaptive indexing, stream processing, scientific data management, and key-value stores. We also study the history of data systems, traditional and seminal concepts and ideas such as the relational model, row-store database systems, optimization, indexing, concurrency control,

recovery and SQL. In this way, we discuss both how and why data systems evolved over the years, as well as how these concepts apply today and how data systems might evolve in the future. We focus on understanding concepts and trends rather than specific techniques that will soon be outdated - as such the class relies largely on recent research material and on a semi-flipped class model with a lot of hands-on interaction in each class.

Recommended Prep: Computer Science 51 and Computer Science 61.

Enrollment Cap:

60

The course covers skills and techniques necessary to design innovative interactive products that are useful, usable and that address important needs of people other than yourself. You will learn how to uncover needs that your customers cannot even articulate. You will also learn a range of design principles, effective creativity-related practices, and techniques for rapidly creating and evaluating product prototypes. You will also have several opportunities to formally communicate your design ideas to a variety of audiences. You will complete two large team-based design projects.

Recommended Prep: CS 50 or web programming experience.

Artificial Intelligence (AI) is an exciting field that has enabled a wide range of cutting-edge technology, from driverless cars to grandmaster-beating Go programs. The goal of this course is to introduce the ideas and techniques underlying the design of intelligent computer systems. Topics covered in this course are broadly be divided into 1) planning and search algorithms, 2) probabilistic reasoning and representations, and 3) machine learning (although, as you will see, it is impossible to separate these ideas so neatly). Within each area, the course will also present practical AI algorithms being used in the wild and, in some cases, explore the relationship to state-of-the-art techniques. The class will include lectures connecting the models and algorithms we discuss to applications in robotics, computer vision, and speech processing.

Recommended Prep: CS 51; Stat 110 (may be taken concurrently).**Additional Course Attributes:**

20

Building autonomous robotic systems requires understanding how to make robots that observe, reason, and act. Each component uses many engineering principles: how to fuse, multiple, noisy sensors; how to balance short-term versus long-term goals; how to control one's actions and how to coordinate with others. This year theme will be "Robots Roam the Halls", where we will focus on kinect-based robots that move in the SEAS buildings, to do applications like navigating, map building, and interacting with people. The class format will have a mixed lecture and lab format, and have a final project component.

Recommended Prep: The only prerequisites are CS51 or CS61, or experience with programming and using APIs. This class is appropriate for CS, EE, and ME students interested in robotics.

Computing Foundations for Computational Science (128104)

Ignacio Martin Llorente

2019 Spring (4 Credits)

Schedule: TR 0130 PM - 0245 PM**Instructor Permissions:** None**Enrollment Cap:** n/a

Computational science has become a third partner, together with theory and experimentation, in advancing scientific knowledge and practice, and an essential tool for product and process development and manufacturing in industry. Big data science adds the 'fourth pillar' to scientific advancements, providing the methods and algorithms to extract knowledge or insights from data. The course is a journey into the foundations of Parallel Computing at the intersection of large-scale computational science and big data analytics. Many science communities are combining high performance computing and high-end data analysis platforms and methods in workflows that orchestrate large-scale simulations or incorporate them into the stages of large-scale analysis pipelines for data generated by simulations, experiments, or observations. This is an applications course highlighting the use of modern computing platforms in solving computational and data science problems, enabling simulation, modeling and real-time analysis of complex natural and social phenomena at unprecedented scales. The class emphasizes on making effective use of the diverse landscape of programming models, platforms, open-source tools, computing architectures and cloud services for high performance computing and high-end data analytics.

Recommended Prep: Students are expected to have basic programming experience and understanding of algorithms (e.g. CS50/CS51/CS207), familiarity with Python, C or similar, and basic knowledge of Linux including using the

command line.

Systems Development for Computational Science (128105)

David Sondak

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to fit tools and approaches to the problem being solved.

Recommended Prep: Students are expected to have basic programming experience (Computer Science 50).

Topics in Theoretical Computer Science: Biology and Complexity (207862)

Leslie Valiant

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Many processes in biology consist of step by step processes, whether in evolution, neural activity, development, or protein circuits. In many of these processes the actual steps taken by biological systems are not currently understood. Further, even the outcomes that are being realized by these processes are not well understood. In general current understanding of most aspects of biology is not complete or specific enough to provide theories in which predictions can be made by analysis or computer simulation. Computer science is the study of step by step processes and of specifications of the outcomes that such processes can realize. For many computational outcome specifications it is known or believed that no mechanism with feasible resources can realize them. Computer science therefore offers a top-down approach to understanding what could possibly be computed in biology, and how. In this course we shall pursue this computational complexity approach, whose origins go back to Turing and von Neumann. Emphasis will be on evolution and neuroscience, but other topics such as development will be also discussed. Research papers that address some aspect of the complexity question, whether by mathematical analysis, computer simulations or experimental findings will be discussed.

Recommended Prep: CS 121/124 or equivalents.

Topics in Theoretical Computer Science: Information Theory in CS (120237)

Madhu Sudan

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Information Theory originated in a seminal work of Shannon that attempted to formalize and quantify communication. This theory was mostly ignored by theoretical computer science till the 1990s when tools and concepts from Information Theory started to play a central role in powerful results in the field. Notable examples include the Parallel Repetition Theorem of Raz (1994), the development of the Information Complexity measure as a means of understanding Communication Complexity (2001). Today Information Theoretic measures and tools influence many aspects of CS theory including analysis of streaming algorithms, differential privacy and game theory. This course will introduce the basic concepts in information theory and then sample topics of interest to CS theory where information theoretic tools play a central role. See <http://madhu.seas.harvard.edu/courses/Spring2019> for more information.

Recommended Prep: CS 121/124/125 or equivalents.

Topics in Theoretical Computer Science: Interactions between Physics and Computation (120237)

Boaz Barak

Tselil Schramm

2018 Fall (4 Credits)

Schedule:

F 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this graduate seminar we will explore some of the connections between theoretical computer science and physics. Some topics include: connections between statistical physics and computational complexity, quantum information theory, quantum Hamiltonian complexity, black holes, bulk/boundary correspondence, "quantum superiority experiments", the "conformal bootstrap". and more.

All of these are topics that I personally find fascinating, but know very little about. I hope we can learn about them together. Each one of those can probably be the topic of a full semester-long course (and even that, assuming significant physics background). I hope this seminar will be like a "tasting menu" where we pick some of the juiciest and most interesting questions and results from all these areas, and attempt to understand and present them using the minimal amount of physics.

See the website <https://www.boazbarak.org/fall18seminar/> for more information about this seminar.

Course Notes:

While the seminar is officially listed as taking place from 1:30 till 2:45, it will actually take place from 1:30-4:30 as it is merged with the theory reading group.

Recommended Prep:

This seminar is mostly geared towards graduate in theoretical computer science, but advanced undergraduates might also enjoy it. I recommend undergraduate take this seminar if they have already taken a graduate course in theoretical computer science (i.e., CS22x course) but feel free to email me to discuss whether this course will be a good fit for you.

Computer Science 244R

Networks Design Projects (112631)

H. Kung

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The contents and course requirements are similar to those of Computer Science 144r, with the exception that students enrolled in Computer Science 244r are expected to do substantial system implementation and perform graduate-level work.

Deep neural networks (DNNs) are becoming a popular tool in data-driven applications. One of the next frontiers is distributed DNNs over computer networks for improved scaling (e.g., for scaling training as in federated learning) and parallel DNNs over processor arrays for low-latency inference in real-time applications. To this end, there is a need to understand issues such as communication, computation, and accuracy trade-offs. This research-oriented course will address this relatively new, yet rapidly advancing, topic. We will survey the main approaches, with a unique focus on the interplay between deep learning models, parallel and distributed computing architectures, and the hardware structures of end devices. The class will be organized into the following eight modules:

Motivations for parallel and distributed deep learning; Parallelism available in deep neural networks; Review of background concepts in deep learning, computer networks, computer architectures, and FPGA/ASIC hardware accelerators; Deep dive case studies in parallel and distributed training and inference (e.g., distributed federated learning and quantized low-latency and energy-efficient inference); Full-stack design optimization for inference in which deep learning models, computing architectures, and hardware circuits are simultaneously optimized; Collaborative deep learning inference between the cloud, edge, and client machines; Privacy and security protocols, and the novel use of blockchains in support of parallel and distributed deep learning; and Emerging technologies in deep learning such as automated neural architecture search and neuromorphic computing. Students working in 2- or 3-person teams will do a substantial project in these and other related areas.

Course Notes:

Preference given to upper-class undergraduates or graduate students in computer science or in business who are proficient in computer programming or in business software.

Recommended Prep:

Basic courses in networking (e.g., CS 143) and AI (e.g., CS 181 or 182), programming experience (e.g., CS 51), some research experience, and a strong interest in the subject matter. Lab sessions will be provided to give extra support.

Big Data Systems (113660)

Stratos Idreos

2019 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Big data is everywhere. A fundamental goal across numerous modern businesses and sciences is to be able to utilize as many machines as possible, to consume as much information as possible and as fast as possible. The big challenge is how to turn data into useful knowledge. This is a moving target as both the underlying hardware and our ability to collect data evolve. In this class, we discuss how to design data systems, data structures, and algorithms for key data-driven areas, including relational systems, distributed systems, graph systems, noSQL, newSQL, machine learning, and neural networks. We see how they all rely on the same set of very basic concepts and we learn how to synthesize efficient solutions for any problem across these areas using those basic concepts.

Recommended Prep: CS 165 or permission of instructor.

Topics in Data Visualization (211349)

Johanna Beyer

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course covers advanced topics in data visualization. Over the course of the semester, we will examine seminal works and recent state-of-the-art research in information visualization, scientific visualization and visual analytics. Students will work on a semester-long visualization project that will allow them to visualize their own data sets and write a short paper about their project. We will employ peer-feedback and formal design critiques to analyze each other's work.

Course Notes: Enrollment limited to 30 students. Instructor permission needed.

Recommended Prep: CS 171, CS 179, CS 279, or some data visualization experience. Please contact course staff if you are unsure about the course pre-requisites.

Research Topics in Human-Computer Interaction (121985)

Krzysztof Gajos

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The course covers major areas of inquiry and core research methods in Human-Computer Interaction including experimental design, statistical data analysis, and qualitative methods. Activities will include discussion of primary literature, a small number of lectures, assignments (design, execution and analysis of both lab-based and on-line experiments), and a research project.

Course Notes:

Designed for first year PhD students from all areas. Masters students and advanced undergraduates are welcome, particularly those who wish to do research (or write a thesis) in an area related to Human-Computer Interaction.

Recommended Prep:

None for PhD students; for undergrads CS 179 or CS 171 is strongly recommended and permission of the instructor is required. Basic programming skills will be needed to implement and conduct experiments.

David Parkes

David Belanger
Alexander D'Amour
Dougal Maclaurin
Roland Snoek
Alexander Wiltchko

2019 Spring (4 Credits)

Schedule:

F 0900 AM - 1045 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Recent advances in ML have enabled rapid progress in data-driven systems in a wide range of domains like image processing and NLP. However, to unlock additional areas of application, ML methods must provide good estimates of uncertainty, operate on structured representations of data, and work at large scale. We will explore a collection of cutting-edge advancements in these topics. Students will read multiple papers per week, present papers to the class, and complete a final project. Sometimes the machine learning literature is daunting because it changes so quickly. An overarching goal of the course will be to collectively identify broad frameworks and trends of the research community and to identify opportunities for high-impact research.

Class Notes:

The class will meet in Maxwell Dworkin G115 for the first class, Friday, Feb. 1. Course will meet at Google after the first meeting. The course is taught by a group of researchers on the Google Brain team. Starting with the Feb 8 class, students should head to Google Kendall Square Office at 355 Main Street in Cambridge (Kendall Square t-station). Students should arrive 15 minutes early (8:45am) for the second class Friday, Feb. 8, check in with security downstairs and then head to reception on the 5th floor, where Carolyn Cismondi will greet them and lead them to the "Esplanade East" training room. The course will be capped at 20 students.

Recommended Prep:

Students should be comfortable with the basics of modern probabilistic machine learning, such as deep learning, variational inference, and Markov Chain Monte Carlo.

Additional Course Attributes:

Topics in Machine Learning: Deep Bayesian Models (156936)

Finale Doshi-Velez

2018 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Many domains involve placing uncertainties over functions: If we took two precipitation readings two miles apart, what are the possible precipitations in between? If we have a function mapping drug dosage to blood pressure change for a variety of patients, what is our uncertainty for a new patient? Deep Bayesian models are a flexible class of priors over deterministic and stochastic functions, but truly understanding that model class, and performing inference in it, has many open questions. In this course, we will begin with Gaussian processes, a much simpler prior over functions, and then explore deep Bayesian models via

readings, coding assignments, and a final project. Along the way, we'll learn what works when, and where the research questions are.

Course Notes: The course will be capped at 25 students.

Recommended Prep: While no experience with deep Bayesian models is expected, students will be expected to be comfortable with basic ideas of Bayesian inference, including Markov Chain Monte Carlo and variational inference. Take a peek at Rasmussen and Williams's Chapter 2.2 and see if you're in love.

Biologically-inspired Multi-agent Systems (120238)

Radhika Nagpal

2018 Fall (4 Credits)

Schedule: WF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Surveys biologically-inspired approaches to designing distributed systems. Focus is on biological models, algorithms, and programming paradigms for self-organization. Topics vary year to year, and usually include: (1) swarm intelligence: social insects and animal groups, with applications to networking and robotics, (2) cellular computing: including cellular automata/amorphous computing, and applications like

self-assembling robots and programmable materials, (3) evolutionary computation and its application to optimization and design.

Course Notes: Geared toward graduate students of all levels as well as advanced undergraduates. Preference given to graduate students or upper-level concentrators.

Recommended Prep: Students should have a familiarity/experience with computer systems (e.g. software, networking) and algorithms/analysis through classes and/or internship experiences. Background in biology not required.

Subject: Engineering Sciences

Engineering Sciences 301

SEAS Teaching Practicum (125374)

John Girash

2018 Fall (4 Credits)

Schedule: T 0300 PM - 0545 PM**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Practicum emphasizing an active but reflective approach to teaching applied sciences and engineering; designed for graduate students in any SEAS area, not specifically Engineering Sciences. Topics: presentation and communication; in-class teaching and interaction; developing, grading and giving feedback on assignments; course head / TF relations and expectations; cognition and learning. Seminar style with an emphasis on observation, practice, feedback, and reflection. While the primary context of the course is classroom-style teaching, those interested in developing instructional communication skills in other contexts within science and engineering -- labs/studios, presentations, etc. -- are quite welcome, and course tasks can be adjusted for such.

Course Notes:

Unlike most 300-level courses at SEAS, this is a class with a regular meeting time and some assignments, largely involving lesson prep and brief background reading. The class will alternate between "teaching weeks" (likely taking until 5:45) and "reflection weeks" (aiming to end at 5pm). Counts towards the Derek Bok Center's [Teaching Certificate](https://bokcenter.harvard.edu/teaching-certificate). Graduate students from all science and engineering fields within Harvard are welcome. Postdocs and motivated undergraduates may audit, doing the same work as enrolled graduate students. Formerly COMPSCI 365.

Earth and Planetary Sciences

Subject: Earth & Planetary Sciences

Earth & Planetary Sciences 10

A Brief History of the Earth (203888)

Jerry Mitrovica

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is an introduction to Earth and Planetary science for EPS concentrators and an overview, for those outside the field, of the critical events and processes that have shaped the Earth's evolution and its place in the solar system. The course is designed to highlight the processes, from tectonic plate to microbial scale, that drive the Earth's response to (internal and external) perturbations and we will explore both the time scale of those perturbations and the limits of the Earth's resilience. By considering the full sweep of geological time, from the early Earth to the modern world, the course will take advantage of a series of natural experiments to compare the Earth system during periods with and without atmospheric oxygen, animals, land plants and polar ice sheets, and to compare it, on occasion, with other terrestrial planets.

Course Notes: Course includes a weekly two-hour lab (5 total during the term) and 3 one-day field trips.

Class Notes: Course includes four labs that will be spread out during term and a one-day field trip.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam

Earth & Planetary Sciences 51

Introduction to Planetary Materials and Earth Resources (109527)

Stein Jacobsen

2018 Fall (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A comprehensive introduction to how the principles of mineralogy, phase equilibria, and the compositions of terrestrial and extraterrestrial materials are used to understand the evolution of the Earth and its resources. The course will discuss how we know that the Earth's crust has more than sufficient resources for its human population.

Course Notes: Course includes a weekly lab. This course fulfills the EPS sub-discipline requirement of either Earth History and Geobiology or Geology, Geophysics and Planetary Science.

Recommended Prep: An introductory earth and or planetary science course and a course in

college-level chemistry or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 52

Global Geophysics: A Primer (109231)

Esther James

Jerry Mitrovica

2019 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A comprehensive introduction to global geophysics. This course serves as a bridge between introductory Earth science course EPS 10 and higher level geophysics courses in EPS. Topics include: plate tectonics, the Earth's composition, thermal state and rheology, mantle convection, the geodynamo, the Earth's gravity field and geodesy, and (modern and paleo) climate change. We explore the physical processes at work in the Earth's interior, which produce mountains, oceans, volcanoes, and earthquakes. Using geophysical tools to investigate the interior of the planet, and emphasizing on the quantitative analysis of geological phenomena, this course will provide a strong foundation for further study in many areas of Earth and Planetary Sciences, such as geophysics, tectonics, structural geology, among others. Knowledge of calculus, introductory physics, and introductory geological principles are will be expected.

Course Notes:

Course includes approximately five 1-hour section meetings spread out over the term, to be arranged. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Recommended Prep:

Applied Mathematics 21a,b (or Mathematics 1a,1b; or Mathematics 21a, b); Physics 15a,b (prior or concurrent) or Physical Sciences 12a,b; or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Earth & Planetary Sciences 53

Marine Geochemistry (126174)

David Johnston

2018 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to low temperature biogeochemistry. We will focus on key biogeochemical elements and look to understand the linkages between the biosphere, atmosphere and hydrosphere. The course begins with a description of marine geochemistry (alkalinity and chemical fluxes) and works toward understanding

isotopic fractionation and what it can tell us about the environment. We will explore biogeochemistry over a range of physical and temporal scales.

Course Notes: This course includes a weekly two-hour lab to be arranged. This course fulfills the EPS sub-discipline requirement of either Atmosphere(s) and Oceans or Earth History and Geobiology. Given in alternate years. Formerly offered as EPS 186. Students who have taken EPS 186 cannot take EPS 53 for credit.

Recommended Prep: A course in college chemistry is recommended.

Earth & Planetary Sciences 109

Earth Resources and the Environment (114664)

Annika Quick

John Shaw

2019 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An overview of the Earth's energy and material resources, including conventional and unconventional hydrocarbons, nuclear fuels, alternative/renewable energy resources, metals, and other industrial materials. The course emphasizes the geologic and environmental factors that dictate the availability of these resources, the methods used to identify and exploit them, and the environmental impacts of these operations. Topics include: coal and acid rain; petroleum exploration, drilling, and production, shale gas/oil, photochemical smog, and oil spills; nuclear power and radioactive hazards; alternative energies (solar, hydroelectric, tidal, geothermal power), metals and mining.

Course Notes:

Course includes three hours of laboratory work each week and two field trips. EPS 109 is also offered as ESE 109. Students may not take both for credit. Undergraduate engineering students should enroll in ESE 109. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.

Recommended Prep:

EPS 10, ES 6, an equivalent course, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: General Education	Science of the Physical Universe
FAS: Core Curriculum	Science A

Earth & Planetary Sciences 112

Thermodynamics by Case Study (161215)

Scot Martin

2019 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes:

EPS 112 is also offered as ES 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. Total class capacity of 18 includes students in both ES 112 and EPS 112.

Class Notes:

Enrollment in this course is limited to 18 students and will be determined by a lottery if interest exceeds the limit.

