Subject: African & African Amer Studies

African & African Amer Studies 10

Introduction to African American Studies (122910)

Cornel West

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will examine canonical texts of the Afro-American intellectual tradition. W.E.B.Du Bois, Lorraine Hansberry, and James Baldwin will set the scene and stage for other towering figures such as Walker, Douglass, Morrison, Wright, Drake, Frazier, Lorde, Wilson, Gates, Cooper, Baraka (Jones), Malcolm X, and others.

Course Notes: **Required of concentrators in the African American Studies track. Students who transfer into the concentration after their sophomore year may substitute another African and African American Studies course already taken if the course addresses the materials covered in African and African American Studies 10, and the petition is approved by the Director of Undergraduate Studies.**

African & African Amer Studies 11

Introduction to African Studies (123591)

Daniel Agbiboa

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces students to the general outlines of African archeology, history and geography, as well as key concepts in the study of African health, social life , economic situation, arts, and politics. Our aim is to give students a fundamental vocabulary and interdisciplinary methodology for the study of Africa. Throughout, we assume that Africa is not a unique isolate but a continent bubbling with internal diversity, historical change, and cultural connections beyond its shores. The course is open to all students who are interested in exploring various dimensions of African life and cultures in ancient and modern periods.

Course Notes: **Required of concentrators in African Studies track.**

African & African Amer Studies 20 Section: 1

Introduction to African Languages and Cultures (118883)

John Mugane

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This introduction to African languages and cultures explores how sub-Saharan Africans use language to understand, organize, and transmit (culture, history, etc.) indigenous knowledge to successive generations. Language serves as a road map to comprehending how social, political, and economic institutions and processes develop: from kinship structures and the evolution of political offices to trade relations and the transfer of environmental knowledge. As a Social Engagement course, AAAS 20 will wed scholarly inquiry and academic study to practical experience and personal involvement in the community. Students will be given the opportunity to study Africans, their languages, and their cultures from the ground up, not only through textbooks and data sets but through personal relationships, cultural participation, and inquisitive explorations of local African heritage communities. Throughout the semester you will be asked to employ video production, ethnographic research, creative writing, "social-portraiture," GIS mapping, and linguistic study as you engage with Africans, their languages, and their cultures. By examining linguistic debates and cultural traditions and interrogating their import in the daily lives of Boston-area Africans, we hope to bridge the divide between grand theories and everyday practices, between intellectual debates and the lived experiences of individuals, between the American academy and the African world. Ultimately, this course aims to place Africans themselves in the center of the academic study of Africa.

Sophomore Tutorial:Pan-African Diasporic Imaginations: History, Concepts, Artistic Expressions (123590)

Ingrid Monson

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the long history of creating pan-African solidarity among peoples of African descent in the Caribbean, North America, Latin America and on the African continent. Beginning with the Haitian Revolution and its lessons for understanding making history of diasporic past we examine the transformation of African identities under slavery, the economics of racial capitalism and then explore the origins of Pan-African thought. We examine the differences between Marcus Garvey's and W.E.B. Du Bois's pan-African visions and the influence of these ideas on anti-colonial struggles in Africa and the Civil Rights and Black Power movements. In the second half of the course we examine artistic expressions in music, theater, and film, first in the 60s and 70s in North American, and then more in more recent works of Afro-futurism and hip hop in the U.S. Brazil, and Nigeria

Course Notes: **Required for concentrators in African and African American Studies. Open to all undergraduates.**

Chocolate, Culture, and the Politics of Food (108879)

Carla Martin

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will examine the sociohistorical legacy of chocolate, with a delicious emphasis on the eating and appreciation of the so-called "food of the gods." Interdisciplinary course readings will introduce the history of cacao cultivation, the present day state of the global chocolate industry, the diverse cultural constructions surrounding chocolate, and the implications for chocolate's future of scientific study, international politics, alternative trade models, and the food movement. Assignments will address pressing real world questions related to chocolate consumption, social justice, responsible development, honesty and the politics of representation in production and marketing, hierarchies of quality, and myths of purity.

Afro-Latin America: History and Culture (159570)

Alejandro de la Fuente

Doris Sommer

2020 Spring (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course explores how African cultural expressions influenced colonial societies and later national cultures in Latin America. How did peoples of African descent shape the formation of Latin American national cultures in areas such as literature, religion, visual arts, music, dance, and cinema? Some scholars have debated whether African religious, musical, medical and communitarian practices were reproduced in the New World or whether they were creolized through fusion with other (European and indigenous) practices. Others have sought to explain how African cultural practices (music, religion, dances) that were derided as primitive and uncivilized in the early twentieth century became "nationalized" and transformed into key expressions of national cultures in many Latin American countries. What are the implications of this process for those cultural forms and their practitioners? How do they impact, if at all, other areas of social life? We explore these questions through historical and literary texts, films, visual arts, and recordings.

Mobility, Power and Politics (214576)

Daniel Agbiboa

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course incorporates insights from the new mobilities paradigm in studying the linkages between movement, power and politics in the contemporary era. The course will discuss how issues of mobility are central to many lives and many organizations, and how movement intersects with the spatialization and materialization of power, difference and inequality within societies. Students will come to an understanding of how mobility, and control over mobility, both reflects and reinforces power; why mobile subjects are increasingly a risk and at risk; and the impact of the regulation and governance of mobility on conflict, security and development. Students will also benefit from the new light that this course sheds on how issues of mobility and immobility intersect with security and development in at least five core areas: (1) questions of power and government (2) spaces of regulation and intervention (3) the quandary of freedom and control in a globalized world; (4) infrastructures that enable and constrain movement; and (5) issues of justice and ethics. Confirming the analytical appeal of the mobilities paradigm, this course will serve as a melting pot for a variety of disciplines, including sociology, anthropology, geography, gender studies, social work and social policy, disability and health studies, conflict analysis and resolution, urban studies, political science and international relations. Topics will include mobility and terrorism after 9/11; mobility and mobilization of the urban poor; youth, mobility and being 'stuck'; social mobility; roads, corruption and policing; mobility and il/legality; gender and mobility; and mobility as fieldwork.

Black Womens Voices in the #MeToo Era (207805)

Linda Chavers

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

When accepting the Oscar for Best Actress in 2015 Patricia Arquette said the following: "The truth is, right under the surface, there are huge issues that are at play that do affect women, and it's time for all the women in America and all the men that love women and all the gay people and all the people of color that we all fought for to fight for us now."
This course examines why such statements are part of a larger and longer tradition of disappearing black women and why they are popular in the cultural zeitgeist. Through extensive reading and tough discussion this class examines the current discourse around sexual harassment and assault from the #MeToo movement through the informed lens of Harriet Jacobs's slave narrative Incidents in the Life of a Slave Girl. Both "texts" involve navigating spaces of subjugation and supremacy and yet one voice has remained steadily ignored in mainstream audiences. We will also look at the intersection of race and gender that Incidents reveals and trace how these remain intact or not through today.

The Key to Making It? Educational progress and barriers among black Americans (160402)

Jacqueline Rivers

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course combines the study of the historical trajectory of educational achievement among African Americans with a sociological analysis of the challenges they have faced in attaining educational equity, with a focus on the current situation. The course will review the structural barriers to educational achievement that blacks have faced at different periods in the history of the US and the cultural strengths, such as the high value placed on education, that have driven them to achieve. The persistence of racial barriers in the current era and their importance for social mobility, particularly among working class and poor blacks, will be discussed.

Introduction to African Literary and Film Production (213434)

Bojana Coulibaly

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** 30

This course examines oral, written and visual texts produced in precolonial and modern-day Africa. Using a comparative and intercultural approach, the students are introduced to African canonical literature and film production that include works by Chinua Achebe, Ousmane Sembene, Chimamanda Adichie, Mariama Ba, Wanuri Kahiu, Moussa Toure, Dani Kouyate, Boubacar Boris Diop, and others. A broad selection of genres and themes are analyzed, in particular, African literary and cinema aesthetics, the tradition/modernity dichotomy, social class dynamics, gender relations, race, cultural identity and globalization.

Literature, Society and Politics in Africa (213435)

Bojana Coulibaly

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** 30

African writers have recurrently combined creative imagination and political activism, uncovering the major historical, cultural and sociopolitical issues that impact the production of African literature. Relevant to both African and African American identity concern, the course investigates the inherent relation between literature and politics through a comprehensive analysis of the theoretical constructs that sustain their emergence, including theories on colonialism and cultural alienation, political and cultural nationalism, violence and revolution, negritude, feminism, apartheid and black consciousness. A selection of African postcolonial and contemporary prose and drama will be supplemented by essays in political and cultural theory so as to broaden our understanding of African literature.

African Literature and the Poetics of Memory (000196)

Bojana Coulibaly

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Literary representations of memory and trauma in African postcolonial and contemporary literature will be the main focus of this course. In order to understand how trauma impacts individuals in their relationship with their physical world, and how in a very unique way, characters cope with their traumatic reality, we will be analyzing "structural disorder" and "historical event" narratives, including novels and short fiction by Aminata Forna, Boubacar Boris Diop, Tayeb Salih, Yaa Gyasi, Ben Okri, Chris Abani, Jennifer Makumbi, and others. Our examination of these texts will be supplemented by trauma theory and its various subcategories that include the study of memory and forgiveness, retrospective narrative, testimony and bearing witness, PTSD, mourning, war and violence, transgenerational trauma as well as healing and working through trauma.

Poverty, Race, and Health (123435)

David Williams

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course critically examines the health status of the poor, and of African Americans and other socially disadvantaged racial and ethnic groups in the US. Attention will be focused on the patterned ways in which the health of these groups is embedded in the social, cultural, political, and economic contexts, and arrangements of US society. Topics covered include the meaning and measurement of race, the ways in which racism affects health, the historic uses of minorities in medical research, how acculturation and migration affects health, and an examination of the specific health problems that disproportionately affect nondominant racial groups.

Critiquing Black Muslim Reason in the United States (211170)

Youssef J. Carter

2019 Fall (4 Credits) **Schedule:** R 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

In this seminar, we ask: What does it mean to be Black in the United States? What does it mean to be a Muslim in the United States? What happens when these two identities compound or collide with one another? Well, what about Black Muslim Womanhood, for example? There are scholars (Jamilah Karim) who have discussed the "triple constraints" that Black Muslim Women face as they navigate the public sphere. As well, while we directly confront questions of citizenship and belonging and without relying too heavily on critical race theory, we will take some time to think about how these sites of identity (and their reception) specifically impact Black Muslims in the United States. The primary purpose of this course—seminar—is to try to disentangle these sites of identity while understanding that for the people who are Black, Muslim, Female, and/or Migrant, there is no way to properly understand how people are subjected to various forms of marginalization, or resist structural racism or sexism, combat Islamophobia, or articulate what it means to either have or gain citizenship, or build communities where their whole selves are affirmed, by thinking that these identities are ever separable. The secondary aim of this course on Black Muslims is to think more deeply about how such a term has historically been applied to African-American Muslims (that is, American-born Muslims of African descent). Yet, our task is take up Edward Curtis' assertion that the popular use of the term 'Black Muslim' has not traditionally included Senegalese, Gambian, Somali, Sudanese, Trinidadian, or otherwise dark-skinned Muslims whose point of origin is beyond the United States. Nonetheless, Senegalese or Somali-American Muslims must contend with the othering effects of racism and Islamophobia—they are similarly impacted by police violence and structural discrimination. However, in some cases, they must also combat racially and religiously-motivated legislation that results in exclusion masked as immigration reform (e.g. Muslim Ban).

The African Diaspora: Time, Space, and Belonging (213441)

Youssef J. Carter

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This seminar examines how "diaspora" has emerged in conceptual terms and has been used to describe a specific process of becoming and belonging, particularly for people who have dispersed, or have been dispersed, into multiple spaces around the globe while at the same time maintaining a sense of connectedness (solidarity) through the circulation of homeland paraphernalia, political views, and other devices that act as connective tissue. We will review literatures that focus on transborder practices, and on the ways in which communities engaging in these practices imagine themselves. We begin by tracking a genealogy of 'diaspora' in both historical and contemporary dimensions in order to then analyze how it applies in global African context. This seminar also focuses on how identities become contested and untethered from state boundaries via diasporic and transnational solidarities, but also on how people

discursively situate, or localize, themselves into particular geographic and temporal contexts. Here, we address the theme of mobility through analyzing scholarship on transborder practices within a globalized world, and diasporic existences. We review anthropological writings that center upon the many entanglements that "glocal" communities face as they circulate around multiple diasporic nodes and engage multiple social, political, and religious worlds. Diaspora, here, is not taken for granted and the assumption is not held that diasporas exist automatically, but rather, that their formations are particularized, locally-shaped, and inflected as purposeful camaraderies via interactions (real or imagined) between and among sites in ever-evolving networks. Diasporas are not merely sites where static relations to homeland are simply enacted and maintained—the interactions in and throughout diasporic networks tend to be more complex and multiple. Diasporas do not just produce mobility, they are themselves variable in the sense that they continually shift in size, orientation, and perhaps even representation. Collective envisionings of homeland that configure a solidarity amongst similarly dispersed people can even, over time, downgrade from diaspora to simple dispersion. Our central aim, then, is to deepen our understanding of not only the diaspora concept, but also investigate the social and political components of dispersion.

Africa Rising? New African Economies/Cultures and Their Global Implications (108694)

John Comaroff

Jean Comaroff

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

In a story titled Africa Rising (2011), The Economist argued that the continent epitomizes both the "transformative promise of [capitalist] growth" and its bleakest dimensions. This workshop will explore Africa's changing place in the world - and the new economies, legalities, socialities, and cultural forms that have arisen there. It will also interrogate the claim that the African present is a foreshadowing of processes beginning to occur elsewhere; that, therefore, it is a productive source of theory about current conditions world-wide. The workshop, open to faculty and students, will meet Mondays, 6:15-8:15. 15 students will be permitted to take it as a course; they will also meet on Mondays, 12:00-1:20. Grades will be based on participation and a term essay.

Race and Ethnicity in Latin America (110494)

Alejandro de la Fuente

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This yearlong seminar introduces students to current questions and debates in the study of race and ethnicity in Latin America, from the colonial period to the present. Our seminar answers the call, issued by anthropologist Peter Wade (1997), to produce scholarship integrating the study of Africans and their descendants, along with indigenous peoples, as participants in shared processes of racial formation, nation making, and state building. Through the systematic comparison of several cases, the course discusses how ideas of race have shaped processes of nation and state formation in Latin America, shaping opportunities for mobilization and public policies; how racial identities have been formed and invoked for different cultural and political purposes; and how ideas of race and ethnicity have contributed to the stratification of Latin American societies, which are among the most unequal in the world.

Theory and Race in the Americas (211217)

Jesse McCarthy

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course explores myths and theories of race that have informed the construction and development of social caste and class in the Americas. Reading classical works on race from scholars like DuBois and Hurston to more contemporary works by scholars like Hartman and Gregory, we examine the entrenchment yet mutability of race in the context of the Americas. Looking at both religion and the social sciences, the course explores the ways in which race was first predicated upon religious myths and ideas and then codified through science and the law. In this way we appreciate the infusion of race in the very fabric and shaping of the Americas. Readings, discussions and assignments will emphasize several key themes: race, slavery, diaspora, racism, respectability and resistance. We take an interdisciplinary approach that bridges anthropology, philosophy, religion, sociology and political science. In part we will explore the disciplines' role(s) in making and unmaking race and racism.

FAS: Course Level	Primarily for Undergraduate Students

Subject: Ewe

Ewe AA Section: 01

EWE AA (214450)

John Mugane

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

A study of a Niger–Congo language spoken in southeastern Ghana at the elementary level. Contact hours supplemented by language lab sessions. Emphasis on written expression, reading comprehension, and oral fluency. Students are strongly encouraged to take both parts of the course within the same academic year. The curriculum builds throughout the year.

Course Notes: **Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the department to learn more.**

Anthropology 97X

Sophomore Tutorial in Archaeology (113567)

Amy Clark

2020 Spring (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course will focus on archaeological thinking, the cognitive skeleton of the discipline of archaeology, the principles and the logic that are the foundation of all archaeological conclusions and research. Central to this is an understanding of research design, archaeological theory and interpretation, culture and material culture; as well as an understanding of how to examine and construct an archaeological argument.

Anthropology 97Z

Sophomore Tutorial in Social Anthropology (143028)

Steven C. Caton

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The course is designed as a foundational course with the specific purpose of introducing the principal social theorists whose work has been crucial to the discipline of social anthropology, that is: Marx, Durkheim, Weber, and Foucault. The first objective is to delineate the broad outlines of their thought and the central questions that informed their intellectual and political interventions. The second objective is to provide a solid grounding in the key concepts as well as the theoretical and methodological contributions of these social theorists. Finally, we will seek to demonstrate how contemporary anthropological theory continues to engage with their work.

Course Notes: **Required of all concentrators. Weekly 2-hour sections to be arranged.**

Anthropology 98A

Junior Tutorial in Anthropology (205494)

Zoe Eddy

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course is focused on preparing students to do anthropological fieldwork and develop their own research projects. Through concrete case studies and practical exercises students will be introduced to different approaches to developing research problems, conducting research, and ethnographic writing. Topics covered will include defining research questions and objects of study, situating projects within scholarly literature, and bringing together research data and analysis in different forms of anthropological writing.

The aim of the course is not an exhaustive overview of research design but to familiarize students with some of the key practices and concerns of anthropological research and writing. The course seeks to guide students in reading anthropological texts, understanding the range of data and its representations, unpacking the analytical moves being made in the text, and thinking through the implications of such presentation.

The course is divided into two main components. The first focuses on a case study of a developing anthropological work by the instructor. Through select readings related to their topic of interest and original research documents (proposals, fieldnotes, media, news reports, photographs, analytical essays, among others) students will learn the process of turning a research question into an anthropological project. The case study is also meant to prepare students for the experience of conducting their own research and serve as an example of how to transform research findings into anthropological writing.

Simultaneously, this course is also a research practicum in which students will apply what they have learned to design their own anthropological projects and share with each other research goals, experiences, and components of their emerging work. Through structured assignments, seminar workshops, and regular individual meetings with their instructor students will produce an original research essay based on their research over the course of the semester.

Anthropology 98B

Junior Tutorial for Thesis Writers in Anthropology (205522)

Zoe Eddy

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This individual tutorial is for anthropology students intending to write a senior thesis, and is normally undertaken with an advanced graduate student during the second term of junior year. Students will have weekly meetings with the project advisor for the purposes of developing the appropriate background research on theoretical, thematic, regional, and methodological literature relevant to their thesis topic, and fully refining their summer research proposal. The tutorial's final paper will be comprised of a research proposal representing the research undertaken during the semester.

Anthropology 99A

Thesis Tutorial in Anthropology - Senior Year (205184)

Zoe Eddy

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 30

This is a full year research and writing seminar limited to senior honors candidates. The course is intended to provide students with practical guidance and advice during the thesis writing process through structured assignments and peer feedback on work-in-progress. It is intended to supplement not replace faculty thesis advising (with the requirement of consulting regularly with the advisor built into the assignments) and, most importantly, allow students to share their work and experiences with other thesis writers in a collegial and supportive environment. The seminar will be run jointly by the Department of Anthropology Assistant Director of Undergraduate Studies and the Writing Tutor. Part one of a two part series.

Anthropology 1038

Game of Stones: The Archaeology of Europe from Handaxes to Stonehenge (215108)

Amy Clark

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Game of Stones: The Archaeology of Europe from Handaxes to Stonehenge Buried beneath modern cities, Roman amphitheaters, and Medieval churches lie subtle traces of Europe's earlier occupants: campsites littered stone tools and animal bones, human bodies preserved in bogs and frozen in ice, and cave walls decorated with extinct animals. This course will explore European prehistory from the first colonization of Europe by Homo erectus, around a million years ago, to the building of Stonehenge, c. 2000 B.C. We will cover some of those most exciting topics in archaeology today: How similar were Neanderthals to us and why did they go extinct? When and why did groups subsisting on hunting and gathering take up farming? And finally, for what purpose were large stone monuments such as Stonehenge and Newgrange built?

Anthropology 1040

Origins of the Food We Eat (109581)

Richard Meadow

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The most significant lifestyle revolution in the human past was the change from hunting and gathering to agriculture and pastoralism. That shift in the subsistence base has facilitated, and has been facilitated by, increasing populations and a restructuring of social and economic relations over the past 10,000 years. Focusing on key geographic areas and transformative time periods, we discuss how this process began by focusing on the domestication of what have become the staples and major condiments of modern diets around the world. We also consider the spread and adoption of domestic plants and animals across the Eastern and Western Hemispheres as well as the globalization of food that began at the end of the 15th century CE with the Columbian Exchange.

To study the processes of domestication and subsequent exploitation of domestic plants and animals requires a multi-disciplinary approach. Thus we sample contributions from a wide range of fields including archaeology, anthropology, history, linguistics, botany, zoology, genetics, biogeochemistry, climatology, geomorphology, oceanography, demography, and nutritional science. Fundamental, however, are archaeological excavations, which provide the material remains necessary for specialized analyses as well as the temporal and social contexts needed for their interpretation.

The course is discussion-based, with background material, concepts, and topics introduced by the instructor. Geographical focus is on West, South, and East Asia, Mesoamerica, and the Andean region, with other areas (Europe, Central Asia, Africa, New Guinea, Oceania, Amazonia, and North America) touched upon for specific foods. Readings are in the primary and secondary literature, focusing on key plants, animals, analytical methods, and interpretative debates. Evaluation is based on completing assigned readings before each class, participating in class discussion, and submitting one written assignment by Friday afternoon of each week on a topic to be specified. Graduate students are required to submit a short tightly focused research paper before the end of the semester.

Course Notes: **Given in alternate years.**

Introduction to Archaeological Science (111192)

Christina Warinner

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course offers an introduction to eight major areas of archaeological science: (1) relative and absolute dating, (2) human osteology, (3) paleoethnobotany and micro remains, (4) stable isotopes, (5) organic residue analysis, (6) zooarchaeology and ZooMS, (7) proteomics, and (8) paleogenomics. Students will gain an understanding of the history of the field and its future directions, the method and theory behind how different tools and techniques work, and how archaeological science is transforming archaeology today.

Recommended Prep: **One year of college-level chemistry or physics.**

Moundbuilders, Birdmen, and Earth Monsters: The Archaeology of Eastern North America (215110)

Robert Cook

2020 Spring (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course introduces the archaeological study of the ancient societies of eastern North America, with a focus on the Ohio River Valley region, the first frontier of the United States. We will explore inter-related aspects of religion, economy, technology, and human biology associated with the span of time ranging from the first arrival of humans to the European invasion of the continent. The emphasis is on key forms and changes in social organization associated with shifts between foraging and farming, the development of widely shared ideologies, and senses of place as expressed through persistent monumentality. We conclude the semester with a consideration of the various ways in which indigenous peoples of the Eastern U.S. shaped and were shaped by European colonizers and settlers. Final student research projects will inform the creation of a small exhibit in the Peabody Museum.

Anthropology 1156

East of Babylon: The Archaeology and Geopolitics of Middle Asia (212663)

Benjamin Mutin

2019 Fall (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

At the crossroads of the Islamic World, Iran is very much in the news these days for the reason that it has a central role in current Middle Eastern and Central Asian geopolitics. Yet, few understand that the modern country and its entangled relations with the other countries in the Middle East and Central Asia today are built on the foundation of thousands of years of history and prehistory. This course is designed to introduce students to the geography and modern geopolitics of Middle Asia—i.e., Iran and its neighbours between the Zagros Mountains and the Indus Valley and from southern Central Asia to the Persian Gulf and the Indian Ocean—and to provide an overview of the archaeology of this region. Aspects of current events and recent history in this region are presented, such as China's "New Silk Road" in Central Asia, Iran and Pakistan; the geopolitics of Iran; the emergence of Dubai as a major trading hub; and the continuous foreign meddling in Afghanistan.

In this course, students are familiarized with the archaeology of the prehistory, proto-history, and early historical periods of Middle Asia. For the period between 10,000 and 2,300 years ago we discuss the emergence of agriculture and settled life during the Neolithic period, the first urban civilizations during the Bronze Age, and the Persian Empire and its conquest by Alexander the Great. We also consider the emergence of social complexity, state formation, the development of a variety of craft industries and technologies, long-distance trade and exchange, the diffusion of languages and the emergence of writing. We review the major sites and civilizations of Middle Asia and discuss the main anthropological theories proposed to interpret these data. By the end of the course, students will have acquired an understanding of how the rich cultural history of Middle Asia has provided a foundation for current dynamics in this part of the world.

Cannibalism, Sacrifice, Infanticide: Violence in the Human Past (212863)

Nicholas Carter

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the evidence for three kinds of violence in past societies considered especially shocking or controversial in the contemporary, developed West: human sacrifice, the killing of infants and children, and the consumption of the human dead. Avoiding exoticism and suspending condemnation in favor of anthropological inquiry, the course considers cannibalism, sacrifice, and infanticide as culturally specific expressions of universal human drives and preoccupations. Using a seminar format, we will examine archaeological and ethnohistoric case studies drawn from a wide range of time periods, cultures, and regions in an effort to identify and explain diversity and commonalities among such practices

Anthropology 1190

The Invasion of America: The Anthropology of American Encounters, 1492-1830 (125450)

Matt Liebmann

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In 1492 Native Americans discovered Europeans, changing the world forever. The European invasion of the Americas triggered demographic, economic, and ecological changes on an unprecedented scale. The subsequent movement of plants, animals, and goods prompted global shifts in population, exploitation of resources, and the transformation of environments on both sides of the Atlantic. What can archaeology tell us about early encounters between Native Americans and Europeans? Why did the European conquest of the Americas play out as it did? This course investigates these questions through the sites where first contacts occurred, the objects exchanged by Native peoples and colonists, and the scars that remain in the ground. Through investigations of first contacts, Indigenous politics, disease epidemics, Native rebellions, and ecological changes, Anthropology 1190 presents a sweeping continent-wide treatment of the historical archaeology of Native Americans between 1492-1800.

The Pyramids of Giza: Technology, Archaeology, History (127050)

Peter Manuelian

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Focuses on the Pyramids, Sphinx, and tombs at Giza (ca. 2500 BC), in the context of ancient Egyptian history, art, and archaeology. The HU-MFA Expedition excavated Giza, resulting in today's Giza Project at Harvard. Seminar takes place in Harvard's Visualization Center with 3D viewing of the Giza Necropolis on a 23-foot screen, and consists of introductory lectures, student presentations, and field trips. Topics range from challenges of archaeological information processing to Old Kingdom mortuary art and architecture, to issues of ownership and repatriation. Students will also contribute to the (real world) Giza Project at Harvard.

Migration & Mexico/U.S. Borderlands: Moral Dilemmas, Religion & Liminal/Latinx Modes of Being (160434)

Davíd L. Carrasco

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the current crisis at the Mexico-U.S. borderlands within the epic context of human migration and mobility in historical and global perspectives. Focusing on individual lives and collective stories of homeland and displacement we investigate various forms of religiosity, violence and non-violence, artistic responses, coping strategies, transculturation and the fluidity of national and cultural borders. We consider the material, symbolic and existential conditions of the traveling self.

This course uses Professor Davíd Carrasco's "ensemble approach" (texts, art, music, film) to understand the deepening crisis and tragedy of "Greater Mexico", the symbolism and contents of 'sacred bundles', the cultural and political dynamics of 'center and peripheries' and 'deep rivers of devotion' that animate these Latinx worlds. Drawing on the interpretive approaches of anthropologists, sociologists, and historians of religion (including the literature on 'rites of passage') the course explores the question of 'what cultural and religious resources help migrants survive the ordeal of migration, establish new identities and strive for well-being as strangers in a strange land?'

Anthropology 1603

The Law and Its Limits: Anthropological Approaches to Law (215111)

Malavika Reddy

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

We often talk about the power of law to shape our worlds but what about its powerlessness. The aim of this class is to disrupt commonsense pieties about law and its place in social life. People the world over increasingly are turning to the law to address social, political and environmental ills. An axiom of contemporary life is that modern societies need the rule of law to address social, political and environmental ills. Yet, in the face of entrenched problems, including expanding who belongs, addressing inequality, and confronting environmental crisis, law often appears impotent or, worse, detrimental. This course grapples with the simultaneous hunger for and weakness of law, its power and its powerlessness, by guiding students through an exploration of the following questions. How, why and to whose benefit or expense is the law posed as an answer to political and social problems? What can we learn from situations in which law harms? Who asks for law? Who resists law? How does legal process transform conflict and define the terms of its resolution? The course will seek answers to these questions via an engagement with the empirical -- case studies from around the world -- and the theoretical, ultimately building to an understanding of the various ways that law disables and enables change today.

Megafauna Among Us: Humans and Other Charismatic Animals (215112)

Zoe Eddy

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Whales, wolves, great apes, big cats, buffalo, bears-- these animals populate human cultural imaginations. From animal advocacy groups to zoos to movies, so-called "charismatic megafauna" and/or "flagship species" dominate a wide swath of debates. By focusing on a selection of animals, this course explores a) how people interpret these animals, and b) how human interactions impact these animals and their natural environments. Organized around different animals and the controversies, questions, and events surrounding them, this course will emphasize how animals reflect human understandings of morality, culture, and history. Course themes focus heavily on environmental activism, public and environmental policy, Indigeneity, and animals in tourism markets. While this class centers on North American case studies, international examples will help create a cross-comparative global context. In addition to exploring the cultural context of large animals, students will also learn how to approach these issues as anthropologists. Every class will feature a module wherein students tackle problems with different theory and methodology from anthropological research. This course relies on interspecies approaches to anthropological research on animals: critical use of interdisciplinary materials will generate multiple perspectives on the animals we study. Finally, Indigenous methodology and ontology about animals and the environment will serve as a foundation for discussion.

Language and Culture (112218)

Steven C. Caton

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a course in linguistic anthropology. We explore key theoretical issues in the semiotic anthropology of language use, focusing on communication, social (inter)action, representation, cultural conceptualization, and language ideology. By presenting many of the most influential and innovative contributions to the study of language in culture and society—both recent and classic—the course aims to guide students in asking fundamental questions about language and communication more broadly as facts of everyday sociocultural experience.

Course Notes: **No previous knowledge of linguistics or of anthropology is required.**

Wheat, Coffee, Cotton, Cannabis: Capitalism, Crops and the Making of the Modern World (213502)

Aarti Sethi

2019 Fall (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course tells the story of modernity as one of agrarian change. While we have come to associate the modern world with industry and cities, 60% of the globe's population works in agriculture and 100% of the world depends upon it. The rise of industrial capitalism in Europe transformed peasant farmers into workers. The earliest factories organized on capitalistic lines, such as cotton and paper mills, organized laboring and plant bodies in new relations. The consolidation of modern nation states, global cities, and sustaining non-agricultural urban populations required direct techno-scientific interventions into plant-life and the industrial harnessing of nature. We will study the social history and contemporary economies of specific crops – cotton, sugar, tobacco, tea, wheat, rice and cannabis among others – to understand how the plants we eat, wear, write on and smoke are imbricated in the histories of colonialism, empire, race and slavery. Topics covered include theoretical approaches to agrarian change, bio-science and GM technology, the control of 'criminal plants' and the war on drugs, agri-business, the global food crises and the impact of climate change on hereditary farming communities around the world.

Global Intimacies: Love and Labor in a Mobile World (215113)

Andrea Wright

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

By analyzing the intersections of love, sex, labor, power, and money, this course will explore theoretical and ethnographic approaches to global intimacies, particularly intimate and reproductive labor. Readings will focus on ethnographic works that illustrate how global mobilities and intimate relations are linked and delinked. By engaging with some of the most influential contributions to the study of gender, labor, and migration, this course will guide students in understanding global and transnational transformations; and in doing so, help students connect issues of gender, sexuality, race, class, and power to changing practices of love, intimacy, and livelihood.

Race and Genetics: American Biopolitics (213467)

Anna Jabloner

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This seminar examines the increasingly convoluted relationship between genetics/genomics and race in the United States. In this contemporary moment, geneticists are debating definitions or "locations" of race on the human genome. Some draw on older racial classifications, others claim that the complexities of human ancestry cannot be captured by race. In this course, we will read social scientific studies of race categories in genetics and genomics, as well as scholarship on the meanings of race as identity category in American society. Rather than define what race really is or pass judgments on biology, our goal will be to understand a) the historically and culturally specific relationship between race and genetics, and b) the political stakes and charged conditions and implications of the current entanglements of genomic science and race categories in American society.

Paperwork: What Does Paper Do for Social Life? (212905)

Malavika Reddy

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

How does paper work in contemporary life? Few terms are as evocative of the drudgery of modernity, yet are as unexamined as is paperwork. Tacking between ethnography and social theory, this course examines how paper artifacts – from forms, reports and memoranda to identity papers, receipts and business cards – mediate, materialize, constitute, and shape the collective projects that produce them. What does the paperwork's perspective allow us to see about the institutions, collaborations and polities in which we take part? Given its ubiquity, how does paperwork become understood as alienating? The course begins with a discussion of methods. With what conceptual and ethnographic tools have social scientists made sense of paper forms? The class is then divided in thirds: the first examines the relationship of documents and bureaucracy; the second asks about the ways in which paperwork makes people and power; and the final section considers how paper artifacts construct pasts and (purportedly paperless) futures.

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

American Indian, First Nations, and other Indigenous communities of the USA and Canada contend with disproportionately high rates of "psychiatric" distress. Many of these communities attribute this distress to their long colonial encounters with European settlers. Concurrently, throughout the 20th century, the disciplines and professions associated with mind, brain, and behavior (e.g., psychiatry, psychology, psychoanalysis) consolidated their authority and influence within mainstream society. These "psy-ences" promote their professional practices (e.g., diagnosis, psychotherapy) as plausible remedies for Indigenous social suffering, but many Indigenous communities remain skeptical of—and resistant to—these clinical approaches, primarily for cultural and political reasons. In this seminar, we will consider whether and how the concepts, categories, tools, and techniques of the mental health professions might be appropriately adapted and/or adopted for use with Indigenous communities in an increasingly globalized world. In recognition of the (post)colonial status of these populations, we will attend closely to alterNative cultural and spiritual approaches that have been identified and promoted by Indigenous people themselves as conducive to healing and wellness. This course is designed for upper-level undergraduate students interested in medical anthropology, professional psychology, pre-medicine, Indigenous studies, and related social and health sciences. Students will participate in regular seminar discussions, write routine responses to assigned readings, and submit major independent research papers addressed to the promotion of Indigenous well-being. Student engagement and exchange during class is essential, so routine attendance and participation are expected throughout the semester.

Is More Money a Good Thing Everywhere? Anthropological Approaches to the Economy (213503)

Aarti Sethi

2019 Fall (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

How do societies decide what can be sold (commodified) and what may only be given as a gift (love?). This

course introduces the methods and concepts of economic anthropology, political-economy and the study of exchange in human societies. Is 'having' the same as 'owning'? Is money a universal token of value? How do consumption choices become political, ethical and moral statements about self and society? What happens when people may buy bits of other people (organs, breast-milk, hair, wombs)? Is the 'free market' really free? Is thieving anti-social or revolutionary? We will read theoretical and ethnographic approaches to production, consumption, trade, saving, investment, barter and theft as social, symbolic and political acts, proceeding from the tenet that relations between things reflect relations between people.

How People Live With The Gods (215114)

Aarti Sethi

2020 Spring (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course focuses on conceptual and theoretical issues in the study of religion, with a focus on the religious traditions of South Asia. Religion attempts to sequester a fundamental mystery of human existence: what lies before, outside, adjacent to, and after mortal corporeal existence. Is divinity immanent in the world or transcendental to it? How do people, animals and things become sacralized? What do relations between people and gods, tell us about interactions between people and people? The course examines religion and ritual as lived socio-material and symbolic practices, ideologies of political and state power, the means of interaction between co-existing groups, the production of social hierarchy and challenge to dominant orders, and as a source of ecstatic experience, personal healing and ethical dispositions.

Materials in Ancient Societies:Ceramics (120535)

Richard Meadow

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course examines the technologies used in the production of ceramic vessels, bricks, tiles, and mortars in ancient and non-industrial societies. It also focuses on the laboratory-analytical techniques that enable

reconstruction of these technologies.

The course has been designed to consider: (1) the principles of geology and of materials science and engineering that provide an understanding of the properties and behavior of clays (and other ceramic materials) as materials systems; (2) the activities involved in producing, using, and distributing ceramic materials and ceramic products; (3) the culture-producing and culture-using aspects of ceramic technologies.

Laboratory sessions include microscopy with emphasis on petrography of ceramics and geological materials, mechanical testing of fired ceramics, and the appropriate methods for documenting and reporting the analyses of archaeological artifacts made from ceramic materials.

Recommended Prep: **Pre-Registration is required. Please contact anthrouc@fas.harvard.edu for further information.**

GIS & Spatial Analysis In Archaeology (120580)

Jason Ur

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 8

An introduction to the GIS and remote sensing methods used by archaeologists to document and analyze datasets at the scale of the site and the region. This class will involve the hands-on use of printed maps, aerial photography, satellite imagery, digital terrain models, GPS-based observations, and UAV (drone) photogrammetry to approach archaeological research questions. Students will gain competence in creating spatial data for fieldwork, print publication, and online visualization (web maps and 3D modeling), and in basic spatial analysis of archaeological datasets. Labs will use data from the instructor's Middle Eastern case studies, but students will be responsible for assembling a GIS database for their own region of interest.

Lithic Technology (108968)

Amy Clark

2019 Fall (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Stone tools represent the oldest known human technology. They represent the most abundant and arguably one of the most informative elements of the archaeological record for reconstructing ancient human behavior over the last 3.3 million years. In this graduate seminar that is open to undergraduates with permission, students are provided with a solid methodological and theoretical grounding in how to interpret stone (lithic) tools. The course includes hands-on training in how to identify and analyze stone tools, qualitative and quantitative approaches to process and interpret lithic data, and detailed discussions of current theoretical perspectives that use stone tools to understand broader questions about the evolution and diversity of human behavioral adaptations. The course will draw heavily on the analysis of archaeological collections from New World and Old World stored at Harvard's Peabody Museum, capped by student-devised experimental research projects.

Course Notes: **Undergraduates welcome, with permission of the instructor.**

Class Notes: **College Fellow, Amy Clark, is the instructor for the course.**

The Archaeology of Mesopotamia (212757)

Jason Ur

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

A survey of current issues in the archaeology and history of ancient Mesopotamia (today within the states of Iraq, Syria, Turkey, and Iran). The course focus will be on urban origins, the nature of urban societies in the Bronze Age, and the expansion and impact of empires in the Iron Age. Issues will include kinship and "the State," the economic infrastructure of cities, the nature of political control, and the different theoretical approaches that archaeologists and historians have used to investigate them.

Intended for graduate students in archaeology, NELC, and history, or advanced undergraduate archaeology concentrators.

Quipu (Khipu): Reading the Inka Knotted-String Records (119387)

Gary Urton

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will guide you through an intensive investigation of one of the most remarkable artifacts of the ancient Americas: the quipu (khipu). Quipus were the devices used for record keeping in the Inca empire of pre-Columbian South America. Quipus recorded numerical information useful to Inca administrators, as well as information used to construct accounts of Inca myths, genealogies, histories and other narrative genres. We will study quipu samples in the Peabody Museum, and we will practice the arts of spinning, plying and knotting threads used in the production of quipus. The general objective of the course is to understand how these complex knotted-string devices served the Incas in the recording of information of interest to administrators of what was the largest state of the ancient New World - the Inca Empire.

Course Notes: **Undergraduate students welcome.**

Archaeology and Heritage (160955)

William Fash

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The links between archaeology, cultural heritage, and nation building have been fundamentally important to archaeological practice since the origins of the discipline. The uses and abuses of archaeology by the state over the past fifty years have been criticized by all manner of social scientists, journalists, local

communities and indigenous people in countries across the globe, in dozens of books, hundreds of articles, and The International Journal of Heritage Studies. Archaeological practice and heritage management continue to be the topic of lively theoretical and legal debates by multiple stakeholders with competing claims to the past. The ideological uses and commodification of archaeological heritage by diverse factions has led many archaeologists to become actively involved in creating sustainable solutions that promote responsible heritage stewardship in this dynamic context. The members of the seminar will read and discuss theoretical schema, practice and critiques from the Americas and the Old World in examining innovative approaches to archaeological heritage management. The focus in this seminar will be on finding a 'third way' to address the valid claims of local communities and indigenous peoples, vis-à-vis the ways central governments construct their own origin myths and legitimation of the state through archaeological research and its presentation to the public.

Subaltern Anthropology & the Politics of Method (212943)

Youssef J. Carter

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Why have anthropologists found it necessary to imagine, and then craft, a "decolonization" of their discipline? What kinds of insurgencies get enveloped in social scientific methodologies through which scholars, black scholars in particular, have studied the colonial epistemologies and uneven socialities that configure how we experience our world(s)? This course engages in a reading of particular anthropological discourses on race, gender, and varying social institutions theorized and examined through Black scholarship as inherently and necessarily political. While there has been illumination on African-American

legacies within Anthropology, this course builds on those recognitions by looking more broadly, into preoccupations with Black Feminist discourse and other kinds of emancipatory ethics, for example, while relying on ethnography as a medium and methodology for problematizing critical assumptions about "cultures". We attempt to further this by finding commonality in the methodological concerns shared from within both African continental and diasporic scholarship alike. Insofar as the humanities and social sciences has served as colonial weaponry in order to subjugate entire aspects of the human terrain, the working assumption pushed forward here is that such disciplines have always been political. This course examines how, and by what means, subaltern scholarship is, and has been, invested in shifting broadly-held misconceptions about human beings and their relations

Jean Comaroff

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This class is a critical exploration of theory and method in Anthropology. To what extent have claims for the unique potential of the discipline for critical estrangement stood up to the challenges of the long history of modernity on a world-wide scale? What might its distinctive modes of investigation offer other decentering projects in the human sciences as they grapple with the changing nature of society, state, and empire in the face of radical shifts in the form of economy and politics; or the morphing shape of

capitalism, value production, and social inequality? The course will explore how the interplay of scholarly practice and context have shifted in Anthropology from colonial to postcolonial times, and will encourage discussion of the genealogy of the discipline, broadly understood, within the human sciences writ large.

Course Notes: **Required of candidates for the PhD in Social Anthropology. Not open to undergraduates.**

Feminism and Anthropology (213468)

Anna Jabloner

2020 Spring (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course considers the relationship between feminism (as activist realm, as theoretical field, in its institutionalized form as gender studies) and anthropology. We will begin with early ethnographic writing by women and about women, and analyze some of the interventions feminists hope to make in anthropology. We will then examine the relationship between feminism and anthropology through two topics: kinship and politics. Our course will consider how feminist anthropologists have connected the study of kinship, culture and nature, and carved out a place for the anthropological study of gender relations. In our study of kinship, the politics of reproduction and of labor will be important issues, such as the question of who gets to be related to whom, and whose work counts as what. In our study of politics, we will look at specific feminist statements and consider their impact on, and relationship with, the field of anthropology. Finally, our course will investigate more recent work on nature and biology, as well as (queer) gender and sexuality, in order to speculate on the futures and potentials of feminist anthropologies.

Anthropology 2695

Design Anthropology: Objects, Landscapes, Cities (107371)

Gareth Doherty

2020 Spring (4 Credits) **Schedule:** F 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

In recent years, there has been a movement in anthropology toward a focus on objects, while design and planning have been moving toward the understanding of objects as part of a greater social, political, and cultural milieu. This seminar explores their common ethnographic ground.

