In the second half of the class, divided into two equal segments of 50 minutes each, we will be workshopping the writing of two students. Our goal is for each of you to have two turns, and approximately 5-10,000 words of your work critiqued, by the time semester ends. The final project involves significant redrafting of a story or a portion of a novel.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Haunted: Writing the Supernatural: Workshop (213309)

Laura van den Berg

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The supernatural has long been fertile terrain for writers, canonical and contemporary alike. The supernatural is a means to explore the material that cannot be contained by corporal life: the unsayable secrets, the unexamined truths, the unreconciled historical traumas. Through the study of "haunted" fiction, generative exercises, and workshop critique, this course will explore the vital dimensions the supernatural can bring to the page and what your own "haunted" material might look like. The initial weeks will focus on craft study—readings will include works by Daphne du Maurier, Edith Wharton, Julio Cortázar, Helen Oyeyemi, Kelly Link, and Marina Enriquez, among others—and exercises designed to expand your imaginative horizons. Later in the term, your own fiction will serve as the primary text as the focus shifts to workshop critique.

Course Notes: **Admission based on submitted samples of writing. For information on**

Introduction to Journalism: Workshop (156630)

Jill Abramson

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

An intense seminar for those interested in understanding the changing role of journalism and in learning the art of reporting and writing narrative stories. The course is intended for those contemplating careers as journalists or because they want a better sense of how journalism really works. Coursework will include two narrative articles that are ready for publication. Readings will include some of the best examples of modern journalism, from magazine features by authors including Gay Talese to multimedia narratives such as The New York Times' "Snow Fall."

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Introduction to Playwriting: Workshop (116875)

Sam Marks

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This workshop is an introduction to writing for the stage through intensive reading and in-depth written exercises. Each student will explore the fundamentals and possibilities of playwriting by generating short scripts and completing a one act play with an eye towards both experimental and traditional narrative styles. Readings will examine various ways of creating dramatic art and include work from contemporary playwrights such as Kenneth Lonergan, Martin McDonagh, Suzan Lori-Parks, and Sarah Ruhl as well established work from Anton Chekhov, Sarah Kane, and Harold Pinter.

Introduction to Fiction Writing: Workshop (214529)

Molly Antopol Johnson

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Introduction to Fiction Writing

This course will introduce you to the fundamental elements of fiction writing. We will read a variety of work, including pieces by Alice Munro, Edward P. Jones, Joy Williams, James Baldwin, Bohumil Hrabal, Grace Paley and Ben Okri, using each text as a template for examining such aspects in fiction as tension, dialogue, point of view, arc and character. Through class discussions and a series of writing exercises, we will also pay close attention to the ways in which conventions of craft are applied and understood—and sometimes re-interpreted or subverted. As the semester progresses, the focus of the class will shift to your own work, which we will critique and discuss as a group in a workshop setting, with an eye toward drawing connections between craft principles and your own writing practice. You will later significantly revise your piece.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Workshops do not ordinarily meet during shopping period. Instructors will notify admitted students of first meeting date.**

Introduction to Fiction: Workshop (205276)

Indraneel Mukherjee

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The course will consist of two halves. In the first hour of each class, we will be doing close readings of an assigned text (TBA), with the aim of isolating some aspect of the craft of writing in order to take bearings for your own. In the second half of the class, divided into two equal segments of an hour each, we will be workshopping the writing of two students. Our goal is for each of you to have two turns, and approximately 5-10,000 words of your work critiqued, by the time semester ends. The final project involves significant redrafting of a story or a portion of a novel.

Narrative Science Journalism: Workshop (207633)

Michael Pollan

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The arc of this workshop will trace the process of researching and writing a single long piece of science journalism: finding and pitching story ideas; reporting in depth and at length; outlining and structuring your story; choosing a narrative voice and strategy, crafting leads and "overtures," and making connections between your story and its larger contexts. As a group, we'll also work as editors on one another's ideas and pieces. And since reading good prose is the best way to learn to write it, we'll be closely reading an exemplary piece of narrative science journalism each week. Students will be expected to complete a draft and revision of a substantial piece by the end of the term.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Politics & Journalism: Workshop (203362)

Jill Abramson

2020 Spring (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

An advanced journalism seminar for those with some writing experience and an interest in political news coverage. Students will learn how to write about U.S. politics in all the major genres, including long form narratives, profiles, commentary and opinion. There will be extensive reading from political books, including chapters from the novel All The King's Men and non-fiction classics by T.H. White, Richard Ben Cramer, Garry Wills,and Hunter S. Thompson. Additional readings come from a wide array of reporters and columnists covering the 2020 election including Jane Mayer, Maureen Dowd, Mark Leibovch Peggy Noonan and other political pieces from magazines, newspaper, on-line sites and blogs.The class will focus on the structure of political writing, how to incorporate interviews in narrative writing, the quality and fairness of 2020 election coverage. There will be weekly writing assignments and one in-depth final, magazine-length piece.

Writing for Television: Developing the Pilot: Workshop (203266)

Sam Marks

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This workshop introduces the television pilot with a focus on prestige drama and serialized comedy. Students will excavate their own voice and explore the structure and execution of pilot writing through a first draft of their own original script. With intensive reading and discussion of student work we will examine elements of TV writing, such as treatments and outlines as well as character, dialogue, tone, plot, and, most importantly, vision. Over the semester, we'll turn ideas into worlds and worlds into scripts.

The Art of Writing about Science and the Environment: Workshop (207988)

Russell Rymer

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This is a seminar in creative nonfiction writing that will take science and the environment as its subject matter. Students will research and write a series of magazine-style articles about science or scientists, intended for a general readership. Along the way, they will hone their interviewing and research skills and expressive capabilities, while contending with issues of factual accuracy, creative license, authority, and responsibility, along with the basic tenets of longform nonfiction. Ultimately students will explore the ways that hard science and subjective prose are interrelated forms. No prior experience with science is required.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. Writing Women: Workshop (207987)

Susan Faludi

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Women have historically exerted their voice and power through writing, even as the professional writing trades of journalism and publishing have historically been unwelcoming of their presence. This seminar class will examine reporting and writing by and about women, and engage students in the practice of

writing about gender, feminism, and women's lives. Students will produce and workshop their own researched and reported longform articles, while simultaneously inspecting how the media represents women's issues and learning the history of women writers in American journalism. We will grapple with questions of interviewing, structure, creative expression, ethics, and fair representation, along with the fundaments of narrative nonfiction.

Course Notes: **Admission based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page. James Simpson

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 27

Across the period 700-1700 the shapes of British culture were absorbed from different centers of Western Europe. These cultural forms are conflicted among themselves, and conflicted across time. This course will

delineate the principal cultural forces (e.g. religious, political, social) that shaped England in particular. We will look to the ways in which those vibrant yet opposed forces find expression in the shape, or form, of literary works.

Course Notes: **Be sure to attend first class meeting to be considered for admittance.**

Anna Wilson

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 27

In this course we will read some of the most significant and influential works of literature written in England before 1700. We will encounter the genres, tropes, forms, and language of medieval and early modern English literature, while exploring how these texts respond to and shape issues of their time, including war, political regimes, the emergence of national, racial, and religious identities, and changing attitudes to gender and sexuality. We will also develop a foundational range of critical writing skills and methods for approaching English literature.

Poets: Poetry and Everything (213573)

Christopher Spaide

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 27

An introduction to the major categories of lyric poetry—from Chaucer's time to ours, from this zip code and wherever else English has traveled—through poetry's ties to just about everything. How does life give rise to different kinds of poems, and how do those poems shape, memorialize, and alter life? What can poetry steal from neighboring discourses and media—song, prayer, visual art, news, drama, narrative, argument—and what does poetry stake out as its own? How much can history—the history of culture and politics, of technology and language—teach us about how poets revolutionize past forms and devise new forms?

Readings include the greatest hits of English-language poetry, a stellar collection from 2019 (Jericho Brown's The Tradition), and selections from recent books and literary magazines. Assignments include critical essays and shorter creative exercises—parodies, translations, imitations.

Poets: Keats Isn't Dead: How We Live Romanticism (214513)

Vidyan Ravinthiran

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 27

Our thoughts and feelings about identity, self-expression, and the power of the imagination draw on the British Romantic poetry of the Long Eighteenth Century--whether we've read any or not. Focusing on John Keats (his key poems, and his key ideas, about 'negative capability', the 'camelion poet', and so on), this course makes unconventional connections into the twentieth, and twenty-first century. Tracking issues of race, class, gender and sexuality, we'll bounce from Keats into war verse; African-American poetries; world/postcolonial writing; the literature of social class; feminist experimentalism; and constructions of masculinity. Concentrators will learn how to analyze poetry in both closed and open forms.

John Stauffer

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 27

This course traces the extraordinary rise of American literature from the nation's founding through the early twentieth century. Focusing on the "outsider," we examine how American literature gave definition to a culture that was distinct from Europe. Along the way we explore a number of themes: the dilemma of democratic ideals co-existing with slavery and oppression; women as symbols of America; and the relationship between domestic and national fictions. Authors include Irving, Douglass, Melville, Stowe, Whitman, James, Twain, Chesnutt, Wharton, others.

Course Notes: **Be sure to attend first class meeting to be considered for admittance.**

Migrations: Gilded Ages (208099)

Patricia Chu

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** 27

Originally from the title of an 1873 novel by Mark Twain and Charles Dudley Warner, the phrase "The Gilded Age" quickly passed into popular parlance as the name of the period following the Civil War in America: a time when immense fortunes and superficial appearances of growth and prosperity co-existed with growing poverty and unrest. As a number of economists have argued, income disparities in the United States are currently at their highest levels since the end of the 1920s, when the arrival of the Great Depression produced a consensus in favor of the more equitable distribution of wealth. In other words, we are now living in America's new Gilded Age. In this class we will explore this premise by first examining how representative novels of the classic Gilded Age (approximately 1870 through 1930) represented social structures—how authors tried to comprehend and depict "the way the world works" and the individual's life in it—and then comparing and contrasting these with novels of a new gilded age, including the way depictions of globalization and economic empire as central to American national identity develop over time and across national boundaries (England, India). We will study the novel as a genre and literary realism as a strategy of representation and how these emerge from social and political history. We will also read brief accounts of the economic culture of each historical moment. Authors may include: F. Scott Fitzgerald, Theodore Dreiser, Edith Wharton, Frank Norris, William Dean Howells, Aravind Adiga, Zadie Smith, Jeffrey Eugenides, Jonathan Franzen.

Course Notes: **Be sure to attend first class meeting to be considered for admittance.**

Race, Identity, and American Poetry Right Now (213571)

Christopher Spaide

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

What does contemporary American poetry look like if we consider work by poets of color to be absolutely central rather than specialized or marginal? What assumptions, questions, and tools do we bring to bear when we read African American poets, Latinx poets, Asian American poets, Pacific Islander poets, Native poets, and mixed-race poets? (For that matter: What do we bring to bear when we read a white or "unmarked" poet?) Questions like these will guide our careful reading of ten poetry books, all published in the last five years. We'll also study the many media where poetry is now published, reviewed, and adapted, from literary magazines and anthologies to Twitter and web series. Our writing culminates in a research essay, equal in scope and ambition to a publishable review-essay or scholarly article; we'll also read, reverse-engineer, write, and workshop the primary prose genre of contemporary-poetry criticism, the book review. Poets include Claudia Rankine, Danez Smith, Tommy Pico, Brenda Shaughnessy, Natalie Scenters-

Zapico, Craig Santos Perez, Layli Long Soldier, Fatimah Asghar, Joshua Jennifer Espinoza, Cameron Awkward-Rich, and Terrance Hayes.

The Art of the Real (213540)

Stephanie DeGooyer

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This class will examine literature from the eighteenth century to contemporary era in order understand what makes a work of art or story 'real.' Is there really such a thing as truth, transparency, or evidence in fiction? Why do we want – or do we want – art to appear real? How does one go about representing reality? Why would we study fiction in order to understand real-world political, economic, and social problems? The first half of the class will primarily investigate formal and social realism in the eighteenth- and nineteenth-century novel, with some attention to art. In the second half of the course we will consider modern and contemporary varieties of realism such as cinéma vérité, direct cinema, affectless or hysterical realism, and autofiction.

Primary texts may include Jane Austen's Pride and Prejudice, Daniel Defoe's Robinson Crusoe, George Samuel Richardson's Pamela, and Zadie Smith's NW (as well as William Greaves' film symbiotaxiplasm). We will also read critical essays and shorter excerpts by Erich Auerbach, Roland Barthes, Teju Cole, Catherine Gallagher, Karl Ove Knausgård, Tao Lin, György Lukács, David Shields, Ian Watt, and Alex Woloch.

Black New England (207586)

Thomas Dichter

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course examines the rich archive of African American writing in and about New England. The study of African American literature often focuses on the rural South and the urban North (especially such metropolises as New York and Chicago). Yet African Americans have been living and writing in New England since the colonial era. This course reorients conventional geographies of African American literature while also offering an alternative perspective on the New England literary tradition. Authors will include: Ann Plato, Phillis Wheatley,

David Walker, Harriet Wilson, W.E.B. Du Bois, Pauline Hopkins, Ann Petry, Malcolm X, and the Combahee River Collective.

Chekhov/Beckett (213543)

Elizabeth Phillips

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar will put into conversation the radically influential literatures of Anton Chekhov and Samuel Beckett. Despite the chronological and geographical distance between their writing careers, Chekhov and Beckett describe human experience in remarkably similar ways, and drew upon many of the same philosophical influences. Their writings are attuned to many of the same concerns: human misery and nonsensical passions, the passage and felt experience of time, the ways in which the theater can create new sensations in its audiences. In studying Chekhov, we will discuss his depiction of Russian life as a method of confronting Realism and pioneering a new naturalism, and we will focus particularly on his experimentation at the Moscow Art Theater and collaboration with director Constantin Stanislavski, as well as his influence on the Russian Avant Garde. For Beckett, we will study his plays and novels as a response to the influence of Marcel Proust and James Joyce; we will discuss the Second World War and his work in the French Resistance; we will define Aburdism, Existentialism, and Postmodernism. In this small seminar, we will also echo Chekhov and Beckett's same philosophical questions, and inquire into our own felt experiences of reading and watching: what does it mean to be bored? To experience illness? To establish a routine? To feel desperate? Through our readings in prose and drama, as well as several secondary essays, we will compose original, research-based arguments, culminating in a substantial paper or creative final project.

Comic Imagination Through the Middle Ages (123564)

Daniel Donoghue

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Bad puns. Blasphemy. Codpieces. Corpse humor. Cougars. Cuckolds. Fart jokes. Dominant ladies. Funny drunks. Hypocrites. Incredible sex. Over-clever students. Priapic priests. Romance send-ups. Wimpy

knights. Wit triumphant. These are some of the ingredients of humor covered in our survey of literature from 1100 to 1650. The ranges include drama, fabliaux, Latin lyrics, Chaucer, Middle Scots poetry, and other genres up to Rabelais and Shakespeare. With the help of Auerbach, Huizinga, Bakhtin, and other critics, you will develop an understanding of what constitutes humor from this period, as well as the serious institutions that invite a comic reflex.

The Empire Writes Back: Contemporary Fiction and the Booker Prize (213630)

Duncan White

2019 Fall (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In 1982 Salman Rushdie contributed an editorial to the *Times of London,* signaling a change in literary power relations. "English, no longer an English language, now grows from many roots," he wrote, "and those whom it once colonized are carving out large territories within the language for themselves. The Empire is striking back." With the empire shrinking fast and British culture being reinvented by postcolonial immigration, a more expansive understanding of "British" literature began to emerge, a change embodied in the founding the Booker Prize in 1969, which soon became the most prestigious literary award in the country. That writers from "Commonwealth" countries were eligible for the award resulted in the valorization of writing that confronted Britain's history as an empire and explored the legacy of imperialism in those countries that had gained their independence. In this course we will consider how novels that won the Booker questioned ideas of identity, nation, literariness, and prestige, reading a range of novels, including by Kiran Desai, Nadine Gordimer, Marlon James, V.S. Naipaul, Michael Ondaatje, Arundhati Roy, and Rushdie. In the final weeks of the class we will reflect on what it means that the Booker Prize has recently opened itself up to all literature in English, including by American writers, at the very moment when nationalism and Brexit has led to a resurgence of imperial nostalgia.

Global Shakespeare (214626)

Leah Whittington

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

William Shakespeare drew on texts from around the world when he wrote plays for the London theater he named "The Globe." Since they were first performed in early modern England, Shakespeare's plays have become global texts, adapted and re-fashioned for diverse international audiences. In this course, we will study key plays by Shakespeare in relation to their multi-cultural sources and their global adaptations. Students will explore how the plays dramatize distinctly early modern approaches to ethnicity, diversity, and cross-culturalism, locating Shakespeare's works in their own moment of cultural transition. At the same time, they will study how the plays have been re-interpreted and transformed by contemporary writers, playwrights, actors, and directors from Europe, the Middle East, Africa, Asia and Asia/Pacific, Latin America, Russia, Australia, New Zealand, and far-reaching corners of the world. How do these contemporary performances negotiate between old and new, local and global, canonicity and cultural plurality? What can the story of Shakespeare's worldwide reach tell us about how we conceive "global" literature today?

The Harvard Novel (212790)

Beth Blum

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course addresses the genre of the "Harvard novel," from Faulkner's Absalom, Absalom! to Elif Batuman's The Idiot and Zadie Smith's On Beauty, in order to examine Harvard's status and signification within the cultural imaginary. It brings together novels (and some films) where Harvard offers the narrative setting, supplies a character's backstory, or even serves as a character in its own right. We will address themes of tradition, access, privilege, race, anxiety, competition, and canonicity.

In addition to serving as an introduction to 20th-21st century Anglo-American literature, this seminar is designed to offer students an opportunity to slow down and engage more reflectively with the meaning and substance of their time on campus. Lectures will explore narrative depictions of how Harvard experiences extend into broader society, and also thelarger trajectory of the individual's post-collegiate life.

Consciousness from Austen to Woolf (118850)

James Wood

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

A look at the complex ways in which writers represent their characters' thought in texts by Austen, Flaubert, James, Tolstoy, Chekhov, Giovanni Verga, and Woolf. More broadly, traces the development of stream-of-consciousness, from Austen's incipient mastery of free indirect style, through Flaubert's more sophisticated use of it, to Woolf's full-blown inner monologues, seeing this development as not merely a fact of English and American literature, but as a phenomenon of world literature and an element of our modernity.

Plotting the passions: Nineteenth-Century Literature and Modern Love (213730)

Victoria Wiet

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Instructed by Professor Victoria Wiet

On the series finale of *Crazy Ex-Girlfriend*, the flawed but lovable protagonist comes to a realization when she sings, "life doesn't make narrative sense." *Crazy Ex-Girlfriend* is one among many contemporary television shows that meditate on how literature, theatre and film have created expectations about romantic and sexual life in ways that are both invigorating and restricting. This course explores how those expectations have been established, revised and reflected upon since the consolidation of the marriage plot in the early nineteenth century. How does intimacy develop? What are the aims of romantic and sexual life? How does sexual passion affect personal identity, and how do social norms affect sexual passion? We will consider how plot combines with other narrative elements such as description, characterization, and point-of-view in order to convey perspectives on the preceding questions. Through formal analysis, we will come to a deeper appreciation of how narrative works convey changing beliefs about love and sex and what beliefs have remained the same despite the seismic historical changes that have intervened between Jane Austen's *Emma* and Sharon Horgan's comedic series, *Catastrophe.*

The first two units study the development and consolidation of two important narrative conventions: the marriage plot and the sexual tragedy. During these units, we will consider how these conventions emerged out of a distinctive historical context, the consolidation of the inviolate reproductive nuclear family, while also asking how and why they have endured. In the next unit, we will meditate on how the narrative and social expectations laid out in the nineteenth-century took on altered yet recognizable forms in the new media characteristic of the twentieth century: cinema, the pulp novel, and the modern theatre. We will conclude by reading a contemporary novel that puts enduring narrative conventions in service of formal experimentation, Sally Rooney's *Normal People.* Other works studied include *Emma; Jane Eyre; Madame Bovary; Jude the Obscure; The Picture of Dorian Gray;* the films *It Happened One Night* and *Now Voyager*; the plays *A Streetcar Named Desire* and *A Taste of Honey*; and the lesbian pulp *The Price of Salt* and its 2015 film adaptation, *Carol.*

Recognitions (207583)

James Simpson

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Representation and recognition: this course considers the European fortunes of art and recognition from Homer through to the Holocaust. What if recognition of what and whom we have *known already* is the most emotionally forceful, illuminating experience of art? What if we feel ourselves to be recognized by art? What if originality were not what strikes us most forcefully in art? This course will test the force of these propositions, by looking to both literature and visual art (especially painting). In addition, we will look to rhetoric, cognitive psychology and philosophy in order to understand the artistic experience of recognition. The course starts with Homer and ends with the great challenge to recognition: does the Holocaust fundamentally damage the possibility of recognition?

Staging Shakespeare (212789)

Derek Miller

2020 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Like any other plays, those by William Shakespeare pose serious challenges for actors, directors,

designers, and audiences, problems they must solve in performance. Because Shakespeare's plays have such a long history in the theater, they offer a unique window into ever-evolving performance aesthetics. In staging Shakespeare, artists always attempt to capture what they perceive as Shakespeare's universal achievements and to amplify his work's resonance for a contemporary audience. This seminar examines a history of Shakespeare in the English-speaking theater to illuminate how Shakespeare helps to shape theater and how the theater helps to make Shakespeare. We will read a number of Shakespeare's works, but will attend not to literary interpretations of the texts, but rather to (a) the problems those texts create in performance and (b) how artists have solved those challenges over the past four centuries. In other words, we will explore both prior approaches to staging Shakespeare and what in Shakespeare's plays makes them particularly difficult—and exciting—to stage.

Course Notes: **This course, when taken for letter grade, meets the Department of English Shakespeare requirement.**

Selfies: Solo and Verbatim Performance (214440)

Elizabeth Phillips

2020 Spring (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will explore performances of the self--both storytelling and the first personal monologue, and documentary theater and third person verbatim performances. Each seminar will be divided between theoretical and critical discussion of plays and performances--with particular attention to themes of gender and sexual identity, race, community building, and US politics--and a studio practicum in which students will perform their own stories and the stories of others. For the final assignment, students will create either a one-act length verbatim/documentary performance or a one-act length solo show. Course materials will include plays and performances by artists including Heidi Schreck, Anna Deavere Smith, Alan Rickman and Katherine Viner, Erin Markey, Diana Oh, Lily Tomlin, Moises Kaufman, Doug Wright, Joe Salvatore/NYU Verbatim Performance Lab, and The Civilians.

English 102J

Introduction to Old English: Conceptions of the East in Old English Literature (207605)

Daniel Donoghue

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

One of the most curious aspects of Old English literature, is its profusion of texts that engage with the idea of the Eastern world. This can, perhaps, be attributed to Theodore of Tarsus, a monk from Cilicia in the Byzantine Empire who assumed the archbishopric of Canterbury in 668. Theodore brought with him a profound knowledge of Greek- and Latin-based intellectual traditions to England with his arrival, and established a school in Canterbury from which he bestowed this breadth of learning on English pupils.

The result is that, alongside texts we normally associate with Anglo-Saxon England, such as *Beowulf*, there exist texts such as *Apollonius of Tyre*, a translation of a Greek story referred to by scholars as the earliest English novel, and *The Wonders of the East*, a work describing the magical creatures inhabiting regions such as Persia, Babylonia, and Egypt. We'll read excerpts from these texts and more, covering literary forms such as prose and poetry, all of which will be representative of early English engagement with the Eastern world.

First and foremost however, this course serves as an introduction to Old English, that produced in the vernacular language used by the Anglo-Saxons from the fifth century until around 1100. Although many of its linguistic features are recognizable in Modern English, Old English must be learned as a foreign language. The first half of the course will focus primarily on instruction in Old English grammar. We will begin translating short texts during the third week of the course. Before long, however, we will progress to translating prose texts and poems that demonstrate Anglo-Saxon engagement with the idea of "the East." Alongside translation, some time will be devoted to discussion organized around our translations and a few select readings that will allow us to interrogate early English conceptions of the Eastern world. Daily instruction by Joseph Shack

Course Notes: **This course, when completed with an honors grade and in combination with English 103g, fulfills the College language requirement and the English Department's Foreign Literature requirement.**

Old English: Working with Manuscripts (116977)

Daniel Donoghue

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The task of translation will be supplemented by consistent attention to the manuscript contexts of Old English literature. The texts will include selections from the Anglo-Saxon Chronicle, Genesis, the Exeter Book Riddles, Beowulf, and others. The course will guide students through basic principles of manuscript study and will culminate in a collaborative edition of an Old English text.

Course Notes: **Students who complete both English 102 and 103 with honors grades will fulfill the College language requirement and the English Department's Foreign Literature requirement.**

Recommended Prep: **English 102g or equivalent.**

Shakespeare After Hamlet (146556)

Gordon Teskey

2019 Fall (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Written at the midpoint of Shakespeare's career (1600-01), *Hamlet* marks the culmination of an experiment in representing the inner life with remarkable human sympathy. *Hamlet* also marks the beginning, in the comedies as much as in the famous tragedies, *Othello*, *King Lear*, and *Macbeth*, of a new and disturbing interest in the human mysteries of sadism, power, eroticism and loss.

Course Notes: **This course, when taken for letter grade, meets the Department of English Shakespeares Common Ground requirement.**

English Lyric Poetry from the Renaissance to the Romantics (213326)

Gordon Teskey

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Lyric poems are short bursts of metrically organized language that capture, in art, moments of entangled feeling and thought. How has lyric poetry in English developed or changed from the Renaissance to the romantics? In this course, we will read poets ranging from Sir Thomas Wyatt and Sir Philip Sidney to Emilia Lanyer, Wordsworth, Shelley, Keats, and Elizabeth Barrett Browning.

Milton's Paradise Lost (203023)

Gordon Teskey

2020 Spring (4 Credits) **Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course focuses on Milton's most famous work, *Paradise Lost*, the greatest long poem in English and the only successful classical epic in the modern world. Milton went totally blind in his forties and composed *Paradise Lost* by reciting verses to anyone available to take them down, like the blind prophets and poets of legend. Yet the questions he raised are surprisingly enduring and modern. We will consider how he generates the sublime and how he builds great scenes and characters, especially his most famous one, Satan.

The Nineteenth-Century British Novel (213731)

Victoria Wiet

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course explores how the relatively new cultural form of the novel represented and responded to the new features of social life that characterized nineteenth-century Britain. The nineteenth century was a period of drastic historical change in which the institutions that continue to define modern life became consolidated: companionate marriage, mass transit, urbanization, telecommunications, colonial expansion, secularization, innovations in medicine and psychology, and the establishment of mass culture. Even after they achieved eminence, these institutions continued to evolve at a rapid pace that perhaps only the novel could capture. The novel was in a privileged position to represent and reflect on how these new developments affected everyday life because of its extended length, flexible form, and intricate techniques for examining the relations among self, society, and the world.

This course begins with Jane Austen's *Persuasion* and Charlotte Brontë's *Jane Eyre* in order to establish how the novel form represents these relations, with particular focus on how novelists connect their provincial settings to the operations of empire. The next unit explores how the relation between self and society changes with the emergence of the modern city, where the upheavals of industrial capitalism have particularly insidious effects. Next, we consider how new understandings of the self developed in medicine and psychology affect one's relations to others. In the final part of the course, we turn to two works that reflect on whether the institutions of modern life are harmful or liberating, Thomas Hardy's *Jude the Obscure* and Oscar Wilde's *De Profundis.* In addition to the works mentioned, we also read Elizabeth Gaskell's *Mary Barton,* Charles Dickens's *Bleak House,* Anthony Trollope's *The Warden,* George Eliot's *The Lifted Veil,* and Robert Louis Stevenson's *Dr. Jekyll and Mr. Hyde.*

Broadway Bodies, or Representation on the Great White Way (212758)

Derek Miller

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

To many of its fans, Hamilton poses a problem. How can a show that presents so many talented artists of color represent a white-washed American history? And how should we evaluate the show's impact when sky-high ticket prices make it accessible primarily to a wealthy (read: white) audience? In its aspirational embrace of a multi-ethnic America and its failure fully to realize that promise, Hamiltonembodies the paradox of Broadway. This course examines that paradox since World War II, particularly as it pertains to multiple aspects of identity including race, gender, sexuality, and disability. We will examine how shows such as South Pacific, with its famous anti-racist anthem, or M. Butterfly, which explored the intersections of Orientalism, gender, and sex, temper their inclusive representations to appeal to wide commercial audience. Broadway is a particularly fertile ground for exploring these issues because theatrical performances always call attention to the performative nature of subjectivity: that is, who you are is a product of what you do. As we shall see, though, theatrical performatives risk being "infelicitous," in the words of philosopher J.L. Austin: instead of affirming the subjects they represent, the performances can turn those subjects into mere theater. Our starting assumption is that many Broadway stake-holders genuinely desire broader representation in and for their work, but that the structure of the industry constrains how these shows challenge the status quo. To understand those constraints we will ask what stories Broadway tells, who sees them, and how they are marketed—while always attuned to "who tells your story."

20th Century American Novel (214530)

Patricia Chu

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1130 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Obviously it's impossible to cover 100 years of literature in a semester but we will engage intensely with a group of major American novels published approximately 1900-2000. We will study their literary forms and styles: while also setting them in the context of American literary history and the sociopolitical developments with which they were engaged. Authors may include: Hemingway, Faulkner, Hurston, Himes, Larsen, Ellison, DeLillo, Morrison, Hagedorn, Cather.

The Literature of Displacement (212752)

Jesse McCarthy

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

A displacement can take place in our lives in the sense of moving, or being moved, from one location to another. From the nautical sense we also understand any volume, which fills or occupies a liquid space that changes to accommodate it, a useful metaphor for intellectual

displacements—as we bend, shift and make room for new ideas in our minds. In psychology, a displacement is the transference of a site of trauma from one person, scenario, or object to another. Finally, there are histories of human displacement, a broad category under which to consider narratives generated by migration, emigration, exile, and enslavement. In this seminar we will read from texts that contribute in all of these ways, often interrelated, to a "literature of displacement." We will read novels, essays, and memoirs by Joseph Conrad, Zora Neale Hurston, Richard Wright, Chimamanda Ngozi Adichie, James Baldwin, Tayeb Salih, Valeria Luiselli, and W. G. Sebald and watch films by Les Blank, Charles Burnett, Rainer Werner Fassbinder, and Edward Yang among others. We will ask how these works respond to the trials and rewards of belonging to, or being alienated from, cultures and communities; how history and loss imprint us with identity but also disrupt it; what we learn from encountering other places and perspectives. Can remembering, witnessing, and storytelling create a place for ourselves in a world founded on an ongoing and massive experience of perpetual displacement?

Course Notes: **This course, when taken for a letter grade, meets the Department of English Migrations requirement.**

On the Run: Fugitives and Refugees in American Literature (205001)

Thomas Dichter

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Escaped slaves, refugees, outlaws, and rebels are all on the run in the pages of American literature. In a nation founded in the name of "life, liberty and the pursuit of happiness," stories of the fugitive making a break for freedom have been both troubling and enchanting. In this course, we will examine narratives of flight by American writers from the early days of the Republic through the present. These authors explore many different kinds of fugitivity: from the story of Henry "Box" Brown, a slave who hid in a crate and mailed himself to freedom in the North, to recent fiction by Edwidge Danticat and Viet Thanh Nguyen. Along the way, we'll consider narratives of outlaws, war refugees, undocumented immigrants, and insurrectionaries. Engaging with a diverse range of authors, our texts will include autobiography, novels, poetry, and folklore.

Modern Women Writers (213541)

Elizabeth Phillips

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1130 AM

Instructor Permissions: None **Enrollment Cap:** n/a

What does is it mean to be, or feel as, a woman? This course will survey major female authors from the twentieth and twenty-first centuries who ask these questions in their novels, plays, and essays. In our lectures, we will move through literary explorations of womanhood in Modernism, to Expressionism, the Feminist movements, and on to contemporary questions of trauma, reproductive rights, love, activism, sexuality and gender identity, race, sexual exploitation and abuse, camaraderie, unity, and comedy. Authors include Virginia Woolf, Margaret Atwood, Toni Morrison, Audre Lorde, Djuna Barnes, Sally Rooney, Alice Birch, Elena Ferrante, and Chimamanda Ngozi Adichie. Final assignment will be a creative project of your own design based on course themes and materials.

Introduction to Asian American Literature: What Is Asian American Literature? (146590)

Ju Yon Kim

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Aiiieeeee! An Anthology of Asian-American Writers (1974) was one of the earliest attempts to collect writings that were, to quote the editors, "exclusively Asian-American." Yet as their lengthy—and controversial—explanation of the selection process makes clear, Asian American literature defies neat categorization. This course is both a survey of Asian American literature and an introduction to ongoing debates about what constitutes Asian American literature. We will study a variety of literary genres and ask how formal and stylistic conventions, as well as shifting sociohistorical circumstances, have shaped conceptions of Asian American literature.

Poetry, Exile and Displacement (161291)

Peter Sacks

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course studies lyric poetry and its thematic as well as formal expressions of exile, the loss of home, the experience of estrangement or dispossession. Such displacements may be from the self, or from assigned "identity" ("why should I be my aunt,/or me, or anyone?"), as much as from other persons, conditions, regimes. Selected poems will certainly coincide with the urgent unease regarding questions of the body, of the passions, of gender, of background, of national or global citizenship. With some prior examples from the ancient world to the Renaissance and Romantic periods (from Sappho and Ovid, to the anonymous author of "Tom o' Bedlam," and from Wordsworth and Coleridge to Tennyson, Hemans and Dickinson), the course will focus primarily on Twentieth Century works by Marianne Moore, Elizabeth Bishop, James Wright, Anthony Hecht, James Merrill, Derek Walcott, Seamus Heaney, Yusef Komunyakaa, and several others.

The Essay: History and Practice (207555)

James Wood

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Matthew Arnold famously said that poetry is, at bottom, "a criticism of life." But if any literary form is truly a

criticism of life, it is the essay. And yet despite the fact that all students write essays, most students rarely study them; bookshops and libraries categorize such work only negatively, by what it is not: "non-fiction." At the same time, the essay is at present one of the most productive and fertile of literary forms. It is practiced as memoir, reportage, diary, criticism, and sometimes all four at once. Novels are becoming more essayistic, while essays are borrowing conventions and prestige from fiction. This class will disinter the essay from its comparative academic neglect, and examine the vibrant contemporary borderland between the reported and the invented. We will study the history of the essay, from Montaigne to the present day. Rather than study that history purely chronologically, each class will group several essays from different decades and centuries around common themes: death, detail, sentiment, race, gender, photography, the city, witness, and so on. In addition to writing about essays – writing critical essays about essays – students will also be encouraged to write their own creative essays: we will study the history of the form, and practice the form itself. Essayists likely to be studied: Plutarch, Montaigne, Hazlitt, De Quincey, Woolf, Benjamin, Orwell, Camus, Primo Levi, Barthes, Baldwin, Sontag, Dyer, Didion, Leslie Jamison, Knausgaard, Ta-Nehisi Coates.

Introduction to Law and Literature (213538)

Stephanie DeGooyer

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0230 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course introduces students to interpretative approaches to law and literature. Why might a lawyer or judge want to examine the law from the perspective of literature or use tools of literary analysis to understand a case? What role has literature played in the development of legal rules and principles? Organized around four major legal topics—nationality, personhood, property, and testimony—this course will explore the rhetorical basis of law, the historical roots of equity, similarities between literary and legal interpretation, debates about the use of literature to humanize legal decision-making, and the use of narrative as an alternative paradigm for justice. Additionally, we will address the major academic debates in the "law and literature movement," which has seen a recent burst of scholarly activity.

Primary texts may include Claudia Rankine's *Citizen,* M. NourbSe Philip's *Zong!,* Mary Shelley's *Frankenstein,* Sophocles' *Antigone,* Richard Powers' *The Overstory,* Herman Melville's *Benito Cereno,* and J.M. Coetzee's *Disgrace*

Constellations (212761)

Homi Bhabha

2020 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

"Constellations" is an attempt at putting key literary works in conversation with significant texts from other disciplines and discourses --- philosophy, politics, history, law, and the social sciences. The conversations initiated between these texts might converge on conceptual or historical issues; on other occasions, they may conflict on matters of aesthetic form or cultural belief. What gives these 'coupled" conversations a thematic or curricular coherence is their sustained interest in the life-worlds of minorities as they struggle to gain the recognition and protection of human rights. One of the key questions running through the course will be what it means to make a claim to human dignity from a position of inequality and injustice.

I have chosen landmark texts that describe a wide arc of historical experience from colonization and segregation to migration and the predicament of refugees. These conditions of life and literature will be framed by questions of national sovereignty and international cosmopolitanism. Discourses of race, gender and identity will intersect with conceptual issues of cultural representation and literary form. The conversations initiated by this course will be polyphonic and plural.

Growth, Technology, Inequality, and Education (212859)

James Engell

Benjamin Friedman

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An economist and a humanist, together with professors from the natural sciences, analyze familiar conceptual and policy-relevant issues from viewpoints of their respective disciplines. For example, how do we measure inequality, and at what point does it become problematic (and how do we know)? How then should it be addressed (e.g., tax code, minimum wage)? What are the best policies to confront job losses from technology? What does sustainable growth mean? The goal is not merely to examine four intertwined issues "growth, technology, inequality, and education" but also to understand the distinct concerns and methods of the humanities, social sciences, and natural sciences.