- For the lottery, please send an email to me (smartin@seas.harvard.edu) with your rationale for taking the course.
- You must attend class on January 28 to be eligible for the lottery.
- Students wishing to enroll in this course must enter the lottery by 8 am on Tuesday, January 29, by adding the course to your Crimson Cart in my.harvard.edu and requesting enrollment permission.
- You will be notified about whether you may enroll in this course by 5 pm on Tuesday, January 29.
- Students who are not selected by the lottery will be waitlisted.

Earth & Planetary Sciences 132

Introduction to Meteorology and Climate (123877)

Brian Farrell

2018 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Physical concepts necessary to understand atmospheric structure and motion. Phenomena studied include the formation of clouds and precipitation, solar and terrestrial radiation, dynamical balance of the large-scale wind, and the origin of cyclones. Concepts developed for understanding today's atmosphere are applied to understanding the record of past climate change and the prospects for climate change in the future.

Course Notes:

EPS 132 is also offered as ESE 132. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

Mathematics 21 or Applied Mathematics 21a and 21b; Physical Sciences 12; or permission of instructor.

Additional Course Attributes:

Climate Change Debates: The Reading Course (126141)

Peter Huybers

Eli Tziperman

2019 Spring (4 Credits)

Schedule: W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

The atmospheric carbon dioxide concentration is now the highest it has been in at least 800,000 years, raising concerns regarding possible future climate changes. This reading course will survey the science of global change from the perspective of scientific debates within the climate community. Specifically, the course will involve guided reading and discussion of papers that present contentious view points on the science of global change, with the goal of students learning how to scientifically evaluate such points of view. Students are given weekly writing assignments and need to prepare presentations and lead some of the weekly discussions.

Course Notes: Course includes a weekly section to be arranged. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans. Given in alternate years.

Recommended Prep: Applied Mathematics 21a,b or equivalent, or permission of instructor.

Paleoclimate as Prologue (205194)

Peter Huybers

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course we will explore and quantitatively assess past events in Earth's history involving temperature, sea level, and the cryosphere; and compare these events with respect to our understanding of current and predicted changes. The class will take a 'raw-data' and 'first-principles' approach to the subject: raw data in the sense that we will work with quantities that are directly observed in order to make estimates and draw inferences, and first principles in the sense of focusing on basic mechanisms. Working backward in time, topics will include modern temperature variability, the Little Ice Age, Medieval Warm Period, and more ancient climate variations. Complimentary to study of existing datasets, the course will also involve developing quantitative inferences from historical artwork and archival information, including through a series of field trips to the Harvard Art Museums and University Archives.

Course Notes:

Each class will involve lecture, discussion, and in-class data analysis. This course fulfills the EPS sub-discipline requirement of either Atmosphere(s) and Oceans or Earth History and Geobiology.

Recommended Prep:

EPS 131 or EPS 132, or permission of instructor; experience with statistics and coding is helpful.

Additional Course Attributes:

Earth & Planetary Sciences 142

Mineralogy (205567)

2019 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a comprehensive foundation of mineralogy for students of Earth and planetary sciences, materials science, or related fields. Topics include: bonding, symmetry, crystallography, high pressure mineralogy, and the bonding, structures, and significance of a variety of mineral types. Weekly lab sections will cover crystal structures, symmetry, and the identification of a variety of minerals in hand samples.

Course Notes:

Course includes a three-hour weekly lab to be arranged. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Additional Course Attributes:

Attribute	Value(s)

Earth & Planetary Sciences 162

Hydrology (108750)

Kaighin McColl

2018 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to the global hydrologic cycle and relevant terrestrial and atmospheric processes. It covers the concepts of water and energy balance; atmospheric radiation, composition and circulation; precipitation formation; evaporation; vegetation transpiration; infiltration, storm runoff, and flood processes; groundwater flow and unsaturated zone processes; and snow processes.

Course Notes:

Course includes a weekly 1.5 hour lab session or section for discussion of assigned problems. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics, and Planetary Science. EPS 162 is also offered as ESE 162. Students may not take both for credit.

Recommended Prep:

Applied Mathematics 21a,b or Mathematics 21a,b; AND Applied Physics 50a,b, Physics 15a,b or Physical Sciences 12a,b.

Mechanics in Earth and Environmental Science (124688)

James Rice

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the mechanics of fluids and solids, organized around earth and environmental phenomena. Conservation laws, stress, deformation and flow. Inviscid fluids and ocean gravity waves; Coriolis dominated large scale flows. Viscosity and groundwater seepage; convective cells; boundary layers. Turbulent stream flows; flood surges; sediment transport. Elasticity and seismic waves. Pore fluid interactions with deformation and failure of earth materials, as in poro-mechanics of consolidation, cracking, faulting, and landslides. Ice sheets and glacial flow mechanics.

Course Notes: Given in alternate years.

Recommended Prep: Calculus-based introductory physics at the level of Physics 11 or 15 and mathematics at the level of Applied Mathematics 21 and 105.

Topics in Hydrometeorology and Hydroclimatology: Causes and consequences of drought (211357)

Kaighin McColl

2019 Spring (4 Credits)

Schedule:

F 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar course will focus on recent advances in understanding hydrometeorological and hydroclimatological processes, with implications for weather forecasting, climate modelling, agriculture, human health and water resources management. Students will read and present journal articles on relevant topics, and will rotate responsibility for leading discussions. Specific topics will vary each year offered.

Class Notes: In spring 2019, this course will focus on the hydrological causes and consequences of drought. We will discuss key mechanisms that determine drought onset, intensity and duration, and study examples from around the world. We will also cover impacts of drought on the terrestrial carbon budget, food security, water resources and extreme weather.

Recommended Prep: Familiarity with ordinary differential equations (e.g., APM 105, 201, 202 or equivalent) and an introductory course in atmospheric dynamics/oceanography/climate science (e.g., EPS 232, MIT 12.800 or equivalent); or with permission of instructor.

Planetary Radiation and Climate (205144)

Robin Wordsworth

2019 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Atmospheric radiative transfer is at the heart of understanding the climate of Earth and other planets. This course covers basic stellar and planetary physics, quantum spectroscopy, molecular and aerosol scattering, satellite retrieval theory, cloud, CO₂ and H₂O climate feedbacks, and extreme climate phenomena such as the runaway greenhouse, Nuclear Winter and Titan's methane cycle. As a final course outcome, you will learn to construct a line-by-line radiative-convective climate model from first principles.

Course Notes: EPS 237 is also offered as Engineering Sciences 237. Students may not take both for credit.

Earth & Planetary Sciences 248

Topics in Mineral Physics and Chemistry: Volatiles in the Deep Earth (207625)

Rebecca Fischer

2018 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar course will focus on recent advances in understanding the physical and chemical properties of minerals and melts at extreme pressures and temperatures, with implications for the properties, composition, formation, and evolution of Earth and planetary cores and mantles. Students will read and present journal articles on relevant topics, and will rotate responsibility for leading discussions. Specific topics will vary each year offered.

In Fall 2018, this course will focus on the topic of deep Earth volatiles, in particular C, S, H, and the noble gases. We will discuss the origin, abundances, mineralogy, and effects of these elements in the upper mantle, transition zone, lower mantle, and core. While the focus will be on the Earth, we will also touch on the subject of volatiles in other terrestrial planetary interiors.

Course Notes: Given in alternate years or upon announcement.

Earth & Planetary Sciences 253

Glaciology (208301)

Bradley Lipovsky

2018 Fall (4 Credits)

Schedule:

F 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the physics of glaciers and ice sheets. We begin by describing "synoptic scale" glaciology, i.e., at the scale of entire glaciers and ice sheets. The course then examines the smaller-scale physics of the glacier-atmosphere, -bed, and -ocean interfaces, the interactions between ice sheets and planetary climates, and the analysis of ice cores. Special attention will be given to a dozen or so deep-focus topics that may include ice shelf hydraulic fracturing, glacier sliding, the marine ice sheet instability, climatic forcing of ice sheet steady states, and ice core reconstructions. These topics will be approached using mathematical physics, geophysical data, simple computer simulations, and large-scale ice sheet models.

Recommended Prep:

Familiarity with the analysis of partial differential equations. Matlab will be used throughout this course.

Earth & Planetary Sciences 259

Dimensional Analysis and Scaling (207638)

Miaki Ishii

2019 Spring (4 Credits)

Schedule:

MF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Dimensional analysis and scaling relations have wide applications in science and engineering and provide a simple, quantitative framework for understanding complex physical processes and interpreting results obtained by numerical calculations. It is often used to reduce a large number of independent parameters to a smaller number of dimensionless groups, providing opportunities ranging from the ability to learn about jet airplanes from models the size of children's toys, to estimating the maximum height of trees using simple assumptions. This course provides an introductory survey of the topic and a practical tutorial of its application to understanding physical processes. Hands-on exercises and projects will prepare these topics to be implemented in the understanding of physical systems and advancement of research endeavors.

Course Notes:

Given in alternate years.

Recommended Prep:

Applied Mathematics 21a and 21b; or Mathematics 21a and 21b; or permission of instructor [i.e., Must have some experience with: (1) Multivariate Calculus (Div, Grad, Curl and All That) (2) Partial and Ordinary Differential Equations (Partial derivatives, line and surface Integrals, etc.) (3) Linear Algebra (Matrices, vector spaces, eigenvalues, etc.)].

Earth & Planetary Sciences 261

Sea Level Change (126477)

Jerry Mitrovica

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The physical processes responsible for sea level changes over time scales extending from hours to hundreds of millions of years. Long-term sea-level trends: geological observations, physical mechanisms and eustasy, dynamic topography. Sea-level change on an ice age Earth (glacial isostatic adjustment, GIA): observations, viscoelastic loading, mantle viscosity, the Last Glacial Maximum (LGM), interglacial sea-level change, ongoing GIA. Ocean tides: equilibrium and non-equilibrium effects, tidal dissipation. Modern global sea level change: tide gauge and geodetic observations, ice melting and thermal expansion, closing the sea-level budget, sea-level fingerprinting.

Course Notes: Given in alternate years.

Recommended Prep: College-level physics and math courses are required. Open to undergraduate students only with permission of instructor.

Earth & Planetary Sciences 274

Field Geology (107945)

Miaki Ishii

2019 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Attend an advanced domestic or overseas geological field program of 3-6 weeks duration to learn methods of obtaining, synthesizing, and interpreting field observations.

Course Notes: Field programs are selected individually by students with the advice and approval of the instructor. An upper level field course at another university can be substituted with approval of the instructor. Students must notify the instructor and Academic Administrator of intention to enroll by the course registration deadline of the preceding term.

Recommended Prep: Permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 286

The Biological Production and Consumption of O₂ (126176)

David Johnston

2018 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Stable isotope systems serve as one of our most powerful tools in reconstructing both Earth History and environmental/climatic change over nearly all timescales. These isotope systems are driven by basic physical chemical principles that if understood, allow even more to be drawn from core isotopic systems (namely the biogeochemical elements – C, H, N, O, S). Further, advances in mass spectrometry now allow for site-specific isotopic determinations, as well as the quantification of trace isotope bonding (clumping). This course will begin with a quick but rigorous review of the chemistry underpinning equilibrium and kinetic isotope effects, before moving to survey the systematics that govern the most popular low temperature isotope systems. From there, the bulk of the course will target new and emerging isotopic targets such as clumping in O₂ and methane.

Course Notes:

Given in alternate years.

Recommended Prep:

EPS 186 and 187 or equivalent; or permission of instructor.

Elementary Modern Chinese (124237)

Xiaoshi Yu

2019 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a continuation (second semester) of the Elementary Modern Chinese. It is designed for students who have completed the first semester of Elementary Modern Chinese I (Chinese Ba) or the equivalent. The course will further develop students' communicative skills in the listening and speaking modalities, and at the same time shift the focus of instruction gradually towards reading and writing. It provides more practice on syntactic structures, usage and their communicative functions, and prepares students for intermediate-level classes.

Course Notes: No auditors. May not be taken Pass/Fail.

Class Notes: Classes meet five days a week, additional discussion sections to be arranged. Course meets for first hour of schedule block.

Recommended Prep: Chinese Ba or equivalent.

Requirements: Prerequisite: Chinese BA or equivalent.

Additional Course Attributes:

Chinese 130B Section: 003

Pre-Advanced Modern Chinese (159631)

Mo Zhang

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Continuation of Chinese 130a. The aim of this course is to further develop students' Chinese proficiency in both spoken and written language. By reading texts based on current issues and cultural phenomena and engaging in in-depth class discussions, students will continue to expand their vocabulary, master more complex grammatical structures, and develop an ability to perform tasks involving description, narration, and argumentation at the discourse level.

Class Notes: Classes meet five days a week, additional discussion sections to be arranged.

Recommended Prep: Chinese 130a or equivalent.

Requirements: Prerequisite: Chinese 130A or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam

Continuation of Chinese 130xb,130b. This course aims at further developing students' ability to use Chinese in advanced and complex contexts, and process and generate sentences with complex structures used mainly in formal speech and writing.

The objectives of this course include: 1) enabling students to gain a deeper understanding of Chinese cultural conventions and assumptions, and the ability to "read between the lines" and discern the subtle connotations often present in Chinese speech and writing, 2) giving students the skills and confidence to use Chinese in a number of important, practical settings, including job interviews and academic forums, 3) enabling students to express their opinions and feelings more accurately, appropriately and coherently, and to offer more detailed and vivid descriptions and narrations.

Course Notes: No auditors. May not be taken Pass/Fail.

Class Notes: Course meets for the first hour of schedule block.

Introduction to the Study of East Asia: Issues and Methods (145419)

Ryuichi Abe

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This interdisciplinary and team-taught course provides an introduction to several of the approaches and methods through which the societies and cultures of East Asia can be studied at Harvard, including history, philosophy, literary studies, political science, film studies, anthropology and gender studies. We consider both commonalities and differences across the region, and explore how larger processes of imperialism, modernization, and globalization have shaped contemporary East Asian societies and their future trajectories.

Course Notes:

Required of sophomore concentrators and secondary field candidates.
Open to freshmen. EAS 97ab may not be taken Pass/Fail.

Text and Data in the Humanities (207790)

Donald Sturgeon

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to key concepts and techniques fundamental to applying digital methods to the study of textual materials and other types of data in humanities subjects. The core topics covered are digital representations of data, ways of structuring and managing data, extracting data from textual materials, and data visualization and analysis. Concepts introduced in lecture sessions will be reinforced and applied concretely in particular contexts during corresponding practical sessions and take-home assignments.

No background in digital methods is assumed, however students are expected to have basic computing skills and access to a suitable laptop. Examples will be selected from a variety of subject domains within the humanities with the primary focus being on textual materials.

Major Religious Texts of East Asia (143833)

Ryuichi Abe

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course aims at enabling students to read and analyze in depth major religious texts of East Asia, representing diverse traditions and genres. The course encourages students to take up their reading of texts not only as ways to acquire knowledge on Asian religious traditions, but as practice, labor, and play in which their ordinary way of understanding/experiencing the world and themselves will be challenged, reaffirmed, and renewed.

Daniel Koss

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Putting Chinese politics on the map, this course asks how the government deals with the enormous challenges of ruling over a vast terrain with a diverse population, encompassing super-rich urban metropolises as well as poor rural peripheries. We begin with statecraft traditions from the late imperial era; and end with China's place on the future global maps of the 21st century. Topics include: macro-regions; priority zones of governance; Special Economic Zones; the Chinese equivalent of "blue states and red states;" rising inequality; ethnic minorities and borderlands; economic development models; urbanization and city planning; collective action in digital space; domestic and international migration; environmental politics; and the geo-politics of the "One Belt One Road" initiative. We will set aside class time for a hands-on introduction to producing and interpreting maps of China.

Course Notes: This course can count for EAS 98 Junior Tutorial.

Class Notes: This course will be taught by Daniel Koss, Lecturer in East Asian Languages and Civilizations

This introductory course is designed to provide a basic foundation in modern Korean language and culture by focusing on the balanced development of the interpersonal (speaking), interpretive (listening & reading), and presentational (formal speech & writing) skills. Students in Korean Ba begin by learning the complete Korean writing system (Hangul), which is followed by lessons focusing on basic conversational skills, cultural competence, and grammatical structures. To provide sufficient opportunities to apply what has been learned in class, there are small group drill sessions, language tables, and a number of other cultural activities.

Class Notes:

Classes meet five days a week, additional sections to be arranged.
Class meets for first hour of schedule block only.

**PLEASE NOTE THAT OUR FIRST CLASS MEETING WILL BE ON
WEDNESDAY, SEPTEMBER 5TH.**

Korean 120a is the first half of the intermediate course designed for students who have successfully completed Elementary Korean or students who have an equivalent proficiency level. This course aims to increase students' ability to communicate in Korean in a wide range of daily life situations with an equal focus on expanding and on consolidating students' knowledge of the fundamental grammar of Korean. Students are introduced to reading and listening materials of increasing complexity on a variety of topics in modern Korean society and culture. In addition, in order to develop a deeper understanding of the basic structures of the Korean vocabulary, simple Chinese characters will be introduced in this course.

Class Notes: Classes meet five days a week, additional sections to be arranged. Class meets for first hour of schedule block only.

Korean 123xb is a continuation of Korean Bx and is for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills. It is an accelerated course covering important grammatical structures and materials from Intermediate Korean (120a and 120b) for the purpose of providing tools to build upon the basic foundation of student's Korean language ability. Hence, this class is designed to meet the linguistic needs that are unique to heritage language students to (i) increase accuracy in grammar, (ii) develop basic reading writing skills, and (iii) expand vocabulary through introduction of Chinese characters. Upon completion of this course, students will be fast-tracked into an upper-level course (e.g. Korean 130a).

Instructor Permissions: None

Enrollment Cap:

n/a

Korean 130a is designed for students who have completed Intermediate Korean 120b or have equivalent proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring these topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

Recommended Prep: Korean 120b or equivalent.

The Legacy of the May Fourth: A Critical Survey of Modern Chinese Literary Culture (207563)

David Wang

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

On May 4, 1919, thousands of students in Beijing took to the streets to protest the resolution of the Peace Conference in Paris that concluded the First World War. Though China had been on the side of the Allies against Germany, the Treaty of Versailles arranged for the German-held concessions in China to be handed over to Japan, another supporter of the Allies. The Allies' disregard of China's sovereignty and the Chinese government's weak response to the handover aroused nationwide indignation. Patriotic protests soon spread to all the major cities, culminating in a national campaign for sociopolitical reform and cultural renovation.

Since the early 1920s, the May Fourth Movement has been presented as the harbinger of modern China in almost all domains. It has taken on a mythopoetic dimension, signaling the magical beginning of Chinese modernity. In particular, literature was celebrated as the cultural and sociopolitical institution through which the nation would be reformed and the Chinese mind reformed. This approach is subject to review in the new millennium. The seminar seeks to take issue with the "legacy of May Fourth" by rethinking the conventional wisdom regarding the movement, from "enlightenment" to "revolution," from "Mr. De" (democracy) to "Mr. Sai" (science), from

nationhood to selfhood. Literature in a broad sense—fiction, poetry, biography, manifestos and political treatises, etc.—will be the avenue for our inquiry and contestation. We will also take into account issues related to the use and abuse of the May Fourth in terms of the Foucauldian production of the "truth regime." Loosely following a chronological order, the seminar will focus on three thematic modules: "a revolution of the mind"; "the politics of enlightenment"; and "re-enlightenment and re-enchantment." Meanwhile, questions will be raised as to the "repressed modernities" —genres, figures, discourses, and movements that have been obscured or even denigrated as a result of May Fourth's calls for revolution and enlightenment.

Students are expected to submit weekly reading responses prior to class meeting and a research paper at the end of the semester. In view of the workload of weekly assignments, we will provide both the Chinese texts and English translations (whenever available) for the class.