In spring 2020, the Design Anthropology course will focus on Afro-Brazilian sacred groves, terreiros, in Salvador da Bahia, the fourth largest city in Brazil. Terreiros can be understood as a combination of urban farm and monastery where energies of nature / orishas / deities associated with Afro-Brazilian religions are cultivated through combinations of plants and sacred leaves combined with animal sacrifice and religious rituals. In these spaces, Afro-diasporic memories, knowledge and deities are celebrated.

Terreiros are plentiful in Brazilian cities such as Salvador which is commonly referred to as "the Black Rome," because of its hilly topography, the number of churches, and the fusion of African religions that enslaved populations brought to the new world. There are officially about 1,300 terreiros in Salvador, although some researchers maintain that this figure is closer to 2,000. They have very particular internal arrangements—and they are among the last remaining green spaces in an increasingly dense city.

Fieldwork

Eight students will visit Salvador over Spring Recess (March 13–22) and, working in pairs, document the physical and social spaces. GSD students will be selected through the limited enrolment lottery. FAS students will be selected through a short essay due immediately after the first class session. The remaining twelve students who do not travel will conduct their research through secondary sources. There are no prerequisites. Knowledge of Portuguese would be helpful but is not required.

Assignments

Students are expected to engage in two main projects over the course of the semester. The first is the fieldwork either in person or using secondary sources. The class periods leading up to the fieldwork will prepare students—methodologically, ethnographically, and theoretically—for this exercise. After spring recess, all students will share in the results of the collaborative fieldwork to interpret it and produce visualizations of the physical space and lived experience. This first assignment will prepare students to complete the second main project of the course: a design proposal capturing their thinking on design anthropology and the future of the terreiros.

Learning objectives Where possible, the synergy between anthropologists and designers will be cultivated to maximize exchange between disciplines. The seminar provides students with training in ethnographic methods which can be applied in other academic and professional projects. On completion of the course, students should be prepared for conducting their own ethnographic fieldwork projects, either alone or collectively. During the semester, students will:

1. Apply fieldwork as a bridge between design and anthropology;

2. Develop theoretical positions on landscape arising from fieldwork;

3. Identify non-written forms of note taking;

4. Experiment with visualizing social phenomena and the lived experiences of spaces;

Course Notes: **Offered jointly with the Graduate School of Design as GSD 3336.**

Students enrolled in Anthro 2695 will need to make arrangements to pay $300 for international travel, in addition to the costs of meal and incidentals with the Graduate School of Design's Department of Landscape Architecture. Students are responsible for obtaining the necessary visas. One set itinerary is made for the trip with no modifications. If students wish to modify the itinerary, it may be possible for them to do so in direct contact with the travel agent, and the student is responsible for any change fees incurred. Students will need to sign a travel waiver in the Department of Landscape Architecture and register their trip with Harvard Travel Assist.

Event, Time, Memory (116071)

Steven C. Caton

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines the way anthropology has looked at time theoretically and ethnographically. It begins with a comparison of the way different cultures have "classified" time and time reckoning,. This is then followed by the anthropology of the event as started by Marshall Sahlins' and his work on Captain Cook's arrival in the Pacific, and host of other analyses of the "event" that came after it (drawing inspiration from historiography). The third framework is the study of "memory," particularly the idea of collective memory, as it bears on both anthropological and historical analysis. The fourth framework has to do with different formulations of "temporalities" that infuse our experiences of "everyday" life. Besides anthropological readings, the course will draw from historiography and philosophy to inform what we mean by event, time, and memory.

Course Notes: **No prior knowledge of anthropology is required. Graduates and undergraduates are welcome**

Anthropology of Media, Critical Surveys (110009)

Veronika Kusumaryati

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course is a critical survey of the principal studies in the anthropology of media. It will address the aesthetic and political debates across the history of this sub-discipline in anthropology whose central questions include: In what ways has anthropology engaged with media? What role do different types of media play in constituting the cultures and societies in which we live? How has the

emergence of digital media transformed the anthropology of media? How do we as anthropologists go about researching media? The course begins with a critical look at anthropology itself to interrogate broader issues that are particularly endemic to the field, such as media production, consumption, and circulation, and issues of representations and power. Students will examine various media forms, from photography, radio, television, film, to the internet, and learn different anthropological theories and methods for conducting media research. Discussions and assignments in the course are geared towards a critical understanding of media. By the end of the course, students are expected to gain critical tools to analyze mass media and their role in advancing specific political, economic, and cultural interests, and to devise an intervention to existing media representations and relations of power.

Remaking Life and Death (211109)

Anya Bernstein

2020 Spring (4 Credits) **Schedule:** W 0600 PM - 0800 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is a critical reading graduate seminar focusing on how defining the boundaries between life and death became a matter of profound political, cultural, and scientific debate. Guided by the concepts of bio- and necropolitics, we will explore the shifting relations between body and person, human and time, and technology and biology while attending to the changing political, biomedical and religious contexts. The course includes readings from a number of anthropological subfields, including medical anthropology, anthropology of science and technology, religion, politics, and the Anthropocene. We will discuss the range of issues, from the classic studies of mortuary rituals to political lives of dead bodies to technoscientific reconfigurations of the human and of life itself.

Ethnography as Practice and Genre (212865)

Ieva Jusionyte

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

What is ethnography, as a mode of witnessing, a method of research, a form of storytelling? How is it distinct from other ways of producing knowledge about human experience? How do ethnographers understand and engage with the ethics and politics of fieldwork and writing? This seminar raises these and other questions underlying the practice and genre of ethnography. It delves into the issues of participation, power, and perspective; the nature of evidence; the reliability of representation; the relation between description and interpretation and between narrative and theory; and the role of different viewpoints and of the author's voice. Through close reading and discussion of selected texts, the course examines ethnography's epistemology, ethics, politics, and poetics. Experience in ethnographic research is not required in order to enroll; however, students who have previously conducted fieldwork, even if limited in scope, and are preparing on doing it again in the future will benefit from this seminar the most.

Professionalization in Archaeology (120488)

Christina Warinner

2020 Spring (4 Credits) **Schedule:** MW 0600 PM - 0715 PM

Instructor Permissions: None **Enrollment Cap:** n/a

All good research begins with a strong foundation. This course is aimed at providing you with the foundational knowledge and basic tools you need to succeed as a professional archaeologist. Aided in part by guest speakers from within and beyond Harvard, this course emphasizes collaborative research, presentation, publication, grant proposal writing, conflict resolution, and other skills to help you complete your PhD and to be competitive on the job market afterwards, and to navigate the complex intellectual, social, and personal demands of academia.

Course Notes: **Anthropology 2070 is commonly taken before Anthropology 3070, but is not a prerequisite. Required of students in the Archaeology Program of Anthropology; open to other graduate students and advanced undergraduates with permission of instructor.**

Requirements: **Course open to Graduate Students Only**

Anthropology 3626

Research Design/Proposal Writing (116522)

Anya Bernstein

2019 Fall (4 Credits) **Schedule:** W 0600 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course is part seminar, part practicum. Its purpose is to help students conceptualize and design a research project, to craft effective research and grant proposals, and to prepare for ethnographic and archival work. The first and longest part of the course will focus on formulating a researchable project, in all its various elements; how to write a statement of problem, to frame arguments/theses, to situate work in the appropriate anthropological literature/s, to develop a methodological approach, and techniques, commensurate with the objectives and claims of the study, and to make a case for its significance and contribution to the discipline. To the extent time permits, the class will also pursue a secondary objective: imparting professional skills, primarily in the area of writing and publishing, but also in oral presentation, that will be useful to students throughout their professional lives.

Course Notes: **By permission only. The class is open to third year social anthropology students who have done most of the background reading for their PhD dissertation research and are actively working on a formal research proposal, of which they have a draft in hand.**

Requirements: **Course open to Graduate Students Only**

Anthropological Research Methods (108949)

Veronika Kusumaryati

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course offers a conceptual overview of research methods used by anthropologists. We will hear from faculty members their experience of doing fieldwork—from formulating a research question, choosing a site, entering the field to ethical issues they face in the field. Students will not only learn about but also practice these various methods and reflect on their projects in lights of the discussion about methods. To that end, students will complete several exercises and craft a method paper for their own project.

Course Notes: **This course is limited to graduate students in anthropology.**

Requirements: **Course open to Graduate Students Only**

Anthropology 3636

Pedagogy in Anthropology (214587)

Rowan Flad

Richard Meadow

2020 Spring (2 Credits) **Schedule:** M 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course has two aims: 1) to provide graduate students with the necessary training to be effective Teaching Fellows at Harvard, and 2) to give you the tools to develop your own approach to critical pedagogy in the field of Anthropology. Required for graduate students in the Spring of their second year. Classes will also be advertised to all Anthropology graduate students as optional Pedagogy Workshops for professional development. While discussions will be tailored to the unique challenges of teaching in Anthropology (across Archaeology and Social Anthropology), students will also be prepared to TF outside of Anthropology. Workshop-style classes are interspersed with formal office hours throughout the semester. Office hours are designed for one-on-one or small-group consultation with the Pedagogy Fellow in conjunction with course requirements.

Requirements: **Course open to Graduate Students Only**

Applied Computation

Subject: Applied Computation

Applied Computation 209A

Data Science 1: Introduction to Data Science (109898)

Pavlos Protopapas

Kevin A. Rader

Christopher Tanner

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part one of a two part series.

Course Notes: **Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.**

Recommended Prep: **Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).**

Requirements: **Not to be taken in addition to Computer Science 109, or Computer Science 109A, or Statistics 121, or Statistics 121A.**

Applied Computation 209B

Data Science 2: Advanced Topics in Data Science (203547)

Pavlos Protopapas

Mark Glickman

Christopher Tanner

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two part series.

Course Notes: **Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.**

Recommended Prep: **CS 109a, AC 209a, or Stat 121a required.**

Requirements: **Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking APCOMP 209B) AND (Cannot take APCOMP 209B, if already taken APCOMP 209 OR CS 109 OR CS 109B OR STAT 121 OR STAT 121B)**

Applied Computation 221

Critical Thinking in Data Science (207093)

James Waldo

Michael Smith

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 75

This course examines the wide-ranging impact data science has on the world and how to think critically about issues of fairness, privacy, ethics, and bias while building algorithms and predictive models that get deployed in the form of products, policy and scientific research. Topics will include algorithmic accountability and discriminatory algorithms, black box algorithms, data privacy and security, ethical frameworks; and experimental and product design. We will work through case studies in a variety of contexts including media, tech and sharing economy platforms; medicine and public health; data science for social good, and politics. We will look at the underlying machine learning algorithms, statistical models, code and data. Threads of history, philosophy, business models and strategy; and regulatory and policy issues will be woven throughout the course.

Course Notes: **This does not count as a technical or disciplinary course for SEAS PhD students, nor for SEAS masters-degree students outside of CSE and Data Science.**

Recommended Prep: **CS 109A, Introduction to Data Science or equivalent by instructor approval.**

Applied Computation 227

Computational Methods in the Physical Sciences (128101)

Sauro Succi

2019 Fall (4 Credits) **Schedule:** WF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

In this Course, we shall familiarize with the main computational methods which permit to simulate and analyze the behavior of a wide range of problems involving fluids, solids, soft matter, electromagnetic and quantum systems, as well as the dynamics of (some) biological and social systems. The course consists of three main parts,

Part I : Classical and Quantum Fields on Grids

Part II : Mesoscale Methods

Part III: Statistical Data Analysis and Learning

In Part I, we shall discuss the fundamentals of grid discretization and present concrete applications to a broad variety of problems from classical and quantum physics, such as Advection-Diffusion Reaction transport, Navier-Stokes fluid-dynamics, nonlinear classical and quantum wave propagation. Both regular and complex geometrical grids will be discussed through Finite Differences, Volumes and Elements, respectively.

In Part II we shall discuss mesoscale technique based on the two basic mesoscale descriptions: probability distribution functions, as governed by Boltzmann and Fokker-Planck kinetic equations, and stochastic particle dynamics (Langevin equations). The lattice Boltzmann method will be discussed in great detail, with applications to fluids and soft matter problems.

In addition, we shall provide the opportunity of hands-on on a multi scale codes for X (extreme) simulations at the interface between physics and molecular biology.

Finally, in Part III, we shall present data analysis & learning tools of particular relevance to complex systems with non-gaussian statistics, such as turbulence, fractional transport and extreme events in general. An introduction to Physics-Aware Machine Learning will also be presented.

Recommended Prep: **None, but basic notions of numerical analysis and scientific computing would help.**

Applied Computation 275

Computational Design of Materials (128103)

Boris Kozinsky

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will teach theoretical background and practical applications of modern computational methods used to understand and design properties of advanced functional materials. Topics will include classical potentials and quantum first-principles energy models, density functional theory methods, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties, and machine learning approaches. Examples will be based on rational design of industrially relevant materials for energy conversion and storage, electronic and magnetic devices, and nanotechnology.

Course Notes: **Applied Computation 275 is also offered as Applied Physics 275. Students may not take both for credit.**

Recommended Prep: **Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.**

Applied Computation 295

Topics in Applied Computation: Advanced Practical Data Science (215121)

Pavlos Protopapas

2020 Spring (4 Credits) **Schedule:** TR 0430 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In this course we explore advanced practical data science practices. The course will be divided into three major topics:
1) How to scale a model from a prototype (often in jupyter notebooks) to the cloud. In this module, we cover virtual environments, containers, and virtual machines before learning about microservices and Kupernetes. Along the way, students will be exposed to Dask.
2) How to use existing models for transfer learning. Transfer learning is a machine learning method where a model developed for a task is reused as the starting point for a model on a second task. It is a popular approach in deep learning where pre-trained models are used as the starting point on computer vision and natural language processing tasks. This can be very important, given the vast compute and time resources required to develop neural network models on these problems and given the huge jumps in skill that these models can provide to related problems. In this part of the course we will examine various pre-existing models and techniques in transfer learning.
3) In the third part we will be introducing a number of intuitive visualization tools for investigating properties and diagnosing issues of models. We will be demonstrating a number of visualization tools ranging from the well established (like saliency maps) to recent ones that have appeared in https://distill.pub.

Data Science Capstone Research Project Course (156202)

Pavlos Protopapas

Christopher Tanner

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

The data science master's capstone project is intended to integrate and apply the skills and ideas data science master's students acquire in their core courses and electives. By requiring students to complete a substantial and challenging collaborative project, the capstone course will prepare students for the professional world and ensure that they are trained to conduct research. There will be no homework or lectures. Students will be dealing with real-world problems, messy data sets, and the chance to work on an end-to-end solution to a problem using computational methods.

Interdisciplinary Seminar in Computational Science & Engineering (109339)

Daniel Weinstock

2019 Fall (4 Credits) **Schedule:** WF 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course, centered on the Institute for Applied Computation Science (IACS) seminar series, will provide broad exposure to cutting-edge topics, applications, and unifying concepts in Computational Science & Engineering. Students will read, present and discuss journal articles related to IACS talks, attend the seminars and meet with visiting speakers. Possible topics to be covered include scientific visualization, computational approaches to disease, mathematical neuroscience, computational archeology, and computational finance.

Computing for Science and Engineering (213407)

Efthimios Kaxiras

2020 Spring (2 Credits) **Schedule:** F 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is a systematic introduction to a computing environment suited for applications in science and engineering. It is designed as a tutorial, which will last through an entire semester, and will involve approximately half of the amount of work of a regular 4-credit course. It consists of three Modules: In the first Module ("Basics"), the basics of using computing to work with variables and functions are introduced, including arrays, basic operations (loops) and file handling and plotting. In the second Module ("Elementary"), elementary applications are presented, including integration using random numbers, function root finding, and function propagation through series (Taylor) expansions. In the third Module ("Advanced") more advanced applications are explored, including numerical differentiation and integration, solution of differential equations, and simple visualization tools.

Course Notes: **The course will also be offered in the Spring semester. First-year students are strongly encouraged to take this course in the Spring semester, unless there are compelling reasons to take it in Fall in which case they need to obtain the approval of the course head (Prof. Kaxiras for Fall 2019).**

Recommended Prep: **AP Calculus BC in high school and/or co-enrollment in Math 1b or higher; students who do not meet these requirements in their first-year are welcome to take the course as sophomores. No programming background is required. CS50 is independent of this course; students who take this course could take CS50 at the same time, before or after this course – there is no preference.**

Applied Mathematics 22A

Solving and Optimizing (211334)

Steven Gortler

2019 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course covers a combination of linear algebra and multivariate calculus with an eye towards solving systems of equations and optimization problems. Students will learn how to prove some key results, and will also implement these ideas with code.Linear algebra: matrices, vector spaces, bases and dimension, inner products, least squares problems, eigenvalues, eigenvectors, singular values, singular vectors. Multivariate calculus: partial differentiation, gradient and Hessian, critical points, Lagrange Multipliers.

Course Notes: **Not to be taken in addition to AM21b or Math21b. Some overlap with AM21a and Math21a. Can be used in conjunction with Stat110 to fulfill the mathematics requirements for computer science.**

Recommended Prep: **Mathematics 1b or an equivalent background in mathematics.**

Introduction to Applied Mathematics (122564)

Doeke Hekstra

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 35

This course provides an introduction to the problems and issues of applied mathematics, focusing on areas where mathematical ideas have had a major impact on diverse fields of human inquiry. The course is organized around two-week topics drawn from a variety of fields, and involves reading classic mathematical papers in each topic. The course also provides an introduction to mathematical modeling and programming.

Course Notes: **Course limited to 35 students. Sections Friday, 3:00pm-4:15pm.**

Recommended Prep: **Mathematics 1b is a prerequisite, although it can be taken concurrently. Some limited concepts from Mathematics 21a / Applied Mathematics 21a will be used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, and starts from the level of a complete beginner.**

Applied Mathematics 91R

Supervised Reading and Research (121692)

Margo Levine

Sarah Iams

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Supervised reading or research on topics not covered by regular courses. For AM concentrators, work may be supervised by faculty in other departments. For non-concentrators, work must be supervised by an AM faculty member. Students must receive the approval of an (Associate) Director of Undergraduate Studies and obtain their signature before submitting AM91r forms.

Course Notes: **Students cannot take AM 91r and 99r simultaneously with the same supervisors. Normally may not be taken more than twice. May be counted once for concentration credit in Applied Mathematics (as a breadth course). May be taken in either term. When project work from APMTH 91R is used to satisfy the honors modeling requirement, a paper describing the project must be submitted to the concentration for evaluation by the end of the final exam period in the semester in which the 91R is undertaken. For further information, write am-advising@seas.harvard.edu.**

Statistical Inference for Scientists and Engineers (132127)

Robert D. Howe

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 55

Introductory statistical methods for students in the applied sciences and engineering. Random variables and probability distributions; the concept of random sampling, including random samples, statistics, and sampling distributions; the Central Limit Theorem and its role in statistical inference; parameter estimation, including point estimation and maximum likelihood methods; confidence intervals; hypothesis testing; simple linear regression; and multiple linear regression. Introduction to more advanced techniques as time permits.

Complex Analysis and Series Expansions for Applications to Science, Engineering and Finance (122094)

Efthimios Kaxiras

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduces fundamental concepts for solving real-world problems and emphasizes their applications through motivational examples drawn from science, engineering and finance. Topics: special distribution functions; functions of complex variables, Taylor and Laurent series expansions and their convergence; contour integration; wave (Fourier) and wavelet expansions and transforms, and their uses in signal analysis and in solving partial differential equations, focusing on the evolution equations (the diffusion equation and the wave equation) and their applications.

Recommended Prep: **Applied Mathematics 22a and 22b or Mathematics 21a and 21b.**

Graph Theory and Combinatorics (118482)

Leslie Valiant

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Topics in combinatorial mathematics that find frequent application in computer science, engineering, and general applied mathematics. Course focuses on graph theory on one hand, and enumeration on the other. Specific topics include graph matching and graph coloring, generating functions and recurrence relations, combinatorial algorithms, and discrete probability. Emphasis on problem solving and proofs.

Nonlinear Dynamical Systems (121989)

Sarah Iams

2019 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

An introduction to nonlinear dynamical phenomena, focused on identifying the long term behavior of systems described by ordinary differential equations. The emphasis is on stability and parameter dependence (bifurcations). Other topics include: chaos; routes to chaos and universality; maps; strange

attractors; fractals. Techniques for analyzing nonlinear systems are introduced with applications to physical, chemical, and biological systems such as forced oscillators, chaotic reactions, and population dynamics.

Course Notes: **Course enrollment limited to 30 students. Formerly Applied Mathematics 147.**

Recommended Prep: **Mathematics 21a and 21b, or Applied Mathematics 21a and 21b.**

Applied Mathematics 111

Introduction to Scientific Computing (120198)

Cengiz Pehlevan

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Many complex physical problems defy simple analytical solutions or even accurate analytical approximations. Scientific computing can address certain of these problems successfully, providing unique insight. This course introduces some of the widely used techniques in scientific computing through examples chosen from physics, chemistry, and biology. The purpose of the course is to introduce methods that are useful in applications and research and to give the students hands-on experience with these methods.

Course Notes: **Applied Mathematics 111 is also offered as Engineering Sciences 111. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 111.**

Recommended Prep: **Applied Mathematics 21a and 21b, or Mathematics 21a and 21b, or permission of instructor.**

Mathematical Modeling (118021)

Ariel Amir

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most

important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes: **Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.**

Class Notes: **Enrollment limited to 40 students for APMTH/ENG-SCI 115.**

Requirements: **Prerequisite: Must take APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115.**

Applied Mathematics 115

Mathematical Modeling (118021)

L Mahadevan

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes: **Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.**

Requirements: **Prerequisite: Must take APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115.**

Applied Mathematics 120

Applied Linear Algebra and Big Data (113876)

Eli Tziperman

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Topics in linear algebra which arise frequently in applications, especially in the analysis of large data sets: linear equations, eigenvalue problems, linear differential equations, principal component analysis, singular value decomposition, data mining methods including frequent pattern analysis, clustering, outlier detection, classification, and machine learning, including neural networks and random forests. Examples will be given from physical sciences, biology, climate, commerce, internet, image processing and more.

Course Notes: **Enrollment in this course is limited to 205 students and will be determined by a lottery if interest exceeds the limit.**

Recommended Prep: **Applied Mathematics 21a,b or equivalent, Computer Science 50 or programming experience.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
Quantitative Reasoning with Data	Yes
FAS: Final Assessment Category	Three-hour Exam

Applied Mathematics 121

Introduction to Optimization: Models and Methods (123662)

Yiling Chen

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to basic mathematical ideas and computational methods for solving deterministic and stochastic optimization problems. Topics covered: linear programming, integer programming, branch-and-bound, branch-and-cut, Markov chains, Markov decision processes. Emphasis on modeling. Examples from business, society, engineering, sports, e-commerce. Exercises in AMPL, complemented by Maple or Matlab.

Course Notes: **Applied Mathematics 121 is also offered as Engineering Sciences 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.**

Recommended Prep: **Applied Mathematics 21b or Mathematics 21b (linear algebra) and some knowledge of probability and statistics at the level of Statistics 110 or Applied Mathematics 101 or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)

Physical Mathematics I (112798)

Michael P. Brenner

2019 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to methods for developing accurate approximate solutions for problems in the sciences that cannot be solved exactly, and integration with numerical methods and solutions. Topics include: dimensional analysis, algebraic equations, complex analysis, perturbation theory, matched asymptotic expansions, approximate solution of integrals.

Recommended Prep: **Applied Mathematics 104 and 105, or equivalent; basic programming knowledge at the Computer Science 50 level.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 205

Advanced Scientific Computing: Numerical Methods (110684)

Christopher Rycroft

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An examination of the mathematical foundations of a range of well-established numerical algorithms, exploring their use through practical examples drawn from a range of scientific and engineering disciplines. Emphasizes theory and numerical analysis to elucidate the concepts that underpin each algorithm. There will be a significant programming component. Students will be expected to implement a range of numerical methods through individual and group-based project work to get hands-on experience with modern scientific computing.

Recommended Prep: **Familiarity with linear algebra and calculus; basic programming knowledge at the Computer Science 50 level.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 207

Advanced Scientific Computing: Stochastic Methods for Data Analysis, Inference and Optimization (127561)

Weiwei Pan

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Develops skills for computational research with focus on stochastic approaches, emphasizing implementation and examples. Stochastic methods make it feasible to tackle very diverse problems when the solution space is too large to explore systematically, or when microscopic rules are known, but not the macroscopic behavior of a complex system. Methods will be illustrated with examples from a wide variety of fields, like biology, finance, and physics.

Recommended Prep: **CS 50 or working proficiency in a computer programming language (python strongly recommended), as well as STAT 110 or a course in calculus based statistics.**

Additional Course Attributes:

Quantitative Reasoning with Data	Yes

Applied Mathematics 216

Inverse Problems in Science and Engineering (135919)

Michael P. Brenner

2020 Spring (4 Credits) **Schedule:** F 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Many problems in science and engineering are inverse problems. Any experiment that requires an explanation can be couched thus - given the data, what is the theory/model that provides it - this is an inverse problem. In engineering, a given function (in a product/software ….) requires a design - again an inverse problem. This course will introduce a wide array of features of inverse problems from science and engineering - from oil prospecting and seismology to cognitive science, from particle physics to engineering design. We will then introduce deterministic and probabilistic algorithms for solving these problems. Much of the class will be spent studying how the recent revolution in deep neural networks can (and cannot) be used to solve such inverse problems. The class will have a substantial computational component -- part of every class session will contain instruction and computer implementation of the algorithms in question. Students will carry out final projects in their own area of interest. Programming

will be taught and carried out in Python and Tensorflow.

Recommended Prep: **Linear algebra, Differential equations, Basic probability, some MATLAB experience.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

FAS: Course Level	Primarily for Graduate Students

Applied Mathematics 226

Neural Computation (212912)

Cengiz Pehlevan

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces advanced mathematical methods and models used in theoretical neuroscience. We will explore computations and functions performed by the brain, and how they are implemented by neurons and their networks. We will cover selected topics from spiking neuron models; population codes; normative theories of sensory representations; learning with synaptic plasticity; computing with dynamics in recurrent neural networks; attractor network models of memory and spatial maps; neural models of probabilistic inference in the brain and drift-diffusion models of decision making. Concrete examples of applications of these ideas to the brain will be discussed. Topics at the research frontier will be emphasized.

Recommended Prep: **APMTH 21A and APMTH 21B or equivalent.**

Additional Course Attributes:

FAS: Course Level	Primarily for Graduate Students

Applied Mathematics 227

Computational Methods in the Physical Sciences (207546)

Sauro Succi

2019 Fall (4 Credits) **Schedule:** WF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

In this Course, we shall familiarize with the main computational methods which permit to simulate and analyze the behavior of a wide range of problems involving fluids, solids, soft matter, electromagnetic and quantum systems, as well as the dynamics of (some) biological and social systems. The course consists of three main parts,

Part I : Classical and Quantum Fields on Grids

Part II : Mesoscale Methods

Part III: Statistical Data Analysis and Learning

In Part I, we shall discuss the fundamentals of grid discretization and present concrete applications to a broad variety of problems from classical and quantum physics, such as Advection-Diffusion Reaction transport, Navier-Stokes fluid-dynamics, nonlinear classical and quantum wave propagation. Both regular and complex geometrical grids will be discussed through Finite Differences, Volumes and Elements, respectively.

In Part II we shall discuss mesoscale technique based on the two basic mesoscale descriptions: probability distribution functions, as governed by Boltzmann and Fokker-Planck kinetic equations, and stochastic particle dynamics (Langevin equations). The lattice Boltzmann method will be discussed in great detail, with applications to fluids and soft matter problems.

In addition, we shall provide the opportunity of hands-on on a multi scale codes for X (extreme) simulations at the interface between physics and molecular biology.

Finally, in Part III, we shall present data analysis & learning tools of particular relevance to complex systems with non-gaussian statistics, such as turbulence, fractional transport and extreme events in general. An introduction to Physics-Aware Machine Learning will also be presented.

Recommended Prep: **None, but basic notions of numerical analysis and scientific computing would help.**

Applied Mathematics 232

Learning, Estimation, and Control of Dynamical Systems (161259)

Na Li

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This graduate level course studies dynamic systems in time domain with inputs and outputs. Students will learn how to design estimator and controller for a system to ensure desirable properties (e.g., stability, performance, robustness) of the dynamical system. In particular, the course will focus on systems that can be modeled by linear ordinary differential equations (ODEs) and that satisfy time-invariance conditions. The course will introduces the fundamental mathematics of linear spaces, linear operator theory, and then proceeds with the analysis of the response of linear time-variant systems. Advanced topics such as robust control, model predictive control, linear quadratic games and distributed control will be presented based on allowable time and interest from the class. The material learned in this course will form a valuable foundation for further work in systems, control, estimation, identification, detection, signal processing, and communications.

Course Notes: **Applied Mathematics 232 is also offered as Engineering Sciences 202. Students may not take both for credit.**

Recommended Prep: **Linear algebra, differential equations, and signals and systems (AM 120, ES 156, or equivalent). Undergraduates need permission.**

Applied Physics

Subject: Applied Physics

Applied Physics 50A

Physics as a Foundation for Science and Engineering, Part I (108880)

Kelly Miller

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 60

AP 50a is the first half of a one-year, team-based and project-based introduction to physics. This course teaches scientific reasoning and problem-solving skills. You will work in teams on three, month-long projects, each culminating in a project fair. The twice-weekly class periods are all inclusive: there are no separate labs or discussion sections, but you must set attend a 75-minute section on Thursday or Friday to work on your projects with your team in the teaching labs (w. AP50a topics include: kinematics, Newton's Laws, conservation laws, angular dynamics, and simple harmonic motion.Course Note: AP50a is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers such as Physics 15a, but focuses on the application of physics to real-world problems.

Course Notes: **AP50a is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems. Lecture meets 9:00am-11:45am. Students must attend one 75-minute section on Thursday afternoon or Friday. Section times will be as follows: Thursday 3-4:15pm, Friday 9-10:15am, 12-1:15pm, 3-4:15pm.**

Recommended Prep: **A solid knowledge of multivariable calculus at the level of Applied Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.**

Applied Physics 50B

Physics as a Foundation for Science and Engineering, Part II (108882)

Eric Mazur

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 60

AP 50b is the second half of a one-year, team-based and project-based introduction to physics. This course teaches students to develop scientific reasoning and problem-solving skills. AP50b topics include: electrostatics; electric currents; magnetostatics; electromagnetic induction; Maxwell's Equations;

electromagnetic radiation; geometric optics; and, wave optics. Multivariable and vector calculus is introduced and used extensively in the course. Students work in teams on three, month-long projects, each culminating in a project fair. The twice-weekly class periods are all inclusive: there are no separate labs or discussion sections.

Course Notes: **AP50b is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems. Students must attend one 2-hour section on Friday. Section times will be assigned upon enrollment (9-11am, 11-1pm, 1-3pm, 3-5pm).**

Recommended Prep: **A solid knowledge of multivariable calculus at the level of Applied Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.**

Applied Physics 171

Introduction to Quantum Materials and Devices (215415)

Robert Westervelt

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an introduction to quantum materials and devices, including two-dimensional electron layers, single and double quantum dots, 2D materials such as graphene, and Josephson junctions. Their behavior is explained using semiclassical and quantum transport, electron states in reduced dimensions, the Coulomb blockade, and superconductivity. Quantum devices offer new approaches to electronics and photonics.

Recommended Prep: **ES 170 or Physics 143A, and ES 154 or Physics 153. AP 195 / Physics 195 provides a good introduction, but is not required.**

Additional Course Attributes:

Attribute	Value(s)

Applied Physics 195

Introduction to Solid State Physics (131331)

Julia Mundy

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); plasmonic excitations and screening; optical transitions; solid-state lasers; magnetism, spin waves, magnetic resonance, and spin-based devices; dielectrics and ferroelectrics; superconductivity, Josephson junctions, and superconducting circuits; electronic transport in low-dimensional systems, quantum Hall effect, and resonant tunneling devices.

Course Notes: **APPHY 195 is also offered as PHYSICS 195. Students may not take both for credit.**

Recommended Prep: **Elementary quantum mechanics.**

Applied Physics 202

Mechanics in Earth and Environmental Science (213560)

James Rice

2019 Fall (4 Credits) **Schedule:** WF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to the mechanics of fluids and solids, organized around earth and environmental phenomena. Conservation laws, stress, deformation and flow. Inviscid fluids and ocean gravity waves; Coriolis dominated large scale flows. Viscosity and groundwater seepage; convective cells; boundary layers. Turbulent stream flows; flood surges; sediment transport. Elasticity and seismic waves. Pore fluid interactions with deformation and failure of earth materials, as in poro-mechanics of consolidation, cracking, faulting, and landslides. Ice sheets and glacial flow mechanics.

Course Notes: **APPHY 202 is also offered as E-PSCI 202. Students may not take both for credit.**

Recommended Prep: **Calculus-based introductory physics.**

Applied Physics 216

Quantum and Classical Electromagnetic Interaction with Matter (141253)

Donhee Ham

2019 Fall (4 Credits) **Schedule:** WF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The first half of the course will cover the interaction of quantized atoms with electromagnetic fields, introducing a number of basic concepts such as coherent Rabi transitions vs. rate-equation dynamics, stimulated & spontaneous transitions, and energy & phase relaxations. These will be then used to study a range of applications of atom-field interactions, such as nuclear magnetic resonance, molecular beam and paramagnetic masers, passive and active atomic clocks, dynamic nuclear polarization, pulse sequence techniques to coherently manipulate atomic quantum states, and laser oscillators with applications. We will also touch upon the interaction of quantized atoms with quantized fields, discussing the atom + photon (Jaynes-Cummings) Hamiltonian, dressed states, and cavity quantum electrodynamics. The second half will cover the classical interaction of electromagnetic fields with matter, with special attentions to collective electrodynamics in particular, magnetohydrodynamics and plasma physics with applications in astrophysics, space physics, and Bloch electrons in crystalline solids.

Recommended Prep: **Undergraduate-level electromagnetism and quantum mechanics are recommended.**

Applied Physics 218

Electrical, Optical, and Magnetic Properties of Materials (121594)

Xin Li

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course covers the electrical, optical and magnetic properties of technologically important materials systems. It provides a quantitative description of structure-property relations by introducing tensor properties, crystal symmetry, Neumann's principle and Curie principle. A variety of properties of materials are then introduced, including pyroelectricity, dielectricity, piezoelectricity, ferroelectricity; pyromagnetism, magnetoelectricity, piezomagnetism, ferromagnetism; defect chemistry, transport properties and applications in semiconducting, dielectric and energy storage materials; crystal optics including birefringence, Pockels effect, Kerr effect, photoelastic effect and optical activity. Ferroelectric, ferromagnetic and topological phase transitions are also covered as special topics.

Recommended Prep: **Introductory solid-state physics or equivalent course.**

Computational Design of Materials (110087)

Boris Kozinsky

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course covers theoretical background and practical applications of modern computational atomistic methods used to understand and design properties of advanced functional materials. Topics include interatomic potentials and quantum first-principles energy models, wave function and density functional theory methods, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties, and machine learning approaches. Methods are applied to study microscopic and quantum-level effects in materials for energy conversion and storage, molecules, soft materials, electronic devices, and low-dimensional materials.

Course Notes: **Applied Physics 275 is also offered as Applied Computation 275. Students may not take both for credit.**

Recommended Prep: **Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 278

Computational Physics of Solids and Fields (208932)

Prineha Narang

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a completely revamped advanced computational physics course. This course will be split into two

segments: first half will be computational physics of solids and computational quantum chemistry, and the second half will focus on computational physics of fields including light-matter interactions and transport. Our mission is simple: how do we compute properties of quantum materials and their response to light, temperature and external perturbations? We will note that properties of complex systems frequently involve going beyond conventional DFT approaches. In these cases, it is important to go from formalism and approximations to exactly how these are implemented and to recognize where beyond leading-order terms become essential to capture the physics. Whether you are an experimentalist working on low dimensional systems and topological matter or a theorist looking to expand your toolkit, this class is for you!

Topics include GW and Bethe-Salpeter Equation methods, DMFT, linear and nonlinear optical property predictions in low dimensional materials, properties of quantum defects in solids, computing scattering and response of topological materials like Dirac and Weyl semimetals among others. Please see here for week-by-week plan.

Recommended Prep: **Graduate quantum mechanics and introductory theory of solids class.**

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 282

Solids: Structure and Defects (142998)

Frans Spaepen

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Bonding, crystallography, diffraction, phase diagrams, microstructure, point defects, dislocations, and grain boundaries.

Course Notes: **Intended for students in applied mechanics, materials science, condensed matter physics, chemistry, and earth sciences.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 284

Statistical Mechanics (131392)

David R. Nelson

2019 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Basic principles of statistical physics and thermodynamics, with applications including: the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical phenomena, as illustrated by the liquid-gas transition and simple magnetic models. Time permitting, introduction to

Langevin dynamics and polymer physics.

Course Notes: **Also offered as Physics 262. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program.**

Recommended Prep: **Physics 143a and Physics 181 or Engineering Sciences 181.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 286

Inference, Information Theory, Learning and Statistical Mechanics (212685)

Sharad Ramanathan

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will build introduce modern applications of Statistical Mechanics from information theory, to coding and compression, finding probabilistic answers to poorly posed inverse problems to unsupervised learning. Further we will study supervised learning and machine learning. All of these topics will be taught using examples in the primary literature with an emphasis on the applications of the tools and framework we develop in the course. Applications will be taught through problems in genomics, neuroscience, mechanics, geophysics and engineering.

Recommended Prep: **Comfort with Linear Algebra, Calculus is necessary, undergraduate Statistical Mechanics would be useful but not necessary.**

Applied Physics 291

Electron Microscopy Laboratory (116509)

David Bell

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Lectures and laboratory instruction on transmission electron microscopy (TEM) and Cs corrected, aberration-correction microscopy and microanalysis. Lab classes include; diffraction, dark field imaging, X-ray spectroscopy, electron energy-loss spectroscopy, atomic imaging, materials sample preparation, polymers, and biological samples.

Course Notes: **Primarily for graduate students planning to use TEM for their research.**

Additional Course Attributes:

Attribute	Value(s)

FAS: Course Level	Primarily for Graduate Students

Applied Physics 295A

Introduction to Quantum Theory of Solids (143855)

Subir Sachdev

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Electrical, optical, thermal, magnetic, and mechanical properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Metals, semiconductors, and insulators will be covered, with possible special topics such as superconductivity.

Course Notes: **Applied Physics 295a is also offered as Physics 295a. Students may not take both for credit.**

Recommended Prep: **Applied Physics 195 or equivalent, and a graduate level quantum mechanics course similar to Physics 251a. (Physics 251b would be helpful and may be taken concurrently.)**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 295B

Quantum Theory of Solids (146948)

Eugene Demler

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course presents theoretical description of solids focusing on the effects of interactions between electrons. Topics include Fermi liquid theory, dielectric response and RPA approximation, ferro and antiferromagnetism, RKKY interactions and Kondo effect, electron-phonon interactions and superconductivity.

Course Notes: **Applied Physics 295b is also offered as Physics 295b. Students may not take both for credit.**

Recommended Prep: **Physics 251a,b, an introductory course in solid state physics, or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Applied Physics 296

Mesoscale and Low Dimensional Devices (204955)

Philip Kim

2020 Spring (4 Credits) **Schedule:** WF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits.

Recommended Prep: **Undergrad level condensed matter physics (AP/P195).**

Art, Film, and Visual Studies

Subject: Art, Film, and Visual Studies

Art, Film, and Visual Studies 12 Section: 1

Drawing 1: Drawing as a Visual Language (203312)

Katarina Burin

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

A studio course to build the skills of drawing incrementally and expand students' visual vocabulary. Drawings will be made from life, photographs and invention. Emphasis will be placed on enhancing our observational sensibilities through life drawing and the figure, focusing on all aspects of technical development, particularly the importance of line. The aim of this course is to expand drawing skills with intention and purpose.

Course Notes: **This class is for beginners or anyone furthering their skill level.**

Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration

Silkscreen (121758)

Annette Lemieux

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

For the student who is interested in the manipulation of found and original imagery. Students will create monotypes on paper and other surfaces utilizing the silkscreen process. Through slide presentations, the class will be introduced to the work of artists such as Rauschenberg and Warhol, as well as others who use the silkscreen process.

Course Notes: **No previous studio experience necessary.**

Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Additional Course Attributes:

Attribute	Value(s)

Art, Film, and Visual Studies 22

One Thing Leads to Another: Introduction to Oil Painting (205073)

Judith Belzer

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This studio class will introduce students to the use of oil paints as a tool for image making, with an emphasis on process over product. Assignments will morph and evolve, one building on another, while drawing on a variety of source materials. Expanded visual acuity and an openness to experimentation will be developed as students explore the nature of oil paint and how it can be used to transform experience into art.

Course Notes: **This course will have a break for lunch.**

Interested students must attend the first meeting of the class to speak with teaching staff about class enrollment procedure.

Approaching Narrative: Introduction to Filmmaking (127469)

Anocha Suwichakornpong

2019 Fall (4 Credits) **Schedule:** WF 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

In this production course, students will learn the basic principles of narrative filmmaking. Different tools and filmmaking techniques, including lighting and cinematography, sound recording, and editing will be introduced to students by lecturer and invited film professionals. Classes will also consist of screenings, discussion, and critiques of student work.

By the end of the course, students will be equipped with the necessary tools to produce a short film with sync sound.

Course Notes: **No prior filmmaking experience necessary. Interested students must attend first meeting of class during shopping week to speak with**

teaching staff about course enrollment procedure.

On Objects: A Studio Course in Sculpture and Performance (205410)

Karthik Pandian

2019 Fall (4 Credits) **Schedule:** M 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This introductory course will investigate the contemporary status of the object through studio projects in sculpture, video and performance. Students will make things, make moving images that represent these things and make language and movement around these things in an exploration of medium, materiality and artistic persona. Work by artists such as Hollis Frampton, David Hammons, Hito Steyerl, Richard Tuttle, Lee Lozano and Mark Leckey will help introduce and guide our projects.

Course Notes: **Interested students must attend first meeting of class during shopping week to talk with teaching staff about enrollment procedure.**

First year students and students who have not taken any AFVS courses are encouraged to apply.

Frame, Spectacle, Spectator: Video as Medium (213583)

Carissa Rodriguez

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

In this intro-level production course, students will be introduced to video as a time-based art form viewed within the framework of the art institution. This course will explore different modes of spectatorship (from theater, to installation, to mobile screens) and examine the spatiotemporal features of each. We will study a range of methods in which artists work critically with moving images in relation to mass media. Through screenings and readings by contemporary artists, filmmakers and theorists, students will develop a moving image vocabulary as well as narrative techniques to be applied to individual video projects.

Course Notes: **Experience with editing tools helpful but not required.**

Interested students must attend first meeting of course during shopping week to learn admission procedure.

Class Notes: **This course meets from 1:30 to 5:45.**

SPECIAL FIRST MEETING LOCATION: The first meeting of this course on Monday, Sept. 9 will be in Carpenter Cener B04 at 1:30.

The Art of Film (115688)

Katherine Rennebohm

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introductory course that focuses on the language of film and moving image media. It will provide the students with the analytical tools to respond both critically and creatively to moving image media, with an emphasis on close formal analysis. In the interest of exploring the vast possibilities of the moving image, we will watch a broad selection of narrative and non-narrative works from around the globe alongside canonical feature films.