Course Notes: **Sections will separately accommodate concentrators in English/Humanities and Economics/Social/Natural Sciences/SEAS.**

Saints' Lives in Old and Middle English (212778)

Daniel Donoghue

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Our exploration of the lives of saints falls into three parts: the first focuses on translation of individual saints' lives, with attention to the language of Old English; the second will read broadly and deeply into the newly-published collection of The Old English Lives of Saints by Ælfric, in three volumes from the Dumbarton Oaks Medieval Library; the third will trace the transition from Old English to early Middle English using the lives of Juliana, Margaret, and Katherine, with some attention to Anglo-Norman Lives. Much of the secondary reading will be decided after we meet and take the measure of the varieties of student interest.

Queer Literature (212795)

Stephanie Burt

2020 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Queer and trans literary writing now, its parallels and its precursors, from late medieval to the present day, along with useful ideas about it. Some history, some theory, but mostly queer and trans and queer-adjacent literature. Marlowe, Rochester, K. Phillips, Wilde, Rich, Baldwin; some primary texts determined by *your interests,* including less-often-studied genres and media such as graphic novels and YA.

Ethnic Studies: Past, Present Future (213575)

Ju Yon Kim

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

An interdisciplinary graduate research seminar exploring cutting-edge approaches in ethnic studies. From its institutional beginnings in the late-1960s, the field of ethnic studies built frameworks to critically examine questions of inequality and power through intersecting analytical paradigms of race, indigeneity, gender, sexuality, class, and citizenship. With visiting scholars at Harvard's Warren Center, students will explore how such frameworks remain useful and relevant, interrogate limitations and contradictions within the field, all the while exploring new possibilities and directions within ethnic studies.

Co-taught with Professor Lorgia García Peña

Course Notes: **Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.**

Class Notes: **This course will meet Tuesdays, bi-weekly, thoughout the year from 9: 45 to 11:45am**

Public Humanities Practicum: Humanities in the High School Classroom (214358)

Elisa New

2019 Fall (4 Credits) **Schedule:** M 0415 PM - 0700 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This fall, over 500 high juniors and seniors and teachers from Title One high schools across the country (from New York City, LA, San Diego, Flint, Pontiac, Hartford and rural Louisiana and New Mexico) have enrolled in the Poetry in America and Harvard Extension School's national pilot of the online Poetry in America: The City from Whitman to Hip Hop.

The Public Humanities Practicum, co taught by course Poetry in America director Elisa New and National Education Equity Lab director, Leslie Cornfeld, will provide students in FAS, GSE, and HKS the opportunity to embed within, study and evaluate how college level humanities instruction may promote college readiness, intellectual and emotional growth and civic cohesion-- and to weigh the implications of this model for broad educational public policy. Students in the course will be allowed to focus individual final projects in 1) public policy 2) humanities instruction or 3) media and educational design.

Course Notes: **Jointly offered with Harvard Kennedy School (as SUP-472 Education Equity Through A Solutions-Targeted Lens) and Harvard Graduate School of Education.**

South Asian Poetry (214514)

Vidyan Ravinthiran

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

When we look at literature by writers on the margin (whether this refers to race, nationality, gender, sexuality, and so on) is there a danger of only seeing their art in terms of its politics, and, rather than recognizing their creativeness, always putting their work through the same victim-template?

Focusing on post-1947 Indian poetry, this course will also glance at Sri Lankan poetry from this period. These poets make a decisive break with the wannabe-colonial, archaically emulous stuff which came before them—and they do this with the aid of European modernism, and US poetry's turn to open forms and a streetwise vernacular. We'll read Nissim Ezekiel, Sujata Bhatt, A.K. Ramanujan, Kamala Das, Arun Kolatkar, Dom Moraes, Eunice de Souza, Adil Jussawalla, Arvind Krishna Mehrotra, and Agha Shahid Ali—poets whose politics is inextricable from the aesthetic richness of their work.

Who Cares about Modernism?: Literary Studies and the Problem of Periodization (212774)

Beth Blum

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This graduate seminar uses modernism as a test case for debates regarding the merits and limits of literary periodization. Though our focus is modernism, we will be engaging with examples of similar debates from other periods, such as challenges to the medieval/ Renaissance divide, calls for "presentist Shakespeare," the manifesto of the Victorian v21 collective, and discussions regarding the utility of labelling contemporary literature as "post-45." We will examine the contingencies and controversies of modernism's fraught self-formation, reading detractors including Wyndham Lewis, Laura Riding, and Edith Wharton, as well as figureheads such as Woolf, Lawrence, and Joyce.

Primary texts are designed to partly overlap with the generals list and may include: Joyce's Portrait of the

Artist as a Young Man, Woolf's To the Lighthouse, Wharton's The House of Mirth, and more. Secondary readings to include: Eric Hayot, Rita Felski, Paul Saint-Amour, Fredric Jameson, Kenneth Burke, Susan Stanford Friedman, René Wellek, Gerald Graff, Ted Underwood, David James and Urmila Seshagiri, Wai Chee Dimock.

Migration and the Humanities (205269)

Homi Bhabha

2020 Spring (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

By focusing on literary narratives, cultural representations, and critical theories, this course explores ways in which issues related to migration create rich and complex interdisciplinary conversations. How do humanistic disciplines address these issues—human rights, cultural translation, global justice, security, citizenship, social discrimination, biopolitics—and what contributions do they make to the "home" disciplines of migration studies such as law, political science, and sociology? How do migration narratives compel us to revise our concepts of culture, polity, neighborliness, and community? We will explore diverse aspects of migration from existential, ethical, and philosophical perspectives while engaging with specific regional and political histories.

Public Humanities Workshop (212794)

Martin Puchner

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Public humanities are becoming increasingly central for careers both inside and outside of academia. This workshop, which is open to beginning and advanced graduate students, introduces participants to the tools they need to address audiences other than specialists in their own field. These tools range from writing op-eds based on dissertation research to writing general interest books, and also include book reviews, podcasts, social media strategies and more. While we will discuss some historical context, the emphasis is on practice and skills. Our work will be supplemented by visits from editors and literary agents. Because the course is a workshop, enrollment is limited to 12.

Topics in Criticism and Theory (212796)

Jesse McCarthy

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course surveys major works in literary theory and criticism from the high watermark of 'French Theory' as it crossed the Atlantic in the 1970s up to the present. Our goal will be twofold: firstly, to grapple with these arguments and methodologies on their own terms and gauge their impact on literary study, with students encouraged to draw on examples from their respective fields. Secondly, to historicize our own reception of 'theory,' assessing its present place in scholarship and its possible futures at a time when various contemporary modes of inquiry like, "surface reading," "new formalism," and "weak theory," are all pushing back on this intellectual legacy, forcing us to rethink the limits and aims of critique.

Methods in the Digital Humanities (203055)

Derek Miller

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course introduces practical skills in programming for the Digital Humanities (DH) while also investigating the theories and debates that continue to define that field. We will focus primarily on DH's applications to research questions in the humanities rather than on any pedagogical or archival uses. The course is designed with a firm belief not in DH's righteousness—indeed, we will devote considerable time to critiques of the field—but rather in the necessity of grappling with its ideas and practices in an informed manner. To that end, our exploration of DH methods will involve considerable work in computer programming (though you need have no prior knowledge of those skills). Our practical work with coding and with pre-fabricated digital tools will give us the tools to understand what happens to our thinking when we think about the humanities with computers.

Placement Seminar (207884)

Ju Yon Kim

Anna Wilson

2019 Fall (2 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The job placement seminar will meet during the Fall semester to help students prepare dossiers and oral presentations of their work for the academic job market. The class will meet roughly every two weeks, providing a supportive structure for participants to produce, workshop, and revise application materials. We will also arrange mock interviews and practice teaching demonstrations. The placement officers provide one-on-one support with editing/proofing materials and guidance in navigating the applications process. This seminar is restricted to students in the English department. We welcome students who are intending to actively apply for postdocs or jobs this year to enroll; some seminar sessions suitable for

those interested in thinking about the market or their career options but not actively applying this year will be advertised more widely and open to all graduate students in the department.

Environmental Sci & Public Pol 11 Section: 1

Sustainable Development (109934)

William Clark

Alicia Harley

Michaela Thompson

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 40

Explores contemporary understandings and practical implications of the idea of sustainable development. Investigates the meanings and measures that different groups have given to "sustainable development;" scientific understanding of the complex social-environmental systems we seek to develop sustainably; and lessons on how societies have avoided the "tragedy of the commons" while instituting practical action that advances sustainable development effectively and equitably. Employs case studies in development to meet needs for energy, food, water and health.

Technology, Environment, and Society (109882)

Sheila Jasanoff

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Our interactions with the natural world are increasingly mediated through changes in technology. Technologies create risks, generate solutions, reshape the environment, and alter our perception of the boundaries between nature and artifice. This course draws on major theories of technology and society to inform and deepen our understanding of environmental crises, problems, possible fixes, and policy options.

Course Notes: **Offered in alternate years.**

Conservation Biology (119814)

Mark Margres

2020 Spring (4 Credits) **Schedule:** W 0900 AM - 1130 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The major goal of conservation biology is to preserve and recover genetic, species, and ecosystem diversity through evidence-based assessment, analysis, and management. This course will integrate evolutionary and ecological theory into resource management, economics, sociology, and political science to explore conservation strategies associated with habitat fragmentation and loss, exotic species invasions, over-harvesting and sustainable development, re-wilding, and other relevant topics across the ever-changing wildlife-human landscape relationship. State-of-the-art tools and methodologies will be introduced and showcased with real examples. Weekly classes will involve discussions of emerging conservation issues through the reading of research papers as well as hands-on learning of methodologies of conservation science through analysis of real data. Seminars and discussion forums with guest researchers and field trips with hands-on data collection will also be offered.

Future Energy Economies: Perspectives from the Past: Challenges for the Future (123858)

Michael McElroy

Shaojie Song

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

The seminar will provide a historical perspective on the development of the Chinese and Indian economies with emphasis on their energy sectors, including analysis of related environmental problems. Low-carbon energy options will be introduced, including opportunities for nuclear, wind, solar, hydro, and biofuels. Relations to the global energy systems will be discussed. The seminar will discuss tradeoffs implicit in these choices with respect to reconciling competing goals for environmental protection and economic development.

The Technology, Economics, and Public Policy of Renewable Energy (127572)

George Baker

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

Energy is the lifeblood of economic activity, and there is little prospect of this changing. However, the planet's stores of easily accessed fossil fuels are limited, and the climatological cost of continuing to rely on fossil fuels is high. This course examines the long run and short run prospects for renewable energy. We start by understanding the technology of various renewables, including hydro, solar, wind, biomass, etc. We then examine the economics of these technologies, and how subsidies and taxes affect their viability. Special attention will be paid to the interaction of technology, economics, and public policy.

Class Notes: **This course will be offered in a seminar format with an enrollment limit of 30.**

Recommended Prep: **Economics 10a.**

Current Issues in U.S. Environmental Law (156676)

Shaun Goho

2019 Fall (4 Credits) **Schedule:** T 0600 PM - 0830 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course examines federal environmental law in the United States. It provides an introduction some of the most important environmental laws, the methods of regulation and enforcement represented by those laws, and current controversies regarding their implementation and development. Each week's class will be divided between a general discussion of the law under examination and an in-depth discussion of a current controversy involving that law, with a particular focus on the Trump administration's environmental rollbacks.

Environmental Science and Engineering

Subject: Environ Science & Engineering

Environ Science & Engineering 6

Introduction to Environmental Science and Engineering (116362)

Elsie Sunderland

Steven Wofsy

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will provide students with an introduction to current topics in environmental science and engineering by providing: an overview of current environmental issues, critically evaluating their underlying science and knowledge limitations, and exploring the best-available engineering solutions to some of our most pressing environmental problems. The course will emphasize the interconnected biological, geological, and chemical cycles of the earth system (biogeochemical cycles) and how human activity affects these natural cycles within each of the major environmental compartments (atmospheric, aquatic, and terrestrial).

Recommended Prep: **The course presumes basic knowledge in chemistry, physics, and mathematics at the high school level.**

Global Warming Science 101 (214500)

Eli Tziperman

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the science of global warming/ climate change, meant to assist students to process issues that often appear in the news and public debates. Topics include: the greenhouse effect, and consequences of the rise of greenhouse gasses including sea level rise, ocean acidification, heat waves, droughts, glacier melting, hurricanes and more. Throughout, an ability to critically evaluate observations, predictions and risk will be emphasized. The students will be involved in in-class quantitative analysis of climate observations, feedbacks and models via python Jupyter notebooks that will be provided.

Course Notes: **ESE 101 is also offered as E-PSCI 101. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 101. AB students may enroll in either E-PSCI 101 or ESE 101 to meet their concentration requirements.**

Class Notes: **Programming in Python will be employed throughout the course in HW assignments and course workshops. Prior exposure to basic programming would be helpful, and students will be provided with template code to start from and be guided in this work in weekly course workshops. Students are requested to bring their laptops to the first class, and to try to install Anacoanda python version 3.7 before class.**

Recommended Prep: **Basic calculus and ordinary differential equations, as covered for example by Math 1b, Math 19a, Math 21b.**

Designing Satellite Missions: Research Methods through the Lens of Earth Observing Systems (215716)

Peter Zoogman

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Satellites provide a vast and powerful suite of global observations of Earth system processes. In this course, students will learn research methods and work with satellite data, including those targeted at: land use, ocean biochemistry, climate change, and air pollution. We will emphasize skills for designing and proposing projects, such as: project planning, reading scientific papers, writing research proposals, and exploratory data analysis. This course will provide the framework and understanding for the students to design future missions to address environmental, scientific, and societal challenges. By the end of the course, students will have learned to work with big data both to address existing scientific questions and to pose new ones.

Course Notes: **ESE 122 is also offered as E-PSCI 122. Students may not take both for credit. Given in alternate years.**

Recommended Prep: **Math 1a,b; Physics 11a.**

Climate and Atmospheric Physics Laboratory (213669)

Marianna Linz

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will take a hands-on approach to learning climate and atmospheric physics. Topics covered will include the Greenhouse effect, global scale atmospheric dynamics, synoptic meteorology and weather forecasting, and climate modeling. Each week will have one three-hour session to perform laboratory experiments, run models, analyze data, and create data visualizations. In this flipped-classroom environment, knowledge transfer will occur outside of class through readings and pre-class assignments in preparation for each session.

Course Notes: **ESE 129 is also offered as EPS 129. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in EPS 129. AB students may enroll in either EPS 129 or ESE 129 to meet their concentration requirements.**

Introduction to Physical Oceanography and Climate (156500)

Eli Tziperman

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Observations and fundamentals of ocean dynamics, from the role of the oceans in global climate and climate change to beach waves. Topics include the greenhouse effect, oceans and global warming; El Nino events in the equatorial Pacific Ocean; currents: the wind driven ocean circulation and the Gulf stream; coastal upwelling and fisheries; temperature, salinity, the overturning circulation and its effect on global climate stability and variability; wave motions: surface ocean waves, internal waves, tsunamis and tides; ocean observations by ships, satellites, moorings, floats and more.

A field trip to the Woods Hole Oceanographic Institution on Cape Cod will be held during the course, which will be an opportunity to learn about sea-going oceanography.

Software for scientific computation and graphics will be introduced (students may choose either Matlab or python), which will be used for some homework assignments.

Course Notes: **EPS 131 is also offered as ES 131. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Oceans and Atmosphere(s). Given in alternate years.**

Recommended Prep: **Mathematics 21a,b; Physical Sciences 12a,b, Physics 15a,b,c or Applied Physics 50a,b; or permission of instructor.**

Requirements: **Prerequisite: Mathematics 21a and 21b; and Physical Sciences 12a, Physics 15a, or Applied Physics 50a; or equivalents / permission of instructor.**

Climate and Climate Engineeering (207835)

David Keith

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

An introduction to the physics that determine our planet's climate motivated by concerns about human-driven climate change. From highly-simplified models of radiation and convection in a column to state-of-the art models of the general circulation, the course provides a hands-on introduction to modeling tools as a basis for understanding predictions of climate change and assessing their uncertainty. Solar geoengineering, the possibility of deliberate large-scale intervention in the climate, is covered as a potentially important new application of atmospheric science and as a tool to motivate analysis of aerosol radiative forcing, feedbacks, and uncertainty.

Recommended Prep: **One freshman-level math or applied math course, one freshman-level**

science course, and physics at either the freshman or high-school level; or, permission of instructor.

Requirements: **Prerequisite: Math 1a; Physical Sciences 1 or 11; and Physical Sciences 12a, Physics 15a, or Applied Physics 50a; or equivalents/permission of instructor**

Applied Environmental Toxicology (156933)

Elsie Sunderland

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will examine the theory and practical application of environmental chemistry and toxicology for assessing the behavior, toxicity and human health risks of chemical contaminants in the environment. The goals of the course are to: (a) illustrate how various sub-disciplines in environmental toxicology are integrated to understand the behavior of pollutants; (b) demonstrate how scientific information is applied to inform environmental management decisions and public policy through several case studies; and (c) provide an introduction to the legislative framework in which environmental toxicology is conducted. This course will be directed toward undergraduate students with a basic understanding of chemistry and calculus and an interest in applied science and engineering to address environmental management problems.

Requirements: **Prerequisite: Physical Sciences 1 or 11; and Math 1b**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Environ Science & Engineering 163

Pollution Control in Aquatic Ecosystems (109684)

Patrick Ulrich

2019 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is focused on aspects of environmental engineering related to the fate, transport, and control of pollution in surface water ecosystems. Course modules will cover ecological impacts of environmental contaminants; fundamental chemistry of natural waters; surface water aspects of engineering hydrology, including rainfall-runoff relationships; quantitative models of pollutant fate and transport in rivers, lakes, estuaries, and wetlands; best management practices for the prevention and control of aquatic pollution; and sustainable natural treatment systems for water quality improvement.

Requirements: **Prerequisite: ESE 6 and Math 21a (or equivalent)**

Additional Course Attributes:

Environ Science & Engineering 166

State-of-the-art Instrumentation in Environmental Sciences (161263)

Frank Keutsch

2020 Spring (4 Credits) **Schedule:** MWF 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will showcase how novel technologies have allowed fascinating new insights into key aspects of our environment that are of high societal importance. Students will gain both an understanding of topics such as climate change and air pollution as well as detailed knowledge of the design and underlying principles of environmental instrumentation, especially via the hands-on laboratory sessions.

The development of novel instrumentation, driven by technological advances, is transforming observations and revolutionizing the environmental sciences. For example, they introduce new observables and extend the spatial and temporal coverage and resolution of (Earth) observations. This course will highlight how state-of-the-art instrument design has enabled these fascinating advances by focusing on the engineering as well as physics and chemistry principles that are central to this success. A central component of the course consists of laboratory sessions that provide hands-on experience on important aspects of instrumentation, ranging from data acquisition, instrument control software, basic electronic filtering all the way to learning design concepts and operation of spectroscopic, mass-spectrometric and separations instrumentation. There will also be a tour of some of the laboratories using state-of-the-art environmental instrumentation at Harvard. The course and especially the laboratory experiments contain aspects from various engineering disciplines including environmental, electronic and mechanical engineering.

Recommended Prep: **Math 1a, b; PS 11 or equivalent; PS 12a, b (or Physics 15a, b or AP 50a, b).**

Requirements: **Prerequisite: Math 1b; Physical Sciences 1 or 11; and Physical Sciences 12a and 12b (or equivalents)**

Ethnicity, Migration, Rights

Subject: Ethnicity, Migration, Rights

Ethnicity, Migration, Rights 121

Native Americans in the 21st Century: Nation Building II (160752)

Eric Henson

2020 Spring (4 Credits) **Schedule:** T 0210 PM - 0400 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This field-based research course focuses on some of the major issues Native American Indian tribes and nations face as the 21st century begins. It provides in-depth, hands-on exposure to native development issues, including: sovereignty, economic development, constitutional reform, leadership, health and social welfare, land and water rights, culture and language, religious freedom, and education. In particular, the course emphasizes problem definition, client relationships, and designing and completing a research project. The course is devoted primarily to preparation and presentation of a comprehensive research paper based on a field investigation. In addition to interdisciplinary faculty presentations on topics such as field research methods and problem definition, students will make presentations on their work in progress and findings. Recommended course: PED-501M. Jointly offered at Harvard Kennedy School as DEV 502 and Harvard Graduate School of Education as A102.

Issues in the Study of Native American Religion (160748)

Ann Braude

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Based around a series of guest speakers, the course interrogates the study of religion in general and of Native American traditions in particular in light of indigenous perspectives and histories. Questions of appropriation, repatriation and religious freedom will be approached through legal as well as cultural frameworks. Jointly offered as HDS 2345 and Religion 1590.

Ethnicity, Migration, Rights 129 Section: 1

Education in Armed Conflict (205500)

Sarah Dryden Peterson

2020 Spring (4 Credits) **Schedule:** M 0900 AM - 1200 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course examines the multidimensional and multidirectional relationships between armed conflict and education. How can education contribute to the work of building "lasting peace" in settings of armed conflict globally? How does education reflect inequalities and reinforce social tensions? How does it contribute to stability and reconciliation? What role does it play in shaping individual and collective imaginings of a post-conflict future? Through critical reading of theoretical texts and case studies, engagement with guest speakers, simulations, and other learning tools, we will adopt an action-oriented approach to investigation of these and other questions. We will look beyond the provision of schooling to the learning and teaching that takes place in schools and community settings, and examine the relationships that are at the core of these educational interactions. Central to discussions will be connections between public policy, daily experiences, and social justice. The course includes a semester-long project through which students will deepen their research, writing, and policy analysis skills, and explore the intellectual and practical dimensions of connecting research, policy, and practice.

Open to all students with an interest in settings of armed conflict or comparative education generally.

Course Notes: **Required, weekly, one-hour section.**

Offered jointly with HGSE as EDU A816. Harvard College students can enroll with instructor consent.

Ethnicity, Migration, Rights 131 Section: 1

Love's Labors Found: Uncovering Histories of Emotional Labor (207804)

Caroline Light

2019 Fall (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

How do love, care, and desire influence the value of work, and why is emotional labor – which is vital to child or elder care, domestic labor, nursing, teaching, and sex work – often considered to be something other than work? How and why do the racial and gender identities of workers affect the economic, social, and emotional value of their labor? How do political and social arrangements of labor help produce and reinforce racial categories while solidifying the boundaries separating masculinity and femininity? Through a mix of primary and secondary sources, this seminar explores histories of emotional labor and the power structures that give meaning to often taken-for-granted categories of work. These sometimes hidden histories are key to untangling the gender, sexual, and racial implications of the "intimate industries" that populate today's transnational labor economies.

Course Notes: **This course, when taken for a letter grade, counts as a portal course for the secondary field in Ethnicity, Migration, Rights (EMR).**

Ethnicity, Migration, Rights 133

Power, Knowledge, Identity: Critical Approaches to Race and Ethnicity (208114)

Eleanor Craig

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

How might critical attention to race and ethnicity as they intersect with gender and sexuality—and also frameworks of indigeneity and class—shape how we study? How do these lenses shift the questions we ask, the information that counts as data, and the genres of work that we recognize as 'academic'?

For those newer to studies of race and ethnicity, this course provides intersectional frameworks for recognizing what assumptions undergird academic projects and fields of study. For those familiar with ethnic studies, it aims to serve as a 'Theories and Methods' course, providing tools and strategies for refining one's own interdisciplinary inquiries.

Ethnicity, Migration, Rights 135

Climate Migration: Histories, Borders, and Activism (213390)

Kristina Shull

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The International Organization for Migration (IOM) predicts that by the year 2050, between 125 million and 1 billion people will be displaced by the far-reaching impacts of climate change. However, the status of "climate refugees" is hard to define and there are no legal protections for such a category of refugee in international law. Furthermore, powerful countries like the United States are strengthening militarization and border enforcement in an era of growing humanitarian need. This writing and discussion-intensive seminar explores the historical relationship between climate change and migration, as well as the rise of border enforcement and artistic and activist responses to these crises. Students will also have the opportunity to contribute collaboratively to the digital humanities project "Climate Refugee Stories." Some questions we will address are: How do histories of colonialism and racial capitalism help us understand a growing global refugee crisis?

What does it mean to be a "climate refugee" or "environmental migrant" in the era of anthropogenic climate change? What are the experiences of those most directly impacted? And how are these displacements creating new opportunities for collective responses to addressing climate change that are rooted in migrant, indigenous, land, and human rights?

Topic: **Climate Migration**

Ethnicity, Migration, Rights 136

Race, Gender, and American Empire (213393)

Hannah Waits

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar explores the culture and politics of American imperialism from the late 19th century to the present, with particular attention to race and gender. This writing and discussion-intensive course encourages students to examine how formal and informal imperial relations developed, and to analyze how American empire functioned on the ground for those who imposed it and those who resisted, appropriated, or accommodated it. The course focuses especially on American relations with Asia and Latin America, and topics include immigration, military occupation, gendered and racialized cultural engagement, international adoption, humanitarianism, and international development. Assigned readings bring together scholarship from American Studies, Women's Studies, Ethnic Studies, Anthropology, and American History.

Topic: **Race, Gender, Amerian Empire**

Ethnicity, Migration, Rights 137

Asian American Mobility and Transpacific Movements (213404)

Courtney Sato

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar draws together Asian American history (ca. 1800-present) and the emerging interdisciplinary field of mobility studies. This course will explore the formation of "Asia America" through Asian American networks and transpacific communities with particular attention to the perspectives and agency of Asian/Americans. Together we will think through and critically interrogate histories and cultures of

movements in various forms (lecture and world fair circuits, gendered labor flows, cultures of travel, the figure of the sojourner, international student exchanges, and transportation infrastructure like steamship and railroad lines). Throughout, we will employ transnational and diasporic analyses to examine central themes in Asian American and transpacific studies including: immigration, labor, cultural representations, militarism, gender and sexuality, settler colonialism, and political movements and ideologies.

Coloniality, Race and Catastrophe (213559)

Mayra Rivera

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0200 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the relationship between coloniality, race and ecology through the lens of "catastrophe." We will examine a variety of theoretical and literary sources that deploy or refute tropes of the "end of the world." We will study different uses of "catastrophe" to denounce the destruction of a particular world, re-imagine the past, or proclaim the impossibilities of the present. Through the readings and discussions, we will analyze the aims, effectiveness and limitations of talk of catastrophe in the contemporary context. Jointly offered as HDS 2432.

Contemporary Immigration Policy and Educational Practice (214346)

Roberto Gonzales

2019 Fall (4 Credits) **Schedule:** T 0100 PM - 0359 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Today's immigration debates have brought to the fore conflicting visions regarding the place of immigrants in our society and educational systems. This course will examine legal and undocumented immigration from both community level and policy frames of understanding and interrogation. Students will start with the broad question of what Americans should do with the current immigration system--including the estimated 11.1 million people presently living in the United States in unauthorized residency status--and then take a deeper look at the ways in which U.S. laws and school experiences shape the everyday lives of immigrant children, adolescents, and young adults. Finally, students will explore the challenges educators face in working within the intersection of immigration policy and people's lives, and how this work shapes various possible roles as teachers, leaders, school policy-makers, advocates, and allies.

The primary objective of this course is to assist students in building a fundamental understanding of various issues relevant to immigration policy and educational practice. It is designed to achieve the following objectives: 1. To provide students with an understanding of the public policy context of immigration and how that context shapes immigrants' daily realities and our work with immigrant communities, families, and individuals; 2. To present students with important controversies and trends in contemporary immigration and education policy and help them to develop a critical perspective with respect to such controversies and trends; 3. To help students understand the important implications of immigration policies for the education and schooling of immigrant youth; 4. To provide students the tools to critically examine their professional work and evaluate its outcomes in ways that are self-reflective; 5. To broaden students' viewpoints so they can advocate for the policies and practices that meet the needs of immigrant students and their families.

In small classes, students work closely with instructors on developing and organizing ideas, analyzing sources, and drafting and revising clear, engaging essays. Students meet frequently in individual conferences with instructors to discuss their work, and the class also emphasizes collaborative work among students. Assignments are based on sources from a range of disciplines and genres.

Topic: **Expos Studio 10: Introduction**

Course Notes: **After taking Expos Studio 10, a student must pass Expository Writing 20 or Expos Studio 20 to meet the College's Expository Writing requirement.**

Expository Writing 20 Section: 201

Expository Writing 20 (116353)

David Barber

2020 Spring (4 Credits)		**Schedule:**	TR 0130 PM - 0245 PM
Instructor Permissions:	Department	**Enrollment Cap:**	15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic:	**Wizards and Wild Things**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**Once upon a time, there was no Harry Potter. Once upon a time, there was no such thing as children's literature. When and if children learned to read, they read what grown-ups read. How then did writing for children as we now know it come of age? Why does the genre have such an enduring hold on our cultural imagination, even as it continues to provoke sharp debate over its greater purpose and value? Are classic children's books like *The Wizard of Oz*, *The Wind in the Willows*, and *The Cat in the Hat* instructive or subversive, didactic or liberating? In this course we'll examine selections from three centuries of popular prose and verse written expressly for and about children as we investigate how this eclectic canon reflects evolving ideas about childhood, changing views about educating and enchanting young readers, and persistent disputes over what and how children should learn from books. In Unit 1 we'll survey landmark works in English for children from the Puritan through the Victorian eras, including *The New England Primer, Grimms' Tales*, and *Alice in Wonderland*, as we consider what these texts tell us about the origin and evolution of the genre. In Unit 2 we'll examine works by touchstone authors for younger readers including Mark Twain, Louisa May Alcott, Rudyard Kipling, E. B. White, C. S. Lewis, Maurice Sendak, and others, drawing on the critical perspectives of thinkers such as John Locke, Bruno Bettelheim, Alison Lurie, and Marina Warner to assess arguments about the essential function of imaginative literature from infancy through adolescence. In the final unit, students will conduct their own research to place a major children's author of their choice in a relevant cultural and historical context.**

Expository Writing 20 Section: 202

Expository Writing 20 (116353)

Jacob Betz

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Department **Enrollment Cap:** 14

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Religious Pluralism**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **The United States is arguably the most religiously diverse nation in the world. Americans possess a dizzying array of religious beliefs and behavior. And despite predictions to the contrary, levels of devout religious belief remain high, evidenced by recent controversies over a proposed Islamic community center in Lower Manhattan, as well as Supreme Court rulings on female access to contraception and same-sex marriage. How do people—including nonbelievers—experience this religious multiplicity? How are these vast religious differences negotiated socially, culturally, politically, and legally? Moving beyond**

theology, this course will explore the broad concept of lived religion in the United States. Through readings in fiction, law, history, and sociology, we'll tackle these fundamental issues. In Unit One, we'll read Ayad Akhtar's 2013 Pulitzer Prize-winning play, *Disgraced*, to explore how religion affects intimate relationships among spouses, friends, and co-workers. In the second unit, we'll wade into the constitutional quandary surrounding the First Amendment, dissecting legal scholars' arguments over the limits of religious freedom. Through a series of case studies involving snake handling, home schooling, and drug use, we'll examine the frequent tension that emerges from a Bill of Rights that both guarantees the free exercise of religion and requires some degree of secularism. Finally, in Unit 3, students will focus on a religious topic of their choosing, design a research proposal, examine both primary and secondary sources, and write a substantial research paper.

Topic: **Wastelands**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **The impenetrable wilderness of *The Revenant*, the diseased streets of *Children of Men*, the trash heap cities of *Wall-E*—these are the wastelands that fascinate our pop culture. On the screen, they come to life as horrifying alternate universes and dead civilizations—the very fates we must avoid at all costs. And yet wastelands are not exclusively the stuff of science fiction. In this course, we will grapple with both imaginary and actual wastelands. We will begin with short stories by Jack London, Thomas King, and Octavia Butler. From the icy wilds of the Yukon to the borderlands of Native American exile, these writers question the way wastelands have been imagined, especially in North America, over the past century. Next, we will turn to real wastelands—to the garbage dumps and arid landscapes where nothing grows. We will ask what these places reveal about their inhabitants, their struggles, and their achievements. Finally, students will research a wasteland of their own choosing—anything from the mega slums of Mumbai to the sprawl of Boston's unused rooftops. Along the way, we will investigate how wastelands form and evolve,**

and how people adapt to them. Are wastelands actually the places we should avoid at all costs, or are they the places we can no longer afford to ignore?

Topic: **Whose Boston?**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: ***The "Engaged Scholarship" components of this course include multiple mandatory activities outside of regular class hours.***

Each year over three million visitors walk Boston's Freedom Trail, learning a curated story of how this country came to be. But whose story is it? This engaged scholarship course will leave the Yard in order to think about how the stories we tell shape the city we live in. In the wake of the riots in Charlottesville over the removal of a statue dedicated to Robert E. Lee, Americans are embroiled in a debate long familiar to historians: what do our monuments say about who we are? Maybe more importantly: how do those messages change the way we interact with each other? This course will explore these questions in the context of the city you have come to live in for the next four years. We will begin by critically examining the story visitors and residents learn when they walk the Freedom Trail—whose stories are told? What do those narratives say about what this city is? We will be part of the debate about what it means to be represented (or not) on the city landscape. This course will teach you to see the cityscape as a book to be read—a book whose meaning you can shape. After examining these questions, we will make our own decisions about what stories need to be told: the course will culminate in creating a digital map and our own walking tour presented to the public.

Expository Writing 20 Section: 206

Expository Writing 20 (116353)

Willa Brown

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Department **Enrollment Cap:** 14

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Whose Boston?**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: ***The "Engaged Scholarship" components of this course include multiple mandatory activities outside of regular class hours.***

Each year over three million visitors walk Boston's Freedom Trail, learning a curated story of how this country came to be. But whose story is it? This engaged scholarship course will leave the Yard in order to think about how the stories we tell shape the city we live in. In the wake of the riots in Charlottesville over the removal of a statue dedicated to Robert E. Lee, Americans are embroiled in a debate long familiar to historians: what do our monuments say about who we are? Maybe more importantly: how do those messages change the way we interact with each other? This course will explore these questions in the context of the city you have come to live in for the next four years. We will begin by critically examining the story visitors and residents learn when they walk the Freedom Trail—whose stories are told? What do those narratives say about what this city is? We will be part of the debate about what it means to be represented (or not) on the city landscape. This course will teach you to see the cityscape as a book to be read—a book whose meaning you can shape. After examining these questions, we will make our own decisions about what stories need to be told: the course will culminate in creating a digital map and our own walking tour presented to the public.

Topic: **The Art of Shock**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **From Michelangelo's fleshly angels on the ceiling of the Sistine Chapel through to Andres Serrano's *Piss Christ* (1987), art has never shied away from representing difficult subject matter – or from courting controversy. In the twentieth century, some critics even argued that art is *only* effective when it jolts us out of our customary ways of relating**

to the world, or when it makes explicit the structures of violence and oppression that operate invisibly. This course will begin by exploring works of art and literature by Michelangelo, Edouard Manet, and Charles Baudelaire that were considered transgressive in their time but which have since been incorporated into the canon of art history. Is an artwork deemed shocking because of its own intrinsic qualities, or because of the norms and values of its viewing culture? How did these creations and their controversies shape or redirect the course of art history? In our second unit, we will study some contemporary artists who understand "shock" to be an integral part of their aesthetic projects. In looking at Damien Hirst's pickled animal installations, or Tracey Emin's own stained mattress set in the middle of the Tate Gallery, or Kara Walker's provocative 75-foot-long sphinx made out of sugar, why do these artists want their audience to feel such alarm and unease? We will consider these artworks alongside readings by feminist critics, philosophers, and art theorists who defend art even at its most outrageous extremes. Can shock motivate moral or ethical reasoning? Is shock a particularly political feeling? And why are images or representations of the body so central to this genre of art? The third unit will investigate how institutions – like museums, the media, and even universities like Harvard – play a role in either canonizing transgressive art or else fanning the flames of public outrage. Students will have the opportunity to visit the Harvard Art Museum as they work on their final, individual research papers.

Students who enroll in this Expos section will also participate in a new* How to Harvard *ungraded seminar. Please see the Writing Program's How to Harvard webpage for additional information.

Topic: **Democracy in Action**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: ***Note: This Expos course requires participation in some activities outside of normal class hours.***

Winston Churchill famously quipped that "democracy is the worst form of government except for all of those other forms that have been tried from time to time." These days, it sometimes seems like democracy is just the worst. This year, Pew Research Center reported that 58% of Americans are dissatisfied with the way their democracy is working, and that around the world more citizens are dissatisfied with their democracies than are satisfied. The complaints tend to be the same: politicians are corrupt and out of touch, government is unresponsive, and elections fail to offer meaningful choices. Amidst a climate of cynicism and disillusionment, this course invites students to consider the proposal that the cure for what ails democracy is more democracy: a stronger, deeper form of democracy that gives the word's original meaning – rule by the people – a new lease on life. Throughout the semester, we will explore the theory and practice of "participatory democracy," a vision of political life that emphasizes active citizenship, public deliberation, and direct self-government. Advocates of participatory democracy insist that we can save our democracies, but that in order to do so we'll have to reinvent them by finding new ways to engage and empower citizens.

In our first unit, we will examine participatory democracy as an ideal.

Our sources will include John Dewey, the great American philosopher of democracy, as well as some of the idea's most influential contemporary proponents (one of whom will be joining us in the classroom for a special session). In our second unit, we will consider how this ideal can be brought to life through innovative forms of governance that delegate power to the people. The City of Cambridge's sixth annual Participatory Budgeting (PB) process will provide students with an opportunity to observe and, yes, participate in a real-world case study, and even to provide feedback on the process to the city. In our third unit, students will look to the future of participatory democracy by conducting independent research into challenges, best practices, and further innovations – and they'll have the opportunity to present their findings at our culminating democracy forum.

The Engaged Scholarship components of the course include two in-class sessions (September 17th, October 3rd) as well as the following out-of-class components:

· In October, students will coordinate with each other to observe aspects of the PB Process in pairs or small groups. Options for observation will be provided at the beginning of Unit 2.