Kambun (111790)

Edwin Cranston

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The goal of this course is to acquire skills to read and analyze Kambun (Sino-Japanese scripts used in Premodern Japan). Despite its antiquated and difficult character, Kambun is still important; without mastering it, we will never be able to thoroughly understand Japanese culture and society. After consolidating our foundational skills to analyze Kambun, we will read various Kambun texts organized by certain themes—significant events, historical figures, gender roles, religious ideas, and material goods—in order to advance our knowledge about premodern Japanese history, culture, and society. For example, we will explore the lives of courtiers, warriors, religious followers, and female landlords, such as Heian courtier official Fujiwara no Munetada and royal princess Hachijō-in. By reading records on piracy, diplomacy, and natural disasters, we will also learn about different historical phenomena. The significance of Kambun training is to not only acquire an understanding of the grammatical rules and vocabulary; the real challenge and excitement of Kambun learning is to understand the society that developed the language, and to see how the language in turn shaped the society.

Subject: Chinese History

Chinese History 202

Digital Methods for Chinese Studies (161272)

Donald Sturgeon

2018 Fall (4 Credits)

Schedule: R 1200 PM - 0245 PM**Instructor Permissions:** Instructor**Enrollment Cap:** 18

This course introduces graduate students in Chinese studies to programming skills and digital humanities techniques of direct practical relevance to research in their discipline. It will consist of weekly lectures, each introducing a specific type of technique, followed by an interactive lab session during which students practice applying the technique to data appropriate to their own research. No background in digital methods or programming is assumed, but students are expected to have basic computing skills and are required to bring a suitable laptop to use during the lab sessions. The techniques covered in this course all have broad applicability to topics in Chinese studies, and students will be expected to apply them to their own research topics and relevant texts as arranged during the first few sessions. The course will end with student presentations in which students apply an appropriate selection of the techniques studied to their own research questions.

While examples and coursework will draw upon Chinese language source materials, students primarily working with other East Asian languages are also encouraged to take this course.

Course Notes: This course will be taught by Donald Sturgeon, Postdoctoral Fellow in Chinese Digital Humanities and Social Sciences at the Fairbank Center for Chinese Studies, Harvard University.

Girl Culture, Media, and Japan (125615)

Tomiko Yoda

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In contemporary Japan, girls and girl culture are considered to be among the most significant sources of popular cultural trends. For instance, the girly aesthetics of "cute" (*kawaii*) has animated broad areas of Japanese culture since the 1980s and has become a global cultural idiom through the dissemination of Japanese entertainment medias and fashion products abroad. The course will explore a number of key questions about Japanese (and global) girl culture. How did the conceptualization of girlhood, girl culture, girl bodies, and girl affect transform in Japan from the early twentieth century to the present? How did various medias and media consumption help shape these trends? What can the exploration of "girls' question" tell us, not only about Japanese socio-cultural history, but also about the general conditions of youth, gender, and media culture in the world today (e.g., the *sea of pink* at Women's March, 2016)? We will begin the semester by unpacking key terms such as "girl," "girlhood," and "girl culture" in relations to the modern and contemporary notions of gender, maturity, and majority. The course materials include fiction, fashion magazines, teen films, manga, and animation. No prior knowledge of Japanese language or history is expected.

Japanese Literature 170 Section: 01

Traditional Japanese Literature: From the Dawn of Writing to the Dawn of Modernity (204985)

David Atherton

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Poetry written by gods, incestuous aristocratic romances, exorcist theater, samurai fantasy novels, fart literature: traditional Japanese literature has something for everyone, and invites us to rethink our assumptions about what literature is and how creativity works. From the most ancient myths up to the 19th century arrival of Western style modernity, we will explore together the relationships between high art and pulp fiction, the stage and the page, words and illustrations, manuscript and print, language and the sacred. We will probe the literary imagination of beauty, nature, desire, and heroism, and ask what Japanese literature can tell us about what it is to be human.

This semester, Spring 2019, the seminar will examine theories and practices of feminism in Japan and elsewhere. In particular, we will study several forms of "radical feminism," including women's liberation movement or *ribu* in early 1970s Japan. We will explore "radicality" in feminism, articulated against the grain of discourses on women's rights and equality. Topics treated in the course include, radical feminism and the New Left, feminist genealogies, feminism and violence, the politics of feminist manifestos, feminism and futurity, and the feminist politics of organization. Some of the reading materials are in Japanese.

Medieval Japanese Literature and Culture (207479)

David Atherton

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course offers a comprehensive introduction to the literature of Japan's medieval centuries (broadly conceived as the 12th through 16th centuries), together with an overview of critical approaches to its study. We will explore the relationship between literary production and politics, visual culture, scholasticism, geography and human movement, religion and ritual, and conceptions of class and gender, as well as the materiality and circulation of texts and, ultimately, the question of "medievallity" itself. Our primary readings will be taken from high and low genres of poetry, drama, and prose (including narrative fiction, essays, miscellanies, and works of poetic and dramatic theory). Previous study of Japanese or East Asian literature is NOT required (though certainly welcome), and readings will be provided in English for those who do not read modern or classical Japanese. Curious students of other literary traditions are particularly welcome.

Ideologies of Language in Modern and Contemporary Korea (156593)

Si Nae Park

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Descriptions and prescriptions about how we (should) speak and write are fundamentally, if at times covertly, related to larger questions pertaining to cultural identity, history, power, gender, and contents and contours of literature. How are ideas about language and writing constructed, contested, and remembered? What are the impulses and impacts of such ideas? In this seminar, students will become familiarized with key sites of ideologies of language and writing using Korea as a nexus. We will begin with ideologies of language and writing in Korea within the Sinographic cosmopolis (i.e., shared script in pre-20th-century East Asia), Korea under Japanese Imperialism, postcolonial and postwar Korea, and contemporary Korea.

The Book in Korea Before the 20th Century (204995)

Si Nae Park

2018 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is for graduate students and advanced undergraduate students interested in the book from pre-20th-century Korea. With a focus on the "vernacular book" (i.e., books within which the Korean language is inscribed and books of foreign origins published in Korea), this course teaches students the art of reading slowly to bring "dead" books to life, including how to dissect the book space as a site of visual and aural inscription, to understand the contents of the book (i.e., linguistic decipherment), and to map out producers and readers' horizon of expectations. Students must have advanced knowledge of Korean and should have had some exposure to reading texts written in Literary Chinese or Chinese.

Frames in Time: Korean Cinema as History and Filmmaking (207561)

Carter Eckert

Alexander Zahlten

2019 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will trace the development of Korean cinema from the 1930s to the present, approaching the subject through two alternating lenses: One focuses on cinema as depicting and reflecting historical moments and changes in Korean society, and the other focuses on the transformations of Korean filmmaking and its interactions with national, regional, and global cinemas. During the semester the course will introduce students to a diverse array of key Korean films, including North Korean cinema. Arranged both thematically and diachronically, the films will shed light on both of these perspectives and allow the course to consider how the art and technology of filmmaking in each case has been applied to enhance and explore the subject matter of the film.

E Asian Film & Media Studies 151 Section: 01

Documenting China on Film (204991)

2018 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

What defines a film as "documentary"? How do documentary films inform, persuade, provoke, or move us? Of whom, by whom, and for whom are documentaries made? Can documentary also be "propaganda" or "art"? What rhetorical devices and aesthetic strategies do documentaries use to construct visions of reality and proclaim them as authentic, credible and authoritative? What might documentary films—as opposed to written text—teach us about modern Chinese history and contemporary society? Above all, how would you go about making a documentary film, in China or elsewhere?

In this course, we will examine documentary films made in or about China from the early 20th century to the present day, through the lenses of both Chinese and foreign filmmakers. We will interrogate the visual "evidence" that camera images can offer, look into their production and reception histories, as well as discuss the ethics, aesthetics, and politics of documentation, representation, and exhibition. Weekly topics are roughly grouped into three parts: (1) "Witnessing History" (2) "Social Reportage" and (3) "Art, Experimentation, and Fiction." The first part will cover the cinematic history and memory of World War II, the Cultural Revolution, and the 1989 Tiananmen protests. The second part will explore documentary engagements with contemporary issues ranging from social inequality, migrant labor, forced demolitions, and environmental degradation. The third part will consider the art of observation, the potentials of experimentation, and the porous boundaries between documentary and fiction. Viewings of documentary films will be complemented by theoretical and contextual readings, as well as short assignments to engage critically and creatively with the films we watch. The final project for the course will be to make a documentary film in a small group.

Three Times + 1. Transitional Moments in Film and Media Culture in Japan: Seminar (109513)

Alexander Zahlten

2018 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This seminar will focus on transitional moments in the history of film and media culture in Japan. We will explore the deep transformations of the years 1927, 1963, and 1995—with an additional focus on 1968—and their connections to media-historical shifts that include magazines, TV, animation, music, the experimental arts and other media / genres.

We will also take a step back to consider the theory and methods of historiography of media, both generally and in the specific case of Japan.

Topics in Chinese Film and Media Studies: Seminar (109511)

Jie Li

2019 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This graduate seminar surveys the current field of Chinese cinema studies with a focus on film culture and historiography from the end of the 19th century to the start of the 21st century. We will be asking three questions preoccupying film and media studies--What is cinema? When is cinema? Where is cinema?--in Chinese and Sinophone contexts. Beyond the interpretation of film texts, we will also examine film production and exhibition, stars and audiences, genres and movements, technologies and infrastructures, propaganda and censorship, industries and markets, experiences and memories, transnational and transmedial connections. Situating films within broader media ecologies, we will discuss some of the most innovative scholarship published in recent years as well as delve into untapped primary sources to explore future research projects that can make new contributions to this emerging field. The organization of the syllabus is roughly chronological, while many weekly themes will resonate throughout the semester.

Economics

Subject: Economics

Economics 10A

Principles of Economics (113326)

N. Mankiw

2018 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to economic issues and basic principles and methods of microeconomics: how markets work, market efficiency and market failure, firm and consumer behavior, policy issues such as taxation, international trade, the environment, and the distribution of income.

Course Notes:

Ec 10A Microeconomics (taught in the fall term) is a prerequisite for Ec 10B macroeconomics (taught in the spring term). Taught in a mixture of lectures and small sections. No calculus is used, and there is no mathematics background requirement. Designed for both potential Economics concentrators and those who plan no further work in the field. The Department of Economics strongly encourages students considering concentration to take both Ec10A and Ec10B in their freshman year. This is a required course for all economics concentrators and a prerequisite for higher level courses in economics. This course, when taken for a letter grade together with Economic 10b, meets the General Education requirement for only Empirical and Mathematical Reasoning, Societies of the World, or United States in the World.

Class Notes:

Microeconomics (taught in the fall term) is a prerequisite for macroeconomics (taught in the spring term). Students may elect to take only the fall microeconomics course and receive a half-course credit. Taught in a mixture of lectures and small sections. No calculus is used, and there is no mathematics background requirement. Designed for both potential Economics concentrators and those who plan no further work in the field. The Department of Economics strongly encourages students considering concentration to take the full-year course in their freshman year. This is a required course for all economics concentrators and a prerequisite for higher level courses in economics. This course, when taken for a letter grade together with Economic 10b, meets the General Education requirement for either Empirical and Mathematical Reasoning or United States in the World, but not both.

M., W., F., at 12. Sections also meet at 9, 10, 11, 12, 1, or 2.

N Mankiw and members of the Department

Immigration Economics (126771)

George Borjas

2018 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

There has been a resurgence of large-scale international migration in the past few decades. This course explores the economic determinants and consequences of these population flows. Specific topics include the study of how immigrants are non-randomly selected from the population of the countries of origin, the measurement and implications of economic assimilation in the receiving country, the impact of the flows on the labor markets of both receiving and sending countries, and the calculation of the economic benefits from immigration. This is a junior tutorial.

Course Notes: A research paper will be required.

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Policy Options in Health Economics (107675)

Ariel Pakes

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Description: The seminar will focus on policy issues in health economics. We will read papers on an assortment of policy options and formulate frameworks for analyzing their likely impacts on outcomes of interest. Examples include the analysis of mergers in hospital and insurance markets, the choice of capitation vs fee for service contracts and its impact on cost and quality of care, policy options for health insurance, and the re-structuring of health service providers. Where possible we will use data and do the analysis quantitatively. Some knowledge of microeconomic and statistical tools, particularly those related to industrial organization, will be helpful (a few of the needed techniques will be taught during the course). This is a Junior Tutorial.

Course Notes: This course requires special action- application or lottery- to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.

Class Notes: Please note this course will meet from 12:45-2:45pm.

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics of Work and Family (108892)

Claudia Goldin

2018 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

How are the most personal choices and life transitions decided? When and whom do you marry, how many children do you have, how much education should you obtain, and which careers or jobs will you pursue? Much will be explored in terms of change over time, particularly concerning the economic emergence of women and the growing role of government. Readings draw on economic theory, empirical analyses, history, and literature from the 19th century to the present. This is a Junior Tutorial.

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Behavioral Finance (203866)

Jeremy Stein

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This junior seminar will provide an overview of theoretical and empirical research on asset pricing that adopts a "behavioral" perspective, i.e. that considers the joint consequences of: (i) investors who have either less than fully rational beliefs or non-standard preferences; and (ii) various impediments to arbitrage. We will also spend considerable time fleshing out the implications of investor sentiment for corporate finance, macroeconomics, and public policy.

Class Notes: This course will take place from 12:00-2:00pm.

Recommended Prep: Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Empirical Research on Economic Inequality (160329)

Maximilian Kasy

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

The purpose of this class is twofold. First, to teach you something about economic inequality, some of its causes, and how it is affected by policy. Second, to teach you econometric methods which have been used in the literature on economic inequality, preparing you to do your own research on this topic, or related topics, and to maybe write an undergrad thesis.

We will focus mostly on mechanisms affecting income inequality, such as racial discrimination, (de) unionization, minimum wages, shifts in labor demand due to changes in technology and trade, shifts in labor supply due to migration, intergenerational transmission of economic status, and taxation.

We will talk a little bit about the historical evolution of income and wealth inequality, and a little bit about international inequality; mostly, though, we will focus on mechanisms affecting the distribution of incomes in the United States.

Economics 1011A Section: 002

Intermediate Microeconomics: Advanced (120711)

Edward Glaeser

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Economics 1011a is similar to Economics 1010a, but more mathematical and covers more material. The course teaches the basic tools of economics and to apply them to a wide range of human behavior. Prerequisites for this course include Mathematics 21a or permission of the instructor.

Course Notes:

Economics 1011a fulfills the intermediate microeconomic theory requirement for Economics concentrators. Students may take either Econ 1010a or Econ 1011a for credit. However, starting in Fall 2014, concentrators who receive less than a B- in this course must enroll in Economics 975a (Microeconomic Theory Tutorial). Exception: Concentrators who already took their macroeconomic theory requirement (Econ 1010b/1011b) prior to Fall 2014 are held to the old rule: concentrators who earn below an average grade of B-/C+ in their two economic theory requirements must enroll in Econ 975.

Recommended Prep:

Mathematics 21a or permission of the instructor.

From Gorbachev to Putin: The Economics and Politics of the Russian Transition (203356)

Maxim Boycko

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

The course covers the transformation of Russia from "mature socialism" of the early days of Mikhail Gorbachev to the present-day mix of market economics and authoritarian politics under Vladimir Putin. After introducing basic concepts of capitalism, socialism and transition, the course focuses on key economic and political reforms. Additional topics include the Russian energy sector, oligarchs, and corruption. Students will have weekly reading assignments, participate in classroom discussions, and make an oral presentation.

Recommended Prep: **Prerequisites:** Ec10a, Ec10b or equivalents; and Stat104 or equivalent.

Economics 1033

The Economics of Networks (160360)

Benjamin Golub

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

100

Social and economic networks are an essential part of the fabric of modern life. Some examples: the complex trading networks that underlie modern financial markets and supply chains; social media platforms; networks of personal connections that help people find jobs. These networks profoundly affect the economy and society more broadly: for instance, financial interdependencies are critical in economic crises, while rumors on Twitter have come to play a central role in our politics. How can we make sense of these phenomena—as individuals, within companies, and as policymakers? This seminar teaches models from the economics and statistics of networks that are essential to the task. Topics include the diffusion of information and rumors, racial segregation, and the network origins of recessions. We emphasize how network models relate to key ideas from microeconomics. For a sense of the course, see reviews of Econ9800: this course will focus on similar material without the project component.

Recommended Prep: **Stat 110, Applied Math 101, Math 154, or equivalent; Ec 1010/1011a**

Economics 1036

The Psychology and Economics of Beliefs (204421)

Matthew Rabin

2018 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

This seminar focuses on how individuals and groups come to form beliefs about important things in their lives. What medicines are effective? What investment strategies make sense? What careers are lucrative? What effect would a 10% tax cut this year have on the unemployment rate two years from now? How many total hours will you sleep next week? What GPA will you have when you graduate Harvard? What is the probability you will enter a post-graduate program after college—and how does that depend on your GPA? We will review theories and evidence about how individuals develop their beliefs from experience, personal observations, and by learning from others. The organizing theme will be to compare the assumption of full rationality that is traditional in economic theory to evidence identified by psychologists and others about errors people make, and the consequences of these errors for beliefs. When do people become overconfident that they know the right answer? Are their beliefs internally consistent? When do groups of people all come to the same conclusions, and how likely are such consensus beliefs to be correct? Readings for the course will include academic research in psychology, economic theory, empirical economics, and historical and sociological research about prevailing beliefs. The course requires participation in discussions, a short presentation, problems sets, and research-oriented written assignments. Given the nature of the course, full attendance (insofar as it is consistent with your health and the health of those around you) is required, no auditing is permitted, and enrollment will be open solely to Harvard University undergraduates. (No exceptions!) Because of the heavy emphasis in lectures and problem sets on rigorous formal theories and measurements along the lines of mainstream economics, the course requires background in microeconomics, mathematics, and statistics (e.g., Bayes' Theorem, univariate distributions, law of large numbers, and the central limit theorem). Completion of courses at the level of Math 21A and Stats 110 are strongly advised, and Math 1A, Economics 1010A or 1011A, and Stats 104 or their equivalents are required. Note that all students must obtain instructor consent prior to enrolling in the class; please see the course syllabus or consult Professor Rabin, or the Teaching Fellow (William Murdock, wmurdock@g.harvard.edu) if you have concerns about your fit for the course.

Course Notes: Course will take place from 10am-12pm.

Class Notes: Course taking place from 9:45am-11:45am.

Recommended Prep: Ec 1010a prereq. Helpful to have taken Stat 110 or Stat 104.

Sports Economics (211392)

Judd Cramer

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

80

This course will apply economic principles from game theory, labor economics, and econometrics to analyze a wide range of issues primarily in the realm of professional sports and collegiate athletics rigorously with a focus on causality. Topics include: the hot hand; expansion and rival leagues; franchise relocation and venue construction; revenues from merchandising, broadcast rights and their distribution; free agency, arbitration, and salary caps; player development through amateur drafts and minor leagues; NCAA rules on scholarships and eligibility; in-game strategy; and financial aspects of collegiate athletic

programs. Class discussion, problem sets, and an exam will form the bulk of the course requirements. Readings will draw upon a variety of sources, including Andrew Zimbalist's *Baseball and Billions*, Robert Frank and Phil Cook's *The Winner-Take-All Society*, and newspaper, magazine and academic journal articles.