Course Notes: **This course is required for all students concentrating in or pursuing a secondary field in film and visual studies.**
This course has mandatory weekly film screenings on Tuesday evenings from 7:15 pm to 10pm.

Class Notes: **The first meeting of this class on Tuesday, January 28 will be held in the Carpenter Center Lecture Hall which is on the lower level of the Carpenter Center.**

Exploring Culture Through Film (117631)

Veronika Kusumaryati

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will provide an introduction to the history and theory of documentary and ethnographic film with a focus on the politics of representation and the challenges made to the canonical mainstream. We will discuss the changing paradigms of "ethnographic" film, situating these debates within their historical film contexts and explore how new digital media technologies effect the politics of representation. A variety of cinematic styles from essay films and new media to observational cinema will be screened and discussed.

The Devil, Probably x 8 + 1: A Studio-based Seminar (108844)

Stephen Prina

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0415 PM
T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Part 1 is a weekly studio session during which participants will create 3 projects in any medium or discipline during the term. Part 2 is a screening of the film "The Devil, Probably," 1977 by Robert Bresson for 10 consecutive weeks, interrupted by the 3 project class presentations. Different readings will accompany each screening. The final screening--+1--is "The Third Generation," 1979 by Rainer Werner Fassbinder.

Course Notes: **The studio projects do not need to pertain to the Bresson/Fassbinder screenings.**
Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Class Notes: **This course meets from 1pm to 4pm on Thursdays, though it may end earlier on some Thursdays.**

Drawing 2: Model Witness (203313)

Katarina Burin

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This studio art course foregrounds the medium of drawing, investigating its many potentials, both on and off the page. Drawing is positioned as model and as witness, and as something which carries ideas forward. It is experimental, light and flexible, while maintaining the ability to record direct process or be deeply specific.

Students will explore the potential of depicting both literal and metaphorical space, including the space of personal or collected memory, of future possibility and the imprint of time and process. Working in two-and three-dimensions we will strengthen our conceptual, technical and artistic visual skills.

Course Notes: **This course is open to anyone who has some experience with creative visual work.**

Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Curating Contemporary Art: Exhibitions, Artists, Institutions, and Audiences (213509)

Daniel Byers

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course introduces the practice and study of curating contemporary art, examining exhibition typologies such as biennials, solo exhibitions, thematic and historical surveys, publications, and public

programs; working with living artists; the institutional context of the museum, alternative space, commercial gallery, and performance venue; and questions around audiences and communities. Through exhibition viewings, meetings with curators and artists, and readings and discussion, we will critically engage the role of curator and art institution within a broad cultural and contemporary art context.

Course Notes: **Interested students must attend the first meeting of the course to speak with teaching staff about enrollment procedure.**

Class Notes: **The class will include frequent trips to museums and galleries in the area.**

Recommended Prep: **History of Art and Architecture 17K: Introduction to Contemporary Art or similar experience.**

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This class uses photography to explore our expectations of the medium and to expand its possible applications. Students develop an independent work practice that is an extension of their own interests.

Students will develop ideas for a project proposal at the outset of the semester and build a group of related photographs throughout the semester. The class will be organized around class discussions, critiques and individual meetings with the instructor. Slide presentations and readings will be given to deepen your understanding of the history of photography and contemporary art practices.

Course Notes: **Interested students must attend first meeting of class to speak with teaching staff about enrollment procedures.**

Class Notes: **This course meets from 1:30-4:15.**

Recommended Prep: **At least one previous photography course in AFVS or the permission of the instructor.**

Additional Course Attributes:

Difficult Pictures: Studio Course (207855)

Elle Perez

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This studio class engages with photographs that have been deemed difficult, wrong, shocking, inappropriate, and/or subversive. Discussion is foundational to this course, with the goal of having open, generous, and generative conversations. Does photography have unique moral obligations that are distinct from other mediums? Furthermore, what are the moral and ethical responsibilities of photographers today? Students will devote themselves to the development of a semester long individual project that culminates in a final portfolio of photographs. In addition, students will engage with multiple case studies of photographs and photographers whose work has drawn controversy drawing from global examples.

Course Notes: **Interested students must attend the first meeting of the course during shopping week.**

Class Notes: **This course meets from 1:30 to 4:15.**

Recommended Prep: **Prerequisite: Introduction to Still Photography or the permission of the instructor.**

Photography and Ecology (213475)

Makeda Best

2019 Fall (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Integrating the study of art history, research-based artistic production, theory, and environmental studies, the aim of this course is to critically and actively explore the contemporary interplay between photographic vision and environmental history; the shifting composition, structure, and function of landscapes; cultural constructions of nature and environmental perceptions; environmental justice, politics, and policy; and, the role of photography in responding to how humans create and impact landscape patterns and process.

Course Notes: **Interested students must attend the first meeting of the course to learn about enrollment procedures.**

Art, Film, and Visual Studies 150A

Film Directing: From Script to Screen (114116)

Anocha Suwichakornpong

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

The course guides the students through different stages of filmmaking, from script to finished film. Students develop short film scripts which they will make at the end of the course. Emphasis is placed on directing actors, single-camera blocking, and the role of camera work in its narration of the story. Film professionals will occasionally be invited to conduct some workshops with students. In-class screenings and critiques of student assignments form an important component of the course.

Course Notes: **Interview with instructor required for admission. Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.**

Class Notes: **This course meets from 1:30 to 4:15.**

Recommended Prep: **AFVS 50 or two other AFVS courses in video or film production.**

Additional Course Attributes:

Art, Film, and Visual Studies 150B

True Fiction: Intermediate Film Production (113516)

Anocha Suwichakornpong

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This production course is the more advanced level of 150A. Students must have at least the first draft of their short screenplays on the first day of class. Content includes scene analysis and script revision, directing professional and non-professional actors, cinematography, blocking and mise-en-scène, sound design, editing and post-production. Students will be given assignments related to their written screenplays throughout the course, culminating in the final project: the production of a narrative short film. Film professionals will occasionally be invited to conduct workshops or hold master classes with students.

Course Notes: **Students seeking to enroll should come to the first class meeting with a developed short narrative screenplay.**

Recommended Prep: **VES 150A or two courses in video production, one of which must be AFVS 60x or AFVS 59.**

Additional Course Attributes:

Attribute	Value(s)

Nonfiction Video Projects (113447)

Ross McElwee

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Working from a proposal approved in advance by the instructor, each student plans, shoots, and edits a documentary video of his or her design. Shooting should take place over the summer and editing during the fall term. Readings and screenings augment individual work.

Course Notes: **Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.**

In exceptional cases, a student will be permitted to take the course without having filmed over the summer, but the student must have a specific proposal for a documentary that can be both shot and edited during the term. An interview with the instructor is required for admission.

Recommended Prep: **At least one AFVS course in live-action film or video.**

Additional Course Attributes:

Intermediate Video Workshop: Studio Course (117216)

Robb Moss

2020 Spring (4 Credits) **Schedule:** F 1200 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

A workshop for students with experience in video to explore further the capabilities of the medium by working in the nonfiction genres of the documentary, the experimental, and the experimental documentary. Students may work singly or together to make either an extended project or a series of shorts.

Course Notes: **Students seeking to enroll are encouraged to bring to the first class meeting a paragraph describing a proposed project, whether extended or short.**

Class Notes: **NOTE: The first meeting of this class will take place on Thursday, Jan. 30 at 10am-12pm in Sever 411.**

The normal meeting space is Sever B10.

Recommended Prep: **One AFVS course in video production.**

Documentary Fictions (205241)

Joana Pimenta

2019 Fall (4 Credits) **Schedule:** F 1200 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

In this film production course, students will make short films that explore the fluid boundaries between fiction and documentary. We will discuss the generative possibilities of the real in the production of fiction works, and fictional strategies for working in documentary film. Assignments will encompass video and sound recording and editing, cinematography and montage. Class time will include technical workshops, film screenings, discussions of student work and occasional visiting filmmakers.

Course Notes: **Interested students must attend first meeting of class to speak with teaching staff about enrollment procedures.**

Class Notes: **This course has mandatory film screenings on Wednesday evenings at 7:15 to 10:00PM in the Carpenter Center Lecture Hall.**

Class Notes: **LOCATION for FIRST MEETING on FRIDAY, SEPTEMBER 6 at noon is SEVER 416.**

Recommended Prep: **At least one previous AFVS film/video course and/or experience in film/video and sound recording and editing is recommended, but not required.**

Documentary Animation (215412)

Tim Szetela

2020 Spring (4 Credits) **Schedule:** M 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In this course, students will create a short animated film based on site-specific documentary research. Initial exercises will utilize a range of observational methods, including documentary drawing, data collection, mapping, and field recording. Students will then apply various animation techniques to communicate their observations, including hand-drawn animation, stop-motion, data visualization, and mixed media collage. The semester will culminate in the production of a short animated film based on the stories, patterns, and experiences discovered during their research.

Course Notes: **No previous experience in animation is required, but a background in video, audio, or design is helpful.**

Class Notes: **This course has mandatory film screenings built into the class time from 4:30-5:45 on Mondays.**

This class meets in Sever 402, the animation studio.

Algorithmic Performance (208333)

Sohin Hwang

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0715 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

How do we think, feel, and work in the age of performative algorithms? This course explores performative practices using algorithms as an investigative method. Programming figures in both immediate and remote environment, students will develop experimental practices based on various forms of algorithmic constructions. Contemporary examples will be introduced, with a focus on the use of lists, instructions, and diagrams. Screenings, workshops, guest presentations, and readings will supplement the development of the projects.

Course Notes: **Prerequisite: Previous studio or programming experience helpful but not required.**

Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Class Notes: **This course meets from 3pm to 7pm in Sackler 111.**

Film and the Self-Image: From Local Cinema to the Selfie (213512)

Katherine Rennebohm

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Films and moving images have a long history of putting "the self" on screen. This course will take an alternate route through the history of non-fiction film and video making in order to explore this history of the "Self-Image." We will also consider the theoretical and political implications of film's century of picturing the self, investigating differences from other instances of 'self-media.' How do film and moving image media change how we understand the self?

Course Notes: **This course will have mandatory weekly film screenings on Fridays from 3:00 to 5:30 in the Carpenter Center Lecture Hall.**

Additional Course Attributes:

What Is (21st-Century) Cinema? (213738)

Dennis Lim

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

More than a half century after André Bazin asked "what is cinema?" this class will attempt to answer that fundamental question from the unstable vantage of the present. We will do so by looking at the aesthetic forms, technological movements, economic structures, and critical and theoretical discourses that have shaped — and that continue to transform — contemporary moving-image culture. Students will encounter work across forms and genres by a wide range of filmmakers who have collectively begun to define what a 21st-century cinema might look like.

Class Notes: **This class meets from 3pm to 5pm on Mondays in Carpenter Center 401, preceded by weekly film screenings in the Carpenter Center Lecture Hall at 12:00-2:45.**

Additional Course Attributes:

Art of the Real: Rethinking Documentary (156235)

Dennis Lim

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

What defines the documentary, and why have these definitions proved so mutable and even contentious over the years? This seminar will undertake a historical survey of the documentary from the silent era to the digital present, paying special attention to the formal, aesthetic, and ethical questions that have shaped its evolution. Looking beyond the canon and beyond traditional notions of non-fiction, the class aims to provide students with an expanded view of the real in cinema.

Course Notes: **There are mandatory film screenings for this class from 12:00pm to 2:00 on Mondays, preceding the class meeting, which is from 3pm to 5pm. Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.**

Class Notes: **This class meets from 3pm to 5pm on Mondays in Carpenter Center 401, preceded by weekly film screenings in the Carpenter Center Lecture Hall at 12:00-2:45.**

Film Theory, Visual Thinking (114647)

Giuliana Bruno

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0130 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How do moving images transform the way we think? Introduction to film theory aimed at interpreting the visual world, and developing skills to analyze films and media images. Survey of classical and contemporary film theory goes from turn-of-the-century scientific motion studies to the virtual movements of today. Considers theories of space, time, and motion, including Eisenstein's theory of montage and architecture. Treats visual technology and sensate space, the cultural history of the cinematic apparatus, the body and physical existence, affect and gender, and screen theory. Different theoretical positions guide us in understanding and reading films.

Course Notes: **Offered jointly with the Graduate School of Design as HIS 4132. This course has an additional weekly film screening, Wednesday at 7:15 in the Carpenter Center Lecture Hall.**

Class Notes: **This course meets from 12pm to 1:30PM in Carpenter Center B04.**

Postwall German Cinema (213433)

Eric Rentschler

2020 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Filmmakers from the Federal Republic of Germany like Rainer Werner Fassbinder, Werner Herzog, and Wim Wenders would become internationally prominent during the 1970s and lauded for their formal experimentation, stylistic allure, and political outspokenness. What happened, though, after the demise of the so-called New German Cinema in the early eighties and the fall of the wall in 1989? This class will focus on postwall German cinema and discuss a rich sampling of features from a very seismic and eventful decade, the 1990s. Our weekly sessions will probe the textual idiosyncrasies of representative films as well as their socio-political determinations. We will look at mainstream offerings as well as arthouse entries, probing commercial features that seek to optimize their popular appeal as well as more ambitious works that speak out, act out, and take exception. In this way, we will gain an appreciation for the variety of voices within the media ecology of this national cinema, its hearty blend of affirmation, dissent, and diversity. This course will seek to foster students' ability both to fathom the formal workings and historical meanings of films as well as to enhance their analytical capacities and critical skills.

Course Notes: **This course is equivalent to AFVS 188G. Credit may be earned for German 153 or AFVS 188G, but not both.**

No previous course work in film studies nor any knowledge of German is required or presumed.

Class Notes: **This course has mandatory film screenings on Fridays from 12:45-3:15.**

The Cinema According to Alfred Hitchcock (127468)

Haden Guest

2020 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This class explores the films, career and legacy of Alfred Hitchcock, one of the legends of the American cinema and arguably among the most influential artists of the twentieth century. Using a range of diverse critical approaches to closely study key examples of Hitchcock's intricate and obsessive tales of murder and suspense, this course also traces a history of the classical Hollywood studio system that Hitchcock's remarkably successful career helped define.

Class Notes: **FIRST MEETING NOTE: This class will meet on Monday, Jan. 27 at 3pm to 5:45 in the Carpenter Center Lecture Hall on the lower level. The class will not meet on Wednesday, Jan. 29.**

Cinemas of Resistance: Political Filmmaking Across the Globe (207946)

Katherine Rennebohm

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Can film change the world? What can the history of engaged film and media-making teach us about politics, and vice-versa? This course will study instances of political filmmaking from around the world: early 20th century avant-garde filmmaking, anti-colonialist and anti-imperialist cinemas, feminist and queer filmmaking, Indigenous cinemas, and more. Students will learn about different political movements, international histories of film theory and film form, and the ongoing legacies of cinemas of resistance.

Course Notes: **Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.**

There are mandatory weekly film screenings for this course.

Critical Printing (205183)

Matt Saunders

Jennifer L. Roberts

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Incorporating both studio and seminar instruction, this intensive course will explore printmaking's history, trace its particular forms of intelligence, and test its future potential. The class will meet for three hours of studio and two hours of seminar/discussion per week. Assignments will include weekly readings, a short scholarly paper, and two studio projects. For the first half of the semester, students will pursue a rigorous

grounding in a particular historical technique (etching/intaglio); in the second half students will translate what they have learned to another medium, thus exploring printmaking as an expanded field of practice.

Course Notes: **The course is designed for graduate students and advanced undergraduates in any related department.**

Interested students must attend the first meeting of the class during shopping week.

Nora Schultz

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0415 PM
T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

A studio course that is directed to specific themes in the studio practice of graduate students and undergraduates in their junior and senior years.

The course will focus on different ways intermedia and interdisciplinary art work involves language and text, in theory and practice, especially focusing on the intersection of text/language and visual work. The course investigates specific notions of conceptualizing, "critique" and "making" of artworks and in publishing and developing art with textual work

Course Notes: **This course is for graduate students and undergraduates in their junior and senior years.**
Interested students must attend the first meeting of the course during shopping week.

Artistic Research Workshop (208330)

Sohin Hwang

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0715 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

How can we conduct and present research through art? This studio-based seminar explores practices of artistic investigation and critical visual thinking with a focus on strategies from performance, video, and installation. Pursuing individual projects, students will be encouraged to use bare senses for making observations and understand different ways of using objects, space, recordings, and other materials to formulate questions and convey findings. Three presentations will be expected to show the work process that leads to the final one. Screenings, guest presentations, field trips, and readings supplement the development of the projects.

Course Notes: **This is a graduate level course, but undergraduates are also welcome to apply. Interested students must attend the first meeting of the class during shopping week to speak with teaching staff about course enrollment procedure.**

Recommended Prep: **Prerequisite: Experience in media production helpful but not required.**

Art, Film, and Visual Studies 270

Proseminar in Film and Visual Studies: History (122079)

Tom Conley

2019 Fall (4 Credits) **Schedule:** T 0500 PM - 0700 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Considers film history and the relations between film and history as well as pertinent theoretical approaches to historiography. Critical readings of exemplary film historical studies and careful scrutiny of films both in and as history.

Course Notes: **Required of all Film and Visual Studies graduate students, as well as graduate students intending to declare a secondary field in Film and Visual Studies.**

Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Class Notes: **There are mandatory film screenings for this course on Tuesday evenings from 7:15 to 10:00 in the Carpenter Center Lecture Hall.**

Additional Course Attributes:

Art, Film, and Visual Studies 271

Proseminar in Film and Visual Studies: Theory (122080)

Giuliana Bruno

2020 Spring (4 Credits) **Schedule:** W 0130 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

An advanced survey of current debates on the place of the moving image in contemporary visual culture, art practice, and media ecologies, with regards to concepts of space, time, archive, movement, and affect. Topics include visual studies and the culture of modernity, media archaeology and cultural techniques, screen culture in the museum, new media and contemporary art, moving images and architectural space.

Course Notes: **Required of all Film and Visual Studies graduate students as well as graduate students intending to declare a secondary field in Film and Visual Studies.**

Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Class Notes: **This course meets on Wednesdays from 2pm to 4pm in Carpenter Center 402.**

Art, Film, and Visual Studies 274 Section: 1

Vision and Power: Introduction to Visual Studies (New Course) (215119)

David Joselit

2020 Spring (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will serve as a theoretical introduction to the field of Visual Studies by addressing six key-words, associated with a significant literature related to visual studies. These are: Archaeology (of knowledge; or Media Archaeology); Forensics (in relation to the recent work of Forensic Architecture and others); Subjectivity (as developed through visual means); Spectacle (as an "empire of the visual); and Art (as a special realm of visuality whose worldly power is often underestimated)

Art, Film, and Visual Studies 279 Section: 1

Materiality, Visual Culture, and Media (203315)

Giuliana Bruno

2019 Fall (4 Credits) **Schedule:** W 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What is the place of materiality in our visual age of rapidly changing materials and media? How is it fashioned in the arts, architecture and media? This seminar investigates a "material turn" in philosophy, art, media, visual and spatial culture. Topics include: actor-network theory, thing theory, the life of objects, the archive, the haptic and the affect, vibrant materialism, elemental philosophy, light and projection, and the immateriality of atmosphere.

Course Notes: **Interested students must attend the first meeting of the class during shopping week.**

This course is jointly offered at the Graduate School of Design as HIS 4451; GSD students should enroll in the course via the GSD.

Class Notes: **This course meets on Wednesdays from 2pm to 4pm in Carpenter Center 402.**

Art, Film, and Visual Studies 289 Section: 1

The Frankfurt School on Mass Media and Mass Culture (156172)

Eric Rentschler

2019 Fall (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This seminar considers the Frankfurt School's deliberations on film, radio, television, and mass culture. We will devote the majority of the course to three seminal figures: Siegfried Kracauer, Walter Benjamin, and T. W. Adorno. More generally, we will focus on the debates catalyzed by the emergence of modern mass media and an industrialized visual culture; we will also reflect on the pertinence of these debates for our own contemporary culture of media convergence.

Course Notes: **This course is also offered through Germanic Languages and Literatures as German 254. Credit may be earned for either AFVS 289 or German 254, but not both.**

Requirements: **Anti-Req: Cannot be taken for credit if GERM 254 is taken for credit.**

Astronomy 1

The Big Questions of Astronomy (113797)

David Charbonneau

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will discuss the big questions of astronomy that have engaged scientists and the general public alike for centuries: How did the universe begin? What is the ultimate fate of the Sun? How do planets form? Is there life outside the Solar system? Students will use telescopes to study the night sky and examine how the combination of astronomical observations and physical theory have led to an understanding of the vast and dynamic cosmos we inhabit.

Class Notes: **Course notes: In addition to the two lectures per week a weekly evening section using telescopes will be required.**

Celestial Navigation (111305)

Philip Sadler

2019 Fall (4 Credits) **Schedule:** T 1130 AM - 0130 PM
T 0700 PM - 0900 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Never be lost again! Find your way on sea, land, or air by employing celestial and terrestrial techniques. Acquire expertise in using navigators' tools (sextant, compass, and charts) while learning the steps to the celestial dance of the sun, moon, stars, and planets. This 108-year-old course continues to rely on practical skills and collaborative problem-solving, while utilizing historical artifacts (instruments, maps, captains' logs) and student-built devices. Culminating in a day-long cruise to practice navigation skills.

Course Notes: **Minimal lecturing; predominantly practical activities with individual attention from teaching staff. Math beyond high school trigonometry and geometry unnecessary. This course is offered each year.**

Class Notes: **This course uses a lottery system to allot the 25 available seats. Attendance at first class is a condition of participating in the lottery.**

Astronomy 5

Astrosociology (205519)

Gerhard Sonnert

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

In an age of magnificent astronomical progress and discoveries, the increasing knowledge of the cosmos has manifold repercussions in society and culture. This course will examine how outer space-related phenomena impact, or potentially impact, society and culture, and vice versa. Especially in light of the proliferating discovery of exoplanets, an intriguing topic of astrosociology is presented by the possibility of the existence of extraterrestrial civilizations, their detection, communication with them, and even contact.

Stellar and Planetary Astronomy (118136)

Karin Oberg

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM
F 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an introduction to the physical principles describing the formation and evolution of stars and their planetary companions. Topics include thermal radiation and stellar spectra; telescopes; energy generation in stars; stellar evolution; orbital dynamics; the Solar system; and exoplanets. This course includes an observational component: students will determine the distance to the Sun, and use the Clay Telescope atop the Science Center to study stellar evolution and detect exoplanets.

Course Notes: **This course is offered each year.**

Recommended Prep: **An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16 or Physical Sciences 12a.**

Requirements: **Prerequisite: Physics 15a, Physics 16, or Physical Sciences 12a. May be taken concurrently.**

Galactic and Extragalactic Astronomy (125884)

Xingang Chen

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 35

This course provides an introduction to the physical principles describing galaxies and the composition and evolution of the Universe. Topics include the interstellar medium; star clusters; the structure and dynamics of the Milky Way; other galaxies; clusters of galaxies; active galaxies and quasars; cosmology; and the early universe. This course includes an observational component: In addition to observing galaxies with the Science Center Clay Telescope, students will use the millimeter-wavelength telescope at the Harvard-Smithsonian Center for Astrophysics to measure the rotation velocity of the Milky Way galaxy and to determine its mass.

Course Notes: **This course is offered each year.**

Class Notes: **Classes for Astro 17 will end at 4:30 pm.**

Recommended Prep: **An introductory course in mechanics, which may be taken concurrently, satisfied by Physics lla, Physics 15a, Physics 16, or Physical Sciences 12a.**

The Unity of Science: From the Big Bang to the Brontosaurus and Beyond (212793)

Irwin Shapiro

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Science is like a well-woven, ever-expanding fabric, designed to uncover Nature's secrets. This course emphasizes the strong connections between subfields of science,showing it as the never-ending and greatest detective story ever told, with evidence always the arbiter. These characteristics are exhibited in the semi-historical treatment of three main themes: unveiling the universe, the earth and its fossils, and the story of life.

Research Tutorial in Astrophysics (112487)

Xingang Chen

2019 Fall (4 Credits) **Schedule:** M 0130 PM - 0245 PM
T 0600 PM - 0715 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This junior tutorial introduces students to research at the forefront of astrophysics, and provides opportunities for students to meet with research scientists and individuals active in science policy, education, and journalism. Students meet weekly for a lecture and discussion over dinner with a guest speaker, preceded by a reading and a preparatory seminar. Students will be mentored throughout the term on a research project of their choosing. The Harvard-Smithsonian Center for Astrophysics is home to one of the largest groups of astronomers in the world, providing extensive opportunities for undergraduate research.

Requirements: **Prerequisite: Astronomy 16 OR Astronomy 17**

Methods of Observational Astronomy (125880)

Douglas Finkbeiner

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In this course we will learn the basic tools of modern astronomical research, including telescopes, detectors, imaging, spectroscopy, and common software. Emphasis will be placed on both the theory behind telescopes and their use, and hands-on experience with real data. Using this basic knowledge we will analyze science-level astronomical data from a wide range of telescopes and review the basic properties of stars, galaxies, and other astronomical objects of interest. The course includes a trip to the F. L. Whipple Observatory on Mount Hopkins, Arizona, to gather data with various telescopes.

Course Notes: **This course is offered each year.**

Recommended Prep: **Astronomy 16 or Astronomy 17.**

Astronomy 214

Seminar in Observational Astronomy (212787)

Jonathan Grindlay

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Observational techniques associated with relativistic and high-energy astrophysical phenomena. Accretion onto compact stars (white dwarfs, neutron stars, black holes); active galactic nuclei, galaxy clusters. Gamma-ray bursts and cosmic rays. X-ray and gamma-ray background.

Additional Course Attributes:

Astronomy 305

Topics in Origins of Life Research (161303)

Dimitar Sasselov

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course will cover a broad range of contemporary topics in origins of life research through a set of 10 two-week modules taught by members of the Origins of Life Initiative faculty.

Enrolled students will be required to attend at least six of the offered modules over the course of two semesters. The course will meet twice per week, and each two week module will be comprised of a stand-alone topic with a single assignment.

Class Notes: **This course meets at the Center for Astrophysics, 60 Garden St, in the Classroom A-101. Actual class times are 2:00 - 3:15 pm**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Astronomy 308

Data Mining, Machine Learning, and Deep Learning for Astronomy (215413)

Jaehyon Rhee

2020 Spring (2 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

One of the greatest challenges in modern astronomy is how to extract meaningful and interpretable results from data in a timely and systematic manner as astronomical data becomes extreme in volume, acquisition rate, and complexity. Using Python and R, this seminar course introduces modern data science methods and their applications along with real astronomical data sets. Topics include not only fundamental data mining (DM) and machine learning (ML) techniques (i.e., regression, classification, clustering, and time series analysis) but also select advanced deep learning (DL) and artificial intelligence (AI) algorithms (such as CNN, GAN, and RL). By the semester's end, students emerge with knowledge of and skills in data science that empower them to handle big data, carry out data analysis tasks, and interpret meaning out of

it. Although designed for astronomy major students, this course is for any student who wants to learn how modern science works with machine learning.

Class Notes: **This seminar is considered a half-semester course offering 2 units of credit. Students should review the syllabus before committing to the course to ensure that they have enough flexibility in their schedule to participate in the class and complete the assignments.**

Class Notes: **Course will meet Thursdays Feb 27 - Apr 16, 2020. Actual class times will be 9:30 AM - 12 Noon.**

Astronomy 315

Ethics and Practice in Astronomy (205416)

Charles Conroy

2019 Fall (2 Credits) **Schedule:** R 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This seminar course offers a survey in the following topics: the establishment of paradigms in astronomy; ethical behavior in astronomy; the underrepresentation of minorities and women in science; peer review and the scientific proposal process; the mentor-advisor relationship; professional conduct; careers in and beyond astronomy.

Course Notes: **This seminar is considered a half-semester course offering 2 units of credit. Students should review the syllabus before committing to the course to ensure they have enough flexibility in their schedule to complete the assignments and readings. Check with the instructor if you would prefer to audit the course.**

Class Notes: **Course will meet Sept 12 - Oct 31, 2019. Actual class times will be 2 - 4 PM.**

Human Physiology (113276)

Nancy Long Sieber

Stephanie Shore

2019 Fall (4 Credits) **Schedule:** MW 0945 AM - 1114 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the principles governing function in the human body designed to provide a framework in physiology for future public health researchers and professionals who have not taken college level physiology courses. Emphasis on the concept of homeostasis and on integrative aspects of physiology. Examples of pathophysiology and environmental physiology highlight these processes.

Course Notes: **Offered jointly with the School of Public Health as EH 205. Required lab.**

Class will take place in Kresge G2

Recommended Prep: **College-level introductory biology or permission of the instructor.**

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups
Wave 1 | All EH Degree Students, PHS EPI
Wave 2 | PHD BPH & Wave 1
Wave 3 | Open Enrollment

Priority Wave Timing
Wave 1 | TBD
Wave 2 | TBD
Wave 3 | TBD

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Biological Sciences Communications (110521)

Brendan Manning

2019 Fall (4 Credits) **Schedule:** MW 0230 PM - 0359 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Emphasis of this course is effective scientific communication. Students will develop skills in writing and critiquing grants and scientific papers, learn about the grant application process, and present seminars that focus on structure, language and content appropriate for technical and lay audiences. Topics covered will apply to public health concerns in biological sciences across various disciplines.

Course Notes: **Required for all first year BPH PhD students.**

Class will take place in Building 2, Conference Room 102.

Cross-listed with DBS 205

The Biological Basis of Human Nutrition (111293)

Frank M. Sacks

Jeremy Furtado

2020 Spring (4 Credits) **Schedule:** TR 0200 PM - 0329 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

A review of the biochemistry of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Contemporary topics are emphasized. Particular emphasis given to current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer. Recommended dietary intakes of selected nutrients are discussed in order to understand their limitations.

Course Notes: **Offered jointly with the Medical School as BPH 733.0 and with the School of Public Health as NUT 202.**

Recommended Prep: **Introductory nutrition course. Prior familiarity with nutrition and the health sciences expected, as well as a basic knowledge of biochemistry and human physiology.**

Additional Course Attributes:

Biological Sci in Public Hlth 250

Biology and Control of Vector-Borne Parasites (214578)

Barbara Burleigh

Daniel Neafsey

Flaminia Catteruccia

Deepali Ravel

2020 Spring (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This advanced readings course focuses on a group of vector-borne parasitic protozoa and helminths that are responsible for the highest burden of disease in developing countries. Central themes in the biology of transmission, parasite-host interactions and opportunities for control will be covered in the framework of the unique biology of eukaryotic parasites including Plasmodium, Leishmania, trypanosomes and schistosomes. Weekly lectures from Harvard faculty and invited speakers will enhance critical readings of the current literature and student-led discussions, and will emphasize experimental approaches and mechanisms of parasitic infection from the perspective of molecular and cellular biology, genomics, and evolution. Final group presentations of short research proposals will be required. The primary course goal is for students to attain deep mechanistic understanding of select topics in vector-borne parasite biology and to be able to critically evaluate and explain to others the rationale and limitations of disease control measures.

The target audience for this course is early PhD students interested in parasite and vector biology as well as students in the Infectious Disease Epidemiology (ID-Epi) concentration or medical students.

Course Notes: **Offered jointly with School of Public Health as IID 250.**

Recommended Prep: **Strong background in molecular biology, cell biology, genetics; ability to critically read primary experimental literature. If you are unsure of your preparation for this class, please contact the course director.**

Biological Sci in Public Hlth 302QC

Interdisciplinary Training in Pulmonary Sciences Part II (127599)

Quan Lu

2020 Spring (2 Credits) **Schedule:** F 0100 PM - 0159 PM
T 0945 AM - 1044 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse

disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Course Notes: **Offered jointly with the School of Public Health as EH 513.**

Class runs from 1/27/20-5/15/20.

Ecological and Epidemiological Control of Parasitic Diseases (127601)

Dyann Wirth

Manoj Duraisingh

Jeffrey Dvorin

2019 Fall (2 Credits) **Schedule:** MWF 0200 PM - 0329 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Provides an introduction to ecological and epidemiological concepts basic to the control of infectious agents. Considers important parasitic diseases of particular significance in the developing areas of the world. Epidemiological principles of vector-associated diseases are elucidated through study of entities such as malaria and schistosomiasis.

Course Notes: **Offered jointly with School of Public Health as IID 201.**

Recommended Prep: **Background in biology required; knowledge of pathogenesis of infectious diseases desirable.**

Fall 1 course. Class runs from 9/3/19-10/25/19.

Molecular Mechanisms of Aging (127931)

William Mair

2020 Spring (2 Credits) **Schedule:** MF 0200 PM - 0329 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

We will explore molecular mechanisms underlying aging and aging-related disease. Topics will include nutrient signaling and energy metabolism, genome stability and proteostasis, interventional approaches to extended longevity, and theories of aging including the free radical theory. Recent and classic literature will be critically discussed.

Course Notes: **Course will next be offered in Spring 1 2020**

This course will be taught every other year (odd years). Offered jointly with the School of Public Health as GCD 212.

Recommended Prep: **Preference given to PhD students in HILS-affiliated programs (e.g., BPH, BBS, etc.)**

2019 Fall (2 Credits) **Schedule:**

Instructor Permissions: None **Enrollment Cap:** n/a

This can be used to indicate that a student has received a teaching appointment and is engaged in teaching a course.

Course Notes: **For GSAS PhD students only.**

It is inappropriate for graduate students to receive credit for the same work for which they are financially compensated, therefore, this should be used and not the course being taught.

Biomedical Engineering

Subject: Biomedical Engineering

Biomedical Engineering 110

Physiological Systems Analysis (150189)

Maurice Smith

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A survey of systems theory with applications from bioengineering and physiology. Analysis: differential equations, linear and nonlinear systems, stability, the complementary nature of time and frequency domain methods, feedback, and biological oscillations. Applications: nerve function, muscle dynamics, cardiovascular regulation. Laboratory: neural models, feedback control systems, properties of muscle, cardiovascular function.

Recommended Prep: **Engineering Sciences 53 (or equivalent); Physical Sciences 12b (or equivalent); and Math 21a and Math21b (or equivalents)**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 121

Cellular Engineering (119067)

Kit Parker

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes: **BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.**

Requirements: **Prerequisite: LS1a (or LPS A); LS 1b; Math 21b (or equivalent); Physical Sciences 12a and 12b (or equivalents); and Engineering Sciences 53; AND Co-requisite: Biomedical Engineering 110**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 125

Tissue Engineering (121282)

David Mooney

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Fundamental engineering and biological principles underlying field of tissue engineering, along with examples and strategies to engineer specific tissues for clinical use. Students will prepare a paper in the field of tissue engineering, and participate in a weekly laboratory in which they will learn and use methods to fabricate materials and perform 3-D cell culture.

Recommended Prep: **LS1a, Chem17 or 20, or biochemistry and cell biology background.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 128

Introduction to Biomedical Imaging and Systems (204470)

Linsey Moyer

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 24

The course is designed as an introduction for students who want to gain both hands on training as well as an introduction to the physics and image reconstruction techniques involved in generating images. The course will introduce the fundamentals of the major imaging modalities including, but not limited to: electron microscopy, optical microscopy, x-ray, computed tomography, ultrasound, MRI, and nuclear imaging, as well as an overview of in vivo imaging and molecular imaging. This course also includes a lab section every other week.

Course Notes: **Enrollment limited to 24 students.**

Recommended Prep: **Physics, Calculus; Basic biology helpful but not required.**

Requirements: **Prerequisite: Applied Physics 50b OR Physical Sciences 12b OR Physics 15b OR PHYSCI 3 AND Math1b or higher**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	For Undergraduate and Graduate Students

Biomedical Engineering 129

Introduction to Bioelectronics (211359)

Jia Liu

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an introduction to bioelectronics and its applications in neuroscience, neuroengineering, cardiology, wearable technology and so on. The focus is on the basic principles of bioelectricity, biochemistry and physiological behaviors of biological systems and how to design tools to precisely measure and control them. Key themes throughout the course will include bioelectricity, biochemistry, cellular and tissue physiological behavior, optogenetics, sensors, stimulators, circuits, signals, biointerface and applications. This includes both the practical and theoretical aspects of the topic.

Recommended Prep: **Applied Physics 50b (OR Physical Sciences 12b, OR Physics 15b), and Math 1a or equivalent. Some background in chemistry and biology at the level of ES 53 is helpful but not required.**

Requirements: **Prerequisite: LS1a or LPSa; Math 1b; and AP50b or Physical Sciences 12b (or equivalent)**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 191

Introduction to Biomaterials (110020)

Jennifer Lewis

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 24

A biomaterial is any form of matter that is produced by or interacts with biological systems. One of the pillars of biomedical engineering is to use naturally derived and synthetic biomaterials to treat, augment, or replace human tissues. This course examines the structure, properties and processing of biomaterials.

Recommended Prep: **Physical sciences 1, Math 1b.**

Requirements: **Prerequisite: (LS 1A or LPS A or PS 1 or PS 11) AND (Math 1b or higher)**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Biophysics

Subject: Biophysics

Biophysics 170

Evolutionary and Quantitative Genomics (121318)

Leonid Mirny

2019 Fall (4 Credits) **Schedule:** MW 1100 AM - 1229 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Aims to develop deep quantitative understanding of basic forces of evolution, molecular evolution, genetic variations and their dynamics in populations, genetics of complex phenotypes, and genome-wide association studies. Application of these foundational concepts to cutting edge studies in epigenetics, gene regulation and chromatin; cancer genomics, and microbiomes. Modules consist of lectures, journal club discussions of high impact publications, and guest lectures that provide clinical correlates. Homework assignments and final projects aim to develop hands-on experience and understanding of genomic data from evolutionary principles.

Course Notes: **Also listed as HST.508**
Meets on MIT Campus for 2019 Fall semester.
Mondays & Wednesdays 11:00 am-12:30pm. Bldg. 66, Room 160

Class Notes: **Class meets in Building 66, Room 160 on the MIT Campus. First day of class is Wednesday, September 4th**

Additional Course Attributes:

Biophysics 205

Computational and Functional Genomics (119807)

Martha Bulyk

Shamil Sunyaev

Peter Sorger

2020 Spring (4 Credits) **Schedule:** MW 0230 PM - 0400 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Experimental functional genomics, computational prediction of gene function, and properties and models of complex biological systems. The course will primarily involve critical reading and discussion rather than lectures.

Class Notes: **Meets on Harvard Medical School Campus.**
Folin Wu Room, Bldg. C, Room 115, 240 Longwood Avenue, Boston.

Recommended Prep: **Molecular Biology (MCB 52 or equivalent), solid understanding of basic probability and statistics.**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Biophysics 242R

Special Topics in Biophysics (117635)

Venkatesh Murthy

Martha Bulyk

Maofu Liao

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1029 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Biophysical topics emerging from special interest research not normally available in established curriculum. The 2019-20 year's course focuses on the theory and practice of cryo-electron microscopy (cryo-EM) with a particular emphasis on single-particle cryo-EM. Three parts run in parallel throughout the course: general theory lectures, guest lectures on specific subjects, and hands-on sessions on basic image processing. General theory lectures cover electron microscope, image formation, sample preparation, two- and three-dimensional classification, revolutionary technical advancement, and future directions. Guest lectures showcase exciting examples of the application of cryo-EM in different research areas. Hands-on sessions include the steps from image pre-processing to particle classification and refinement. Students will have a good understanding of how to plan, perform, optimize and evaluate single-particle cryo-EM work.

Course Notes: **Weekly lectures with discussion sections, guest lectures and hands-on experience.**

Class Notes: **Meets on Harvard Medical School Campus.**

Folin Wu Room, Bldg. C, Room 115, 240 Longwood Avenue, Boston.

(Exceptions on 2nd Tuesday of each month. Class will meet in Seeley G. Mudd 3rd Floor Conference Room on these three dates -Feb. 11, Mar. 10, Apr. 14).

Biophysics 300

Introduction to Laboratory Research (121518)

Venkatesh Murthy

Martha Bulyk

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Introductory lectures by associated Biophysics faculty members. Lectures Fall semester only accompanied by three periods of instruction in laboratories of structural biology, cell and membrane biophysics, molecular genetics and development, neurobiology, bioinformatics, and physical biochemistry.

Course Notes: **Fall semester only: meets on both the Cambridge and HMS campuses. Contact department Admin for fall course location and individual faculty member presentation schedule.**

FAS: Course Level	Graduate Course

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 348

Protein Kinases, Reversible Protein Phosphorylation (114665)

Raymond Erikson

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 348

Protein Kinases, Reversible Protein Phosphorylation (114665)

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 368

Probing Polymers with Nanospores, Experimental Condensed Matter Physics (115668)

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
FAS Course Roll	FAS Course Roll

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 379

Theoretical Population Genetics (116575)

John Wakeley

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	None

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)

Biostatistics

Subject: Biostatistics

Biostatistics 230

Probability Theory and Applications I (119844)

Marcello Pagano

2019 Fall (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Notes: **Offered jointly with the School of Public Health as BST230.**

Requirements: **Prerequisite: Biostatistics PhD Program**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll

Biostatistics 231

Statistical Inference I (119845)

Robert Gray

2020 Spring (4 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Exponential families, sufficiency, ancillarity, completeness, method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, Neyman-Pearson theory, likelihood ratio, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency.

Course Notes: **Offered jointly with the School of Public Health as BST231.**

Requirements: **Prerequisite: Biostatistics 230**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 232

Methods I (119846)

Brent Coull

2019 Fall (4 Credits) **Schedule:** MW 0800 AM - 0930 AM

Instructor Permissions: Instructor **Enrollment Cap:** 35

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Notes: **Offered jointly with the School of Public Health as BST232.**

Recommended Prep: **Signature of instructor required if prereq not met.**

Requirements: **Prerequisite: Biostatistics PhD Program**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll

Biostatistics 234

Introduction to Data Structures and Algorithms (160641)

Christoph Lange

Georg Hahn

2020 Spring (4 Credits) **Schedule:** MW 1130 AM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 35

Introduction to the data structures and computer algorithms that are relevant to statistical computing. The implementation of data structures and algorithms for data management and numerical computations are discussed.

Course Notes: **Offered jointly with the School of Public Health as BST 234.**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 235

Advanced Regression and Statistical Learning (119848)

Rajarshi Mukherjee

2019 Fall (4 Credits) **Schedule:** MW 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimension reduction, and classification methods. Background in matrix algebra and linear regression required.

Course Notes: **Offered jointly with the School of Public Health as BST235.**

Requirements: **Prerequisite: Biostatistics 231 AND Biostatistics 232**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 238

Principles and Advanced Topics in Clinical Trials (125262)

David Wypij

2020 Spring (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course focuses on selected advanced topics in design, analysis, and interpretation of clinical trials, including study design; choice of endpoints (including surrogate endpoints); interim analyses and group sequential methods; subgroup analyses; and meta-analyses.

Course Notes: **Offered jointly with the School of Public Health as BST 214 & BST 238.**

Requirements: **Prerequisite: BIST 230 AND BIST 231 (may be taken concurrently)**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 240

Probability Theory and Applications II (119854)

Lorenzo Trippa

2019 Fall (4 Credits) **Schedule:** MW 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

A foundational course in measure theoretic probability. Topics include measure theory, Lebesgue integration, product measure and Fubini's Theorem, Radon-Nikodym derivatives, conditional probability, conditional expectation, limit theorems on sequences of random variables, stochastic processes, and weak

convergence.