· In late November or early December, students will be required to volunteer one time to assist Cambridge PB with Get out the Vote (GOTV).

· Students will be expected to contribute to planning, publicizing, and of course, presenting at our capstone event (date and time to be decided democratically).

Topic: **1984: Orwell's World and Ours**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **When George Orwell wrote *1984*, the year that gave the book its title and setting lay 35 years ahead. Today, it is 35 years in the past, and yet Orwell's prophecies seem more relevant than ever. In 2017, when a Trump spokesperson debuted the concept of "alternative facts" to an incredulous public, 1984 raced to the top of the best-seller charts. In 2013, the book saw a similar resurgence of popularity following revelations of a secret mass surveillance program that allowed the NSA to gather the data of American citizens. Even if you've never read the book you've probably heard – maybe even used – some of its iconic phrases: *Big Brother*, *Thought Police*, *doublethink*, *thoughtcrime*, *Newspeak*, or *2+2=5*. Orwell invented all of this because he wanted to give his readers a handle on what was happening in the world. He feared that a new species of totalitarian governments wielding new forms of power – power over the body, the mind, and perhaps even reality itself – would come to dominate and dehumanize their citizens, and he believed that only a conscious choice to prevent this would redeem the future. Much has changed since then, including the fall of the totalitarian regimes that inspired the novel, and yet it seems we still cannot put Orwell's premonitions behind us.**

In this course, we will shed light on the enduring significance of *1984* by investigating the novel from three different angles. In the first unit, we will grapple with the text itself, close-reading key passages from the novel and using them to explore the underappreciated nuances of Orwell's masterpiece. In the second unit, we will look at the text in its historical context, drawing evidence from Orwell's essays, journalism, and letters to add depth and sophistication to our analysis. In the third unit, we will consider whether and to what extent Orwell's novel still illuminates our future. Students will pursue independent research on key Orwellian themes such as authoritarianism, post-truth, and surveillance, in order to see how the arguments of contemporary scholars and thought leaders have updated Orwell's insights for the twenty-first century. During this time, the class will also collaborate on a video time capsule to transmit our own predictions, hopes, and fears to the Harvard students of the future.

Topic:	**Modern Love**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**"Reader, I married him." As this famous line from Charlotte Brontë's *Jane Eyre* reminds us, writers have long been preoccupied with matters of the heart. Courtship plots are everywhere, from the novels of Jane Austen to the "rom-coms" of the 1980s and 1990s to essays you can find every Sunday in the "Styles" section of the *New York Times*. For centuries, marriage was primarily an economic relationship, and love outside of marriage ended in humiliation or even death. But what happens when society expands the options for living and loving? What happens to the courtship plot when women choose not to be wives, or when people who once couldn't marry now can? When couples are as likely to meet through Tinder as they are through mutual friends? In this course, we'll explore what courtship plots can tell us about changing concepts of gender, sexuality, family, and freedom. We'll start with fiction by Edith Wharton, one of the American literature's keenest social observers (and, incidentally, one of the inspirations for the TV show *Gossip Girl*). By closely reading her accounts of love and marriage in New York's high society at the turn of the twentieth century, we'll ask what stories about eligible bachelors and old maids can tell us about a society's values and beliefs. In our second unit, we'll turn to more recent courtship plots that trouble traditional conceptions of romance, marriage, and the family. Our texts will include the story "Brokeback Mountain" (and scenes from the Oscar-winning film), short fiction from Pulitzer-prize-winner Jhumpa Lahiri, and the viral *New Yorker***

Our texts will include the story "Brokeback Mountain" (and scenes from the Oscar-winning film), short fiction from Pulitzer-prize-winner Jhumpa Lahiri, and the viral *New Yorker* short story "Cat Person." Using feminist theory, queer theory, literary criticism, and recent sociologies of dating, we'll examine what new romantic possibilities—and problems—exist for couples today. Finally, in our third unit, students will pick a modern love story of their choosing—a novel, a memoir, a film—and, drawing on the work of critics and scholars, make an argument about what this story shows us about our society's sexual mores.**

Class Notes: **When George Orwell wrote *1984*, the year that gave the book its title and setting lay 35 years ahead. Today, it is 35 years in the past, and yet Orwell's prophecies seem more relevant than ever. In 2017, when a Trump spokesperson debuted the concept of "alternative facts" to an incredulous public, 1984 raced to the top of the best-seller charts. In 2013, the book saw a similar resurgence of popularity following revelations of a secret mass surveillance program that allowed the NSA to gather the data of American citizens. Even if you've never read the book you've probably heard – maybe even used – some of its iconic phrases: *Big Brother*, *Thought Police*, *doublethink*, *thoughtcrime*, *Newspeak*, or *2+2=5*. Orwell invented all of this because he wanted to give his readers a handle on what was happening in the world. He feared that a new species of totalitarian governments wielding new forms of power – power over the body, the mind, and perhaps even reality itself – would come to dominate and dehumanize their citizens, and he believed that only a conscious choice to prevent this would redeem the future. Much has changed since then, including the fall of the totalitarian regimes that inspired the novel, and yet it seems we still cannot put Orwell's premonitions behind us.**

In this course, we will shed light on the enduring significance of *1984* by investigating the novel from three different angles. In the first unit, we will grapple with the text itself, close-reading key passages from the novel and using them to explore the underappreciated nuances of Orwell's masterpiece. In the second unit, we will look at the text in its historical context, drawing evidence from Orwell's essays, journalism, and letters to add depth and sophistication to our analysis. In the third unit, we will consider whether and to what extent Orwell's novel still illuminates our future. Students will pursue independent research on key Orwellian themes such as authoritarianism, post-truth, and surveillance, in order to see how the arguments of contemporary scholars and thought leaders have updated Orwell's insights for the twenty-first century. During this time, the class will also collaborate on a video time capsule to transmit our own predictions, hopes, and fears to the Harvard students of the future.

Expository Writing 20 Section: 213

Expository Writing 20 (116353)

Janling Fu

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Department **Enrollment Cap:** 14

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Eating Culture**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **"Food . . . is not art. . . . A good risotto is a fine thing, but it isn't going to give you insight into other people, allow you to see the world in a new way, or force you to take inventory of your soul." So William Deresciewicz, in an opinion piece for the *New York Times*, dismisses our society's rising fascination with food over the last few decades, from the explosion of cookbooks, food blogs, and bestselling histories of cod, salt, and sugar, to the glut of cooking shows, many featuring contestants dueling in gladiatorial kitchens. Like the ancient Romans, we have become obsessed with food. But is Deresciewicz right to say that food won't give us insight into ourselves? Is it not possible that by examining what scholars and commentators call "foodways"— the various forces involved in how different cultures produce, buy, sell, and consume food—we learn much about ourselves and the world? In this course we will be guided by the maxim of famous anthropologist Claude Levi-Strauss, "food is good to think," as we contemplate various foodways from a number of illuminating perspectives. In our first unit we delve into what makes food "disgusting" or "natural." How do we categorize edible material as polluting or pure? What even counts as food in different societies? In our second unit, we explore what we can learn about food and culture by looking at successful cooking shows produced in different countries, for instance, *Top Chef*, *Iron Chef*, and *The Great British Bake Off*. What do these shows as cultural artifacts tell us about the values that are celebrated or perpetuated through food? Our third unit will consider global trends of commodities, economics, and food ethics. For this unit students will conduct a research of food practice centered in some way on Annenberg. Can we define what a dining hall does, or should do? How has the ritual and practice of dining changed over time at Harvard? Along the way, we will read classic works, from theories of food by anthropologists Mary Douglas, Jack Goody, and Michael Dietler, to ideas about food as a medium for relationships between people, including the relationships that make up a vast food economy of farms, factories, supermarkets, and our tables, as seen in the writing of novelists, essayists, and food journalists as diverse as Marcel Proust,**

David Foster Wallace, Wendell Berry, M.F. K. Fisher, and Michael Pollan.

Expository Writing 20 Section: 213

Expository Writing 20 (116353)

Margaret Doherty

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Department **Enrollment Cap:** 15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Modern Love**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **"Reader, I married him." As this famous line from Charlotte Brontë's *Jane Eyre* reminds us, writers have long been preoccupied with matters of the heart. Courtship plots are everywhere, from the novels of Jane Austen to the "rom-coms" of the 1980s and 1990s to essays you can find every Sunday in the "Styles" section of the *New York Times*. For centuries, marriage was primarily an economic relationship, and love outside of marriage ended in humiliation or even death. But what happens when society expands the options for living and loving? What happens to the courtship plot when women choose not to be wives, or when people who once couldn't marry now can? When couples are as likely to meet through Tinder as they are through mutual friends? In this course, we'll explore what courtship plots can tell us about changing concepts of gender, sexuality, family, and freedom. We'll start with fiction by Edith Wharton, one of the American literature's keenest social observers (and, incidentally, one of the inspirations for the TV show *Gossip Girl*). By closely reading her accounts of love and marriage in New York's high society at the turn of the twentieth century, we'll ask what stories about eligible bachelors and old maids can tell us about a society's values and beliefs. In our second unit, we'll turn to more recent courtship plots that trouble traditional conceptions of romance, marriage, and the family. Our texts will include the story "Brokeback Mountain" (and scenes from the Oscar-winning film), short fiction from Pulitzer-prize-winner Jhumpa Lahiri, and the viral *New Yorker* short story "Cat Person." Using**

feminist theory, queer theory, literary criticism, and recent sociologies of dating, we'll examine what new romantic possibilities—and problems—exist for couples today. Finally, in our third unit, students will pick a modern love story of their choosing—a novel, a memoir, a film—and, drawing on the work of critics and scholars, make an argument about what this story shows us about our society's sexual mores.

Topic:	**The Psychology of Success and**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**Who gets ahead in America? Why do some succeed while others fail? Given knowledge of someone's background or personal characteristics, can we predict if she will become successful? How do we account for the influence of various complex factors, including personality, family, and community? In this course, we will examine questions of success, failure, achievement, and identity viewed through the lens of current theories in psychology. We will begin by examining individual-level, person-centered theories of success with readings on grit, the growth mindset, and multipotentiality. Next, we will read Malcolm Gladwell's *Outliers: The Story of Success* alongside a longitudinal, ethnographic study of 12 American children and a seminal treatise on the role of race in the American classroom. As part of our broader inquiry into the environmental factors that impact success, we will explore how race, class, and familial wealth and resources affect children's lived experiences of childhood and, later, their chances of successfully getting into college. In the final unit of the course, students will answer the question, "What does it take to be successful at Harvard?" Students will select their own pop-science book on a self-help topic like willpower, motivation, happiness, or creativity, research the relevant academic literature, and create a written proposal with an accompanying short presentation to disseminate their findings. Throughout the course, we will use psychological theory to motivate questions and answers about human behavior in a society where the demand for success can be tantalizingly high and the fear of failure devastatingly relentless.**

Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Telling Her Story: Narrative,**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **In a powerful essay, the late writer and activist Audre Lorde suggested, "Where the words of women are crying to be heard we must each of us recognize our responsibility to seek those words out, to read them and share them and examine them in their pertinence to our lives." Lorde is not alone in asking us to pay attention to and take responsibility for women's stories; for centuries scholars and activists alike have championed the words of women, including women of color and queer women, whose stories have routinely gone untold or unheard. Yet if this issue has always been pressing, the call to heed women's stories seems especially urgent at a moment when such stories have come to dominate the cultural landscape and public consciousness – from news accounts to popular shows, literature to social media. This course responds to this moment by examining how women's stories are narrated across a variety of media and exploring what impact the sharing of them can have. Our first unit will focus on short stories by contemporary women authors Roxane Gay, Carmen Maria Machado, and Jenny Zhang that raise questions about the body, family, love, and society. Our second unit then turns to television, studying Hulu's 2017 adaptation of Margaret Atwood's dystopian novel *The Handmaid's Tale* . Informed by readings in critical feminist theory, we'll consider how the show probes the troubling connections between gender, authority, power, and image. Finally, our third unit engages visual and performance art alongside movements like #MeToo and #SayHerName, offering students an opportunity to pursue independent research projects that explore the relations between art, activism, and social media.**

Topic:	**Humans, Nature, and the Enviro**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**Deforestation, overpopulation, pesticide use, toxic oceans, endangered species, global warming. How are we to make sense of the many environmental problems facing the Earth today? Although the sciences provide a factual account of environmental threats and ways of countering them, scientific facts seem not to be enough, since artists, writers, filmmakers, and even scientists find themselves turning again and again to their imaginations to respond to the environmental predicaments of industrial society. They may be doing what English Romantic poet Percy Shelley powerfully described 200 years ago as an essentially human and creative impulse: "to imagine that which we know." How, then, have creative minds imagined – in essays, books, and movies – the very idea of nature, the place of humans in it, and their power to change the environment? In this course, we will consider both the possibilities and the problems that writers and filmmakers have imagined about human interactions with the natural world. We begin with the nineteenth century, when Romantic writers were urgently contemplating the meaning of nature in an age of increasing industrialization. In the first unit we interpret "Walking" (1862), the naturalist Henry David Thoreau's seminal nature essay that imaginatively explores the concept of wildness. In the second unit we will critically compare the literary approaches of two popular books by scientists – Rachel Carson's *Silent Spring* (1962), and James Lovelock's *The Revenge of Gaia* (2006). Through shocking critiques that draw upon the power of the imagination, both writers, in different ways, have tried to inform the public of the harm being done to nature in the hope that this harm can be averted. And in the final unit we will examine the techniques of documentary movies about relationships between humans and animals – Werner Herzog's *Grizzly Man* (2005) in which the filmmaker takes issue with the self-proclaimed environmentalist Timothy Treadwell who strove to protect bears in the Alaskan wilderness, and Gabriela Cowperthwaite's *Blackfish* (2013) in which she delivers a brilliant polemic against the Sea World corporation and its treatment of captive killer whales.**

Expository Writing 20 Section: 218

Expository Writing 20 (116353)

Alexandra Gold

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Department **Enrollment Cap:** 14

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Telling Her Story: Narrative,**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **In a powerful essay, the late writer and activist Audre Lorde suggested, "Where the words of women are crying to be heard we must each of us recognize our responsibility to seek those words out, to read them and share them and examine them in their pertinence to our lives." Lorde is not alone in asking us to pay attention to and take responsibility for women's stories; for centuries scholars and activists alike have championed the words of women, including women of color and queer women, whose stories have routinely gone untold or unheard. Yet if this issue has always been pressing, the call to heed women's stories seems especially urgent at a moment when such stories have come to dominate the cultural landscape and public consciousness – from news accounts to popular shows, literature to social media. This course responds to this moment by examining how women's stories are narrated across a variety of media and exploring what impact the sharing of them can have. Our first unit will focus on short stories by contemporary women authors Roxane Gay, Carmen Maria Machado, and Jenny Zhang that raise questions about the body, family, love, and society. Our second unit then turns to television, studying Hulu's 2017 adaptation of Margaret Atwood's dystopian novel *The Handmaid's Tale* . Informed by readings in critical feminist theory, we'll consider how the show probes the troubling connections between gender, authority, power, and image. Finally, our third unit engages visual and performance art alongside movements like #MeToo and #SayHerName, offering students an opportunity to pursue independent research projects that explore the relations between art, activism, and social media.**

Expository Writing 20 (116353)

Martin Greenup

2020 Spring (4 Credits)		**Schedule:**	MW 1030 AM - 1145 AM
Instructor Permissions:	Department	**Enrollment Cap:**	14

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic:	**Humans, Nature, and the Enviro**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**Deforestation, overpopulation, pesticide use, toxic oceans, endangered species, global warming. How are we to make sense of the many environmental problems facing the Earth today? Although the sciences provide a factual account of environmental threats and ways of countering them, scientific facts seem not to be enough, since artists, writers, filmmakers, and even scientists find themselves turning again and again to their imaginations to respond to the environmental predicaments of industrial society. They may be doing what English Romantic poet Percy Shelley powerfully described 200 years ago as an essentially human and creative impulse: "to imagine that which we know." How, then, have creative minds imagined – in essays, books, and movies – the very idea of nature, the place of humans in it, and their power to change the environment? In this course, we will consider both the possibilities and the problems that writers and filmmakers have imagined about human interactions with the natural world. We begin with the nineteenth century, when Romantic writers were urgently contemplating the meaning of nature in an age of increasing industrialization. In the first unit we interpret "Walking" (1862), the naturalist Henry David Thoreau's seminal nature essay that imaginatively explores the concept of wildness. Expository Writing 20 Section: 220

Expository Writing 20 (116353)

James Herron

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Department **Enrollment Cap:** 12

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Class and Culture**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **It is commonplace to note that in the United States many people identify as "middle class" even though our society is marked by deep, persistent, and increasing class inequality. Such self-identification, however, can obscure the complex and often contradictory ways in which we experience social class in our everyday lives. This course explores the cultural dimensions of social class in the U.S. from an ethnographic perspective, focusing on the everyday lives and cultures of ordinary Americans. We will consider questions such as the following. What is it like to be a working class person in a society heavily invested in ideas of individual advancement and meritocracy? How do professionals (the "upper-middle" class) define themselves and how do they view those above and below them in the class structure? What role does elite education play in the creation and reproduction of class inequality? How does social class shape people's values, political views, and tastes? In our first unit we will compare two important ethnographic studies of working class Americans — Michèle Lamont's classic *The Dignity of Working Men* and Jennifer Silva's more recent *Coming Up Short* — in order to gain some understanding of how working class people have responded to the relative decline in their living standards over the past 20 years. In**

the second unit we will read selections from Armstrong and Hamilton's *Paying for the Party* in order to analyze the role of higher education in shaping the class trajectories of students from working-, middle-, and upper-class backgrounds. For the third unit students will devise their own research project concerning the roles and self-conceptions of elites. For inspiration, we'll read selections of Shamus Khan's Privilege, which examines life at an elite New England boarding school, and Karen Ho's Liquidated, which analyzes the ideologies and identities of Wall Street financiers.

Topic: **Culture in Play**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Common phrases such as "I was just playing" or "it's only a game" suggest that play is less than serious. Play is often associated with childhood and distinct from the productivity of work. Yet, even for adults, such activities often entail considerable commitments, including substantial expenditures of time and money: the average gamer spends over seven hours a week on video games; baseball player Mike Trout recently signed a $430 million contract. Likewise,**

play has been shown to have real-world effects: studies have suggested Barbie dolls affect body image, and that the television show *Sesame Street* impacts educational achievement. Thus, despite common assumptions about its frivolity, play is of social, economic, political, and symbolic import. In this course, we explore what forms of play reveal about the cultures and peoples who take part in them, analyzing how everyday practices involving toys, games, and sports might illuminate broader social phenomena. First, we take inspiration from Roland Barthes's insight that toys are "meant to create users, not creators." We infer the cultural significance of objects from our own childhoods using anthropological methods of "thick description," a form of interpretation attentive to context and meaning. Next, we turn to play on Harvard's campus. Students choose an extracurricular activity and examine it using social scientific techniques; drawing on this data, they advance arguments that apply or test theories advanced by influential scholars, such as Theodor Adorno and D.W. Winnicott. Finally, students turn to independently chosen topics, selecting issues of national significance and conducting research in order to make original contributions to scholarship. Sample topics might include gender and sports, the politics of video games, the marketing of toys, recess in schools, fandom, virtual realities, and live action role play.

Topic: **Society and the Witch**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Riding broomsticks and dancing in the woods at night, witches are often imagined to be outside society. But in these representations may be keys to understanding social norms, norms that get articulated**

through the witch's very violation of them. In this seminar, we ask what discourses about witches tell us about the societies that produce them. We begin by examining anthropologists' depictions of witchcraft among people who come to find magic believable: how do we understand the seemingly irrational idea that magic is real? Closely considering evidence from classic ethnographic accounts, we critically examine other scholars' answers to questions such as this one by thinking across competing approaches to the study of magic. Next, we analyze the film *Harry Potter and the Chamber of Secrets* and the television sitcom *Bewitched*, bringing these pop-cultural phenomena into conversation with Mary Douglas's treatise on *Purity and Danger*, Pierre Bourdieu's critique of *Masculine Domination*, and Umberto Eco's ruminations on interpreting serials. For the research paper, each student chooses an example of witchcraft on which to conduct independent research. Sample topics include postmodern fairy tales like *Frozen* and *Maleficent*, Broadway musicals like *Into the Woods* and *Wicked*, historical witch-hunts and contemporary occult practices. What unites our diverse inquiries is a common interest in the social significance of this seemingly marginal figure: the witch.

Topic: **Work: Culture, Power, and Cont**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **This course explores the structure and experience of work in the contemporary political economy with an eye toward both its liberating and oppressive potential. We will take up enduring sociological questions with respect to power, control, autonomy, surveillance and**

self-determination on the job. How do different forms of work affect our life circumstances, personalities, and connections to each other? In the first unit we will examine corporate culture and how it affects the experience of professional work. Does a strong corporate culture enhance professional autonomy or management's power? Does it facilitate or undermine community? In unit two we explore the crucial issue of workers' control over their own labor and the concept of alienation. We examine accounts of deskilling, the separation of mental and manual labor, and the consequences of these processes for workers' experience on the job. To what extent does alienation occur in offices versus factories versus service counters? For the final unit we will critically engage in a debate about the development of "flexible" labor and the ways in which workers' connections to employers, occupations, and locations have become more fluid and transitory. We will explore what flexibility means in a variety of contexts and ask: does flexibility lead to liberation or loss of identity? Does it bring self-fulfillment or insecurity? What does flexibility mean for tech workers in Silicon Valley and bankers on Wall Street? Our texts consist of case studies and ethnographic accounts representing a variety of workplaces along with readings from prominent social theorists who in different ways seek to elucidate the conditions of work under modern capitalism.

We will explore what flexibility means in a variety of contexts and ask: does flexibility lead to liberation or loss of identity? Does it bring self-fulfillment or insecurity? What does flexibility mean for tech workers in Silicon Valley and bankers on Wall Street? Our texts consist of case studies and ethnographic accounts representing a variety of workplaces along with readings from prominent social theorists who in different ways seek to elucidate the conditions of work under modern capitalism.

Expository Writing 20 Section: 224

Expository Writing 20 (116353)

Lindsay Mitchell

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Department **Enrollment Cap:** 15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **The Femme Fatale**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **The femme fatale—the attractive, seductive woman who brings about the downfall of men—has fascinated us through the ages, from Biblical figures like Eve and Delilah, to historical women such as Cleopatra and Wallis Simpson, to the media personas of modern pop stars like Cardi**

B and Miley Cyrus. In the classic femme fatale narrative, the woman's dangerous actions empower her, but she also must submit to the fact that her empowerment renders her a villain. Might this contradiction in the femme fatale's character reflect tensions in our own evolving understanding of gender? How can the femme fatale character help us untangle the real-world gender problems that modern women and men face?

This course will begin to explore these and other related questions by studying accounts of femme fatales in literature and film. In our first unit, we'll explore 1920s and 1930s pulp fiction as a source of the modern fatale archetype, with special focus on James M. Cain's noir novella *Double Indemnity*. In our second unit, we'll move forward to the post-feminist movement 1990s and examine two films featuring teenage femme fatales, comparing Gil Junger's *Ten Things I Hate About You* to Alexander Payne's *Election*, both released in 1999. Finally, in our third unit, students will research a modern-day femme fatale, either real or fictional, and argue why the modern version is recognizable as a femme fatale, but also represents some evolution of, or twist on, the classic archetype. Here students will be challenged not only to apply broad theories and ideas from the course, but also to reach a greater understanding of why some modern women seem so dangerous.

Expository Writing 20 Section: 226

Expository Writing 20 (116353)

Shannon Monaghan

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Department **Enrollment Cap:** 15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **"Noncombatants": The Home Fron**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **While it is perceived today as one of the greatest aberrations in human society, warfare has also been one of the most common experiences in human history. Yet popular conceptions of the history of warfare are often limited to the myth of completely separated soldiers and**

civilians. This has not, historically, been so: there is a reason that we call the "home front" a *front*. We begin by looking at the idea of "total war" within the context of several modern case studies. We will question and examine the roles of women and children, as agents and as targets, in these conflicts. We then move to thinking about the memory and meaning of war through the art and memoirs of the great German printmaker and sculptor Käthe Kollwitz and the intellectual polymath (and French Resistance member) Marguerite Duras. What do the histories and stories that we tell about war, about resistance and about patriotism, particularly stories told by those *not* in uniform, add to the national and cultural understanding of a conflict? In the final unit, students will choose their own historical research subject from a variety of options. They might investigate conflicts and wars ranging from the recent (the "forever wars" of Iraq and Afghanistan) to the nineteenth century (the U.S. Civil War); from the modern and industrial (the Second World War) to the guerrilla, civil, and anti-imperial (the Spanish Civil War and the Algerian War of Independence). Further research options include different types of participants in conflict (from forcibly recruited child soldiers to anti-war activism) and different ways to pressure an enemy (food policy and blockade). Students will analyze the conflict in their chosen subject through the lens of the unexpected agent in modern warfare: the woman and/or the child. Throughout the course, we will ask what it means to be a "soldier" or a "civilian" in modern conflict, pondering the nature of the distinction.

Expository Writing 20 Section: 228

Expository Writing 20 (116353)

Emilie Raymer

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Department **Enrollment Cap:** 15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and

secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic:	**Genetics and Bioethics**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**When researchers at the National Institutes of Health announced in June 2000 that they had successfully sequenced the human genome, President Bill Clinton asserted that "with this profound new knowledge, mankind is on the verge of gaining immense, new power to heal." Since 2000, scientists have developed DNA-risk tests, stem-cell therapies, and precise gene-editing techniques. Yet, despite the potential benefits of these breakthroughs, some have expressed concerns about the bioethical consequences of these new technologies. Critics have voiced fears that scientists are "playing God" and have expressed apprehensions that those who can afford new gene-editing technologies may produce "designer babies" while those who cannot will continue to suffer from heritable diseases. In this course, we will explore how to balance the medical advantages of genetic technologies with their potential disadvantages. For the first essay, we will analyze "The Case Against Perfection" by Harvard political philosopher Michael Sandel, who emphasizes the dangers of genetic enhancements. For the second essay, we will explore claims that new genetic techniques could create a contemporary eugenics movement. For the third and final essay, students will examine both the positive and negative consequences of a genetic technology of their choice and decide how to establish bioethical guidelines to direct its use. Possible topics could include human germline editing, pharmacogenomics, stem-cell therapy, cosmetic enhancements, cloning, or CRISPR-CaS, a new gene-editing technique. The course will culminate with a capstone project, and students will prepare a short talk about the social and biomedical ramifications of a selected genetic technology.**

Topic: **Narrating Immigration**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: ***Note: This Expos course requires participation in some activities outside of normal class hours.***

Immigration has become a divisive topic in the U.S., as thousands of people fleeing violence and poverty in Central America arrive at the southern border each year. While conversations about immigration tend to focus on its economic, cultural, and political implications, the lived experiences of immigrants can get lost in the shuffle. Who are the people coming to the U.S. border? What has motivated their journeys? Once they arrive, what happens to them? Which of their experiences make it into the national conversation around immigration, and which are ignored? In this course, students will try to answer these questions, combining both standard academic inquiry with exploratory community engagement. Course participants will have the opportunity to meet with and pose questions to lawyers from the Harvard Law School Immigration Clinic, as well as representatives from the Dilley Pro Bono Project, who provide legal services to asylum seekers at the U.S. family detention center in Dilley, Texas. They will also exit the gates of Harvard to attend immigration court proceedings, visit local immigrant neighborhoods, and talk with activists about their hopes and frustrations regarding immigration reform. These experiences will then inform students' academic writing, which will culminate in a research paper that seeks to bring national attention to some of the overlooked realities of the immigration system course participants have encountered.

In Unit 1, we will start by looking at concepts of nationhood and community, asking students to critique arguments for and against open borders, focusing on the libertarian, utilitarian argument made in favor of them by economist Bryan Caplan. In Unit 2, we will turn to the self-articulated experiences of immigrants to the United States, putting narratives of asylum seekers in conversation with former Attorney General Jeff Sessions's definition of persecution in The Matter of A-B-. Finally, in Unit 3 students will write a research paper in which they synthesize their learning throughout the semester, contributing directly to the national conversation surrounding immigration, with the goal of submitting their work for potential publication. They will write this paper in conjunction with creating a capstone project: a two-minute, self-reflective video produced for the class's community partners.

Expository Writing 20 (116353)

Margaret Rennix

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Department **Enrollment Cap:** 14

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Narrating Immigration**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: ***Note: This Expos course requires participation in some activities outside of normal class hours.***

Immigration has become a divisive topic in the U.S., as thousands of people fleeing violence and poverty in Central America arrive at the southern border each year. While conversations about immigration tend to focus on its economic, cultural, and political implications, the lived experiences of immigrants can get lost in the shuffle. Who are the people coming to the U.S. border? What has motivated their journeys? Once they arrive, what happens to them? Which of their experiences make it into the national conversation around immigration, and which are ignored? In this course, students will try to answer these questions, combining both standard academic inquiry with exploratory community engagement. Course participants will have the opportunity to meet with and pose questions to lawyers from the Harvard Law School Immigration Clinic, as well as representatives from the Dilley Pro Bono Project, who provide legal services to asylum seekers at the U.S. family detention center in Dilley, Texas. They will also exit the gates of Harvard to attend immigration court proceedings, visit local immigrant neighborhoods, and talk with activists about their hopes and frustrations regarding immigration reform. Expository Writing 20 (116353)

Kip Richardson

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: Department **Enrollment Cap:** 15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Laugh Riots**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **We are living in an apparent golden age of humor. Judging solely by the number of viral comedians, late-night shows, humor books, parody websites, and meme generators, the genre is thriving. Yet critics, both liberal and conservative, have raised substantive concerns about this explosion of political and social satirical content, questioning its corrosiveness, its persuasive efficacy, even its ability to truly hold powerful interests accountable. Indeed, some have begun to doubt the potency of political satire at all, victim to the surreality and self-parody of modern political life. This course will ask students to weigh in on these questions about the value and viability of social and political humor. In Unit 1, students will consider when, if ever, do jokes go "too far"? Using the global controversy over the satirical caricatures of the Prophet Muhammad drawn by Western cartoonists, students will think critically about whether offensive humor serves or undermines the greater social good. In Unit 2, we turn to the burgeoning world of political satire television, most notably *The Daily Show* but also its many imitators. Such shows have been routinely lauded by commentators as a pillar of civics education, but there are reasons to doubt such rosy estimations. Using both theoretical and empirical sources, students will ask whether such shows really do inform and engage the public, or whether instead they oversimplify and encourage**

apathy toward the political sphere. Finally, in Unit 3, students will be tasked with exploring the social worlds created by various humor practices, examining either how a historical case study of humor reflects its cultural zeitgeist (e.g., anti-Chinese immigration satire from the 1880s) or surveying the social scientific research on a specific issue within contemporary humor studies (e.g., how sexist humor affects the workplace).

Topic: **Journey to Mars**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Evoking President Kennedy's famous speech to put a man on the moon by the end of the 1960s, on October 11, 2016, President Obama called for the United States to launch humans to Mars by 2030 and to one day settle there. The quest to achieve this goal has dominated recent headlines from NASA's landing of the Curiosity Rover to Hollywood's renewed fascination with the red planet. Mars has become the next great frontier in human conquest and exploration. Why Mars? What is at stake in our efforts to reach Mars? What does it say about life here on Earth? Over the semester, we will look at a range of scholarly literature on Mars as well as films, science fiction, and virtual reality simulations to examine some possible futures in which humans have colonized outer space and become a multi-planetary species. Our launch will be a close analysis of the film *The Martian* to discover key themes and topics in media representations of Mars. We will next chart a path through Ray Bradbury's *The Martian Chronicles* to explore connections between science, technology, and art in our imagination of human life and the experience of difference on Mars. The course will conclude with a broader inquiry of Mars as the next frontier of human entrepreneurship that critically engages with the science and ethics of**

proposed future Mars missions (Mars One, SpaceX, UAE's Mars 2117, among others). Students will write a final research paper on a topic of their choice that builds on course readings, activities, and discussion.

Topic:	**Philosophical Films**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**How should society be organized? What should individuals do when they disagree with the reigning order? Protest? Revolt? Withdraw? Our class will approach these perennial philosophical questions though a number of recent films. At the beginning of the semester, we will watch Sophie Barthes's *Cold Souls*, Boots Riley's *Sorry to Bother You*, and Bong Joon-ho's *Snowpiercer*, which in very different settings—affluent New York City, the gentrifying Bay area, and a frozen post-apocalyptic world—offer critiques of the stratification of wealth and opportunity between haves and have-nots. As students develop their interpretations of one of these films in their first paper, we will also learn the basic vocabulary of cinematography and editing. Then, in the middle of the semester, we will consider the stories of two individuals who, alienated from society, decide to recede from it, examining their own lives in minute detail instead. In Tom McCarthy's cult-classic novel *Remainder* and video artist Omer Fast's adaptation of it, a man is pathologically compelled to reenact a (possibly false) memory of a time when he felt authentic; he then begins, very strangely, to reenact moments from other people's lives. In Charlie Kaufman's film *Synecdoche, New York*, a playwright self-consciously recreates his life on stage, eventually employing hundreds of actors and filling multiple impossibly large warehouses. In order to think about the nature of adaptation—from text to screen, from life to art—students will compare two of these works, with attention to the differences between them facilitating more nuanced arguments about memory, authenticity, and how we should live. Finally, at the end of the semester, we will read some short theoretical selections about the relationship between philosophy and film, attuning students to larger issues as they write a research paper about a philosophical film or filmmaker of their choice, such as *Memento*, *Eternal Sunshine of the Spotless Mind*, *Stalker*, Claire Denis, Spike Lee, Akira Kurosawa, David Lynch, or Terrence Malick, among many other possibilities.**

Topic: **Sexism and Politics**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: ***The "Engaged Scholarship" components of this course include multiple mandatory activities outside of regular class hours.***

Today, the United States Congress is 19.4% female. That statistic trails the world average of 23.3%, with Nordic, European, sub-Saharan African, and Asian countries achieving better gender balance in national legislatures than the U.S. Some scholars contend that when women run, they are no more likely to win or lose compared to their male counterparts, though they are simply less likely to run in the first place. Other scholars identify a strong correlation between voting and sexist attitudes, notably in the 2016 U.S. election. But the puzzle persists: what accounts for the persistently low levels of female political representation in American politics, particularly since the United States boasts some of the highest levels of female participation in the labor market, especially in executive positions? Our course explores this question as it examines how prejudicial attitudes about women manifest themselves in American political life and society. In Unit 1, we begin by examining the popular argument that women should have more political representation because they would be better political leaders. In this unit, you will also have a chance to engage in the Harvard community by interviewing peers, neighbors, and other members of Harvard Square to get a sense of beliefs about women in politics. In Unit 2, we turn our attention to recent case studies, including Hillary Clinton, Sarah Palin, and Alexandria Ocasio-Cortez, to investigate how gender stereotypes may or may not have played a role in the outcomes of their political races. Finally, in Unit 3, you will contribute to the scholarship in this field, by researching the phenomenon that Massachusetts lags behind other states when it

comes to female political representation at the state and gubernatorial level. We will partner with the Massachusetts Women's Political Caucus (www.mwpc.org) to help them address this problem at the state level by writing a policy paper with recommendations that draw on your research into this issue.

Topic: **Sexism and Politics**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: ***The "Engaged Scholarship" components of this course include multiple mandatory activities outside of regular class hours.***

Today, the United States Congress is 19.4% female. That statistic trails the world average of 23.3%, with Nordic, European, sub-Saharan African, and Asian countries achieving better gender balance in national legislatures than the U.S. Some scholars contend that when women run, they are no more likely to win or lose compared to their male counterparts, though they are simply less likely to run in the first place. Other scholars identify a strong correlation between voting and

sexist attitudes, notably in the 2016 U.S. election. But the puzzle persists: what accounts for the persistently low levels of female political representation in American politics, particularly since the United States boasts some of the highest levels of female participation in the labor market, especially in executive positions? Our course explores this question as it examines how prejudicial attitudes about women manifest themselves in American political life and society. In Unit 1, we begin by examining the popular argument that women should have more political representation because they would be better political leaders. In this unit, you will also have a chance to engage in the Harvard community by interviewing peers, neighbors, and other members of Harvard Square to get a sense of beliefs about women in politics. In Unit 2, we turn our attention to recent case studies, including Hillary Clinton, Sarah Palin, and Alexandria Ocasio-Cortez, to investigate how gender stereotypes may or may not have played a role in the outcomes of their political races. Finally, in Unit 3, you will contribute to the scholarship in this field, by researching the phenomenon that Massachusetts lags behind other states when it comes to female political representation at the state and gubernatorial level. We will partner with the Massachusetts Women's Political Caucus (www.mwpc.org) to help them address this problem at the state level by writing a policy paper with recommendations that draw on your research into this issue.

Expository Writing 20 Section: 238

Expository Writing 20 (116353)

Adam Scheffler

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Department **Enrollment Cap:** 15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **The Underworld**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Hell is popular. In fact, it's been doing much better than heaven. It's practically a literary consensus that Dante's best book is his *Inferno***

not *Purgatorio* or *Paradiso*, and that Milton, a Christian believer, got so carried away in describing Satan and hell that he ended up being "of the Devil's party without knowing it" (Blake). And the world today may be more secular than in past generations, but hell is doing just fine. Harvard presents its own interesting case: Currier House's annual "Heaven and Hell" party has situated "Hell" in a room that can hold about 500 people whereas "Heaven" can fit only about 50. (This past year heaven was eliminated entirely.) But what are the components of hell – what archetypes or depictions of hell and the underworld helped to cement their importance in culture? And why is hell so alive in secular culture? Why do those people who don't believe that hell is real want to keep imagining it again and again (in *Supernatural*, in *South Park*, in *Buffy the Vampire Slayer*, etc.)? In our first unit, we will examine famous underworld themes and archetypes as we look at short excerpts from *Gilgamesh*, Homer, Virgil, Dante, Milton, Jonathan Edwards, the story of Persephone, and the story of Orpheus and Eurydice. In our second unit, we'll consider how these themes and archetypes are taken up by recent secular texts such as a Stephen King short story, the film *Pan's Labyrinth*, and a *New Yorker* article by Harvard Professor Danielle Allen about her cousin's experience in the American prison system. Finally, in our third unit, students will select and research a contemporary depiction of hell, and make an argument about how that hell works as a metaphor for a real-world issue or fear (such as the sleaziness of Hollywood, or bickering families, or mental illness, or the vastness of outer space). Throughout, we will try to better understand the curious attraction of hell, and why its 4,000-year-old story shows no sign of ending.