Recommended Prep: Econ 1010a, Stat 104, Concurrent Enrollment in econometrics
(Previous completion recommended)

Strategy, Conflict, and Cooperation (123893)

Robert Neugeboren

2019 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Game theory is the study of interdependent decision-making. In the early days of the cold war, game theory was used to analyze an emerging nuclear arms race; today, it has applications in economics, psychology, politics, the law and other fields. In this course, we will explore the "strategic way of thinking" as developed by game theorists over the past sixty years. Special attention will be paid to the move from zero-sum to nonzero-sum game theory. Students will learn the basic solution concepts of game theory -- including minimax and Nash equilibrium -- by playing and analyzing games in class, and then we will take up some game-theoretic applications in negotiation settings: the strategic use of threats, bluffs and promises. We will also study the repeated prisoner's dilemma and investigate how cooperative behavior may emerge in a population of rational egoists. This problematic -- "the evolution of cooperation" -- extends from economics and political science to biology and artificial intelligence, and it presents a host of interesting challenges for both theoretical and applied research. Finally, we will consider the changing context for the development of game theory today, in particular, the need to achieve international cooperation on economic and environmental issues.

The course has two main objective: to introduce students to the fundamental problems and solution concepts of noncooperative game theory; and to provide an historical perspective on its development, from the analysis of military conflicts to contemporary applications in economics and other fields. No special mathematical preparation is required.

Recommended Prep: Economics 10a

Game Theory with Applications to Social Behavior (203555)

Erez Yoeli

Moshe Hoffman

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Game theory is the formal toolkit for analyzing situations in which payoffs depend not only on your actions (say, which TV series you watch), but also others' (whether your friends are watching the same show). You've probably already heard of some famous games, like the prisoners' dilemma and the costly signaling game. We'll teach you to solve games like these, and more, using tools like Nash equilibrium, subgame perfection, Bayesian Nash equilibrium, and the one-shot deviation principle.

Game theory has traditionally been applied to understand the behavior of highly deliberate agents, like heads of state, firms in an oligopoly, or participants in an auction. However, we'll apply game theory to social behavior typically considered the realm of psychologists and philosophers, such as why we speak indirectly, in what sense beauty is socially constructed, and where our moral intuitions come from.

Each week, students are expected to complete a problem set, to read 2-3 academic papers, and to complete a 1-2 page response to short essay questions ('prompts') on these readings. All assignments can be completed in groups of two. Tutorials are not required but are highly recommended for students without a substantial background, especially in math. There will also be a final exam.

Class Notes:

Class meets on Tuesdays and Thursdays, 1:30 to 2:45 pm.

Analyzing Education Policy (204433)

Joshua Goodman

2019 Spring (4 Credits)

Schedule:

MW 1015 AM - 1130 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course examines a variety of education policy issues in the United States and abroad, with an emphasis on rigorous econometric evaluation of such policies. By the course's end, students should have an analytical framework that allows them to think clearly about the impacts of education policies, as well as be able to distinguish good research from bad. The first half of the course reviews important empirical techniques in the context of broad questions, such as whether people make educational decisions by weighing benefits and costs and whether education improves students' long-term outcomes. The second half of the course centers on debates in which teams of students will argue for a given policy proposition and I will argue against it, with the aim of sharpening everyone's arguments on the basis of existing empirical evidence. . Prerequisites: Familiarity with regression analysis and causal inference, or permission of the instructor.

Great Theorems of Microeconomic Theory (160362)

Jerry Green

2018 Fall (4 Credits)

Schedule:

T 0600 PM - 0845 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course surveys the most important results in microeconomics that have shaped the field in the years since WWII. It has two objectives: (i) To understand how the questions were posed, who the innovative researchers were, and what external influences drove them to approach the subject as they did. This $\frac{1}{4}$ of the course is the modern history of micro-economic thought. (ii) The major results themselves. This $\frac{3}{4}$ of the course is quite technical. The lectures will explain and introduce these results in their historical context, and provide the mathematical background. Class participants will present proofs of the results in section.

The major theorems covered come from choice theory under certainty and uncertainty, general equilibrium theory, non-cooperative game theory, cooperative game theory, social choice, and the economics of incentives and mechanism design.

Course requirements comprise three papers and one end-of-term take home exam. Section presentations will also be a component of the grade.

Economics 1083

Growth, Inequality, and the Income of Households (205607)

Jason Furman

2019 Spring (4 Credits)

Schedule:

MW 0845 AM - 1000 AM

Instructor Permissions: Instructor**Enrollment Cap:**

5

Since the 1970s households in the United States and other advanced economies have seen their income growth slow as a result of slower overall economic growth and rising inequality—compounded in many countries by men withdrawing from the workforce. In China and many emerging economies, households have seen substantial income gains—as fast overall economic growth has outweighed the rise in inequality. This course will analyze the ways in which growth, inequality and labor force participation shape the incomes of typical households, focusing on the United States, other advanced economies, and to a lesser degree developing economies. The course will consider the causes of the changes in growth and inequality as well as their relationship—asking questions like whether higher growth inevitably entails higher inequality and whether inequality can be bad for growth. In addition, we will consider the positive and normative evaluation of policies that entail tradeoffs between growth and inequality.

This course forms a unified sequence with SUP-206 "The Causes and Consequences of Inequality" taught in the spring which provides a more microeconomic and focused perspective on inequality. While either course can be taken separately, taking them together as a sequence is recommended for students wanting to pursue a more in depth study of household incomes and inequality.

Class Notes: The course location is: Harvard Kennedy School Rubenstein Classroom 304. Taught jointly with HKS SUP-204.

Recommended Prep: There are no formal prerequisites but familiarity with economics and elementary statistics is strongly recommended. Students lacking this background may find the material challenging.

Economics 1123

Introduction to Econometrics (123033)

Gregory Bruich

2019 Spring (4 Credits)

Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to multiple regression techniques with focus on economic applications. Discusses extensions to discrete response, panel data, and time series models, as well as issues such as omitted variables, missing data, sample selection, randomized and quasi-experiments, and instrumental variables. Also develops the ability to apply econometric and statistical methods using computer packages.

Course Notes: Students may take both Economics 1123 and Statistics 139 for credit. However, Statistics 139 will not count as the econometrics requirement for the economics concentration. Also, Economics 1123 may not be taken for credit if taken after Economics 1126, but credit will be given for both courses if Economics 1123 is taken first.

Recommended Prep: Statistics 100 and 104.

Using Big Data to Solve Economic and Social Problems (208364)

Nadarajan Chetty

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course, targeted at freshmen and sophomores, will show how "big data" can be used to understand and solve some of the most important social and economic problems of our time. The course will give students an introduction to frontier research in applied economics and social science in a non-technical manner that does not require prior coursework in Economics. Topics include equality of opportunity, education, health, the environment, innovation and entrepreneurship, crime, and political partisanship. In the context of these topics, the course will also provide an introduction to basic statistical methods and data analysis techniques, including regression analysis, causal inference, quasi-experimental methods, and machine learning.

Poverty and Development (118764)

2019 Spring (4 Credits)

Schedule:

WF 0900 AM - 1015 AM

Instructor Permissions: Instructor**Enrollment Cap:**

30

We will consider a number of important questions in the field of development economics: Why are some countries so rich and others so poor? What factors have determined which countries prosper? Which are the root causes and which are the proximate causes of economic underdevelopment? Can these factors be changed with specific economic policies? If so, what are they and how are they best implemented? Are there country-specific characteristics that determine economic fate? Or, is prosperity just the result of luck? Does the enjoyment of the rich somehow depend on the continuing suffering of the poor? We will consider these questions and more. The course is intended to not only provide a general overview of the dominant views about economic development and policy, but to also provide students a sense of the most recent research in the field. For this reason, the course will go beyond the usual textbook summary of the field. Students will also examine recent journal articles that have made important contributions to the field of development economics. In the course, a particular effort is made to link the theories and empirical evidence to the real world.

Course Notes: Writing requirement: A research paper is required. This course meets the concentration writing requirement. Instructor's permission is required.

Recommended Prep: Economics 1010a1, 1010a2, (or 1011a) and 1010b (or 1011b). It is recommended that students have taken Economics 1123 or equivalent.

Economics 1450

The Political Economy of Religion (107425)

Robert Barro

Rachel McCleary

2018 Fall (4 Credits)

Schedule: W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: n/a

The study of the political economy of religion is grounded in two intellectual strands of thought developed in economics and sociology. The economic approach views religious competition and church-state relations as market phenomena. The absence of state religion allows for competition, thereby creating an environment for a plurality of religious faiths

in society. The continual subdividing of religion into sects ensures an open and competitive market whereby no one single religion dominates. The sociological approach focuses on religious beliefs and activities as rational choices as well as cultural phenomena. Religious beliefs are a part of cultural traits, values, and organizations which contribute to economic outcomes. As in commercial activity, people respond to religious costs and benefits in a predictable, observable manner. Religious beliefs that promote hard work, thrift, and honesty can be found across the world's major religions. The key question is: How does a society promote these values and in what circumstances does it, intentionally or unintentionally, discard them? People choose a religion (the theory of sects) and the degree to which they participate and believe (if at all). In this course we discuss a wide range of topics--religious competition, secularization (and its varieties), pluralism and tolerance, the structure of religious organizations, religion and individual behavior—that highlight the contributions and areas of further research in the field of political economy of religion.

Recommended Prep: Intermediate Macroeconomics and Microeconomics: Economics 1010a1, 1010a2, or 1011a and Economics 1010b or 1011b.

The World Economy: Growth or Stagnation? (125835)

Dale Jorgenson

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The world economy is gradually recovering from the financial and economic crisis that originated in the United States in 2007-2009. Despite the slow recovery of Europe and the U.S., world economic growth has continued at an accelerated pace since the mid-1990s. This is due to very rapid growth of Asian economies, especially China and, increasingly, India. China overtook the U.S. as the world's largest economy in 2014, while India surpassed Japan in 2012, becoming the world's third largest economy. The growth of the two Asian economic giants is rapidly transforming the world economy. The ultimate objective of Economics 1490 is to assess the prospects for sustainable growth of the world economy in the future. Will slower growth of the U.S., Japan, and the leading economies of Europe lead to worldwide stagnation or will the accelerated growth of the world economy continue?

Course Notes:

This course satisfies the Economics concentration writing requirement. Students who would like to enroll should submit the application form available on the course website.

Recommended Prep:

Economics 1010a1, 1010a2, or 1011a and Economics 1010b or 1011b.

The Financial Crisis and the Great Recession (207618)

Karen Dynan

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course will explore what lessons we can draw from the experience of the U.S. economy during the financial crisis and Great Recession. We will look at research on what factors precipitated the boom and bust in the housing market and how the resulting mortgage crisis rippled through the global financial system and ultimately generated the most severe economic downturn since the Great Depression. We will learn not only about the macroeconomic consequences of these events but also about the high human costs. We will analyze the policies the government used to stabilize the financial system, mitigate foreclosures, and provide fiscal and monetary support to the economy. The course will conclude by considering the lessons in the context of the current state of the U.S. economy, with an emphasis on what we will need to do to fight the next economic downturn.

Recommended Prep: Ec1011b and Ec1010b**Additional Course Attributes:**

Economics 1776

Religion and the Rise of Capitalism (125944)

Benjamin Friedman

2018 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Examines the influence of religious thinking on the intellectual revolution, associated with Adam Smith and others, that created economics as we know it as an independent discipline; also examines how the lasting resonances from these early religious influences continue to shape discussion of economic issues and debates about economic policy down to our own day.

Course Notes:

This course, when taken for a letter grade, meets the General Education requirement for Culture and Belief. This course fulfills the requirement that one of the eight General Education courses also engage substantially with Study of the Past.

Recommended Prep: Ec 10a and Ec 10b.**Additional Course Attributes:**

Attribute	Value(s)
FAS: General Education	Culture and Belief
FAS: Final Assessment Category	Three-hour Exam

FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Social Sciences
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration

Economics 1818

Economics of Discontinuous Change (112195)

Richard Freeman

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

40

Explores discontinuous changes in the economic position of groups and countries and presents mathematical and computer simulation models designed to illuminate these changes. Examples include growth/decline of trade unions, segregation of groups, development of linkages on the internet, changes in corporate work culture, growth of social pathologies in neighborhoods, and Malthusian concerns about the environment. Models include nonlinear simulations, neural networks, finite automata, evolutionary stable strategies, causal conjunctures, agent-based simulations, and genetic algorithms.

Course Notes:

Writing requirement: A research paper is required. This course meets the concentration writing requirement. Students should have some mathematical background, but there is no prerequisite.

Additional Course Attributes:

FAS Divisional Distribution	Social Sciences
FAS: Course Level	For Undergraduate and Graduate Students

Economics 1936

Keynes (107388)

Stephen Marglin

2018 Fall (4 Credits)

Schedule:

TR 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course explores the birth, death, and resurrection of The General Theory of Employment, Interest and Money from the Great Depression (1929-1939) to the Great Recession (2008-?). A major goal is to lay out a coherent argument that, for all its theoretical innovation, The General Theory did not deliver: the argument why a market system, even an idealized system with all of the warts removed, may fail to provide jobs for willing workers. In the process we will examine the orthodoxy that Keynes attacked and that resurfaced in the 1960s and 70s; the key concepts underlying the models implicit in The General Theory; and the attempts of the Keynesian mainstream to make peace with both Keynes and orthodoxy. We will also explore the applicability of The General Theory to the long run. A final section will view the present economic difficulties through a Keynesian lens.

Recommended Prep: Economics 1010b or 1011b, or permission of instructor; a year of college calculus allowing students to understand mathematical notation and concepts (derivatives, maximization, etc.) even though mathematics will be used very sparingly.

Economics 2020A

Microeconomic Theory I (112942)

Maciej Kotowski

2018 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

100

A comprehensive course in economic theory designed for doctoral students in all parts of the university. Topics include consumption, production, behavior toward risk, markets, and general equilibrium theory. Also looks at applications to policy analysis, business decisions, industrial organization, finance, and the legal system. Undergraduates with appropriate background are welcome, subject to the instructor's approval.

Course Notes:

The first lecture will be on FRIDAY September 7th at the usual class time and location: 8:45-10:00 in HKS, L-280. Thereafter, the course will meet on Mondays and Wednesdays.

The final exam will take place at Harvard Kennedy School on Tuesday, December 18, 2018, 9 a.m. – 12 Noon, Room (TBD).

Recommended Prep:

Multivariate calculus and one course in probability theory. Thorough background in microeconomic theory at the intermediate level.

Psychology and Economic Theory (156371)

Matthew Rabin

2018 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economics. Topics include ways utility theory can be improved--such as incorporating reference dependence, news utility, social preferences, self image, and other belief-based tastes--and ways we can relax assumptions of perfect rationality--such as incorporating focusing effects, limited attention, biased prediction of future tastes, present-biased preferences, biases in probabilistic judgment, and errors in social inference. The course will emphasize (a) careful interpretation and production of new evidence on relevant departures, (b) formalizing this evidence into models that can, with discipline and rigor, generate sharp predictions using traditional economic approaches, and (c) exploring economic implications of those models presented. Although we will primarily emphasize (b), the course is meant to be useful to students whose interests lie anywhere in this spectrum, under the premise that all such research will be improved by a greater appreciation of the full spectrum. The course is intended for PhD students in the Business Economics and Economics programs and others who have a solid background in microeconomic theory at the level of introductory PhD courses in these programs. While obviously appropriate to those wishing to specialize in "behavioral economics", the course is also designed for those interested in doing research in particular

fields of economics. And while the course centers on theoretical models (learning and evaluation will center around solving formal problem sets), the theory is focused towards its empirical implementability and economic relevance, so that the course is also designed for those interested in theory-influenced empirical research.

Course Notes: This course is cross listed with HBS

Economics 2040

Experimental Economics (123849)

Benjamin Enke

2018 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course provides an introduction to experimental methods and their applications in economics. We will focus on (i) the use of lab experiments in establishing causal effects, testing models, and illuminating mechanisms; (ii) field experiments in behavioral economics; and (iii) the measurement of preference parameters and behavioral traits in lab-in-the-field settings. Topics include bounded rationality, wishful thinking, moral values and social image concerns, gender, the measurement of preferences in lab and large-scale survey settings, and the explanatory power of behavioral traits for field behaviors. We will cover methodological topics including the relationship between experiments and theory, simple process-tracing techniques, internet experiments, and surveys. Students will become acquainted with the full process of designing an experiment, and class discussions will place heavy emphasis on the development of early-stage research ideas. The course is intended not just for those with an interest in behavioral and experimental economics per se, but also for those who wish to measure behavioral parameters in non-lab settings in applied work or to conduct field experiments.

Course Notes: Open to undergraduates with permission of the instructor.

Experimental Methods in the Social Sciences (211338)

Lucas Coffman

2019 Spring (4 Credits)

Schedule:

F 0130 PM - 0410 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This class is an introduction to experimental methods, particularly those developed across the social sciences (e.g. Economics, Psychology, Political Science, and Sociology). We will cover all of the steps of

an experiment, from design, measurement and randomization, to practical considerations like cost and power analyses. This is mainly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods (e.g. lab, field, and online studies, experiments in developing countries, interventions in organizations, and so on). The course is not intended to provide a foundation of famous experimental results overall or for any one topic. The take-away of the course is to develop the ability to design a confound-free experiment regardless of question or context. There will be weekly assignments, intermittent presentations, and a final paper.

Course Notes: Course will take place at HBS Cumnock Hall 220.

Recommended Prep: At least one out of three courses: Ec1010a, Ec1011a, or Ec1030.
Plus Ec 1123, plus Math 21a or equivalent.

Decision Theory (121331)

Tomasz Strzalecki

2018 Fall (4 Credits)

Schedule:

F 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course prepares students for pure and applied research in axiomatic decision theory. We start with a rigorous treatment of the classical topics that are at the heart of all of economics (utility maximization, expected utility, discounted utility, Bayesian updating, dynamic consistency, option value). We then delve into a number of modern topics inspired by the observed violations of the classical models ("exotic preferences" used in macro-finance, ambiguity aversion, temptation and self-control). The last part of the course explores the recently flourishing literature on stochastic choice (which is related to, but distinct from, discrete choice econometrics). **Prerequisites:** basic microeconomic theory at the level of Mas Colell, Whinston, Green; being comfortable with abstract models.

Econometric Methods (120662)

Isaiah Andrews

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course continues the first year sequence in econometrics and covers a variety of topics and ideas that are important for pursuing and interpreting empirical research in economics. The first half of the course covers core econometric approaches that are important for a wide range of applications, including identification analysis, asymptotic approximations, large sample theory for estimation and hypothesis testing, and the bootstrap. The second part of the course examines a range of complementary topics and new developments, including reasons why canonical econometric methods may be unreliable (such as model misspecification, identification failure, and the incidental parameters problem) and extensions of and alternatives to the traditional econometric paradigm (such as partial identification, Bayesian inference, nonparametrics, and machine learning). Economic applications will be discussed throughout. Enrollment limited.

Recommended Prep: Economics 2120 or equivalent.**Additional Course Attributes:**

Economic Development: Theory and Evidence (156605)

Rohini Pande

Dani Rodrik

2018 Fall (4 Credits)

Schedule: TR 1015 AM - 1130 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course aims to study theories of economic (under)development and scrutinize empirical evidence in order to glean insights to design development policy. The course will identify key features of the development process across countries, and develop an analytical framework, grounded in economic theory, to better understand these patterns. We will then apply our frameworks combined with rigorous empirical evidence to identify when and how public policies can enable economic growth and development. Macro topics include economic growth and its proximate determinants; resource misallocation, learning and coordination and their impacts on productivity; the impact of historical forces on the evolution of (political) institutions and the development process; and the effect of external influences on development. Micro topics include the determinants of and returns to investments in (health and education) human capital; credit markets, savings behavior, and the returns to financial capital; gender; behavioral economics in development; and governance and corruption. Grading will be based on a combination of short responses, technical assignments, a midterm, and a final

Recommended Prep: Students are expected to have strong background in microeconomics and statistics, as well as reasonable facility with multivariable calculus

History and Human Capital (124933)

Lawrence Katz

Claudia Goldin

2019 Spring (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Explores a range of subjects concerning human capital, historically and comparatively. Topics include fertility, mortality, health, immigration, women's work, child labor, retirement, education, inequality, slavery, unionization, and governmental regulation of labor, all within the broader context of economic history.