Course Notes: **Offered jointly with the School of Public Health as BST240.**

Requirements: **Prerequisite: Biostatistics 231**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 241

Statistical Inference II (119855)

Rui Wang

2020 Spring (4 Credits) **Schedule:** TR 0200 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Advanced topics in statistical inference. Limit theorems, multivariate delta method, properties of maximum likelihood estimators, saddle point approximations, asymptotic relative efficiency, robust and rank-based procedures, resampling methods, nonparametric curve estimation.

Course Notes: **Offered jointly with the School of Public Health as BST 241.**

Requirements: **Prerequisite: Biostatistics 240**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 245 Section: 1

Analysis of Multivariate and Longitudinal Data (119850)

Sebastien Haneuse

2020 Spring (4 Credits) **Schedule:** TR 0945 AM - 1115 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The multivariate normal distribution, Hotelling's T2, MANOVA, repeated measures, the multivariate linear model, random effects and growth curve models, generalized estimating equations, multivariate categorical outcomes, missing data, computational issues for traditional and new methodologies.

Course Notes: **Offered jointly with the School of Public Health as BST 245.**

Requirements: **Prerequisite: Biostatistics 231 AND Biostatistics 235**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students

Biostatistics 249

Bayesian Methodology in Biostatistics (119853)

Jeffrey Miller

2020 Spring (4 Credits) **Schedule:** TR 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

General principles of the Bayesian approach, prior distributions, hierarchical models and modeling techniques, approximate inference, Markov chain Monte Carlo methods, model assessment and comparison. Bayesian approaches to GLMMs, multiple testing, nonparametrics, clinical trials, survival analysis.

Course Notes: **Offered jointly with the School of Public Health as BST249.**

Requirements: **Prerequisite: Biostatistics 231 AND Biostatistics 232**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 281

Genomic Data Manipulation (126944)

Curtis Huttenhower

Eric Franzosa

2020 Spring (4 Credits) **Schedule:** MW 0345 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Introduction to genomic data, computational methods for interpreting these data, and survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.

Course Notes: **Offered jointly with the School of Public Health as BST 281.**

Requirements: **Prerequisite: BST 272 or BST 273**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Course Roll	FAS Course Roll

FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 282

Introduction to Computational Biology and Bioinformatics (126946)

Xiaole (Shirley) Liu

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Basic biological problems, genomics technology platforms, algorithms and data analysis approaches in computational biology. There will be three major components of the course: microarray and RNA-seq analysis, transcription and epigenetic gene regulation, cancer genomics.

This course is targeted at both biostatistics and biological science graduate students with some statistics and computer programming background who have an interest in exploring genomic data analysis and algorithm development as a potential future direction.

Course Notes: **Offered jointly with the School of Public Health as BST 282.**

Class Notes: **This course is also offered as STAT 215/STAT 115.**

Recommended Prep: **Biostatistics degree program or Computational Biology and Quantitative Genetics degree program**

Requirements: **Prerequisite: STAT 110 OR CS 50 OR BIOSTAT PhD Students**

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS Course Roll	FAS Course Roll
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Food and Fantasy in Irish Tradition (203245)

Joseph Nagy

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Many aspects of food—growing, cooking, eating, drinking, and distributing it—have served as powerful cultural symbols in Irish oral and literary tradition from medieval to modern times. A survey of the environmental, historical, and economic background to food and its production in Ireland of the early Middle Ages will lead to the close reading of medieval texts (in translation) such as "News about Mac Dathó's Pig," "The Vision of Mac Conglinne," and "The Battle of Mag Tuired," in each of which the "what," "why," and "how" of eating determine the outcome of the story. In addition, we will examine the lively symbolism of food as perpetuated in Irish legend and folktale, and also in post-medieval Irish literature.

Celtic Mythology (111202)

Joseph Nagy

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Medieval Irish and Welsh texts reflect underlying story patterns, characters, and motifs that are rooted in pre-Christian tradition and in some cases witnessed in the archaeological evidence and in the ethnographic writings of ancient Greek and Roman authors. We will examine these texts in translation and track the reconstruction of the "pagan past" undertaken by medieval Celtic writers, as well as the new mythologies they developed to suit the evolving ideological agenda of their world, from ca 600 to 1500 CE.

Introduction to Irish Folklore, Mythology, and Music (213697)

Kathryn Chadbourne

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0530 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Ireland from its earliest times to the present boasts a rich and complex mythic tradition that serves as an energizing source for literature, folk- and fairy-lore, and even music. Students consider medieval and more recent sources for mythological study, and examine such topics as Ireland's sacred geography, deities, fairies, heroes, folk ritual, and traditional songs and tunes.

Subject: Welsh

Welsh 128

Introduction to Modern Welsh (113699)

Catherine McKenna

2019 Fall (4 Credits) **Schedule:** MTWR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to the Welsh language as spoken and written today, designed for those with little or no prior knowledge of this vibrant Celtic language. Intensive conversation practice is provided, and students learn to write fluently. Internet, audio and video exercises using dialogue, music and film augment a contextualized grammatical survey, and use of authentic literary texts increases as the course progresses.

Course Notes: **The combination of Welsh 128 followed by Welsh 129r satisfies the language requirement. It is recommended in any case that this course be followed by Welsh 129r. May not be taken Pass/Fail. Not open to auditors.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Meets Foreign Lang Req	Welsh
FAS: Course Level	For Undergraduate and Graduate Students
FAS Course Roll	FAS Course Roll

Welsh 129R

Intermediate Modern Welsh (114118)

Catherine McKenna

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM
TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Direct continuation of Welsh 128, developing and deepening students' knowledge of, and skill in, the modern spoken and written language. By the end of the semester students will be able to converse, read and write in a number of registers of idiomatic Welsh (academic, literary, informal). Various media, featuring dialogue, music and film, augment the advanced grammatical survey. Central cultural and historical issues are discussed.

Course Notes: **This course, when taken following Welsh 128, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.**

Recommended Prep: **Welsh 128 or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Meets Foreign Lang Req	Welsh
FAS Divisional Distribution	None
FAS: Course Level	For Undergraduate and Graduate Students

Stephen Blacklow

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 003

Graduate Research (124362)

Stephen Blacklow

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 004

Graduate Research (124362)

Philip Cole

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Chemical Biology 350 Section: 004

Graduate Research (124362)

Arlene Sharpe

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 005

Graduate Research (124362)

Sara Buhrlage

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 005

Graduate Research (124362)

Sara Buhrlage

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Chemical Biology 350 Section: 006

Graduate Research (124362)

Stirling Churchman

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 006

Graduate Research (124362)

Manoj Duraisingh

2019 Fall (4 Credits) **Schedule:** TBD

TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Chemical Biology 350 Section: 007

Graduate Research (124362)

Adam Cohen

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 007

Graduate Research (124362)

Adam Cohen

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 008

Graduate Research (124362)

Vladimir Denic

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Chemical Biology 350 Section: 008

Graduate Research (124362)

Vladimir Denic

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 009

Graduate Research (124362)

Stephen Elledge

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 009

Graduate Research (124362)

Stephen Elledge

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 010

Graduate Research (124362)

Rachelle Gaudet

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 010

Graduate Research (124362)

Rachelle Gaudet

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 011

Graduate Research (124362)

Vadim Gladyshev

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 011

Graduate Research (124362)

Brian Liau

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Chemical Biology 350 Section: 012

Graduate Research (124362)

Nathanael Gray

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 012

Graduate Research (124362)

Nathanael Gray

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 013

Graduate Research (124362)

Stephen Haggarty

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 013

Graduate Research (124362)

Stephen Haggarty

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 014

Graduate Research (124362)

Robert Kingston

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 014

Graduate Research (124362)

Marcia Haigis

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 015

Graduate Research (124362)

Deborah Hung

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 015

Graduate Research (124362)

Deborah Hung

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 016

Graduate Research (124362)

Brian Liau

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 016

Graduate Research (124362)

Eric Jacobsen

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 017

Graduate Research (124362)

Cigall Kadoch

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 017

Graduate Research (124362)

Cigall Kadoch

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 018

Graduate Research (124362)

Randall King

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 018

Graduate Research (124362)

Randall King

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 019

Graduate Research (124362)

Andrew Kruse

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Chemical Biology 350 Section: 019

Graduate Research (124362)

Andrew Kruse

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Chemical Biology 350 Section: 020

Graduate Research (124362)

Chemical Biology 2200

Introduction to Chemical Biology (124812)

Ralph Mazitschek

Stephen Haggarty

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course will provide a survey of major topics, technologies, and themes in Chemical Biology, with hands-on exposure to a variety of experimental approaches.

Course Notes: **Intended for first-year graduate students in the Chemical Biology Program; permission of the instructor required for all others.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Chemistry and Chemical Biology

Subject: Chemistry

Chemistry 17

Principles of Organic Chemistry (115137)

Christina Woo

2019 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to organic chemistry, with an emphasis on structure and bonding, reaction mechanisms, and chemical reactivity.

Course Notes: **Open to freshmen with a score of 750 or higher in the College Boards or the Chemistry Placement Examination; and to students who scored 5 on the Chemistry Advanced Placement Examination; and to the students who achieved a grade of B or higher in either Physical Sciences 1, 10, 11, or another college-level introductory chemistry course. Others may enter only by permission of the instructor. The Chemistry 17/27 sequence is intended primarily for students in chemistry or the life sciences, who have completed LPSA or LS1a and one of the PS courses (PS1, PS10, PS11). The Chemistry 20/30 sequence is intended primarily for students planning a concentration in chemistry or the physical sciences. Either sequence satisfies the organic chemistry requirement for medical school. Students may not count both Chemistry 17 and Chemistry 20 for degree credit. On the other hand, Chemistry 27 and Chemistry 30 cover different material, so students interested in taking both courses may choose to do so via one of two sequences: Chemistry 17-27-30 or Chemistry 20-30-27. Chemistry 27 satisfies the biochemistry chemistry requirement for most medical schools.**

Additional Course Attributes:

Attribute	Value(s)
FAS Course Roll	FAS Course Roll
FAS: Final Assessment Category	Three-hour Exam

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 20

Organic Chemistry (124312)

Logan S. McCarty

2020 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to structure and bonding in organic molecules; mechanisms of organic reactions; chemical transformations of the functional groups of organic chemistry; synthesis; determination of chemical

structures by infrared and NMR spectroscopy.

Course Notes: **Chemistry 20/30 is an integrated two-semester sequence that prepares students to study chemistry and other physical sciences, whereas the Chemistry 17/27 sequence focuses on application of organic chemistry concepts to the life sciences. Either sequence satisfies the organic chemistry requirement for medical school and the chemistry concentration. The content of Chemistry 17 is accelerated and overlaps with topics from both Chemistry 20 and 30. Students may not count both Chemistry 17 and 20 toward the degree. However, Chemistry 27 and Chemistry 20/30 cover different material, so students may choose to take Chemistry 27 after completing the 20/30 sequence.**

Recommended Prep: **Open to students who scored 4 or 5 on the Chemistry Advanced Placement Examination, or who successfully completed Life Sciences 1A or Life and Physical Sciences A. Others should contact the instructor to discuss their preparation.**

Chemistry 27

Organic Chemistry of Life (117558)

Emily Balskus

2020 Spring (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Chemical principles that govern the processes driving living systems are illustrated with examples drawn from biochemistry, cell biology, and medicine. The course deals with organic chemical reactivity (reaction mechanisms, structure-reactivity relationships), with matters specifically relevant to the life sciences (chemistry of enzymes, nucleic acids, drugs, natural products, cofactors), and with applications of chemical biology to medicine and biotechnology. An understanding of organic reactions and their "arrow" pushing mechanisms is required.

Course Notes: **Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.**

Recommended Prep: **Chemistry 17 or Chemistry 30 or Chemistry 20 with permission of the instructor.**

Additional Course Attributes:

Attribute	Value(s)

Chemistry 30

Organic Chemistry (118925)

Andrew Myers

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Continuation of Chemistry 20. Fundamental principles and advanced topics in organic chemistry. Carbonyl chemistry and pericyclic reactions are covered in particular detail, using principles of stereochemistry, stereoelectronic theory, and molecular orbital theory as a foundation. Students learn about strategies in multi-step organic synthesis and are given an introduction into organometallic chemistry. Laboratory: an introduction to organic chemistry laboratory techniques and experimental organic synthesis.

Course Notes: **Chemistry 20 or equivalent.**
Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.

Recommended Prep: **See notes section**

Chemistry 100R

Experimental Chemistry and Chemical Biology (123022)

Heidi Vollmer-Snarr

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Chem 100R is a project-based synthetic, physical organic, and chemical biology research course, where students conduct, present, and write about cutting-edge, faculty-derived research. Students also learn to communicate about the broader applications of their research to nonscientific audiences.

Course Notes: **This course is suitable for students with or without extensive laboratory experience, but must be a student's only for-credit research commitment during the enrolled semester. Open to freshman, sophomores, juniors, and seniors, regardless of concentration.**

Class Trip: This course includes a highly recommended, Harvard-paid, three-day, midweek science advocacy trip to Washington, D.C.,

sometime during the last two weeks of October depending on the Congressional schedule. If participating, students will work with course staff to schedule meetings and present their own talking points to educate their congressional representatives about key scientific issues and concerns.

Recommended Prep: **Chem 30, 27, or S-20ab; and permission of the instructor.**

Additional Course Attributes:

Chemistry 101

Chemical Biology Towards Precision Medicine (124554)

Stuart Schreiber

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 125

Chemical Biology Towards Precision Medicine teaches students principles of modern organic synthesis, chemical biology and human biology relevant to the discovery of safe and effective small-molecule therapeutics in the future. The course will explore patient-based 'experiments of nature' that illuminate disease, including cancer, diabetes, infectious disease and psychiatric disease, among others. Students will then use their knowledge of chemistry and chemical biology to propose research yielding novel small molecules that affect biological systems by mechanisms suggested by the experiments of nature. Chem 101 aims to prepare students for the next decade where academic research tests hypotheses emerging from human biology in humans using novel small-molecule probes.

Chemistry 105 Section: 1

Advanced Organic Chemistry (109454)

Eric Jacobsen

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Advanced reactivity principles in organic chemistry. Students learn 1) fundamentals of structure, bonding, and reaction energetics, 2) to identify and propose mechanisms for common organic, organometallic, and catalytic reactions, along with experiments to test those mechanisms; 3) to analyze the factors controlling rate and selectivity in organic reactions.

Course Notes: **Prerequisites: Two semesters of college-level organic chemistry. At least one course in physical chemistry is strongly recommended.**

Additional Course Attributes:

The Chemistry and Biology of Therapeutics (110241)

Matthew Shair

Brian Liau

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will cover the chemical and biological principles that govern small molecule therapeutics. We will discuss small molecule conformational analysis, chemical forces that drive small molecule-protein interactions, and small molecule binding to proteins to affect disease states. We will also discuss how protein targets are identified and the frontiers of modern small molecule therapeutics. Protein targets include, but are not limited to kinases, proteases, GTPases, scaffolding proteins, epigenetic modifiers, metabolic enzymes and transcription factors. This course will teach students how to use modern computer modeling applications to perform structure-based design of small molecule ligands.

Materials Chemistry (207680)

Jarad Mason

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 50

This course will survey topics in materials chemistry, emphasizing how atomic-level interactions dictate the bulk properties of matter. Basic chemical principles will be applied to discuss the design, synthesis, and characterization of inorganic and organic materials. Specific topics will include: electronic, optical, and magnetic properties of inorganic solids, nanomaterials, micro and mesoporous solids, gas sorption, glasses, ionic liquids, and membranes. The primary literature will be used to highlight key historical discoveries and significant recent results relevant to each of these areas.

The Quantum World (112976)

Cynthia Friend

2019 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

We live in a quantum world. Many essential properties of atoms, molecules and materials stem from their quantum mechanical nature. In this course, we will focus on the quantum mechanical aspects of physical chemistry. The basic principles of quantum mechanics will be introduced in tandem with concepts such as molecular bonding, vibrations, and rotations. The fundamentals of molecular spectroscopy will be seen in the light of quantum mechanics. The second half of the course will introduce molecular electronic structure and properties and what goes behind the sciences in quantum chemistry packages.

Course Notes: **Applied Mathematics 21a and 21b, Mathematics 21a and 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; Physical Sciences 2 or Physics 11a, and Physical Sciences 3 or Physics 11b.**

Chemistry 301HFA

Scientific Teaching and Communications: Practicum (124905)

Gregory C. Tucci

Lu Wang

Sirinya Matchacheep

2019 Fall (2 Credits) **Schedule:** F 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course will teach graduate students how to communicate scientific concepts in the classroom. Students will focus on becoming effective teachers in discussion sections and in the laboratory. The course will emphasize hands-on experience in teaching and explaining scientific concepts. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: **Required of all first-year graduate students in the Department of**

Chemistry and Chemical Biology.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Full Year Course	Indivisible Course

Subject: Physical Sciences

Physical Sciences 1

Chemical Bonding, Energy, and Reactivity: An Introduction to the Physical Sciences (122574)

Kang-Kuen Ni

Sirinya Matchacheep

Nicholas Colella

2020 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The course covers the chemistry and physics underlying molecular phenomena in the world. Starting from a single electron, the course will build up to atoms, molecules, and materials. Interactions of molecules are studied through thermochemistry, equilibria, entropy and free energy, acids and bases, electrochemistry, and kinetics. Applications include physical principles in biology, global energy demands, and modern materials and technology.

Course Notes: **A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.**

This course is part of an integrated introduction to the physical science intended for students who plan to pursue a concentration in the physical or life sciences and/or to satisfy a pre-medical requirement in general/inorganic chemistry. Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep: **A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Course Roll	FAS Course Roll

Physical Sciences 10

Quantum, Statistical, and Computational Foundations of Chemistry (107367)

Adam Cohen

2019 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the fundamental theories of quantum mechanics and statistical mechanics and their role in governing the behavior of matter. The course begins with the quantum behavior of a single electron and develops the elements of the periodic table, the nature of the chemical bond, the bulk electronic and thermal properties of materials, and the thermodynamics of chemical reactions. Applications include semiconductor electronics, solar energy conversion, medical imaging, and the stability and dynamism of living systems. Calculus will be used extensively.

Course Notes: **Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical school can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11.**

Recommended Prep: **A strong background in chemistry (Chemistry AP score of 5, or Physical Sciences 1, or equivalent preparation), mathematics at the level of Mathematics 1b (may be taken concurrently), and some familiarity with physics (force, energy, work, and electric charge).**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Course Roll	FAS Course Roll
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students

Physical Sciences 11

Foundations and Frontiers of Modern Chemistry: A Molecular and Global Perspective (107368)

James Anderson

Gregory C. Tucci

2020 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The Physical Sciences hold the key to solving unprecedented problems at the intersection of science, technology, and an array of rapidly emerging global scale challenges. The course emphasizes a molecular scale understanding of energy and entropy; free energy in equilibria, acid/base reactivity, and electrochemistry; molecular bonding and kinetics; catalysis in organic and inorganic systems; the union of quantum mechanics, nanostructures, and photovoltaics; and the analysis of nuclear energy. Case studies are used both to develop quantitative reasoning and to directly link these principles to global strategies.

Course Notes: **Students are expected to have high school chemistry, or have completed Life and Physical Sciences A (LPS A) or Life Sciences 1a (LS 1a), or have received permission of the instructors. Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical students can be satisfied**

with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11. NOTE: Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep: **A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed.**

Subject: Life & Physical Sciences

Life & Physical Sciences A

Foundational Chemistry and Biology (123833)

Gregory C. Tucci

Nava Gharaei

Sirinya Matchacheep

2019 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces fundamental concepts in chemistry and biology. Topics in chemistry include stoichiometry, acids and bases, aqueous solutions, gases, thermochemistry, electrons in atoms, and chemical bonding. The course also examines biological molecules, the transfer of information from DNA to RNA to protein, and cell structure and signaling.

Course Notes: **The last day to add or switch between Life Sciences 1a (LS 1a) and Life and Physical Sciences A (LPS A) will be Friday, September 13. Students should use their scores on the Chemistry and Biology Placement Tests to determine whether to enroll in Life and Physical Sciences A or Life Sciences 1a. This course assumes fluency with high school algebra. Students who have completed Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, Physical Sciences 11, Chemistry 17 or Chemistry 20 may not take Life and Physical Sciences A for credit.**

Requirements: **Anti-req: Cannot be taken for credit if Life Sciences 1a, OR Physical Sciences 1, OR Physical Sciences 10, OR Physical Sciences 11, OR Chemistry 17 OR Chemistry 20 already complete**

Subject: Classical Archaeology

Classical Archaeology 11

Roman Art (108693)

Adrian Staehli

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides a broad overview of the history Roman art, architecture, and material culture from the time of the Republic through the Imperial period, to the age of Constantine. It offers basic knowledge about core categories of archaeological artifacts and remains within their topographical setting and within the context of Roman culture and society; it also includes issues of methods, theoretical approaches, and problems of current research.

Recommended Prep: **This course is a basic introduction to Roman art and archaeology and specifically designed for undergraduates; graduate students are more than welcome, but the course does not count towards the Classical Archaeology course requirements for graduate students in the Classics programs.**

Classical Archaeology 159

Collecting the Past: Seminar (109366)

Adrian Staehli

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will explore different historical practices of collecting and displaying Greek and Roman art from antiquity through the middle ages to most recent times, including the current debates about cultural propriety and the repatriation of looted antiquities, and investigate how various forms of collecting shape the knowledge of ancient civilizations and, more generally, of the past.

Additional Course Attributes:

Classical Archaeology 252

Parapictoriality (212906)

Adrian Staehli

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar will explore the specific circumstances and conditions that enabled, in Greek and Roman antiquity, to perceive and interpret artefacts, objects, and monuments as images (or visual representations). We will evaluate a variety of recent approaches and theories that offer a better understanding of how cultural practices, cognitive preconditions, and visual tools guide, condition, and frame the perception of visual media in different spatial settings and social contexts.

Recommended Prep: **The seminar addresses graduate students, but also undergraduates with previous exposure to Classical Archaeology, Classical Philology, or Ancient History; graduate students are expected to read German or French scholarship.**

Latin AX

Latin Review and Reading (122177)

Ivy Livingston

2019 Fall (4 Credits) **Schedule:** MTWR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Latin Ax is designed for students who have studied some Latin prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Latin grammar and apply that knowledge to the reading of short classical texts, both literary and non-literary (such as inscriptions). Students should leave the course able to read with the precision that is necessary to use primary sources in research.

Course Notes: **Students wishing to continue after Latin Ax should proceed to Latin 10. No auditors. May be taken Pass/Fail.**

Recommended Prep: **Students considering Latin Ax should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).**

Advanced Latin Prose Composition: Seminar (114908)

Michael Konieczny

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Exercise in the prose style of different authors and periods, working within various subject areas and genres. As a guide to composition, we will read and analyze illustrative passages from authors including Cato, Cicero, Sallust, Livy, Seneca, Tacitus, and Apuleius. Weekly assignments will include both reading and composition. Instead of a final exam, there will be a final composition project.

Latin 1 Section: LEC

Introductory Latin 1 (203025)

Ivy Livingston

2019 Fall (4 Credits) **Schedule:** MTWR -

Instructor Permissions: None **Enrollment Cap:** n/a

Latin 1 is a starting point for those interested in learning to read the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings.

Course Notes: **Students wishing to continue after Latin 1 should proceed to Latin 2, which continues the introductory sequence and prepares students for Latin 3. Auditors allowed with permission of course head.**
May be taken Pass/Fail.

Class Notes: **Latin 1 will be offered in two sections, both MTWTh, one from 9 to 10: 15 and one from 10:30 to 11:45. Attend either time during the first week, and enrollees will be sectioned after the Course Registration Deadline on September 9th.**

Recommended Prep: **None. Latin 1 is an introductory course for students with no prior experience. Those who have studied Latin formally are not permitted to enroll in Latin 1, but should instead consider Latin Ax (Review and Reading) or Latin 1x (Accelerated Introduction to Latin); please consult with the Preceptor in the Classics (livings@g.harvard.edu).**

Additional Course Attributes:

Latin 1X

Accelerated Introductory Latin 1 (203254)

Ivy Livingston

2020 Spring (4 Credits) **Schedule:** MTWRF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Latin 1x is the first half of a two-semester intensive introduction to the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings at a more rapid pace than Latin 1.

Course Notes: **Students wishing to continue after Latin 1x should proceed to Latin 2x, which completes the accelerated introductory sequence and prepares students for Latin 10.**
No auditors. May be taken Pass/Fail.

Recommended Prep: **None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Latin 1x with the permission of the course head.**

Latin 106C

Virgil's Iliadic Aeneid: Aeneid 7–12 (212820)

Richard Thomas

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Reading of the second half of Virgil's *Aeneid*, with attention to meter and focus on improving Latin skills. Consideration of relationship to and differences from the first half, rewriting of Homer, Italian interests and emphasis, ideology, and aesthetics. Some selective study of Virgilian reception in the Roman epic tradition and beyond, and in the translation tradition.

Course Notes: **Open to students who have taken Latin 106b, and to all other qualified students.**

Latin 112B

History of Latin Literature II (121749)

Rachel Love

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will read extensive selections from major authors of the late Republic and Principate across a range of genres, from Vergil to Boethius, and satire to historiography, and consider their form and content against their historical contexts. Class will consist of a mixture of prepared translation from Latin and introductory lectures, while a weekly section will allow students to deepen their grammatical understanding of the texts. Designed for those with a good foundation of Latin grammar and vocabulary, students will be exposed to a robust amount of Latin prose and poetry, and at the end of the course will have acquired a solid grasp on Latin literary history.

Recommended Prep: **Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).**

Latin 115

Tacitus' Annals (121559)

Harry Morgan

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Tacitus' *Annals* are one of the most searching works of historiography ever written, and his Latin style is brilliant, challenging, and addictive. We will read major selections in the original Latin concerning the fraught reigns of the emperors Tiberius, Claudius, and Nero, and evaluate Tacitus' method and the veracity and insight of his account by comparison with contemporary inscriptions, the biographies of Suetonius, and the surviving epitomes of the later historian, Cassius Dio.

Recommended Prep: **Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).**

Latin 117

Livy (110614)

Rachel Love

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will prioritize Livy's role as a storyteller, focusing especially on the author's use of narrative structures in the creation of historical meaning. Through close reading of Latin excerpts across Books 4, 5, and 6 of the *Ab Urbe Condita*, we will use some of the most exciting episodes of Rome's early military history (i.e. the Siege of Veii and the Gallic Sack of Rome) to examine the relationship between history and text. Throughout, we will pay special attention to the form and function of the individual book as a unit of organization in a multi-book work of history.

Recommended Prep: **Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).**

Greek 108

Athenian Deliberative Oratory (117421)

Gregory Mellen

2019 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Close reading of political speeches delivered in the Athenian Assembly, with a focus on Demosthenes' *Philippics* and *Olynthiacs*. Readings in the original Greek will be supplemented by modern scholarship on Athenian politics and government, along with ancient analyses of political rhetoric from authors such as Thucydides, Plato, Aristotle (in translation).

Recommended Prep: **Greek 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).**

Greek 111

Euripides (125873)

Michael Konieczny

2020 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1000 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course will focus on three plays from various stages of Euripides' career: *Medea*, *Iphigenia in Tauris*, and the *Bacchae*. Particular attention will be paid to matters of language, style, and dramatic technique, as well as to the social, historical and intellectual contexts in which the plays were produced. Topics covered include the role of women in Athenian society; representations of the "barbarian"; Euripides' treatment of myth; and the relationship between the rational and irrational, particularly in the *Bacchae*.

Course Notes: **Greek 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).**

Classical Studies 97A

Introduction to the Ancient Greek World (116729)

Paul Kosmin

2019 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will provide a broad overview of Greek history and culture from the Bronze Age through the Hellenistic period. We will survey major political, social, and cultural transformations, as well as major achievements in literature, material culture, and philosophy. Students will acquire familiarity with a wide variety of primary sources (all read in translation), key examples of Greek art and architecture, and selected secondary literature as they learn to appreciate a civilization that is considerably stranger and more complex than the image conveyed by modern commonplaces about "the Greeks."

Course Notes: **Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students

Classical Studies 97B

Introduction to the Ancient Roman World (124050)

Harry Morgan

2020 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course has three components: a chronological survey of Roman history from the beginnings to Late Antiquity; thematic explorations of key features of culture and daily life in Rome as well as other parts of Roman Italy and the provinces (including religion, law and government, elite society, Romanization, urban topography, etc.); and an introduction to the tools and methods available for research on the Roman world, with an emphasis on material culture and documentary sources.

Course Notes: **Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.**

Additional Course Attributes:

Ancient Greek Warfare (212910)

Natasha Bershadsky

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will introduce students to the history and myths of ancient Greek warfare. At its center will be the hoplite phalanx: its transformations through time, its relationship to wider social organization, its rules and rituals, and its lethal potential. We will also explore other modes of fighting, such as naval warfare, cavalry battle, sieges, ambushes, and feints, as well as the employment of mercenary troops and the participation of women and non-Greeks. We will examine many different kinds of ancient evidence, from epic poetry and vase painting (using the collections in the Harvard Art Museums) to historical writings and archaeological finds of arms and armor, and question how these sources can be combined or contrasted to yield radically different interpretations of ancient practices and ideologies.

Dreams in the Ancient World (212902)

Natasha Bershadsky

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In the ancient world, dreams linked the mortal and divine realms, portended disasters, healed the sick, and revealed the structure of the cosmos. They could also deceive and be misinterpreted or parodied. This course begins with an overview of Near Eastern materials, and then introduces students to the cultural significance of dreams in the ancient Greek and Roman worlds. We will read famous literary dreams, selected passages from ancient treatises on the nature of dreams, guides to dream interpretation, and personal accounts of dream experiences. Our examination of ancient dreaming will open the way to thinking about Greek and Roman conceptualizations of perception, vision, and meaning.

Ancient Slavery (212903)

Harry Morgan

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What was it like to be a slave in the ancient world—and why should historians care? This course shines a spotlight on the servile populations of Greece and Rome—their thoughts and experiences, hopes and fears. We will consider how far it is possible to reconstruct the lives of the subservient and downtrodden in antiquity; and how the ancients themselves justified and normalized the institution of slavery in their literature, philosophy, and rhetoric. We will also explore the dark legacy of ancient slavery in modern times, and ask what can be learned from the comparison of slave systems across different time periods and geographical locales. All readings, ancient and modern, are in English.

Classical Studies 152

The Construction of Gender and Sexuality in Ancient Greece (156310)

Naomi Weiss

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will explore ancient Greek ideologies of gender difference and sexuality, including the mythical "origins" of gender, legal definitions of marriage and adultery, the gendering of space, the portrayal of women on the tragic stage, gender-bending and cross-dressing in comedy, medical models of sex and childbirth, and the links between pederasty and pedagogy. With the help of some important modern discussions about the construction of gender, sexuality, and identity, we will try to assess the ways in which sexual practices and male and female identities were imagined, formed, reinforced, and institutionalized during the archaic and classical periods (roughly 800-300 BCE).

The Persian Empire: Images and Realities (212835)

Paul Kosmin

Susanne Ebbinghaus

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will investigate the history and material culture of the Achaemenid Persian Empire, from its foundation by Cyrus the Great to its destruction by the Macedonians, taking a critical look at the available

sources, both textual and visual. We will start with the foundation narratives by which Cyrus and Darius I claimed legitimate command of this empire. Second, and using the collections in the Harvard Museums, we will examine the construction of an imperial center, the development and dissemination of images and trappings of kingship, and the workings of the Achaemenid bureaucracy and administration. Third, we will tour certain provinces, asking how Persian imperialism impacted local communities—Babylonia, Judea, Lydia and Ionia, Egypt, and Caria and Lycia. Finally, after attempting to understand the Persian Empire on its own terms, we will turn to the Greek sources that for so long dominated our understandings.

Class Notes: **This course is capped at 15. Please see the course site and submit the requested statement of interest by the end of the day on Friday, September 6th.**

Recommended Prep: **None.**

Classical Studies 222

Regional Study: Macedonia (109565)

Emma Dench

Paul Kosmin

2020 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 6

This graduate seminar will explore the political and cultural history of Macedonia and northern Greece, from the archaic period to late antiquity. We will focus on questions of change, recurrence, and continuity within the long history of this frontier region, at the threshold of the Aegean and Balkan worlds.
The seminar will be discussion-based, and texts, objects, and ideas will be brought into dialogue around themes that are arranged roughly chronologically. These will include the formation and identity of the Macedonian kingdom, interactions with Balkan and Asian neighbors, conflicts with Greek poleis, imperial expansion and consolidation, provincialization by Rome, and the dynamics of early Christian community building.
Our enquiry will be conducted on several different scales: we will be informed both by close reading of texts and close examination of individual sites and objects, by the different, broader modern arguments into which texts, sites and objects are drawn, and by the big, overarching questions that we will ask as we move across time and place. We will take a week-long, funded tour of Macedonia during Spring Break, in order to visit the most significant archaeological sites and museum collections.

Class Notes: **Enrollment is capped at 6, and is by application only. We regret that we are unable to accommodate auditors.**

Modern Greek 10

Introduction to Modern Greek Texts (212818)

Calliopi Dourou

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is designed for students who possess an intermediate level in Modern Greek. It aims at further development of reading and listening comprehension as well as oral and written expression. The students will expand their vocabulary in thematic areas, such as technology, arts, environment, education, and politics. The course will also offer a targeted review of advanced grammatical phenomena, such as passive voice, indirect speech, and subordinate clauses. At the same time, the students will delve deeper into Modern Greek culture by being exposed to various cultural media, including prose (literary and journalistic), film, and music.

Course Notes: **Conducted in Modern Greek. It prepares students to take "MODGRK 100: Introduction to Modern Greek Literature" in the spring.**

Recommended Prep: **Modern Greek BA or BB or equivalent. Consult with Instructor.**

Modern Greek 90

Modern Greek Language Tutorials (214511)

Calliopi Dourou

2020 Spring (4 Credits) **Schedule:** F 1030 AM - 1145 AM
W 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the instructor to learn more.

Course Notes: **Special topic: Reading Scholarly Modern Greek.**
This tutorial is addressed to students who want to develop literacy competence in order to read Modern Greek scholarly texts. No prior knowledge of the language is required: The entirety of the grammatical concepts and forms necessary to comprehend written academic Greek will be covered. The students will also gain familiarity with various academic genres in Greek (among others, articles, chapters, reviews, lecture transcripts). Emphasis is placed on grammar and on reading strategies that enable students to locate, select, and comprehend texts that are central to their research needs. Students will become familiar with the major stylistic features of contemporary academic Modern Greek and will consolidate their competence through various reading, translating, and writing activities. The assigned material will also familiarize students with basic aspects of Modern Greek life and culture.

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Glimpses of Antiquity: Navigating the contours of Hellenism in Modern Greek Literature

Even as early as the fifteenth century, Greek intellectuals had increasingly begun to identify themselves primarily as *remnants of ancient Greece*. By calling attention to the impressive literary and philosophical achievements of their illustrious ancestors, as well as by foregrounding the continuity between the ancient past and the present, these renowned Hellenists, anticipating the much-coveted *regeneration* of Greece that Adamantios Korais was later to promote so passionately at the dawn of the nineteenth century, were not ushering in a stridently novel conceptualization of Greek antiquity.

Far from being unprecedented, the view that the Byzantines were descended from the ancient Greeks, spawned primarily in the wake of the Fourth Crusade and the concomitant conquest of Constantinople in 1204, enjoyed considerable popularity already in the thirteenth century, when the Empire of Nicaea proudly played a leading role in the reconfiguration of the Byzantine past and dynamically consolidated the reputation of the Byzantines as the true heirs to the enduring legacy of classical Greece.

At this early date, the newly evoked association with the Byzantines' ancient Greek forebears was mostly intended to bring further *kudos* to the traditional identity of the Byzantines *qua* Romans. This association was later to develop into a full-blown alternative identity, which by the second half of the fifteenth century had come to overshadow—or sometimes even eclipse—the identification of the Byzantines as Romans, which had lasted a thousand years.

Against this rich backdrop of sharply shifting perceptions of the ancient Greek past and increased focus on re-elaborations of a Hellenic collective identity, this course will seek to explore the intriguing ways in which Greek writers endeavored to get to grips with their Hellenic heritage in subsequent centuries. Authors to be studied include the following: C. P. Cavafy, Odysseas Elytis, Andreas Kalvos, Kostis Palamas, Alexandros Papadiamantis, Iakovos Pitzipios, Yiannis Ritsos, Giorgos Seferis, Dionysios Solomos, Dido Sotiriou, Georgios Vizyenos.

Course Notes: **Conducted in Modern Greek. Permission of instructor required.**

Classical Philology 239

Intertextuality and Reception from Alexandria to Rome and Beyond (212664)

Richard Thomas

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Exploration of the pragmatics of the intertextual relationship of Hellenistic poetry to the prior Greek tradition, and of republican, Augustan, and imperial Roman poets' further complicating of and building on this practice. Particular attention to the effect of intertextuality on genre and genre formation. How is intertextuality to be situated within the field of reception studies or the classical tradition? What, if any, are or should be the limitations of reception studies within the field of classical philology?

Course Notes: **Requirements: Greek and Latin.**

Venantius Fortunatus (212909)

Adam Trettel

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Participants in this seminar will gain methods for studying rival intellectual traditions by exploring the work and life of Venantius Fortunatus, often called "the last poet of antiquity." In reading him alongside his contemporaries, we will treat him as a case study within a dynamic and rapidly developing political and artistic landscape. Topics to be discussed include late ancient attitudes to friendship and gender; the role of the Roman past in Merovingian political life; Christian use of classical literature; the influence of poetry on Western monasticism and religious practice.

Classical Philology 261

Aeschylus: New Approaches to Early Tragedy (212908)

Naomi Weiss

2020 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar explores some of the most recent trends in scholarship on ancient Greek theater by taking four Aeschylean tragedies as case studies: *Persians*, *Seven Against Thebes*, *Suppliants*, and *Prometheus Bound*. Looking at these plays with attention to materiality, affect, embodiment, visuality, sound, music, and cognition, we will consider how (and whether) such approaches lead us to novel understandings of dramatic texts. At the same time, this seminar is about the experimental nature of Athenian theater as much as it is about the experimental readings of modern scholars. By focusing largely on plays from the first half of the fifth century BCE, we will try to appreciate anew Aeschylus' remarkable innovations during this early phase in the development of tragedy.

Comparative Literature 102

Comparing, Connecting, Compos(t)ing: Comparative Literature from Lucretius to Elfriede Jelinek (205024)

Katharina Piechocki

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar centers on six writers—Lucretius, William Shakespeare, Jules Verne, Virginia Woolf, Aimé Césaire, and Elfriede Jelinek—as well as filmmakers such as Stuart Paton and Maya Deren, composers such as Tchaikovsky, and different visual artists. Unlike other introductory or survey courses, this seminar introduces you to literary studies and related art forms (film, fine arts, music, science, etc.) through the practice of slow reading. We typically dedicate two weeks to one author whose work we explore more carefully (reading a book in its entirety, not samples), by couching it in an interdisciplinary context. This means that we will read fewer pages per week, but we will study them in a more focused way. Slowing down our reading pace will allow us to appreciate more deeply how writers and artists created and understood the world around them and why they still inspire and transform us today. It will allow us to engage in-depth with the specific media and means they use(d) to create their works (style, genre, etc.). Some recurring topics that will accompany us throughout the semester include the environment, the importance and variety of nature, migration, and gender. Through close reading of carefully selected works, accompanied by major critical and theoretical statements, we will sharpen our interpretive skills and engage with literary, visual, and aural texts from the past two millennia as we'll explore the relation of literature to topics as diverse as the rise of new media, technological transformation and its relation to the humanities, the

human/non-human divide, medicine, sexuality, translation, space, race, ecology, violence, and (post-) colonialism. Film screenings and visits to the Houghton Library, Harvard Museum of Natural History, and the Institute of Contemporary Art in Boston are an important part of the course.

Comparative Literature 106

The Yiddish Short Story: Folk Tales, Monologues, and Post-Apocalyptic Parables (212720)

Saul Zaritt

2020 Spring (4 Credits) **Schedule:** W 0900 AM - 1100 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Who are the storytellers of Yiddish literature? Where did their stories come from? Why did the short story become the central genre of modern Jewish literary culture? This course explores the genealogy of the Yiddish short story from the hasidic folk tale to the modernist sketch, from the monologues of Sholem Aleichem and Isaac Bashevis Singer to the haunting narratives of David Bergelson and Der Nister. Stretching from the nineteenth century to the present, we follow the short story in its comparative contexts from Eastern Europe to Western Europe, Palestine/Israel, and the US. Note: All texts will be taught in translation; optional reading section for those with Yiddish knowledge.

Translating World Literature (212721)

Luke Leafgren

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course, students will read selections from a dozen works from the canon of world literature with particular attention to their existence as translated texts. The course will highlight the role of translation in the history of a text and its reception within new contexts. By reading different translations of the same work, students will be able to examine the choices translators have made, consider the ethical responsibilities of the translator, and explore the role of translation in mediating the meaning of the text. The course will also incorporate short readings on translation theory and presentations on the original languages of composition. Assignments will include written comparisons of different translations, with the option to translate a text into English.

Modernism in Theory and Practice (212773)

David Damrosch

2019 Fall (4 Credits) **Schedule:** M 0345 PM - 0444 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Modernism was an exceptionally critically self-aware movement, marked by manifestoes, arguments with friends and against enemies, and theoretical reflections woven into literary works. This course explores the interplay of theory and practice in the work of three major European modernists, Marcel Proust, Virginia Woolf, and Franz Kafka, from diaries and letters to programmatic essays to major novels, looking particularly at formal experiment and social concern, the construction of political, religious, and sexual identity, and transformations of narrative time and novelistic space.

David Stern

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Judaism is a famously text-centric religious culture, founded not only on a single book, the Hebrew Bible, but profoundly involved in the study and ritual use of other classic texts like the Babylonian Talmud, the Prayerbook, Biblical commentaries like that of Rashi, and the Passover Haggadah. This course will study the development of these four books and their transformation from texts into books with distinct physical and material features. In the case of each book, the text will be studied historically-- "excavated" for its sources and roots, and its subsequent development over the centuries—and holistically, as a canonical document in Jewish tradition. Class time will be devoted primarily to learning to read the primary sources in translation; supplementary secondary readings will provide historical and cultural context The seminar will also include regular visits to Houghton Library to look at manuscripts, early printed editions, and facsimiles of these books in order to study the changing shapes these books have taken as a key to understanding how they were studied and used, and to consider the relationship of materiality to textuality. While each book will raise its own set of issues, we will repeatedly deal with three basic questions: What makes a "Jewish" text? How do these books represent different aspects of Jewish identity? What can these books tell us about the canonical books of other religious traditions?

No previous background in either Judaism or Jewish history is required. All readings in English translation. While this course is not a formal introduction to Judaism, it does aim to introduce students to Judaism and Jewish culture from *inside* its classic texts.