Topic: **Privacy and Surveillance**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Most of us are vaguely aware that our online activities are extensively monitored by corporations in search of profits and that the government may be watching or listening to some of our communications in the name of national security. It is easy to decry this state of affairs as Orwellian, or, on the other hand, to reassure ourselves that surveillance only harms those with something to hide. In this course we will seek to move beyond these simplistic responses by considering the rights underlying privacy claims and by closely examining how surveillance operates in practice. In the first unit, we will explore the powerful, but surprisingly elusive, concept of privacy. Are we concerned only about the possibility that information gathered about us will be abused? Or is there something more fundamentally troubling in the government reading people's emails, or in corporations having records of our internet browsing histories? In the second unit, we will consider government surveillance, specifically the National Security Agency's power to monitor the content of calls and emails originating from non-American citizens who are outside the United States. Do these non-citizens have any privacy rights vis-à-vis the U.S. government? Are there adequate legal protections for American citizens whose communications—both dangerous and innocent—are swept up in surveillance that is targeted at foreigners? In the final unit we will turn to the issue of privacy rights against corporations. Do we have a right to be forgotten online, or should truthful information about private citizens be available via internet search engines indefinitely? Can internet users be regarded as having given meaningful consent to privacy agreements that they have not read and would in any case likely not fully understand? For this unit, students will write a research paper about the appropriate limits on the power that private entities have over our online lives.**

Students who enroll in this Expos section will also participate in a new* How to Harvard *ungraded seminar. Please see the Writing Program's How to Harvard webpage for additional information.

Topic: **Truth Claims in a Post-Truth W**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **We often describe an idea or phrase as having "the ring of truth," but what does truth *sound* like? And what happens when politicians, news organizations, and advertising agencies learn to reproduce or mimic that sound? This course addresses recent claims that we are living in a "post-truth world," and considers the fate of argument in a world in which truth is subjective, and fact divided into mainstream and alternative forms. Is it possible to draw clear lines between fact and fiction, truth and lies? And if, as Oprah Winfrey has insisted, there is value in the transformative power of "speaking your truth," what does this mean for debate and the project of seeking a truth that exists beyond our personal experience? In our first unit, we'll consider the methods we use to distinguish fact from fiction as we examine fictional and philosophical texts by Tim O'Brien, J.L. Austin, and others that seek to distinguish (or blur the lines) between truth and fiction. In the second unit, we'll engage with texts from both sides of heated debates that challenge the idea of "expertise"—including climate-change and vaccination as we explore how social media platforms shape our relationship to the truth and to argument. Our final unit will take us where the quest for truth reaches its extremes: the conspiracy theory. We'll look at the complex anatomy of conspiracy theories from the world-wide (the moon landing "hoax" and "crisis actors," among others) to the local (Harvard-based conspiracies), and students will have an opportunity to interview peers and local members of the community as they conduct their research.**

Topic: **Buddhism, Mindfulness, and the**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Today, mindfulness is touted as a panacea, the secret to happiness and health, superb sex and unparalleled productivity. The hype is not entirely new, however. For decades, ostensibly Buddhist ideas have been tossed around in the West as recipes for success in just about any art or craft. But what hides behind this craze? Can Buddhist teachings offer us tools with which to achieve our goals, or are we corrupting Buddhism by applying it in such a way? What have artists and practitioners thought of the use of meditative tools, and how have they integrated Buddhist terms like "bare awareness" and "emptiness" into their work?**

In order to answer such questions, we will start the course with a reading of the *Satipat□hāna Sutta*, the Buddha's instructions on mindfulness mediation. A close reading the text in our first unit will give us a glimpse of the ancient Buddhist practice, its complexity and richness. As we move into our second unit, we will read the text that first gave the West the idea that Buddhism can allow us to "hit the mark" without trying to do so, Eugen Herrigel's bestselling 1948 book, *Zen in the Art of Archery*. Using Edward Said's classic work, *Orientalism*, we will ask if Herrigel was romanticizing Zen Buddhism, and if he was, what the consequences of such a romanticization have for Japan and the West. In our last unit, we will read the work of Chögyam Trungpa, one of the most charismatic masters to have taught in the West. His lectures in *Dharma Art* will provide us a glimpse into the way Buddhist religious-artistic practices have influenced contemporary artists in the West. By looking at Trungpa's Tibetan "crazy wisdom," we will try to understand what Buddhist ideas of self/not-self mean, and why artists have taken such avid interest in them.

As we read these texts, we will also practice mindfulness meditation, as well as various other forms of Buddhist meditation. In doing so, we will think about these meditations both practically and critically, at the same time as we refine our analytical understanding of Buddhist ideas.

Topic: **Buddhism, Mindfulness, and the**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Today, mindfulness is touted as a panacea, the secret to happiness and health, superb sex and unparalleled productivity. The hype is not entirely new, however. For decades, ostensibly Buddhist ideas have been tossed around in the West as recipes for success in just about any art or craft. But what hides behind this craze? Can Buddhist teachings offer us tools with which to achieve our goals, or are we corrupting Buddhism by applying it in such a way? What have artists and practitioners thought of the use of meditative tools, and how have they integrated Buddhist terms like "bare awareness" and "emptiness" into their work?**

In order to answer such questions, we will start the course with a reading of the *Satipat□hāna Sutta*, the Buddha's instructions on mindfulness mediation. A close reading the text in our first unit will give us a glimpse of the ancient Buddhist practice, its complexity and richness. As we move into our second unit, we will read the text that first gave the West the idea that Buddhism can allow us to "hit the mark" without trying to do so, Eugen Herrigel's bestselling 1948 book, *Zen in the Art of Archery*. Using Edward Said's classic work, *Orientalism*, we will ask if Herrigel was romanticizing Zen Buddhism, and if he was, what the consequences of such a romanticization have for Japan and the West. In our last unit, we will read the work of Chögyam Trungpa, one of the most charismatic masters to have taught in the West. His lectures in *Dharma Art* will provide us a glimpse into the way Buddhist religious-artistic practices have influenced contemporary artists in the West. By looking at Trungpa's Tibetan "crazy wisdom," we will try to understand what Buddhist ideas of self/not-self mean, and why artists have taken such avid interest in

them.

As we read these texts, we will also practice mindfulness meditation, as well as various other forms of Buddhist meditation. In doing so, we will think about these meditations both practically and critically, at the same time as we refine our analytical understanding of Buddhist ideas.

Expository Writing 20 Section: 244

Expository Writing 20 (116353)

Julia Tejblum

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Department **Enrollment Cap:** 15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Truth Claims in a Post-Truth W**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **We often describe an idea or phrase as having "the ring of truth," but what does truth *sound* like? And what happens when politicians, news organizations, and advertising agencies learn to reproduce or mimic that sound? This course addresses recent claims that we are living in a "post-truth world," and considers the fate of argument in a world in which truth is subjective, and fact divided into mainstream and alternative forms. Is it possible to draw clear lines between fact and fiction, truth and lies? And if, as Oprah Winfrey has insisted, there is value in the transformative power of "speaking your truth," what does this mean for debate and the project of seeking a truth that exists beyond our personal experience? In our first unit, we'll consider the methods we use to distinguish fact from fiction as we examine fictional and philosophical texts by Tim O'Brien, J.L. Austin, and others that seek to distinguish (or blur the lines) between truth and fiction. In the second unit, we'll engage with texts from both sides of heated debates that challenge the idea of "expertise"—including climate-change and vaccination as we explore how social media platforms shape our relationship to the truth and to argument. Our final unit will take us where the quest for truth reaches its extremes: the conspiracy**

theory. We'll look at the complex anatomy of conspiracy theories from the world-wide (the moon landing "hoax" and "crisis actors," among others) to the local (Harvard-based conspiracies), and students will have an opportunity to interview peers and local members of the community as they conduct their research.

Topic: **Why Shakespeare?**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Shakespeare, we have all been told, is extremely important. You might agree or disagree with this pronouncement, but do you know why Shakespeare matters to so many people? Why does every high school in America assign Shakespeare? Why did the world erupt with jubilation on his 450th birthday in April 2014? Why did the British government pay $2.4 million to have Shakespeare translated into Mandarin? Does Shakespeare deserve this fuss, or is he really overrated? In this section, Shakespeare lovers and haters alike are invited to consider the question of Shakespeare's popularity by looking into the relationship between his methods of artistic creation and the values of the modern world. We'll begin with the most famous artwork of the past millennium, *Hamlet*, about a young scholar (like you) who finds the injustice of the world overwhelming (like you?). Then we'll turn to *Othello*, its confrontation with race and gender especially relevant in our moment. We'll read it in conversation with *Blindspot: Hidden Biases of Good People* by Anthony Greenwald and Mahzarin Banaji, a social science theory we'll use to think about the identity politics of Shakespeare and his characters; and with *Desdemona* by Toni Morrison, whose recent passing will no doubt bring additional weight to her adaptation of *Othello* addressing life "beyond death when you have time, time, time to talk, to explain, to**

reargue, to debate, to confess, to love." Finally, we'll ask, "Why Shakespeare?" and entertain answers ranging from the skeptical (Shakespeare is a dead, white male that other dead, white males have used to promote the values of dead, white males) to the euphoric (Shakespeare is universal; Shakespeare invented the human).

Topic: **What is Health?**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes:

Health care is on everyone's minds these days: polls show it is among voters' top priorities when considering candidates, it dominates headlines, and elected officials wrestle with options to

improve our insurance system. Underlying all this talk is a fundamental goal of health—yet what in fact does this term mean? What does it mean to be healthy? What are we trying to achieve with our health system or with health insurance? How would we know if we've done a good or bad job? These are the questions that challenge practitioners of medicine, public health, and health policy. To be "healthy" may be living very long, having healthy behaviors, or being happy; it could be a combination of all of these, and it could be different for different people. Understanding what we mean when we talk about health is important to every facet of the health system and to everyone who interacts with it, so we know what we are collectively and individually aiming for and whether it is achieved.

This course will explore what health is, what it means to be healthy or not healthy, and how we can improve people's health. The emphasis will be on writing from a science and social science perspective, highlighting the distinctions with writing in the humanities. It is an "active-learning" seminar, which means we will use in-class exercises and frequent assignments to build writing skills: you will write, critique others' writing, talk about writing, read writing aloud, draw diagrams of arguments—all sorts of varied exercises to understand, develop, and improve your own writing style. Unit 1 will focus on the definition of health to form a basis for the semester, including the World Health Organization's definition and case examples of people who we may or may not consider healthy (for instance, would Stephen Hawking have been considered healthy?). Unit 2 will look at health policies, specifically focusing on childhood obesity prevention. We will read conflicting views of obesity as a medical condition or a descriptor of body size, and grapple with a situation where science points in different directions. Unit 3 will introduce research papers, and you will write on an individually-chosen topic around improving college students' health. You will learn to use the Harvard library system and resources to write a final paper. The materials for the course will consist of scientific articles (mainly in medicine and public health), online health data sources, commentaries and editorials, videos/TED talks, and a few newspaper articles and websites. Some classes will be held at Harvard's Global Health Education and Learning Incubator to use verbal and visual exercises to clarify concepts, practice articulating ideas, and develop a focus for writing.

Topic: **The Uses of Horror**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **In a conversation with Stephen Colbert, comedian and filmmaker Jordan Peele referred to his 2017 horror film, *Get Out*, as a "historical biopic." His claim that "the movie is truth" invites us to reflect on the relationship between horror and history – between fictional and filmic fantasies that terrify us, and our own lived realities. In this course, we'll think about what happens when we encounter works of art that are disturbing, excessive, horrific, and about how horror, as a genre, has given us new ways of understanding and describing our experiences. In our first unit, we'll read one of horror's modern masters: Edgar Allan Poe. Paying particular attention to patterns of transgressed boundaries between self and other, life and death, sanity and madness, we'll consider how Poe's brand of American horror expresses anxieties about the unknown and the irrational and how it serves as a compelling allegory for psychic and social realities. In unit two, we'll consider Henry James's 1898 novella, *The Turn of the Screw*, alongside 20th-century film adaptations of his classic work of literary horror. We'll attend to questions of genre and film form – what is illuminated and what might be lost when we move from text to screen. Finally, for our third unit, we'll turn our full attention to horror's most contemporary (and popular) iteration: the scary movie. Students will write a research paper about a horror film of their choice (some suggested options will include *Night of the Living Dead*, *Rosemary's Baby*, *The Babadook*, and *Get Out*), drawing on readings in philosophy, psychology, and film theory in order to tackle some of the central questions animating this course: what makes horror cohere as a genre, how do its aesthetic qualities operate on the mind of the observer, and what kinds of social and cultural commentary might it be capable of making?**

Then we'll turn to *Othello*, its confrontation with race and gender especially relevant in our moment. We'll read it in conversation with *Blindspot: Hidden Biases of Good People* by Anthony Greenwald and Mahzarin Banaji, a social science theory we'll use to think about the identity politics of Shakespeare and his characters; and with *Desdemona* by Toni Morrison, whose recent passing will no doubt bring additional weight to her adaptation of *Othello* addressing life "beyond death when you have time, time, time to talk, to explain, to reargue, to debate, to confess, to love." Finally, we'll ask, "Why Shakespeare?" and entertain answers ranging from the skeptical (Shakespeare is a dead, white male that other dead, white males have used to promote the values of dead, white males) to the euphoric (Shakespeare is universal; Shakespeare invented the human).**

Expository Writing 20 Section: 250

Expository Writing 20 (116353)

Eve Wittenberg

2020 Spring (4 Credits)		**Schedule:**	TR 1030 AM - 1145 AM
Instructor Permissions:	Department	**Enrollment Cap:**	15

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic:	**What is Health?**
Course Notes:	**Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**
Class Notes:	**Health care is on everyone's minds these days: polls show it is among voters' top priorities when considering candidates, it dominates headlines, and elected officials wrestle with options to improve our insurance system. Underlying all this talk is a fundamental goal of health—yet what in fact does this term mean? What does it mean to be healthy? What are we trying to achieve with our health system or with health insurance? How would we know if we've done a good or bad job? These are the questions that challenge practitioners of medicine, public health, and health policy. To be "healthy" may be living very long, having healthy behaviors, or being happy; it could be a combination of all of these, and it could be different for different people. Understanding what we mean when we talk about health is important to every facet of the health system and to everyone who interacts with it, so we know what we are collectively and individually aiming for and whether it is achieved.** **This course will explore what health is, what it means to be healthy or not healthy, and how we can improve people's health. The emphasis will be on writing from a science and social science perspective, highlighting the distinctions with writing in the humanities. It is an "active-learning" seminar, which means we will use in-class exercises and frequent assignments to build writing skills: you will write, critique others' writing, talk about writing, read writing aloud, draw diagrams of arguments—all sorts of varied exercises to understand, develop, and improve your own writing style. Unit 1 will focus on the definition of health to form a basis for the semester, including the World Health Organization's definition and case examples of people who we may or may not consider healthy (for instance, would Stephen Hawking have been considered healthy?). Unit 2 will look at health policies, specifically focusing on childhood obesity prevention. We will read conflicting views of obesity as a medical condition or a descriptor of body size, and grapple with a situation where science points in different directions. Unit 3 will introduce research papers, and you will write on an individually-chosen topic around improving college students' health. You will learn to use the Harvard library system and resources to write a final paper. The materials for the course will consist of scientific articles (mainly in medicine and public health),**

online health data sources, commentaries and editorials, videos/TED talks, and a few newspaper articles and websites. Some classes will be held at Harvard's Global Health Education and Learning Incubator to use verbal and visual exercises to clarify concepts, practice articulating ideas, and develop a focus for writing.

Expository Writing 20 Section: 250

Expository Writing 20 (116353)

Kip Richardson

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Department **Enrollment Cap:** 14

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Laugh Riots**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **We are living in an apparent golden age of humor. Judging solely by the number of viral comedians, late-night shows, humor books, parody websites, and meme generators, the genre is thriving. Yet critics, both liberal and conservative, have raised substantive concerns about this explosion of political and social satirical content, questioning its corrosiveness, its persuasive efficacy, even its ability to truly hold powerful interests accountable. Indeed, some have begun to doubt the potency of political satire at all, victim to the surreality and self-parody of modern political life. This course will ask students to weigh in on these questions about the value and viability of social and political humor. In Unit 1, students will consider when, if ever, do jokes go "too far"? Using the global controversy over the satirical caricatures of the Prophet Muhammad drawn by Western cartoonists, students will think critically about whether offensive humor serves or undermines the greater social good. In Unit 2, we turn to the burgeoning world of political satire television, most notably *The Daily Show* but also its many imitators. Such shows have been routinely lauded by commentators as a pillar of civics education, but there are reasons to doubt such rosy estimations. Using both theoretical and empirical sources, students will ask whether such shows really do inform and engage the public, or whether instead they oversimplify and encourage apathy toward the political sphere. Finally, in Unit 3, students will be**

tasked with exploring the social worlds created by various humor practices, examining either how a historical case study of humor reflects its cultural zeitgeist (e.g., anti-Chinese immigration satire from the 1880s) or surveying the social scientific research on a specific issue within contemporary humor studies (e.g., how sexist humor affects the workplace).

Topic: **Gothic Fiction**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **"Horror, madness, monstrosity, death, disease, terror, evil, and weird sexuality": these preoccupations, according to a recent critic, have animated the Gothic genre ever since it emerged in the mid-1700s. We will contemplate these preoccupations as we examine a range of Gothic texts from eighteenth-century Gothic fragments to stories by Edgar Allan Poe and Isabel Allende. And we will ask these questions about those texts: What makes the Gothic "Gothic"? How are we to understand its recurring motifs--its crumbling old houses, fragmented texts, prematurely buried women, incestuous siblings, and mad narrators? And what have modern Gothic writers and readers made of the genre they've inherited? We'll develop a working definition of the Gothic in our first segment, which will take a group of short stories, of various centuries and countries, as its primary texts. Next, we'll consider several of Edgar Allan Poe's stories (including "The Fall of the House of Usher," "The Tell-Tale Heart," "The Cask of Amontillado," and "Ligeia") in relation to each other and in the context of what a handful of twentieth-century critics have argued about them. Our third segment will focus on "the new Gothic": your final project, a research**

essay, will require you to identify a modern Gothic work in any medium—the possibilities include fiction, film, television, music, poetry, and visual media--and to develop your own argument about it in the context of contemporary critics' ideas.

Topic: **The Psychology of Success and**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **Who gets ahead in America? Why do some succeed while others fail? Given knowledge of someone's background or personal characteristics, can we predict if she will become successful? How do we account for the influence of various complex factors, including personality, family, and community? In this course, we will examine questions of success, failure, achievement, and identity viewed through the lens of current theories in psychology. We will begin by examining individual-level, person-centered theories of success with readings on grit, the growth mindset, and multipotentiality. Next, we will read Malcolm Gladwell's *Outliers: The Story of Success* alongside a longitudinal, ethnographic study of 12 American children and a seminal treatise on the role of race in the American classroom. As part of our broader inquiry into the environmental factors that impact success, we will explore how race, class, and familial wealth and resources affect children's lived experiences of childhood and, later, their chances of successfully getting into college. In the final unit of the course, students will answer the question, "What does it take to be successful at Harvard?" Students will select their own pop-science book on a self-help topic like willpower, motivation, happiness, or creativity, research the relevant academic literature, and create a written proposal with an accompanying short presentation to**

disseminate their findings. Throughout the course, we will use psychological theory to motivate questions and answers about human behavior in a society where the demand for success can be tantalizingly high and the fear of failure devastatingly relentless.Who gets ahead in America? All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Expos Studio 20: The Successfu**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **What does the successful life consist of? Do we base our notions of success on careers and paychecks? On the impact we have on others? On where we go to college, or on the happiness we achieve? In this course, we will investigate the different definitions and assumptions we might hold about success. First, we will examine accounts of working in a variety of professions. What makes the work in that career meaningful? How do people measure success in these occupations? And what do people sacrifice for their success? Next, students will conduct original research to answer a question about success they're interested in, whether happening right here at Harvard or elsewhere. What, for example, predicts success in school, or in athletics and other extracurricular activities? What difference does a person's race, socioeconomic background, gender identity, culture, or religion make to their attaining success? What power do media images of success and failure have on people? What are potential barriers to success in a college or high school environment? When we look back at Harvard's own history, who fought to change institutional barriers to success and how, and what barriers might still remain? The course will also give students the opportunity to become more confident and skilled oral presenters; to create a final capstone project about their research; and to learn the art of writing an effective Job Cover Letter commonly required by employers for summer jobs, term-time positions, or employment after college.**

Expository Writing 20 (116353)

Jane Rosenzweig

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Department **Enrollment Cap:** 9

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the Expos Website. All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic: **Expos Studio 20: The Successfu**

Course Notes: **Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.**

Class Notes: **What does the successful life consist of? Do we base our notions of success on careers and paychecks? On the impact we have on others? On where we go to college, or on the happiness we achieve? In this course, we will investigate the different definitions and assumptions we might hold about success. First, we will examine accounts of working in a variety of professions. What makes the work in that career meaningful? How do people measure success in these occupations? And what do people sacrifice for their success? Next, students will conduct original research to answer a question about success they're interested in, whether happening right here at Harvard or elsewhere. What, for example, predicts success in school, or in athletics and other extracurricular activities? What difference does a person's race, socioeconomic background, gender identity, culture, or religion make to their attaining success? What power do media images of success and failure have on people? What are potential barriers to success in a**

college or high school environment? When we look back at Harvard's own history, who fought to change institutional barriers to success and how, and what barriers might still remain? The course will also give students the opportunity to become more confident and skilled oral presenters; to create a final capstone project about their research; and to learn the art of writing an effective Job Cover Letter commonly required by employers for summer jobs, term-time positions, or employment after college.

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Expos 40 is an elective within the Writing Program, and focuses on developing and strengthening the skills necessary for successful public speaking. Students learn strategies for impromptu speaking, preparing and delivering presentations, formulating and organizing persuasive arguments, cultivating critical thinking, engaging with an audience, using the voice and body, and building confidence in oral expression.

Admission is by application only. See any of the Canvas sites for a link to the online application. Limited to 15 students per section (135 total).

Class Notes: **For directions to the Lowell House classrooms, please visit the FAS Registrar's website.**

African Storytellers and Oral Traditions: Folklore and the Verbal Arts from Abidjan to Zanzibar (215723)

Lowell Brower

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

African Storytellers and Oral Traditions **introduces students to the pasts, presents, and futures of Africa's verbal arts, and to a vibrant cast of African storytellers, poets, performers, and artists engaged in various projects of meaning-making, tradition-bearing, connection-forging, and world-building. Exploring folktales, myths, legends, praise poems, proverbs, and songs -- as artistic texts, as situated performances, and as social acts -- this course attempts to do justice to the powers, potentials, politics, and poetics of African storytelling circa 2020. Organized thematically rather than temporally, this course seeks to trouble both the typical assumptions about "modern" vs. "traditional" expressive culture (as well as long-standing debates about "orality and literacy") by highlighting the coexistence and co-pollination of cattle songs and battle raps, trickster tales and Nollywood screenplays, sacred origin myths and neoliberal critiques, supernatural legends and human-rights testimony. Highlighting the relationship between communal storytelling performances, ancient oral traditions, and contemporary expressive texts, our course readings, discussions, and social engagement activities will amplify and illuminate the myriad forms of creative expression though which African storytellers are making their voices heard.**

Folklore & Mythology 131

The Storyteller in Flight: Migrant Narratives, Refugee Camp Cultures, and the Arts of Displacement (213673)

Lowell Brower

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What are the effects of displacement on tradition, storytelling, and cultural belonging? How does migration influence narration, creative expression, and imagination? What are the powers and potentials of artistic communication after existential rupture? What is the role of the storyteller in flight? This course explores expressive cultures *in motion, amid crisis,* and *out of place*, and asks how tradition bearers and creative innovators adapt when the communities in which their preexisting cultural practices had once flourished are destroyed, uprooted, transformed, or dispersed. It also asks how researchers, aid workers, activists, and other outsiders might engage in ethical and beneficial ways with individuals and communities in exile. In examining the impacts of forced migration on cultural production, transmission, and innovation, we will put classical theories of Refugee and Migration Studies in conversation with recent ethnographies and folklore collections, as well as memoirs, novels, songs, and films by and about displaced persons. With case studies ranging from colonial Africa, to post-war Europe, to contemporary America we will explore what, if anything, holds together "the refugee experience," while also interrogating our own neighborly obligations and scholarly commitments as we navigate what has famously been deemed "the century of the migrant." Course work will include analytic and creative projects as well as experiential learning opportunities. The social engagement option for this course will offer students the chance to investigate our course topics in collaboration with local community members.

Course Notes: **This course meets the requirements for the Humanities Distribution Requirement.**

Folklore & Mythology 172

Quilts and Quiltmaking (127859)

Felicity Lufkin

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Are quilts the great American (folk) art? From intricately stitched whole-cloth quilts, to the improvisational patchworks of Gee's Bend; from the graphic simplicity of Amish quilts to the cozy pastels of depression-era quilts; from the Aids Quilt to art quilts; quilts have taken on extraordinary significance in American culture. This class surveys the evolution of quilt-making as a social practice, considering the role of quilts in articulations of gender, ethnic, class and religious identities, and their positions within discourses of domesticity, technology, consumerism, and cultural hierarchy.

Tattoo: Histories and Practices (161297)

Felicity Lufkin

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Tattooing has been practiced in many different social and cultural settings, in many different time periods, to different ends. In the United States, tattooing was long associated with marginalized and stigmatized groups, but since the 1970s, has become increasingly popular and even mainstream. This seminar style class will explore distinct regional histories of tattoo, the development of tattooing in the US, and the different ways that contemporary tattoo practitioners situate themselves historically and negotiate boundaries of race, class and gender. We will also consider tattoo as an art form that both invites and resists aesthetic judgments.

Freshman Seminar 21G

First Stars and Life in the Cosmos (108389)

Abraham Loeb

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Since the Universe is expanding, it must have been denser in the past. But even before we get all the way back to the Big Bang, there must have been a time when stars like our Sun did not exist because the Universe was denser than they are. Since stars are needed to keep us warm, we face the important question about our origins: how and when did the first stars form? Primitive versions of this question were considered by humans in religious and philosophical texts for thousands of years. The Seminar will summarize the fundamental principles and scientific ideas that are being used to address this question in modern cosmology. Eventually, the formation of stars like the Sun was accompanied by planets like the Earth on which life has emerged. When did life start in the cosmos and when will it all end? The Seminar will describe current plans to search for extraterrestrial life, including project "Starshot" which aims to visit the nearest stars within our lifetime and send close-up photos of their planets.

Freshman Seminar 21I

Evolution, Buddhism, and Ethics (109916)

John Wakeley

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Evolutionary genetics traces back to Darwin's (1859) idea of natural selection. Darwin provided a compelling theory about how species change due to competition in reproducing populations, yet it remains difficult to understand, particularly when applied to ourselves. To enable critical evaluation and discussion of ethical questions and to illustrate connections between science and Buddhism, about one third of this course will cover select details of evolutionary genetics. The focus will be on understanding human genetic variation. Buddhism originated with Siddhartha Gautama's enlightenment around 500 BCE, achieved after six years of intense devotion to the problem of human suffering. He emerged as the Buddha, or the Enlightened One, making the bold statement that suffering within each person results from misunderstanding the nature of one's self and its relationship to the ever-changing world. He outlined a program of analytical introspection and meditation, aimed at solving this problem. As with evolutionary genetics, critical evaluation and discussion of Buddhist ideas in this course will be fostered by learning the details of what the Buddha taught. Major points of overlap between evolutionary genetics and Buddhism

emerge in the ways they undermine appearances, deconstructing phenomena which at first appear wholly unbreakable. We will bring our knowledge of Buddhism to bear on ethical questions arising from genetic testing, the use of human embryos in research, and the prospects for human genetic engineering.

Freshman Seminar 21V

Black Holes, String Theory and the Fundamental Laws of Nature (109627)

Andrew Strominger

2019 Fall (4 Credits) **Schedule:** W 0600 PM - 0830 PM

Instructor Permissions: Instructor **Enrollment Cap:** 13

The quest to understand the fundamental laws of nature has been ongoing for centuries. This seminar will assess the current status of this quest. In the first five weeks we will cover the basic pillars of our understanding: Einstein's theory of general relativity, quantum mechanics and the Standard Model of particle physics. We will then examine the inadequacies and inconsistencies in our current picture, including for example the problem of quantum gravity, the lack of a unified theory of forces, Dirac's large numbers problem, the cosmological constant problem, Hawking's black hole information paradox, and the absence of a theory for the origin of the universe. Attempts to address these issues and move beyond our current understanding involve a network of intertwined investigations in string theory, M theory, inflation and non-abelian gauge theories and have drawn inspiration from the study and observation of black holes, gravitational waves and developments in modern mathematics. These forays beyond the edge of our current knowledge will be reviewed and assessed.

Recommended Prep: **Prerequisites: High school level calculus and physics.**

Requirements: **Course open to Freshman Students Only**

Freshman Seminar 21W

Research at the Harvard Forest: Global Change Ecology-Forests, Ecosystem Function, the Future (112349)

David Foster

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 11

Global change ecology is the line of scientific inquiry that integrates the responses of organisms, ecosystems, and their environments with changes in human activity and climate. This seminar will focus on state-of-the-art research, tools, and measurements used in evaluating and anticipating global change through ongoing studies at the Harvard Forest's 3,500-acre outdoor laboratory in Petersham, MA. Students will explore the key role that forests play in climate control and develop the necessary skills to present and discuss the ecological evidence for past and future global change. The seminar consists of four weekend-long field trips (Friday evening-Sunday) to the Harvard Forest, where students will visit various long-term ecological experiments, use long-term and real-time datasets to understand biosphere-atmosphere interactions, and discuss key scientific findings. The course will highlight integrated faculty studies of land-use history, forest dynamics, atmospheric exchange of carbon and water, plant phenology, invasive plants and pests, and the impacts of climatic warming on complex ecosystems. Transportation, accommodations, and meals at the Harvard Forest will be provided. A final, on-campus mini-symposium will give students an opportunity to present what they have learned in a public forum.

Course Notes: **The seminar consists of four weekend-long field trips (Friday evening-Sunday) to the Harvard Forest, dates TBA. Transportation, accommodations, and meals at the Harvard Forest will be provided at no cost to the student.**

Freshman Seminar 22C

Psychoactive Molecules from Babylon to Breaking Bad (159838)

Jon Clardy

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Psychoactive molecules change brain function in ways that result in altered perception, mood, or consciousness, and while *psychoactive* hints at something illicit, these molecules are also useful or potentially useful treatments for pain, depression, and PTSD among others. After an introductory session, the seminar begins with two meetings focused on synapses and neurotransmitters. Subsequent meetings begin with opioids and cannabinoids that indirectly influence important neurotransmitters with case studies involving heroin, heroin derivatives like Oxycontin and Narcan, and synthetic opioids like fentanyl. The cannabinoid meetings will deal with THC and anandamide, our body's own cannabinoid. The next few meetings will focus on the monoamines including both the monoamine neurotransmitters dopamine, serotonin, and norepinephrine as well as their synthetic mimics like amphetamine, methamphetamine, and ketamine. The final meetings will focus on psychedelics (mescaline, LSD, and psilocybin) and designer drugs. The seminars are discussion based and cover wide-ranging issues. For example the seminars on opioids also explore our brain's reward system; the nature of addiction; the connection between opioids, alcohol abuse, and genes; the connection between opioid sensitivity and human bonding; and the 'opioid epidemic'.

Recommended Prep: **A familiarity with some basic concepts in biology and chemistry will be helpful but by no means essential.**

Requirements: **Course open to Freshman Students Only**

Freshman Seminar 22D

Time for Sleep: Impact of sleep deficiency and circadian disruption in our 24/7 Culture (159839)

Charles Czeisler

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0530 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

America is a sleep-starved nation. The Institute of Medicine estimates that between 50 and 70 million Americans are suffering from chronic sleep deficiency or sleep disorders, increasing their risk of weight gain, heart ailments, mood disorders, errors and catastrophic road accidents that kill more than 7,000 and maim more than 50,000 Americans annually. Children of all ages are sleeping about two hours less per night than they did in prior generations, rendering them hyperactive and irritable and compromising their ability to sustain attention and learn in school. This hyperactivity leads many sleep-deprived children to be misdiagnosed with ADHD and treated for years with amphetamines and other stimulants that further disrupt sleep. Yet, prevailing cultural attitudes lead us all to undervalue sleep and lionize all-nighters, such that most patients with sleep disorders remain undiagnosed and untreated. This seminar will explore the function of sleep, the physiologic factors that regulate sleep and circadian rhythms, the impact of exposure to artificial light on sleep and circadian rhythms, historical and cultural differences in sleep habits, and the consequences of sleep deficiency, circadian disruption and sleep disorders on both the brain and the body. Public policy issues, such as school start times, limits on resident physician work hours, drowsy driving laws, and proposed regulations to screen transportation workers for sleep disorders will be debated. Students will be encouraged to track their own sleep patterns throughout the semester, identify the personal, structural and cultural barriers to maintaining healthy sleep while in college, and propose strategies to improve sleep health at Harvard College, the local community and the nation.

Freshman Seminar 22H

My Genes and Cancer (159990)

Giovanni Parmigiani

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The role of a person's genetic background in determining whether he or she will develop cancer, and when, is at the center of public discussions and active scientific investigations. Already, one's genetic

background is used in making life-altering health decision aimed at preventing the occurrence of cancer, as was recently the case with actor Angelina Jolie. This seminar will explore the extent to which current scientific knowledge can inform this type of decisions. The goals is to gain enough understanding of the scientific background to critically evaluate the discourse of a genetic counseling session. The course will proceed at first by laying essential foundations of genetic inheritance in humans; cancer evolutionary theories; statistical risk; and decision-making in health care. Subsequently student will read articles from the scientific and popular press, and listen to podcasts. In class we will discuss the readings. There is a good deal of reading and listening, which everyone is expected to do ahead of class. Students can expect readings in genetics and statistics that will stretch them, though it will not always be necessary to understand all the technical details of every paper. Students can also expect to read opinion pieces with which they (as well as I) may disagree. Students will be required to present summaries of the assigned readings, and lead class discussions. They will also be required to write one 5-page double spaced essays at the end of the class, and to lead a class discussion on the topic of their papers. A typical paper is the critique of a scientific or popular press article, chosen from a list of suggested options or identified independently by the student, with my approval, during the first seven weeks of classes. Attendance is essential, not only for the students' education, but for the benefit their contributions provide to the others.

Freshman Seminar 22I

The Science of Sailing (123658)

Jeremy Bloxham

2019 Fall (4 Credits) **Schedule:** M 0600 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Explores the application of simple physics to various natural phenomena associated with sailing. Topics addressed range from hydrostatics (e.g. why do boats float?) to meteorology (e.g. why do sea breezes veer during the afternoon?). Explores in depth the generation of lift and drag by the flow of air over sails and the flow of water over keels and rudders, examining critically the numerous incorrect explanations in the popular literature.

Course Notes: **Open to Freshmen only.**

Recommended Prep: **Participants in this seminar should have a good high school physics background and have some knowledge of sailing.**

The Amazing Brain (123659)

John Dowling

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

What makes us human and unique among all creatures is our brain. Perception, consciousness, memory, learning, language, and intelligence all originate in and depend on the brain. The brain provides us with wondrous things, from mathematical theories to symphonies, from automobiles and airplanes, to trips to the moon. But when it goes awry, we are undone. **(From "Understanding the Brain")**

This seminar will be an introduction to our present understanding of neural and brain function. It is designed for students not planning to concentrate in neuroscience, but who enjoy science and are curious about the brain. We will read from my recently published book "Understanding the Brain: From Cells to Behavior to Cognition that is accessible to anyone with a high school science background. Each chapter begins with a vignette, usually about a neurodegenerative or other brain disorder that is then explained further in the chapter.

Course Notes: **The class will run only 2 hours within the time block. Professor Dowling especially invites those students who are not planning to concentrate in neurobiology or a natural science to join the seminar.**

Recommended Prep: **High school science**

Requirements: **Course open to Freshman Students Only**

Quantum Mechanics Face to Face (160193)

Melissa Franklin

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0530 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course is for students who would like to be introduced to the ideas of quantum mechanics without the rigor of mathematics but who would be interested in learning by demonstration as well as spoken word and picture. We will be guided by a non-mathematical text Introducing Quantum Theory, read short pieces by the creators of quantum theory, including Bohr, EInstein, Hesienberg and Schrodinger, and each week watch and play with physics demonstrations of wave and particle physics. This course requires reading, watching short films, watching demonstrations in the lab and visiting places at the university where quantum mechanics is used on a daily basis.