Course Notes: Satisfies the graduate distribution requirement. Open to undergraduates on a limited basis with permission of instructor.

Behavioral Development Economics (160359)

Gautam Rao

2019 Spring (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

This graduate level course will focus on the intersection of two rapidly growing fields in economics - development economics, and behavioral economics. We will study applications of behavioral economics to development questions, and ask whether there is a special behavioral science of poverty and development. Methods covered will include field experiments, lab experiments, tests of theory and combining experiments with structural estimation.

China Economy Seminar (110240)

Richard Freeman

2019 Spring (4 Credits)

Schedule: W 0130 PM - 0345 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This seminar provides a forum for faculty, graduate students, and research fellows in economics and other fields to present and discuss research and scholarship on the economic and social transformation of China. The seminar will give special attention to the environmental, technological, and social changes that are accompanying China's extraordinary economic development and to the links between Chinese and US economies.

Macro-Finance: Rational and Behavioral (125372)

Xavier Gabaix

2018 Fall (4 Credits)

Schedule:

M 0600 PM - 0845 PM

Instructor Permissions: None

Enrollment Cap:

n/a

- (1) Bounded rationality:** we'll go over a behavioral version of basic microeconomics (consumer theory, Arrow Debreu), basic macroeconomics (real and monetary) and public economics.
- (2) Macroeconomics with heterogeneity:** we'll study how microeconomic shocks can generate macro fluctuations; network models in macro-finance; models of the income distribution.
- (3) Finance:** we'll study unified macro-finance models. First, with perfect financial markets: we'll review

unified models of stocks, bonds, options and exchange rates. Second, with imperfect financial markets: we'll study how this sheds light on financial crises and currency movements. Time permitting, we'll review some behavioral finance, merging all three themes. The course is geared toward two types of students, and has accordingly two tracks, "behavioral" and "finance", with corresponding emphasis in the homework and exam.

Advanced Topics in Economic Growth (207939)

Philippe Aghion

2019 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This class focuses on the theory and empirics of "economic growth". The class will follow a micro-to-macro approach and hence special emphasis will be given to firms and inventors to uncover the determinants of aggregate productivity growth. In addition to some classic papers, the class will mainly focus on recent research. Students will be encouraged to discuss the frontier topics in class and produce new and exciting research ideas.

Course Notes: This is a 6 week course taught in the second half of the semester.

Additional Course Attributes:

Public Economics and Fiscal Policy I (110660)

Nathaniel Hendren

2018 Fall (4 Credits)

Schedule:

M 0600 PM - 0845 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The course will focus on a range of topics in public economics including welfare estimation of tax and expenditure policies, including income and commodity taxation, public goods, education, and place-based policies. We will also discuss foundations for government intervention, including market failures such as externalities and asymmetric information. Throughout, the focus will be on using theoretical models to motivate empirical analyses to uncover the desirability of government intervention in the economy and to quantify the welfare impacts of such policies.

Course Notes:

The course material and teacher for 2450A and 2450B have flipped relative to previous years.

This fall 2450A course will be very similar to the 2450B course taught in Spring 2018. The Spring 2019 2450B course will be taught by Professor Stantcheva and will be similar to the material covered in 2450A in Fall 2017

Class Notes:

Seminar in Health Economics (121703)

David Cutler

2019 Spring (4 Credits)

Schedule: W 0400 PM - 0515 PM

Instructor Permissions: None

Enrollment Cap: n/a

Focuses on theory, econometric models, and public policy of health care. Frontier work in health economics presented and discussed by instructors and outside speakers.

Course Notes: May be taken for credit only by dissertation students writing a research paper. Offered jointly with the Kennedy School as SUP-951.

Additional Course Attributes:

The Innovator's Practice: Finding, Building and Leading Good Ideas with Others (128317)

B Altringer

2018 Fall (4 Credits)

Schedule:

MW 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

25

Students gain experience overcoming many under-represented challenges of becoming an innovator, including: identifying your intrinsic motivations, finding related good ideas, working effectively with others to develop them, and leading innovative professional projects to implementation. Students apply human-centered design processes (observing, interpreting, ideating, testing, refining, planning) to stimulate innovation, negotiate, strategize, and build and lead cooperative teams. Features guest speakers from industry, academia, and involves collaborating with cutting-edge companies.

Course Notes: Offered jointly with the Design School as SCI-06271.

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Engineering Sciences 22

Design Survivor: Experiential Lessons in Designing for Desirability (109374)

B Altringer

2019 Spring (4 Credits)

Schedule:

MW 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Multi-disciplinary course for students interested in designing products and services that are simple, irresistible, delightful, cool, covetable, viral, and, increasingly these days, much more likely to be successful. Students study real world cases of how organizations (e.g., Apple, Gucci, Swarovski) strategically design for desirability. In weekly design challenges, students use analogical transfer to apply these insights to diverse industries and target markets (e.g., health literacy campaigns, declining technologies, the future of luxury). Weekly critique panels with experts enable students to develop their own design point of view and to finish with a diverse design portfolio.

Course Notes: Permission required for all students. Engineering Sciences 22 is jointly offered with the Graduate School of Design as SCI 6276.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

The Art & Science of Making (211326)

David Edwards

Robert D. Howe

Doris Sommer

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0415 PM

F 0130 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

Introduces students to the making processes of some of the leading creators working today from engineering and design, to art, science, food, entertainment and more. Students develop six projects over the course of the semester — and a semester-long collaborative project — that engage the students in art & science maker processes of visiting creators and encourage skills of collaboration, expression, communication, and aesthetic appreciation. Students learn to use basic engineering and design tools including some or all of the following: CAD/CAM rapid prototyping, machine shops tools, and environmental engineering and tissue engineering lab tools and methodologies.

Course Notes:

Enrollment limited to 25 students. Fridays will be dedicated to studio time in the Active Learning Labs.

Class Notes:

No prior experience with engineering required.

Engineering Sciences 24

Flavor Molecules of Food Fermentation: Exploration and Inquiry (156947)

Pia Sorensen

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Course description: Microorganisms produce a diverse array of specialized small molecules as part of their metabolic processes. In this course we will study the production, properties, and characterization of these molecules through the lens of food fermentation. In particular, we will focus on the small molecules that contribute taste and aroma in fermented foods. Students will experience the scientific inquiry process in a creative way by designing and implementing their own research project based on a fermented food of their choosing. Still a field with much potential for discovery, interested students are invited to continue their research project in the summer.

Recommended Prep:

Ls1a , LPSA or equivalent; first semester Organic Chemistry recommended but not required.

Engineering the Acoustical World (205412)

Robert Wood

2018 Fall (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

40

How does Shazam know what song is playing? Why do some rooms have better acoustics than others? Do high-end musical instruments sound better than cheap ones? How do electronic synthesizers work? How is music stored and manipulated in a digital form? This class explores these and related themes in an accessible way for non-engineering concentrators. The class is driven by hands-on group projects to enhance your technical literacy, a critical skill for anyone designing solutions to today's most pressing and complex issues. The projects are designed so that the creativity of students in all fields will have a role to play. Lectures, demonstrations, and guest lecturers/performers are integrated into the class to build foundational knowledge and to inspire. We will also explore wider social themes related to music and acoustics. The class is approached from an engineering perspective, using music and musical instruments as the framework to introduce a broad array of concepts in physics, mathematics, and engineering. Requires no previous exposure to physics or calculus beyond the high school level.

Course Notes:

Enrollment limited to 40 students.

Engineering Sciences 26

Humanity and its Challenges: Systems Thinking and Approaches (204471)

Fawwaz Habbal

Vikram Mansharamani

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

As citizens in a rapidly changing world facing increasingly complex challenges, the skills that tomorrow's leaders need are increasingly crossing disciplinary silos. Humanity's most pressing problems are interconnected, involve competing interests, and defy simplification into single disciplines. Reductionist approaches focused on linear understanding must be balanced against the integrative logic of systems-oriented thinking. Depth must be balanced with breadth.

This course will give students an appreciation for the complexities of today's most intractable problems, and in so doing, help students develop a methodology for navigating the world they will face. After an overview of systems thinking and its emphasis on interconnections and feedback loops, the course will explore several issues and the complications they generate. Over the course of the semester, topics including epidemics, inequality, human displacement, and food systems will be addressed.

The course will employ multiple methods of learning, with course preparation varying from reading novels to watching videos to reviewing academic papers. Each case will include an overview of the issue and why it matters, before exploring existing disciplinary approaches to address the challenge. Prior thinking is

evaluated both in terms of its rigor and its effectiveness. What worked and didn't work? Why? Students will learn to employ systems thinking using a multi-disciplinary method to evaluate possible solutions. This future-oriented analysis will emphasize the necessity to zoom out and paint a mosaic of possible unintended consequences and roadblocks that may impede progress. By the end of the course, students should have developed a robust framework for integrating economic, political, technical, ethical, and social lenses into an analysis of complex problems and their potential solutions.

2019 Spring (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

24

We live in a time of unprecedented technological change that affects how we live with each other and with our environment. How, in areas that lack precedents and are fraught with uncertainties, can we strike a balance between technological progress and social welfare? Students are expected to leave the course with a deeper understanding of technology-society linkages as seen through three analytic lenses: risk, inequality, and human dignity. They will see how assumptions about progress and political legitimacy affect each of these dimensions of human development by looking at examples such as genetic engineering, artificial intelligence, robotics, environmental change, and big data.

Class Notes:

Enrollment by application. Please answer this one question survey to be considered: <https://goo.gl/forms/wEH2xAvL5DB0v9bj1>.

Christopher Lombardo

Munib Wober

2019 Spring (4 Credits)

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap: 40

This course is a practical introduction to analog and digital electronics for engineers. Topics will include aspects of analog circuit theory, discrete digital circuits, and embedded systems that utilize microcontrollers to process inputs from sensors and act on the world accordingly, for instance through motor control. There will be extensive hands-on laboratories to put into practice the topics covered in lecture. This course meets the electronics course requirement for mechanical engineers and bioengineers (i.e., for those bioengineering tracks that require electronics/circuits). This course is not intended for electrical engineering concentrators.

Course Notes: Enrollment limited to 40 students. Instructor permission required.

Startup R & D (109272)

Paul Bottino

2019 Spring (4 Credits)

Schedule: T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Students do field-based work in entrepreneurship to develop their existing startup and explore new ideas and opportunities for startup design. The course is for students seeking innovation experience as a

founder of a startup. Students may work individually; teams are preferred. Requires self-directed, independent work and active outreach to mentors, customers, and partners for guidance and feedback in addition to that provided by the instructor. Students will share their work regularly and engage in a peer-to-peer feedback forum. The coursework is customized to the needs of each student and their startup role and includes development of product, technology, market, business, organization and leadership.

Course Notes: Enrollment limited; permission of instructor required.

Class Notes: ES 95r can be taken maximum of two times (i.e., repeated a maximum of once). Applications are due before the first class, a link to application instructions can be found here: <http://tech.seas.harvard.edu/rad/>.

n/a

Introduction to basic mathematical ideas and computational methods for solving deterministic and stochastic optimization problems. Topics covered: linear programming, integer programming, branch-and-bound, branch-and-cut, Markov chains, Markov decision processes. Emphasis on modeling. Examples from business, society, engineering, sports, e-commerce. Exercises in AMPL, complemented by Maple or Matlab.

Course Notes: Engineering Sciences 121 is also offered as Applied Mathematics 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.

Recommended Prep: Applied Mathematics 21b or Mathematics 21b (linear algebra) and some knowledge of probability and statistics at the level of Statistics 110 or Applied Mathematics 101 or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 123

Introduction to Fluid Mechanics and Transport Processes (144952)

Shmuel Rubinstein

2019 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Dimensional analysis. Basic elements of steady and unsteady thermal conduction and mass diffusion. Statics and dynamics of fluids. Buoyancy-stability and hydrostatics. Laminar viscous flows, potential flows, origin of lift, and basic aspects of boundary layers. Navier-Stokes and continuity equations. Applications in aerodynamics, chemical, environmental, and mechanical engineering, and physics.

Recommended Prep: Applied Mathematics 21a,b or Mathematics 21a,b.

Requirements: Prerequisite: (Applied Math 21a or Math 21a or equivalent) AND (Applied Math 21b or Math 21b or equivalent) AND (APPHY 50a or PHYSCI 12a or Physics 15a)

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 125

Mechanical Systems (144157)

Boris Kozinsky

2018 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Modeling and analysis of mechanical and electromechanical systems. Topics include 3D rigid body dynamics, resonance, damping, frequency response, Laplace transform methods, Lagrange's equations, multiple degree-of-freedom systems and an introduction to nonlinear vibration, continuous systems, and control. Analytical modeling will be supplemented with numerical simulations and lab experiments. Laboratory exercises will explore vibration, stabilization, and nonlinear systems using data acquisition systems.

Recommended Prep: Applied Mathematics 21a,b or Mathematics 21a,b or Mathematics 23a, b; Applied Physics 50a, Physical Sciences 12a, or 15a.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam

Engineering Sciences 128

Computational Solid and Structural Mechanics (133525)

Katia Bertoldi

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to finite element methods for analysis of steady-state and transient problems in solid, structural, fluid mechanics, and heat transfer. Implementation of simple MATLAB codes and use of existing general-purpose programs (ABAQUS and COMSOL).

Course Notes: Offered alternate years.

Recommended Prep: Engineering Sciences 120 or equivalent introduction to the mechanics of deformable materials and fluids. Engineering Sciences 123 may be taken concurrently.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 139

Innovation in Science and Engineering: Conference Course (118939)

David Weitz

2018 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Explores factors and conditions contributing to innovation in science and engineering; how important problems are found, defined, and solved; roles of teamwork and creativity; and applications of these methods to other endeavors. Students receive practical and professional training in techniques to define and solve problems, and in brainstorming and other individual and team approaches.

Course Notes: Offered jointly with the Design School as SCI-06272. Taught through a combination of lectures, discussions, and exercises led by innovators in science, engineering, arts, and business.

Requirements: Anti-Req: May not be taken for credit if ENG-SCI 239 already complete

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 150

Probability with Engineering Applications (116859)

Yue Lu

2019 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course introduces the fundamentals of probability theory for parameter estimation and decision

making under uncertainty. It considers applications to information systems as well as other physical and biological systems. Topics include: discrete and continuous random variables, conditional expectations, Bayes' rules, laws of large numbers, central limit theorems, Markov chains, Bayesian statistical inferences, and parameter estimations.

Recommended Prep: Applied Math 21a, Math 21a or equivalent.

Requirements: Prerequisite: (Applied Math 21a or Math 21a or equivalent) AND
Corequisite: (Applied Math 21b or Math 21b or equivalent)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
FAS: Final Assessment Category	Three-hour Exam

Engineering Sciences 151

Applied Electromagnetism (143005)

Evelyn Hu

2019 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Electromagnetism and its applications in science and technology. Topics: Maxwell's equations; electromagnetic waves (e.g., light, microwaves, etc.); wave propagation through media discontinuity; transmission lines, waveguides, and microwave circuits; radiation and antennae; interactions between electromagnetic fields and matters; optics of solids; optical devices; origin of colors; interference and diffraction; lasers and masers; nuclear magnetic resonance and MRI; radio astronomy; wireless networking; plasmonic wave (charge density wave).

Recommended Prep: Basic electromagnetism (Applied Physics 50b, Physical Sciences 12b, or 15b or equivalent), basic vector calculus (Applied Math 21a or equivalent), basic differential equations (Applied Math 21b or equivalent) and familiarity with Fourier analysis (Applied Math 21b or equivalent).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 152

Circuits, Devices, and Transduction (207597)

Todd Zickler

Marco Donato

2018 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on devices and systems that use *analog* electronics, and it complements COMPSCI 141, which focuses on digital devices and systems. Topics of this course include: time and frequency domain analysis of simple 1st and 2nd order circuits; operational amplifiers and op-amp circuits; basic semiconductor physics; PN junctions and diodes; bipolar junction transistors (BJT); field-effect transistors (MOSFETs); bias circuits and current sources; amplifier gain and bandwidth; frequency response, feedback, noise, and stability. Further, students are introduced to select transducers, particularly motors and their concomitant drive schemes, but also photocells, photodiodes, and semiconductor lasers to highlight device design and characterization.

Recommended Prep: Math 1a/b and PS 12b (corequisite) or score of 5 on AP exam, Physics C.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 153

Laboratory Electronics (156518)

David Abrams

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

22

A lab-intensive introduction to electronic circuit design. Develops circuit intuition and debugging skills through daily hands-on lab exercises, each preceded by class discussion, with minimal use of mathematics and physics. Moves quickly from passive circuits, to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Notes:

Limited to 20 students. Engineering Sciences 153 is also offered as Physics 123/223. Students may not take both for credit. Engineering students should enroll in ES153. Undergraduate physics students should enroll in Physics 123. Graduate students should enroll in Physics 223.

Additional Course Attributes:

Attribute	Value(s)
FAS: General Education	Science of the Physical Universe
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Systems and Control (207626)

Na Li

2018 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course and its follow-on course ENG-SCI 156 concern the fundamentals of information systems in the real world. Together they provide a comprehensive foundation in signal processing, systems design and analysis, control, and communications, while also introducing key linear-algebraic concepts in the context of authentic applications. The first course, ENG-SCI 155, focuses on the basic principles of feedback and its use as a tool for inferring and/or altering the dynamics of systems under uncertainty. Topics include linear algebra, the elemental representations of dynamic systems, stability analysis, the design of estimators (e.g., Kalman Filter) and feedback controllers (e.g., PID and Optimal Controller). The class includes both the practical and theoretical aspects of the topic.

Course Notes: Additional discussion and lab section to be arranged.

Recommended Prep: Math 1a/b.

Signals and Communications (148148)

Flavio du Pin Calmon

2019 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is a follow-on to ENG-SCI 155 and continues to develop the fundamentals of information systems in the real world. It focuses on the analysis and manipulation of signals in the time and frequency

domains in the context of authentic applications. Topics include: the sampling theorem, convolution, and linear input-output systems in continuous and discrete time. Further, students are introduced to transforms—including Fourier, discrete cosine, wavelet, and PCA / SVD 'transforms'—that map between vector spaces via matrix multiplication as a method to ease analysis provided conditionalized knowledge. Randomness, noise, and filtering. Waves and interference in the context of communications; antennae, phasors, modulation, multiplexing. Applications in communications and data science.

Recommended Prep: Applied Mathematics 21b or Mathematics 21b.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 170

Engineering Quantum Mechanics (207088)

Prineha Narang

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

As a first course in quantum mechanics, tailored for engineering, applied mathematics and computer science students, this course will teach concepts needed to engineer a quantum world, to understand quantum mechanical properties of materials and build an intuition for quantum information science. The course will be a hybrid of lectures on theory, state-of-the-art computational methods ('theory-lab') in quantum simulations and we will use IBM Q Experience, an open access quantum computer. Topics will include periodic potentials and the tight-binding approach, quantizing vibrations in solids, spin matrices and an introduction to qubits. Assignments will teach the basics of the Python programming language, introduce students to open source scientific software and electronic structure methods.

Course Notes: This course also includes a weekly theory lab section.

Class Notes: View course trailer [here](#).

Recommended Prep: Math 21a (multivariable calculus) and Math 21b (linear algebra)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students

Engineering Sciences 173

Introduction to Electronic and Photonic Devices (119048)

Christopher Lombardo

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will focus on physical principles underlying semiconductor devices: electrons and holes in semiconductors, energies and bandgaps, transport properties of electrons and holes, p-n junctions, transistors, light emitting diodes, lasers, solar cells and thermoelectric devices.

Course Notes: This course will include a few short laboratory sessions.