Global Crime Fiction: Tackling Crime, Corruption, and Social Disintegration (205067)

Karen Thornber

2019 Fall (4 Credits) **Schedule:** M 0600 PM - 0845 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Crime fiction is one of literature's most popular genres, with hundreds of millions of fans across the globe. Both local and foreign crime fiction, the latter often in translation, flies off bookshelves from Boston to Barcelona to Beijing and beyond, regardless of whether the novel takes place in a small Swedish village or in multiple cosmopolitan megacities. Why is this? Part of it is in the storytelling. Who can resist a gripping whodunit with unexpected twists and turns and often with an appealing investigator or detective (professional or amateur), particularly if everything is resolved at the end, and often in ways we least expect? But part of the appeal of crime fiction is also the insights this genre can offer into some of the most significant challenges facing societies globally. In this course we will read a selection of bestselling crime fiction from the Americas, Africa, Asia, Europe, and the Middle East. We will be most concerned with what this literature tells us about investigating, exposing, and potentially ameliorating historical crimes, environmental crimes, corruption in criminal justice, and social disintegration, particularly as these involve injustices inflicted on marginalized and otherwise vulnerable individuals and communities, people targeted on account of their class, ethnicity, gender, race, religion, sexuality and other factors. Secondary readings and class discussion will provide the necessary cultural and literary contexts for these readings.

Science Fiction (214536)

Jacob Emery

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Considers science fiction's development and shifting emphases in both of its major traditions, in Russia and in the English-speaking world. Touches on perennial themes of the genre including: our relationship to the future and the hypothetical; the technological mediation of human existence; the limits of space and time and the consequences of surpassing them; non-human and non-organic consciousness; radically different forms of human togetherness; and various apocalyptic scenarios. Reading list might include: H.G. Wells, Alexander Bogdanov, Eugene Zamiatin, Ursula K. LeGuin, Philip K. Dick, the Strugatsky Brothers, Octavia Butler, and China Miéville, as well as select films.

Nabokov (212711)

Justin Weir

2019 Fall (4 Credits) **Schedule:** W 0600 PM - 0845 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course on the major fiction of Vladimir Nabokov begins with his major Russian novels in English translation, including *The Defense*, *Laughter in the Dark (Camera Obscura), Invitation to a Beheading*, and *Despair*, and concludes with classic English works, *Speak*, *Memory*, *Lolita*, and *Pnin*. Topics in the course include emigration and cross-cultural translation, literary modernism, metafiction, nostalgia and stories of childhood, as well as the literary representations of tyranny, violence, and abuse. We will pay additional attention to Nabokov's interest in film and film aesthetics, and we will consider four screen versions of his novels (*Luzhin's Defense, Laughter in the Dark, Despair*, and *Lolita*).

Performance and Lyric (212724)

Gregory Nagy

2020 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A re-examination of "Lyric" as *occasion* as well as *genre*. Central questions to be explored will include: how do the "lyrics" of composed song come alive in performance? For example, how do the two librettists of Puccini's opera *La Bohème* contribute to the making of a masterpiece in song? Shared readings include *The Lyric Theory Reader: A Critical Anthology*, edited by Virginia Jackson and Yopie Prins. Students are free to select as their focus of research any particular "lyric" traditions, composed in whatever language. No previous knowledge of literary theory is presumed.

From Type to Self in the Middle Ages (112654)

Luis Giron Negron

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

It has been argued that the poetic "I" in premodern literatures is not a vehicle for self-representation, but an archetype of the human. The course will examine this thesis against the rise of autobiographical writing in medieval and early modern Europe. Readings include spiritual autobiographies (Augustine, Kempe, Teresa of Ávila), letter collections, *maqama* literature, troubadour lyric, Hispano-Jewish poetry, pilgrimage narratives, medieval allegories, Dante and the picaresque novel. Theoretical perspectives by Spitzer, Lejeune, Zumthor and DeCerteau.

Course Notes: **This course counts for the Romance Studies track in the Department of Romance Languages and Literatures.**

Comparative Literature 166

Jews, Humor, and the Politics of Laughter (205045)

Saul Zaritt

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

By mistake some thieves found their way into Hershele's house late at night while he was sleeping. They searched and searched but found nothing. Meanwhile, Hershele heard their rummaging and slowly crept up behind one of the thieves. He grabbed him by the arm and the thief, naturally, tried to run away. Hershele held him close, whispering, "Be still. Maybe together we'll actually find something." Beginning with jokes like this one, this course will examine the question of Jewish humor, exploring the concept of therapeutic joking, the politics of self-deprecation, and strategies of masking social critique behind a well-timed joke. Rather than reach some essential definition, we will instead investigate literature, stand-up comedy, film, and television of the twentieth and twenty-first century in order to 1) think together about the theory, mechanics, and techniques of comedy and humor and 2) ask how and when a text or performance gets labeled Jewish, by whom and for what purposes. Texts, films, and performers include: Freud, Kafka, Sholem Aleichem, the Marx Brothers, Belle Barth, Mel Brooks, Joan Rivers, Larry David, Sarah Silverman, Broad City, and Rachel Bloom.

Prayer and Prayerbook (Tefillah and Siddur) (215117)

David Stern

2020 Spring (4 Credits) **Schedule:** T 1245 PM - 0330 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The institution of organized prayer—Tefillah be-Tzibbur—is one of the most complex phenomena in Judaism because it has served historically not only as a medium for worshipping God but also for expressing communal religious identity. In the first half of this course, we will study the development of prayer from the Bible until the medieval period through reading primary sources--select passages from the Bible, Talmud and midrash, Geonic literature and other rabbinic texts—as well as secondary works for historical and literary background. We will also trace the development of piyyut, Hebrew liturgical poetry, and what it can tell us about the character of Jewish prayer. In the second part of the course, we will study the history of the prayerbook as a physical, material object from the early medieval period into the modern. Special attention will be paid to the great illustrated Ashkenazi and Italian mahzorim (holiday prayerbooks) and siddurim, and to the place of the visual imagination in Jewish religious culture. One class will also be devoted to the development of the synagogue and sacred space. The course will also include visits to Houghton Library to view original editions and rare facsimiles of manuscripts.
While the class itself will be conducted in English, all primary sources will be read in Hebrew. Students should be able to read unpointed Hebrew texts.

Comparative Literatures of the Indian Ocean (212712)

Annette Lienau

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0130 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The maritime counterpart to ancient trade routes that brought silk and cannon-fire to Europe, the Indian Ocean was a space re-imagined through successive tides of trade, conquest, and exploration, historically mediating between the diverse cultures of three continents. This course introduces students to the literatures of this cosmopolitan space and to its historic lines of influence and exchange, through a comparative reading of literary texts drawn from its perimeter and from travel accounts both fictional and historical/semi-biographical. Readings will include Indic, Arabic, and Persian classics, Sufi poetry from across Asia and Africa, travel narratives in Portuguese and English, and twentieth century writing and film.

Public Humanities Workshop (212800)

Martin Puchner

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Public humanities are becoming increasingly central for careers both inside and outside of academia. This workshop, which is open to beginning and advanced graduate students, introduces participants to the tools they need to address audiences other than specialists in their own field. These tools range from writing op-eds based on dissertation research to writing general interest books, and also include book reviews, podcasts, social media strategies and more. While we will discuss some historical context, the emphasis is on practice and skills. Our work will be supplemented by visits from editors and literary agents.

Comparative Literature 248

Literature, Cartography, and the Spatial Turn from Homer to Claire Coleman (212714)

Katharina Piechocki

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What is the impact of space, geography, and mapping not only on the study of literature, but also on the writing process itself? By bringing cartography and the spatial turn in dialogue with comparative literature this seminar asks: what can be gained when literary texts are read "cartographically," with an emphasis on the tension between narrative and spatial imaginary? How does the question of border, place, and territory articulate itself in literary texts and emerge as one of literature's principal challenges? How does the spatial turn not only reevaluate modes of visualization and strategies of mapping, but also redirect comparative literature? This seminar does not take maps and keywords such as place, space, and location as fixed categories, but as malleable and ever-changing processes to understand, create, and challenge the world. We will discuss maps alongside texts from Antiquity to the 21st century and focus, among others, on questions such as exile, contested territories, the environment, insularity, underwater optics, poetics, style, utopia, (post-)apocalyptic spaces, and heterotopia. Texts and authors include Homer, Plato, the Bible, Ptolemy, Macrobius, Ibn Khurradādhbih, an anonymous 11th-century Egyptian Book of Curiosities, Christopher Columbus, Thomas More, Francis Bacon, Aphra Behn, Kamau Brathwaite, Édouard Glissant, Jamaica Kincaid, Wisława Szymborska, Charles Olson, Mia Couto, and Claire Coleman. Visits to Harvard's Houghton and Pusey (Map) Libraries are an intrinsic part of the course.

Literary Translation: A Workshop (214533)

Thomas Wisniewski

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

A graduate workshop in literary translation. Students' work-in-progress on a semester-long translation project will be presented, discussed, and critiqued each week with the aim of publication. Readings on strategies and methodologies will complement participants' work in the seminar's shared enterprise of exploring the pleasures and risks that the translation of literature entails. Working as scholars and practitioners, we will challenge the division between theory and practice in the field of translation studies today. Guest translator-scholars will visit the workshop. *Requirements*: All source languages are welcome; translations into English. Enrollment limited to twelve (graduate and advanced undergraduates); course application due the first week of the term.

Computer Science

Subject: Computer Science

Computer Science 1

Great Ideas in Computer Science (119953)

Henry Leitner

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the most important discoveries and intellectual paradigms in computer science, designed for students with little or no previous background. Explores problem-solving using high and low-level programming languages; presents an integrated view of computer systems, from switching circuits up through compilers and GUI design. Examines theoretical and practical limitations related to unsolvable and intractable computational problems, and the social and ethical dilemmas presented by such issues as software unreliability and invasions of privacy.

Course Notes: **May not be taken for credit after completing Computer Science 50.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 10

Elements of Data Science (212950)

Hanspeter Pfister

Joseph Blitzstein

Xiao-Li Meng

Liberty Vittert

2020 Spring (4 Credits) **Schedule:** MWF 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 100

Data science combines data, statistical analysis, and computation to gain insights and make useful inferences and predictions. This course will take a holistic approach to helping students understand the key factors involved, from data collection and exploratory data analysis to modeling, evaluation, and communication of results. Working on case studies and a final project in teams will provide students with hands-on experience with the data science process using state-of-the-art tools. Emphasis will be given to the strengths, trade-offs, and limitations of each method to highlight the importance of merging analytical skills with critical quantitative thinking.

Course Notes: **Also offered as STAT 10. Students may not take both for credit.**

Please note that the enrollment cap of 100 is a combined total for both STAT 10 and COMPSCI 10.

Class Notes: **If you are interested in joining this course please fill out this form [https://forms.gle/CWG6j4qsiFb6gDRt5] by Wednesday, January 29, 11: 59 pm EST. We will notify you on Friday, January 31.**

Requirements: **Anti-requisite: Cannot be taken for credit if AC 209A or CS 109A or STAT10 or STAT 121A is already complete.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 20

Discrete Mathematics for Computer Science (128073)

Rebecca Nesson

2020 Spring (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Widely applicable mathematical tools for computer science, including topics from logic, set theory, combinatorics, number theory, probability theory, and graph theory. Practice in reasoning formally and proving theorems.

Course Notes: **Covers material used in Computer Science 121 and Computer Science 124. Ordinarily, not to be taken after those courses or after courses such as Applied Mathematics 106, Applied Mathematics 107, Mathematics 101, and Mathematics 153.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS: Final Assessment Category	Three-hour Exam

Computer Science 50

Introduction to Computer Science (152514)

David Malan

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, and software engineering. Languages include C, Python, and SQL plus students' choice of: HTML, CSS, and JavaScript (for web development); Java or Swift (for mobile app development); or Lua (for game development). Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project.

Designed for concentrators and non-concentrators alike, with or without prior programming experience. Two thirds of CS50 students have never taken CS before. Among the overarching goals of this course are to inspire students to explore unfamiliar waters, without fear of failure, create an intensive, shared experience, accessible to all students, and build community among students.

Class Notes: **This course ordinarily meets for lectures in Sanders Theatre on Mondays, 3pm–5pm, but the course's first lecture will be in Sanders Theatre on Wednesday, 9/4/19, 3pm–5pm, during shopping period. Students are expected to attend the course's first eight lectures in person unless simultaneously enrolled in (or, during shopping period, shopping) another course that meets at the same or overlapping time, in which case they may watch CS50's lectures online and attend the other course in person. (The Ad Board has already granted this exception for CS50; no other steps are required.) Students with other academic or athletic conflicts should email the course's heads. After the course's eighth lecture, all students will watch their choice of lectures (on web development, mobile app development, or game development) online. CS50 is ordinarily graded SAT/UNS, though students whose concentration requires letter grades should change their grading status to letter-graded by the term's fifth Monday. Students may take CS50 SAT/UNS to fulfill the Science and Engineering and Applied Science distribution requirement or the Quantitative Reasoning with Data requirement, but not both. First years may take both CS50 and a freshman seminar SAT/UNS. Graduate students are welcome to cross-register for CS50. All students are expected to attend an orientation meeting during the second week of term; students with conflicts may watch online. Required sections to be arranged. See cs50.harvard.edu for FAQs, syllabus, and what's new for Fall 2019.**

Additional Course Attributes:

Computer Science 50

Introduction to Computer Science (152514)

David Malan

Brian Yu

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, and software engineering. Languages include C, Python, and SQL plus HTML, CSS, and JavaScript. Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project.

Class Notes: **This spring version of CS50 is for undergraduate concentrators who**

were unable to take the course in Fall 2019. All students, including concentrators and non-concentrators, are encouraged to take CS50 in fall term instead. See cs50.harvard.edu/spring for differences between fall term and spring term. Students must register via my.harvard for and attend weekly class meetings on Tuesdays, 3pm–5:45pm. Instructor-led tutorials to be arranged.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Computer Science 51

Abstraction and Design in Computation (112960)

Stuart Shieber

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Fundamental concepts in the design of computer programs, emphasizing the crucial role of abstraction. The goal of the course is to give students insight into the difference between programming and programming well. To emphasize the differing approaches to expressing programming solutions, you will learn to program in a variety of paradigms -- including functional, imperative, and object-oriented. Important ideas from software engineering and models of computation will inform these different views of programming.

Course Notes: **Formerly Introduction to Computer Science II.**

Class Notes: **Students interested in enrolling in CS51 for spring 2020 should make sure to attend the two introductory lectures on January 28 and 30 at 10:30am in Science Center B.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 61

Systems Programming and Machine Organization (123623)

Eddie Kohler

Michael Smith

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Fundamentals of computer systems programming, machine organization, and performance tuning. This course provides a solid background in systems programming and a deep understanding of low-level machine organization and design. Topics include C and assembly language programming, program

optimization, memory hierarchy and caching, virtual memory and dynamic memory management, concurrency, threads, and synchronization.

Recommended Prep: **CS50 or some experience programming in C.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 91R

Supervised Reading and Research (113257)

Stephen Chong

Boaz Barak

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Supervised individual study of advanced topics in computer science. A student wishing to enroll in Computer Science 91r must be accepted by a faculty member who will supervise the course work. Additional information and a form are available via https://harvardcs.info/forms/#cs-91r-form. The form must be filled out and signed by the student and faculty supervisor. Students writing theses may enroll in this course while conducting thesis research and writing.

Course Notes: **At most two terms of Computer Science 91r may be taken for academic credit. May not be taken Pass/Fail. Students wishing more information about the range of suitable projects or faculty supervisors should consult the Director of Undergraduate Studies.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 100

CS+X: Software Engineering in the Arts and Humanities (207609)

Douglas Lloyd

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Introduction to applications of computer science (including web technologies, visualization, and database design) to domains in the arts and humanities. Emphasis on principles of software engineering and best practices, including code reviews, source control, and testing. Languages include JavaScript and SQL. Students work in teams to design and implement solutions to problems proposed by faculty from departments across campus. Offered jointly with Yale University.

Class Notes: **Enrollment limited. Apply at cs.harvard.edu/100.**

Recommended Prep: **CS50 or equivalent required.**

Additional Course Attributes:

Attribute	Value(s)

Privacy and Technology (125407)

James Waldo

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 36

What is privacy, and how is it affected by recent developments in technology? This course critically examines popular concepts of privacy and uses a rigorous analysis of technologies to understand the policy and ethical issues at play. Case studies: database anonymity, research ethics, wiretapping, surveillance, and others. Course relies on some technical material, but is open and accessible to all students, especially those with interest in economics, engineering, political science, computer science, sociology, biology, law, government, philosophy.

Computer Science 108

Intelligent Systems: Design and Ethical Challenges (160419)

Milind Tambe

David Grant

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course explores the use of artificial intelligence to tackle difficult social problems, and considers how to address ethical challenges that arise through appropriate design techniques. Drawing on work by computer scientists, philosophers, and social scientists, we will analyze several real-world case studies featuring the application of AI methods to problems in public health, conservation and public safety, including HIV prevention, tuberculosis prevention, predictive policing, and wildlife conservation. The course will also feature guest lectures from experts in social work, anthropology, criminology, and public health.

Course Notes: **The course presumes basic programming ability, but welcomes concentrators in the humanities and social sciences as well as science and engineering.**

Recommended Prep: **CS 50**

Additional Course Attributes:

Attribute	Value(s)

Computer Science 109A

Data Science 1: Introduction to Data Science (109899)

Pavlos Protopapas

Kevin A. Rader

Christopher Tanner

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and

interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes: **Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.**

Recommended Prep: **Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).**

Requirements: **Not to be taken in addition to Applied Computation 209, or Applied Computation 209A, or Statistics 121, or Statistics 121A.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 109B

Data Science 2: Advanced Topics in Data Science (203546)

Pavlos Protopapas

Mark Glickman

Christopher Tanner

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes: **Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.**

Recommended Prep: **CS 109a, AC 209a, or Stat 121a required.**

Requirements: **Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking CS 109B) AND (Not to be taken in addition to CS 109, OR APCOMP 209, OR APCOMP 209B, OR STAT 121, OR STAT 121B.)**

Additional Course Attributes:

Computer Science 121

Introduction to Theoretical Computer Science (119064)

Boaz Barak

Madhu Sudan

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Computation occurs over a variety of substrates including silicon, neurons, DNA, the stock market, bee colonies and many others. In this course we will study the fundamental capabilities and limitations of computation, including the phenomenon of universality and the duality of code and data. Some of the questions we will touch upon include: Are there functions that cannot be computed? Are there true mathematical statements that can't be proven? Are there encryption schemes that can't be broken? Is randomness ever useful for computing? Can we use the quirks of quantum mechanics to speed up computation?

Course Notes: **Students may not receive credit for both CS 121 and CS 125.**

Class Notes: **Midterms will be on Thursday, October 10, 7pm and Thursday, November 14, 7pm.**

Recommended Prep: **Experience in formal mathematics at the level of CS 20. A "Homework Zero" will be posted on the course website cs121.boazbarak.org by July 1st. It is highly recommended that students complete it before the first lecture.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 124

Data Structures and Algorithms (115384)

Michael Mitzenmacher

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Design and analysis of efficient algorithms and data structures. Algorithm design methods, graph algorithms, approximation algorithms, and randomized algorithms are covered.

Course Notes: **Starting in the spring of 2013, Computer Science 124 will assume background from Computer Science 20. Students will not receive credit for both CS 124 and CS 125.**

Recommended Prep: **Computer Science 50 or equivalent; Computer Science 51 is helpful.**

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 126

Fairness and Privacy: Perspectives of Law and Probability (204972)

Cynthia Dwork

Martha Minow

2019 Fall (4 Credits)

Schedule: W 0900 AM - 1015 AM
M 0900 AM - 1010 AM

Instructor Permissions: Instructor

Enrollment Cap: 24

Students will learn to analyze and mitigate privacy loss, unfairness, and lack of statistical validity, in data analysis. Principal techniques will come from cryptography, differential privacy, and the newly emerging areas of adaptive data analysis and fairness in machine learning.

Course Notes: **Course enrollment limited. Offered jointly by HLS and SEAS, with interwoven tracks emphasizing, respectively, law and computer science, the tracks will meet jointly and separately. Admission is by permission of instructors; applicants should submit letters of inquiry with CVs to Rachel Keeler, rkeeler@law.harvard.edu, by August 25, 2019.**

Class Notes: **Please note that we are still reviewing applications for the CS portion of this course, and final acceptance decisions may come later in shopping week. CS Applicants should submit letters of inquiry with CVs to Allison Choat, achoat@g.harvard.edu, by midnight, Wednesday, September 4. All applicants should plan to attend an opening lecture dinner for the class at 7:00 PM, Tuesday, Sept. 3rd, on HLS campus (room TBD). To attend the dinner, e-mail Allison Choat at achoat@g.harvard.edu prior to Thursday, August 29, at 3:30 PM. Whether or not you can attend the dinner, if you have not been informed of your application status, please plan to attend the first formal CS-specific class on Wednesday, September 4th, 9:00-10:15 AM, in Maxwell-Dworkin 221.**

Cryptography (109566)

Boaz Barak

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Cryptography is as old as human communication itself, but has undergone a revolution in the last few decades. It is now about much more than "secret writing" and includes seemingly paradoxical notions such as communicating securely without a shared secret, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as fully homomorphic encryption and software obfuscation. This is a proof-based course that will be best appreciated by mathematically mature students.

Course Notes: **This course will be offered in both an undergraduate and graduate versions. The graduate version will involve an additional project.**

Recommended Prep: **Comfort with mathematical proofs at the level of CS121, CS124 or similar. Please contact the instructor if you're unsure if your background is sufficient.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 136

Economics and Computation (128164)

David Parkes

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The interplay between economic thinking and computational thinking as it relates to electronic commerce, social networks, collective intelligence and networked systems. Topics covered include: game theory, peer production, reputation and recommender systems, prediction markets, crowd sourcing, network influence and dynamics, auctions and mechanisms, privacy and security, matching and allocation problems, computational social choice and behavioral game theory. Emphasis will be given to core methodologies, with students engaged in theoretical, computational and empirical exercises.

Course Notes: **Formerly Computer Science 186**

Recommended Prep: **Applied Math 21b, Computer Science 51 or equivalent, Statistics 110, and one of Computer Science 181, Computer Science 182, Economics 1011a, Economics 1052, or Economics 1056.**

Computing Hardware (113856)

Vijay Janapa Reddi

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on *digital* devices and systems, and it complements ENG-SCI 152, which focuses on devices and systems that use analog electronics. Topics include: combinational and sequential logic; computer architecture; machine code; and altogether the infrastructure and computational framework composing a MIPS processor. Consideration is given in design to interactions between hardware and software systems. Students will design application specific hardware for an embedded system.

Recommended Prep: **CS50 or programming experience required.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam

FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 143

Computer Networks (118418)

H. Kung

2019 Fall (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Computer networking has enabled the emergence of mobile and cloud computing, creating two of the most important technological breakthroughs in computing of the past decade. We expect three major focuses in the next ten years. First, we will witness the emergence of 5G wireless mobile networks, which will begin to replace the current 4G networks as early as 2020, enabling new applications and paradigm shifts in edge computing, such as uploading sensor data for AI applications everywhere. Second, cyber security, and in particular its relation to networking and supply chain security for 5G network infrastructure, will receive unprecedented attention from industry. Third, blockchain technology, which has powered Bitcoin, is creating a new trusted network infrastructure that will allow information to be distributed but not copied. While these areas are each rich in intellectual content on their own, they will also interplay with one other, creating interesting opportunities for those versed in all three. In order to play a role in this era of network-based computing, students must have a thorough understanding of these networking technologies and applications. Beyond teaching the basic networking protocols, which have become very mature and can be treated as a black box, in CS 143, we will teach new networking issues and topics of significance. This focus on upcoming wireless, cyber security as it relates to networks, network infrastructure, and the broader supply chain, and blockchain advancements is the motivation for CS 143 this semester. Students in the course will read and discuss basic material as well as the latest literature, work on homework assignments, gain hands-on experience through network programming, and have the opportunity to present the concepts and insights learned through a final project.

Recommended Prep: **CS50 (or programming experience) and a strong interest in the subject matter. Lab sessions will be provided to give extra support.**

Networking at Scale (208314)

Minlan Yu

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Clouds have become critical infrastructures for many applications in business and society (e.g., social media, public health, and entertainment). In this course, we will take a look inside the cloud infrastructure and learn critical technology trends and challenges in the networking and computing layers. We will discuss the design choices of performance, scalability, manageability, and cost in various cloud companies such as Amazon, Google, Microsoft, and Facebook. This course includes lectures and system programming projects.
More information can be found at https://github.com/minlanyu/cs145spring20.

Recommended Prep: **System programming at the level of CS 61 or CS 143**

Additional Course Attributes:

Attribute	Value(s)

Computer Architecture (113270)

David Brooks

2019 Fall (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Review of the fundamental structures in modern processor design. Topics include computer organization, memory system design, pipelining, and other techniques to exploit parallelism. Emphasis on a quantitative evaluation of design alternatives and an understanding of timing issues.

Recommended Prep: **Computer Science 61**

Requirements: **Prerequisite: Computer Science 141**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 148

Design of VLSI Circuits and Systems (110990)

Gu-Yeon Wei

2020 Spring (4 Credits) **Schedule:** WF 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Presentation of concepts and techniques for the design and fabrication of VLSI systems and digital MOS integrated circuits. Topics include: basic semiconductor theory; MOS transistors and digital MOS circuits design; synchronous machines, clocking, and timing issues; high-level description and modeling of VLSI systems; synthesis and place and route design flows; and testing of VLSI circuits and systems. Various CAD tools for design, simulation, and verification are extensively used.

Course Notes: **Offered in alternate years.**

Recommended Prep: **Computer Science 141 or permission of instructor.**

Requirements: **Prerequisite: Computer Science 141**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Computer Science 152

Programming Languages (119629)

Nada Amin

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Comprehensive introduction to the principal features and overall design of both traditional and modern programming languages, including syntax, formal semantics, abstraction mechanisms, modularity, type systems, naming, polymorphism, closures, continuations, and concurrency. Provides the intellectual tools needed to design, evaluate, choose, and use programming languages.

Recommended Prep: **Computer Science 51; Computer Science 121 is recommended. Students must have good programming skills, be very comfortable with recursion, proofs, basic mathematical ideas and notations, including sets, relations, functions, and induction.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS: Final Assessment Category	Three-hour Exam

Computer Science 153

Compilers (131493)

Stephen Chong

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Implementation of efficient interpreters and compilers for programming languages. Associated algorithms and pragmatic issues. Emphasizes practical applications including those outside of programming languages proper. Also shows relationships to programming-language theory and design. Participants build a working compiler including lexical analysis, parsing, type checking, code generation, and register allocation. Exposure to run-time issues and optimization.

Recommended Prep: **Computer Science 51 or 61.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Computer Science 161

Operating Systems (113847)

James Mickens

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course focuses on the design and implementation of modern operating systems. The course discusses threads, processes, virtual memory, schedulers, and the other fundamental primitives that an OS uses to represent active computations. An exploration of the system call interface explains how applications interact with hardware and other programs which are concurrently executing. Case studies of popular file systems reveal how an OS makes IO efficient and robust in the midst of crashes and unexpected reboots. Students also learn how virtualization allows a physical machine to partition its resources across multiple virtual machines. Class topics are reinforced through a series of intensive programming assignments which use a real operating system.

Recommended Prep: **Computer Science 61.**

Additional Course Attributes:

Attribute	Value(s)

Computer Science 165

Data Systems (119249)

Stratos Idreos

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We are in the big data era and data systems sit in the critical path of everything we do. We are going through major transformations in businesses, sciences, as well as everyday life - collecting and analyzing data changes everything and data systems provide the means to store and analyze a massive amount of data. This course is a comprehensive introduction to modern data systems. The primary focus of the course is on the modern trends that are shaping the data management industry right now: column-store and hybrid systems, shared nothing architectures, cache conscious algorithms, hardware/software co-design, main-memory systems, adaptive indexing, stream processing, scientific data management, and key-value stores. We also study the history of data systems, traditional and seminal concepts and ideas such as the relational model, row-store database systems, optimization, indexing, concurrency control, recovery and SQL. In this way, we discuss both how and why data systems evolved over the years, as well as how these concepts apply today and how data systems might evolve in the future. We focus on understanding concepts and trends rather than specific techniques that will soon be outdated - as such the class relies largely on recent research material and on a semi-flipped class model with a lot of hands-on interaction in each class.

Recommended Prep: **Computer Science 51 and Computer Science 61.**

Computer Science 179

Design of Useful and Usable Interactive Systems (123971)

Elena Glassman

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 71

The course covers skills and techniques necessary to design innovative interactive products that are useful, usable and that address important needs of people other than yourself. You will learn how to uncover needs that your customers cannot even articulate. You will also learn a range of design principles, effective creativity-related practices, and techniques for rapidly creating and evaluating product prototypes. You will also have several opportunities to formally communicate your design ideas to a variety of audiences. You will complete two large team-based design projects.

Additional Course Attributes:

Attribute	Value(s)

GSD: MDS/MDE Rec. Elec.	MDE recommended elective

Computer Science 181

Machine Learning (148156)

Finale Doshi-Velez

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to machine learning, providing a probabilistic view on artificial intelligence and reasoning under uncertainty. Topics include: supervised learning, ensemble methods and boosting, neural networks, support vector machines, kernel methods, clustering and unsupervised learning, maximum likelihood, graphical models, hidden Markov models, inference methods, and computational learning theory. Students should feel comfortable with multivariate calculus, linear algebra, probability theory, and complexity theory.

Students will be required to produce non-trivial programs in Python.

Recommended Prep: **Computer Science 51, Statistics 110, Math 21a and 21b (or equivalent).**

Additional Course Attributes:

Attribute	Value(s)

Computer Science 183

Foundations of Machine Learning (215691)

Yaron Singer

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course provides an extensive account of the fundamental ideas underlying machine learning and the basic algorithms used in practice. The course first formalizes basic concepts used to establish the theory and language of machine learning. These concepts include PAC learnability, sample complexity, and the VC dimension. The course then covers the concepts of convexity, regularization, and stability as well as important algorithmic paradigms including stochastic gradient descent, boosting, support vector machines, kernel methods, feature selection, and neural networks.

Course Notes: **Students cannot take both CS 181 and CS 183 for credit.**

Recommended Prep: **Math23a, 25a, or 55a; OR Math 21b and either CS121 or CS124.**

Requirements: **Cannot be taken for credit if COMPSCI 181 already complete.**

Autonomous Robot Systems (127551)

Radhika Nagpal

2020 Spring (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Building autonomous robotic systems requires understanding how to make robots that observe, reason, and act. Each component uses many engineering principles: how to fuse, multiple, noisy sensors; how to balance short-term versus long-term goals; how to control one's actions and how to coordinate with others. This year theme will be "Robots Roam the Halls", where we will focus on kinect-based robots that move in the SEAS buildings, to do applications like navigating, map building, and interacting with people. The class format will have a mixed lecture and lab format, and have a final project component.

Recommended Prep: **The only prerequisites are CS51 or CS61, or experience with programming and using APIs. This class is appropriate for CS, EE, and ME students interested in robotics.**

Additional Course Attributes:

Computing Foundations for Computational Science (128104)

David Sondak

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Computational science has become a third partner, together with theory and experimentation, in advancing scientific knowledge and practice, and an essential tool for product and process development and manufacturing in industry. Big data science adds the 'fourth pillar' to scientific advancements, providing the methods and algorithms to extract knowledge or insights from data. The course is a journey into the foundations of Parallel Computing at the intersection of large-scale computational science and big data analytics. Many science communities are combining high performance computing and high-end data analysis platforms and methods in workflows that orchestrate large-scale simulations or incorporate them into the stages of large-scale analysis pipelines for data generated by simulations, experiments, or observations. This is an applications course highlighting the use of modern computing platforms in solving computational and data science problems, enabling simulation, modeling and real-time analysis of complex natural and social phenomena at unprecedented scales. The class emphasizes on making effective use of the diverse landscape of programming models, platforms, open-source tools, computing architectures and cloud services for high performance computing and high-end data analytics.

Recommended Prep: **Students are expected to have basic programming experience and understanding of algorithms (e.g. CS50/CS51/CS207), familiarity with Python, C or similar, and basic knowledge of Linux including using the command line.**

Systems Development for Computational Science (128105)

David Sondak

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying

software for scientific computing. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to fit tools and approaches to the problem being solved.

Recommended Prep: **Students are expected to have basic programming experience (Computer Science 50).**

Topics in Theoretical Computer Science: Essential Coding Theory (120237)

Madhu Sudan

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduces essential elements the theory of error-correcting codes. Focuses on the basic results in the area, taught from first principles. Special focus will be given on results of asymptotic or algorithmic significance. Principal topics include 1. Construction and existence results for error-correcting codes; 2. Limitations on the combinatorial performance of error-correcting codes; 3. Decoding algorithms 4. Applications to other areas of mathematics and computer science. Lecture notes for this course from previous offerings give further details on the material covered. These may be found at http://madhu.seas.harvard.edu/courses/Spring2017.

Course Notes: **Instructor permission needed for undergraduates. Undergraduates planning to take the class must write to the instructor indicating (1) what they hope to learn from the class and (2) their level of preparation in math and CS theory (e.g., CS 121, CS 124).**

Recommended Prep: **CS 121/124/125 or equivalents.**

Computing at Scale (160624)

H. Kung

2020 Spring (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Scaling computation over parallel and distributed computing systems is a rapidly advancing area of research receiving high levels of interest from both academia and industry. The objective can be for high---performance computing and energy---efficient computing ("green" data center servers as well as small embedded devices). In this course, students will learn principled methods of mapping prototypical computations used in machine learning, the Internet of Things, and scientific computing onto parallel and distributed compute nodes of various forms. These techniques will lay the foundation for future computational libraries and packages for both high---performance computing and energy---efficient devices. To master the subject, students will need to appreciate the close interactions between computational algorithms, software abstractions, and computer organizations. After having successfully taken this course, students will acquire an integrated understanding of these issues. The class will be organized into the following modules: Big picture: use of parallel and distributed computing to achieve high performance and energy efficiency; End---to---end example 1: mapping nearest neighbor computation onto parallel computing units in the forms of CPU, GPU, ASIC and FPGA; Communication and I/O: latency hiding with prediction, computational intensity, lower bounds; Computer architectures and implications to computing: multi---cores, CPU, GPU, clusters, accelerators, and virtualization; End---to---end example 2: mapping convolutional neural networks onto parallel computing units in the forms of CPU, GPU, ASIC, FPGA and clusters; Great inner loops and parallelization for feature extraction, data clustering and dimension reduction: PCA, random projection, clustering (K---means, GMM---EM), sparse coding (K---SVD), compressive sensing, FFT, etc.; Software abstractions and programming models: MapReduce (PageRank, etc.), GraphX/Apache Spark, OpenCL and TensorFlow; Advanced topics: autotuning and neuromorphic spike---based computing. Students will learn the subject through lectures/quizzes, programming assignments, labs, research paper presentations, and a final project. Students will have latitude in choosing a final project they are passionate about. They will formulate their projects early in the course, so there will be sufficient time for discussion and iterations with the teaching staff, as well as for system design and implementation. Industry partners will support the course by giving guest lectures and providing resources. The course will use server clusters at Harvard as well as external resources in the cloud. In addition, labs will have access to state---of---the---art IoT devices and 3D cameras for data acquisition. Students will use open source tools and libraries and apply them to data analysis, modeling, and visualization problems.

Recommended Prep: **(1) programming experience (Python, MatLab or C/C++ should be fine); (2) basic knowledge in systems and machine organization; (3) familiarity in data structures and algorithms; and (4) maturity in mathematics (e.g., undergraduate linear algebra and statistics). For students with strong interest in the subject matter and related research topics, one of these four requirements may be waived. Labs and extra support will provide preparation in the first weeks of the semester to help students quickly obtain the background necessary to excel in the course.**

Computer Science 243

Advanced Computer Networks (212686)

Minlan Yu

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a graduate-level course on computer networks. It provides a comprehensive overview of advanced topics in network protocols and networked systems. The course will cover both classic papers on computer networks and recent research results. It will examine a wide range of topics including routing, congestion control, network architectures, network management, data center networks, software-defined networking, and programmable networks, with an emphasis on core networking concepts and principles and their usage in practice. The course will include lectures, in-class presentations, paper discussions, and a research project.

More information can be found at http://minlanyu.seas.harvard.edu/teach/cs243-fall19/.

Recommended Prep: **System programming at the level of CS 61, CS 143, CS145. Prior knowledge of basic networking concepts is useful.**

Computer Science 247R

Advanced Topics in Computer Architecture (128149)

David Brooks

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Seminar course exploring recent research in computer architecture. Topics vary from year to year and will include subjects such as multi-core architectures, energy-efficient computing, reliable computing, and the interactions of these issues with system software. Students read and present research papers, undertake a research project.

Recommended Prep: **Computer Science 146 or 246 or permission of the instructor.**

Additional Course Attributes:

Special Topics in Edge Computing: Autonomous Machines (212687)

Vijay Janapa Reddi

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The course covers a range of emerging research topics in edge computing. The Fall 2019 course focuses on computing systems for autonomous machines (drones, cars, etc.). We survey fundamental and cutting-edge research across algorithms, systems, and hardware, and learn how to optimize the cyber-physical system-stack for performance, power efficiency, reliability, and safety. This research-oriented course is ideal for students interested in interdisciplinary and cross-layer research.

Computer Science 252R

Advanced Topics in Programming Languages (114807)

Nada Amin

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This year only: We'll focus on making communication with computers more accessible: easier, faster, and safer. The course co-locates two advanced graduate seminars in HCI and PL. From HCI, students will learn new design and evaluation methods focused on utility and usability. From PL, students will learn new PL techniques relevant to building user-centric systems.

Students enrolled in 252r will select and present papers on PL topics including type systems, program synthesis, and metaprogramming. Students enrolled in 279 will select and present systems HCI papers about communicating intent between humans and computers, such as programming by demonstration and representing transformations on large piles of data. Activities will include a small number of lectures, discussion of relevant literature in each field, and a project, in which students from 252 and 279 will work together in groups to propose and carry out research at the intersection of PL and HCI.

Course Notes: **Designed for PhD students from all areas. Masters students and advanced undergraduates are welcome, particularly those who wish to do research (or write a thesis) in an area related to Human-Computer Interaction and/or Programming Languages.**

Recommended Prep: **Computer Science 152 or permission of the instructor.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 252R

Advanced Topics in Programming Languages (114807)

Stephen Chong

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Seminar course exploring recent research in programming languages. Topics vary from year to year. Students read and present research papers, undertake a research project.

Recommended Prep: **Computer Science 152 or permission of the instructor.**

Computer Science 263

Systems Security (160579)

James Mickens

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores practical attacks on modern computer systems, explaining how those attacks can be mitigated using careful system design and the judicious application of cryptography. The course discusses topics like buffer overflows, web security, information flow control, and anonymous communication mechanisms such as Tor. The course includes several small projects which give students hands-on experience with various offensive and defensive techniques; the final, larger project is open-ended and driven by student interests.

Recommended Prep: **Computer Science 161 (Operating Systems)**

Additional Course Attributes:

Attribute	Value(s)

Computer Science 265

Big Data Systems (113660)

Stratos Idreos

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Big data is everywhere. A fundamental goal across numerous modern businesses and sciences is to be able to utilize as many machines as possible, to consume as much information as possible and as fast as possible. The big challenge is how to turn data into useful knowledge. This is a moving target as both the underlying hardware and our ability to collect data evolve. In this class, we discuss how to design data systems, data structures, and algorithms for key data-driven areas, including relational systems, distributed systems, graph systems, noSQL, newSQL, machine learning, and neural networks. We see how they all rely on the same set of very basic concepts and we learn how to synthesize efficient solutions for any problem across these areas using those basic concepts.

Recommended Prep: **CS 165 or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)

Computer Science 271

Topics in Data Visualization (211349)

Johanna Beyer

2020 Spring (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course covers advanced topics in data visualization. Over the course of the semester, we will examine seminal works and recent state-of-the-art research in information visualization, scientific visualization and visual analytics. Students will work on a semester-long visualization project that will allow them to visualize their own data sets and write a short paper about their project. We will employ peer-feedback and formal design critiques to analyze each other's work.

Course Notes: **Enrollment limited to 30 students. Instructor permission needed.**

Recommended Prep: **CS 171, CS 179, CS 279, or some data visualization experience. Please contact course staff if you are unsure about the course pre-requisites.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 280R

Curricular Design for Computer Science: Computational Linguistics and Natural-language Processing (109283)

Stuart Shieber

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This graduate seminar focuses on the design of a curriculum and pedagogical infrastructure for a new computer science course. This term, the target course will be an undergraduate course in computational linguistics, the study of human language using the tools and techniques of computer science, and the technological applications thereof. The class will investigate appropriate subject matter for the target course, canvas existing and novel pedagogical methods for teaching the subject, and construct a curriculum and course materials and infrastructure for a new course on the subject, to be taught in the fall of 2020.

Course Notes: **Enrollment limited to 15 students, selected on the basis of a preregistration survey.**

Recommended Prep: **CS51, CS121, some statistics background.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 282BR

Topics in Machine Learning: Interpretability and Explainability (213653)

Hima Lakkaraju

2019 Fall (4 Credits) **Schedule:** F 1200 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

As machine learning models are increasingly being employed to aid decision makers in high-stakes settings such as healthcare and criminal justice, it is important to ensure that the decision makers (end users) correctly understand and consequent trust the functionality of these models. This graduate level course aims to familiarize students with the recent advances in the emerging field of explainable ML. In this course, we will review seminal position papers of the field, understand the notion of model interpretability from the perspective of decision makers (end users), discuss in detail different classes of interpretable models (e.g., case (prototype) based approaches, sparse linear models, rule-based techniques, saliency maps, generalized additive models, and counterfactual explanations), and explore the connections between model interpretability and causality, debugging, and fairness. The course will also emphasize on various applications which can immensely benefit from model interpretability including medical imaging and judicial decision making.

Recommended Prep: **Knowledge of machine learning, convex optimization, probability and statistics, basic computer science and programming skills.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

GSD: MDS/MDE Rec. Elec.	MDE recommended elective

Computer Science 282R

Topics in Machine Learning: Batch Reinforcement Learning (156936)

Finale Doshi-Velez

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

This course will take a deep dive into batch reinforcement learning, with a focus on healthcare applications. Sequential decision making is at the core of many healthcare problems: a clinician observes a patient, determines a treatment, and based on the response and the patient's previous history, determines what to try next. Reinforcement learning is a formal framework for thinking about such problems. Batch reinforcement learning aims to extract as much as possible from previously-observed trajectories: given a large batch of previous clinician-patient interactions, what inferences can we make about good courses of action? What inferences are not possible?

We will first review the fundamentals through lectures, readings, and coding assignments; they will also engage in a semester-long project applying and extending these ideas to problems related to healthcare (including the opportunity to work with clinical decision-making in intensive care units).

Recommended Prep: **Students are expected to be fluent in basic linear algebra (matrix manipulation), basic statistics (e.g. rules of expectations, importance**

sampling), algorithms (e.g. dynamic programming), and software engineering/numerical computing (e.g. programming in Python and numpy, working with data with 100,000+ rows).

Biologically-inspired Multi-agent Systems (120238)

Radhika Nagpal

2019 Fall (4 Credits) **Schedule:** WF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Surveys biologically-inspired approaches to designing distributed systems. Focus is on biological models, algorithms, and programming paradigms for self-organization. Topics vary year to year, and usually include: (1) swarm intelligence: social insects and animal groups, with applications to networking and robotics, (2) cellular computing: including cellular automata/amorphous computing, and applications like self-assembling robots and programmable materials, (3) evolutionary computation and its application to optimization and design.