Why We Animals Sing (108564)

Brian Farrell

2020 Spring (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 11

We do not sing alone. On land, four kinds of animals produce songs or calls: birds, frogs, mammals, and insects. Some of these (and fish) also do so underwater. The principal sounds such animal species make are signaling behaviors directly related to mating success. They are of individuals, usually males, marking territories, and wooing mates. However, in any one location, species may also compete with one another for occupation of acoustic space (that is, for bandwidth) and otherwise optimize their sound signals to features of their environment. We will explore these topics and others as we listen to and read about each of the various kinds of singers on earth, the biology of their sound production and reception, and the ways they attract mates while avoiding becoming meals for eavesdropping predators. We will listen to many different kinds of acoustic signalers across a wide array of acoustic communities in tropical and temperate settings, both terrestrial and aquatic, and we will examine sound spectra on a large screen as we listen and slow down and isolate sounds to help distinguish their parts. Finally, we will consider the biology and evolution of music in humans, considering evidence from brain studies, archaeology and anthropology, and the music of indigenous peoples. We will look at music parallels in different kinds in animals of other species. There will be field trips to listen to and record assemblages of local species. The overall objective is to awaken the students' sense, understanding, and appreciation of the acoustic environment from which we come, and the role of this environment in shaping human biology and culture. There is a fair bit of reading required in preparation for weekly discussions. Accordingly, participation will be expected for discussion of the readings and listening experiences.

Exploring the Infinite (160198)

Peter Koellner

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Infinity captivates the imagination. A child stands between two mirrors and sees herself reflected over and

over again, smaller and smaller, trailing off to infinity. Does it go on forever? … Does anything go on forever? Does life go on forever? Does time go on forever? Does the universe go on forever? Is there anything that we can be certain goes on forever? ... It would seem that the counting numbers go on forever, since given any number on can always add one. But is that the extent of forever? Or are there numbers that go beyond that? Are there higher and higher levels of infinity? And, if so, does the totality of all of these levels of infinity itself constitute the highest, most ultimate, level of infinity, the absolutely infinite? In this seminar we will focus on the mathematical infinite. We will start with the so-called "paradoxes of the infinite", paradoxes that have led some to the conclusion that the concept of infinity is incoherent. We will see, however, that what these paradoxes ultimately show is that the infinite is just quite different than the finite and that by being very careful we can sharpen the concept of infinity so that these paradoxes are transformed into surprising discoveries. We will follow the historical development, starting with the work of Cantor at the end of the nineteenth century, and proceeding up to the present. The study of the infinite has blossomed into a beautiful branch of mathematics. We will get a glimpse of this subject, and the many levels of infinity, and we will see that the infinite is even more magnificent than one might ever have imagined.

Freshman Seminar 23H

Anatomy and Ethical Transgressions in National Socialist (Nazi) Germany (160215)

Sabine Hildebrandt

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar introduces students to the history and ethics of anatomy, and their relevance for current questions in medicine concerning the human body in life and death. The story of anatomy in National Socialist (NS or Nazi) Germany is an example of ethical transgressions in the anatomical sciences and reveals the complex relationship between anatomists and the Nazi regime. The historic causes of this development will be explored by examining the roots of the biologistic NS ideology in the connections between anatomy, physical anthropology, the global eugenics movement and German racial hygiene. Many anatomists became members of the NS party, while others were persecuted for so-called "racial" and political reasons. An examination of the history of anatomical body procurement from ancient Greece to the 21st century demonstrates the changes of the traditional sources of bodies for anatomical dissection under NS rule, resulting in the use of many bodies of NS victims for anatomical purposes. Anatomical research changed with the exploitation of the rising number of bodies of executed men and women. Case studies of the work of individual anatomists reveal a gradual shift in the paradigm of anatomy. A few anatomists left the traditional paradigm-—i.e. the gain of anatomical knowledge through work with the dead—in favor of a new paradigm—i.e. work with the "future dead" —in human experiments on prisoners who were subsequently murdered. Ultimately, anatomists became complicit with the government through their role in the complete destruction of the perceived "enemies" of the NS regime.

Insights from Narratives of Illness (117969)

Jerome Groopman

2020 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

A physician occupies a unique perch, regularly witnessing life's great mysteries: the miracle of birth, the perplexing moment of death, and the struggle to find meaning in suffering. It is no wonder that narratives of illness have been of interest to both physician and non-physician writers. This seminar will examine and interrogate both literary and journalistic dimensions of medical writing. The investigation will be chronological, beginning with "classic" narratives by Tolstoy, Chekhov, and Kafka, and then moving on to more contemporary authors such as William Carlos Williams, Richard Selzer, Oliver Sacks, Susan Sontag, and Philip Roth. Controversial and contentious subjects are sought in these writings: the imbalance of power between physician and patient; how different religions frame the genesis and outcome of disease; the role of quackery, avarice, and ego in molding doctors' behavior; whether character changes for better or worse when people face their mortality; what is normal and what is abnormal behavior based on culture, neuroscience, and individual versus group norms. The presentation of illness in journalism will be studied in selected readings from the *New York Times'* and *Boston Globe*'s Science sections, as well as periodicals like the *New Yorker*, *The New York Review of Books*, *Harper's*, and the *Atlantic Monthly*. The members of the seminar will analyze how the media accurately present the science of medicine or play to "pop culture." The seminar will study not only mainstream medical journalists, but so called alternative medical writers such as Andrew Weil and celebrity health voices like Gwyneth Paltrow. Patients with different diseases will be invited to speak to the members of the seminar about their experiences. Students will try their hands at different forms of medical writing, such as an editorial on physician-assisted suicide that would appear in a newspaper and a short story that describes a personal or family experience with illness and the medical system.

Physics, Math and Puzzles (109319)

C. Vafa

2019 Fall (4 Credits) **Schedule:** R 0600 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 17

Physics is a highly developed branch of science with a broad range of applications. Despite the complexity of the universe the fundamental laws of physics are rather simple, if viewed properly. This seminar will focus on intuitive as well as mathematical underpinnings of some of the fundamental laws of nature. The seminars will use mathematical puzzles to introduce the basic features of physical laws. Main aspects discussed include the role of symmetries as well as the power of modern math, including abstract ideas in topology, in unraveling the mysteries of the universe. Examples are drawn from diverse areas of physics including string theory. The issue of why the universe is so big, as well as its potential explanation is also discussed.

Recommended Prep: **This seminar is recommended for students with a strong background in both math and physics and with keen interest in the relation between the two subjects.**

Requirements: **Course open to Freshman Students Only**

Freshman Seminar 23R

Asteroids and Comets (161261)

Charles Alcock

2020 Spring (4 Credits) **Schedule:** M 0600 PM - 0815 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Comets have been seen regularly since before the beginning of recorded history. They have often been regarded as disturbing portents. Asteroids, on the other hand, were not discovered until the 19th century, with the advent of astronomy with telescopes. Today we know of many more asteroids than comets, but we believe that there are vastly more comets than asteroids in the solar system.
This seminar will start with the history of the study of comets and asteroids, including the "Great March Comet of 1843", observations of which led to the establishment of the Harvard College Observatory and its Great Refractor, at that time the largest telescope in the Americas. Our understanding of comets advanced dramatically in 1950 with the publication of two extraordinary papers: Whipple (then at Harvard) described the mixture of dust and ice that comprises the nuclei of comets, and Oort (Leiden University) showed that new comets enter the inner solar system from a vast, diffuse cloud surrounding the planetary system. Modern telescopes and spacecraft encounters provide us today with a wealth of information about comets and asteroids. We will examine these observations and learn what is known and what is inferred about the origin and structure of asteroids and comets. The students will observe with the Astronomy Laboratory's Clay Telescope on the roof of the Science Center. Students will take on projects, which may involve their own observing program, or which exploit existing data.

Course Notes: **The seminar will make use of the Clay Telescope on the roof of the Science Center. There may also be a trip to the Observatory at 60 Garden Street to visit the Great Refractor.**

Recommended Prep: **AP calculus or equivalent.**

Freshman Seminar 23S

The Seven Sins of Memory (117972)

Daniel Schacter

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

How do we remember and why do we forget? Can we trust our memories? How is memory affected by misinformation such as "fake news"? Do smartphones and the Internet help our memories or hurt them? Are traumatic experiences especially well remembered or are they poorly remembered? What are the best ways to study for exams? This seminar will address these and other questions related to the fallibility of memory by considering evidence from studies of healthy people with normal memories, brain-damaged patients who show dramatic forgetting or striking memory distortions, and neuroimaging studies that reveal brain regions and networks that are linked to memory. The framework for the seminar is provided by the idea that the misdeeds of memory can be classified into seven basic "sins". Three of the memory sins refer to different kinds of forgetting (transience, absent-mindedness, and blocking), three refer to different kinds of distortions or false memories (misattribution, suggestibility, and bias) and the final sin refers to intrusive recollections (persistence). We will consider how the memory sins impact everyday life and discuss the possibility that they can be conceptualized as by-products of adaptive features of memory, rather than as flaws in the system or blunders made by Mother Nature during evolution. Relatedly, we will also discuss the interplay between remembering past experiences and imagining future experiences, which provides clues regarding the nature and fallibility of memory.

All Physics in 13 Days (127972)

John Doyle

2019 Fall (4 Credits) **Schedule:** R 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Some claim that there are 13 ideas or principles that can form the bedrock for a pretty good understanding of our physical and technological world. These are: 1) Boltzmann factor and thermal equilibrium, 2) Turbulence, 3) Reaction rates, 4) Indistinguishable particles, 5) Quantum waves, 6) Linearity, 7) Entropy and information, 8) Discharges, ionization, 9) Relativity, 10) Nuclear binding energies, 11) Photon modes, 12)

Diffraction, 13) Resonance. Each week we will discuss one of these principles and see how they explain certain things about the physical world. We will discuss these and connections with other principles, as well as how the principle shows up in technology and, more broadly, in our technological society.

Course Notes: **The course will run for 2 hours within the time block.**

Recommended Prep: **Please note that this seminar will be geared to students likely to go on in physics or related areas, such as chem/phys or engineering. The introduction to certain principles is done with the expectation that students will return to a more formal course on the subject in the future. This course acts as a kind of road map for further studies in physics. Topics may change.**

Freshman Seminar 24G

A Brief History of Surgery (127976)

Frederick Millham

2019 Fall (4 Credits) **Schedule:** R 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The history of surgery begins with the Hippocratic physicians whose principles were based, at least partly, on observation and measurement. However, surgical thinking for first three quarters of the "modern era" was dominated by Galen of Pergamum who, "fooled by his monkeys," established a school thought as false as it was tightly held. The exposure of Galen's errors by Vesalius in 1543 and Harvey in 1628 began a Medical Enlightenment. It would take until the 19th century for the next era of discovery to begin. During this time, the pace and significance of medical discovery increase, yet adoption of good ideas, like antisepsis, seems to take much too long, while bad ideas find adherents in spite of poor or no supporting evidence. Throughout this period, the ghost of Galen continues to haunt hospitals and battlefields. It will not be until the 1930's that Galenism is banished from the wards. Our study will track this history and conclude with a consideration of the management of combat casualties from the time of the first "modern" surgeon, Ambrose Pare, to that of contemporary forward surgical teams in Afghanistan and Iraq. The seminar will consist of weekly discussion, informed by assigned reading and independent inquiry. We will visit the site of the first use of ether anesthesia, and duplicate William Harvey's experiments in the anatomy lab. From time to time we will be joined by other doctors with expertise in specific areas such as infectious disease, combat surgery and anatomy.

The Surprising Science of Happiness (128118)

Nancy Etcoff

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

After a century of studying how to cure mental illness, scientists have started to explore what makes us happy. What have they discovered? In this course, we will critically examine the findings from the new science of happiness, including research in cognitive science, evolutionary biology, psychology, and neuroscience and reveal how this work alters our understanding of what happiness is, the optimal ways to achieve and increase it, the role of circumstance in its occurrence, its effect on our physical health, and its place in human nature. We will consider the notion of a biologically determined "hedonic set point," and question whether there are people who "have started in life with a bottle or two of champagne inscribed to their credit; whilst others seem to have been born close to the pain threshold," as William James noted over a century ago. We will examine how the brain's reward circuitry generates feelings of pleasure, desire, comfort and craving, and the ways it propels us to achieve biologically significant goals. Among the questions we will consider are: What is happiness for? Can one make oneself happier by conscious effort? What are some of the myths about happiness? Finally, is happiness a worthy goal for one's life? Highlighting the most rigorous and promising work in this field, we will attempt to construct a "happiness toolkit." The course will be didactic, interactive and experiential and provide an introduction to a burgeoning field of scientific inquiry.

Child Health in America (119619)

Judith Palfrey

Sean Palfrey

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0530 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

How can American health care be improved for children? How a nation cares for its children's health is often considered a measure of its commitment to the general citizenry and to its future. The members of the seminar will review together the history of children's health and health care in the United States, exploring the impact of geography, environment, nutrition, clean water, as well as of the scientific discoveries of the late 19th century and the early 20th century and the emergence of the high technology care of the middle and late 20th century. Then they will pose the question, "Does America provide children and youth the best possible health care available in the 21st century?" To approach this question, students will analyze the current causes of illness, disability and death among U.S. children and youth and compare United States epidemiology with that of other developed and developing nations. Students will also explore how child health delivery is financed.

Course Notes: **The seminar will meet at Oaktel (the temporary residence for Adams House during the renovations), 1201 Massachusetts Ave, Stone Soup Room.**

"How Did I Get Here?"—Appreciating "Normal" Child Development (128122)

Laura Prager

2020 Spring (4 Credits) **Schedule:** T 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Understanding "normal" growth and development may seem like a relatively easy task at first. We take the nuances of developmental differences for granted because we're so accustomed to experiencing them. Nevertheless, defining normal (versus abnormal) development is a complex and controversial task. Development involves a tricky intermingling of environmental stimuli, cultural and social expectations, rapid and not always intuitive changes in brain development, temperamental differences, genetic inheritance, and mind-boggling brain plasticity. The course will start with a consideration of general themes and then move to a chronologic perspective. First, we approach child development as a dynamic force, one which simultaneously engages multiple domains: social/relational, cognitive, physical, moral. We will then switch to examine stages of development in sequence, using our understanding of neurobiological, physical, cultural, and psychological factors to inform our assessment of how children change over time. Readings will include classic papers on development, textbook chapters that provide overviews of specific developmental stages, recently published research articles on genetic inheritance, selected contemporary children's and young adult literature, personal memoirs, and short stories written about childhood.

Finding Connections: Perspectives on Psychological Development and Mental Illness (122458)

Nancy Rappaport

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 13

The seminar's challenge will be to deepen our understanding of human development and how individuals

cope with serious emotional or social difficulties (neglect, bipolar disorder, autism, depression, schizophrenia). We will use multiple perspectives: medical observations and texts that provide practical knowledge (e.g. The New England Journal of Medicine review articles), narrative readings to understand how patients experience the meaning of illness from the inside out (e.g. The Center Cannot Hold), visitors who will discuss their experience with mental illness, and how development-related mental illness is portrayed in the press (e.g. The New Yorker articles). We will start with the mental life of babies and how scientists interpret infants' nonverbal ways of finding safety and security. This begins the journey of our understanding fundamental needs for tenderness, holding, and making meaning. Understanding how conditions such as autism, depression, and schizophrenia are described in clinical research and literature will help us to appreciate the biological vulnerabilities and relational patterns that may disrupt the human connection. We will examine the resourcefulness required for both fragility and resiliency. Throughout the seminar, the instructor, as a practicing child and adolescent psychiatrist, will bridge the gap between research findings, clinical applications, and everyday insight.

The Universe's Hidden Dimensions (121549)

Lisa Randall

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar will give an overview and introduction to modern physics and cosmology. As with the books, *Warped Passages*, *Knocking on Heaven's Door*, *Higgs Discovery*, and *Dark Matter and the Dinosaurs*, on which it will be loosely based, the seminar will consider important developments in physics today and in the last century. We will consider the revolutionary developments of quantum mechanics and general relativity; and will investigate the key concepts which separated these developments from the physical theories which previously existed. We will then delve into modern particle physics and cosmology and how theory and experiment culminated in the "Standard Model of particle physics" which physicists use today as well as the current cosmological model based on the Big Bang theory and inflation. We will also move beyond the standard theories into more speculative arenas, including supersymmetry, string theory, and theories of extra dimensions of space, as well as ideas about the nature of dark matter. We will consider the motivations underlying these theories, their current status, and how we might hope to test some of the underlying ideas in the near future.

Transformative Ideas in Brain Science: War, technology, and disease pioneered discovery (156450)

Jeffrey Macklis

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 14

This seminar will offer an integrated historical-neurobiological-neurological introduction to foundational and transformative ideas in the ~3,700-year history of brain science, neuroscience, and "lay" neurology—all accessible to freshmen with interests from neuroscience and (molecular, developmental, organismic, evolutionary, or regenerative) biology to history and philosophy of science to neuroeconomics and medicine. No background will be assumed. Rather, a series of historical vignettes and sources will be tied to modern understanding of elements of the nervous system, its organization, function, and modes of investigation and manipulation. Selected historical contexts, often involving war, disease, serendipity, and technology advancement, will be highlighted as advancing knowledge in surprising ways. An inter-disciplinary approach will benefit from each student bringing insights from their own reading of primary source and history of science texts, to be added to in-session discussion, with moderation and direction from me (JDM). We will visit a number of the Harvard Collections and museums, including Comparative Zoology, Herbaria, History of Science, the HMS Warren Anatomical Museum collection (Phineas Gage's skull and railroad tamping rod), the Harvard collection of historical scientific instruments (advances in microscopy, electrical measurement, e.g.), and the state-of-the-art Center for Brain Science imaging facility, providing context.

Course Notes: **No background with this material will be assumed.**

What Is Life? (156181)

Guido Guidotti

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar will consider the conditions of a cell necessary to support life. The central questions are: what are the principal constituents of the cell, what is the role of water in cellular activities, what determines the size of a cell, what are the consequences of crowding of the components of the cell, what is the role of diffusion in biological interactions, what is the energy currency of the cell, what are the critical reactions that provide energy for the cell, how does the cell evade the requirement for an increase in entropy for a spontaneous process. The proposal is to find a definition for a living system using information and principles of biology, chemistry and physics. Answers to the central questions may allow an understanding

of the size of prokaryotic and eukaryotic cells, of the ionic composition of the cell cytoplasm, and of the involvement of molecular interactions and complementarity in cellular processes.

Death and Immortality (110425)

Cheryl Chen

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In this seminar, we will discuss philosophical questions about death and immortality. What is death? Is there a moral difference between "brain death" and the irreversible loss of consciousness? Is the classification of a person as dead a moral judgment, or is it an entirely scientific matter? Is death a misfortune to the person who dies? How can death be a misfortune if you are no longer around to experience that misfortune? Is it possible to survive after death? What does it mean for you to survive after your death? Is there such a thing as an immaterial soul distinct from your body? Is immortality something you should want in the first place? Even if you do not live forever, is it nevertheless important that humanity continues to exist after your death? By discussing these questions about death, we will hopefully gain insight about the importance and meaning of life.

Nietzsche (159736)

Mathias Risse

2019 Fall (4 Credits) **Schedule:** T 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Friedrich Nietzsche addresses some of the big questions of human existence in a profoundly searching but often disturbing manner that continues to resonate with many. Hardly any philosopher (except Karl Marx) has exercised such a far-reaching and penetrating impact on intellectual life in the last 150 years or so. He has influenced thinkers and activists across the political spectrum. Nietzsche has always been of special interest to young people who have often appreciated the irreverence and freshness of his thought, as well

as the often very high literary quality of his writing. In this course, we explore Nietzsche's moral and political philosophy with emphasis on the themes he develops in his best-known and most accessible work, The Genealogy of Morality. The best-known themes from this book include the slave rebellion in morality, ressentiment, bad conscience, and ascetic ideals. However, we also read several other of Nietzsche's works, and do so chronologically (except that we begin with his auto-biography, Ecce Homo, which Nietzsche wrote briefly before his mental collapse in 1889). The others works include The Birth of Tragedy, The Gay Science, Beyond Good and Evil, and The Antichrist. We do not read any secondary literature, though the instructor will recommend such literature as appropriate. The point is to become familiar with Nietzsche's writings themselves and to engage with his thought.

Course Notes: **The seminar will meet for 2 hours within the time block.**

Freshman Seminar 31E

Magic and Other Virtual Realities (109471)

Shigehisa Kuriyama

2019 Fall (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar explores our remarkable propensity, as human beings, to respond viscerally to simulacra of realities as if they were real—even though we know, intellectually, that they aren't. Think of how movies make us laugh and cry, even though we know that they are just fleeting images on a screen. Think of how colored pills can dissolve our pains, even after we learn that they are not "real" medicines, but mere placebos. And think of the hypnotic spell cast by certain clumps of metal and strips of paper, just because we imagine them as "money."

What makes virtual realities so powerful? And what does their enormous sway reveal about our hearts and minds? The seminar will open by dissecting how magicians craft convincing illusions, and then go on to study virtuality in comics, religious rituals, economics, movies, and medicine—as well as, of course, in computer-generated VR. The class will involve regular hands-on activities: in addition to reading theories of how virtual realities work, we will also experiment with practical applications, including the design of astounding magic tricks, and the use of sound to shape what the eyes see.

Freshman Seminar 31M

In Pursuit of the Ordinary: Genre Painting in Boston-Area Museums (123767)

Joseph Koerner

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar looks at portrayals of everyday life in art, mostly from Europe and America, and mostly in the medium of painting. Examining original art objects in different Boston-area collections, we investigate this type of imagery as it develops into a distinct tradition. We observe its beginnings in medieval marginalia. We trace its evolution into a specialty product from the Renaissance and through its heyday in the seventeenth and eighteenth centuries, when it came to be called "genre painting." And we consider its rejection by and strange survivals in modern art. Studying individual artworks closely, we also explore the character and missions of the public collections that house them.

Course Notes: **The seminar will conduct its meetings on site at various local museums, including the Harvard Art Museums, Boston's Museum of Fine Arts, the Isabella Stewart Gardner Museum, the ICA, and Harvard's Peabody Museum of Archaeology and Ethnography**

Beauty and Christianity (121903)

Robert Kiely

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In Book X of The Confessions Augustine wrote, "I have learned to love you late, Beauty at once so ancient and so new!" In addressing God as source and model of beauty, Augustine joins theology and aesthetics in one sentiment that has informed and sometimes troubled Christianity throughout its history. There is no doubt that the life and teachings of Jesus have inspired some of the greatest works of art, literature, and music in Western culture, but it is also true that Christians have not always agreed on the definition and function of beauty. The seminar will consider certain key Christian aesthetic theories, including those of Augustine, Gregory the Great, Aquinas, and Calvin. But the focus will be on the analysis of particular works, selections from Dante's Paradiso, poems of Herbert, Donne, and G.M. Hopkins, The Little Flowers of St. Francis, Bunyan's Pilgrim's Progress, Hawthorne's Scarlet Letter, Melville's Billy Budd, works of C.S. Lewis, and the short stories of Flannery O'Connor. Included as well will be paintings (eg Italian Renaissance depictions of Jesus, Mary, Mary Magdalene, John the Baptist, and St. Sebastian) and choral music (eg Bach's Saint Mathew Passion and selected African-American spirituals). The abiding question will be: In what ways does aesthetic form—beauty—enhance, qualify, complicate, or obscure the gospel?

Freshman Seminar 32M

Food for Thought: Culinary Culture in Spain and Beyond (109626)

Johanna Damgaard Liander

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The French have said that the history of a nation depends on what they eat. Yet in the case of Spain, it's clearly the reverse. What Spain has eaten has been a consequence of the country's vast -and often turbulent- history. Invasions, expansions, exile and immigration have created and continue to create the cuisine and culture, which will be our focus in this seminar. Likewise, we will consider Spain's culinary exchange with Latin America, with specific reference to Argentina, Peru and the Caribbean. From don Quijote's rudimentary repas, to Almodóvar's gazpacho, we'll conclude at the tables of the globalized metropolis. We will first consider food and identity, then food, its rituals and traditions. We will examine Spain from the Middle Ages until the present, the history and regions of the peninsula, and the culinary consequences of transatlantic voyages. We will also consider the repercussions of Europeans arriving in the 19th century, and those of the many closer, traumatic events of the 20th century, and beyond. The readings, all in English, are by novelists, historians, chefs, food critics, sociologists, poets, cartoonists and travel writers over the span of ten centuries. The films and videos are more recent, and will have subtitles. No previous knowledge of Spanish language, or travel to any of the countries mentioned, is required. Neither do prospective students need extensive cooking skills. The only pre-requisite is curiosity about what, why, and how the people of Spain and Latin America have eaten throughout their history, and how

this reflects identity and culture of these lands.

Course Notes: **The class will engage in hands-on sessions in the kitchen.**

Recommended Prep: **No previous knowledge of Spanish language, travel to any of the countries mentioned, or extensive cooking skills are required.**

Freshman Seminar 33C

Borges, García Márquez, Bolaño and Other Classics of Modern Latin American Fiction and Poetry (159836)

Mariano Siskind

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course introduces students to some of the most important Latin American literary works produced during the twentieth century. We will explore the ways in which these novels, short-stories, essays and poems interrogate the historical traumas, political contexts and aesthetic potential of the region between 1920s and 1980s. We will shed light on their place in the historical and cultural formation of the literary canon, as well as on the concept of 'classic'. The goal of this seminar is two-fold. On the one hand, it introduces students to the Latin American literary and critical tradition through some of the best and most interesting literary and critical works (each novel or grouping of short stories and poems are paired with an important critical essay that situates them historically and aesthetically). On the other, it provides them with the fundamental skills of literary analysis (close reading, conceptual and historical framing, continuities and discontinuities with the aesthetic tradition), and that is why I have selected a relatively small number of readings, in order to have time to work through them, discuss them and have some flexibility to extend the classes we dedicate to a given author when our discussions merit it.

Freshman Seminar 33R

The Chinese Language, Present and Past (160197)

C.-T. James Huang

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar offers an opportunity to learn about the Chinese language, by observing and analyzing its linguistic structure, history, cultural tradition and social relevance. With a partially hands-on approach, we shall look at the fundamental principles that make up the sound system and govern the grammar of Mandarin, with particular attention to those features that distinguish Chinese from English and other languages, including its system of tones, its writing system, its word-order and syntactic patterns, and how the language has developed in over 2000 years of its recorded history. Looking deeper, we see how the study of Chinese may contribute to our understanding of language as a central component of human cognition. The seminar is designed for students with some experience of the Chinese language (e. g., with some prior formal instruction or as heritage speakers of Mandarin or any other Chinese dialect). The analytical skills acquired will be of use as an aid to improve on one's proficiency, or in preparing for study in linguistics, translation, East Asian study, and/or artificial intelligence.

Recommended Prep: **Some experience of the Chinese language is required as a pre-requisite for taking the seminar (e.g., a minimum of one semester of prior formal instruction, or as a heritage speaker of Mandarin or any Chinese dialect). To fully satisfy this seminar, you must (a) complete each reading assignment and have questions ready before class, (b) actively engage in class discussion. In addition, students will complete a term project (individual or collaborative) on a topic in consultation with the instructor.**

Freshman Seminar 33X

Complexity in Works of Art: Ulysses and Hamlet (116807)

Philip Fisher

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Is the complexity, the imperfection, the difficulty of interpretation, the unresolved meaning found in certain great and lasting works of literary art a result of technical experimentation? Or is the source extreme complexity—psychological, metaphysical, or spiritual? Does it result from limits within language, or from language's fit to thought and perception? Do the inherited forms found in literature permit only certain variations within experience to reach lucidity? Is there a distinction in literature between what can be said and what can be read? The members of the seminar will investigate the limits literature faces in giving an account of mind, everyday experience, thought, memory, full character, and situation in time. The seminar will make use of a classic case of difficulty, Shakespeare's Hamlet, and a modern work of unusual complexity and resistance to both interpretation and to simple comfortable reading, Joyce's Ulysses. Reading in exhaustive depth these two works will suggest the range of meanings for terms like complexity, resistance, openness of meaning, and experimentation within form.

Course Notes: **There may be interviews for selected applicants during Opening Days week.**

Language and Prehistory (117406)

Jay Jasanoff

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

It was discovered around 1800 that the major languages of Europe, along with the ancient languages of India and Iran, were descended from an unattested parent, formerly known as "Aryan" or "Indo-Germanic," but today usually called Proto-Indo-European. The identification of the Indo-European family raised many questions, some purely linguistic (e.g., what was Proto-Indo-European like; was it grammatically complex or "primitive"?), and some more far-reaching (e.g., who were the speakers of Proto-Indo-European; why did Indo-European languages spread so widely?). Questions of the first type eventually led to the birth of the new academic field of linguistics. Questions of the second type, however, misled some nineteenth- and early twentieth-century intellectuals to posit a genetically and culturally superior Aryan "race." Although this idea is now universally rejected, linguistic evidence still plays an important role in studies of the past. Recent debates about the origins of "Western civilization," for example, center on the alleged presence of borrowed Egyptian words in Greek, while theories about the settlement of the Americas depend on

supposed linguistic connections between the New World and other continents. This seminar will explore the use and misuse of such methods. What, if anything, does the fact that languages are related tell us about their speakers? How can we distinguish genuine cases of linguistic borrowing or "influence" from the kinds of resemblances that come about through pure chance? Answers to these and similar questions will be sought through case studies, with readings chosen to illustrate and contrast scholarly and unscholarly approaches. The work for the course will consist of readings, four or five short problem sets, and a final project with both written and oral components.

The Art and Craft of Acting (126838)

Remo Airaldi

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

We've all watched a great performance and wondered, "How did that actor do that?" Acting is undoubtedly the most popular, most widely experienced of the performing arts and yet, in many ways, it remains a mystery. This seminar will give students an opportunity to demystify the art of acting by introducing them to the basic tools of the trade; they will learn about the craft of acting by actually "doing" it. It will provide an introduction to acting by combining elements of a discussion seminar with exercises, improvisations and performance activities. Improvisation will be used to improve group/ensemble dynamics minimize habitual behaviors and to develop characters. Students will explore a range of acting techniques designed to give students greater access to their creativity, imagination and emotional life. The aim will be to improve skills that are essential to the acting process, like concentration, focus, relaxation, observation, listening, etc. In the later part of the term students will work on monologues. Students will also attend and critique productions at the Loeb Drama Center and other theaters in the Boston area.

Course Notes: **The first class will be held on Labor Day Monday, Sept 2nd. Students will be required to attend theater performances during the course of the term. There will be no charge to the student. The first theater date will be Saturday, Sept 7, 7:30pm.**

The Creative Work of Translating (128124)

Stephanie Sandler

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Translation makes culture possible. Individual writers and thinkers draw sustenance and stimulation from works created outside their own cultures, and artists working in one format get ideas from those working in entirely different media. Translation between languages and between art forms will center our seminar's work. Taking a broad view of translation as a mental activity, we will study poems, fiction, film, photography, film, and music. We will stretch our own imaginative capacities by transposing material across media and genres, creating homophonic translations, and translating between languages. We will work individually as well as collaboratively. We will read a small amount translation theory, and some reflections by working translators. We will invite into our classroom a practicing poet, artist, and translator or two, attend poetry readings and lectures at Harvard. The only requirement is some knowledge of a language besides English—and a readiness to play with languages, art forms, and texts. Readings from Anna Akhmatova, Walter Benjamin, Jorge Luis Borges, Joseph Brodsky, Anne Carson, Emily Dickinson, Forrest Gander, Susan Howe, Velimir Khlebnikov, Vladimir Nabokov, Sappho, W. G. Sebald, Wang Wei, and Sor Juana; music by John Adams and David Grubbs. Films to include *Despair*, *Chekhovian Motifs* and *The Golem*.

Course Notes: **There will be at least one required field trip, to the Isabella Stewart Gardner Museum.**

Recommended Prep: **The seminar will require some knowledge of one language besides English. To consult with the instructor about this, please email Professor Stephanie Sandler, ssandler@fas.harvard.edu. There will be at least one required field trip to the Isabella Stewart Gardner Museum.**

Freshman Seminar 36S

Comparative Historical Mythology (109498)

Michael Witzel

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar will deal with an innovative approach to comparative Mythology, detailed in my 700 pp. book on the topic (OUP, Dec. 2012). Comparative mythology has been a well-trodden but controversial field since at least 1800. The proposed seminar will discuss the matter in a new way by incorporating an historical approach, which has so far been lacking. The two most prominent explanations for the wide-spread, worldwide similarities in myths have been archetypes (C.G. Jung) and diffusion (L. Frobenius / H.

Baumann). Both approaches are inadequate to explain these similarities. Approaching myths historically, and working backwards from our earliest written sources (Egypt, Mesopotamia, Levant, India, China, Maya, etc.), earlier stages in the development of mythologies can be detected through successive reconstructions. These are supported by the additional testimony of oral texts found across the globe. Further, recent developments in human population genetics as well as in archaeology, anthropology and comparative linguistics sustain the proposed historical model, which ultimately, but rather tentatively, reaches back to the time of the "African Eve." This seminar will investigate the ways myths have been compared in the past; further, the underlying assumptions about human spirituality and religion, as well as available scientific evidence for such models. The new historical and comparative proposal will be tested against this evidence. All of this offers a wide scope for students' class room intervention and individual research in a multitude of ancient and oral texts (in translations) from a variety of languages as well as in the sciences.

Reading Tolstoy's War and Peace (119150)

Julie A. Buckler

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Leo Tolstoy's massive masterwork *War and Peace* (1865-69) is a magnificent work of art by a world-class writer tackling life's "big questions." It is also a great read! Over the course of a semester, we will give this nineteenth-century novel the time and attention it deserves. We will read War and Peace closely, while comparing two different English-language translations, exploring cultural and historical context, artistic biography, historiography, the novel as a literary form, literary language, issues in translation, interpretive paradigms, and potential new ways of reading. We will trace the changing interpretative approaches to *War and Peace* from the 1860s to the present. How does the pacing of the novel relate to nineteenth-century reading and publishing practices? To nineteenth-century conceptions of time, space, narrative, and genre? What are the problematic distinctions between history and literature that the novel raises? We will also consider the significance of the Napoleonic wars (1803-1815) in Russian history and the broader pan-European cultural legacy of this period, including literature, art, and architecture.

Course Notes: **All readings will be in English.**

The Transformation of Marketing (160713)

Elie Ofek

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Marketing, as you will find in this seminar, refers to the set of activities needed to form and sustain a healthy business by fostering meaningful exchanges between the organization and its chosen customers. Marketing helps create value for consumers and extract a share of that value for the organization. We will spend time understanding the fundamentals of marketing management and examine how recent economic, technological, cultural, and societal developments have affected the marketing field. We will first cover the central themes of customer behavior, strategic marketing analysis, innovation forecasting, and brand management. Then we will explore how marketing has dramatically evolved in recent years due to: the digital and social-media revolution; the increasing shift from human-based to technology-based interactions with customers; firms' desire to globalize; societal trends affecting consumer preferences; and the call for companies to exhibit greater social responsibility. In examining these themes, we will also draw upon research from the domains of psychology, sociology and economics. Each session will have assigned pre-readings that may include case studies, book chapters, and articles. The discussion and material covered in class will rely upon these readings. During the term each student will identify a marketing phenomenon they find intriguing and that reflects concepts covered in class. Students will prepare a one-page summary of this business phenomenon and communicate it in a short presentation. The final paper for the seminar requires students to analyze a case study and turn in a short write up.

Law and Society through the Cinematic Frame (160785)

Ofrit Liviatan

2020 Spring (4 Credits) **Schedule:** M 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In this seminar we will explore the interaction of law and society using the lens of film. The cinematic experience has become a key site through which the public understanding of law is produced, debated and influenced. Driven first and foremost by market and audience considerations, law-related films often inject drama, contentious dimensions and even misrepresentations into the portrayal of real events. Nonetheless, by raising awareness about legal themes that pervade the plot, these films offer valuable insights toward discovering social scientific perspectives on the manner in which law functions in everyday life. Hence, the

seminar will not focus on legal doctrine or teach you the fundamentals of the legal profession. Rather, using films as a framework for discussion, we will study law's working in relations to the social, political, economic and cultural environments in which it operates. Central thematic topics to be discussed include: the relationship between law, justice and morality; how does law intervenes in social relations and whether it is over-utilized as part of these relations; the dynamics between law and social change; is access to the legal process equal to everyone; and the function of law in deeply divided societies. Throughout the semester film viewing will occur outside class as part of your weekly preparation for the seminar. However, we will dedicate one class as a field trip to watch a law-related film together and analyze its themes through the sociolegal perspective.

Advice to Young Leaders (127970)

David Armitage

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Many of the classic works of political and ethical theory in the western tradition were written for young people about to enter public service or positions of authority. This Freshman Seminar takes a selection of

these major texts of advice and encouragement, among them works by Plato, Aristotle, Cicero, Machiavelli, Burke, James, Weber, and Woolf. The class will introduce students to some major thinkers and ideas through a selection of texts that might speak to their own condition and ambitions. It will also show how to treat such works historically, in their own terms and their own contexts, while also applying them to current concerns and dilemmas. The overarching aim of the class will be for students to think rigorously about their own imminent responsibilities as citizens and leaders by reflecting on arguments addressed to similar rising generations in the past, in classical Greece, ancient Rome, early modern Europe, the eighteenth, nineteenth, and early twentieth centuries.

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 13

In this age of rapid globalization and heightened cross-cultural contacts, nations struggle to reaffirm their identities and values. In the United States, one of the most precious values is free speech, embedded in the First Amendment to the Constitution and regarded as a keystone of American democracy. But arguments over the boundaries of free speech have become intense, especially in the era of electronic communication. This seminar will examine the dialogue taking place within the United States and around the world on free speech issues – sometimes civil, but often a political or cultural confrontation that turns violent. We will discuss international and domestic protests over politically sensitive cartoons, controversies over Holocaust denial, whether hate speech should be banned on campuses, whether the domestic media can ever be legitimately constrained on national security grounds, whether anti-gay religious activists have a right to disrupt military funerals, whether pornography and violent music lyrics should be regulated, and what constitutes free speech on the Internet or cell phones. Through Supreme Court decisions and by other means, we will examine the debate over what it means to be patriotic and whether patriotism requires Americans to say, or prohibits them from saying, certain things – and examine how standards have changed over the years. We will ask whether other countries' attitudes toward free speech and the other First Amendment freedoms should influence US foreign policy toward those countries. Examples of constraints on free speech in our daily lives and work, unwitting or not, will also be considered.