Recommended Prep: Applied Physics 50a and b, Physics 15a and b, Physical Sciences 12a and b, or equivalent (mechanics; electromagnetism); undergraduate level quantum mechanics highly useful, but not required.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 177

Microfabrication Laboratory (109356)

Marko Loncar

Peter Stark

2019 Spring (4 Credits)

Schedule: M 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to micro- and nanofabrication processes used for photonic and electronic devices. Students use both an instructional lab as well as a state-of-the-art cleanroom in the Center for Nanoscale Systems. Several electronic and photonic devices will be fabricated, such as transistors, light-emitting diodes (LEDs) and lasers. Lectures will focus on fabrication processes, including lithography, deposition of metals and dielectrics, etching, oxidation, implantation and diffusion of dopants, and device characterization.

Course Notes: This course has a 4-hour weekly lab session.

Recommended Prep: Applied Physics 50a and 50b, Physical Sciences 12a and 12b, or Physics 15a and 15b or equivalent and ES 173 required.

Requirements: Prerequisite: (Applied Physics 50a OR Physical Sciences 12a OR Physics 15a) AND (Applied Physics 50b OR Physical Sciences 12b OR Physics 15b) AND ES 173

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 181

Engineering Thermodynamics (135598)

Michael Aziz

2018 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to classical engineering thermodynamics. Topics: Zeroth Law and temperature. Properties of single-component gases, liquids, and solids. Equations of state for ideal and simple nonideal substances. First Law, heat and heat transfer, work, internal energy, enthalpy. Second Law, Third Law, entropy, free energy, exergy. Heat engines and important engineering applications such as refrigerators, power cycles. Properties and simple models of solutions. Phase and chemical equilibrium in multicomponent systems; chemical potential. Electrochemistry, batteries, fuel cells. Laboratory included.

Recommended Prep: One semester of calculus-based college-level physics. Chemistry at the high school Advanced Placement level.

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 183

Introduction to Heat Transfer (108871)

David Clarke

2019 Spring (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

The macroscopic description of the fundamentals of heat transfer and applications to practical problems in energy conversion, electronics and living systems with an emphasis on developing a physical and analytical understanding of conductive, convective and radiative heat transfer. Emphasis will also be given to problem solving skills based on applying governing principles, mathematical models and physical intuition. Includes laboratory sessions and semester-long projects.

Recommended Prep: Applied Math 21a (Mathematical Methods in Science) or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 190

Introduction to Materials Science and Engineering (143870)

Xin Li

2018 Fall (4 Credits)

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to the structure, properties, and applications of materials. Crystal structure and defects. Phase transformations: phase diagrams, diffusion, nucleation and growth. Mechanisms of deformation and fracture. Effect of microstructure on properties. Examples from a variety of engineering applications.

Recommended Prep: Physical Sciences 12a,b, and Applied Mathematics 21a,b or Mathematics 21a,b.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 203

Stochastic Control (143872)

Roger Brockett

2019 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the theory of stochastic differential equations based on Wiener processes and Poisson counters, and an introduction to stochastic modeling, stochastic approximation and simulated annealing. The formulation and solution of problems in nonlinear estimation theory. The Kalman-Bucy filter and nonlinear analogues. Identification theory. Adaptive systems. Applications.

Recommended Prep: Applied Mathematics 104 , Applied Mathematics 105, or equivalent. Some prior exposure to probability; Engineering Sciences 202 desirable but not essential.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 220

Fluid Dynamics (146772)

James Rice

2018 Fall (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Continuum mechanics; conservation of mass and momentum, energy; stress, kinematics, and constitutive equations; vector and tensor calculus. Dimensional analysis and scaling. Navier-Stokes equations, Reynolds number. Solutions for simple flow states. Low Reynolds number flows; porous media flows; lubrication theory; gravity currents. Inviscid flows, Kelvin circulation theorem, Bernoulli integrals, Vortical flows. Waves in fluids; acoustics, shocks, water waves. Airfoil theory. Boundary layers. Flow instabilities. Mixing, and turbulence in unbounded and bounded flows.

Recommended Prep:

Familiarity with dynamics, vectors, multivariable calculus, and partial differential equations. An undergraduate course in fluid dynamics or other continuum mechanics is strongly recommended.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 222

Advanced Cellular Engineering (114808)

Kevin K. Parker

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes:

BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.

Recommended Prep:

Inorganic chemistry, cell biology, physics, and mathematics at the level of Applied Mathematics 21 or Mathematics 21. Suggested courses include organic chemistry and molecular biology.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Technology Venture Immersion (211051)

Conor Walsh

Thomas Eisenmann

2019 Spring (4 Credits)

Schedule:

MTWRF 0900 AM - 0600 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Using a learning-by-doing approach, student teams will work on their own venture concepts in this intensive immersion course. The course will convey concepts and builds skills required in early stage technology ventures, including problem finding (human-centered design, customer discovery), solution finding (ideation methods, prototyping, user testing), business model validation (hypothesis generation, minimum viable products, lean experimentation), sales and marketing methods, venture financing, and team building and leadership skills. Enrollment limited to first year MS/MBA students only.

Course Notes: This course is limited to first year MS/MBA students only. Extensive January term course.

Engineering Sciences 237

Planetary Radiation and Climate (156547)

Robin Wordsworth

2019 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Atmospheric radiative transfer is at the heart of understanding the climate of Earth and other planets. This course covers basic stellar and planetary physics, quantum spectroscopy, molecular and aerosol scattering, satellite retrieval theory, cloud, CO₂ and H₂O climate feedbacks, and extreme climate phenomena such as the runaway greenhouse, Nuclear Winter and Titan's methane cycle. As a final course outcome, you will learn to construct a line-by-line radiative-convective climate model from first principles.

Course Notes: Engineering Sciences 237 is also offered as Earth and Planetary Sciences 237. Students may not take both for credit.

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 240

Solid Mechanics (131521)

Joost Vlassak

2019 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Foundations of solid mechanics, development of elasticity theory, and introduction to linear visco-elasticity and plasticity. Basic elasticity solutions. Variational principles. Deformation of plates. Introduction to large deformation.

Recommended Prep: Applied Mathematics 105 or equivalent; introduction to solid mechanics at the level of Engineering Sciences 120, or Earth and Planetary Sciences 108 or 166, or Applied Physics 293.

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 254

Information Processing and Statistical Physics (160448)

Yue Lu

2018 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course introduces students to several fundamental notions and methods in statistical physics that have been successfully applied to the analysis of various problems in signal processing, information theory, and theoretical computer science. Discussions will be focused on studying such information processing systems in the infinite-size limit, on analyzing the emergence of phase transitions, and on understanding the behaviors of efficient algorithms. This course seeks to start from basics, assuming just undergraduate probability and analysis, and in particular assuming no knowledge of statistical physics. Students will take an active role by applying what they learn from the course to their preferred applications.

Course Notes: Engineering Sciences 254 is also offered as Applied Mathematics 254. Students may not take both for credit.

Recommended Prep: Analysis (Math 21a/b, or equivalent), Probability (Statistics 110, Engineering Sciences 150, or equivalent).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 256

Informal Robotics/New Paradigms for Design and Construction (156726)

Chuck Hoberman

2019 Spring (4 Credits)

Schedule:

M 1000 AM - 1259 PM

Instructor Permissions: Instructor

Enrollment Cap:

5

Today new materials and fabrication techniques are transforming the field of robotics. Rather than rigid metal parts connected by mechanical components, robots may now be made of folded paper, carbon laminates or soft gels. They may be formed fully integrated from a 2D or 3D printer rather than assembled from individual components. Light, compliant, highly customized - we are seeing the emergence of a new design paradigm.

Informal Robotics is a direct collaboration between the Wyss Institute's Bioinspired Robotics platform (<http://wyss.harvard.edu/viewpage/204/bioinspired-robotics>) and the GSD. Within the class, you will interact with Wyss researchers who will share their unique designs for ambulatory and flying robots, end-effectors, medical instruments and other applications.

The class will explore informal robotics from multiple perspectives, culminating with the design and fabrication of original devices displaying animated intelligence in real-time. Going beyond traditional engineering approaches, we will also explore new opportunities for design at the product, architectural, and urban scales.

The class will be organized along four primary topics:

- Kinematics includes an overview of mechanism principles, design techniques for pop-ups, flat-folding origami structures, and soft mechanisms.
- Fabrication methods will be explored through workshops on use of composite materials, laminated assembly techniques, self-folding, and integrated flexures.
- Controls considers how to actuate movement and program desired behavior. Topics include servos, linear actuators, shape memory alloys (SMAs) and use of Arduino for sensing and actuator control.

Applications takes us beyond purely technological concerns, contextualizing Informal Robotics within larger trends where materials, manufacturing and computation are starting to merge.

Course Notes:

This course does not count for concentration credit for SEAS undergraduate concentrators; this course does not count as a disciplinary course for SEAS Ph.D. students.

Class Notes:

Will meet in Gund Hall 522. Current course information can be found [here](#).

Recommended Prep:

This course includes weekly lectures, workshops, and guest lectures. There will be assignments to produce test mechanisms and CAD models, followed by final group projects. Presentations and discussions of ongoing student work are integral to the course. Although, there are no firm prerequisites, some knowledge of scripting and/or fabrication using CNC machines is helpful. Evaluation will be based on completion of assignments and the final project.

Engineering Sciences 273

Optics and Photonics (123351)

Federico Capasso

2018 Fall (4 Credits)

Schedule:

WF 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

The focus is on the foundations of optics/photonics and on some of its most important modern developments and applications. Powerful and widely used computational tools will be developed in the sections. Topics to be covered: Maxwell's equations, Free space optics. Reflection, refraction, polarization (Jones Calculus and Stokes parameters); interference and diffraction. Light-matter interaction, dispersion and absorption. Guided wave optics (including optical fibers). Perturbation and couple mode theory, transfer matrix methods; numerical methods. Optical resonators. Photonic crystals. Near-field optics. Metal optics and Plasmonics. Metamaterials and Metasurfaces.

Course Notes: Open to graduate students and advanced undergraduates.

Recommended Prep: Elements of Electromagnetism, such as taught in Applied Physics 50b, Physics 15b, Physical Sciences 12b, Engineering Sciences 151 or equivalent.

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 274

Quantum Devices (118028)

Marko Loncar

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The focus of this course are quantum devices that have revolutionized the field of information science and technology. Particular emphasis this year will be on optical devices and communication technology. First, quantum devices that have enabled development of internet will be discussed, including semiconductor lasers, modulators and photo-detectors. Next, emerging quantum devices that will lead to so-called "second quantum revolution" and development of quantum internet and quantum computers will be introduced. These include single-photon sources and detectors, quantum memories, physical implementations of quantum gates, etc.. Topics that will be covered include quantum dots, color centers in solids, trapped ions and atoms, photon pair generation, quantum teleportation, quantum cryptography and quantum repeaters. The course is a mixture of quantum mechanics, semiconductor device physics, nanophotonics, quantum electronics and quantum optics.

Recommended Prep:

Undergraduate level quantum mechanics such as Physics 143a or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 276

Introduction to MicroElectroMechanical System (127590)

Peter Stark

Amit Solanki

2018 Fall (4 Credits)

Schedule:

M 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

25

In this course, the student is introduced to micro-fabrication techniques through the filter of the rapidly emerging, multi-disciplinary and exciting field of MicroElectroMechanical Systems (MEMS.) It is a lab based course complemented by mandatory weekly lectures. It teaches fundamentals of micro machining and fabrication techniques, including planar thin-film process technologies, photolithography and soft-lithography techniques, deposition and etching techniques as well as limited inspection and characterization technologies. Students, in teams, will build and characterize fully functional: surface acoustic wave (SAW) resonators, micro polymerized chain reaction (uPCR) amplifiers, micro pressure sensors and final projects of their own choosing. In doing so, they will be exposed to the basic principles of tools in an advanced cleanroom.

Course Notes:

Labs to be determined.

Recommended Prep:

Applied Physics 50a,b, Physical Sciences 12a,b, or 15a,b; College Chemistry at the level of Life Sciences 1a, Physical Sciences 1, Engineering Sciences 173 and Engineering Sciences 176.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 277

Microfabrication Laboratory (109357)

Marko Loncar

Peter Stark

2019 Spring (4 Credits)

Schedule:

M 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Content and requirements are similar to Engineering Sciences 177, with the addition that students enrolled in Engineering Sciences 277 are given an additional project.

Recommended Prep:

Physical Sciences 12a and 12b, or Physics 15a and 15b or equivalent. ES 173 or a similar course on the fundamentals of semiconductor devices, is strongly recommended.

Requirements:

Graduate Students Only (Undergraduates can submit a request to enroll)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 280

System Engineering (208004)

Robert D. Howe

Venkat Venkatasubramanian

2018 Fall (4 Credits)

Schedule:

MTWRF 0900 AM - 1200 PM

Instructor Permissions: Instructor**Enrollment Cap:**

30

This is the first core course for students in the MS/MBA program, to be taken in August of the first year of the program. The course will begin with methods for modeling engineering and business systems, including discrete and continuous systems and feedback controls. Students will write simple simulations and then use professional modeling software to simulate complex systems. Students will next learn design methodology, including stakeholder modeling, ideation, and decision making tools. A final team project will involve design of a system, including simulation and prototyping.

Course Notes:

This course is limited to first year MS/MBA students only. Extensive 3-week course, Aug. 7-23.

Recommended Prep:

Calculus, linear algebra, differential equations.

Requirements: First year MS/MBA students only

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 291

Nano Micro Macro: Adaptive Material Laboratory (156219)

Joanna Aizenberg

Jonathan Grinham

2018 Fall (4 Credits)

Schedule: W 0830 AM - 1129 AM

Instructor Permissions: Instructor

Enrollment Cap: 8

"In recent years, a wealth of cross-disciplinary research has produced unprecedented growth in the study of "architected-materials." At the heart of this growth is a desire to design extraordinary functionality by manipulating matter at the smallest length scale possible—think nano or even atomic. The science's new approach to material design is radical. This course asks what these new material technologies mean to design, energy, and our everyday occupancy of this planet.

This course brings together scientists, engineers, and designers to think across scales, learn about each other's' working methods, and address real-world challenges by designing new materials and applying them to new applications, or atmospheres. It is co-taught by faculty from the GSD and SEAS and co-listed between the two schools. There are no prerequisites.

Working closely with laboratories from the Wyss Institute for Biologically Inspired Engineering and SEAS, the 2018 edition of this course will focus on the potential of these new materials to be translated across scales and application space. To develop bio-inspired adaptive materials capable of responding to thermal, chemical, or other stimuli, students may work with scientists from the Aizenberg Lab. Those interested in the mechanical behavior of meta-materials may work with the Bertoldi Group to understand the effects of cellular aggregation in structural materials. While other students may be excited to explore super-tough and self-actuated soft materials with scientists from the Mooney Lab. Across all of these possible experiences, students will work closely with their scientist counterparts to gain hands-on, practical knowledge of prototyping and experimental methods that provide meaningful insight into the future of material design.

As in previous years, the course will be an intensely interdisciplinary, project-based exploration that challenges students from the sciences and design to re-think the way they approach their craft. Students will be asked to navigate the space between the sciences and design through a collaborative semester-long group project. A sequence of lectures, workshops, and ideation sessions will provide a framework that guides students towards understanding and mastering the innovation process itself. Scientists from the Wyss, SEAS, and industry will provide both material specific guest lectures as well as visionary lectures to help students frame their work. Students will conduct part of their work in the Wyss or SEAS science labs on Oxford Street, as well as at the GSD FabLab.

Note: MDE students, this course can satisfy a GSD course requirement by enrolling in SCI 6477, or a SEAS course requirement by enrolling in ES 291. But it cannot simultaneously satisfy both requirements.

Course Notes: Offered jointly with Harvard Graduate School of Design as SCI 6477 and will meet at GSD.

Class Notes: See GSD SCI 6477 in my.harvard.edu for classroom information.

This is a SAT/UNSAT seminar course focused on design thinking, analysis, planning, and executing the development of engineered systems. Weekly meetings will include discussions and assigned readings of case studies and examples of the systems surrounding the developing technical system. Organizing and executing research, innovation, and product design at the scales from academic group, to startup, to major industry will be discussed. The course is designed to allow the engineer and designer to integrate technical knowledge into an executable framework as an individual or leader of a design team.

Course Notes: Enrollment subject to approval of the instructor, with first and second year MDE graduate students receiving priority. Undergraduates are not allowed to enroll.

Practical Solutions For Technology's Public Dilemmas (107995)

Ash Carter

2018 Fall (4 Credits)

Schedule:

MW 0845 AM - 1000 AM

Instructor Permissions: Instructor**Enrollment Cap:**

20

This course identifies and analyzes alternative solutions to the dilemmas that disruptive technology is posing to public good in the digital, biotech, and jobs and training domains. The objective is for students to craft technologically-informed practical public-private approaches to some of the key policy issues of our time. It begins with a brief history of successful and unsuccessful governance of far-reaching technological changes in the past. The first part of the course treats the ongoing digital revolution, crafting solutions to issues of social media responsibility, cybersecurity, and artificial intelligence (AI). It then turns to the biotech revolution that is gathering momentum, addressing genome editing, bioweapons and bioterror, and the role of venture capital in biotech. The third segment of the course addresses the ways that technology is disrupting the nature of work and lifelong training. The example of driverless cars will be used to illustrate the challenges and opportunities that technology provides to sustain cohesive and prosperous societies in the era of tech "disruption". Assignments stress development of key writing and speaking skills.

Course Notes:

Cannot be used for computer science or engineering concentration credit. Jointly offered with HKS (IGA 505) and meets at HKS.

Class Notes:

See HKS IGA 505 for classroom information.

Heterogeneous Nanophotonic Devices and Bio-templated Electronic Materials (125480)

Evelyn Hu

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Engineering Sciences 322

Heterogeneous Nanophotonic Devices and Bio-templated Electronic Materials (125480)

Evelyn Hu

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Engineering Sciences 324

Materials Processing (120117)

Jennifer Lewis

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Engineering Sciences 324

Materials Processing (120117)

Jennifer Lewis

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 326

Mixed-Signal VLSI Design (115694)

Gu-Yeon Wei

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 326

Mixed-Signal VLSI Design (115694)

Gu-Yeon Wei

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 328

Circuit Design and Scientific Instrumentation (116341)

Paul Horowitz

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Engineering Sciences 328

Circuit Design and Scientific Instrumentation (116341)

Paul Horowitz

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Engineering Sciences 329

Readings in Dynamic Meteorology (113399)

Brian Farrell

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 329

Readings in Dynamic Meteorology (113399)

Brian Farrell

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 332

Integrated Circuits and Electronics (117620)

Donhee Ham

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 332

Integrated Circuits and Electronics (117620)

Donhee Ham

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 334

Mechanics and Materials in Small Structures (118787)

Zhigang Suo

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 334

Mechanics and Materials in Small Structures (118787)

Zhigang Suo

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Engineering Sciences 336

Mechanics of Engineering Materials and Small Devices (114275)

Joost Vlassak

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 336

Mechanics of Engineering Materials and Small Devices (114275)

Joost Vlassak

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Engineering Sciences 338

Mechanics of Solids and Fluids: Earthquake Seismology and Environmental Geomechanics (136043)

James Rice

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 338

Mechanics of Solids and Fluids: Earthquake Seismology and Environmental Geomechanics (136043)

James Rice

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 340

Materials Physics and Engineering (125478)

David Clarke

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 340

Materials Physics and Engineering (125478)

David Clarke

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 342

Mechanics of Soft Materials (127073)

Katia Bertoldi

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Engineering Sciences 342

Mechanics of Soft Materials (127073)

Katia Bertoldi

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Engineering Sciences 344

Deformation and Fracture of Materials (146775)

John Hutchinson

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 344

Deformation and Fracture of Materials (146775)

John Hutchinson

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Engineering Sciences 346

Neural Control of Movement (121466)

Maurice Smith

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Engineering Sciences 346

Neural Control of Movement (121466)

Maurice Smith

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 348

Biomolecular Engineering, Molecular Self-Assembly and Responsive Materials (127071)

Neel Joshi

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Engineering Sciences 348

Biomolecular Engineering, Molecular Self-Assembly and Responsive Materials (127071)

Neel Joshi

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Engineering Sciences 350

Materials Science (107734)

Roy Gordon

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Engineering Sciences 350

Materials Science (107734)

Roy Gordon

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 352

Engineering Mammalian Cell Phenotype (119262)

David Mooney

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 352

Engineering Mammalian Cell Phenotype (119262)

David Mooney

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 354

Cellular Biophysics (118030)

Kevin K. Parker

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 354

Cellular Biophysics (118030)

Kevin K. Parker

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 355

Bioelectronics (212600)

Jia Liu

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 356

Bioinspired Engineering (109276)

Donald Ingber

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 356

Bioinspired Engineering (109276)

Donald Ingber

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 358

Atmosphere-Biosphere Interactions (144759)

Steven Wofsy

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 358

Atmosphere-Biosphere Interactions (144759)

Steven Wofsy

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 360

Stratospheric Chemistry and Transport (143830)

Steven Wofsy

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Engineering Sciences 360

Stratospheric Chemistry and Transport (143830)

Steven Wofsy

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Engineering Sciences 362

Atmospheric Chemistry (144339)

Daniel Jacob

2018 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Engineering Sciences 362

Atmospheric Chemistry (144339)

Daniel Jacob

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 366

Topics in Atmospheric and Climate Dynamics (121289)

Zhiming Kuang

2018 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Engineering Sciences 366

Topics in Atmospheric and Climate Dynamics (121289)

Zhiming Kuang

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Engineering Sciences 368

Environmental Science (122867)

Michael McElroy

2019 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 368

Engineering Sciences 399-TIME

Academic-Related Work for SEAS Graduate Students (208271)

2019 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Enrollment in ES 399-TIME is open to any SEAS Ph.D., M.E., or S.M. student who holds a SEAS or FAS Teaching Fellow (TF) appointment and is engaged in teaching a course. Once hired to teach in a specific course, whether within or outside SEAS, the student must complete the online form at <http://tinyurl.com/seastfform>.