Course Notes: **Geared toward graduate students of all levels as well as advanced undergraduates. Preference given to graduate students or upper-level concentrators.**

Recommended Prep: **Students should have a familiarity/experience with computer systems (e.g. software, networking) and algorithms/analysis through classes and/or internship experiences. Background in biology not required.**

Earth and Planetary Sciences

Subject: Earth & Planetary Sciences

Earth & Planetary Sciences 10

A Brief History of the Earth (203888)

Jerry Mitrovica

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 68

This is an introduction to Earth and Planetary science for EPS concentrators and an overview, for those outside the field, of the critical events and processes that have shaped the Earth's evolution and its place in the solar system. The course is designed to highlight the processes, from tectonic plate to microbial scale, that drive the Earth's response to (internal and external) perturbations and we will explore both the time scale of those perturbations and the limits of the Earth's resilience. By considering the full sweep of geological time, from the early Earth to the modern world, the course will take advantage of a series of natural experiments to compare the Earth system during periods with and without atmospheric oxygen, animals, land plants and polar ice sheets, and to compare it, on occasion, with other terrestrial planets.

Class Notes: **Class capacity is 68 students, and students must be able to join one of the lab sections (Tuesday 3:00-5:00 pm, Wednesday 3:00-5:00 pm, Thursday 3:00-5:00 pm, or Friday 10:00 am-12:00 pm) in order to enroll in the class. If interest in this class exceeds capacity, a lottery will be conducted. Please see the course Canvas site for more details. This course includes a mandatory lab component and a one-day field trip.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 51

Introduction to Planetary Materials and Earth Resources (109527)

Stein Jacobsen

2019 Fall (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A comprehensive introduction to how the principles of mineralogy, phase equilibria, and the compositions of terrestrial and extraterrestrial materials are used to understand the evolution of the Earth and its resources. The course will discuss how we know that the Earth's crust has more than sufficient resources for its human population.

Course Notes: **Course includes a weekly lab and three 1-day field trips. This course fulfills the EPS sub-discipline requirement of either Earth History and**

Geobiology or Geology, Geophysics and Planetary Science.

Recommended Prep: **An introductory earth and or planetary science course and a course in college-level chemistry or equivalent.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Earth & Planetary Sciences 52

Geophysics of the Earth and Planets (109231)

Roger Fu

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

A combined introduction to geophysics and planetary sciences. This course serves as a bridge between introductory Earth science course EPS 10 and higher level geophysics and planetary sciences courses in EPS. We will cover topics widely applicable to the physics of rocky planets, including plate tectonics, interior composition, heat flow and rheology, mantle convection, core dynamos, the gravity field and geodesy, and coupling between geophysical processes and climate. Throughout the course, we will emphasize how these concepts are expressed not only on the Earth, but also on the other terrestrial planets of the solar system, large asteroids, and satellites of the giant planets. This course will provide a strong foundation for further study in many areas of Earth and Planetary Sciences, such as geophysics, planetary sciences, tectonics, structural geology, among others. Knowledge of calculus, introductory physics, and introductory geological principles are will be expected.

Course Notes: **Course includes two labs of approximately 3-hour duration. One lab will involve taking nighttime lunar observations. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.**

Class Notes: **Please note that there has been an instructor change since the course was offered last spring term, and student comments/concerns will be taken into consideration.**

Recommended Prep: **Applied Mathematics 21a,b (or Mathematics 1a,1b; or Mathematics 21a, b); Physics 15a,b (prior or concurrent) or Physical Sciences 12a,b; or permission of the instructor.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Final Assessment Category	Three-hour Exam

Earth & Planetary Sciences 55

Earthquakes and Tectonics (205190)

Marine Denolle

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to earthquakes in the context of global tectonics, source mechanisms, types of natural and induced quakes. Faults in the field, dating earthquakes, materials of fault cores. Observations, introduction to the theory, and analog modeling of earthquake cycles, mountain building, infrastructure response to earthquake ground motion. Introduction to tsunami hazard and to earthquake risk analysis.

Course Notes: **This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students

Earth & Planetary Sciences 56

Geobiology and the History of Life (108969)

David Johnston

Andrew Knoll

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

Course Notes: **Course includes a weekly three-hour lab to be arranged and one field trip.**
EPS 56 is also offered as OEB 56. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

Recommended Prep: **EPS 10, OEB 10, or Life Sciences 1b, or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Final Assessment Category	Three-hour Exam

Earth & Planetary Sciences 100

The Missing Matlab Course: A Practical Introduction to Programming and Data Analysis (122333)

Miaki Ishii

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Being able to write a working program is not just about syntaxes of the programming language but involves other skills such as debugging and being able to convert a problem at hand to a sequence of commands. This intense course develops these skills for successful program writing by being hands-on. Students will first learn new syntaxes and then spend time writing numerous scripts.

Course Notes: **Nor prior knowledge of MATLAB is required. Course meeting time includes lecture and lab. Students are not allowed to audit the course.**

Recommended Prep: **Mathematics 1a, b; or equivalent.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
Quantitative Reasoning with Data	Yes
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 101

Global Warming Science 101 (214499)

Eli Tziperman

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the science of global warming/ climate change, meant to assist students to process issues that often appear in the news and public debates. Topics include: the greenhouse effect, and consequences of the rise of greenhouse gasses including sea level rise, ocean acidification, heat waves, droughts, glacier melting, hurricanes and more. Throughout, an ability to critically evaluate observations, predictions and risk will be emphasized. The students will be involved in in-class quantitative analysis of climate observations, feedbacks and models via python Jupyter notebooks that will be provided.

Course Notes: **This course fulfills the E-PSCI sub-discipline requirement of Atmosphere(s) and Oceans. E-PSCI 101 is also offered as ESE 101. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 101. AB students may enroll in either E-PSCI 101 or ESE 101 to meet their concentration requirements.**

Class Notes: **Programming in Python will be employed throughout the course in HW assignments and course workshops. Prior exposure to basic programming would be helpful, and students will be provided with template code to start from and be guided in this work in weekly course workshops. Students are requested to bring their laptops to the first class, and to try to install Anacoanda python version 3.7 before class.**

Recommended Prep: **Basic calculus and ordinary differential equations, as covered for example by Math 1b, Math 19a, Math 21b.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
Quantitative Reasoning with Data	Yes

Earth & Planetary Sciences 112

Thermodynamics by Case Study (161215)

Scot Martin

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes: **EPS 112 is also offered as ES 112. Students may not take both for**

credit. Undergraduate engineering students should enroll in ES 112. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. Total class capacity of 18 includes students in both ES 112 and EPS 112.

Additional Course Attributes:

Attribute	Value(s)

Designing Satellite Missions: Research Methods through the Lens of Earth Observing Systems (215715)

Peter Zoogman

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Satellites provide a vast and powerful suite of global observations of Earth system processes. In this course, students will learn research methods and work with satellite data, including those targeted at: land use, ocean biochemistry, climate change, and air pollution. We will emphasize skills for designing and proposing projects, such as: project planning, reading scientific papers, writing research proposals, and exploratory data analysis. This course will provide the framework and understanding for the students to design future missions to address environmental, scientific, and societal challenges. By the end of the course, students will have learned to work with big data both to address existing scientific questions and to pose new ones.

Course Notes: **E-PSCI 122 is also offered as ESE 122. Students may not take both for credit. Given in alternate years.**

Recommended Prep: **Math 1a,b; Physics 11a.**

Earth & Planetary Sciences 129

Climate and Atmospheric Physics Laboratory (213672)

Marianna Linz

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will take a hands-on approach to learning climate and atmospheric physics. Topics covered will include the Greenhouse effect, global scale atmospheric dynamics, synoptic meteorology and weather forecasting, and climate modeling. Each week will have one three-hour session to perform laboratory experiments, run models, analyze data, and create data visualizations. In this flipped-classroom environment, knowledge transfer will occur outside of class through readings and pre-class assignments in preparation for each session.

Course Notes: **EPS 129 is also offered as ESE 129. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.**
For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in EPS 129. AB students may enroll in either EPS 129 or ESE 129 to meet their concentration requirements.

Class Notes: **Course includes a part-day trip to NOCA Glass School.**

Recommended Prep: **Physics 12a/15a/16, Math/AM 21a (b recommended) or equivalent or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)

Earth & Planetary Sciences 131

Introduction to Physical Oceanography and Climate (111361)

Eli Tziperman

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Observations and fundamentals of ocean dynamics, from the role of the oceans in global climate and climate change to beach waves. Topics include the greenhouse effect, oceans and global warming; El Nino events in the equatorial Pacific Ocean; currents: the wind driven ocean circulation and the Gulf stream; coastal upwelling and fisheries; temperature, salinity, the overturning circulation and its effect on global climate stability and variability; wave motions: surface ocean waves, internal waves, tsunamis and tides; ocean observations by ships, satellites, moorings, floats and more.

A field trip to the Woods Hole Oceanographic Institution on Cape Cod will be held during the course, which will be an opportunity to learn about sea-going oceanography.

Software for scientific computation and graphics will be introduced (students may choose either Matlab or python), which will be used for some homework assignments.

Course Notes: **EPS 131 is also offered as ESE 131. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans. Given in alternate years.**

Recommended Prep: **Mathematics 21a, 21b; Physical Sciences 12a, Physics 15a or Applied Physics 50a; or equivalents/ permission of instructor.**

Additional Course Attributes:

Atmospheric Chemistry (122093)

Daniel Jacob

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Physical and chemical processes determining the composition of the atmosphere and its implications for climate, ecosystems, and human welfare. Construction of atmospheric composition models. Atmospheric transport. Nitrogen, oxygen, and carbon cycles. Climate forcing by greenhouse gases and aerosols. Stratospheric ozone. Oxidizing power of the atmosphere. Surface air pollution: aerosols and ozone. Deposition to ecosystems: acid rain, nitrogen, mercury.

Course Notes: **EPS 133 is also offered as ESE 133. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.**

Recommended Prep: **Physical Sciences 1, 2, Mathematics 1b; or equivalents.**

Additional Course Attributes:

Earth & Planetary Sciences 138

Mysteries of Climate Dynamics (204007)

Brian Farrell

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

We will study the evidence in the climate record for dramatic changes in the climate system and delve into how these challenge our understanding of climate dynamics. Case studies will include the dim early sun paradox, the Snowball Earth, Equable Climates, Glacial/Interglacial and Stadial/Interstadial transitions and ENSO.

Course Notes: **This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. EPS 138 is also offered as ESE 138. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in EPS 138. AB students may enroll in either EPS 138 or ESE 138 to meet their concentration requirements.**

Recommended Prep: **Mathematics 21 or Applied Mathematics 21A and 21B; Physical Sciences 12; or permission of instructor.**

Mineralogy (205567)

Rebecca Fischer

2019 Fall (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides a comprehensive foundation of mineralogy for students of Earth and planetary sciences, materials science, or related fields. Topics include: bonding, symmetry, crystallography, high pressure mineralogy, and the bonding, structures, and significance of a variety of mineral types. Weekly lab sections will cover crystal structures, symmetry, and the identification of a variety of minerals in hand samples.

Course Notes: **Course includes a three-hour weekly lab to be arranged and one field trip. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 146

Ocean Ridges and the Earth System (108000)

Charles Langmuir

2019 Fall (4 Credits) **Schedule:** TR 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Course will present our current knowledge of the ocean ridge system where two thirds of Earth's crust is continually being created. We will examine the progressive understanding of ocean ridges from a historical perspective, emphasizing the process of scientific discovery. Topics include melt generation in the mantle, magmatic processes in the crust, formation of ocean ridge topography, faulting and tectonics, hydrothermal systems, manifestations in the overlying water column, and the unique ecosystems associated with vents. Approaches must be inherently interdisciplinary, including geochemistry, geophysics, geology, hydrothermal systems, and biology. The place of the ocean ridge system within the overall Earth system will be emphasized.

Course Notes: **This course includes a weekly two-hour lab to be arranged. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.**

Recommended Prep: **One of: EPS 10, EPS 21, EPS 22, EPS 50, or SPU 14; or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)

Earth & Planetary Sciences 160

Space Science and Engineering: Theory and Applications (160957)

Robin Wordsworth

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course is an introduction to the challenges involved in designing spacecraft for observation of Earth and exploration of other planets. Topics covered include basic atmospheric and planetary science, key principles of remote sensing, telemetry, orbital transfer theory, propulsion and launch system design, and thermal and power management.

Course Notes: **EPS 160 is also offered as ESE 160. Students may not take both for credit. Undergraduate engineering students should enroll in ESE 160. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.**

Additional Course Attributes:

Earth & Planetary Sciences 171

Structural Geology and Tectonics (112745)

John Shaw

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the deformation of Earth materials, including the processes of mountain building and plate tectonics, faulting and earthquakes, folding, and ductile deformation. Structures are examined using geologic maps, balanced cross sections, seismic reflection data, satellite imagery, microscopic analysis, analog experiments, and numerical methods. Labs emphasize the applications of structural geology in the energy and environmental industries, and for assessing earthquake hazards.

Course Notes: **Course includes a weekly three-hour lab to be arranged and one field trip. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.**

Recommended Prep: **EPS 10 or EPS 55, an equivalent course, or permission of the instructor.**

Additional Course Attributes:

Attribute	Value(s)

Biogeochemistry (117399)

Ann Pearson

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to biological and organic chemistry of the Earth's environment. Primary focus on formation, processing, and preservation of organic carbon, with emphasis on paleoenvironmental applications and on processes occurring at the molecular level. This class is intended to be taken in series with EPS 186.

Course Notes: **This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology. Given in alternate years.**

Recommended Prep: **A course in college-level chemistry or equivalent. Chemistry 17 or 27 strongly recommended. EPS 186 strongly recommended.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 202

Mechanics in Earth and Environmental Science (124688)

James Rice

2019 Fall (4 Credits) **Schedule:** WF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to the mechanics of fluids and solids, organized around earth and environmental phenomena. Conservation laws, stress, deformation and flow. Inviscid fluids and ocean gravity waves; Coriolis dominated large scale flows. Viscosity and groundwater seepage; convective cells; boundary layers. Turbulent stream flows; flood surges; sediment transport. Elasticity and seismic waves. Pore fluid interactions with deformation and failure of earth materials, as in poro-mechanics of consolidation, cracking, faulting, and landslides. Ice sheets and glacial flow mechanics.

Course Notes: **EPS 202 is also offered as APPHY 202. Students may not take both for credit.**

Recommended Prep: **Calculus-based introductory physics.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 203

Earthquakes and Faulting (121615)

Marine Denolle

Brendan Meade

John Shaw

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Earthquake phenomenology in the context of plate tectonics. Continuum mechanics and elastic deformation; seismic wave radiation. Earthquake cycle models and constraints from tectonic geodesy. Earthquake geology and paleoseismology. Source physics, fault friction, rupture dynamics. Deformation rates and fault system structure. Quantitative seismic hazard analysis.

Course Notes: **Given in alternate years.**

Recommended Prep: **Applied Mathematics 21a, b.**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 207

Geochemical Oceanography (112198)

Daniel Schrag

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Topics in low-temperature geochemistry, oceanography, and climatology will be discussed. Students will read and present journal articles on relevant topics, and will rotate responsibility for leading discussions.

Course Notes: **Given in alternate years or upon announcement.**

Earth & Planetary Sciences 248

Topics in Mineral Physics and Chemistry: Magma Oceanology (207625)

Rebecca Fischer

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar course will generally focus on recent advances in understanding the physical and chemical properties of minerals and melts at extreme pressures and temperatures, with implications for the properties, composition, formation, and evolution of Earth and planetary cores and mantles. Students will read and present journal articles on relevant topics, and will rotate responsibility for leading discussions. Specific topics will vary each year offered.

Class Notes: **In spring 2020, this course will focus on the topic of magma oceans during planet formation. We will discuss the origins, atmospheric interactions, and geodynamics of magma oceans; processes occurring within them, such as core formation and crystallization; and effects of magma oceans on the resulting planetary mantle. While the focus will be on the Earth, we will also discuss magma oceans on the Moon and other terrestrial planets.**

Earth & Planetary Sciences 258

Giant Planets (212941)

Jeremy Bloxham

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The giant planets account for over 99% of the mass of our Solar System, excluding the Sun. First, we consider what we can learn about these planets from Earth-based observations, such as their orbits, mean radius and shape. How do such observations constrain their density, and hence composition and formation? Additionally, Earth-based observations reveal atmospheric zonal flows and the presence of magnetic fields, which provide additional insight. Second, we consider the role of observations from spacecraft, which provide spatial detail of the planets' gravitational and magnetic fields. Finally, we consider what additional observations are needed to more completely understand these

planets.

Recommended Prep: **A course in mechanics, plus differential equations and electromagnetism at the 100-level.**

Machine Learning across the Earth and Planetary Sciences (203361)

Marine Denolle

Bradley Lipovsky

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This graduate research seminar combines machine learning with applications in the Earth and Planetary Sciences. The class will consist of literature review augmented with significant data curation and coding. Students will decide on topics and machine learning tools may include supervised learning (e.g., for seismic tomography, detection of earthquakes, impact craters, exoplanets), physics-driven discovery (e.g., estimating simple ODE's to represent wave propagation, ENSO cycles, the earthquake cycle), time series analysis (e.g., on glacier length time series and/or climate reanalysis information), acceleration of multiphysics numerical modeling and for emulation of sub-grid scale processes (e.g., for small-scale earthquake processes, cloud parameterization, or ice sheet hydrology).

Learning outcomes are: 1) knowledge of the successes and challenges in using machine learning (ML) for specific problems in the Earth and Planetary Sciences, 2) knowledge in the ML tools in supervised and unsupervised learning, 3) knowledge gained through hands-on experience in a coding project, and 4) familiarity with ethical standards and debates surrounding reproducibility, transparency, open source code development, open data availability, and open access publishing.

The seminar will build toward a group or individual project given at the end of the term. Students are expected to read and present papers and work at least 2-3 hours per week outside of their class on their projects. Computing will be performed on FAS Research Computing, a personal desktop, or other cloud computing options that could become available. Class time will be dedicated to presentations and coding activities.

Course Notes: **Given in alternate years.**

Recommended Prep: **Knowledge in a high level programming language with easy access to a machine learning toolkit (e.g., Matlab, Python, and/or Julia). Students are expected to bring their laptop with Python and/or MATLAB and/or Julia on the first day of class. The instructors will help students meet this requirement if contacted beforehand.**

Ann Pearson

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This course will provide formal mentorship in a variety of skills essential for an academic career in geosciences. Students will be guided through modules that provide practical tools to improve strategies for reading, paper writing, proposal writing, teaching, giving research seminars, informal networking, and peer review. Peer-to-peer feedback and group exercises will be used in addition to typical formats such as written assignments and oral presentations. The units are designed to complement the curriculum of graduate students as they prepare for the qualifying exam.

Course Notes: **This course is an elective and will not count toward the breadth or subject requirements. Students must obtain permission of the advisor before enrolling.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 301

Teaching-Related Work (211358)

2020 Spring (2 Credits) **Schedule:**

Instructor Permissions: None **Enrollment Cap:** n/a

Enrollment is open to any EPS Ph.D. student who holds a Teaching Fellow (TF) appointment and is engaged in teaching a course.

Course Notes: **Teaching Fellows may enroll in 4 units of E-PSCI 301 for a .25 FTE TF appointment, or up to 8 units for a .5 FTE TF appointment. TFs should**

not enroll in the course in which they are teaching.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course

East Asian Languages and Civilizations

Subject: Japanese

Japanese BA

Elementary Japanese (111193)

Yuko Kageyama-Hunt

2019 Fall (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course aims to develop a basic foundation in modern Japanese leading to proficiency in the four language skills of speaking, listening, reading and writing. Emphasis is placed on the use of these skills to communicate effectively in authentic contexts of daily life. Mastery of hiragana, katakana, and approximately 86 Kanji (Chinese characters).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS Course Roll	FAS Course Roll
FAS: Course Level	For Undergraduate and Graduate Students
FAS: Meets Foreign Lang Req	Japanese

Japanese BA Section: 002

Elementary Japanese (111193)

Elementary Modern Chinese (124237)

Xiaoshi Yu

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a continuation (second semester) of the Elementary Modern Chinese. It is designed for students who have completed the first semester of Elementary Modern Chinese I (Chinese Ba) or the equivalent. The course will further develop students'communicative skills in the listening and speaking modalities, and at the same time shift the focus of instruction gradually towards reading and writing. It provides more practice on syntactic structures, usage and their communicative functions, and prepares students for intermediate-level classes.

Course Notes: **No auditors. May not be taken Pass/Fail.**

Requirements: **Prerequisite: Chinese BA or equivalent.**

Elementary Modern Chinese (124237)

Xiaoshi Yu

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a continuation (second semester) of the Elementary Modern Chinese. It is designed for students who have completed the first semester of Elementary Modern Chinese I (Chinese Ba) or the equivalent. The course will further develop students'communicative skills in the listening and speaking modalities, and at the same time shift the focus of instruction gradually towards reading and writing. It provides more practice on syntactic structures, usage and their communicative functions, and prepares students for intermediate-level classes.

Course Notes: **No auditors. May not be taken Pass/Fail.**

Requirements: **Prerequisite: Chinese BA or equivalent.**

Additional Course Attributes:

Continuation of Chinese 130xb,130b. This course aims at further developing students' ability to use Chinese in advanced and complex contexts, and process and generate sentences with complex structures used mainly in formal speech and writing.

The objectives of this course include: 1) enabling students to gain a deeper understanding of Chinese cultural conventions and assumptions, and the ability to "read between the lines" and discern the subtle connotations often present in Chinese speech and writing, 2) giving students the skills and confidence to use Chinese in a number of important, practical settings, including job interviews and academic forums, 3) enabling students to express their opinions and feelings more accurately, appropriately and coherently, and to offer more detailed and vivid descriptions and narrations.

Course Notes: **No auditors. May not be taken Pass/Fail.**

Subject: E Asian Film & Media Studies

E Asian Film & Media Studies 111

East Asian Media Studies (159551)

Alexander Zahlten

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the explosion of media in East Asia and the resulting forms of media production, circulation and consumption that transform everyday life, economy and politics. From pop culture phenomena such as K-Pop, fan fiction and internet platforms such as Sina Weibo, 2channel or DC Inside, from mobile phone culture to video games and social networks used in political protests, complex media forms and practices are developing with lightning speed across the region and exerting global influence. The starting point of the course are questions such as: What effects does this intense new media environment have in East Asia? How are ways of thinking and behaving adjusting to completely new forms of media? What are the consequences for the future of East Asia? How do media influence us in ways that go beyond the films, music, games, news or other forms that they supply us with?

Japanese Language and Visual Media (Bridge Course) (212648)

Wesley Jacobsen

Alexander Zahlten

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a bridge course designed around Japanese visual media with the dual goal of introducing methods and concepts current in the discipline of film studies while building increased proficiency in the Japanese language, especially in aural comprehension. The course will be conducted in Japanese so far as is practical, targeting students who have completed at least five semesters of Japanese language study. It seeks to build on student interest in genres of film with which they are familiar, deepening their critical understanding of the medium of film while introducing them to the analysis of visual media with which they are likely to be less familiar, either in terms of content or temporal period.

Documenting China on Film (204991)

Jie Li

2019 Fall (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What defines a film as "documentary"? How do documentary films inform, persuade, provoke, or move us? Of whom, by whom, and for whom are documentaries made? Can documentary also be "propaganda" or "art"? What rhetorical devices and aesthetic strategies do documentaries use to construct visions of reality and proclaim them as authentic, credible and authoritative? What might documentary films—as opposed to written text—teach us about modern Chinese history and contemporary society? Above all, how would you go about making a documentary film, in China or elsewhere?

In this course, we will examine documentary films made in or about China from the early 20th century to the present day, through the lenses of both Chinese and foreign filmmakers. We will interrogate the visual "evidence" that camera images can offer, look into their production and reception histories, as well as discuss the ethics, aesthetics, and politics of documentation, representation, and exhibition. Weekly topics are roughly grouped into three parts: (1) "Witnessing History" (2) "Social Reportage" and (3) "Art, Experimentation, and Fiction." The first part will cover the cinematic history and memory of World War II, the Cultural Revolution, and the 1989 Tiananmen protests. The second part will explore documentary engagements with contemporary issues ranging from social inequality, migrant labor, forced demolitions, and environmental degradation. The third part will consider the art of observation, the potentials of experimentation, and the porous boundaries between documentary and fiction. Viewings of documentary films will be complemented by theoretical and contextual readings, as well as short assignments to engage critically and creatively with the films we watch. The final project for the course will be to make a documentary film in a small group.

Media Mix: Representations and Meaning Between Media in Japan: Seminar (108471)

Alexander Zahlten

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces ways of understanding the complex media systems we live in. Drawing on a wide range of media theories it maps different histories of the interconnection of media in Japan, from "old" to "new" media. The course will explore the early ties between theater, literature and cinema, fascist media strategies, the popularization of the media mix by anime and publishing companies, current routes between manga, anime, light novels, films and games, or the emerging platform economy. It will consider the consequences of media mix for, among others, our understanding of nation, gender, memory, and the

concept of world.

Basic Japanese language skills are recommended, though not required, for this course.

Media Cultures in the People's Republic (110471)

Jie Li

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This graduate seminar examines the changing Chinese mediascape from the 1950s to the present. Every week, we will focus on one or two different media forms or technologies, from propaganda posters, photography, cinema, animation, radio, loudspeakers, cassettes, to television, video, Internet, surveillance systems, and digital platforms. We will ask question such as: How have various visual, sound, broadcasting, and digital media represented and transformed Chinese culture, history, and society? To what extent was the Chinese revolution a media revolution, and is there a media revolution going on now? How have the mass media served authoritarian propaganda and surveillance, facilitated grassroots resistance and independent expression, or circulated as commodities of market capitalism? How have media technologies affected perception, experiences, and memories of socialism and postsocialism, as well as the periods' aesthetics, ethics and practices? What is specific or special about each medium, and how do different types of media interact in the Chinese context?

Scholarship on Chinese media can be found across various disciplines including literature, film studies, art history, cultural history, anthropology, sociology, and political science. This course draws on this interdisciplinary body of scholarship and seeks to reframe them within the new and emerging field of Chinese media studies. While analyzing media texts, we will also consider their sociopolitical, institutional, and technological as well as engage with media theories and explore untapped historical sources.

Introduction to the Study of East Asia: Issues and Methods (145419)

Ryuichi Abe

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This interdisciplinary and team-taught course provides an introduction to several of the approaches and methods through which the societies and cultures of East Asia can be studied at Harvard, including history, philosophy, literary studies, political science, film studies, anthropology and gender studies. We consider both commonalities and differences across the region, and explore how larger processes of imperialism, modernization, and globalization have shaped contemporary East Asian societies and their future trajectories.

Course Notes: **Required of sophomore concentrators and secondary field candidates. Open to freshmen. EAS 97ab may not be taken Pass/Fail.**

Political Economy of 21st Century China: Junior Tutorial (212974)

Daniel Koss

2019 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course examines central challenges facing the Chinese leadership since 2000, in (1) domestic politics,

(2) economics, and (3) foreign policy. Concepts and methods from the social sciences are introduced to analyze topics including the SARS health crisis, the strained leadership transition to Xi Jinping, internet censorship, the great variety of protests, policy experimentation, factions in elite politics, ethnic minorities, state-led development with the emergence of companies designated as national champions, anti-corruption efforts, rising inequality, artificial intelligence (AI) in the country's digital strategy, international power transitions, China's entry into the World Trade Organization (WTO), the ongoing trade dispute, and the Belt and Road initiative. This is a junior tutorial with enrollment capped at 10 students.

East Asian Religions: Traditions and Transformations (126199)

James Robson

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides an introduction to the study of East Asian religions. It covers the development of Buddhism, Daoism, Confucianism and Shinto. It is not a comprehensive survey, but is designed around major conceptual themes, such as ritual, image veneration, mysticism, meditation, death, and category formation in the study of religion. The emphasis throughout the course is on the hermeneutic difficulties attendant upon the study of religion in general, and East Asian religions in particular.

Course Notes: **Offered jointly with the Divinity School as 3010.**

Tea in Japan / America (212645)

Melissa M. McCormick

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This undergraduate seminar examines the history, culture, and practice of the Japanese tea ceremony (*chanoyu*) and its reception in the United States. What began as a ritualized preparation of tea, by the medieval period had developed into a wide-ranging cultural practice the study of which opens onto issues of Japanese aesthetics, political history, and philosophy. Common perceptions of *chanoyu* today, however, are often filtered through the lens of its first systematic presentation in the United States, Okakura Tenshin's *Book of Tea* (1906). With this in mind, the course takes advantage of the rich resources in the Boston area that pertain directly to this early phase of "teaism" in America, while exploring later twentieth-century and contemporary examples of art and architecture related to tea.

Enrollment limited to 12.

Class Notes: **In addition to the seminar meeting (2 hours within the allotted time), a 1-hour "tea lab" will meet each week consisting mainly of tea ceremony instruction.**

Requirements: No background in Japanese studies necessary. Enrollment is limited to 12 and requires permission of the instructor.

Political Geography of China (212563)

Daniel Koss

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Putting Chinese politics on the map, this course asks how the government deals with the enormous challenges of ruling over a vast terrain with a diverse population, encompassing super-rich urban metropolises as well as poor rural peripheries. We begin with statecraft traditions from the late imperial era; and end with China's place on the future global maps of the 21st century. Topics include: macro-regions; priority zones of governance; Special Economic Zones; the Chinese equivalent of "blue states and red

states;" rising inequality; ethnic minorities and borderlands; economic development models; urbanization and city planning; collective action in digital space; domestic and international migration; environmental politics; and the geo-politics of the "One Belt One Road" initiative. We will set aside class time for a hands-on introduction to producing and interpreting maps of China.

China's Cultural Revolution (212976)

Daniel Koss

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces a cataclysmic movement that brought the People's Republic of China to the brink of anarchy: The Great Proletarian Cultural Revolution (1966-1976). The first part looks at historical precursors, including rebellion in the imperial era, political movements in the Republican Era, Communist campaigns and purges, as well as the Great Leap Forward famine that cost tens of millions of lives. Paying equal attention to elite politics at Mao Zedong's "court" and the lived experiences of ordinary citizens, the second part focuses on the evolution of the turmoil, once Mao had called for "bombarding the headquarters" of his own party state, discussing the "Gang of Four," the "attempted coup" by Lin Biao, the Red Guards and the worker rebels in Shanghai, local power seizures and factional warfare, military crackdowns, and the return to order. The third part begins with the reception of the movement abroad, and focuses on its afterlives, including the quasi- pluralist lessons drawn in the immediate aftermath, the role of CR legacies in decisions such as the violent crackdown on the Tiananmen protesters in 1989, and memory politics under Xi Jinping. No language requirement.

Political Parties of East Asia (212977)

Daniel Koss

2020 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

East Asia has been home to an astonishing assortment of political parties, covering the spectrum from democratic to authoritarian institutions, including some of the world's most sophisticated and resilient political organizations. We begin with China's Communist Party, revisiting its foundation in 1921, its rise during the Sino-Japanese War 1937-45,
and its transformation from a revolutionary party to a party in power; then turn to the present day to cover the deep reach of the party into society, the activities and functions of ordinary members, as well as the dynamics of the leading echelons. The second part of the course focuses on Japan, including the origins of political parties in the late 19th century, the post-War emergence of the perennial ruling party, the age of grand money politics under Tanaka Kakuei, the electoral reform of 1993, and the origins of the party's current strength. The third part consists of case studies, covering contemporary parties in North and South Korea, parties in Taiwan before and after the democratic transition, as well as parties in Malaysia and Vietnam, with their multiple connections to East Asia. The course also puts East Asian parties into a comparative perspective to other world regions.

East Asian Studies 260

The Lotus Sutra: Texts, Narratives, and Translations (212644)

Ryuichi Abe

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This is a seminar aimed at a small number of advanced graduate students. The *Lotus Sutra* is arguably the most popular sutra in the history of Buddhism in *East Asia.* Its richness in metaphors and parables makes the sutra extremely important in understanding the influence of Buddhist scriptural texts on the development of East Asian literary traditions. Responding to its significance in East Asia, a large number of translations are produced in Western languages. Yet even undergraduate students at Harvard College typically find the most readable English translation, such as the one by Leon Hurvitz and Burton Watson, beyond the reach of their understanding. A large part of the problem in English versions of the sutra is that they fail to bring to the fore the most seminal strands for the development the sutra's narratives that run throughout the sutra's chapters. Unfortunately, existing secondary scholarly writings on the sutra do not help students much because they more often than not uncritically rely on Hurvitz' and Watson's translations and repeat the errors there.

This seminar aims at illustrating such essential strands of sutra's narrative by reading the original Chinese text side by side with the foundational sutra commentaries written by the patriarchs of Chinese Buddhist doctrinal schools – such as Zhiyi and Jicang. The goal of the seminar is threefold: first, it strives to help students improve their ability to interpret and translate Buddhist scriptural texts written in Buddhist literary Chinese; second, it aims at helping students learn how to use the axial commentarial texts in Chinese Buddhist doctrinal traditions; three, it will help students horn their pedagogical skill in teaching undergraduate student how to study Buddhist sutras through their English translation.

Prerequisite: Literary Chinese and instructor's permission. Enrollment limited to 12.

Class Notes: **Recommended Prep: Literary Chinese and instructor's permission.**

Recommended Prep: **Literary Chinese and instructor's permission.**

Advanced Readings in East Asian Art (212646)

Melissa M. McCormick

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a seminar for advanced graduate students in East Asian art (and adjacent fields) focusing on reading secondary and primary sources in Japanese, as well as recent scholarship and theoretical texts in English. The topic will change each semester to accommodate the research projects, general exam fields, and interests of the participants. In addition to examining the state of the field of East Asian art history, the goal is to provide instruction in practical areas such as deciphering calligraphic texts (*kuzushiji*), improving bibliographic skills, and mastering specialized terminology.

EALC Teaching Practicum (212681)

Wai-yee Li

2019 Fall (2 Credits) **Schedule:** T 0345 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is intended for graduate students in the Department of East Asian Languages and Civilizations, who are either first-time teachers or first-time teaching fellows (TF) in the department. While convened by the EALC PF, who will serve as a resource on weeks that are departmentally specific, invited experts trained in each week's topics will primarily run the course. It will begin by providing students with a tool-kit for effectively fulfilling their role as TF, including strategies for managing the classroom, discussion-leading and active learning techniques, and effective grading and feedback methods. The course will then transition into more specific topics that may arise in the classroom, and finally expand to consider broader issues that we must all face when teaching in East Asian Studies departments.

The course will meet for a total of 10 times. We will meet weekly for weeks 1-4 and bi-weekly for the remainder of the semester, in two-hour sessions. There are a total of 10 sessions, including the Bok Center Fall Teaching Conference. *Students must successfully complete the course before advancing to their general exams*. Each meeting will focus on a specific skill and is intended to give students the chance to not only think about how they want to teach, but also the opportunity to put those ideas into practice before stepping into the classroom. As the semester proceeds, the syllabus is flexible and can respond to student needs and concerns, so please be sure to provide your feedback as we go along!

The course is primarily intended for students currently in the fall semester of their G3 year, although G2 students are also welcome to enroll in the course. For G3 students, this is a chance to use actual materials from your assigned course to prepare for leading discussion sections in parallel with the demands of the semester. For G2 students, who will not yet have a teaching assignment, you will be asked to consult with your advisor about what course you are most likely to teach in the coming year, obtain a syllabus used in previous years for that course, and prepare for class activities based on those readings and potential lecture topics. Class requirements regarding collecting midterm feedback and class observation/recording may be completed during the following academic year without repeating the course.

Chaghatay A

Elementary Chaghatay (214585)

Aizezi Gulina

2020 Spring (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is intended to develop a basic reading knowledge of Chaghatay, the classical antecedent of modern Uzbek and modern Uyghur, and the common literary language of all Central Asian Turks from the fourteenth to the early twentieth centuries. The course includes a survey of Chaghatay literature as well as a discussion of grammar, the writing system, and lexicographical resources; the class meetings will be devoted to both textbook-based instruction and (particularly in the second half of the semester) the reading of samples from Chaghatay texts drawn from printed sources and manuscript copies.

Subject: Korean Literature

Korean Literature 110

Premodern Korean Literature (156592)

Si Nae Park

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This lecture course introduces students to select representations of Korean literature through literary works and their contexts from the 9th through the early 20th centuries. Lectures will be on the socio-cultural, historical, political, and philosophical contexts within which the texts, their writers' lives, their customs, their worldviews were embedded. Readings include original texts in translation and parallel scholarly commentaries. Students will read diverse genres of writing including biographies, memorials, poetry, songs, letters, fictional prose, travelogues, memoirs, folklore, and p'ansori. Some of our literary texts may perfectly fit our understanding of what a literary text is supposed to be, while others will challenge us to expand the boundaries of what we define as literature. The course aims to uncover sensibilities that constituted what Koreans during this period perceived as literary and literature-like. Combining lectures and deep reading of the course materials for class discussions, the course also uses visual representations such as paintings, maps, and old books, and portrayals of traditional Korean literary practices in film and television. Those interested in East Asian literature, history, and society will find this course useful.

Korean Literature 211

Ideologies of Language in Modern and Contemporary Korea (156593)

Si Nae Park

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Descriptions and prescriptions about how we (should) speak and write are fundamentally, if at times covertly, related to larger questions pertaining to cultural identity, history, power, gender, and contents and contours of literature. How are ideas about language and writing constructed, contested, and remembered? What are the impulses and impacts of such ideas? In this seminar, students will become familiarized with key sites of ideologies of language and writing using Korea as a nexus. We will begin with ideologies of language and writing in Korea within the Sinographic cosmopolis (i.e., shared script in pre-20th-century East Asia), Korea under Japanese Imperialism, postcolonial and postwar Korea, and contemporary Korea.

Korean Writers and Their Books (204997)

Si Nae Park

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This graduate seminar introduces students to Korean literature within an intricate transcultural and translingual matrix of other preexisting literary texts by focusing on writers and the books that served as their creative inspiration. Each week—with the exception of the first week focused on pre-20th-century Korea—students will read the whole or part of one recent monograph on Korean literature in the English language and a pair of literary works (one by a Korean writer in the original language, with the aid of a

modern Korean rendition, and the other that was his or her "muse" in English translation) to conduct close reading, familiarize oneself with debates and research questions in current Korean literature scholarship, and contextualize the authors and their works in relevant ecology and culture of books. Students should have advanced knowledge of Korean.

Korean BA

Elementary Korean (124296)

Hi-Sun Kim

2019 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This introductory course is designed to provide a basic foundation in modern Korean language and culture by focusing on the balanced development of the interpersonal (speaking), interpretive (listening & reading), and presentational (formal speech & writing) skills. Students in Korean Ba begin by learning the complete Korean writing system (Hangul), which is followed by lessons focusing on basic conversational skills, cultural competence, and grammatical structures. To provide sufficient opportunities to apply what has been learned in class, there are small group drill sessions, language tables, and a number of other cultural activities.

Class Notes: **All lecture and discussion will meet for the duration of 1 hour. First class meeting for this course will be on WEDNESDAY, September 4, 2019.**

Intermediate Korean (117220)

Joungmok Lee

2019 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Korean 120a is the first half of the intermediate course designed for students who have successfully completed Elementary Korean or students who have an equivalent proficiency level. This course aims to increase students' ability to communicate in Korean in a wide range of daily life situations with an equal focus on expanding and on consolidating students' knowledge of the fundamental grammar of Korean. Students are introduced to reading and listening materials of increasing complexity on a variety of topics in modern Korean society and culture. In addition, in order to develop a deeper understanding of the basic structures of the Korean vocabulary, simple Chinese characters will be introduced in this course.

Class Notes: **All lecture and discussion will meet for the duration of 1 hour. First class meeting for this course will be on WEDNESDAY, September 4, 2019.**

Intermediate Korean for Advanced Beginners (161278)

Hi-Sun Kim

2020 Spring (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Korean 123xb is a continuation of Korean Bx and is for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills. It is an accelerated course covering important grammatical structures and materials from Intermediate Korean (120a and 120b) for the purpose of providing tools to build upon the basic foundation of student's Korean language ability. Hence, this class is designed to meet the linguisitic needs that are unique to heritage language students to (i) increase accuracy in grammar, (ii) develop basic reading writing skills, and (iii) expand vocabulary through introduction of Chinese characters. Upon completion of this course, students will be fast-tracked into an upper-level course (e.g. Korean 130a).

Class Notes: **A 30 minute discussion section (2-3 students per section) for a more focused speaking practice will be scheduled on either Tuesdays or Thursdays after classes begin.**

Pre-advanced Korean (111235)

Heeyeong Jung

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Korean 130a is designed for students who have completed Intermediate Korean 120b or have equivalent proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring the these topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

Class Notes: **Discussion T or Th between 12:00-2:00 pm Sever 205(FAS)**

Subject: Japanese Literature

Japanese Literature 162

Girl Culture, Media, and Japan (125615)

Tomiko Yoda

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In contemporary Japan, girls and girl culture are considered to be among the most significant sources of popular cultural trends. For instance, the girly aesthetics of "cute" (*kawaii*) has animated broad areas of Japanese culture since the 1980s and has become a global cultural idiom through the dissemination of Japanese entertainment medias and fashion products abroad. The course will explore a number of key questions about Japanese (and global) girl culture. How did the conceptualization of girlhood, girl culture, girl bodies, and girl affect transform in Japan from the early twentieth century to the present? How did various medias and media consumption help shape these trends? What can the exploration of "girls'

question" tell us, not only about Japanese socio-cultural history, but also about the general conditions of youth, gender, and media culture in the world today (e.g., the *sea of pink* at Women's March, 2016)? We will begin the semester by unpacking key terms such as "girl," "girlhood," and "girl culture" in relations to the modern and contemporary notions of gender, maturity, and majority. The course materials include fiction, fashion magazines, teen films, manga, and animation. No prior knowledge of Japanese language or history is expected.

Instructor Permissions: None **Enrollment Cap:** n/a

This semester, Spring 2019, the seminar will examine theories and practices of feminism in Japan and elsewhere. In particular, we will study several forms of "radical feminism," including women's liberation movement or *ribu* in early 1970s Japan. We will explore "radicality" in feminism, articulated against the grain of discourses on women's rights and equality. Topics treated in the course include, radical feminism and the New Left, feminist genealogies, feminism and violence, the politics of feminist manifestos, feminism and futurity, and the feminist politics of organization. Some of the reading materials are in

Japanese.

Strange Tales: The Supernatural in Chinese Literature (212642)

Thomas Kelly

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces students to traditional Chinese literature by focusing on "tales of the strange." We will examine how ghosts, demons, fox spirits, and other liminal creatures haunt the literary imagination, stretching the possibilities of storytelling. Students will gain familiarity with masterpieces of Chinese literature and their intriguing afterlives in performance, film, and popular culture. Our discussions will consider how literary accounts of ghosts and the supernatural grapple with issues of gender and sexuality, the cultural meanings of death, the boundaries of human community, and the experience of historical trauma. We will focus on developing skills in close reading, while critically engaging theories of the "strange." No background in Chinese is required.

Chinese Literature 140

The Greatest Chinese Novel (108229)

Wai-yee Li

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The Story of the Stone (also known as The Dream of the Red Chamber) by Cao Xueqin (1715?-1763) is widely recognized as the masterpiece of Chinese fiction. It is also a portal to Chinese civilization. Encyclopedic in scope, this book both sums up Chinese culture and asks of it difficult questions. Its cult

status also accounts for modern popular screen and television adaptations. Through a close examination of this text in conjunction with supplementary readings and visual materials, the seminar will explore a series of topics on Chinese culture, including foundational myths, philosophical and religious systems, the status of fiction, conceptions of art and the artist, ideas about love, desire and sexuality, gender roles, garden aesthetics, family and clan structure, and definitions of socio-political order.