Freshman Seminar 40P

Making the Grade? Middle and High School Math Education in the U.S. (109469)

Robin Gottlieb

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

What are the goals of mathematics education at the middle and high school level, and how do these goals impact our evaluation of the success or failure of math education in America? Why does math education at these levels matter? What societal structures (historic, economic, political, cultural) impact mathematics education? How does math education in turn impact societal structures? As the world changes, how do the goals of mathematics education change, and in what ways? We will explore these issues to become more educated participants in this ongoing discussion.

Course Notes: **A special invitation is extended to students not planning to concentrate in math.**

Requirements: **Course open to Freshman Students Only**

Freshman Seminar 41E

The American Death Penalty: Morality, Law, and Politics (109475)

Carol Steiker

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 14

This seminar will address the controversies that swirl around the American death penalty in the distinct but related contexts of morality, law, and politics. At the level of moral theory, we will consider whether the death penalty is ever justified as a state practice, both in the abstract and in application, given concerns about its fairness and efficacy in deterring crime. We will explore the U.S. Supreme Court's "constitutionalization" of capital punishment starting with its landmark decision in 1972 in the case of Furman v. Georgia. We will trace the Court's attempt to deal with issues of fair process, proportionality, cruelty, reliability, and racial discrimination. Close readings of key opinions will show how the Court's interpretations of the majestic generalities of the Constitution—the guarantees of "due process", "equal protection," and protection from "cruel and unusual punishments"—have been informed by moral theory. Finally, we will consider the American death penalty in political context, both nationally and internationally. We will assess explanations for the anomaly of American retention of capital punishment, alone among Western democracies. We will consider how moral philosophy and legal regulation have affected the course of the American death penalty in the political sphere and contemplate the legal and political future of the institution. Will (or can) the death penalty be reformed? What are the prospects for nationwide abolition (or large-scale resurgence)? Will (or should) the death penalty's future lie in the hands of the courts or the political branches of government?

Freshman Seminar 41J

Economic Development (156421)

Michael Kremer

2020 Spring (4 Credits) **Schedule:** R 0600 PM - 0800 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Understanding the determinants of the wealth of nations has long motivated the study of economics and it is arguably the most important problem in the field for human welfare. This seminar will examine economic development, looking both at historical experience and at contemporary issues in developing countries. It will focus on writing in economics, but will also draw on other disciplines, including political science and sociology. The course will start with readings of Adam Smith, Karl Marx, and Max Weber. Participants will then read works illustrating some of the techniques and modes of reasoning associated with contemporary microeconomics and statistical analysis. Finally, it will conclude with contemporary writing on development, including work that addresses big-picture political economy models of the role of institutions in development and more microeconomic approaches.

Recommended Prep: **Students are expected to have had some background in economics, such as an AP economics course in high school, or simultaneous enrollment in Ec 10a or Social Analysis 10.**

Requirements: **Course open to Freshman Students Only**

Freshman Seminar 41K

Human Rights, Law and Advocacy (156502)

Susan Farbstein

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Human rights practitioners confront numerous ethical, strategic, and legal dilemmas in their struggles for social justice. This freshman seminar explores the underlying legal framework in which human rights advocates operate, and then uses specific case studies to consider the various challenges they must grapple with in their work. The seminar is designed to encourage students to critically evaluate the human rights movement while offering an introduction to some of the essential tools and strategies used by human rights advocates, including advocacy, litigation, documentation, and report writing. Students will be asked to grapple with tough questions, such as: How can human rights be harnessed to successfully

influence and change behavior? What does responsible, effective human rights advocacy look like? How do we engage without perpetuating power differentials along geopolitical, class, race, gender, and other lines? How do we find ways to work in collaboration with directly affected communities? What does it mean to be a human rights advocate working on abuses affecting individuals and communities remote from yourself? How do you balance broader advocacy goals with the needs of individual survivors or clients? How do you determine when to intervene and devote limited resources to a given issue? Students will also consider a series of dynamics (e.g., north/south, insider/outsider, donor/donee, lawyer/non-lawyer) that influence how and why advocacy is formulated and received. Finally, the seminar considers the limits of the human rights paradigm and established methodologies, such as litigation and "naming and shaming," and explores alternative sources and forms of advocacy, including the role of community lawyering in the human rights context.

Freshman Seminar 41P

American Presidential Campaigns and Elections 1960-2020 (124777)

Maxine Isaacs

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 17

For two hours each week, students will work to understand the history, forces and politics of American presidential campaigns and elections. Each student will be "responsible" for one presidential election between 1960 and 2016, and, together, members of the seminar will develop some perspective on dramatic changes as well as enduring factors that have shaped our own times, issues and society. With the help of some guests – practitioners including political leaders, public opinion analysts and journalists – students will develop a deeper understanding of contemporary politics; the impact of demographic patterns and changes; public opinion and polling; and political communication. Students will learn about the relationship among politics, news and public opinion, and who influences whom. Participants will be introduced to excellent contemporary studies about modern presidential campaigns and elections. At the end of the term, students will make oral reports to the class on lessons learned from a past election which can help all of us better understand this one.

Media in American Politics (159837)

Matthew Baum

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course considers the degree to which Americans' political opinions and actions are influenced by the media as well as the influence of the media on public policy. Topics to be covered include the history of the mass media, recent trends in the media, theories of media effects, the implications for politics of changes in media (e.g., the rise of the Internet, social media and partisan media), the ways in which the news shapes the public's perceptions of the political world, campaign communication, how the media affect the manner in which public officials govern, and the general role of the media in the democratic process.

Museums (156182)

James Hanken

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What are museums? Where did they come from? What exactly do they do, and why? Do they have a future? This seminar will trace the history of museums from their beginnings centuries ago as personal collections maintained by private (wealthy) individuals to the modern institutions of today. We will consider not only the objects maintained in museums and their conservation, but also the role of museums in contemporary society, financial considerations associated with their successful operation, their dual—and sometimes conflicting—functions of scholarly research and public display, the mechanics and psychology of exhibit design, legal and ethical issues of collecting and acquisition, and challenges confronting museums and how they likely will fare in the future. The seminar's focus will range from large art, archaeological, and natural history museums to smaller and more specialized institutions that focus on particular cultural, scientific, artistic, and engineering artifacts. Weekly class meetings will include both discussion sessions and field trips to museums and libraries at Harvard. During these trips we will view public exhibits and gain access to "behind-the-scenes" collections and scholar/staff work areas that the public rarely sees. One weekend-day optional field trip to a museum outside Boston may be included as well, depending on student interest.

Freshman Seminar 42C

The Role of Government (160196)

Oliver Hart

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Economists have a very positive view of the role of markets. The intellectual foundations of this are the first and second theorems of welfare economics. The purpose of the seminar is to introduce the students to these results but also to their limitations. For example, for markets to work well it is essential to have a legal system that upholds contracts and protects property rights. The legal system is also important to deter crime. But who can provide the legal system other than a government that has the coercive power to raise taxes? The legal system is an example of a public good, but of course there are many others including national defense, clean air, etc. Markets under-provide public goods and they also do not work well in the presence of externalities, a highly topical example of which is global warming resulting from carbon emissions. Another very topical issue is inequality. There is no particular reason to think that a market economy will yield an equitable distribution of income, and given this what is the appropriate government response? Throughout the seminar the analysis of ideas and concepts will be interspersed with policy issues such as whether and what limitations should be placed on the right to smoke or consume drugs, the right to marry, the right to buy and sell organs, the right to bear arms, and the freedom of businesses to decide whom to serve. We will also consider the pros and cons of the Affordable Care Act (Obamacare), the role of government nudges, and whether goods or services paid for by the government need to be produced by the government or can be outsourced: the issue of privatization.

Freshman Seminar 42H

U.S. Energy Policy and Climate Change (160203)

James H. Stock

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Burning fossil fuels has powered 150 years of unprecedented economic growth, but doing so has left a legacy of high and increasing concentrations of carbon dioxide and other greenhouse gases. Those gases are changing our climate and thereby endanger human health, human welfare, and the earth's ecosystems. To avoid the worst of those consequences requires decarbonizing the energy sector, but that task is massive and will require effective and efficient climate policy. Recently, U.S. energy and climate policy has been subject to wild swings, as Obama-era regulatory and subsidy policies designed to shift from fossil fuels to renewables have been replaced under the Trump administration by policies to promote and subsidize fossil fuel use and production. This seminar examines U.S. climate policy from economic, legal, and technological perspectives. The seminar starts with a review of the U.S. energy sector, climate science, and climate economics. The course then turns to current policy issues, including carbon pricing, the regulation of CO2 emissions from fossil-fuel fired power plants, the keep-it-in-the-ground movement, policies to promote new low-carbon technologies, and the Green New Deal. The seminar also examines

subnational (state and local) and international climate policies.

Freshman Seminar 43D

Christianity and Slavery in America, 1619-1865 (160213)

Catherine Brekus

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Most people today assume that Christianity and slavery are incompatible. For most of Christian history, however, the opposite was true. Christians not only owned slaves, but they argued that slavery was sanctioned by the Bible. This seminar will explore the relationship between Christianity and slavery in America from 1619, when the first slaves arrived in Virginia, to the Emancipation Proclamation in 1865. We will ask several questions. How did white Christians become convinced that slavery was sinful? Why did many slaves convert to Christianity, the religion of their oppressors? How did enslaved Christians make sense of their suffering? Students will read major historical interpretations of slavery, but they will particularly focus on primary documents, including proslavery tracts and sermons, abolitionist speeches, poems, and the personal religious narratives of enslaved men and women. In addition to discussing the readings during class meetings, we will listen to spirituals and analyze paintings, photos, architecture, and other objects (for example, abolitionist tokens).

Course Notes: **In addition to our regular class meetings, we will meet at the Schlesinger Library to look at rare books and manuscripts, and we will take a guided walking tour of Boston's Black Heritage Trail. The tour will include an exploration of the African Meeting House.**

Freshman Seminar 44J

Clash of Titans, Seats of Empire: The Aztecs, Toltecs, and Race of Giants in Ancient Mexico (116506)

William Fash

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The film "Clash of Titans" was a British extravaganza dedicated to exploring the ancient Greeks' concepts of the interactions between humans and their gods. In Ancient Mexico, the tale of Topiltzin Quetzalcóatl, Toltec Prince of Tula, is the best-known example of the intervention of rival gods, in the affairs of kingdoms and empires, and serves as the point of departure for our seminar. Just as the Greeks countenanced sacrifices and political assassinations, in Ancient Mexico the three great empires practiced human sacrifice, regicide, and engaged heavily in warfare which was vital in their statecraft and economy. We will explore how these central components were explained and justified in their mythology, why reciprocity with the gods was so vital, and how and why each empire came to a violent end. We begin with the first-person description of the Aztec Empire and its violent conquest, penned by a foot solider in Hernán Cortés's army, Bernal Díaz del Castillo. In the following weeks we will explore the environmental basis, religious dimensions, and social and political development of civilization, cities, at the three seats of empire in ancient Mexico. We will make extensive use of Peabody Museum collections, archaeological studies, historical accounts, and recent films and other media to critically examine ancient practices and current perceptions of the Aztec empire (1428-1519 CE); its predecessor the legendary Toltec empire of Tula (850-1100 CE); and the foundational Teotihuacan empire (100-550 CE), known as "The City of the Gods" to people throughout the region. The Aztecs and Toltecs went to Teotihuacan on pilgrimage every 20 days, because the scale of that ancient city was so massive, the architecture so impressive, and the religious art and historical lore so compelling, that the Aztecs had a legend that it was built in an earlier creation, by a race of giants. Seminar participants will explore how the biases of the observer play a role in describing and explaining "the Other." Students will analyze the ways in which religion and the quest for power fueled the genesis, expansion and demise of all three empires. First-years in this seminar will also explore the ways in which the living descendants of the Aztecs are reviving their traditional culture and how the Pre-Columbian civilizations are integral to the national identity of Mexico and Chicanos in this country, vs. the way they are portrayed in Hollywood and U.S. popular culture, through films and other media in the U.S. and Mexico.

Course Notes: **No background or previous experience, on or in Mexico is required, only an open mind.**

Freshman Seminar 50I

The Temporal Universe (203269)

Jonathan Grindlay

2019 Fall (4 Credits) **Schedule:** T 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The Universe is not static, but rather stars and entire galaxies are evolving as revealed by their variability on timescales ranging from milliseconds for collapsed stars (neutron stars and black holes) to gigayears for stars and galaxies. In this seminar we shall explore stars and nuclei of galaxies through variability—from how brightness variability of stars with binary companions measured with small telescopes measures star masses and radii, to the extremes of variability of stars that undergo repeated huge flares, to enormously luminous variations from accretion onto gargantuan black holes in the nuclei of "Active Galaxies" (blazars and quasars). We shall use the Clay Telescope on the Science Center roof to make some repeated observations (from the 8th floor Astronomy Lab) of several types of variable stars and accretion-powered binaries and deduce what life would be like if either were our Sun. From a blazar, we shall observe historical outbursts that occasionally change brightness to exceed its host galaxy by a factor of ~100, by using the digitized brightness measures on thousands of glass plate images taken by Harvard telescopes from 1885–1992 and now digitized

and on-line from our digital access to a Sky Century @ Harvard (DASCH) project. The seminar will include readings from an introductory astronomy text as well as both popular and journal articles and the short books *Black Hole* (Bartusiak) and *Black Hole Blues* (Levin). Students will use astronomical software to measure stellar brightness and variability from telescope images as well as learn temporal analysis techniques with applications to other disciplines. Students discuss in-class readings and observations conducted and write short papers on their observations and deductions.

Course Notes: **This seminar is open to all but may be of particular interest to those considering Astronomy, Physics or Engineering concentrations. The seminar will run for two hours within the time block.**

Food, Up Close and Personal (203424)

Noreen Tuross

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Several times a day, you decide what to eat and drink. What happens to the food in your body; how is it turned into you and how has evolution shaped some of your choices? We alternate among popular nutrition literature, peer reviewed papers and discussion of data to unravel some of the complicated issues surrounding human nutrition. We will examine the published results from "The Biggest Loser" television program and explore the effects of alcohol on the body and brain. We will, of course, cook. The class will meet for three hours each week and attendance is mandatory. As a group, the class will plan a cooking and eating experience, and each student will present on at least one of the topics in the class.

Freshman Seminar 50S

From Galileo to the Big Bang Theory: Conflict and Dialogue between Religion and Science (204929)

Karin Oberg

2019 Fall (4 Credits) **Schedule:** M 0900 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

It is easy to find controversies at the intersection of science and religion, from the time of Galileo, to Darwin and the emergence of modern cosmology. Yet many scientists throughout the ages have been devoutly religious, challenging claims of an intrinsic enmity between science and religion. This seminar treats a number of historical conflicts between religious beliefs and scientific theories, among them the Galileo affair, the clockwork universe, evolution, and the Big Bang theory. The seminar will introduce students to the main protagonists through their own words, and through contemporary and modern-day commentaries. We will explore why these conflicts arose and, based on these historical lessons, what we can expect the future relationship between science and religion to be. The ultimate aim of this seminar is for students to form their own opinion of which kind of conflicts between science and religion are inevitable and which are accidents of time and place, and under which conditions, if any, interactions between science and religion can be mutually beneficial. Most of the course will focus on Christianity and the natural sciences, with emphasis on astronomy and cosmology, but the relationship between other ancient and contemporary religions and other sciences will be discussed as well to provide a broader context.

Recommended Prep: **There are no pre-requisites. The course will include scientific concepts and their empirical and theoretical foundations, but no scientific preparation beyond high school physics is required.**

Requirements: **Course open to Freshman Students Only**

Freshman Seminar 50Z

CRISPR, Genome Editing, and the Future of Medicine (207509)

David Liu

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The life sciences are undergoing a revolution stimulated by breakthrough advances in genome editing technologies. These technologies, including CRISPR, enable researchers and physicians to modify target DNA sequences in the genomes of living cells, including human cells and human embryos. The goal of this Seminar is to equip participants with an understanding of the genome editing revolution that will inform their lives inside or outside of science. During the early part of the semester, students will learn how these remarkable agents were discovered and how they work. We will also discuss their current limitations, their potential to shape medicine, and some social and ethical implications of their use. Students will analyze recent reports from both the scientific literature and from popular media, and will present their analyses and opinions during the semester. Participants will also visit a state-of-the-art genome editing laboratory during the semester, and will develop and propose "think pieces" on an aspect of genome editing to the class at the end of the semester.

Course Notes: **The Seminar will be held at the Broad Institute in Cambridge. Participants will be provided with a pre-paid Charlie Card for travel by MBTA. There will be a required trip to a state-of-the-art genome editing laboratory.**

Recommended Prep: **High school chemistry and biology knowledge.**

Requirements: **Course open to Freshman Students Only**

Science in the Age of Artificial Intelligence (207514)

Brendan Meade

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Science is focused on discovering and explaining the world around and within us. This has been its goal for hundreds of years and has produced astonishing breakthroughs from population genetics, to general relativity, to plate tectonics. Artificial intelligence is touted as a tool for learning about a complex systems in ways that humans can't and has seen exceptional progress in natural language processing and image identification. In this class we explore the emerging linkages between scientific inquiry and artificial intelligence. The central goal of this class is to question the classical role of the scientist as a creator of theories and consider how scientists may become interpreters of theories developed by AI. We do this by developing an understanding of how AI systems actually work (they're astonishingly simple), explain recent success cases, and then consider how we may (or may) not rebuild science in an AI-first manner. Examples with be drawn from the earth and planetary sciences as well as the life sciences.

Predicting Life and Death—Quantitative Approaches to Human Health and Disease (207515)

Franziska Michor

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

How long does each of us have to live? How does this expectation depend on the extent of exercise, stress, and lifestyle choices such as a love of burgers or long-term smoking? If we are diagnosed with cancer or cardiovascular disease, how many years do we lose, and how does that depend on where we live and how much we earn? Given that millions of people are diagnosed with disease each year, is that data publicly accessible, and is it sufficient to infer the lifespan of an individual patient? Do I want to know how long I have left to live? Can someone else deduce my identity by me being

part of a database for lifespan prediction? Do I care if my identity and lifestyle choices become publicly known if it is for the greater good of learning more about preventing disease? How do doctors decide on treatment plans and what can we learn from visiting a radiation oncology clinic where terminal patients are being treated? And finally, how can we use emerging datasets in innovative ways to learn about human health and disease?

Course Notes: **There will be a required field trip to the Dana Farber Cancer Institute Radiation Oncology Clinic.**

Recommended Prep: **There are no prerequisites for this seminar.**

Requirements: **Course open to Freshman Students Only**

Freshman Seminar 51E

The Story of the Alternating Sign Matrix Conjecture (207517)

Lauren Williams

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar is intended to illustrate how research in mathematics actually progresses, using recent examples from the field of algebraic combinatorics. We will learn about the story of the search for and discovery of a proof of a formula conjectured by Mills-Robbins- Rumsey in the early 1980's: the number of *n x n* alternating sign matrices. Alternating sign matrices are a curious family of mathematical objects, generalizing permutation matrices, which arise from an algorithm for evaluating determinants discovered by Charles Dodgson (better known as Lewis Carroll). They also have an interpretation as two-dimensional arrangements of water molecules, and are known in statistical physics as square ice. Although it was soon widely believed that the Mills-Robbins-Rumsey conjecture was true, the proof was elusive. Researchers working on this problem made connections to invariant theory, partitions, symmetric functions, and the six-vertex model of statistical mechanics. Finally in 1995, all these ingredients were brought together when Zeilberger and subsequently Kuperberg gave two proofs of the conjecture. In this course we will survey the story of the alternating sign matrix conjecture, building up to Kuperberg's proof. If time permits, we will also get a glimpse of very recent activity in the field, for example the Razumov-Stroganov conjecture.

Recommended Prep: **This seminar is recommended for students with a strong background in mathematics, including some familiarity with proofs. It would be helpful to have some exposure to combinatorics (permutations, binomial coefficients) and linear algebra (matrix multiplication and determinants of n by n matrices).**

Understanding the Seemingly Impossible: A Revolution in Biology (207834)

Craig Hunter

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Occasionally a scientific discovery is so unexpected that it is seemingly unexplainable. This seminar will revisit one such event, the discovery of RNA interference and how modern experimental molecular genetics cracked this "problem" and started a billion-dollar industry. Rare unexpected discoveries in biology, for example catalytic RNAs, instantly extend and broaden our understanding of the world, while the impact of other discoveries (split genes, hopping genes) are more gradual. However, some discoveries challenge firmly supported ideas. The initial description of RNA interference (RNAi) was seemingly magical—the introduction of a RNA molecule matching the sequence of any gene, results in the effective silencing (turning off) of the gene. Further, the silencing signal(s) were extremely potent and mobile, moving between cells, tissues, and generations. A series of seminal discoveries during an amazing four-year period revealed the previously unimagined process. We will read and talk about how these discoveries were made and how this unexpected new biology launched new therapeutic companies and is informing developing ideas about heritability, adaptation, and evolution.

Technology vs. Nature: From Toggling Harpoons to Geoengineering (207761)

David Keith

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Are we at the end of nature? What would it mean if we were? Advanced hunting technologies enabled our ancestors to hunt so efficiently that the human expansion out of Africa drove a wave of extinctions around the globe. No more mammoths. No more moas. Over the last millennia, technological innovation has dramatically reduced many environmental impacts on a per capita basis; but, technology simultaneously enabled a population explosion and caused new forms of environmental disruption. Technology is simultaneously a despoiler and savior of the environment. We will explore the shifting frontier between the natural and artificial through critical examination of globally transformative technologies such as climate geoengineering, Haber-Bosh nitrogen fixation, gene-drives and de-extinction. Solar geoengineering is the idea that humanity could deliberately intervene in the Earth's climate to limit the risks of accumulating carbon dioxide. It's the focus of my own research. It serves as the central motivating case though which the class will explore broader questions about environmentalism in the 21st century. We will read selections from great environmental writings such as The End of Nature to Desert Solitaire along with new writing about the Anthropocene. I aim to help students find their own voice through writing short informal blog posts, commenting on posts by peers, and participating in class debate. The human connection to the natural world

cannot be rightly understood in the abstract. So, we will take the class outside, from short explorations on campus, to an organized day-hike.

Course Notes: **There will be a required day-hike scheduled on Saturday, September 28th.**

The Secrets of Stradivarius or What Makes the Violin Sound Beautiful? (212694)

Philippe Cluzel

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This is an exploratory seminar that draws concepts from many different fields ranging from music to evolution, machine learning, physics, biology, wood carving, and neuro-aesthetics. The goal of the seminar is to discuss the different concepts needed to understand the design of a violin and to propose new methods and technology to improve the quality of the sound it produces. Students will spend most of their time developing hands-on experiments whose final goal will be to transform low-cost violins into beautiful-sounding instruments using the ideas developed through the readings.

Recommended Prep: **Students are not expected to know any of the concepts and tools used in class, but in view of the highly interdisciplinary nature of the project, the ideal class would comprise individuals with a strong interest in either architecture, computer science, physics, biology, music, or an affinity with hand tools and tinkering.**

Euclid's Elements: The Classical Legacy That Just Keeps Getting Better (212770)

Paul Bamberg

Mark Schiefsky

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Visit Athens: the Parthenon still stands, but its decorations are gone. Visit Rome: you can tour the Colosseum, but it is not in good enough condition to host a modern sporting event. Visit the Internet, though, and you can find Euclid's Στοιχεία (Elements), the greatest mathematics textbook ever written, in an electronic form that surpasses any ancient manuscript. You can view the Greek text and its English translation side by side and learn the origin of words like "rhombus" (ρόμβος) and "isosceles" (ισοσκελής) that you have probably seen only in your geometry class. Better yet, you can click on the word □ποτεινούσης (hypotenuse) and instantly learn that it is the feminine genitive singular form of the present active participle formed from the verb □ποτείνω ("subtend"). Had you been a member of the Harvard class of 1724, in the era when all Harvard students, according to the University archives, "followed a prescribed course of studies in Latin, Greek and Hebrew" and pursued disciplines that "included Rhetoric and Logic, Ethics and Politics, Arithmetic and Geometry," you would spend a great deal of time learning how to do this sort of parsing. This seminar explores the most famous theorems in the Elements, with special attention to ones that have arguably improved over the ages, since they have turned out to be valid not only in Euclidean geometry but also in non-Euclidean geometries like the spherical geometry of the Earth's surface, the hyperbolic geometry that provides an alternative to Euclid's postulate about the uniqueness of parallel lines, and the Minkowskian geometry that helped to inspire Einstein's theory of relativity.

Course Notes: **Professor Bamberg encourages you to email him with any questions, bamberg@math.harvard.edu.**

While the seminar is a mathematics course, not a language course, we will investigate the grammar and structure of ancient Greek and translate a few key definitions, postulates, and theorems. Students will have the option of pursuing additional topics in mathematics, in the Greek language, or in the geography of the large portion of the ancient world in which Greek was the common language of the educated.

What is a Species, and How Do Species Evolve? (212771)

James Mallet

2020 Spring (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

One hundred and fifty years after Darwin wrote *On the Origin of Species*..., you would think that scientists already have a good definition of species. In fact, a major debate still rages among biologists as to what species are, and how they evolve from other species. This seminar will

cover these issues. Darwin used impeccable logic and convinced his readership by the 1860s that the entire diversity of life could be explained by means of evolution. Yet it's possible that prior creationist notions of species still prevented even most biologists from accepting Darwin's ideas about the nature of species. We needed a solid theory of heredity to understand what species are and how they evolve, and indeed it was this problem for evolution that led scientists to seek for and ultimately achieve the discovery of DNA. How has genetics and genome science changed our view of species? From 45,000 years ago, Neanderthals coexisted in Eurasia with modern humans for about 3,000-5,000 years. The latest genomic data show that some admixture took place. So, were we the same species? Or two different species? Does it matter? This seminar provides you with tools to make up your own mind on this. Course topics range over history, philosophy, and genetics; we explore the uses of species in classifying branches in the tree of life, and in conservation and laws about endangered species.

Course Notes: **There will be a required trip to the Harvard, Museum of Comparative Zoology for the purpose of identifying real species. No background in biology is required. All first-year students are encouraged to apply.**

Generating Biodiversity: Hands-On Research Experience in Speciation Biology (213249)

Robin Hopkins

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What is a species and how do they evolve? How do we, as scientists, study the process of speciation and the generation of biodiversity? This is a research experience seminar in which you, as a student, will study how and why species evolve. For decades scientists have been arguing over the definition of "species". Why does the definition matter? Genetic diversity across genomes has revealed that many species hybridize and exchange genetic material (even humans). How and why does this happen? It has long been assumed that hybridization is bad for an individual or species. But, can hybridization also be good by generating biological diversity? We will discuss these ideas while performing research experiments on plants in the state-of-the-art research labs at the Harvard University Arnold Arboretum. The experiments will involve trying to generate hybrid seeds; quantifying the health of hybrid individuals; and using microscopy to determine the success or failure of hybrid pollen to germinate and grow inside a flower. Students will collect their own data, learn how to analyze it, and present their findings. In the process, we will explore fundamental concepts in evolution and biodiversity.

Course Notes: **The goal of this seminar is to provide an authentic research experience to students fascinated by biological diversity. Most classes will be held at The Arnold Arboretum of Harvard University. Transportation will be provided at no cost to the student.**

Freshman Seminar 60C

Comics and Graphic Novels (203001)

Stephanie Burt

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Comics and graphic novels, or sequential art, are one of the world's great storytelling media: we're going to learn how to read them, how to talk about how they get made and how they work, how to understand—and how to enjoy— some of the kinds of comics and graphic novels (that is, some of the genres) that make up the history of this medium in the modern English-speaking world. That history has three strands, which cross and re-cross, but which need to be understood independently, and we will see all three: short-form strip comics, designed for newspapers beginning in the 1890s and now flourishing on the Web; action-adventure and superhero comics, invented in the late 1930s, transformed in the 1960s and again in the 1980s, usually created by teams, and important to popular culture today; and a third strand beginning with "underground" or "alternative" comics or comix (with an x) in the 1960s and evolving into long form graphic novels, often created by single writer-artists, today. That history comes with visual references, which you will learn to recognize; comics also comes with its own set of theoretical terms, which you'll learn to use. Comics today share a medium (pictures and usually words in sequence) but belong to several genres: we'll learn how to talk about them, and how they've evolved.You'll get the chance to make comics, and to figure out how creators collaborate, advocate, distribute, and sometimes even earn a living from the comics they make, but the course will focus on existing comics, from McCay to Bechdel, from Kirby to Ms. Marvel— as events in culture and as works of art.

Freshman Seminar 60D

Ireland Rising (203002)

Catherine McKenna

2019 Fall (4 Credits) **Schedule:** R 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

One hundred years ago, in 1919, a parliamentary assembly met in Dublin and declared that "We, the elected Representatives of the ancient Irish people in National Parliament assembled, do, in the name of the Irish nation, ratify the establishment of the Irish Republic and pledge ourselves and our people to make this declaration effective by every means at our command." The members of this assembly, Dáil Éireann, had been elected to the Parliament of the United Kingdom of Great Britain and Ireland, but they refused to take their seats in that body, choosing instead to declare the independence of Ireland from Great Britain. On the very same day that Dáil Éireann met for the first time, members of the Irish Republican Army ambushed and killed two members of the Royal Irish Constabulary. These two events mark the beginning of a war of independence that would lead to the establishment of the Irish Free State in 1922 and the Republic of Ireland later on. This seminar focuses on the development of a sense of "Irishness" in the fifty years or so leading up to 1919—in politics, music, literature, the visual arts, athletics, and language. We'll find our way back into the 1919 moment and beyond, to the cultural revival that enabled it, by examining writers and storytellers of the period—including Yeats, Lady Gregory, Douglas Hyde and James Joyce--images and objects in Houghton Library and the Harvard Art Museums, documentary films, hurling matches, music, and more. We'll discuss the pros and cons of violent revolution as the means by which a colonized people "summons her children to her flag and strikes for her freedom," to quote the Proclamation of the Irish Republic of April 24, 1916. We will explore the range of cultural practices that defined Ireland as a people and a nation then, and consider how the integration of Ireland into the European Union and Brexit have reconfigured Ireland's relationship with the United Kingdom.

Faith and Fiction in American History (203005)

David Holland

2019 Fall (4 Credits) **Schedule:** T 0900 AM - 1130 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar uses key literary works to explore some of the most difficult and demanding questions in the religious history of the United States: Does God have a special relationship with the United States? Is sin an individual responsibility or a social flaw? Why has American religion been so frequently concerned with sexuality? How has religion shaped racial identities and tensions? How does it inform domestic relationships? How do non-Christian immigrants find a place and a voice in a nation with deeply entrenched Christian traditions? To explore these and other areas of concern, we bore into the faith-inflected cultures of American history through the imagined narratives of some of its most celebrated writers, including the likes of Catharine Sedgwick, Harriet Wilson, Flannery O'Connor, James Baldwin, Rudolfo Anaya, Pearl Abraham, Ayad Akhtar, and Marilynne Robinson. I will offer mini-lectures to contextualize these works in their historical moment. We will read some scholarly work to sharpen our tools of analysis, but mostly we will read and talk about the novels themselves. The seminar aims to be both analytically rigorous and aesthetically rewarding.

Silk Road Stories (205030)

Mark Elliott

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The words "Silk Road" conjure up images of camel caravans crossing vast deserts and traversing lofty mountains with precious cargoes of textiles and porcelain. From ancient Chinese travelers and intrepid Buddhist pilgrims to plucky Venetians, swashbuckling Swedes, and adventurous Americans, the Silk Road has produced countless storytellers with enchanting accounts of "East meets West." But what do we really know about the Silk Road? What if it turns out that much of what we believe about the Silk Road turns out to be a myth? This seminar invites you to embark on your own Silk Road journey, exploring the invention of the idea of the Silk Road, the material and historical reality behind the fabled Eurasian trade routes, and the ways in which different Silk Road stories serve today as artistic inspiration, political capital, and economic stimulus. In the process, we will come to understand the peculiar biology of *Bombyx mori*, study attitudes toward cultural patrimony, and get hands-on experience in the Harvard museum collections, where the University's own history and that of the Silk Road intersect. The course aims to introduce you to the history of what we know as the Silk Road and to problematize that history in various ways; to expose you to the idea that globalization is a process with no beginning and no end; to challenge you to think about the role of culture in society and politics yesterday and today; and to persuade you that travel is the only way out of the prison of our own consciousness.

Course Notes: **Students are required to participate in a trip during class time to the Harvard Art Museums. There will also be two required evening film screenings.**

Freshman Seminar 62F

Talking, Literary Animals (207516)

James Simpson

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What do imagined animals have to teach human readers? Why, when literary writers think about hunger, violence, sex, suffering, technology, expressivity, the gods, and education (for example), do they so often draw upon animal behavior to understand human practice? The representation of animals in literature tends to range from the cute to the terrifying, with the beautiful in between: animals are cute when they act like us, beautiful when they express desire, but often terrifying when we realize that we act like them. Cute representation of animals tends to characterize children's literature, while the beautiful and the terrifying material is on the whole reserved for the grown-ups (though those boundary lines are by no means uncrossed). Cute animals tend to be small, the beautiful mid-size, and terrifying huge. Either way—cute, beautiful or terrifying—we need animals to think, no doubt because we are ourselves animals, even if we often pretend not to be. Our habitual ways of looking to animals in order to think about ourselves almost always deploy analogy and/or metaphor; the thought experiment sometimes takes the form of having animals actually cross species lines (animals becoming human, or, more commonly, vice versa). This seminar will focus on extraordinarily brilliant animal literature (funny, mordant, touching, sophisticated) in great European literature, from the last 2000 years. The seminar will also teach students how to read literature. On many weeks we will explore the book history of our texts, including texts held in the astonishing riches of Harvard Library System holdings. Throughout the seminar we will also make frequent reference to visual images of animals. The class will be entirely open to news from evolutionary biology that students bring to it, but its focus is not on the non-human natural world in and for itself; the focus is, rather, on the way in which humans represent animals in order to understand human behavior.

Freshman Seminar 62I

Experiencing Poetry: Love, War, Nature and Religion in Four Major Twentieth Century Poets (207763)

Neil Rudenstine

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In our seminar, we will read four major twentieth century poets—from some of their early work to their latest. The hope will be to see how each poet developed during the course of his or her career. How did their

styles and their deepest concerns alter over the course of a lifetime? We will run the seminar as a lively discussion group, and will read the poems in some detail, trying to understand their tones, structures, and cadences—reading them aloud as well as silently. In the work of W.B. Yeats, we will see major changes in his conception of love, as well as his views of Irish nationalism and the Irish revolution. Meanwhile, in T.S. Eliot, we find a narrator whose essential quest is spiritual, beginning with Prufrock and then The Wasteland (to which we will devote two weeks). Elizabeth Bishop introduces a highly original voice that expresses personal emotions obliquely and, in effect, "objectively" through understated descriptions of events and places. Finally, W.H. Auden's trajectory shows an early (1930s) portrayal of human nature and society that is in certain respects similar to Eliot's but that ends very differently, suggesting values and ways of life that are much less foreboding. In the seminar's first week, we will read and analyze a small group of lyrics by a few writers (none of whom will be identified by name or exact time period). This will be an exercise in "close reading" intended to help us judge poetic quality, because some of the lyrics will be excellent—and some quite dismal! The week is meant to be enjoyable, and our discussion should be fun and perhaps hilarious. There will be four essays due—one on each poet—during the course of the term, about 7–8 pages each.

Freshman Seminar 62L

Knowing Cicero (207810)

Jared Hudson

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

More than any other person from Greco-Roman antiquity, the Roman orator, politician, and philosopher Marcus Tullius Cicero (106-43 BCE) appears to be someone we can "get to know." Over eight hundred detailed, often highly personal, letters of his survive (most not intended for publication), as well as around a hundred from his correspondents, not to mention his fifty-odd extant speeches (most promoting a particular persona) and several self-portraits in his philosophical and rhetorical dialogues. Such a relative abundance of documentation, together with a fertile and complex afterlife in subsequent literature and culture, has led to a number of assumptions about Cicero's "character" or "personality"—the man behind so many eloquent words. Yet a quick look at past reactions reveals just how changeable posterity's judgment of Cicero the man has been: "Every one admires the Orator and the Consul; but for my Part, I esteem the Husband and the Father. His private Character, with all the little Weaknesses of Humanity, is as amiable, as the Figure he makes in publick is awful and majestic." (Steele, 1710); "the most unstable and timid of all Roman statesmen" (Mommsen, 1856); "We may say then without discrediting Cicero, that he was not altogether fit for public life" (Boissier, 1897); "a man of mild temper and of constitutional timidity, but of honest heart and sincere purpose" (Strachan-Davidson, 1900); "no other antique personality has inspired such venomous dislike" (Shackleton Bailey 1971). This seminar offers an in-depth investigation of what it might mean to "know Cicero" today, some two thousand years after he lived. After an introduction to ancient approaches to biography, it will use selections from the *Letters* alongside scholarly biographies to explore key phases of Cicero's life in which the most fascinating and vivid glimpses of his personality are on offer. The last sessions will be devoted to contemporary representations of "Cicero the man" in popular fiction and television. By getting to know Cicero we will consider what his compelling life has to teach us about self-presentation, persuasive speech, and the limits of biography.