SEAS Ph.D. students who are required to enroll in the Bok Center's non-credit *Communicating Science* seminar in order to meet the GSAS English Language Proficiency requirement may also enroll in 4 units of ES 399-TIME.

Course Notes:

Teaching Fellows may enroll in 4 units of ES 399-TIME for a .25 FTE TF appointment, or up to 8 units of ES 399-TIME for a .5 FTE TF appointment. TFs should not enroll in the course in which they are teaching.

Any enrollment in ES 399-TIME other than as described here is disallowed by SEAS policy, with exceptions requiring prior approval of the Director of Graduate Studies. ES 399-TIME cannot be used to satisfy any degree requirements.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 399-TIME

2019 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Intended for students with prior fiction-writing and workshop experience, this course will concentrate on structure, execution and revision. Exploring various strands of contemporary and recent literary fiction – writers such as Karl Ove Knausgaard, Rachel Cusk, Chimamanda Adichie, Valeria Luiselli, etc – we will consider how fiction works in our present moment, with emphasis on a craft perspective. Each student will present to the class a published fiction that has influenced them. The course is primarily focused on the discussion of original student work, with the aim of improving both writerly skills and critical analysis. Revision is an important component of this class: students will workshop two stories and a revision of one of these.

Course Notes:

Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

Journalism in the Age of Trump: Workshop (205147)

Jill Abramson

2019 Spring (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

At its heart, journalism is a truth-seeking exercise based on reported facts, careful collection of evidence from witnesses, and reasoned, dispassionate analysis. The editing and presentation of stories should honor the intelligence of readers and the audience. The journalist is not a combatant in the story. But these time-honored traditions are under assault like never before. President Trump's declared war on "fake news," his attacks on the press as "enemies of the people" as well as secular changes in technology and the ways in which the news is produced and delivered have combined to undermine the very notion of truth. The class will closely study the role of social media in spreading information, including false stories. We will chart the rise of a more ideological press. We will spend the semester examining these developments, their effects on journalism, and their consequences for democracy.

Writing assignments will include weekly essays examining the core issues at stake in the battle for the

truth, compilation of a narrative based on real documents in the Russia investigation and a major, written exercise where students will propose ways that truth can be preserved and protected in journalism.

Readings will include classics, such as Richard Hofstadter's *Paranoid Style in American Politics*, George Orwell's *1984* and Michiko Kakutani's new book, *The Death of Truth*. In class, we will watch the documentary series "The Fourth Estate," and examine nightly news clips from Fox News, MSNBC and CNN. We will examine the key legal documents in the federal investigation of Russian interference in the election and study how they were reported. There will be guest speakers, including the journalists who cover the Trump White House, the Mueller investigation and new projects promoting truth in the news.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

The feature-length script is an opportunity to tell a story on a larger scale, and, therefore, requires additional preparation. In this class, we will move from writing a pitch, to a synopsis, to a treatment/outline, to the first 10 pages, to the first act of a feature screenplay. We will analyze produced scripts and discuss various elements of craft, including research, writing layered dialogue, world-building, creating an engaging cast of characters. As an advanced class, we will also look at ways both mainstream and independent films attempt to subvert genre and structure. Students will end the semester with a first act (20-30 pages) of their feature, an outline, and strategy to complete the full script.

Course Notes:

Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

Sam Marks

2019 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

This workshop is a continued exploration of writing for the stage. Students will be encouraged to excavate their own voice in playwriting. They will examine and attempt multiple narrative strategies and dialogue techniques. They will bolster their craft of playwriting through generating short scripts and a completed one act. Readings will include significant contributors to the theatrical form such as Ibsen and Beckett as well as contemporary dramatists such as Annie Baker, Caryl Churchill and Sam Shepard.

Teju Cole

2019 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

The tension between the invented and the observed has compelled many writers to break out of inherited forms. What is the dividing line between fiction and non-fiction? What are the possibilities for very short narrative pieces? What is "poetic" writing anyway? In this writing workshop, our thinking will be helped along by a wide variety of texts, including work from Félix Fénéon, Georges Perec, Toni Morrison, and Anne Carson. The course will be assessed on classroom participation, a series of shorter written pieces, and a revised final project.

Course Notes:

Writing the Documentary: Workshop (207634)

Musa Syeed

2018 Fall (4 Credits)

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This course will focus on non-fiction writing for film, with a primary focus on the documentary treatment. We will discuss various aspects of the craft, including interviewing techniques, research, varying formal approaches, and story structure, as well as ethical concerns in documentary filmmaking. We will examine produced treatments and screen a wide array of documentaries. Students will be expected to perform research, primarily in the field, and identify their own documentary subjects, about whom they will develop a film treatment as a final project.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Introduction to Journalism: Workshop (156630)

Jill Abramson

2019 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

An intense seminar for those interested in understanding the changing role of journalism and in learning the art of reporting and writing narrative stories. The course is intended for those contemplating careers as journalists or because they want a better sense of how journalism really works. Coursework will include two narrative articles that are ready for publication. Readings will include some of the best examples of modern journalism, from magazine features by authors including Gay Talese to multimedia narratives such as The New York Times' "Snow Fall."

Course Notes:

Indraneel Mukherjee

2019 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The course will consist of two halves. In the first hour of each class, we will be doing close readings of an assigned text (TBA), with the aim of isolating some aspect of the craft of writing in order to take bearings for your own. In the second half of the class, divided into two equal segments of an hour each, we will be workshoping the writing of two students. Our goal is for each of you to have two turns, and approximately 5-10,000 words of your work critiqued, by the time semester ends. The final project involves significant redrafting of a story or a portion of a novel.

Course Notes:

Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

Narrative Science Journalism: Workshop (207633)

Michael Pollan

2018 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The arc of this workshop will trace the process of researching and writing a single long piece of science journalism: finding and pitching story ideas; reporting in depth and at length; outlining and structuring your story; choosing a narrative voice and strategy, crafting leads and "overtures," and making connections between your story and its larger contexts. As a group, we'll also work as editors on one another's ideas and pieces. And since reading good prose is the best way to learn to write it, we'll be closely reading an exemplary piece of narrative science journalism each week. Students will be expected to complete a draft and revision of a substantial piece by the end of the term.

Fiction Writing: Workshop (203264)

Paul Yoon

2018 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

An introductory workshop where we will learn to read as writers and study all aspects of the craft of fiction writing, including such topics as character, point of view, structure, time, and plot. The first weeks will focus heavily on writing exercises and reading contemporary short fiction. Writers we will study will include: Daniyal Mueenuddin, Haruki Murakami, Jenny Erpenbeck, and Tom Drury. As the semester progresses, the focus of the workshop will shift to creating and discussing your own work at the table, along with submitting a final revision project.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

Style in Fiction: Workshop (207635)

Indraneel Mukherjee

2019 Spring (4 Credits)

Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This class will look at excerpts from a selection of writers who are considered to be great prose stylists. The course will consist of two halves. The first hour of the class will be devoted to discussion and close analysis of a particular writer's style in the assigned text that will be circulated a week in advance. The idea is to look at a wide range of writing styles and try to isolate what is unique about each, how the relevant style and meaning correspond, in what ways a writer's style is a window on the world s/he is representing, how style relates to affect, and other such questions. The class would be particularly suited to those who have taken at least two previous Creative Writing courses. Beginners should apply to the 'Introduction to fiction' classes being offered.

In the second half of the class, divided into two equal segments of an hour each, we will be workshopping the writing of two students. Our goal is for each of you to have two turns, and approximately 5-10,000 words of your work critiqued, by the time semester ends. The final project involves significant redrafting of a story or a portion of a novel.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

Writing for Television: Developing the Pilot: Workshop (203266)

Sam Marks

2018 Fall (4 Credits)

Schedule: T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This workshop introduces the television pilot with a focus on prestige drama and serialized comedy. Students will excavate their own voice and explore the structure and execution of pilot writing through a first draft of their own original script. With intensive reading and discussion of student work we will examine elements of TV writing, such as treatments and outlines as well as character, dialogue, tone, plot, and, most importantly, vision. Over the semester, we'll turn ideas into worlds and worlds into scripts.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

Fiction Writing: Workshop (203265)

Laura van den Berg

2019 Spring (4 Credits)

Schedule: R 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 12

This course will serve as an introduction to the fundamentals of writing fiction. The initial weeks will focus on assigned readings—you can expect to encounter works by Edward P. Jones, Helen Oyeyemi, Joy Williams, Yoko Ogawa, and others—and short exercises. The readings will give us a lens through which to explore character, structure, time, point of view, etc, and will inform the workshop dialogues that follow. Later in the term, your own fiction will serve as the primary text as the focus shifts to the creation and revision of original work.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Writing Critically: Creative Writing Workshop (208935)

Teju Cole

2019 Spring (4 Credits)

Schedule: W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Criticism is poised between memoir and reportage. In this writing workshop, you will write critically about photography, painting, film, music, architecture, dance, and literature. We will also examine the particular pressures and possibilities of online criticism. Exemplary essays will be assigned from the work of Susan Sontag, John Berger, Helen Vendler, and Greg Tate. The goal is to help you identify precision, intelligence and élan in criticism, and foster those qualities in your own writing. The course will be assessed on classroom participation, a series of shorter written pieces, and a revised final project.

The Art of Writing about Science: Workshop (207988)

Russell Rymer

2019 Spring (4 Credits)

Schedule: T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This is a seminar in creative nonfiction writing that will take science as its subject matter. Students will research and write a series of magazine-style articles about science or scientists, intended for a general readership. Along the way, they will hone their interviewing and research skills and expressive capabilities, while contending with issues of factual accuracy, creative license, authority, and responsibility, along with the basic tenets of longform nonfiction. Ultimately students will explore the ways that hard science and subjective prose are interrelated forms. No prior experience with science is required.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

Writing Women: Workshop (207987)

Susan Faludi

2019 Spring (4 Credits)

Schedule: T 0300 PM - 0545 PM

Women have historically exerted their voice and power through writing, even as the professional writing trades of journalism and publishing have historically been unwelcoming of their presence. This seminar class will examine reporting and writing by and about women, and engage students in the practice of writing about gender, feminism, and women's lives. Students will produce and workshop their own researched and reported longform articles, while simultaneously inspecting how the media represents women's issues and learning the history of women writers in American journalism. We will grapple with questions of interviewing, structure, creative expression, ethics, and fair representation, along with the fundamentals of narrative nonfiction.

Course Notes: Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.

In this course we will read some of the most significant and influential works of literature written in England before 1700. We will encounter the genres, tropes, forms, and language of medieval and early modern English literature, while exploring how these texts respond to and shape issues of their time, including war, political regimes, the emergence of national, racial, and religious identities, and changing attitudes to gender and sexuality. We will also develop a foundational range of critical writing skills and methods for approaching English literature.

Course Notes: Be sure to attend first class meeting to be considered for admittance.

Andrew Warren

2019 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

27

This course is a general introduction to reading, discussing and writing about poetry, both lyric and narrative. Our focus will be on the Romantics, experimentalists writing amidst a time of political upheaval and radical social change: William Blake, William Wordsworth & Samuel Taylor Coleridge, Anna Barbauld, Charlotte Smith, Lord Byron, Percy Shelley, John Keats and John Clare. We will also read poets who influenced them (Shakespeare, Milton), poets they influenced (Emily Dickinson, TS Eliot) and a few poets writing right now (Monica Youn, Terrance Hayes). At the beginning of the term each student will also pick a poet we're not reading in class to work on throughout the course.

Course Notes: Be sure to attend first class meeting to be considered for admittance.

This course will examine horror—defined expansively to include the uncanny, the abject, the monstrous, and the ghostly—in American literature, considering its formal and aesthetic implications and its relationship to major cultural and social issues. What are the methods and theories that critics have used to study horror in literature? How and to what effect have works of American literature used horror to reflect on contemporary social concerns or to depict historical events? We will explore a range of literary works from the nineteenth century to the present next to critical and theoretical studies of horror and the Gothic.

Course Notes: Be sure to attend first class meeting to be considered for admittance.

Class Notes: Class will be held from 12:00 to 1:00.

Migrations: Literature of Displacement (207742)

2018 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

27

A displacement can take place in our lives in the sense of moving, or being moved, from one location to another. From the nautical sense we also understand any volume, which fills or occupies a liquid space that changes to accommodate it, a useful metaphor for intellectual displacements—as we bend, shift and make room for new ideas in our minds. In psychology, a displacement is the transference of a site of trauma from one person, scenario, or object to another. Finally, there are histories of human displacement, a broad category under which to consider narratives generated by migration, emigration, exile, and enslavement. In this seminar we will read from texts that contribute in all of these ways, often interrelated, to a "literature of displacement." We will read novels, essays, and memoirs by Joseph Conrad, Zora Neale Hurston, Richard Wright, Chimamanda Ngozi Adichie, James Baldwin, Tayeb Salih, Valeria Luiselli, and W. G. Sebald and watch films by Les Blank, Charles Burnett, Rainer Werner Fassbinder, and Edward Yang among others. We will ask how these works respond to the trials and rewards of belonging to, or being alienated from, cultures and communities; how history and loss imprint us with identity but also disrupt it; what we learn from encountering other places and perspectives. Can remembering, witnessing, and storytelling create a place for our selves in a world founded on an ongoing and massive experience of perpetual displacement?

Course Notes: Be sure to attend first class meeting to be considered for admittance.

Class Notes: Class will be held from 1:30 to 2:30.

Migrations: Gilded Ages (208099)

Patricia Chu

2019 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

27

Originally from the title of an 1873 novel by Mark Twain and Charles Dudley Warner, the phrase "The Gilded Age" quickly passed into popular parlance as the name of the period following the Civil War in America: a time when immense fortunes and superficial appearances of growth and prosperity co-existed with growing poverty and unrest. As a number of economists have argued, income disparities in the United States are currently at their highest levels since the end of the 1920s, when the arrival of the Great Depression produced a consensus in favor of the more equitable distribution of wealth. In other words, we are now living in America's new Gilded Age. In this class we will explore this premise by first examining how representative novels of the classic Gilded Age (approximately 1870 through 1930) represented social structures—how authors tried to comprehend and depict "the way the world works" and the individual's life in it—and then comparing and contrasting these with novels of a new gilded age, including the way depictions of globalization and economic empire as central to American national identity develop over time and across national boundaries (England, India). We will study the novel as a genre and literary realism as a strategy of representation and how these emerge from social and political history. We will also read brief accounts of the economic culture of each historical moment. Authors may include: F. Scott Fitzgerald, Theodore Dreiser, Edith Wharton, Frank Norris, William Dean Howells, Aravind Adiga, Zadie Smith, Jeffrey

Eugenides, Jonathan Franzen.

Course Notes: Be sure to attend first class meeting to be considered for admittance.

James / Baldwin (207741)

Jesse McCarthy

2019 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

At first glance Henry James and James Baldwin may seem worlds apart. Yet these two enormously influential writers share much in common. Both are New Yorkers; both spent a good deal of their lives as expatriates; both are celebrated for their queerness, a feature of their style as much as their sexuality. Both were serious, moralizing, and passionate observers of the 'American Scene'; both writers are deeply committed to investigating and exploring the privacy of consciousness and the currency of experience. Henry James was James Baldwin's favorite writer. Colm Tóibín has called Baldwin, "the Henry James of Harlem." What attracted Baldwin to James across their vast racial and class differences? What lessons about the art of fiction can we learn by reading each in the light of the other? Not only the Jamesian influence on Baldwin—but what Baldwin allows us to see might be missing or muted in James. We will think very closely about the subject that deeply occupied both of them: America. And what America means from perspectives acquired from outside of America, looking back in. We will also investigate the expression and communication of sexuality, gender, race, class, money, politics and taste alongside assorted criticism, reviews, and other essays of interest.

Class Notes: Class will be held from 3:00 to 5:00.

This course examines the rich archive of African American writing in and about New England. The study of African American literature often focuses on the rural South and the urban North (especially such metropolises as New York and Chicago). Yet African Americans have been living and writing in New England since the colonial era. This course reorients conventional geographies of African American literature while also offering an alternative perspective on the New England literary tradition. Authors will include: Ann Plato, Phillis Wheatley, David Walker, Harriet Wilson, W.E.B. Du Bois, Pauline Hopkins, Ann Petry, Malcolm X, and the Combahee River Collective.

Class Notes: Class will be held from 3:00 to 5:00.

The Poetry of Elizabeth Bishop and Sylvia Plath (207590)

Peter Sacks

2019 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar studies in detail the poetry and prose of two of the most significant American poets of the mid- to late Twentieth Century, Elizabeth Bishop and Sylvia Plath. While the intention will be to gain some general knowledge of lyric poetry, readings will focus closely on the works of these two quite different poets. We shall examine their entire poetic oeuvres while also reading selections of their prose writings (fiction, letters). Issues of self-presentation, expatriation, loss, vocation, memory, gender and sexuality, as well as techniques of description and expression –these will recur throughout the readings. Other poets may be added for context. While acknowledging the differences between the principal poets (for example the oblique self-portraiture of Bishop as opposed to the more direct "confessional" style of Plath), we shall also seek common motifs both in their situations as writers and in their achieved poems.

Class Notes: Class will be held from 3:00 to 5:00.

(Very) Contemporary American Fiction (207908)

Andrew Warren

2018 Fall (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Thirty years ago David Foster Wallace described his generation as obsessed with "a social Now that admits neither passion about the future nor a curiosity about the past." This course reads some of the most vital work being done in American fiction to ask how we today experience, or want to experience, time. Why and whence this obsession with Now? What kinds of temporal lags or leaps does fiction afford us? How are questions of *identity* knitted to our histories, present circumstances, and hopes for the future? Works include: Tony Tulathimutte's *Private Citizens* (2016), Ben Lerner's *10:04* (2015), N.K. Jemisin's *The Fifth Season* (2015), Celeste Ng's *Little Fires Everywhere* (2017), Luis Alberto Urrea's *House of Broken Angels* (2018), Wallace's *The Pale King* (2011), Paul Beatty's *The Sellout* (2015), Sheila Heti's *Motherhood* (2018), and Richard Powers' *The Overstory* (2018). Each book is paired with a review or critical essay; a major assignment will be a creative project exploring your own experience of time, both in the course and out.