Early Chinese Historical Writings: Zuozhuan and Related Materials (114804)

Wai-yee Li

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

We will study canonical works in early Chinese historical writings and explore questions of ideology, rhetoric, and narrative—the conceptions of time, change, and causation; modes of reasoning, argument, and observation; forms of speech and narrative. The purpose is to introduce seminar participants to these materials and their exegetical traditions.

Recommended Prep: **Reading knowledge of classical Chinese.**

Theater and Theatricality in Early Modern China (212641)

Thomas Kelly

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar charts the development of Chinese dramatic literature from the fourteenth to the seventeenth centuries. We will focus on the close reading of major works in the *zaju, xiwen,* and *chuanqi* forms, examining how the theater shaped new practices of writing and reading. The seminar will follow two central themes: 1) the shifting relationship between the figures of the playwright and the actor; 2) the interplay between the spaces of the page and stage. Engaging with recent scholarship, we will reflect on how modes of theatrical performance and spectatorship transformed broader understandings of self and society. Our discussions will seek new frameworks for approaching the place of the theater in Chinese literary history.

Recommended Prep: **Reading ability in Literary Chinese is required.**

China's Banned Book: Reading Jin Ping Mei (Conference Course) (212643)

Thomas Kelly

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will introduce students to the controversial masterpiece of Chinese fiction, *The Plum in the Golden Vase* (*Jin Ping Mei*). Censored for its erotic content, this sensational book had a profound impact on the development of Chinese fiction. A landmark in the history of the novel, *The Plum in the Golden Vase* shifts attention away from worthy heroes to examine the everyday exploits and desires of ordinary people. The work of an anonymous author, *The Plum in the Golden Vase* revels in sensory excess (greed, murder, intoxication, and lust), illustrating the vivid details of Chinese urban life. We will focus on developing skills in close reading, while using this monumental work to

survey the flourishing cultural landscape of early modern China. Our discussions will situate the novel alongside recent scholarship on gender and sexuality, material culture, and performance. We will also hold class viewing sessions in the Harvard-Yenching Library and the Harvard Art Museums. Students with Chinese language skills will be encouraged to read the original text.

Topic for Fall 2019: Japanese Enthronement Ritual

This seminar addresses Japanese coronation ritual, which is among the oldest in the world, based on readings and media observation of the enthronement of 2019. On May 1 the 126th emperor of Japan will acceed to the throne when he receives the regalia. He will proclaim his enthronement in October before a large audience of officials and foreign guests.The ceremonies conclude in November in a rite called the Daijōsai, in which the new emperor symbolically shares a meal with the ancestral gods of his lineage. Our seminar begins with a consideration of methods for the study of ritual. We examine texts from the ancient period that are understood to provide a prototype, turning to medieval and early modern enthronements incorporating Buddhist ideals for the monarch. Modern enthronements of the Meiji, Taishō, Shōwa, Heisei, and the new era are examined in social and political context, including contemporary debates regarding the compatibility of constitutionalism and monarchy, and separation of religion from state.

Course Notes: **Offered jointly with the Divinity School as 3961.**

Economics

Subject: Economics

Economics 10A

Principles of Economics (Microeconomics) (113326)

Jason Furman

David Laibson

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Economists study human behavior using a combination of models and data. Ec 10A introduces students to economic models by using intuitive discussions, graphical analysis and, in some cases, very basic algebra. The models study individual decision-making and markets, and range from classical approaches like supply and demand to more recent approaches that consider informational limitations and behavioral mistakes. We will also use data to understand the strengths and weaknesses of these models. The course also discusses the role that ethics and values play in people's choices and in policy discussions—including an understanding and critique of approaches like utilitarianism and libertarianism. The ultimate goal of the course is to provide students with a set of tools that will help them develop answers for themselves on how to make better choices and participate in debates on major public policy issues in areas including tax policy, inequality, discrimination and the environment.

Course Notes: **Ec 10A is the first half of an integrated sequence that continues with the study of macroeconomics in Ec 10B. Students may elect to take only the fall microeconomics course and receive four credit. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10A and 10B provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10A and 10B provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10A and 10B are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. From fall 2019 onward, Ec 10A or 10B fulfill the Social Sciences distribution requirement for the General Education program. It is not necessary for students to take both halves of Ec 10 to fulfill this requirement.**

Class Notes: **Ec 10a meets in lectures on Mondays and Wednesdays 10:30-11:45 a. m., and in sections on Thursdays or Fridays. The first three lectures (W 9/4, M 9/9, W 9/11) will meet in Sanders Theatre. Thereafter, lectures will be held in Science Center B.**

Simultaneous enrollment: In the fall of 2019, students can enroll in Ec10a and another course that meets at the same MW time without needing to petition for permission to have simultaneous enrollment. Simply enroll in both courses and the registrar's online systems will accept the overlapping enrollments. While you do not need to come to our lectures (if you watch them on video), you do need to come to our midterm on October 16. So you will need to miss the "other" course

on that one day (a Wednesday). Of course, you will also need to find an Ec10a section time (on Th or F) that works for you. Sections have required in-person attendance.

Recommended Prep: **There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Ec 10A is strongly recommended in advance of Ec 10B which covers macroeconomics and is taught in the spring term.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Social Sciences

Economics 10B

Principles of Economics (Macroeconomics) (109894)

Jason Furman

David Laibson

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Ec 10B continues the curriculum presented in Ec 10A. Starting with the descriptive and ethical frameworks of Ec 10A, Ec 10B moves from the study of microeconomics (individual decision-making and individual markets) to the study of macroeconomics (e.g., the growth of the overall economy, unemployment, and inflation). Ec 10B explains what economists do and do not understand about why per capita income varies so much across countries and what factors determine the rate of aggregate economic growth. Ec 10B also explains why the economy fluctuates, as illustrated by sharp changes in the rate of unemployment, the net rate of job creation, or the rate of overall economic growth. The course also explains how policy makers attempt to manage and dampen these fluctuations using both monetary policy (i.e., government influence over interest rates and government regulation of banks) and fiscal policy (e.g., government control of spending and taxation). We will also discuss how macroeconomic policies work in an international context, including the factors that affect exchange rates, trade deficits, international capital flows, and how these link economies around the world. Like Ec 10A, Ec 10B introduces students to economic models and discusses both how they are supported and how they are contradicted by available data.

Course Notes: **Ec 10B is the second half of an integrated sequence that begins with the study of microeconomics in Ec 10A. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10A and 10B provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10A and 10B provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10A and 10B are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. From fall 2019 onward, Ec 10A or 10B fulfill the Social Sciences distribution requirement for the General Education program. It is not**

necessary for students to take both halves of Ec 10 to fulfill this requirement.

Class Notes: **The class is will meet Monday, Wednesday, and Friday from 10:30 AM to 11:45 AM in Memorial Hall, Sanders Theater.**

Recommended Prep: **There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Ec 10A which covers microeconomics and is taught in the Fall is strongly recommended in advance of Ec 10B.**

Using Big Data to Solve Economic and Social Problems (208364)

Nadarajan Chetty

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in Economics or Statistics, making it suitable both for students exploring

Economics for the first time and more advanced students. Topics include equality of opportunity, education, innovation and entrepreneurship, health care, climate change, and crime. In the context of these topics, the course will also provide an introduction to basic methods in data science, including regression, causal inference, and machine learning. The course will include discussions with leading practitioners who use big data in real-world applications.

Class Notes: **Formally Econ 1152.**

Education in the Economy (126777)

Lawrence Katz

Claudia Goldin

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

An exploration of the role of education in the economy using historical, comparative, and current policy perspectives. Topics include the theory of human capital, role of education in economic growth and distribution, the educational production function, vouchers, charter schools, class size, standards, school equalization, for-profit educational institutions, and the gender gap in college completion. A serious research paper is required, as are several short critical essays of the literature. This is a junior tutorial.

Course Notes: **This course requires special action- application or lottery- to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.**

This course requires attendance to all 12 classes.

Class Notes: **Course start time: 12:45pm**

Recommended Prep: **Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).**

Readings on Market Imperfections and Implications for Government Intervention (156370)

Nathaniel Hendren

2020 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This course focuses on rationales for and methods of government interventions in private markets. We cover various rationales, such as environmental externalities, fiscal externalities, and asymmetric information. And, we focus on various methods of intervention, such as taxes, regulation, direct government provision, mandates. We motivate our discussions using a combination of classic economics papers and more recent work focused on topical issues such as health insurance regulation and climate change. This s a junior tutorial.

Class Notes: **Course will meet from 12:45-2:45pm.**

Inequality, Leverage, and Crises (212647)

Ludwig Straub

2020 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This course provides students with a unique perspective connecting three global macroeconomic phenomena: the rise in income and wealth inequality, the surge in household leverage, and credit boom-bust cycles. We will attempt to answer questions such as: What is behind the recent increases in income and wealth inequality? Does income inequality have a role to play in explaining credit booms? How are credit booms linked to global capital flows? What happens if credit booms go bust, and which credit booms end worse than others? Which policies can be used to prevent the next crisis? Should monetary policy lean against a credit boom?

The course is entirely based on current research and familiarizes students with the ideas on these topics that are shaping current debates among macroeconomists and finance economists in academia, policymaking and industry. Along the way, the course will expose students to important sources for macroeconomic data and the necessary tools to analyze it, such as regression analysis in cross-sectional and panel data in Stata. The ultimate goal of the class is to endow students with the ability to critically digest and conduct research on current topics in global macroeconomics and finance.

Class Notes: **The course will take place from 9:45am-11:45am**

The Libertarian Perspective on Economic Policy: Junior Seminar (212812)

Jeffrey A. Miron

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

This course analyses the libertarian perspective on economic, social, and foreign policy. This perspective differs from both liberal and conservative views, arguing for minimal government across the board. Specific policies addressed include drug prohibition, gun control, free trade, public education, abortion rights, gay marriage, income redistribution, immigration, health care, national defense, and campaign finance regulation.

Designing Real-World Experiments to Improve Firm Decision-Making and Public Policy (212568)

Amanda Pallais

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Field experiments (experiments that take place in real-world settings) are increasingly being used to analyze public policies, make business decisions, and test theories. The most recent economics Nobel Prize recognized experiments' role in alleviating global poverty. This class will dive into how to design a field experiment and learn about some of the most exciting recent experimental research. It will also use experiments to learn about the research process. We will discuss how to frame a question so that the research informs policy, when to trust research discussed in the popular press, and how to interpret and apply results to improve decision-making.

Policy Options in Health Economics (107675)

Ariel Pakes

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Description: The seminar will focus on policy issues in health economics. We will read papers on an assortment of policy options and formulate frameworks for analyzing their likely impacts on outcomes of interest. Examples include the analysis of mergers in hospital and insurance markets, the choice of capitation vs fee for service contracts and its impact on cost and quality of care, policy options for health insurance, and the re-structuring of health service providers. Where possible we will use data and do the analysis quantitatively. Some knowledge of microeconomic and statistical tools, particularly those related to industrial organization, will be helpful (a few of the needed techniques will be taught during the course). This is a Junior Tutorial.

Course Notes: **This course requires special action- application or lottery- to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.**

Class Notes: **This course will meet from 12:45-2:45pm**

Recommended Prep: **Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).**

Personal Economics : Junior Seminar (108892)

Claudia Goldin

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

How are the most personal choices and life transitions decided? When and whom do you marry, how many children do you have, how much education should you obtain, and which careers or jobs will you pursue? Much will be explored in terms of change over time, particularly concerning the economic emergence of women and the growing role of government. Readings draw on economic theory, empirical analyses, history, and literature from the 19th century to the present. This is a Junior Tutorial.

Class Notes: **Course will start at 12:45pm**

Recommended Prep: **Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).**

Behavioral Finance (203866)

Jeremy Stein

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This junior seminar will provide an overview of theoretical and empirical research on asset pricing that adopts a "behavioral" perspective, i.e. that considers the joint consequences of: (i) investors who have either less than fully rational beliefs or non-standard preferences; and (ii) various impediments to arbitrage. We will also spend considerable time fleshing out the implications of investor sentiment for corporate finance, macroeconomics, and public policy.

Class Notes: **Course will take place from 12:00-2:00pm**

Recommended Prep: **Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).**

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An economist and a humanist, together with other professors from the natural and social sciences, analyze conceptual and policy-relevant issues from viewpoints of their respective disciplines. For example, how do we measure inequality, and at what point does it become problematic (and how do we know)? How then should it be addressed (e.g., tax code, minimum wage)? What role does, and can, education play? What are the best policies to confront job losses from technology? What does "sustainable growth" mean? The goal is not merely to examine four intertwined issues – growth, technology, inequality, and education – but also to understand the distinct concerns and methods of the humanities, social sciences, and natural sciences.

Course Notes: **Jointly offered with FAS English Department as 195EC.**

Recommended Prep: **For Economics concentrators: Economics 10a. For others: Ec 10a or completion of General Education EMR requirement or equivalent.**

Cultural Economics (122655)

Alberto Alesina

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Explores the importance of culture on economic outcomes, focusing on how heterogeneity of preferences affects economic choices and where those differences come from. Theoretical topics include group identity, social interactions and networks, evolutionary selection, the importance of the family. Empirical applications include international investment, savings, occupational choices, ethical norms, economic development, fertility decisions.

Recommended Prep: **Economics 1010a1, 1010a2, or 1011a, and Economics 1123.**

Economics 1025

From Gorbachev to Putin: The Economics and Politics of the Russian Transition (203356)

Maxim Boycko

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

The course covers the transformation of Russia from "mature socialism" of the early days of Mikhail Gorbachev to the present-day mix of market economics and authoritarian politics under Vladimir Putin. After introducing the basic concepts of capitalism, socialism, and transition the course focuses on Russia' s key economic and political reforms. Additional topics include the Russian energy sector, oligarchs, corruption, and Putin's foreign policy. Students will have reading assignments twice a week, participate in classroom discussions, make an oral presentation, prepare an empirical note, and take midterm and final exams.

Recommended Prep: **Prerequisites: Ec10a, Ec10b or equivalents; and Stat104 or equivalent.**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Final Assessment Category	Three-hour Exam

Economics 1033

The Economics of Networks (160360)

Benjamin Golub

2020 Spring (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 100

Social and economic networks are an essential part of the fabric of modern life. Some examples: the complex trading networks that underlie modern financial markets and supply chains; social media platforms; networks of personal connections that help people find jobs. These networks profoundly affect the economy and society more broadly: for instance, financial interdependencies are critical in economic crises, while rumors on Twitter have come to play a central role in our politics. How can we make sense of these phenomena—as individuals, within companies, and as policymakers? This seminar teaches models from the economics and statistics of networks that are essential to the task. Topics include the diffusion of information and rumors, racial segregation, and the network origins of recessions. We emphasize how network models relate to key ideas from microeconomics. For a sense of the course, see reviews of Econ980O: this course will focus on similar material without the project component.

Recommended Prep: **Stat 110, Applied Math 101, Math 154, or equivalent; Ec 1010/1011a**

Sports Economics (211392)

Judd Cramer

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 80

This course will apply economic principles from game theory, labor economics, and econometrics to analyze a wide range of issues primarily in the realm of professional sports and collegiate athletics rigorously with a focus on causality. Topics include: the hot hand; expansion and rival leagues; franchise relocation and venue construction; revenues from merchandising, broadcast rights and their distribution; free agency, arbitration, and salary caps; player development through amateur drafts and minor leagues; NCAA rules on scholarships and eligibility; in-game strategy; and financial aspects of collegiate athletic programs. Class discussion, problem sets, and an exam will form the bulk of the course requirements. Readings will draw upon a variety of sources, including Andrew Zimbalist's Baseball and Billions, Robert Frank and Phil Cook's The Winner-Take-All Society, and newspaper, magazine and academic journal articles.

Recommended Prep: **Econ 1010a, Stat 104, Concurrent Enrollment in econometrics (Previous completion recommended**

Strategy, Conflict, and Cooperation (123893)

Robert Neugeboren

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Game theory is the study of interdependent decision-making. In the early days of the cold war, game theory was used to analyze an emerging nuclear arms race; today, it has applications in economics, psychology, politics, the law and other fields. In this course, we will explore the "strategic way of thinking" as developed by game theorists over the past sixty years. Special attention will be paid to the move from zero-sum to nonzero-sum game theory. Students will learn the basic solution concepts of game theory -- including minimax and Nash equilibrium -- by playing and analyzing games in class, and then we will take up some game-theoretic applications in negotiation settings: the strategic use of threats, bluffs and promises. We will also study the repeated prisoner's dilemma and investigate how cooperative behavior may emerge in a population of rational egoists. This problematic -- "the evolution of cooperation" -- extends from economics and political science to biology and artificial intelligence, and it presents a host of interesting challenges for both theoretical and applied research. Finally, we will consider the changing context for the development of game theory today, in particular, the need to achieve international cooperation on economic and environmental issues.

The course has two main objective: to introduce students to the fundamental problems and solution concepts of noncooperative game theory; and to provide an historical perspective on its development, from the analysis of military conflicts to contemporary applications in economics and other fields. No special mathematical preparation is required.

Game Theory and Economic Applications (111817)

Shengwu Li

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Game theory is a mathematical method for analyzing strategic situations. It deals with situations in which multiple people must make interdependent decisions, such as chess, poker, bargaining, oligopoly pricing, and warfare. Topics include strategic-form and extensive-form games, rationalizability, Nash equilibrium, and subgame-perfect equilibrium. We will study applications such as long-term cooperation, auctions, mechanism design, and division of treasure between pirates.

Course Notes: **Students may not take both Economics 1051 and Economics 1052 for credit.**

Recommended Prep: **The only formal prerequisite for this course is Mathematics 21a. Students should have a strong grasp of calculus, basic probability theory, and some exposure to proofs. No prior knowledge of game theory is necessary.**

Economics 1057

Game Theory with Applications to Social Behavior (203555)

Erez Yoeli

Moshe Hoffman

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Game theory is the formal toolkit for analyzing situations in which payoffs depend not only on your actions (say, which TV series you watch), but also others' (whether your friends are watching the same show). You've probably already heard of some famous games, like the prisoners' dilemma and the costly signaling game. We'll teach you to solve games like these, and more, using tools like Nash equilibrium, subgame perfection, Bayesian Nash equilibrium, and the one-shot deviation principle.

Game theory has traditionally been applied to understand the behavior of highly deliberate agents, like

heads of state, firms in an oligopoly, or participants in an auction. However, we'll apply game theory to social behavior typically considered the realm of psychologists and philosophers, such as why we speak indirectly, in what sense beauty is socially constructed, and where our moral intuitions come from.

Each week, students are expected to complete a problem set, to read 2-3 academic papers, and to complete a 1-2 page response to short essay questions ('prompts') on these readings. All assignments can be completed in groups of two. Tutorials are not required but are highly recommended for students without a substantial background, especially in math. There will also be a final exam.

Class Notes: **Fall 2019 First Meeting Location:**
Sever Hall 113 from 9:00 AM - 10:15 AM:
- Tuesday, September 03, 2019,
- Thursday, September 05, 2019

Economics 1058

Experimental Economics (203779)

Lucas Coffman

2019 Fall (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This class is an introduction to experimental methods, particularly those developed by Economics. We will discuss in detail all of the steps of an experiment, from design, measurement and randomization, to cost and power analyses. This is strictly a methods course; the experiments we discuss are chosen to give a broad understanding of experimental methods, not a foundation of famous experimental results. Similarly, when we discuss a topic, for example experiments in incentives, the discussion will not be centered on how to optimally incentivize employees, but rather, how to design a careful, controlled experiment to precisely understand how your employees respond to incentives you think might be appropriate.

There are two main value-addeds from this course. First, you will be equipped to design and run an experiment to answer important questions (whether those questions are academic or for the purpose of an organization for which you are working). Second, in understanding what the optimal experimental design should look like, you will be armed with better lenses through which to view naturally existing data. That is, contrasting the process that produced the naturally existing data with a hypothetical experimental design, you will be able to better judge the faults, and systematic biases, that will affect the data to which you have access.

Analyzing Education Policy (204433)

Michela Carlana

2020 Spring (4 Credits) **Schedule:** TR 1015 AM - 1130 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course examines a variety of education policy issues in the United States and abroad, with an emphasis on rigorous econometric evaluation of such policies. By the course's end, students should have an analytical framework that allows them to think clearly about the impacts of education policies, as well as be able to distinguish good research from bad. The first half of the course reviews important empirical techniques in the context of broad questions, such as whether people make educational decisions by weighing benefits and costs and whether education improves students' long-term outcomes. The second half of the course centers on debates in which teams of students will argue for a given policy proposition and I will argue against it, with the aim of sharpening everyone's arguments on the basis of existing empirical evidence. . Prerequisites: Familiarity with regression analysis and causal inference, or permission of the instructor.

Class Notes: **This course will take place in Rubenstein 304 (review Friday 10:15-11: 30am in HKS Littauer 280).**

Great Theorems of Microeconomic Theory (160362)

Jerry Green

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course surveys the most important results in microeconomics that have shaped the field in the years since WWII. It has two objectives: (i) To understand how the questions were posed, who the innovative researchers were, and what external influences drove them to approach the subject as they did. This ¼ of the course is the modern history of micro-economic thought. (ii) The major results themselves. This ¾ of the course is quite technical. The lectures will explain and introduce these results in their historical context, and provide the mathematical background. Class participants will present proofs of the results in section.

The major theorems covered come from choice theory under certainty and uncertainty, general equilibrium theory, non-cooperative game theory, cooperative game theory, social choice, and the economics of incentives and mechanism design.

Course requirements comprise three papers and one end-of-term take home exam. Section presentations will also be a component of the grade.

Class Notes: **For directions to the Lowell House classrooms, please visit the FAS Registrar's website.**

The Causes and Consequences of Inequality (213427)

David Deming

2019 Fall (4 Credits) **Schedule:** W 0415 PM - 0700 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Why has earnings inequality in the U.S. and other developed countries increased so much since the 1970s? What are the consequences of rising inequality, and what can we do about it? This course provides an overview of what social science has to say about the causes and consequences of inequality, and engages students in a critical and balanced discussion of the positive and normative issues concerning rising inequality. Example topics include: 1) the key role of education and skills in rising inequality among the "99 percent"; 2) inequality in childhood and family environments, including schooling; 3) the role of changes in economic institutions such as unionization and the minimum wage; 4) rising wealth inequality, taxation and capital mobility; 5) global issues in inequality, including outsourcing, immigration and trade. We will also consider the consequences of rising inequality for political and social institutions in the U.S. and around the world, including (for example) political capture by elites and preferences for redistributive social policy. Course assignments will ask students to analyze and develop policy solutions for addressing rising inequality in the U.S. and around the world.

Course Notes: **This course is offered jointly with HKS as SUP-206.**

Financial Markets for the Poor (213522)

Emily Breza

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

1.7 billion adults around the world do not have access to a financial account. Why has it been so challenging to reach this population? What financial product innovations have worked for banking poor customers? How do the underbanked make do without access to the formal financial market? This course investigates the functioning of the financial market for low income populations, with a focus on developing countries. Example topics include: 1) the link between financial market development and economic growth; 2) financial literacy and consumer protection; 3) savings; 4) credit; 5) insurance; 6) mobile banking and digital payments. The course will cover relevant economic principles, business case studies, product design experiments, and research papers.

Poverty and Development (118764)

Nathan Nunn

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

We will consider a number of important questions in the field of development economics: Why are some countries so rich and others so poor? What factors have determined which countries prosper? Which are the root causes and which are the proximate causes of economic underdevelopment? Can these factors be changed with specific economic policies? If so, what are they and how are they best implemented? Are there country-specific characteristics that determine economic fate? Or, is prosperity just the result of

luck? Does the enjoyment of the rich somehow depend on the continuing suffering of the poor? We will consider these questions and more. The course is intended to not only provide a general overview of the dominant views about economic development and policy, but to also provide students a sense of the most recent research in the field. For this reason, the course will go beyond the usual textbook summary of the field. Students will also examine recent journal articles that have made important contributions to the field of development economics. In the course, a particular effort is made to link the theories and empirical evidence to the real world.

Course Notes: **Writing requirement: A research paper is required. This course meets the concentration writing requirement. Instructor's permission is required.**

Recommended Prep: **Economics 1010a1, 1010a2, (or 1011a) and 1010b (or 1011b). It is recommended that students have taken Economics 1123 or equivalent.**

Analytic Frameworks for Policy (107613)

Richard Zeckhauser

2019 Fall (4 Credits) **Schedule:** TR 1015 AM - 1130 AM

Instructor Permissions: Instructor **Enrollment Cap:** 3

This course develops abilities in using analytic frameworks in the formulation and assessment of public policies. It considers a variety of analytic techniques, particularly those directed toward uncertainty and interactive decision problems. It emphasizes the application of techniques to policy analysis, not formal derivations. Students encounter case studies, methodological readings, modeling of current events, the computer, a final exam, and challenging problem sets.

Course Notes: **Jointly offered with the Kennedy School as API-302.**

Class Notes: **Course will take place at HKS in L-230.**

Recommended Prep: **Economics 1011a or permission of instructor.**

Economics of European Integrations (127519)

Hans-Helmut Kotz

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

The aim of the course is to give students familiarity with a broad range of European policy issues: integration of markets (for goods, services, and labor), monetary union (ECB) and its consequences for fiscal policy, financial sector regulation as well as supervision. It is offered for students who would like to employ the tools they have learned in principles of economics and introductory micro and macro courses on real world cases. This implies to write and present a paper (mandatory writing requirement).

Course Notes: **Writing requirement: A research paper is required. This course meets the concentration writing requirement.**

Recommended Prep: **Ec 10a and Ec 10b.**

Economics 1436 Section: 1

Economics and Morality (211204)

Benjamin Enke

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Questions related to morality pervade the economic and political discourse. However, traditionally, economists have paid little attention to the structure and consequences of people's moral concerns. This course introduces students to research in an emerging field that studies the determinants and consequences of heterogeneity in moral reasoning through the lens of economics. The main objective of the class is to highlight (i) how moral reasoning matters for economic and political outcomes, and (ii) how economic needs in turn generate particular moral systems. To understand the bidirectional relationship between economics and morality, we will study empirical research papers that consider questions such as: What is the difference between universalizing and relational approaches to moral reasoning, and how do these matter for economics? How do Americans' moral intuitions vary across space and over time? What is the role of moral values in U.S. presidential elections, or for policy preferences related to redistribution? Why do Republicans and Democrats give to different types of charities? What are the functional economic origins of morality? How and why are moral systems culturally variable? From a methodological viewpoint, the class uses standard empirical economics techniques to study morality-related concepts and ideas from psychology and anthropology.

The Political Economy of Religion (107425)

Robert Barro

Rachel McCleary

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The study of the political economy of religion is grounded in two intellectual strands of thought developed in economics and sociology. The economic approach views religious competition and church-state relations as market phenomena. The absence of state religion allows for competition, thereby creating an environment for a plurality of religious faiths in society.The continual subdividing of religion into sects ensures an open and competitive market whereby no one single religion dominates.The sociological approach focuses on religious beliefs and activities as rational choices as well as cultural phenomena.Religious beliefs are a part of cultural traits, values, and organizations which contribute to economic outcomes. As in commercial activity, people respond to religious costs and benefits in a predictable, observable manner. Religious beliefs that promote hard work, thrift, and honesty can be found across the world's major religions. The key question is: How does a society promote these values and in what circumstances does it, intentionally or unintentionally, discard them? People choose a religion (the theory of sects) and the degree to which they participate and believe (if at all). In this course we discuss a wide range of topics--religious competition, secularization (and its varieties), pluralism and tolerance, the structure of religious organizations, religion and individual behavior—that highlight the contributions and areas of further research in the field of political economy of religion.

Advanced Industrial Organization (124646)

Pierre Dubois

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course studies firms, markets and competition. We will study the theory of industrial organization, focusing on analyzing the way firms make decisions, as well as the impact of those decisions on market outcomes such as market prices, quantities, the type of products offered and social welfare. The fundamental questions addressed in this course include: Why are markets organized the way they are? How does market organization affect firm behavior, such as firm production or pricing? How does the behavior of firms in turn affect the market structure, such as the number of firms or the range of products offered? We will use formal models in order to address these questions. The goals of the course include the development of intuition for firm strategic behavior, such as pricing, as well as the development of skills for the analysis of formal models. The textbook will provide background and introduction to a variety of topics, many of which will be covered in class in greater depth. Lectures (along with problem sets) will be the core of the course.

Course Notes: **Ec 1640 and Ec 1642 may not both be taken for credit.**

Optional writing Requirement: This course offers an optional writing requirement which if completed will satisfy the concentration writing requirement. This is a hands-on course, and students will be expected to use Stata or other statistical software to perform data analysis.

Recommended Prep: **Economics 1010a1, 1010a2, or 1011a**

The Financial Crisis and the Great Recession (207618)

Karen Dynan

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will explore what lessons we can draw from the experience of the U.S. economy during the financial crisis and Great Recession. We will look at research on what factors precipitated the boom and bust in the housing market and how the resulting mortgage crisis rippled through the global financial system and ultimately generated the most severe economic downturn since the Great Depression. We will learn not only about the macroeconomic consequences of these events but also about the high human costs. We will analyze the policies the government used to stabilize the financial system, mitigate foreclosures, and provide fiscal and monetary support to the economy. The course will conclude by considering the lessons in the context of the current state of the U.S. economy, with an emphasis on what we will need to do to fight the next economic downturn.

Recommended Prep: **Ec1011b and Ec1010b**

Economics of Discontinuous Change (112195)

Richard Freeman

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Explores discontinuous changes in the economic position of groups and countries and presents mathematical and computer simulation models designed to illuminate these changes. Examples include

growth/decline of trade unions, segregation of groups, development of linkages on the internet, changes in corporate work culture, growth of social pathologies in neighborhoods, and Malthusian concerns about the environment. Models include nonlinear simulations, neural networks, finite automata, evolutionary stable strategies, causal conjunctures, agent-based simulations, and genetic algorithms.

Course Notes: **Writing requirement: A research paper is required. This course meets the concentration writing requirement. Students should have some mathematical background, but there is no prerequisite.**

Economics 1936

Keynes (107388)

Stephen Marglin

2019 Fall (4 Credits) **Schedule:** TR 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the birth, death, and resurrection of The General Theory of Employment, Interest and Money from the Great Depression (1929-1939) to the Great Recession (2008-?). A major goal is to lay out a coherent argument that, for all its theoretical innovation, The General Theory did not deliver: the argument why a market system, even an idealized system with all of the warts removed, may fail to provide jobs for willing workers. In the process we will examine the orthodoxy that Keynes attacked and that resurfaced in the 1960s and 70s; the key concepts underlying the models implicit in The General Theory; and the attempts of the Keynesian mainstream to make peace with both Keynes and orthodoxy. We will also explore the applicability of The General Theory to the long run. A final section will view the present economic difficulties through a Keynesian lens.

Recommended Prep: **Economics 1010b or 1011b, or permission of instructor; a year of college calculus allowing students to understand mathematical notation and concepts (derivatives, maximization, etc.) even though mathematics will be used very sparingly.**

Psychology and Economic Theory (156371)

Matthew Rabin

2019 Fall (4 Credits) **Schedule:** F 0130 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economics. Topics include ways utility theory can be improved--such as incorporating reference dependence, news utility, social preferences, self image, and other belief-based tastes--and ways we can relax assumptions of perfect rationality--such as incorporating focusing effects, limited attention, biased prediction of future tastes, present-biased preferences, biases in probabilistic judgment, and errors in social inference. The course will emphasize (a) careful interpretation and production of new evidence on relevant departures,(b) formalizing this evidence into models that can, with discipline and rigor, generate sharp predictions using traditional economic approaches, and (c) exploring economic implications of those models presented. Although we will primarily emphasize (b), the course is meant to be useful to students whose interests lie anywhere in this spectrum, under the premise that all such research will be improved by a greater appreciation of the full spectrum. The course is intended for PhD students in the Business Economics and Economics programs and others who have a solid background in microeconomic theory at the level of introductory PhD courses in these programs. While obviously appropriate to those wishing to specialize in "behavioral economics", the course is also designed for those interested in doing research in particular fields of economics. And while the course centers on theoretical models (learning and evaluation will center around solving formal problem sets), the theory is focused towards its empirical implementability and economic relevance, so that the course is also designed for those interested in theory-influenced empirical research.

Course Notes: **This course is cross listed with HBS as HBSDOC 4155.**

Experimental Economics (123849)

Benjamin Enke

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course provides an introduction to experimental methods and their applications in economics. We will focus on (i) the use of lab experiments in establishing causal effects, testing models, and illuminating mechanisms; (ii) field experiments in behavioral economics; and (ii) the measurement of preference parameters and behavioral traits in lab-in-the-field settings. Topics include bounded rationality, wishful thinking, moral values and social image concerns, gender, the measurement of preferences in lab and large-scale survey settings, and the explanatory power of behavioral traits for field behaviors. We will cover methodological topics including the relationship between experiments and theory, simple process-tracing techniques, internet experiments, and surveys. Students will become acquainted with the full process of designing an experiment, and class discussions will place heavy emphasis on the development of early-stage research ideas. The course is intended not just for those with an interest in behavioral and experimental economics per se, but also for those who wish to measure behavioral parameters in non-lab settings in applied work or to conduct field experiments.

Course Notes: **Open to undergraduates with permission of the instructor.**

Behavioral Economics, Law and Public Policy (110309)

Cass Sunstein

2019 Fall (4 Credits) **Schedule:** T 0100 PM - 0300 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

This seminar will explore a series of issues at the intersection of behavioral economics and public policy. Potential questions will involve climate change; energy efficiency; health care; and basic rights. There will be some discussion of paternalism and the implications of neuroscience as well.

Course Notes: **Offered jointly with the Kennedy School as API-305 and with the Law School at 2589.**

Recommended Prep: **Instructor permission is required. To apply for this course please send a letter of interest and current CV to Brenda Bee at bbee@law.harvard.edu by August 20, 2019.**

Decision Theory (121331)

Tomasz Strzalecki

2019 Fall (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course prepares students for pure and applied research in axiomatic decision theory. We start with a rigorous treatment of the classical topics that are at the heart of all of economics (utility maximization, expected utility, discounted utility, Bayesian updating, dynamic consistency, option value). We then delve into a number of modern topics inspired by the observed violations of the classical models ("exotic preferences" used in macro-finance, ambiguity aversion, temptation and self-control). The last part of the course explores the recently flourishing literature on stochastic choice (which is related to, but distinct from, discrete choice econometrics). Prerequisites: basic microeconomic theory at the level of Mas Colell, Whinston, Green; being comfortable with abstract models.

Simplicity and Complexity in Economics (212938)

Shengwu Li

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Technology has enabled the emergence of economic systems of formerly inconceivable complexity. Nevertheless, some technology-related economic problems are so complex that either supercomputers cannot solve them in a reasonable time, or they are too complex for humans to comprehend. Thus, modern economic designs must still be simple enough for humans to understand, and must address computationally complex problems in an efficient fashion. This topics course explores simplicity and complexity in economics, primarily via theoretical models. We will focus on recent advances. Key topics include (but are not limited to) resource allocation in complex environments, communication complexity and information aggregation in markets, robust mechanisms, dynamic matching theory, influence

maximization in networks, and the design of simple (user-friendly) mechanisms. Some applications include paired kidney exchange, auctions for electricity and for radio spectrum, ride-sharing platforms, and the diffusion of information.

Course Notes: **This course will be open to high level undergrads with approval from instructor.**

Market Design (110312)

Scott Kominers

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

This course explores the theory and practice of market design. Key topics include auctions, labor market matching, school choice programs, online markets, organ exchange systems, financial market design, and matching with contracts. The first half of the course will introduce market design and its technology; subsequent weeks will discuss recent papers alongside their classical antecedents.

Class Notes: **The first class Tuesday September 3rd will take place n the FAS campus in Littauer Center Room 300.**

Recommended Prep: **Prior graduate or advanced undergraduate course work in at least one of microeconomics, game theory, or algorithms will be useful, but is not strictly necessary.**

Econometrics I (120668)

Gregory Bruich

2019 Fall (4 Credits) **Schedule:** MW 0115 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 45

Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2110 (fall) reviews probability and statistics, then covers the fundamentals of modern econometrics, with a focus on regression methods for causal inference in observational and experimental data. Prerequisites: undergraduate courses in probability and statistics, regression analysis, linear algebra,

and multivariate calculus.

Course Notes: **Enrollment limited to PhD candidates in economics, business economics, health policy, public policy, and political economy and government (PEG).**

Recommended Prep: **The two-course sequence is open only to qualified PhD students from HKS, HBS, GSE, and HSPH, but occasionally others may be admitted at the discretion of the instructor (if the instructor is convinced that such individuals can perform well and would not negatively affect the nature and pace of the course).**

Econometric Methods II (205523)

Tim Layton

2020 Spring (4 Credits) **Schedule:** MW 0115 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2115 (spring) covers topics (different methods) in current empirical research. Faculty members from across the university will teach modules each covering a different method of causal inference, including but not limited to instrumental variables, panel data methods, and regression discontinuity and kink designs. The course will emphasize a mixture of theory and application, with problem sets focused on the replication or extension of recent papers utilizing these methods.

Course Notes: **This course is designed for PhD candidates in health policy, public policy, education policy, the Business School DBA program. Qualified undergraduates are also permitted to take the course with permission of the instructor.**

Recommended Prep: **Prerequisite: Economics 2110 or the equivalent.**

Principles of Econometrics (115026)

Elie Tamer

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Linear predictor as approximation to conditional expectation function. Least-squares projection as sample counterpart. Splines. Omitted variable bias and panel data. Bayesian inference for parameters defined by moment conditions. Finite sample frequentist inference for the normal linear model. Statistical decision theory and dominating least squares with many predictor variables; applications to estimating fixed effects (teacher effects, place effects) using panel data. Asymptotic inference in the generalized method of moments framework. Likelihood inference using information measures to define best approximations within parametric models. Instrumental variable models and the role of random assignment; applications include models of demand and supply and the evaluation of treatment effects.

Course Notes: **Enrollment is limited to PhD students in the Economics Department, Business Economics program, and PEG program. Other students wanting to enroll in the course should contact the instructor.**

Recommended Prep: **probability at the level of Statistics 110; linear algebra.**

Econometric Methods (120662)

Isaiah Andrews

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course continues the first year sequence in econometrics and covers a variety of topics and ideas that are important for pursuing and interpreting empirical research in economics. The first half of the course covers core econometric approaches that are important for a wide range of applications, including identification analysis, asymptotic approximations, large sample theory for estimation and hypothesis testing, and the bootstrap. The second part of the course examines a range of complementary topics and new developments, including reasons why canonical econometric methods may be unreliable (such as model misspecification, identification failure, and the incidental parameters problem) and extensions of and alternatives to the traditional econometric paradigm (such as partial identification, Bayesian inference, nonparametrics, and machine learning). Economic applications will be discussed throughout. Enrollment limited.

Recommended Prep: **Economics 2120 or equivalent.**

Topics in Econometrics (110300)

Maximilian Kasy

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Economics 2148 will begin with a survey of the literature on identification using instrumental variables, including the re-interpretation of classic estimands as LATE, bounds on objects such as the ATE that are not point identified, conditional moment restrictions, and control function approaches.
The next part of class will cover some of the theoretical foundations of machine learning, including regularization and data-driven choice of tuning parameters. We will discuss in some detail the canonical normal means model, Gaussian process priors, (empirical) Bayes estimation, and reproducing kernel Hilbert space norms.

We will finally cover some selected additional topics in machine learning, including (deep) neural nets, text as data (topics models), multi-armed bandits, and data visualization.

Course Notes: **This course will take place in Sever Hall 209.**

Economic Development: Theory and Evidence (156605)

Dani Rodrik

Eliana Carranza

2019 Fall (4 Credits) **Schedule:** TR 1015 AM - 1130 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course aims to study theories of economic (under)development and scrutinize empirical evidence in order to glean insights to design development policy. The course will identify key features of the development process across countries, and develop an analytical framework, grounded in economic theory, to better understand these patterns. We will then apply our frameworks combined with rigorous empirical evidence to identify when and how public policies can enable economic growth and development. Macro topics include economic growth and its proximate determinants; resource misallocation, learning and coordination and their impacts on productivity; the impact of historical forces on the evolution of (political) institutions and the development process; and the effect of external influences on development. Micro topics include the determinants of and returns to investments in (health and education) human capital; credit markets, savings behavior, and the returns to financial capital; gender; behavioral economics in development; and governance and corruption. Grading will be based on a combination of short responses, technical assignments, a midterm, and a final

Recommended Prep: **Students are expected to have strong background in microeconomics and statistics, as well as reasonable facility with multivariable calculus**

Macro-Finance: Rational and Behavioral (125372)

Xavier Gabaix

2019 Fall (4 Credits) **Schedule:** M 0600 PM - 0845 PM

Instructor Permissions: None **Enrollment Cap:** n/a

(1) Bounded rationality: we'll go over a behavioral version of basic microeconomics (consumer theory, Arrow Debreu), basic macroeconomics (real and monetary) and public economics.

(2) Macroeconomics with heterogeneity: we'll study how microeconomic shocks can generate macro fluctuations; network models in macro-finance; models of the income distribution.

(3) Finance: we'll study unified macro-finance models. First, with perfect financial markets: we'll review unified models of stocks, bonds, options and exchange rates. Second, with imperfect financial markets: we'll study how this sheds light on financial crises and currency movements. Time permitting, we'll review some behavioral finance, merging all three themes.
The course is geared toward two types of students, and has accordingly two tracks, "behavioral" and "finance", with corresponding emphasis in the homework and exam.

Class Notes: **The first two classes will take place in Littauer Center Hansen-Mason Room.**

Theoretical and Empirical Perspectives on Entrepreneurship: Organizational Economics and Growth (161299)

Josh Lerner

William Kerr

2020 Spring (4 Credits) **Schedule:** W 0530 PM - 0830 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Entrepreneurship--the formation and growth of new firms--is a complex phenomenon that has historically attracted relatively little academic attention. In recent years, however, scholars in a variety of disciplines have been devoting increasing attention to this topic. This course explores the emerging work in this dynamic area. Reflecting the complex nature of entrepreneurship, the course will touch on literature in a variety of academic disciplines. The 2019-20 class focuses on works from the industrial economics, labor economics, organizational economics, economic geography, macroeconomics and sociology literatures; the 2020-21 class focuses on works from the corporate finance and behavioral economics literatures. Students taking the course for credit will be expected to complete three referee reports and a paper proposal. This course is cross listed as HBS 4351.

Class Notes: **Course location: HBS Cumnock 130.**

Seminar in Political Economy (207915)

Alberto Alesina

2019 Fall (4 Credits) **Schedule:** R 0430 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The Program on Positive Political Economy (PPE) supports research-related activities that integrate the study of economics and politics, whether by studying economic behavior in the political process or political behavior in the marketplace. In general, positive political economy is concerned with showing how observed differences among institutions affect political and economic outcomes in various social, economic, and political systems and how the institutions themselves change and develop in response to individual and collective beliefs, preferences, and strategies.