Recommended Prep: **No prior knowledge of Cicero, Latin, or the ancient Roman world is**

assumed or required in order to take this seminar. The seminar will include a visit to Houghton Library to examine some of the library's rare manuscripts of Cicero's works.

War in Fiction and Film (207812)

Justin Weir

2019 Fall (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

War has always been one of the most important subjects of art and literature, but in the twentieth and twenty-first centuries, public ideas about war and military service have been formed increasingly by film and other visual media. In this seminar we will consider the different ways war has been depicted in literature and in films. We will spend some time identifying the conventions and clichés of the genre, and we will have occasion to discuss depictions of war in news coverage, documentaries, and video games. But we will mainly be reading and viewing several masterpieces—including novels and stories by Leo Tolstoy, Isaac Babel, Ernest Hemingway, Kurt Vonnegut, Cormac McCarthy, Tim O'Brien, and Phil Klay, and films by directors Jean Renoir, Stanley Kubrick, Francis Ford Coppola, Stephen Spielberg, Terrence Malick, and Kathryn Bigelow. In our discussions, we will reflect on how these largely fictional narratives of war have shaped our understanding of culture, politics, and history.

Recommended Prep: **There are no prerequisites for the seminar. The seminar is designed for a general audience. Literary and/or media studies backgrounds are not required, nor is the material presented in a way that requires any special knowledge of military history. All texts originally written or filmed in languages other than English will be provided in translation or with subtitles.**

Thinking about Race and the Law in American History: Liberal and Critical Perspectives (207778)

Kenneth Mack

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0200 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What is race? What is law? What does law have to do with race and racial inequality? We talk about these kinds of questions all the time when we discuss familiar cultural touchstones as the Brown v. Board of Education decision, the legacy of slavery and Jim Crow, and topics such as the Black Lives Matter movement. In this seminar, we will examine the role law has played throughout American history in creating racial categories, maintaining and eliminating racial hierarchy, and policing the borders between race and other classifications such as gender, sexuality and ethnicity. The civil rights movement taught mainstream Americans that law could be a tool to remedy past sins and made the promise of equality real for all citizens. In recent years, however, this conception of law and its role in the world has been criticized from many quarters, and many of those doubts have coalesced into a field now known as Critical Race Theory. In this seminar, we will bring the long-running dialogue between liberal and critical approaches to race and the law up to the present day. Which approach, or combination of approaches – liberal or critical – best describes our present circumstances? Which would seem to describe a more realistic view our our future? Which provides the tools that we might need to grapple most productively with that future? These are some of the questions we will explore in the seminar.

LGBT Life Stories (212729)

Linda Schlossberg

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In this seminar we'll read a range of classic LGBT life stories (memoirs, journals, diaries, essays, and autobiographies), beginning in the 1800s and ending in the present. We will study them as products of their specific historical moment, paying close attention to changing ideas about race, class, gender, and sexuality. Questions: How do people narrate the story of their identity? What aspects of their life histories do they highlight; what do they censor? How does the "coming out story," generally understood to be characterized by truth-telling and revelation, borrow from the conventions of fiction?

Challenging Reality: Literature and Social Justice (212781)

Nicole Suetterlin

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What do vampires, zombies, ghosts, and cyborgs tell us about *ourselves* and our society? In this seminar we explore how literature critiques social injustices by challenging our notions of reality. Of particular interest to us are texts, films, and visual artworks that push beyond the confines of societal norms through their use of uncanny figures. From the man-made monster breaking loose in Mary Shelley's Gothic classic *Frankenstein,* to the ghost of a traumatic past haunting Toni Morrison's *Beloved* – how do these fantastical figures question the way in which we interact with others, and how others interact with us? Who *is* the monster in these scenarios: a part-human cyborg like Frankenstein's "creature," or the humans who exclude him from society because of his otherness? Chasing various "monsters" from the 18th to the 21st century, all the way to the popular TV series *The Walking Dead*, we explore how their stories challenge the social realities of their time and ours. Texts by influential American, British, French, and German authors invite us to understand the perspective of those whom society excludes because they voice dissent and envision a different, just reality. Our readings include the autobiography of Bryan Stevenson, a Harvard Law School graduate and civil rights lawyer who has been fighting a living "ghost" of slavery for the past three decades: racial bias in the U.S. criminal justice system. Topics include: racial justice, economic justice, migration, women's rights, cultural trauma.

Course Notes: **This seminar will include a workshop with Boston Mobilization, a local, student-led, non-profit organization promoting social justice, movie nights for our films, and visits to the Harvard Art Museums and the Houghton Library.**

Requirements: **Course open to Freshman Students Only**

Zombies and Spirits, Ghosts and Ghouls: Interactions between the Living and the Dead (212697)

Shaye Cohen

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Virtually all the cultures and religions of the world, from ancient to contemporary times, have teachings and rituals about death. In this seminar we will deal with a subset of this very large topic, namely, the relationship of the living and the dead. The dead are often depicted as still-living in some way and still in communication with us and our world. Are they friendly or hostile? Beneficent or malevolent? Think "undead" and "zombie" versus "saint" and "angel." In this course we will look at some of the myriad ways

that religions and cultures conceive of the relationship of the living with the dead. We the living care for the dying and the dead, and hope that the dead will care for us, but how this works exactly is the subject of much speculation. American secular culture, at least in its cinematic expression, has a vigorous belief in the afterlife, especially in having denizens of the afterlife, in the form of zombies, ghosts, and poltergeists, intrude on the world of the living. In our seminar we will survey this rich set of themes as expressed in literature, art, music, cinema, and philosophy.

Course Notes: **There will be a required field trip to Mount Auburn Cemetery in Cambridge, date to be decided.**

Requirements: **Course open to Freshman Students Only**

Faulkner, Ellison, Morrison (212700)

Jesse McCarthy

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0530 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The "Great American Novel" is infamously a difficult notion to harpoon and reel in, but any list of great American novelists will undoubtedly contain the names of William Faulkner, Ralph Ellison, and Toni Morrison. Together we will read some of the most celebrated and powerful works of fiction produced during what Henry Luce called "The American Century." We will ponder the significance of these literary giants in relation to U.S. and global history, the role of the novelist as a voice of conscience, and the place and prestige of fiction as a site for grappling with history and morality, as well as the impact of modernism and postmodernism on novelistic form. We will explore the treatment of race, class, gender, and regionalism, and how these writers weave the fissures of our social fabric into texts that attempt to reconstitute and restore marginal perspectives, sustaining narratives that encompass this vast complexity while also discovering within themselves moments of aesthetic bliss. Many of the novels we will read are long and challenging; they are also some of the most essential and lasting testaments to the genius of literary art in the last century.

Course Notes: **This is an intensive reading course and interested students should be willing to commit to a heavy weekly reading load.**

Music from Earth (212701)

Alexander Rehding

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In 1977 NASA shot a mixtape into outer space. The "Golden Record," as it is known, is aboard the Voyager spacecraft, which is now outside the solar system on its way into the unknown. It contains a selection of music from all over the world, environmental sounds, images, and greetings in 55 human languages. The hope was that somehow, sometime, many thousand years from now, extraterrestrials might pick it up and experience a slice of human culture. In 1977 the idea that there might be nonhuman life "out there" was a pipedream, but in the intervening years we have discovered a large number of exoplanets. By now the tables are turned: it is statistically more likely than not that there is intelligent life on other planets. We will follow the big questions the Golden Record raises: What would happen if someone found the Golden Record at the other end? What does "listening" mean in this vast context? (Do aliens have ears?) How do we represent human culture to other unknown civilizations? How do we teach extraterrestrials how to use the Golden Record? It will take over 40,000 years for Voyager to get close to the nearest star—will human culture exist then? Even if you are not planning to major in interplanetary musicology, this seminar sets you off on a trajectory that can help you with both arts and sciences.

Course Notes: **Ability to read music is not required. The seminar includes visits to several of Harvard's unique facilities. An interest in bold and creative ideas is welcome.**

Regulation or Anarchy? The State and its Critics (212706)

Susanna C. Siegel

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What are law and government for? What makes them important, and what do they mean to you? Laws can seem abstract and impractical. If no one else is at the intersection and you can see for miles in every direction, do you really have to stop? Teenagers tend to shoplift more than people of other ages. Do you think that's because they tend not to feel the force of law as strongly as people who don't? In this seminar we'll consider some of the most basic justifications offered for government, as well as the opposing idea that people could be better off without any government at all. As previously deeply entrenched political institutions in the US, Europe and India are increasingly challenged and destabilized, our readings will introduce systematic challenges to the state and fundamental defenses of it. One of our goals is to locate authoritarian forms of government in relation to both sides of this debate. Relative to democracy, authoritarianism scales back the state in some ways and strengthens it in others. Readings draw from philosophy, legal thought, political science and ancient history, and authors include Plato, Hobbes, James C. Scott, and Frederick Schmitt, as well as contemporary business moguls who argue that a small echelon of super-wealthy should control the basic resources needed for human life. Since we're going work

through these ideas and texts together, we'll need all the help from each other that we can get: all the viewpoints, intuitions, experiences, and background assumptions. So bring your minds, your curiosity, and your imagination, and let's learn and read and discuss these basic questions about society together.

Back to the Future: How the Past Imagined the Cities of Tomorrow (213247)

Bruno Carvalho

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Humans spend a lot of time thinking about the future. In this seminar we will discuss how urban futures were imagined in the past. And how things often turn out in very unexpected ways. European colonizers projected fantasies about the future onto the Americas, and in the past two centuries we have witnessed a boom in utopian and dystopian works about cities. We can think of much of modernity in terms of competing visions of what the future ought to be like. Besides flying vehicles, in the 1920s, for example, some vied for car-centric, highly segregated cities, others for mixed-race, multicultural communities. In modernity, we tend to assume that the future will be radically different from the past. But not all cultures have thought that way, and we will also consider alternative conceptions of time. As a set of expectations, the future helps to shape the present—even if it never quite arrives. Today, with climate change and labor precarity setting in, it often seems as if a dreadful future is inevitable. Is our contemporary condition marked by innovation or exhaustion? From a catastrophist point of view, it is as if the future, not the past, is already fixed. In this seminar, we will investigate the urban visions of authors, designers and filmmakers, asking: how did unrealized projects impact the built environment? How can fiction and the arts stretch the limits of the thinkable? How might futures imagined in the past help us to address current urban and environmental challenges?

Freshman Seminar 62Z

Buddhist Enlightenment: Visions, Words, and Practice (212769)

Ryuichi Abe

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

How do you get enlightened? Is the Buddha a god or human? How many Buddhas are there in the world? How many celebrated enlightened women do we find in Buddhism? How do you know if someone is enlightened? And why does Enlightenment matter? These are basic questions that even most recondite books of Buddhism often fail to answer. This seminar looks at famous visual images of Buddhist enlightenment—not only iconographies of Buddhist divinities, but also architecture, gardens, ritual instruments, and maps of the world—and using them as our gateways, studies narratives, parables, metaphors, and theories that explain what enlightenment is, how to attain enlightenment, and how to retain it in one's everyday life. The seminar encourages students to apply their understanding of Buddhist enlightenment as a way to better appreciate their own religious traditions and/or spiritual identities for the sake of enriching their inner selves as well as their social interactions.

Course Notes: **There will be two required visits to the Harvard Art Museums related to the final student project.**

Freshman Seminar 63C

The Symphonies of Dmitri Shostakovich (212779)

Anne Shreffler

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The symphonies of Dmitri Shostakovich (1906-75) are just as relevant and controversial today as they were during the composer's lifetime. Shostakovich's fifteen symphonies span his entire creative life; starting with his First Symphony, which made the 19-year old composer famous overnight, and ending with his Fifteenth, completed four years before his death. As a public genre, the symphony was the perfect vehicle for Shostakovich to react to his tumultuous times and explore the human psyche. The ups and downs of Soviet politics and culture indelibly shaped Shostakovich's career: the innovative fervor after the Russian Revolution, Stalinism ("Socialist Realism" and the Terror), the Second World War, the post-Stalin "Thaw" after 1956, all the way to the height of the Cold War. Shostakovich was at times encouraged and supported by the Soviet regime, and at other times, reprimanded and punished severely. But Soviet audiences always treasured his work because they heard in it deeply felt emotions that could not be publicly acknowledged. Today's audiences react just as strongly, for different reasons. In the seminar, we will listen closely to all fifteen of Shostakovich's symphonies, learning about their musical features and the political contexts in which they were born and received. We will focus on three main themes: 1) composing in a totalitarian state, 2) how music can be said to "narrate," and 3) the orchestra as sound world. We will work from scores and selected recordings, and will attend a live performance of the Boston Symphony Orchestra.

Course Notes: **There will be a two required concert trips. One will be to hear the Boston Symphony Orchestra performing Shostakovich's 2nd Symphony on Nov. 21, 2019 as part of an ongoing project by the BSO and conductor, Andris Nelsons, to record the complete Shostakovich symphonies. There will be no cost to the student.**

Ancient Greek Tragedy for the 21st Century (212782)

Naomi Weiss

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 13

In Athens in the fifth century BCE, thousands would gather at the theater to see the latest plays of Aeschylus, Sophocles, Euripides, and their contemporaries. Their tragedies grappled with pressing questions of the day: What are the consequences of war? Why should we believe in god(s)? Should we obey the law or put our family first? What happens if a woman has power? How different are we from foreigners? 2500 years later, the handful of tragedies that survive continue to be performed and adapted across different media—in plays, novels, TV dramas, films, art installations, and advertisements. As when these plays were originally performed, they are frequently used to address urgent sociopolitical issues, from fascism to racism to women's rights to immigration. In this course we will read and watch a selection of Greek tragedies alongside some of their most recent reincarnations, many of them created by women, people of color, and non-Western artists. We will think about how these ancient plays, largely produced by and for Athenian citizen men, resonate so powerfully with a remarkably diverse range of 21st-century audiences. Topics for discussion will range from child sacrifice in *Game of Thrones* to the *Oresteia* reimagined in post-apartheid South Africa. For their final assignment students will produce their own tragic adaptations.

Course Notes: **No prior knowledge of ancient Greek language or culture is required.**

Religion, Neuroscience, and the Human Mind (212784)

David Lamberth

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

More than 150 years after Darwin's epochal account of evolution, over 85% of the world's 7 billion people are still religious, and the percentage is growing. What does religion do for human beings? What does an

evolutionary and biologically informed understanding of the mind and brain lead us to think about where religion fits in human life? Harvard's first psychologist, William James, engaged these questions in the late nineteenth century, bringing the cutting edge of empirical psychology to the philosophy of religion. Today these same questions animate the field of neuroscience, where researchers are showing how affectivity, emotions, and our evolutionary past come together to form the "self" philosophers have long thought to be primarily "rational." This seminar brings together the thought of James, writing at the turn of the twentieth century, with the work of contemporary neuroscientist Antonio Damasio to ask what kinds of beings we are, how our minds function, and what religion contributes to human individual and societal experience? The seminar takes up the philosophy of belief, affect, and emotion, and touches on the biology of the brain and homeostasis. We conclude by assessing contemporary views of religion from evolutionary psychology (Boyer, Atran) and cultural anthropology (Geertz, Luhrmann, Asad) in light of James's and Damasio's models of the human mind.

Gnosticism and Film (212786)

Charles Stang

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Are you anxious about political surveillance and domination, the dangers of technological innovation (especially artificial intelligence), the possibility of alien life and its intentions, and the threat of environmental devastation, and other apocalyptic futures? You're not alone: contemporary filmmakers are constantly exploring these themes. What may surprise you, however, is that these filmmakers are increasingly turning to an ancient spirituality, sometimes called "Gnosticism," as a resource for thinking through these anxieties. "Gnosticism" is a spirituality that existed at the margins of several religions of antiquity, including Christianity. While there is no single set of Gnostic beliefs, it is characterized by a distinctive mythology in which the world we inhabit is believed to have been created by a malevolent or ignorant god, and governed by its deputies. Gnosticism emerges, then, as a critique of the created order and the powers that be, and imagines forms of resistance and liberation, including how to seek out the true god, who is higher than the creator and its deputies. This distinctive spirituality and mythology come down to us through ancient texts, some of which have only recently been discovered, and their modern interpreters. This seminar examines Gnosticism's sudden resurgence in the world of film (and increasingly, in television), especially in science fiction and fantasy. From *Bladerunner* to *Westworld*, from *The Matrix* to the *Alien* franchise, we see more and more films picking up this ancient mythology and playing with it. The aim of this seminar is to equip students with the texts and tools to see this ancient spirituality at work in our contemporary culture.

Ethics for a Broken World (213248)

Ned Hall

2019 Fall (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 13

This seminar borrows its title from philosopher Tim Mulgan's book of the same name. Mulgan imagines how basic questions about ethics and political justice might look to our descendants in one all-too-possible world: a "broken" world in which critical natural systems can no longer be depended on for basic goods, where disaster strikes unpredictably and peace cannot be guaranteed. The book takes the form of a series of philosophy lectures, drawn from a course taught some time in the future, looking back on our own time as an "age of affluence" whose basic moral and political outlooks were shaped by expectations of material security that can no longer be maintained. This is a stark, emotionally daunting, and powerful framing device. By working through the book in detail, we will aim to come to an uncompromisingly clear-eyed view of the central ethical and political issues that are rapidly confronting us as the ecological crisis unfolds. It is too late to avert the crisis: Like it or not, profound changes in lifestyle will be forced on all of us, if we do not wish to leave the world so broken as to be uninhabitable. How can these changes be managed in as just a fashion as possible? How can we build the resilience into our social and political institutions needed to weather the coming storms as humanely as possible? What basic stances towards ethics and politics will we have to rethink? These are some of the questions we will attempt to answer.

The First Americans: Portraits of Indigenous Power and Diplomacy (213250)

Shawon Kinew

2019 Fall (4 Credits) **Schedule:** F 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Harvard's Peabody Museum of Archaeology and Ethnology is home to 25 oil portraits of indigenous American leaders painted in the first half of the 19th century. Originally commissioned to preserve cultures an American bureaucrat feared would be extinct, these paintings transcend a moribund history. In fact, the Native American nations represented are still here. Moreover, these portraits have much to teach us about diplomacy, power, representation and indigeneity in 2019. The Peabody portraits, painted by the American

artist Henry Inman, represent some of the most fascinating political leaders of the American nineteenth century—chiefs, spiritual leaders and diplomats, who all traveled to Washington, D.C. to negotiate with the U.S. government on behalf of their tribal nations. Through the close examination of these artworks in person at the Peabody, this seminar will focus on the stories, histories and teachings communicated by these portraits and their sitters.

Islam vs. Image?: Visual Representations in Islamic Art (213252)

David Roxburgh

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Is Islam against images? For reasons that are perplexing and hard to pinpoint, this notion appears to have been promoted by ideas about Islamic doctrine and an endemic hostility toward images which has only been magnified after recent years of religious extremism and terrorism. These include the Taliban's destruction of the Bamiyan Buddhas in Afghanistan in 2001, and the Charlie Hebdo mass shooting in Paris 2015 over the cartoons representing the Prophet Muhammad. And yet there is ample evidence of making and using images across the time and space of Islam. The stereotype of Islam's antipathy toward paintings and drawings, etc., has fostered the understanding that calligraphy and geometry flourished because of figuration's illicitness. These ideas and assertions are misleading and incomplete. The Seminar is an opportunity for personal reflection and to study the issues at stake in questions about the values, forms, and functions of images and examines a broad variety of images produced throughout the Islamic lands from 600–1900. Each week focuses on a selected case study that together span diverse subject matters, mediums, functions, and contexts, and invite thought about a spectrum of modes of representation. We will learn that the condition of images in Islam is as diverse and complex as the religion itself which cannot be reduced to a unified or monolithic expression, to a singular system of belief.

Course Notes: **Each weekly meeting is held in the Art Study Center of the Harvard Art Museums with selected works of art.**

Entrepreneurship and Venture Capital in the Global Economy (203010)

Paul Gompers

2020 Spring (4 Credits) **Schedule:** M 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Entrepreneurial activity has been a potent source of innovation and job generation in the global economy. In the U.S., the majority of new jobs are generated by new entrepreneurial firms. Entrepreneurship has had many definitions over the past two and one half centuries since Richard Cantillon first used the term in the early 18th century. Some have focused on the risk-bearing nature of entrepreneurship, while others have focused on the innovations that entrepreneurs create. Both are important elements of what entrepreneurs do, but neither is a complete definition of entrepreneurship. This seminar will examine the role that entrepreneurship and venture capital plays in economic development and innovation. Academics and policy makers have long highlighted the critical role that these sectors play in promoting a dynamic economy and opportunities for sustained competitive advantage. In particular, venture capitalists have been the source of financing for most of the major technology leaders including Microsoft, Apple, Google, Amgen, and Facebook. Numerous countries have sought to grow their domestic venture capital industry. This seminar will explore the phenomenon through the lenses of economics, history, and psychology. Entrepreneurial and venture capital markets in the US, Israel, and China will be examined in depth through academic articles, books, and Harvard Business School case studies. In addition to traditional class sessions, the seminar will incorporate field trips to the Harvard Innovation Lab and startup companies.

Course Notes: **The seminar will meet for only 2 hours within the time block. In addition to traditional class sessions, the seminar will incorporate field trips to the Harvard Innovation Lab and startup companies.**

Morality, Leadership, and Gray-Area Decisions (203014)

Joseph Badaracco

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Everyone with serious responsibilities, at work and throughout their lives, faces gray area decisions. In organizations, these highly uncertain, high-stakes decisions are delegated upward, to men and women in leadership positions. They have to make final decisions on these problems, despite the gray, and these decisions test their competence and their humanity. This seminar offers a variety of important perspectives on gray-area problems and on ways to resolve them, responsibly and effectively. The seminar begins by examining gray area problems in various professions and lines of work. Subsequent sessions focus on three different ways of resolving gray area problems – in terms of accountability, character, and action. A typical session of the seminar will draw upon classic works of fiction, basic ideas in moral philosophy, and contemporary situations. These situations are typically described in short case studies involving men and women early in their careers, and they give students in the seminar the opportunity to grapple with these problems in personal terms – by discussing what they would do in these situations. From time to time, students will write short papers, which will be discussed in the seminar.

The World of Tomorrow: Inhabiting the 21st Century (203389)

Arthur Segel

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

***"Today, we are shapers of the world of tomorrow. There is no way we can duck the responsibility, and there is no reason why we should."* - —Walt Disney**

Considering the world of tomorrow lends itself to a wide array of considerations. It determines where and how we live, work, play, and dream. Crafting the future embodies concrete stances on a wide variety of social, political, and economic concerns within a society. The quality and availability of affordable housing, for instance, is not merely an economic concern, but also a value judgement about the obligations of a society to its citizens. By examining these issues on a variety of realms, ranging from factory farming to global poverty, students explore the fingerprint of societal values and how they can be a vehicle for both positive and negative change. The seminar weaves together the practical aspects and social factors that will contribute to building the future. Each week, students will take on the role of decision-makers and engage with a wide variety of ethical, aesthetic, political, environmental, and social considerations. We will discuss how issues such as climate change, rapid urbanization, artificial intelligence, resource scarcity, economic inequality, and geopolitical conflicts, affect us as both inhabitants and constructors of tomorrow's world. Week by week, students will partake in conversation and debate with prominent professors, business leaders, and policymakers from around the globe.

Course Notes: **As part of this dual process of investigation and application, students will have the opportunity to meet with world-renowned academics and executives while also taking excursions into Cambridge and Boston.**

Keeping It Simple: Consumer Financial Protection in a Complex World (205027)

John Campbell

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

People face a daunting array of problems in managing their financial lives. Taking out student loans, managing bank accounts and credit cards, financing a home purchase with a mortgage, and saving for retirement are all major challenges. There is evidence that many people lack the skills they need to meet these challenges. This seminar has three goals. The first objective is to give participants a basic grounding in financial literacy: principles of finance that we can use in our own lives. The second objective is to introduce research on the ways in which households use the financial system, emphasizing common financial mistakes and financial products that seem prone to misuse. We will learn to read papers from the academic economics literature, focusing on the papers' central ideas and empirical findings. The third objective is to explore ways in which the financial system can be improved to make it easier and safer to use. We will discuss the role of financial advisers, technological solutions ("fintech"), and public policy interventions including required disclosures, default choices ("nudges"), and regulations restricting access to financial products. We will monitor developments at the Consumer Financial Protection Bureau and other government agencies involved in consumer financial regulation.

Law at Work: Employment Rights in the Age of Uber (205071)

Benjamin Sachs

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Work is what most of us do with most of our time. Even before we start a career, we invest our energy in preparing for work and in imagining what work life will be. In this seminar, we explore the multiple ways that *law* defines what work is like in the contemporary United States. We start with the question of how much power an employer should have over employee: should it really be legal to fire someone for wearing the wrong tie or having the wrong spouse? We then debate the issue of appearance codes, asking whether an employer should be able to require women to wear makeup or to ban employees from having dreadlocks. We will explore the ways in which sexual orientation, gender identity, and immigration status impact employees' rights at work. And we will ask whether it ever should be legal for an employer to hire employees of only one gender: should Hooters Restaurant, for example, be permitted to hire only women as waiters or should those jobs be equally available to men? The seminar also will examine the way law polices the line between work and "life" by looking at the emerging right-to-disconnect. And the seminar will address the fundamental question of *who* exactly is an employee: do Uber drivers or college football players count? The seminar concludes with a discussion of the ways technological changes are transforming work and, with it, the law that governs this central feature of our lives.

Freshman Seminar 70Z

Regulating Online Conduct: Speech, Privacy, and the Use and Sharing of Content (205179)

Christopher Bavitz

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In the course of a few short decades, the Internet has become integral to significant swaths of human experience. It has radically altered modes of interpersonal engagement, democratized access to tools of mass communication, and changed the role of gatekeepers that traditionally controlled access to music, video, and other media. Given the breadth of its impact, it is not surprising that the Internet has pushed the bounds of legal doctrines that govern speech, privacy, and the creation and exploitation of content. Mass-scale online distribution of copyrighted works tests the limits of legal doctrines developed in an era of physical copies. Age-old tensions between privacy and the right to free expression have been exacerbated in cases where one's right to speak bumps up against the desire of another to keep information private. And, the ability to share—and, thus, to consume—extraordinary amounts of personal data has impacted government (which collects and uses data for purposes of law enforcement) and private companies (which collect and use data for purposes of advertising and monetization). This seminar will provide an overview of legal doctrines that govern the online conduct of individuals and institutional actors. It will address the rights and responsibilities of the intermediaries that mediate many of our online activities – social networks, cloud-based storage services, email providers, and the like. Students will consider old and new legal frameworks and the ways in which the law informs strategic decisions for those that operate online. The seminar will address some of the most important and complex policy debates of our day—regarding the proper scope of intellectual property protection; the balance between a robust environment for online free expression and a desire to protect against harmful speech; and the ways in which the law addresses privacy vis-à-vis both government and private actors. Readings and in-class conversations will cover legal cases and case studies, offering students a high-level view of the technical, legal, and business landscape and allowing them to delve deeply into particularly difficult sets of problems concerning the regulation of online conduct.

The Supreme Court and Social Change: Lessons from Landmark Cases and Key Reform Movements (205180)

Tomiko Brown-Nagin

2020 Spring (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Justice Oliver Wendell Holmes famously wrote: "The life of the law has not been logic; it has been experience." This seminar considers the idea of experience—including events external to legal doctrine—affecting the law. It discusses how social movements—groups of citizens mobilized in support of a cause—

deploy the Constitution and other types of rights talk to "frame" disputes and move forward their agendas. Seminar participants will discuss how movements crystallize grievances, mobilize supporters, demobilize antagonists and attract bystander support by referencing constitutional rights and other ideas about law. It also considers the effectiveness of movements' legal strategies. The seminar considers these questions in relation to the abolitionist, woman suffrage, civil rights, women's rights, anti-poverty, same-sex marriage and Tea Party movements, among other recent reform efforts.

Freshman Seminar 71F

The Origins of the Human Mind (205222)

Susan Carey

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The adult human mind is a unique phenomenon on earth. Only people can ponder the causes of and cures for global warming or pancreatic cancer, and can think thoughts about molecules, genes, democracy… Animals, and human infants, do not have most of the 500,000 concepts expressed by words in English. How does the human mind work, and how can we understand how it came to be, with its vast repertoire of concepts from which we routinely compose thoughts? In this seminar, we will explore together the origins and development of human knowledge in the individual child, in relation to two larger time scales: biological evolution and historical/cultural development. We will begin with several case studies, including case studies of the origin of the concepts *natural number* and *living being*. Each case study illustrates how all of the disciplines within the cognitive sciences, as well as anthropological, archeological and historical disciplines, shed light on these issues. The main focus will be on experimental work from psychology. We will then turn to case studies chosen by the participants in the seminar. By the end, seminar students will have a grasp of the theoretical debates about the nature of the human mind that have animated philosophy since the time of the Greek philosophers, as well as why considerations of the origins of the mind were always seen as central to these debates. Students taking this seminar should have an interest in learning about the cognitive sciences, which draw primarily from linguistics, analytic philosophy, computer science, and experimental psychology.

Americans at Work in the Age of Robots and Artificial Intelligence (207507)

Benjamin Friedman

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Where will the coming generation of Americans (say, today's 18-year-olds) find jobs? And will the jobs be worth having? People have worried about losing their jobs to technology at least since the Luddites 200 years ago. In the aggregate, they have been wrong. The automobile put lots of stable boys and saddle makers out of work, but it created vastly more jobs making cars, and fueling them and repairing them, and it opened the way for whole new industries like roadside motels and restaurants. With robots increasingly performing the tasks once done by blue-collar labor, however, and computers and artificial intelligence now eliminating the need for many workers once thought to be immune because of their cognitive skills, today's technological threat seems different. It is no longer just the unskilled and undereducated whose jobs are at risk. Moreover, the challenge may be especially acute in America, where wages are far higher than in many other countries and an ever greater share of what we consume and invest not only can be provided from overseas but often is. Does the next generation of Americans, then, face a genuine threat from advancing workplace technology? If so, what are the dangers – not just economic, but social, political, even moral – to the country as a whole? Most important, what can we do about it?

The Causes and Consequences of Inequality (207818)

David Deming

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Why has earnings inequality in the U.S. and other developed countries increased so much since the 1970s? What are the consequences of rising inequality, and what can we do about it? This seminar provides an overview of what social science has to say about the causes and consequences of inequality, and engages students in a critical and balanced discussion of the positive and normative issues concerning rising inequality. Example topics include: 1) the key role of education and skills in rising inequality among the "99 percent"; 2) rising wealth inequality and taxation; 3) segregation, racial discrimination and the criminal justice system; 4) globalization and international trade; 5) elite capture of the political system, mass media and "big money" in politics. The goal of the seminar is to introduce analytical and moral frameworks for thinking about inequality, and to relate those frameworks to specific political and policy tradeoffs in the U.S. and around the world.

The Heart of Medicine: Patients and Physicians and the Experience of Serious Illness (207777)

Susan Block

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Sickness and death are universal human experiences. Yet we are often uncomfortable talking and thinking about them in relation to ourselves, and to those whom we love. The core thesis of this seminar is that exploring these human vulnerabilities is a way of learning to live a more meaningful life, strengthening relationships, and helping us be better caretakers of people we love, and of people whom we serve in a professional role. In this seminar, we propose to examine, from multiple perspectives, the social, cultural, psychological, economic, and spiritual factors that influence the experience of serious illness. The seminar will draw on core readings from the humanities, social sciences, and medicine to deepen understandings of how people experience and live and die with a serious illness. Opportunities for discussion, reflection, live interviews, case analysis, and experiential exercises will take place in class; additional field learning opportunities (e.g., home visits, participation in hospital-based teaching rounds) may also be available outside of class.

Freshman Seminar 71P

Making Places and Spaces in Modern America (212696)

Lizabeth Cohen

2019 Fall (4 Credits) **Schedule:** T 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

How did a home in 1945 compare to one in 2000? Did the opening of shopping malls in the 1950s change people's consumer habits? What made living in suburbs similar to and dissimilar from cities? How did various work and leisure settings alter people's attitudes toward labor and play? In what ways was traveling by airplane from airports different from transit by train? The built and natural environments offer important clues to how American culture, politics, and social life have transformed since World War II. In this seminar we will examine closely the shifting character of the ordinary and extraordinary places and spaces of postwar America. We will explore typical environments like the church, school, factory, movie theater, bar, and office as well as more unusual sites like a prison or Disneyland. In every place they occupied,

Americans have left an important record of their values, tastes, and priorities. In the diversity of their choices we can see both what unites Americans in a

common culture and what keeps them apart, segregated in different physical—as well as social and political—worlds, often defined by race, class, and gender. In addition to our group investigations through readings, media, and discussion, students will undertake their own exploration of a place or space that has changed significantly over time. And together we will visit some several revealing locations in the Greater Boston area to analyze what the physical world can teach us about the United States since 1945.

Course Notes: **There will be a mandatory field trip late in the term, date to be decided.**

Dilemmas in the World's Economy (212698)

Elhanan Helpman

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Standards of living vary greatly across countries, they rise fast in some and slowly in other. Economic growth has historically been related to the expansion of international commerce as well as industrialization and institutional reforms. How does a country's well-being and growth depend on its trade partners? Is globalization in the form of international integration desirable? Do all income classes benefit from globalization? What role do trade policies play in shaping the benefits and costs of globalization? We will discuss the historical evidence on economic growth, the expansion of commerce, and the evolution of trade policies. We will also discuss the nature of these processes and the interdependence between them. Using this knowledge, we shall discuss the pros and cons of globalization and the tradeoffs faced by policy makers. These tradeoffs will be illustrated with contemporary policy debates concerning tariffs and free trade agreements. Finally, we will discuss the impact of globalization on inequality within countries and in the world economy.

Crime and Punishment (212702)

Robert Sampson

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

What (if anything) motivates some individuals to commit acts of crime and not others? Why is violence highly concentrated in a small number of families and communities? Why did crime plummet in the United States in the last few decades while incarceration rose? Such questions have no easy answers. Indeed, crime has long puzzled social thinkers across many disciplines. This freshman seminar takes on the puzzle of crime by exploring fundamental debates on its definition, nature, explanation, and control. The emphasis will be the discussion of original readings, both classical and contemporary, and the critical appraisal of major theoretical explanations. We will begin with controversies over the very definition of crime, after which we will explore key facts about crime, assumptions that different theories make about human nature, and competing explanations about the causes and control of crime. Finally, armed with this knowledge, the class will debate and write about two case studies—the crime drop and mass incarceration in America.

"Dark Satanic Mills": The Factory and the Making of Modern Manufacturing (212703)

Victor Seow

2019 Fall (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In all likelihood, at least a dozen—probably many times more—of the items on and around you right now are factory-made. So inextricably linked are our modern lives to the assembly line. This, however, has not always been the case. Only in the late eighteenth and early nineteenth centuries did factories become the primary sites of production in industrializing countries, churning out, through the toil of laborers and the working of machines, an ever-widening assortment of goods. To its proponents, the factory was a marvel of material achievement, placing within the reach of those with sufficient means a cornucopia of commodities. To its detractors, it was a manifestation of the exploitation of man and nature—the title of our seminar, "Dark Satanic Mills," is one famous characterization of the factory by the English poet William Blake. A large part of the attraction to and repulsion of the factory has been, after all, its involvement not only in the making of wares within its walls but also in the fashioning of worlds beyond. How did the factory as an institution emerge and evolve over time? How has the development of the factory intersected with broader transformations in technology, society, and the environment? In this seminar, we will grapple with these still-present questions by exploring the history of the modern factory from its origins in industrial revolution England to its current instantiation in contemporary China.

The Psychological Roots of Oppression (212704)

James Sidanius

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Why are people so willing to humiliate, oppress and even massacre people from other social groups? What are the obstacles impeding the construction of truly multi-ethnic societies in which people from all ethnic groups function as equal partners in the pursuit of the national project? What are the factors responsible for the horrors of the holocaust and similar acts of genocide in places such as Rwanda, Cambodia and Myanmar. In this seminar we will explore those aspects of human nature which lie at the root of the seemingly intractable problem of social exclusion and oppression. We will explore the cognitive, affective and motivational components of intergroup brutality by taking an excursion through both classical and contemporary approaches used by social scientists to come to grips with the psychology of social exclusion. This seminar will provide students with an overview of the major theoretical and methodological perspectives informing our understanding of the psychology of prejudice and oppression in modern society. These various theoretical perspectives will span disciplines such as social, political and evolutionary psychology, sociology, political science, and anthropology.

The Amazon: Ecology, Nature and Society in the World's Largest Rain Forest (212707)

Gary Urton

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 13

The Amazon rain forest of South America is the most diverse place on earth in terms of its rich and varied plant and animal life. Nonetheless, the Amazon is threatened today by climate change, illegal logging and mining, and a host of other forces that are diminishing the health and diversity of the forest and its people. This seminar will consider the Amazonian region from the past to the present, as well as its prospects for the future. We will explore such topics as how indigenous Amazonians have adapted to and made use of the resources of the rain forest from pre-European contact times, through colonial rule, and down to the present-day in Brazil and the other nations containing portions of the Amazon watershed. We will explore how Amazonian peoples have formed societies, made a living, understood the relationship between humans and animals, engaged in ritual and ceremonial practices for maintaining the forest and managing

relations with neighboring peoples, and how the encroachment of outsiders is threatening the sustainability of the forest for its present-day peoples and the global environment as a whole. In addition to reading works about the Amazon River and its peoples, we will study the extraordinary collection of Amazonian archaeological and ethnological objects in Harvard's Peabody Museum. Students will work with and research objects in the collections and write a series of short papers relating objects in the museum to the concepts, practices and beliefs encountered in the readings, seminar discussions, and films.