Paradigms of American Freedom in 20th Century African American Literature (208101)

Patricia Chu

2019 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

15

In this course our focus will be on how the social, political and material meanings of race and autonomy in America have been creatively represented by African American authors between (approximately) 1900 and 2000. As we move through the century, we will attend to the changing aesthetic and political environments in which new generations of authors found themselves. Texts for this class grapple both with what gaining "freedom" should mean and with what the African American writer might (or might not) have a duty to contribute towards this goal. Primary authors may include: Charles Chesnutt, Nella Larsen, Zora Neale Hurston, Chester Himes, James Baldwin, Octavia Butler, Assata Shakur, Jesmyn Ward, Kiese Laymon.

Five Shakespeare Plays (146586)

Marc Shell

2018 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Five Shakespearean Pieces: The seminar will focus on five plays (*Hamlet*, *Measure for Measure*, *Henry V*, *The Tempest*, and *Merchant of Venice*) with special attention to staging, literariness, and location.

Course Notes:

This course, when taken for letter grade, meets the Department of English Shakespeare requirement. This class will run for two hours.

Poems of Seamus Heaney and Thomas Hardy (146185)

Elaine Scarry

2019 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Written a century apart, the poems of Seamus Heaney and Thomas Hardy create an urgent call and response between earth and under-earth. The poets share metrical virtuosity, compressed lyric forms, the unfolding of personal history within public crisis and transformation, and the recognition that the acuity of sentence - the daily practice of exquisitely precise perceptual acts - is the ethical center of our brief stay above ground.

Class Notes:

Class will be held from 3:00 to 5:00.

Introduction to LGBTQ Literature (207591)

Stephanie Burt

2019 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar looks at the expanding range of genres, forms and strategies pursued by modern and contemporary authors who want to represent LGBTQ+- lives, communities, bodies and selves; poems and performances, novels and stories, YA and SFF books, memoirs and essays, comics and graphic novels, will all be represented, along with a light frame of what's usually called queer theory and some points of comparison, or contrast, from earlier centuries. Bechdel, Audre Lorde, O'Hara, Russ, Sedgwick, White, Whitman, and many others.

Law and Literature (203067)

Kelly Rich

2018 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course will explore the complex relationship between literature and law, focusing on how each represents and responds to violence and its aftermath. As we survey a series of twentieth-century juridical paradigms (trials, rights, reparations, and reconciliation), our goal will not be to judge the efficacy of literary and legal projects, but rather to study how they imagine issues of guilt, responsibility, testimony, commemoration, apology and forgiveness. Our readings will include novels, short stories, poetry, legal theory, documentaries, and key documents of international law: authors will most likely include Hannah Arendt, J.M. Coetzee, Jacques Derrida, Franz Kafka, Michael Ondaatje, Julie Otsuka, and M. NourbeSe Philip.

Class Notes:

Class will be held from 12:00 to 2:00.

Consciousness from Austen to Woolf (118850)

James Wood

2019 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

A look at the complex ways in which writers represent their characters' thought in texts by Austen,

Flaubert, James, Tolstoy, Chekhov, Giovanni Verga, and Woolf. More broadly, traces the development of stream-of-consciousness, from Austen's incipient mastery of free indirect style, through Flaubert's more sophisticated use of it, to Woolf's full-blown inner monologues, seeing this development as not merely a fact of English and American literature, but as a phenomenon of world literature and an element of our modernity.

Class Notes: Class will be held from 12:00 to 2:30.

Instructor Permissions: Instructor

Enrollment Cap:

15

In 1920, Czech playwright Karel Čapek coined the term "robot" in his play R.U.R. (Rossum's Universal Robots) and transformed societal conceptions of mechanical beings. This course investigates how machines, robots, and codes are represented in, and shaped by literary texts. With a focus on contemporary literature and digital theory, books include Douglas Kearny's *The Black Automaton* (2009), *How We Became Posthuman* (1999) by N. Katherine Hales, and *The Automaton Biographies* (2009) by Larissa Lai, as well as android music videos by Janelle Monae (among other media). In addition to critical reading and writing, students will explore robots, technology, and science fiction through critical, creative, and digital praxis.

What if originality were not what strikes us most forcefully in art? What, instead, if recognition of what and whom we have known already is the most emotionally forceful, illuminating experience of art? This course will test the force of these propositions, by looking to both visual art (painting and movies) and literature. We will look to rhetoric, cognitive psychology and philosophy in order to understand the artistic experience of recognition. Texts will be drawn anywhere from Homer to *Shakespeare in Love*.

Literature and the Rise of Public Science (156064)

Stephen Osadetz

2019 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar explores the relationship between literary and scientific experiment during the Restoration and the eighteenth century. Our readings, by authors such as Milton, Fontenelle, Pope, Hume, Diderot, and Mary Shelley, will be paired with hands-on activities: while reading Swift's *Gulliver's Travels*, for example, students will have the opportunity to use microscopes and telescopes from the period. Throughout, we will seek to understand how writers of various sorts - scientists, philosophers, poets, novelists, and essayists - were inspired by new accounts of nature, from the simplest experimental observations to the grandest visions of the cosmos.

Introduction to Old English: Heroes, Heaven, and Hell (207605)

Nicholas Watson

2018 Fall (4 Credits)

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Satan, cast as a defiant warchief, exults in his heavenly rebellion; Christ is presented as a triumphant hero as he assumes his place on the cross; Grendel's mere serves as the template for a vision of hell. Such examples underscore the close relationship between the heroic and biblical literary traditions of Anglo-Saxon England, which this course seeks to explore. First and foremost however, this course is an introduction to the language and literature of Old English, the vernacular language used in England from

the fifth century until around 1100. Although many of its linguistic features are recognizable in Modern English, Old English must be learned as a foreign language. The semester will begin with an introduction to Old English grammar, along with translations of basic readings. Following instruction in basic grammatical features during the first half of the course, readings will grow progressively more challenging. The selection of readings brings us to the second goal of the course: an exploration of the ways in which the heroic ethos influenced the presentation of Christian and Biblical topics in Old English prose and poetry. Daily instruction by Joseph Shack.

Course Notes: This course, when completed with an honors grade and in combination with English 103g, fulfills the College language requirement and the English Department's Foreign Literature requirement.

Beowulf and Seamus Heaney (146016)

Daniel Donoghue

2019 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Translations of excerpts from *Beowulf* will proceed in parallel with careful reading of Heaney's verse translation. Questions concerning translation theory will emerge from the comparison of in-class efforts with Heaney's and other versions. What is the relation between translation and interpretation? How does Heaney's *Beowulf* compare with the body of poetry he has produced over the decades? The course begins with a review of grammar.

Course Notes: Students who complete both English 102 and 103 with honors grades will fulfill the College language requirement and the English Department's Foreign Literature requirement.

Recommended Prep: English 102e or equivalent.

English 110FF

Medieval Fanfiction (205152)

Anna Wilson

2019 Spring (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Fanfiction is a surprisingly powerful tool for examining medieval literature. It sheds light on the dynamics of rereading and reception that characterize medieval texts, which in turn deepen our own understanding of creative originality. In this class we will read some twentieth- and twenty-first century fanfiction with medievalist themes alongside medieval literary texts that rewrite, reimagine, or let their authors star in pre-existing stories. This medieval 'fanfiction' will include Arthurian romances, 'sequels' to the *Aeneid* and the *Canterbury Tales*, and Christian spiritual texts in which devout men and women imagined themselves as 'Mary Sues' in scenes from the Gospels.

Class Notes: Class will be held from 1:30 to 2:30.

Epic: From Homer to Star Wars (130257)

Leah Whittington

2018 Fall (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

This course studies epic literature through six significant works in the genre: Homer's *Iliad* and *Odyssey*, Vergil's *Aeneid*, Milton's *Paradise Lost*, George Eliot's *Middlemarch*, and George Lucas' *Star Wars*. We will examine these works in terms of their formal conventions, thematic interests, and historical contexts, as well as attending to the interactions between texts in the epic tradition, the shift from narrative poetry to novel and film, and the manifestations of epic in the modern world.

Course Notes: This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding.

Milton's *Paradise Lost* (203023)

Gordon Teskey

2019 Spring (4 Credits)

Schedule: MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course focuses on Milton's most famous work, *Paradise Lost*, the greatest long poem in English and the only successful classical epic in the modern world. Milton went totally blind in his forties and

composed *Paradise Lost* by reciting verses to anyone available to take them down, like the blind prophets and poets of legend. Yet the questions he raised are surprisingly enduring and modern. We will consider how he generates the sublime and how he builds great scenes and characters, especially his most famous one, Satan.

When Novels Were New (111565)

Deidre Lynch

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The novel's emergence as a new literary form and the remarkable record of narrative experimentation that emergence involved, as seen in works by Behn, Defoe, Haywood, Richardson, Fielding, Hogarth, Sterne, and Austen. Questions about genre and about the nature of fictionality will be central for us, and so we will investigate what was novel about novels by pondering how novels differ from epics or histories or the news in newspapers. But we will also use our reading to investigate what the modern novel's emergence can tell us about modernity itself--about love, sex, and marriage, consumer capitalism, empire, and urban life.

Modern Monsters in Literature and Film (130892)

Deidre Lynch

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A class on the aesthetics and cultural politics of the Gothic tradition, from *Frankenstein* to *Freaks*. How has this tradition's fascination with those who come back from the dead mediated social anxieties about the generation of life or the lifelike? We'll consider vampire and other monster fictions by such authors as John Polidori, Mary Shelley, Sheridan Le Fanu, Bram Stoker, Mary Elizabeth Braddon, Robert Louis Stevenson, and Gaston Leroux. We'll conclude the semester with an investigation of early horror cinema, exploring how the modern medium of cinema gave Gothic preoccupations with the animation of the dead a new lease on life.

Course Notes:

This course, when taken for a letter grade, meets the General Education requirement for Culture and Belief.

American Modernism (130253)

David Alworth

2018 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course examines the literature and culture of American Modernism (1880s–1920s). Emphasizing the genre of the novel, it attends to major works by Henry James, Gertrude Stein, T. S. Eliot, F. Scott Fitzgerald, Ernest Hemingway, William Faulkner, Willa Cather, W. E. B. Du Bois, Jean Toomer, and Virginia Woolf. Lectures underscore the dynamic relationship between literature and history—including the history of visual art, technology, media, politics, and ideas. Special attention is given to the relationship between innovative literary practices and themes such as transnational mobility, urban experience, war and its aftermath, work and leisure, the rise of consumer capitalism, vision and visuality, and the shifting pressures of gender, sexuality, race, ethnicity, and class during the modern era. Through collective close readings, student participation is encouraged during lecture.

Course Notes:

This course, when taken for a letter grade, meets the General Education requirement for Aesthetic and Interpretive Understanding.

Poetry Machines (211350)

Margaret Rhee

2019 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

"A poem is a small (or large) machine made of words." - William Carlos Williams.

This course asks a series of questions on the intersection of poetry and other forms of visual art such as

cinema, video art, and new media. More specifically, we'll explore traditional books of poetry which include visual and media imagery such as works by Claudia Rankine's *Citizen*, Teresa Hak Kyung Cha's *Dictee*, and Tory Dent's *HIV*, Mon Amour. We will discuss the rigorous demands and pleasures of reading image and text, and how these cross-genre works respond to political circumstances such as atrocity, violence, and oppression. In addition to traditionally produced poetry books, the course investigates how films and visual art such as the poetic films by Trinh Minh-Ha and *Searching* directed by Aneesh Chaganty embodies poetry within digital pixels and cinematic form. Through engagement with electronic literature and digital culture, the course asks if we could consider Black Twitter and other #hashtag movements or Twitter bots as poetry? Through collaborative workshops, focused readings, and rigorous discussion, students will create their own digital poetry work, and write scholarly essays that explore the definition, stakes, and interventions of poetry in our digital age.

On the Run: Fugitives and Refugees in American Literature (205001)

Thomas Dichter

2019 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Escaped slaves, refugees, outlaws, and rebels are all on the run in the pages of American literature. In a nation founded in the name of "life, liberty and the pursuit of happiness," stories of the fugitive making a break for freedom have been both troubling and enchanting. In this course, we will examine narratives of flight by American writers from the early days of the Republic through the present. These authors explore many different kinds of fugitivity: from the story of Henry "Box" Brown, a slave who hid in a crate and mailed himself to freedom in the North, to recent fiction by Edwidge Danticat and Viet Thanh Nguyen. Along

the way, we'll consider narratives of outlaws, war refugees, undocumented immigrants, and insurrectionaries. Engaging with a diverse range of authors, our texts will include autobiography, novels, poetry, and folklore.

Introduction to Asian American Literature: What Is Asian American Literature? (146590)

Ju Yon Kim

2018 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Aiiieeeee! An Anthology of Asian-American Writers (1974) was one of the earliest attempts to collect

writings that were, to quote the editors, "exclusively Asian-American." Yet as their lengthy—and controversial—explanation of the selection process makes clear, Asian American literature defies neat categorization. This course is both a survey of Asian American literature and an introduction to ongoing debates about what constitutes Asian American literature. We will study a variety of literary genres and ask how formal and stylistic conventions, as well as shifting sociohistorical circumstances, have shaped conceptions of Asian American literature.

Class Notes: Class will be held from 1:30 to 2:30.

The Essay: History and Practice (207555)

James Wood

2018 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Matthew Arnold famously said that poetry is, at bottom, "a criticism of life." But if any literary form is truly a criticism of life, it is the essay. And yet despite the fact that all students write essays, most students rarely study them; bookshops and libraries categorize such work only negatively, by what it is not: "non-fiction." At the same time, the essay is at present one of the most productive and fertile of literary forms. It is practiced as memoir, reportage, diary, criticism, and sometimes all four at once. Novels are becoming more essayistic, while essays are borrowing conventions and prestige from fiction. This class will disinter the essay from its comparative academic neglect, and examine the vibrant contemporary borderland between the reported and the invented. We will study the history of the essay, from Montaigne to the present day. Rather than study that history purely chronologically, each class will group several essays from different decades and centuries around common themes: death, detail, sentiment, race, gender, photography, the city, witness, and so on. In addition to writing about essays – writing critical essays about essays – students will also be encouraged to write their own creative essays: we will study the history of the form, and practice the form itself. Essayists likely to be studied: Plutarch, Montaigne, Hazlitt, De Quincey, Woolf, Benjamin, Orwell, Camus, Primo Levi, Barthes, Baldwin, Sontag, Dyer, Didion, Leslie Jamison, Knausgaard, Ta-Nehisi Coates.

Queer/Medieval (207592)

Anna Wilson

2019 Spring (4 Credits)

Schedule: W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 15

The / in this course title can suggest a slippage or interchangeability; opposition and polarization; or (in fanfiction tagging conventions) erotic or romantic friction between two entities. This course functions as an introduction to queer theory as an intellectual tool with which to read texts far removed from the political, cultural, and social discourses from which queer theory emerged. We will ask: what can queer theory offer readers of medieval literature in its explorations of gender, sexuality, power, narrative, trauma, and time? We will read a range of foundational and cutting-edge queer theorists including but not limited to Judith Butler, José Esteban Muñoz, Lee Edelman, Eve Sedgwick, and Carolyn Dinshaw, alongside texts from the European Middle Ages (roughly 500-1500), in Middle English or in translation. These texts may include Aelred of Rievaulx's *Rule of Life for a Recluse*, Thomas of Monmouth's *The Life and Miracles of William of Norwich*, *The Book of Margery Kempe*, the poems of Baudri of Bourgeuil, the letters of Abelard and Heloise, and more.

Texts, Fragments, and Reconstructions (207587)

Leah Whittington

2018 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar explores the history and theory of fragments from antiquity to the present day, with a focus on the literature of the early modern period (1350-1700). The central question will be how writers and readers of different historical moments respond to incomplete or unfinished works, and how those responses inform current approaches to restoration, conservation, and the preservation of the past, from ancient shreds of papyrus to modern digital archives. We will examine the status of the unfinished in literature vis-a-vis other art forms and trace discussions of remnants and pieces through authors and artists such as Sappho, Ovid, Michelangelo, Spenser, Coleridge, Pound, Auden, and de Kooning.

Class Notes:

Class will be held from 12:00 to 2:00.

The "new birth of freedom" that Abraham Lincoln hoped to see rise out of the death and destruction of the Civil War manifested itself during the twelve years that followed it. Reconstruction (1865 - 1877) ushered in a "Second Founding" of the nation through the ratification of the 13th, 14th, and 15th amendments to the Constitution, abolishing slavery, establishing birthright citizenship, due process and equal protection of the laws, and the right to vote for black male citizens. As revolutionary as Reconstruction was, it was also short-lived, and the long, violent roll-back against it, curiously known as the "Redemption," witnessed the curtailing of these rights and the rise and institutionalization of Jim Crow segregation in what one newspaper editor coined the "New South." A key aspect of Redemption was a propaganda war designed to debase the image of African Americans, and thereby justify the deprivation of their rights. Resisting it, African Americans, starting in the mid-1890s, employed the concept of a "New Negro" to combat racist images of an "Old Negro" fabricated by apologists for Jim Crow. Thus began what we might call America's first "social media" race war. The trope of a New Negro underwent several revisions between the 1890's

and 1920's, when—in the midst of the Great Migration of African Americans from the South to the North—the Harvard-trained philosopher, Alain Locke, revised and appropriated the term to describe a remarkable flowering of art and literature that he named "The New Negro Renaissance." Later commentators would label the period "The Harlem Renaissance." Locke and his contemporaries thought that "armed with culture," as W.E.B. Du Bois wrote much later, they could efficaciously wage the struggle against anti-black racism through what an historian of the period cleverly called "civil rights by copyright." This course traces the history of the metaphor of a "New Negro" from its inception at the dawn of Jim Crow to the end of The New Negro Renaissance in the Great Depression.

Marjorie Garber

2019 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

The essay from the time of Montaigne and Bacon has been an astonishingly supple and capacious genre, with a range of reference from the highly particular and peculiar to the broadly general. In its breadth of reference and occasional form, the literary essay was the forerunner of much of what is today called "cultural studies," on the one hand, and "creative nonfiction" on the other. This seminar will consider major essayists from the sixteenth to the twenty-first centuries, with particular attention to strategies of argument, evidence and style, and to contemporary critical writing. Montaigne, Bacon, Addison, Johnson, Hazlitt, Emerson, Benjamin, Adorno, Eliot, Woolf, Barthes, Sontag, and others.

English 306HF

Long Nineteenth Century and Modernism Colloquium (148064)

Leah Price

Beth Blum

2018 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

The British and Anglophone Literature Colloquium discusses writing from and about Britain and its former territories from the 19th century to the present. The colloquium provides a forum for graduate students and academics at every career stage to present and discuss new research in British, post-colonial, or transnational literature. Rooted in literary study, we welcome scholars of Victorian, Modernist, and Postmodern culture from across the disciplines.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Placement Seminar (207884)

Ju Yon Kim

Anna Wilson

2018 Fall (2 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 30

The job placement seminar will meet during the Fall semester to help students prepare dossiers and oral presentations of their work for the academic job market. The class will meet roughly every two weeks, providing a supportive structure for participants to produce, workshop, and revise application materials. We will also arrange mock interviews and practice teaching demonstrations. The placement officers provide one-on-one support with editing/proofing materials and guidance in navigating the applications process. This seminar is restricted to students in the English department. We welcome students who are intending to actively apply for postdocs or jobs this year to enroll; some seminar sessions suitable for those interested in thinking about the market or their career options but not actively applying this year will be advertised more widely and open to all graduate students in the department.

Class Notes: This seminar will meet biweekly from 3:00 to 5:00 on Thursdays.