Engineering Sciences 22

Product and Experience Design for Desirability (109374)

B Altringer

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Multi-disciplinary course for students interested in designing products and services that are simple, irresistible, delightful, cool, covetable, viral, and, increasingly these days, much more likely to be successful. Students study real world cases of how organizations (e.g., Apple, Gucci, Swarovski) strategically design for desirability. In weekly design challenges, students use analogical transfer to apply these insights to diverse industries and target markets (e.g., health literacy campaigns, declining technologies, the future of luxury). Weekly critique panels with experts enable students to develop their own design point of view and to finish with a diverse design portfolio.

Course Notes: **Permission required for all students. Engineering Sciences 22 is jointly offered with the Graduate School of Design as SCI 6276.**

Class Notes: **Previously "Design Survivor: Experiential Lessons in Designing for Desirability"**

Additional Course Attributes:

Engineering Sciences 24

Flavor Molecules of Food Fermentation: Exploration and Inquiry (156947)

Pia Sorensen

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 28

Microorganisms produce a diverse array of specialized small molecules as part of their metabolic processes. In this course we will study the production, properties, and characterization of these molecules through the lens of food fermentation. In particular, we will focus on the small molecules that contribute taste and aroma in fermented foods. Students will experience the scientific inquiry process in a creative way by designing and implementing their own research project based on a fermented food of their choosing. Still a field with much potential for discovery, interested students are invited to continue their research project in the summer.

Recommended Prep: **Ls1a , LPSA or equivalent; first semester Organic Chemistry recommended but not required.**

Engineering Sciences 26

Humanity and its Challenges: Systems Thinking and Approaches (204471)

Fawwaz Habbal

Vikram Mansharamani

2020 Spring (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

As citizens in a rapidly changing world facing increasingly complex challenges, the skills that tomorrow's leaders need are increasingly crossing disciplinary silos. Humanity's most pressing problems are interconnected, involve competing interests, and defy simplification into single disciplines. Reductionist approaches focused on linear understanding must be balanced against the integrative logic of systems-oriented thinking. Depth must be balanced with breadth.
This course will give students an appreciation for the complexities of today's most intractable problems, and in so doing, help students develop a methodology for navigating the world they will face. After an overview of systems thinking and its emphasis on interconnections and feedback loops, the course will explore several issues and the complications they generate. Over the course of the semester, topics including epidemics, inequality, human displacement, and food systems will be addressed.
The course will employ multiple methods of learning, with course preparation varying from reading novels to watching videos to reviewing academic papers. Each case will include an overview of the issue and why it matters, before exploring existing disciplinary approaches to address the challenge. Prior thinking is evaluated both in terms of its rigor and is effectiveness. What worked and didn't work? Why?
Students will learn to employ systems thinking using a multi-disciplinary method to evaluate possible solutions. This future-oriented analysis will emphasize the necessity to zoom out and paint a mosaic of possible unintended consequences and roadblocks that may impede progress. By the end of the course, students should have developed a robust framework for integrating economic, political, technical, ethical, and social lenses into an analysis of complex problems and their potential solutions.

Keith Raffel

Sam Evans

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In an era of unprecedented technological change, informed citizens will need to make sense of rapidly evolving societal challenges. In this course, students will examine real-life cases in areas like genetic engineering, artificial intelligence, environmental justice, and climate change. Readings, lectures, and discussions will explore issues such as how technology should be regulated, how individual and societal values should be weighed against each other, and how risk-benefit analysis should be applied. The course will aim to give students of any concentration the conceptual tools and structure to grapple with the diverse responsibilities, rights, and privileges of the 21st century citizen.

Introduction to Electrical Engineering (140008)

Todd Zickler

Christopher Lombardo

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The main course objectives are to introduce students to the exciting and powerful world of electrical engineering and to explain how gadgets that we use every day actually work. After taking ES 50, you will be able to leverage the power of electricity to build systems that sense, control and program the physical world around you. Examples include intelligent and autonomous systems (robots), audio amplifiers (e.g. guitar amp), interactive art installations, light-shows, mind-controlled machines, and so on.

Recommended Prep: **Enthusiasm, curiosity and desire to build things! Previous engineering or programming experience is NOT needed. The amount of high school physics required is minimal, and is limited to basic concepts only.**

Electronics for Engineers (208134)

David Abrams

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course is a practical introduction to analog and digital electronics for engineers. Topics will include aspects of analog circuit theory, discrete digital circuits, and embedded systems that utilize microcontrollers to process inputs from sensors and act on the world accordingly, for instance through motor control. There will be extensive hands-on laboratories to put into practice the topics covered in lecture. This course meets the electronics course requirement for mechanical engineers and bioengineers (i.e., for those bioengineering tracks that require electronics/circuits). Current or potential EE concentrators should consult with the ADUS for Electrical Engineering before enrolling.

Course Notes: **Lab M/W 2:30pm - 5:00pm. Enrollment limited to 30 students. Instructor permission required.**

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Semester-long team-based project providing experience working with clients on complex multi-stakeholders real problems. Course provides exposure to problem definition, problem framing, qualitative

and quantitative research methods, modeling, generation and co-design of creative solutions, engineering design trade-offs, and documentation/communication skills. Ordinarily taken in the junior year.

Course Notes: **Preference given to SB candidates.**

Additional Course Attributes:

Engineering Sciences 100HFA

Engineering Design Projects (144350)

Frank Keutsch

2019 Fall (2 Credits) **Schedule:** R 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Individual engineering design projects which demonstrate mastery of engineering knowledge and techniques. During the year, each student will pursue an appropriate capstone project which involves both engineering design and quantitative analysis and culminating in a final oral presentation and final report/thesis. Students must complete both parts of this course, fall and spring, in order to receive credit.

Course Notes: **Ordinarily taken in the senior year. Enrollment is conditional on the student having an approved project before May 1 in the spring semester preceding actual enrollment. Formal project approval rests**

with ES100 teaching staff. Weekly lectures (fall only) and one hour weekly sections (throughout the year) are mandatory.

Requirements: **Pre-Requisite: ENG-SCI 96 OR ENG-SCI 227**

Additional Course Attributes:

Engineering Sciences 111

Introduction to Scientific Computing (156287)

Cengiz Pehlevan

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Many complex physical problems defy simple analytical solutions or even accurate analytical approximations. Scientific computing can address certain of these problems successfully, providing unique insight. This course introduces some of the widely used techniques in scientific computing through examples chosen from physics, chemistry, and biology. The purpose of the course is to introduce methods that are useful in applications and research and to give the students hands-on experience with these methods.

Course Notes: **Engineering Sciences 111 is also offered as Applied Mathematics 111. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 111.**

Recommended Prep: **Applied Mathematics 21a and 21b, or Mathematics 21a and 21b, or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 112

Thermodynamics by Case Study (160454)

Scot Martin

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes: **ES 112 is also offered as EPS 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. Total class capacity of 18 includes students in both ES 112 and EPS 112.**

Engineering Sciences 115

Mathematical Modeling (156427)

Ariel Amir

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes: **Engineering Sciences 115 is also offered as Applied Mathematics 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.**

Class Notes: **Enrollment limited to 40 students for ENG-SCI/APMTH 115.**

Requirements: **Prerequisite: Must take APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking ENG-SCI 115**

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 120

Introduction to the Mechanics of Solids (131270)

Joost Vlassak

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A first course in the mechanical sciences which introduces elements of continuum mechanics and explains how materials and structures stretch, bend, twist, shake, buckle, and break. Stress-strain behavior of materials. Statically determinate and indeterminate structures. Stress and strain, equations of motion or equilibrium, strain-displacement relations. Torsion. Beam theory with applications to beam deflections, vibrations, and buckling. Three laboratory sessions required.

Recommended Prep: **Applied Physics 50a, Physical Sciences 12a, or 15a and Applied Mathematics 21a or Mathematics 21a (previously) and Applied Mathematics 21b or Mathematics 21b (previously or concurrently).**

Requirements: **Prerequisite: Math 21a (or equivalent); and Physical Sciences 12a, Physics 15a, or Applied Physics 50a; AND Co-requisite: Math 21b (or equivalent)**

Additional Course Attributes:

Engineering Sciences 121

Introduction to Optimization: Models and Methods (156288)

Yiling Chen

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to basic mathematical ideas and computational methods for solving deterministic and stochastic optimization problems. Topics covered: linear programming, integer programming, branch-and-bound, branch-and-cut, Markov chains, Markov decision processes. Emphasis on modeling. Examples from business, society, engineering, sports, e-commerce. Exercises in AMPL, complemented by Maple or Matlab.

Course Notes: **Engineering Sciences 121 is also offered as Applied Mathematics 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.**

Recommended Prep: **Applied Mathematics 21b or Mathematics 21b (linear algebra) and some knowledge of probability and statistics at the level of Statistics 110 or Applied Mathematics 101 or permission of instructor.**

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 123

Introduction to Fluid Mechanics and Transport Processes (144952)

David Sondak

2020 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Dimensional analysis. Basic elements of steady and unsteady thermal conduction and mass diffusion. Statics and dynamics of fluids. Buoyancy-stability and hydrostatics. Laminar viscous flows, potential flows, origin of lift, and basic aspects of boundary layers. Navier-Stokes and continuity equations. Applications in aerodynamics, chemical, environmental, and mechanical engineering, and physics.

Requirements: **Prerequisite: (Applied Math 21a or Math 21a or equivalent) AND (Applied Math 21b or Math 21b or equivalent) AND (APPHY 50a or PHYSCI 12a or Physics 15a)**

Additional Course Attributes:

Mechanical Systems (144157)

Boris Kozinsky

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Modeling and analysis of mechanical systems. Topics include 3D rigid body dynamics, resonance, damping, frequency response, Laplace transform methods, Lagrange's equations, multiple degree-of-freedom systems and an introduction to control and continuous systems. Analytical modeling will be supplemented with numerical simulations and lab experiments. Laboratory exercises will explore vibration, and stabilization using data acquisition systems.

Requirements: **Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences 12a (or equivalent)**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 139

Innovation in Science and Engineering: Conference Course (118939)

David Weitz

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Explores factors and conditions contributing to innovation in science and engineering; how important problems are found, defined, and solved; roles of teamwork and creativity; and applications of these methods to other endeavors. Students receive practical and professional training in techniques to define and solve problems, and in brainstorming and other individual and team approaches.

Course Notes: **Offered jointly with the Design School as SCI-06272. Taught through a combination of lectures, discussions, and exercises led by innovators in science, engineering, arts, and business.**

Requirements: **Anti-Req: May not be taken for credit if ENG-SCI 239 already complete**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 151

Applied Electromagnetism (143005)

Evelyn Hu

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Electromagnetism and its applications in science and technology. Topics: Maxwell's equations; electromagnetic waves (e.g., light, microwaves, etc.); wave propagation through media discontinuity; transmission lines, waveguides, and microwave circuits; radiation and antennae; interactions between electromagnetic fields and matters; optics of solids; optical devices; origin of colors; interference and diffraction; lasers and masers; nuclear magnetic resonance and MRI; radio astronomy; wireless networking; plasmonic wave (charge density wave).

Recommended Prep: **Basic electromagnetism (Applied Physics 50b, Physical Sciences 12b, or 15b or equivalent), basic vector calculus (Applied Math 21a or equivalent), basic differential equations (Applied Math 21b or equivalent) and familiarity with Fourier analysis (Applied Math 21b or equivalent).**

Requirements: **Prerequisite: Math 21a (or equivalent); and Physical Sciences 12a and 12b, Physics 15a and 15b, or Applied Physics 50a and 50b**

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 152

Circuits, Devices, and Transduction (207597)

Gu-Yeon Wei

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on devices and systems that use *analog* electronics, and it complements COMPSCI 141, which focuses on digital devices and systems. Topics of this course include: time and frequency domain analysis of simple 1st and 2nd order circuits; operational amplifiers and op-amp circuits; basic semiconductor physics; PN junctions and diodes; bipolar junction transistors (BJT); field-effect transistors (MOSFETs); bias circuits and current sources; amplifier gain and bandwidth; frequency response, feedback, noise, and stability. Further, students are introduced to select transducers, particularly motors and their concomitant drive schemes, but also photocells, photodiodes, and semiconductor lasers to highlight device design and characterization.

Requirements: **Prerequisite: Math 1a and 1b; AND Co-requisite: Physical Sciences 12b or Physics15b or Applied Physics 50b**

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 153

Laboratory Electronics (156518)

Thomas Hayes

David Abrams

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 22

A lab-intensive introduction to electronic circuit design. Develops circuit intuition and debugging skills through daily hands-on lab exercises, each preceded by class discussion, with minimal use of mathematics and physics. Moves quickly from passive circuits, to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Notes: **Limited to 20 students. Engineering Sciences 153 is also offered as Physics 123/223. Students may not take both for credit. Engineering students should enroll in ES153. Undergraduate physics students should enroll in Physics 123. Graduate students should enroll in Physics 223.**

Systems and Control (207626)

Na Li

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course and its follow-on course ENG-SCI 156 concern the fundamentals of information systems in the real world. Together they provide a comprehensive foundation in signal processing, systems design and analysis, control, and communications, while also introducing key linear-algebraic concepts in the context of authentic applications. The first course, ENG-SCI 155, focuses on the basic principles of feedback and its use as a tool for inferring and/or altering the dynamics of systems under uncertainty. Topics include linear algebra, the elemental representations of dynamic systems, stability analysis, the design of estimators (e. g., Kalman Filter) and feedback controllers (e.g., PID and Optimal Controller). The class includes both the practical and theoretical aspects of the topic.

Course Notes: **Note: Students taking Math 21a (or equivalent, or above) have met the prerequisite. Additional discussion and lab section to be arranged.**

Requirements: **Prerequisite: Math 1a and Math 1b**

Additional Course Attributes:

Signals and Communications (148148)

Flavio du Pin Calmon

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is a follow-on to ENG-SCI 155 and continues to develop the fundamentals of information systems in the real world. It focuses on the analysis and manipulation of signals in the time and frequency domains in the context of authentic applications. Topics include: the sampling theorem, convolution, and linear input-output systems in continuous and discrete time. Further, students are introduced to transforms—including Fourier, discrete cosine, wavelet, and PCA / SVD 'transforms'—that map between

vector spaces via matrix multiplication as a method to ease analysis provided conditionalized knowledge. Randomness, noise, and filtering. Waves and interference in the context of communications; antennae, phasors, modulation, multiplexing. Applications in communications and data science.

Recommended Prep: **Applied Mathematics 21b or Mathematics 21b.**

Requirements: **Prerequisite: Math 21a and Math 21b (or equivalents), or Applied Math 22a**

Additional Course Attributes:

Attribute	Value(s)

Biological Signal Processing (109358)

Demba Ba

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

General properties of common biosignals, Bioelectrical (electrophysiological), Biomechanical, Biomagnetic , and Biochemical signals, Bioelectrical acquisition process. Brief discussion of bio-signals obtained from tomography and inverse imaging. Brief introduction to underlying principles of MRI, Ultrasound, CT-Scan, PET, and SPECT, and their associated signals, inverse imaging, ill-posed problems and regularization. Non-transformed and transformed methods for biosignal processing. Structural and Graphical descriptions. Overview of Fourier transforms, Sine and cosine transform, Wavelet transform, Principle Component Analysis, dimension reduction techniques. Blind Source Separation, Representation models based on the statistical independence of the underlying sources, Independent component analysis (ICA), Dependent component analysis, Independent Subspace separation, Pattern Recognition, neural networks, clustering, and genetics algorithms. Applications to Biosignal Processing, and Human computer interaction.

Recommended Prep: **It is helpful, but not necessary, for students to have taken Engineering Sciences 150 or 156 prior to Engineering Sciences 157.**

Requirements: **Prerequisite: Math 21a and Math 21b (or equivalents)**

Additional Course Attributes:

Introduction to Robotics (131554)

Robert Wood

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to computer-controlled robotic manipulators. Topics include coordinate frames and transformations, kinematic structure and solutions, statics and dynamics of serial and parallel chain manipulators, control and programming, introduction to path planning, introduction to teleoperation, robot design, and actuation and sensing devices. Laboratory exercises provide experience with industrial robot programming and robot simulation and control.

Course Notes: **Offered in alternate years.**

Recommended Prep: **Computer Science 50, and either Engineering Sciences 125 or 156.**

Engineering Quantum Mechanics (207088)

Prineha Narang

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

As a first course in quantum mechanics, tailored for engineering, applied mathematics and computer science students, this course will teach concepts needed to engineer a quantum world, to understand quantum mechanical properties of materials and build an intuition for quantum information science. The course will be a hybrid of lectures on theory, state-of-the-art computational methods ('theory-lab') in quantum simulations and we will use IBM Q Experience, an open access quantum computer. Topics will include periodic potentials and the tight-binding approach, quantizing vibrations in solids, spin matrices and an introduction to qubits. Assignments will teach the basics of the Python programming language, introduce students to open source scientific software and electronic structure methods.

Course Notes: **This course also includes a weekly theory lab section.**

Recommended Prep: **Math 21a (multivariable calculus) and Math 21b (linear algebra)**

Additional Course Attributes:

Attribute	Value(s)

Microfabrication Laboratory (109356)

Marko Loncar

2020 Spring (4 Credits) **Schedule:** M 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to micro- and nanofabrication processes used for photonic and electronic devices. Students use both an instructional lab as well as a state-of-the-art cleanroom in the Center for Nanoscale Systems. Several electronic and photonic devices will be fabricated, such as transistors, light-emitting diodes (LEDs) and lasers. Lectures will focus on fabrication processes, including lithography, deposition of metals and dielectrics, etching, oxidation, implantation and diffusion of dopants, and device characterization.

Course Notes: **This course has a 4-hour weekly lab session.**

Recommended Prep: **Applied Physics 50a and 50b, Physical Sciences 12a and 12b, or Physics 15a and 15b or equivalent and ES 173 required.**

Requirements: **Prerequisite: (Applied Physics 50a OR Physical Sciences 12a OR Physics 15a) AND (Applied Physics 50b OR Physical Sciences 12b OR Physics 15b) AND ES 173**

Engineering Thermodynamics (135598)

Zhigang Suo

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to classical engineering thermodynamics. Topics: Zeroth Law and temperature. Properties of

single-component gases, liquids, and solids. Equations of state for ideal and simple nonideal substances. First Law, heat and heat transfer, work, internal energy, enthalpy. Second Law, Third Law, entropy, free energy, exergy. Heat engines and important engineering applications such as refrigerators, power cycles. Properties and simple models of solutions. Phase and chemical equilibrium in multicomponent systems; chemical potential. Electrochemistry, batteries, fuel cells. Laboratory included.

Recommended Prep: **High School AP Chemistry or higher**

Requirements: **Prerequisite: Physical Sciences 12a, Physics 15a, or Applied Physics 50a**

Additional Course Attributes:

Engineering Sciences 183

Introduction to Heat Transfer (108871)

David Clarke

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The macroscopic description of the fundamentals of heat transfer and applications to practical problems in energy conversion, electronics and living systems with an emphasis on developing a physical and analytical understanding of conductive, convective and radiative heat transfer. Emphasis will also be given to problem solving skills based on applying governing principles, mathematical models and physical intuition. Includes laboratory sessions and semester-long projects.

Recommended Prep: **Applied Math 21a (Mathematical Methods in Science) or equivalent.**

Requirements: **Prerequisite: Math 21b (or equivalent) and Physical Sciences 12a, Physics 15a, or Applied Physics 50aREQ: ENG-SCI 183**

Additional Course Attributes:

Engineering Sciences 190

Introduction to Materials Science and Engineering (143870)

Xin Li

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to the structure, properties, and applications of materials. Crystal structure and defects. Structure property relations and crystal symmetry. Phase transformations, phase diagrams, diffusion.

Effect of microstructure on properties. Examples from a variety of engineering applications of electrical, optical and magnetic materials.

Recommended Prep: **Physical Sciences 12a,b, and Applied Mathematics 21a,b or Mathematics 21a,b.**

Requirements: **Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences 12a and 12b, Physics 15a and 15b, or Applied Physics 50a and 50b**

Additional Course Attributes:

Engineering Sciences 202

Learning, Estimation, and Control of Dynamical Systems (142254)

Na Li

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This graduate level course studies dynamic systems in time domain with inputs and outputs. Students will learn how to design estimator and controller for a system to ensure desirable properties (e.g., stability, performance, robustness) of the dynamical system. In particular, the course will focus on systems that can be modeled by linear ordinary differential equations (ODEs) and that satisfy time-invariance conditions. The course will introduces the fundamental mathematics of linear spaces, linear operator theory, and then proceeds with the analysis of the response of linear time-variant systems. Advanced topics such as robust control, model predictive control, linear quadratic games and distributed control will be presented based on allowable time and interest from the class. The material learned in this course will form a valuable foundation for further work in systems, control, estimation, identification, detection, signal processing, and communications.

Course Notes: **Engineering Sciences 202 is also offered as Applied Mathematics 232. Students may not take both for credit.**

Recommended Prep: **Linear algebra, differential equations, and signals and systems (AM 120, ES 156, or equivalent). Undergraduates need permission.**

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 222

Advanced Cellular Engineering (114808)

Kit Parker

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes: **BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.**

Recommended Prep: **Inorganic chemistry, cell biology, physics, and mathematics at the level of Applied Mathematics 21 or Mathematics 21. Suggested courses include organic chemistry and molecular biology.**

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE recommended elective

Engineering Sciences 236A

Integrative Frameworks for Technology, Environment, and Society I (203600)

Woodward Yang

2019 Fall (4 Credits) **Schedule:** TR 0300 PM - 0559 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Developing and implementing good solutions to real problems facing human society requires a broad understanding of the relationships between technology innovation, science, manufacturing, design thinking, environment, sustainability, culture, aesthetics, business, public policy, and government. Various frameworks for understanding these complex relationships within the context of real-world problems will be explored and discussed. Coursework will be based on assigned readings, case studies, research assignments, exercises, and class discussions.

Course Notes: **ES 236a and ES 236b are a two-course sequence.**

Recommended Prep: **This course is for students enrolled in the Master in Design Engineering (MDE) graduate program. A small number of other students may be allowed to enroll by permission of instructor. This course does not count for concentration credit for SEAS undergraduate concentrators; this course does not count as a disciplinary course for SEAS Ph.D. students.**

Engineering Sciences 256

Informal Robotics/New Paradigms for Design and Construction (156726)

Chuck Hoberman

2020 Spring (4 Credits) **Schedule:** M 1000 AM - 1259 PM

Instructor Permissions: Instructor **Enrollment Cap:** 5

Today new materials and fabrication techniques are transforming the field of robotics. Rather than rigid metal parts connected by mechanical components, robots may now be made of folded paper, carbon laminates or soft gels. They may be formed fully integrated from a 2D or 3D printer rather than assembled from individual components. Light, compliant, highly customized - we are seeing the emergence of a new design paradigm.

Informal Robotics is a direct collaboration between the Wyss Institute's Bioinspired Robotics platform (http://wyss.harvard.edu/viewpage/204/bioinspired-robotics) and the GSD. Within the class, you will interact with Wyss researchers who will share their unique designs for ambulatory and flying robots, end-effectors, medical instruments and other applications.

The class will explore informal robotics from multiple perspectives, culminating with the design and fabrication of original devices displaying animated intelligence in real-time. Going beyond traditional engineering approaches, we will also explore new opportunities for design at the product, architectural, and urban scales.

The class will be organized along four primary topics:

- Kinematics includes an overview of mechanism principles, design techniques for pop-ups, flat-folding origami structures, and soft mechanisms.

- Fabrication methods will be explored through workshops on use of composite materials, laminated assembly techniques, self-folding, and integrated flexures.

- Controls considers how to actuate movement and program desired behavior. Topics include servos, linear actuators, shape memory alloys (SMAs) and use of Arduino for sensing and actuator control.

Applications takes us beyond purely technological concerns, contextualizing Informal Robotics within larger trends where materials, manufacturing and computation are starting to merge.

Course Notes: **This course does not count for concentration credit for SEAS undergraduate concentrators; this course does not count as a disciplinary course for SEAS Ph.D. students.**

Class Notes: **Jointly offered with GSD SCI 6478 and will meet at GSD.**

Recommended Prep: **This course includes weekly lectures, workshops, and guest lectures. There will be assignments to produce test mechanisms and CAD models, followed by final group projects. Presentations and discussions of ongoing student work are integral to the course. Although, there are no firm prerequisites, some knowledge of scripting and/or fabrication using CNC machines is helpful. Evaluation will be based on completion of assignments and the final project.**

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students

Optics and Photonics (123351)

Federico Capasso

2019 Fall (4 Credits) **Schedule:** WF 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The focus is on the foundations of optics/photonics and on some of its most important modern developments and applications. Powerful and widely used computational tools will be developed in the sections. Topics to be covered: Maxwell's equations, Free space optics. Reflection, refraction, polarization (Jones Calculus and Stokes parameters); interference and diffraction. Light-matter interaction, dispersion and absorption. Guided wave optics (including optical fibers). Perturbation and couple mode theory, transfer matrix methods; numerical methods. Optical resonators. Photonic crystals. Near-field optics. Metal optics and Plasmonics. Metamaterials and Metasurfaces.

Course Notes: **Open to graduate students and advanced undergraduates.**

Recommended Prep: **Elements of Electromagnetism, such as taught in Applied Physics 50b, Physics 15b, Physical Sciences 12b, Engineering Sciences 151 or equivalent.**

Additional Course Attributes:

Systems Engineering (208004)

Robert D. Howe

Venkat Venkatasubramanian

2019 Fall (4 Credits) **Schedule:** MTWRF 0900 AM - 1200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This is the first core course for students in the MS/MBA: Engineering Sciences program, to be taken in August of the first year of the program. The course will begin with methods for modeling engineering and business systems, including discrete and continuous systems and feedback controls. Students will write simple simulations and then use professional modeling software to simulate complex systems. Students will next learn design methodology, including stakeholder modeling, ideation, and decision making tools. A final team project will involve design of a system, including simulation and prototyping.

Course Notes: **This course is limited to first-year MS/MBA: Engineering Sciences students only. Intensive 3-week course, Aug. 7-23.**

Recommended Prep: **Calculus, linear algebra, differential equations.**

Requirements: **First year MS/MBA students only**

Integrated Design (212920)

B Altringer

Krzysztof Gajos

Alan Maccormack

2019 Fall (4 Credits) **Schedule:** MW 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 35

Leading advanced design projects requires the integration of multiple skill areas and ongoing learning about the best data-driven tools to guide development. This course is structured to provide a comprehensive education in all stages of the new product design process, from idea generation to concept development, detailed design and prototyping, testing and integrating data into design decisions. The

emphasis is on the way that design teams must both generate and utilize data to make decisions under conditions of extreme uncertainty. A critical feature of modern technical design challenges is that the problem space and solution space are often poorly defined, and/or to a large extent unbounded. The course aims to provide students with rigorous analytical tools to deal with such uncertainties.

Class Notes: **This course is limited to second-year MS/MBA: Engineering Sciences students only.**

Recommended Prep: **Integrated Design is a required core course for the Harvard MS/MBA joint degree program. It builds on skills and tools developed in prior courses in the MS/MBA core sequence. Specifically, students enrolled in this course must have taken Systems Engineering, which covers advanced statistical analysis techniques, data analytics, and the modeling and simulation of complex engineered systems. Students must also have taken the intensive course Technology Venture Immersion, which covers the fundamentals of achieving product-market fit in early-stage ventures, encompassing tools and techniques for problem finding (e.g., customer interviewing and persona development) and solution finding (e.g., brainstorming, prototyping, user testing and defining a Minimum Viable Product).**

Engineering Sciences 291

Nano Micro Macro: Adaptive Material Laboratory (156219)

Joanna Aizenberg

Jonathan Grinham

2019 Fall (4 Credits) **Schedule:** W 0830 AM - 1129 AM

Instructor Permissions: Instructor **Enrollment Cap:** 8

This course is an interdisciplinary platform for designers, engineers, and scientists to interact and develop innovative new products. The course introduces ideas-to-innovation processes in a hands-on, project/product focused manner that balance design and engineering concepts with promising, real-world opportunities. Switching back and forth between guided discovery and focused development, between bottom-up and top-down thinking, and market analyses, the course helps students establish generalizable frameworks as researchers and innovators with a focus on new and emerging technologies. Students will conduct part of their work in the Wyss Institute or SEAS science labs on Oxford Street, as well as in the GSD FabLab at Gund Hall. There are no prerequisites.

Note! MDE students, this course can satisfy a GSD course requirement by enrolling in SCI 6477, or a SEAS course requirement by enrolling in ES 291. But it cannot simultaneously satisfy both requirements.

Course Notes: **Offered jointly with Harvard Graduate School of Design as SCI 6477 and will meet at GSD.**

Engineering Sciences 292A

Launch Lab/Capstone 1 (214579)

Russell J Wilcox

Alan Maccormack

2020 Spring (4 Credits) **Schedule:** MTWRFSS 0900 AM - 0459 PM

Instructor Permissions: Instructor **Enrollment Cap:** 35

The MS/MBA Capstone is an intensive project that requires teams of students to apply and integrate the skills they have learned across core disciplines developed in the program curriculum. Specifically, teams will be expected to design, build and launch a new technology-based product/service venture, and thereby to demonstrate mastery with respect to three areas of knowledge: Design Knowledge: The use of human-centered design methods to understand users, identify solutions to their needs, and gather feedback via rapid, iterative prototyping. Technical Knowledge: The use of rigorous system engineering methods to plan, design, develop, build, and test a complex technology-based product/service, integrating knowledge across multiple engineering disciplines. Business Knowledge: The use of business model analysis and lean experimentation methods to develop and test a set of hypotheses that capture how the new product/service will create value, including business model design, pricing, sales and marketing, operating model and profit formula.

The Capstone is divided into two parts, the first of which is an immersive course completed during the January term of the G2 year (Capstone I). The subsequent spring course (Capstone II) follows on from and builds upon work completed in January. In Capstone II, dedicated mentors will be allocated to each team based upon the specific projects they are completing. Given students prior coursework, a working knowledge of human-centered design methods, systems engineering techniques, and business modeling and lean experimentation is assumed. Launch Lab therefore focuses on the practical application of these skills to team projects, supplemented by content in three areas: i) seminars on advanced methods and techniques, ii) workshops that demonstrate how to put these skills and tools into practice, and iii) guest speakers who share their experience in the areas of design, technology and business.

Course Notes: **Open to MS/MBA: Engineering Sciences students only.**

Cryo-Electron Microscopy for Biological and Soft Materials Lecture/Lab (205078)

David Bell

2019 Fall (4 Credits) **Schedule:** M 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This class covers the fundamental principles underlying cryo-electron microscopy applied to Biological and SoftMaterials starting with the basic anatomy of electron microscopes, an introduction to Fourier transforms, and the principles of image formation. Building upon that foundation, the class then covers the sample preparation issues, data collection strategies, and basic image processing workflows.

Recommended Prep: **Freshman-level math, physics, (biochemistry preferred optional).**

Engineering Sciences 298AR

Innovating in Health Care (214632)

Regina Herzlinger

2020 Spring (4 Credits) **Schedule:** MTW 0115 PM - 0315 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This course enables students to bring their entrepreneurial health care ventures to market by:

1) Learning how to align their venture with the six factors that influence entrepreneurial ventures - the structure of the health care system, its financing, technology, consumers, accountability, and public policy; and
2) Learning the nine essential elements of a business model.

The course uses case studies of all kinds of health care innovations – delivery, med tech, insurance, biopharma – in global settings and lectures on subjects such as reimbursement to enable these learnings.

Students apply these learnings to complete a business plan for an entrepreneurial venture. The project can be completed with a team of classmates.

Class Notes: **Med Tech Cases Include: CVI Ingenuity (A) & (B), PARAXEL International Corp.: Stages of Innovation, Reinventing Brainlab (A) & (B), Emdeon's Acquisition of Change Healthcare: Innovating Transparency Solutions for Health Care Consumers, ABC Pharmaceuticals, Medtronic: Patient Management Initiative (A) & (B), Fitbit, Philips-Visicu, and Phreesia. Meets Mon., Tues., and various Wed., 1:15pm – 3:15pm, at HBS, Aldrich Hall, Room 210.**

Class Notes: **Information about accessing the HBS Canvas system can be found online.**

Principles of Collective Learning (213732)

Cesar Hidalgo

2019 Fall (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

How do teams, cities, and nation learn? How do they acquire the knowledge they need to improve their capacities, or enter new activities? This course will equip students with a basic understanding of both, the mechanisms that govern the creation, diffusion, and valuation of knowledge, and the tools needed to study these mechanisms. The course will be divided into three parts. The first part describes the mechanisms that contribute to the collective accumulation of knowledge (e.g. learning curves). The second part will focus on knowledge diffusion, and on the mechanisms governing it across geographies, social networks, and productive activities. The third part will focus on the consequences of knowledge accumulation, for the distribution of wealth and economic activity. These three big lessons will be complemented with lectures

and discussions on the policy implications of this knowledge-based view of economies and with mathematical models describing the accumulation and recombination of knowledge. The course's learning goals will be supported with hands on data exercises in which students will use data on international trade, employment, and patents, to reproduce classical studies.

Course Notes: **Open to Master of Design Engineering, Graduate School of Design, and School of Engineering and Applied Sciences.**

Requirements: **Course open to Graduate Students Only**

Methodologies in Design Engineering (214441)

Nabil Harfoush

2019 Fall (4 Credits) **Schedule:** F 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This is an SAT/UNSAT course focused on providing leaders and change makers with methodologies and practices that can be deployed in real-life situations. Weekly meetings will discuss pre-assigned readings and apply learning through in-class exercises and workshops. The course will focus on four broad areas:

1. **Strategic decision support tools including the design of resilient planning; rapid business model analysis, and design of sustainable business models.**
2. **Qualitative research methods including observations, interviewing techniques, and survey design; organization and evaluation of qualitative data using IT systems.**
3. **Fundamentals of science and engineering including: materials properties and characterization; Reynolds number applications for identifying flow type (laminar, molecular, turbulent); PCR (Polymerase Chain Reaction) fundamentals of molecular biology and its applications.**
4. **Key methodologies for prototyping (physical; virtual; tangible futures; large-scale interventions).**

Class Notes: **Enrollment is subject to approval of instructor, with MDE graduate students (first and second year) receiving priority.**

Recommended Prep: **The methodologies and practices selected require minimal technical skills.**

Additional Course Attributes:

Methodologies in Design Engineering (213398)

Kit Parker

Fawwaz Habbal

2020 Spring (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This is a SAT/UNSAT seminar course focused on design thinking, analysis, planning, and executing the development of engineered systems. Weekly meetings will include discussions and assigned readings of case studies and examples of the systems surrounding the developing technical system. Organizing and executing research, innovation, and product design at the scales from academic group, to startup, to major industry will be discussed. The course is designed to allow the engineer and designer to integrate technical knowledge into an executable framework as an individual or leader of a design team.

Course Notes: **Enrollment subject to approval of the instructor, with first and second year MDE graduate students receiving priority. Undergraduates are not allowed to enroll.**

Solving Tech's Public Dilemmas (107995)

Ash Carter

2019 Fall (4 Credits) **Schedule:** MW 0115 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course identifies and analyzes alternative solutions to the dilemmas that disruptive technology is posing to public good in the digital, biotech, and jobs and training domains. The objective is for students to craft technologically-informed practical public-private approaches to some of the key policy issues of our time. It begins with a brief history of successful and unsuccessful governance of far-reaching technological changes in the past. The first part of the course treats the ongoing digital revolution, crafting solutions to issues of social media responsibility, cybersecurity, and artificial intelligence (AI). It then turns to the biotech revolution that is gathering momentum, addressing genome editing, bioweapons and bioterror, and the role of venture capital in biotech. The third segment of the course addresses the ways that technology is disrupting the nature of work and lifelong training. The example of driverless cars will be used to illustrate the challenges and opportunities that technology provides to sustain cohesive and prosperous societies in the era of tech "disruption". Assignments stress development of key writing and speaking skills.

Course Notes: **Cannot be used for computer science or engineering concentration credit. Jointly offered with and meets at HKS. See HKS IGA 505 for classroom information.**

Engineering Sciences 301

SEAS Teaching Practicum (125374)

John Girash

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Practicum emphasizing an active but reflective approach to teaching applied sciences and engineering; designed for graduate students in any SEAS area, not specifically Engineering Sciences. Topics: presentation and communication; in-class teaching and interaction; developing, grading and giving feedback on assignments; course head / TF relations and expectations; cognition and learning. Seminar style with an emphasis on observation, practice, feedback, and reflection. While the primary context of the course is classroom-style teaching, those interested in developing instructional communication skills in other contexts within science and engineering -- labs/studios, presentations, etc. -- are quite welcome, and course tasks can be adjusted for such.

Course Notes: **Unlike most 300-level courses at SEAS, this is a class with a regular meeting time and some assignments, largely involving lesson prep and brief background reading. The class will alternate between "teaching weeks" (likely taking until 5:45) and "reflection weeks" (aiming to end at 5pm). Counts towards the Derek Bok Center's Teaching Certificate. Graduate students from all science and engineering fields within Harvard are welcome. Postdocs and motivated undergraduates may audit, doing the same work as enrolled graduate students. Formerly COMPSCI 365.**

Engineering Sciences 399-TIME

Academic-Related Work for SEAS Graduate Students (208271)

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Enrollment in ES 399-TIME is open to any SEAS Ph.D., M.E., or S.M. student who holds a SEAS or FAS Teaching Fellow (TF) appointment and is engaged in teaching a course. Once hired to teach in a specific course, whether within or outside SEAS, the student must complete the online form at http://tinyurl.com/seastfform.

SEAS Ph.D. students who are required to enroll in the Bok Center's non-credit *Communicating Science* seminar in order to meet the GSAS English Language Proficiency requirement may also enroll in 4 units of ES 399-TIME.

Course Notes: **Teaching Fellows may enroll in 4 units of ES 399-TIME for a .25 FTE TF appointment, or up to 8 units of ES 399-TIME for a .5 FTE TF appointment. TFs should not enroll in the course in which they are teaching.**

Any enrollment in ES 399-TIME other than as described here is disallowed by SEAS policy, with exceptions requiring prior approval of the Director of Graduate Studies. ES 399-TIME cannot be used to satisfy any degree requirements.

English CAFR

CAFR: Advanced Fiction Workshop: Writing this Present Life (160953)

Claire Messud

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Intended for students with prior fiction-writing and workshop experience, this course will concentrate on structure, execution and revision. Exploring various strands of contemporary and recent literary fiction – writers such as Karl Ove Knausgaard, Rachel Cusk, Chimamanda Adichie, Valeria Luiselli, etc – we will consider how fiction works in our present moment, with emphasis on a craft perspective. Each student will present to the class a published fiction that has influenced them. The course is primarily focused on the discussion of original student work, with the aim of improving both writerly skills and critical analysis. Revision is an important component of this class: students will workshop two stories and a revision of one of these.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Additional Course Attributes:

Attribute	Value(s)

Advanced Playwriting: Workshop (145402)

Sam Marks

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This workshop is a continued exploration of writing for the stage. Students will be encouraged to excavate their own voice in playwriting. They will examine and attempt multiple narrative strategies and dialogue techniques. They will bolster their craft of playwriting through generating short scripts and a completed one act. Readings will include significant contributors to the theatrical form such as Ibsen and Beckett as well as contemporary dramatists such as Annie Baker, Caryl Churchill and Sam Shepard.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

The Art of the Personal Essay: Workshop (213301)

Darcy Frey

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What makes a successful work of personal narrative? What lifts mere experience into shapely art? In this workshop, students will study—partly through reading iconic and experimental essayists, mainly through the submission of their own writing—the art of the personal essay. We will explore elements of the craft such as the construction of a trustworthy narrator, varieties of structure and the fashioning of a satisfying

conclusion. Readings include work by Annie Dillard, Joan Didion, James Baldwin and David Foster Wallace. Writing assignments include several short exercises, two 10-page essays and an extensive revision.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Intermediate Poetry: Workshop (146632)

Joshua Bell

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Initially, students can expect to read, discuss, and imitate the strategies of a wide range of poets writing in English; to investigate and reproduce prescribed forms and poetic structures; and to engage in writing exercises meant to expand the conception of what a poem is and can be. As the course progresses,

reading assignments will be tailored on an individual basis, and an increasing amount of time will be spent in discussion of student work.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Breaking Form: Creative Writing Workshop (208934)

Teju Cole

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The tension between the invented and the observed has compelled many writers to break out of inherited

forms. What is the dividing line between fiction and non-fiction? What are the possibilities for very short narrative pieces? What is "poetic" writing anyway? In this writing workshop, our thinking will be helped along by a wide variety of texts, including work from Félix Fénéon, Georges Perec, Toni Morrison, and Anne Carson. The course will be assessed on classroom participation, a series of shorter written pieces, and a revised final project.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

The Immigrant and the Exile: Workshop (213300)

Paul Yoon

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This is a workshop specifically designed to explore the ways writers have given voice to the experience of being a stranger in a strange land. We'll spend a semester studying and writing stories that attempt to capture the spectrum of characters who feel like outsiders in the place they reside in, and also those who have left somewhere to begin anew—the joys and the great challenges—and how we craft and put into words the idea of "foreignness," "exile," "immigrant," and "home." Some writers we'll read include: Jhumpa Lahiri, Jenny Zhang, Nam Le, Akhil Sharma, and Don Lee.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Introductory Fiction Workshop: Finding and Shaping the Story (160952)

Claire Messud

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

An introductory fiction workshop, in which students will explore elements of craft such as character, point of view, setting, detail, style, etc. The first weeks will be devoted to fiction readings (including Gustave Flaubert, James Joyce, Ernest Hemingway, Toni Morrison, Alice Munro, Yiyun Li, Richard Flanagan, NoViolet Bulawayo, among others) and creative exercises; most of the semester will be spent workshopping student fiction. The final project involves significant revision of a story.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Writing the Feature Screenplay: Workshop (215735)

Shrihari Sathe

2020 Spring (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The feature-length screenplay is an opportunity to tell a story on a larger scale, and, therefore, requires additional preparation. In this class, we will move from writing a pitch, to a synopsis, to a treatment/outline, to the first 10 pages, to the first act of a feature screenplay. We will analyze produced scripts and discuss various elements of craft, including research, writing layered dialogue, world-building, creating an engaging cast of characters. Students will end the semester with a first act (20-30 pages) of their feature, an outline, and strategy to complete the full script.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Character and Consciousness: Advanced Narrative Techniques Fiction Workshop (215753)

ZZ Packer

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course focuses on how artful characterization works to create complex psychological portraits in fiction. We will read fiction and criticism to understand how character informs nearly every element of storytelling craft, and we will incorporate what we've gleaned from our readings into our own writing. After review of fundamental craft elements such as imagery, dialogue and scene, we will examine more advanced narrative techniques such as psychonarration, interiority and focalization, and seek to understand how they contribute to the voice, consciousness and subjectivity of a character. The core of our practice will be comprised of short weekly assignments, in-class exercises, and character studies, culminating in one complete story and revision to be workshopped by peers.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Genre Fiction Workshop: Sci-Fi, Fantasy, Speculative Fiction, Horror, The Ghost Story, The New Weird (213327)

Indraneel Mukherjee

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The course will consist of two halves. In the first hour of each class, we will be doing close readings of an assigned text (please see 'Syllabus'), with the aim of isolating some concept or aspect of the genre under discussion in order to take bearings for your own. The assigned reading is obligatory. We will be looking at questions of genre, and at the reasons for the quotation marks bracketing the word genre in the heading. We will also look at the convergences and divergences in the various kinds and modes mentioned in the title of the course. We will be thinking of generic *topoi*, conceptual underpinnings, imagination, style, world-building, storytelling, resolution, among other things.