The Political Significance of Espionage and Subversion (212776)

Stephen Rosen

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The possible importance of clandestine foreign agents, or spies, has recently become an issue in American politics. However, the use of spies was many centuries ago taken extremely seriously by political theorists in the pre-modern Chinese, South Asian, and Roman worlds, by Sun Tzu, Kautilya, and Livy, respectively. Sun Tzu emphasized the use of spies to see into the mind of the enemy in order to defeat his plans. Kautilya and Livy focused more on the role that secret agents could play in uncovering and exploiting the internal divisions in the society and elite of the enemy. What is surprising is the relative absence of similar systematic consideration of spies by modern political scientists after Machiavelli. Is that because spies still exist but are not as important? If that is true, why is it true? If spies are still important, how can we understand and assess their importance? This seminar will begin by reading the theorists of espionage, but then turn to the empirical study of the use of spies to collect secret information, or intelligence, and to carry out subversion, the clandestine disruption of the normal functioning of a government. Questions to be addressed include whether democracies are more or less vulnerable to espionage than tyrannies? What are the effects of counter-intelligence? The theoretical and empirical analysis will at the end of the course be used to help us understand current questions.

Fat Talk and Thin Ideals: Culture, Social Norms, and Weight (212783)

Anne Becker

2020 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In 1995, the Fiji Islands were one of the last places on the planet to receive broadcast television. Within just three years, body weight ideals had transformed from large to thin and purging had become as common in Fijian high school girls as in their Massachusetts counterparts. How can we understand what happened in Fiji? And, likewise, how did heaviness in the U.S. migrate from signifying prestige to stigmatizing? In this seminar, we will examine the bio-social dimensions of disordered eating and being overweight as well as the volatility of weight ideals and their enduring moral salience. We will draw from anthropological and clinical perspectives to explore the rapidly shifting landscape of body shape ideals in the U.S. over the last century, the arrival of eating disorders in the Global South, the medicalization of obesity, and the emergence of pervasive weight stigma—as manifest in 'fat shaming' and even in policy interventions that have had unintended consequences. We will ask what the social structural determinants of obesity are, as well as how social adversities relating to the built environment, toxic food environment, climate change, and food deserts are embodied. We will examine variation in how the body is cultivated for self-presentation across diverse cultural contexts alongside evidence that the media have accelerated the globalization of thin ideals. We will conclude by considering both emerging threats inherent to pervasive social media platforms and digital photo-shopping as well as potential opportunities to reset social norms through social movements and policy.

Habits, Rituals, and Living the Good Life (212785)

Michael Norton

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Everyone wants better habits—for themselves, their housemates, their partners, their children, their employees, their customers—but how are habits first inculcated, and then perpetuated? And can carrying out these habits feel like anything other than drudgery? This class will explore the interplay between habits and rituals—those odd, seemingly meaningless behaviors that research shows influence our psychology in profound ways, making the mundane meaningful: dull morning routines can instead get us "ready for our day" and rote work meetings can instead improve team cohesion and performance. We will explore rituals in domains ranging from performance anxiety to team effectiveness, from enhancing consumption to improving health—in our daily lives, our work lives, and even our lives when trying to cope with family during the holidays.

Freshman Seminar 71Z

From Rocket Science to Fixing Scandals: Judgment and Uncertainty in Finance (213246)

Stephen Blyth

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 13

Why do so many of your peers pursue a career in finance - other than for the money? What are the intellectual rewards of the profession which attract some of the sharpest minds of your generation? In this seminar, we explore key concepts underlying the financial system, including market-making, replication and arbitrage, and demonstrate how these ideas enable us to make powerful statements about uncertainty in finance. The logical arguments which follow catalyze the construction of the rigorous discipline of financial engineering – powered by quantitative analysts or "rocket scientists". We illustrate these concepts with a series of case studies, in particular discussing how rational arguments broke down during the 2007-2008 financial crisis, when many tenets of quantitative finance were violated. We also examine the merits of the subsequent regulatory interventions. We discuss several "classic trades of all time" which illustrate the power of financial reasoning and subtlety of judgment required to navigate the financial system. Further, we investigate abusive financial practices such as collusion, front-running and market manipulation, notably in the foreign exchange and "libor" fixing scandals, and discuss the boundary between healthy functioning markets and malpractice.

Course Notes: **Students should be prepared to develop rigorous, logical reasoning and be comfortable with elementary quantitative arguments. However, no specific mathematical skills are required, and the seminar is particularly designed for students who do not expect necessarily to take quantitative economics or finance classes but are interested in—or mad about—what happens on Wall Street.**

Stories from the End of the World (212765)

Giovanni Bazzana

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Fantasizing about the end of the world is something that many people in the US do on a daily basis either by watching their favorite shows on TV, by playing videogames, or by listening to political speeches. This course will start from this observation to ask why imagining the end is so pervasive in our culture and to analyze critically where these images are coming from and how they are used in contemporary conversations. Imaginations of the end have their historical roots in a literary genre that is often called "apocalyptic" and has been alive and productive since antiquity. The course will look at this historical trajectory, but most of the work will be focused on contemporary cultural products, such as movies, short stories, songs, comic books, websites, and so on. Students will be asked to observe how thinking about a catastrophic future is actually a means to reflect about the present, by identifying whether humans are doing something wrong and whether they have any chance to correct their mistakes. In this perspective, God, aliens, or meteorites are metaphors representing our powerlessness, while sins, zombies, or climate change are wake up calls for humankind. "Prophets of doom" can be channels of liberating and progressive energy, but can also become instruments to set up for destruction people who look and act differently.

Understanding Darwinism (125195)

Janet Browne

Andrew Berry

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

How does scientific knowledge develop, how is it shaped by history, and what effect does it have on society? An interdisciplinary exploration of Darwin's ideas and their impact on science and society, this course links the history of Darwin's ideas with the key features of modern evolutionary biology. We review the development of the main elements of the theory of evolution, highlighting the areas in which Darwin's ideas have proved remarkably robust and areas in which subsequent developments have significantly modified the theory. Assignments will include a project that allows you to explore your own DNA. We will explore the theological implications of evolution, why evolution is challenged by creationists, and what role the scientific consensus plays in a society mainly composed of non-scientists. By also analyzing the historical context of the development of evolutionary thought beyond Darwin, the course emphasizes the dynamic interplay between science and society.

Power and Identity in the Middle East (142447)

Melani Cammett

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Why are some countries governed democratically while dictators seem to have a firm grasp on power in others? Why do people threaten and even kill each other in the name of ethnicity or religion in some places and times but not others? This course will give you a chance to explore these questions in the context of the Middle East, a region that has been widely perceived as a bastion of authoritarianism and a hotbed of ethnic and religious politics and political violence. In considering key questions and debates about politics, governance, and identity in the Middle East, you will develop a critical understanding of politics in the

region, while simultaneously gaining the social-scientific vocabularies necessary to question the assumptions that are often made about Middle Eastern politics and people and, more generally, about politics in other contexts. In asking why and how the Arab Spring was possible, and how authoritarian governance has managed to persist following those uprisings, you will have an opportunity to engage some of the most urgent social-political questions of our time. You will leave this course with a clearer understanding of how dictators and militaries maintain their hold on power and how identity politics and conflict are constructed and change over time.

Satire (212834)

Ambrogio Camozzi Pistoja

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

A course on satire, its power and limitations, from Classical Rome, through medieval Italy, to Elizabethan theatre and 19th-20th century American cartoonists. Serving as both a critique of social norms and the oppression of minorities (anti-women, anti-Jews, etc.), satire has been one of the most practiced and effective languages in Western culture. By ridiculing ideas, habits or specific individuals, satire challenges and constantly reshapes moral, legal as well as linguistic boundaries. We will discuss various definitions of the genre, with readings on the theory, functions and limitations of satire, focusing on the intellectual debate and juridical responses (censorship, criminal law, libel writs, etc.) that have accompanied satirical expressions across the centuries. Satirical artifacts examined during the classes include poems, novels, theatrical plays, defamatory paintings and sketches, with the participation of contemporary satirists, cartoonists, comedians and judges from around the world.

Contemporary Developing Countries: Entrepreneurial Solutions to Intractable Problems (107464)

Tarun Khanna

Satchit Balsari

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

What problems do developing countries face, and how can individuals contribute to solutions rather than awaiting the largesse of the state or other actors? Intractable problems – such as lack of access to education and healthcare, forced reliance on contaminated food, deep-seated corruption – are part of the quotidian existence of the vast majority of five of the world's seven billion people. Developing societies suffer from what we refer to as 'institutional voids' that make organized activities of all sorts difficult; think of the mundane but important physical infrastructure that allows us to get to work or school in the developed world, as well as our access to higher-order institutions such as the availability of information at our fingertips or the security of the rule of law. The course demonstrates that reflecting upon the nature of the developing world's intractable problems through different lenses helps characterize candidate interventions to address them. The scientist's hypothesis-driven and iterative experimentation, the artist's imagined counterfactuals through putting oneself in others' shoes literally and theatrically, and the planner' s top-down articulation of boundary conditions, all tailor the ultimate solution.

Class Notes: **Open to cross-registration for students from other schools and universities. May accept a limited number of auditors, pending instructor approval.**

Ancestry (203820)

Maya Jasanoff

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 240

Everyone comes from somewhere. We carry our ancestries in our DNA, genealogy, family stories, and more. What do these forms of evidence tell us about who we are, as a species, as a social group, or as an individual? This course looks at ancestry from a range of perspectives: biology, anthropology, genealogy, history, law, and memory—from the origins of human populations to the origins of you. Whether or not you are coming into this course with a prior interest in genealogy or family history, you will leave it with a sharper sense of the role played by ancestry in the terms we routinely use to describe ourselves—as well as in policies and practices shaping everything from citizenship law to college admissions. We will pay close attention to different kinds of evidence—particularly genetic and genealogical—the kinds of

questions they answer or raise, and what happens when they collide. We will also explore in depth the implications of genetic ancestry testing for concepts of race, ethnicity, and nationality. By its end, the course should make you better able to uncover implicit assumptions in qualitative and quantitative data alike, and to assess a claim's value and scope. Most of all, it will prompt you to reconsider you ideas about ancestry, lineage, and inheritance, and enrich how you think about identity in your life outside the classrom and after this semester, at Harvard and beyond.

Black Radicalism (212852)

Robert Reid-Pharr

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 75

"Black Radicalism" is a course designed to introduce students to the main currents of black radical thought in the period stretching from the close of World War II until roughly 1980 and the advent of the Reagan Era. The course will be divided into three sections: Anti-Colonialism; Black Nationalism; and Black Feminism and will focus on key works of fiction, theory, and criticism by especially prominent black intellectuals including Frantz Fanon (The Wretched of the Earth); Richard Wright (White Man Listen!); George Jackson (Soledad Brother); Huey Newton (Revolutionary Suicide); Angela Davis (If They Come for Me in the Morning); and the members of the Combahee River Collective (The Combahee River Statement). The goals of the course are to help students understand the ideological roots of some of the most significant social movements of their own time (Black Lives Matter; Me Too). Indeed, the course will be built on the idea that the vexed struggles around race, class, and gender in which we are all now involved are part of a long history in which the efforts of a radical black intellectual class have been at once challenged and adopted by more mainstream actors. At the same time, students will be pushed to develop both their critical and communicative skills. To that end, course participants write at least two short essays during the semester. They will also complete final group projects that utilize "alternative" platforms—including digital platforms—that reach beyond both the classroom and the campus in order to draw attention to the ways that the ideas and methods of individuals like Fanon, Wright, Jackson, Newton, and Davis operate in contemporary society.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on Friday, September 6. If**

interest exceeds available seats, a lottery of those who have requested permission will run on Friday, September 6, and all participants will be notified of the results via Harvard email. How to Build a Habitable Planet (118517)

Charles Langmuir

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Is Earth one of many planets in an inhabited Universe, or is it the result of a low-probability accident? And what does the answer to that question tell us about humans' relationship to our planet? The aim of this course is to place human beings in a universal and planetary context as we investigate the steps of planetary evolution and their significance to our current relationship to Earth. We will explore the origins of the solar system, life, and the elements, and more, placing humanity in the context of a process that may be universal. This then provides a novel perspective on current environmental problems and how we might deal with them, and the likelihood of alien beings and whether we need to fear them.Readings, assignments include the book How to Build a Habitable Planet, two hour sections to provide discussion and experience with course topics, experiments with the environmental impact of how we live, and two mandatory field trips to see power generation, and waste and trash disposal. At the end of this course, you will have a greater understanding of the past, present, and future of the planet we call home, and the planetary consequences of your life decisions.

The Caribbean Crucible: Colonialism, Capitalism and Post-Colonial Misdevelopment In The Region (118290)

Orlando Patterson

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the complex, formative role of the Caribbean in the development of Western colonialism and capitalism and the consequences for the peoples of the region. Four major themes will be examined. First, the importance of the region in the origin and early development of Western imperialism and capitalism: Why did both Western Europe and America begin their imperial and colonial expansion in this region and to what degree did the region's slave-based economies influence the nature and development of Western capitalism? Second, what were the consequences of imperialism for the demographic and socio-cultural fate of indigenous and African populations? Is genocide a proper designation of the fate of exploited peoples of the region up to the end of the period of slavery? Third, we examine the post-colonial consequences of this history for the socio-political, economic and cultural development of the region. What have been the main paths toward sustainable development in the modern Caribbean? Why in spite of its long history of engagement with Western capitalism, has the region largely faltered in its efforts to develop? We examine the different paths to development through five case studies—neo-colonial dependency in Puerto Rico, communist dependency in Cuba, democratic socialism in Jamaica, Barbados' neo-liberal strategy, and aid-dependency in Haiti. We also study the common problem of migration and transnationalism and the degree to which this process undermines national sovereignty. Fourth, we explore the distinctive features of racial classification and cultural representations in the Caribbean. What do we learn about race as a social construction from the Caribbean experience? How do Caribbean racism and colorism unsettle American notions of race and ethnic identities? Why has globalization not led to cultural homogenization? How do we account for the unusual influence of Caribbean music, especially that of Jamaica, on popular global culture?

Security (108398)

John T. Hamilton

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 315

The term "security" has enjoyed a complex and ambivalent career. Broadly defined as a "removal of care," security leaves its subjects either carefree or careless. Pursuing an itinerary from the Stoics to psychoanalysis, from international relations to feminist theory, the course draws out the ethical implications of the persistent concern to be free of concern. Does "security" make us vigilant or negligent, confident or complacent? Does it promote more fear than it assuages? Is a security purchased with freedom or human rights morally viable? Such questions broach a more informed, nuanced, and critical engagement concerning our civic, professional and personal lives.

The Stories We Tell (212851)

Martin Puchner

David Damrosch

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

***The Stories We Tell* is based on the premise that we are story-telling animals. There have been human societies without the wheel, but none without stories. We use stories to make sense of experience, to understand where we are coming from, and to orient ourselves in the world. Today, we are asked to produce stories to get into college, to run for president, to pitch start-up companies, and to turn scientific insight into new policies. Where do these stories come from?**

The course draws on our entire storytelling inheritance from around the globe. We single out different types of stories, from the hero-epics of the ancient world (Gilgamesh) and pedagogical story-collections (1001 Nights) to the invention of psychological realism by the first novelist (Murasaki Shikibu), and we supplement those with modern storytelling techniques from Asia (Eileen Cheng) to Latin America (Clarice Lispector). Since our most important stories are not confined to literature, we also include those religious and philosophical storytellers (Confucius; Socrates) as well as political stories (Declaration of Independence; Communist Manifesto) that have shaped human affairs. Along the way, we examine the technologies, from clay tablets and papyrus scrolls to print and the Internet, thought which these stories have survived into the early twenty-first century and are shaping our world today.

The course includes in-class exercises, research assignments (Wikipedia entries), and a final exam.

Ignorance, Lies, Hogwash, and Humbug (204966)

Christopher Robichaud

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Is truth dead? Time Magazine posed this question in bold red print on its April 3, 2017 cover. It's a surprising concern, given that information of every sort imaginable is merely a click away on our phones, access to educational resources is robust for both traditional students and online learners, and direct interaction with public figures is more unencumbered than ever before with the help of social networks. Yet we nevertheless find that "alternative" facts regularly compete on equal footing with actual facts, fake news beats out mainstream news, and expert knowledge is sidelined for gut hunches and whatever feels correct. Such is the so-called post-truth age. Can our democracy survive it? Contrary to what many of you may think, it's not obvious that it can. Perhaps even more surprising, if it can survive, it may only be by way of the much-maligned practice of politics. In this course, you'll interrogate the post-truth age, primarily within the American context, through an interdisciplinary engagement with epistemology, political philosophy, media studies, and the behavioral and social sciences.

Human Evolution and Human Health (112339)

Daniel Lieberman

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

How and why did humans evolve to be the way we are, and what are the implications of our evolved anatomy and physiology for human health in a post-industrial world? Why do we get sick, and how can we use principles of
evolution to improve health and wellbeing? To address these questions, this course reviews the major transitions that occurred in human evolution, from the divergence of the ape and human lineages to the origins of modern humans. Also considered are the many effects of recent cultural and technological shifts such as agriculture and industrialization on human health.

Finding Our Way (126603)

John Huth

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 60

How do you navigate our increasingly automated culture? In this course, we will use the theme of primitive navigation to open our eyes to the physical world in a direct and palpable manner. Basic principles include human cognition of physical and mental maps, dead reckoning, direction finding from nature. The course includes the basics of astronomy, including planetary orbits, meteorology, thermodynamics, bird behavior, electromagnetic radiation, optics, waves, tides, ocean currents, and fluid dynamics. Navigational practices of Pacific Islanders, Norse, medieval Arabs, and early western Europeans provide a focus. Main themes of the course will include automation bias, spatial cognition as a template for other forms of cognition, and reasoning when there is no 'right' answer. Some facility with algebra and trigonometry is useful. A series of hands-on projects are employed to understand navigational practices discussed in lecture.

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Conflict Resolution in a Divided World (107669)

Daniel Shapiro

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

How should we understand conflict in our own lives and in the world around us? At all levels of society, people tend to approach conflict as an adversarial battle—communities polarize, ethnopolitical groups clash, and nations and international institutions face daily political tensions. To prepare you for a lifetime of civic engagement, this course empowers you with new pathways for examining enduring questions about

the roots of conflict and interdisciplinary approaches for resolving it. We will explore rational, emotional, and identity-based perspectives on conflict resolution and connect these aspects to your own life challenges and to conflicts ranging from on-campus divisions to large-scale political disputes. Because conflict resolution often involves tough decisions and moral dilemmas, we also will examine models for understanding its broader sociopolitical and ethical dimensions. The hope is that, by the end of this course, you will have a deeper understanding of conflict resolution and will be better equipped to navigate its many contours to advance the vision of a more peaceful world.

Texts in Transition (212840)

Ann Blair

Leah Whittington

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

We live in a moment of "crisis" around regimes of preservation and loss. As our communication becomes ever more digital— and, therefore, simultaneously more ephemeral and more durable—the attitudes and tools we have for preserving our culture have come to seem less apt than they may have seemed as recently as a generation ago. This course examines how texts have been transmitted from the past to the present, and how we can plan for their survival into the future. We will examine what makes texts durable by considering especially the media by which they are transmitted, the changing cultural attitudes toward their content, and the institutions by which they are preserved. The European Renaissance will provide a central case study. During this period scholars became aware of the loss of ancient texts and strove to recover and restore them insofar as possible. These interests prompted new developments in scholarly conservation techniques which we still value today (philology, libraries, and museums) but also the creation and transmission of new errors, ranging from well-intentioned but overzealous corrections and "improvements" to outright forgeries. What can the Renaissance teach us about how to engage productively with these problems, both as the source of our current attitudes toward preservation and loss, and as a case study of another culture dealing with anxiety over preservation and loss? Ultimately, we hope that students will be able to think productively about how to preserve from the past and the present for the future, while recognizing that all preservation inherently involves some kind of transformation.

Dissent and Disobedience in Democracies (214493)

Arthur Applbaum

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

Recent political upheavals in several of the world's established democracies have sparked discussions about dissent and disobedience not seen since the 1960s. When, if ever, are citizens in a democracy justified in breaking the law to protest or resist what they believe to be bad, unjust, or illegitimate laws or policies? When, if ever, are public officials in a democracy justified in undermining or refusing to enforce such laws or policies? This course will study important examples of principled disobedience in democracies, and explore normative arguments for and against various strategies of unlawful dissent through the close reading of texts in political and legal philosophy. In a series of structured written assignments, students will argue for or against proposed, ongoing, or recent cases of principled disobedience by public officials or citizens in democratic states.

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Class Notes: **Also offered by the Harvard Kennedy School as DPI 218. Graduate students in all schools should enroll in DPI 218. An additional graduate section will be scheduled.**

Global Feminisms (212848)

Durba Mitra

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 50

Feminism shapes the world we live in today. Debates about women's and sexual rights define almost every public debate today -- from sexual harassment, to electoral politics, to development, public health, and human rights. But when, and where, did ideas of women's equal rights and liberation emerge? This course digs into the deep history of feminism from a global perspective. It traces the intimate relationship between feminism, colonialism, and racism in case studies from America, Europe, Asia, Africa, and the Middle East, from the eighteenth century until today. We will immerse ourselves in rare materials on transnational and global feminism in the Schlesinger Library here at Harvard. Over the course of the semester, you will build a toolkit of critical thinking and writing skills by engaging diverse primary sources, including political writings of women of color and colonized women, short stories, posters, movies, and human rights reports. You will come away from the course having a deeper understanding of ideas of equality and justice that define politics today.

Readings will highlight marginalized authors, women writers, especially women of color authors, from previously enslaved women in the US South to indigenous people to colonized women in India and Africa. Reading assignments will focus on primary historical sources and encompass diverse genres, from political thought and speeches to fantasy fiction to posters.

Students will build critical skills through assignments that build source analysis skills over the course of the semester, including an annotation of visual materials (a poster or cartoon), short primary source analysis papers using materials from Schlesinger Library, and a final film analysis paper.

Class Notes: **This course has an enrollment cap and requires that you use my.harvard to request instructor permission to enroll. Experiments that Changed Our World (212854)

Philip Sadler

2020 Spring (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 50

Facing the edifice of preexisting knowledge, how are breakthrough scientific discoveries made that contradict the existing canon? Twelve great experiments that have transformed our understanding of

nature will guide us, first through immersion in the scholarship and popular beliefs of the time. Next, how did the discoverer prepare? What were the motivations, prior experiences, and training that led to the threshold of a fruitful advance? Then, to the degree possible, we will carry out the exact same investigations, building our own simple equipment from scratch, duplicating the challenges of wresting patterns from noisy and incomplete data. Students will compare their results to both private and published versions of the original research. The course will examine the magnitude of the cognitive shifts experienced and the often uphill battle to acceptance. We will build an understanding of the nature of scientific progress, examining how the mastery of natural phenomena leads to new technologies and how these can contribute to further scientific discovery.

Experiments are drawn from the natural sciences, ancient to modern, from Eratosthenes measuring the earth's size to Rosalind Franklin determining the structure of DNA. We will consider how these discoveries continue to impact society, as well as the many ethical questions raised. The course will examine the difficulty of accepting new experimental evidence falsifying accepted scientific paradigms and how this remains an issue that plays out in current society. By unpacking these 12 experiments, students will be able to better prepare for their own future discoveries and contributions.

Higher Education: Students, Institutions, and Controversies (212844)

Manja Klemencic

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 75

Though we may think of universities and colleges as centers of learning and research, they too are subject of teaching and burgeoning research. This course explores contemporary higher education institutions and their students through a number of different perspectives and approaches. We identify major issues and controversies in higher education – how students learn, unequal access, the rise of corporate universities, changing funding models for higher education, politics of higher education, and more. We will read what leading scholars from the interdisciplinary field of higher education studies have written about these and other issues. Through personal reflection and insights from guest speakers from Harvard administration, we will look behind the scenes at Harvard student experiences. We will also seek to understand the workings of different types of higher education institutions, conducting field visits to universities and colleges in the Boston area. The centerpiece of this course is a capstone project that involves original research --theoretical or empirical or applied-- on a chosen higher education topic. The capstone research projects will be showcased on an online platform open to the Harvard community to inform and inspire practice and future research. This is an opportunity to gain perspectives on established and emerging areas of higher education research, insights into today's changing higher education landscape, and the tools to address higher education issues. As student researchers you will develop agency to voice, critically examine and propose solutions to higher education issues you care about at Harvard and beyond.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on Friday, September 6. If interest exceeds available seats, a lottery of those who have requested permission will run on Friday, September 6, and all participants will be notified of the results via Harvard email. For more information, including how to request permission, please see gened.fas.harvard.edu/enrollment or visit the course's Canvas site.**

Anime as Global Popular Culture (125611)

Tomiko Yoda

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In this course, students will learn to engage Japanese or Japanese-style animation (sometimes known as anime) through two-pronged approaches. First, the students will learn to evaluate the aesthetic and socio-cultural relevance of anime in relation to the criteria and perspectives developed through the study of more established artistic forms such literature, cinema and visual arts. We will cover topics including, anime's generic conventions, formal aesthetic, and narrative motifs. Secondly, students will learn to address the cultural value of anime in manners that recognize the specificity of its media ecology, encompassing the modes of production, distribution, and consumption. In particular, we will pay close attention to the ways media technology, industrial production of anime, marketing, and fan culture are integral facets of anime eco-system. In this sense, we will study anime as a node in the global network, involving diverse commercial as well as non-commercial medias such as graphic novels, live-action films, video games, character merchandises, and fanzines and other fan practices. The course as a whole suggests that we need to work between these two approaches in order to understand anime as a medium of global popular culture today.

American Dreams Made in Hollywood (109501)

Eric Rentschler

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 218

Is the so-called American dream dead? The notion once essentialized the grand promise of a better, fuller, and richer life. At the present moment, however, it seems to have lost its evocative power as a collective myth. In a time of national crisis and political emergency, this General Education course has a pressing mission. It aims to further a dynamic understanding of American dreams (for there are many and not just one), to apprehend their complexities and contradictions, to appreciate their diverse manifestations and historical shapes, and above all to take measure of their meanings for the world we inhabit.

In this endeavor we will study the variety of ways in which Hollywood's fantasy machinery has created designs for living, indeed the most influential and resonant incarnations of American dreams. We will analyze popular films produced during crucial junctures in the modern history of the United States, from the Great Depression and World War II, through the Cold War and the McCarthy era, up to the 1960s and 1970s. We will consider the wide range of functions that commercial studio features have assumed, how they at times have sought to legitimate and sustain the status quo, but at others also have interrogated, revealed, and even indicted social inequity. The class offers a representative sampling of classical Hollywood features from 1932 to 1976; films to be studied include *Scarface, King Kong, It Happened One Night, The Wizard of Oz, The Grapes of Wrath, Citizen Kane, Casablanca, The Best Years of Our Lives,*

Detour, High Noon, The Invasion of the Body Snatchers, A Face in the Crowd, Raisin in the Sun, The Manchurian Candidate, Easy Rider,* and *Rocky.

General Education 1045

Can We Choose to Be Healthy? (118903)

Nancy Long Sieber

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 75

We often hear how important it is to make "healthy choices"—to eat the right foods, to get enough exercise, to get plenty of sleep. But to what extent is it really within our power as individuals to "choose" to be healthy? In making choices about your own life, have you ever been confused by conflicting data or faced other obstacles in your pursuit of good health? Millions of Americans experience lifestyle constraints that may prevent them from putting their health first—from socioeconomic constraints that limit their dietary choices, to labor market constraints that affect their abilities to set healthy schedules, to structural and mobility constraints that compel them to live near areas of high pollution or in so-called "food deserts." Moreover, most of us struggle to understand the science behind current health controversies—from the growing opioid epidemic to debates over pesticide regulations. This challenge is compounded by the increasing politicization of science, which leads to objective findings becoming distorted as they are twisted to fit one agenda or another. Finding reliable scientific information is a challenge for anyone who wants to fully understand and participate in the national conversation about these complex issues.

In this class, you will learn how scientists approach public health problems, and how their findings are used to assess and intervene against threats to human health. We will begin by looking at health disparities across the US, and considering the biological, behavioral and societal factors that contribute to them. We will then closely examine three pertinent public health issues that significantly affect the health of Americans: 1) mental health and addiction, 2) obesity and cardiovascular disease, and 3) the adverse

effects of exposure to environmental pollutants. We will spend a portion of most classes discussing relevant current events, and weekly section meetings will focus on an in-depth exploration of a case study. Our goal is for you gain a greater understanding of your own body, and of what can be done on a personal and societal level to prevent disease. This will ultimately give you the skills you need to analyze and make decisions about current and future public health challenges.

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Evolving Morality: From Primordial Soup to Superintelligent Machines (203129)

Joshua Greene

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

In this course we'll examine the evolution of morality on Earth, from its origins in the biology of unthinking organisms, through the psychology of intelligent primates, and into a future inhabited by machines that may be more intelligent and better organized than humans. First, we ask: What is morality? Many people believe that morality descends from above, as divine commands or as abstract, timeless principles akin to mathematical truths. Here we take an empirical approach to morality, viewing it as a natural phenomenon that rises up from below—born of the strategic interactions among lifeforms and societies struggling to exist. Next, we take a scientifically informed look at the foundational questions of moral and political philosophy. Many people believe that the "is" of scientific knowledge has nothing to do with the fundamental "oughts" of morality, that science and morality exist in separate realms (and belong in separate courses). Here we challenge this assumption, asking whether our scientific self-knowledge can, and should, change our views about what's right and wrong and how a society should be organized. Finally, we consider the distinctive moral challenges posed by what may be the next stage in Earth's evolutionary history: the rise of artificial intelligence. Many people believe that there is and always will be a fundamental division between human minds and machines. Here we challenge this assumption, going beyond the tropes of science fiction and drawing instead on the latest advances in cognitive neuroscience and neurally inspired artificial intelligence. Our conclusions will have implications for moral challenges of the near and more distant future: Can self-driving cars, military drones, and life-like robots be programmed to behave morally? Will artificial intelligence displace human labor? If so, how can our societies adapt? Could machines displace humans entirely? If so, how can we stay in control? If machines do take over, will they be our conquerors or our children? Across diverse topics, this course explores the implications of a single idea: that the wonder we see around us, and ahead of us, is the product of competition and cooperation at increasing levels of complexity.

General Education 1049

East Asian Cinema (110464)

Jie Li

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 112

This course introduces major works, genres, and waves of East Asian cinema from the silent era to the present, including films from Mainland China, Japan, Korea, Taiwan, and Hong Kong. We will discuss issues ranging from formal aesthetics to historical representation, from local film industries to transnational audience reception.

This course does not assume prior knowledge of East Asian culture or of film studies, but rather seeks to provide students with a basic understanding of modern East Asian cultural history through cinema, and with an essential toolkit for analyzing film and media, including narrative, cinematography, editing and sound. In addition to critical approaches, students are strongly encouraged to creatively respond to course materials by collaborating on their own short films, beginning with the illustration of film terms in the first two weeks and culminating in the "Golden Monkey Awards"—a class screening of final projects with Oscar-like awards in various categories.

As a General Education course, East Asian Cinema will help students develop aesthetic responsiveness and interpretive ability to moving images in an increasingly media-saturated world. While becoming acquainted with some analytical vocabulary and critical approaches to cinema, students will also gain insights into East Asian cultures and histories, aesthetic traditions and ethical values, as well as the politics and economics that went into the films' production and reception. Above all, the course will encourage students to be creative and enterprising with the digital media technologies at our disposal, to engage in collaborative teamwork and experiment with unorthodox ways of looking at the world through amateur filmmaking.

Course Notes: **All films subtitled in English. No prior knowledge of East Asian history or film studies necessary.**

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Reclaiming Argument: Logic as a Force for Good (112199)

Ned Hall

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 120

Our lives are awash in argument and persuasion. This course aims to teach you how to manage argument and persuasion in your own life – not just with skill, but *ethically*. Accordingly, we will have two main goals. The first is to develop your skill at recognizing the myriad ways in which language can be used and misused as a tool for persuasion, by teaching you a variety of techniques drawn from formal logic, linguistics, and the discipline of argument-mapping. Master this skill, and anytime someone attempts to persuade you of something, you will be able to understand the structure of their attempt so deeply that you need not fear manipulation, but can decide *for yourself* whether you wish to sign on to the conclusion they want you to reach. Our second goal is even more important: we hope to show you how you can – and why you *should* – construct your own arguments with such clarity, honesty, and logical transparency that the people you direct them to will be optimally placed to decide, for *them*selves, whether and why they ought to agree with you. In this way, you will come to see argument not primarily as a contest to be won or lost, but as something that should be reclaimed for a more noble purpose: building genuine understanding between people, even across profound differences of viewpoint.

General Education 1052

Race in a Polarized America (116248)

Jennifer Hochschild

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 250

How do we manage issues of race, ethnicity, and immigration in a polarized political era? What role did race play in the election of President Trump, after eight years of the presidency of Barack Obama? How can we be good citizens of the world when Americans have such mixed views and take such mixed actions in engaging with racial hierarchy, identity, or interaction?

This course addresses these questions by examining policy disputes around issues such as incarceration

and policing, free speech, the role of biology in ancestry and medical care, electoral politics, activism, and movement across borders. We will examine class, nationality, and gender differences within and across groups, and how group boundaries are made stronger or weaker. We will consider how to reduce unproductive polarization, and how you --the new generation of citizens of the world -- can promote a better America even, or especially, when we do not agree on just what "better" entails.

Course readings range from public speeches and interviews to works in political science, sociology, economics, and a bit of genomic science. You will learn how and where the United States has progressed in promoting group equality and fairness, as well as where it has not or has even moved backwards. You will end the course with a deeper understanding of the core American paradox of the persistence of group hierarchy in a country dedicated to democracy, equality, and liberty, and what people such as yourselves can do to resolve that paradox.

Political Economy and Its Future (126203)

Roberto Mangabeira Unger

Dani Rodrik

2020 Spring (4 Credits) **Schedule:** M 0100 PM - 0300 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

The world's economic and political order reels under mounting challenges: the global financial crisis, the austerity debacle, a slowdown in economic growth and productivity, the aggravation of inequality and the inadequacy of conventional responses to it, the discrediting of the Washington Consensus, the globalization backlash, the re-emergence of nationalist politics in Europe and the United States, and a contest over the meaning, value, and requirements of democracy. We examine connections among these phenomena and explore alternative ways of thinking about contemporary market economies and their reconstruction. We organize the course around four related themes: the worldwide financial and economic crisis of the recent past and its management; the effort to promote socially inclusive economic growth in richer as well as in poorer countries; the nature, fate, and dissemination of the new knowledge-intensive style of production; and the past, present, and future of globalization.

Course Notes: **Students should have some previous acquaintance with economics but no advanced economic training is required.**

Jointly offered with the Law School.

Transforming Society: Revolution or Reform (125749)

James Simpson

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Is revolution or reform the best way to transform society? To answer this question, we will explore the relation between utopian Enlightenment cultures and dystopian literary cultures in Western history. For each moment of rapid change, from Plato to the Communist and surveillance revolutions of the twentieth century, we will focus on two texts: one that promotes the enlightened and revolutionary utopian social blueprint; and one that offers an alternative, often dystopian model of transformation. You will come away from this course having a chronologically wide and intellectually serious immersion in 2500 years of European philosophical and literary history. Throughout, you are encouraged to think about what resources we use to imagine social transformation and to ask if revolution is in fact the best way to effect social transformation.

Course Notes: **Students who have taken Culture and Belief 18 or Humanities 53 may not take this course for credit.**

Poetry Without Borders (125186)

Stephanie Sandler

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Without borders, can there be poetry? The border of white paper surrounds printed poems; national boundaries keep cultural and linguistic traditions distinct; and aesthetic practice and its conventions create genres and demarcate poetry from music or dance or film. How poetry requires but also perversely challenges these limits will be the subject of this course.

The course studies the cultural practice of poetry, with an emphasis on contemporary poetry. We will examine four kinds of borders – performative, linguistic, geographic, and aesthetic. That yields four large topics: poetry in and about public places (how does poetry speak to public life, including political life? How does poetry address experiences of trauma and harm? What ethical challenges loom large in poetic practice?); poetry and translation (what happens when poems cross languages? how to read mixed-language or macaronic poems?); poetry, confinement, and migration (what happens when poets cross geographic borders? what do they hear in a new language and, as a result, in their own? how do mixed identities and allegiances work? how have the current crises around border crossings and around incarceration affected poetic practices?); and poetry and the other arts (how have the cross-influences of music, film, dance, the visual arts, and photography been felt in poetry? how do poems become visual artifacts, or scripts for performance?).

We will read, listen to, and learn from Laurie Anderson, Reginald Dwayne Betts, Joseph Brodsky, Angie Estes, Allen Ginsberg, Eliza Griswold, Susan Howe, Jorie Graham, Daniil Kharms, Idra Novey, Eugene Ostashevsky, Yang Lian, Valzhyna Mort, Vladimir Nabokov, M. NourbeSe Philip, Tracy K. Smith, Brian Turner, C. D. Wright, Lida Yusupova, and others.

Tech Ethics: AI, Biotech, and the Future of Human Nature (120670)

Michael Sandel

Douglas Melton

2019 Fall (4 Credits) **Schedule:** R 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 683

The course explores the moral, social, and political implications of new technologies. Will biotechnology and AI enable us to hack humanity? Should we edit the genes of our children, extend the human lifespan, and genetically enhance our athletic ability and IQ? Can algorithms be fair? Will robots make work obsolete? Can smart machines outthink us? In an age of big data and social media, is privacy over? Is democracy?

The course will ask how science and technology are transforming the way we work, learn,

make friends, raise children, care for our health, conduct our politics, and understand what it means to be human.

Class Notes: **This course will meet in the Auditorium at the Harvard Business School's Klarman Hall. To find Klarman Hall on a map, please see https://www.hbs.edu/maps/#66.7%2c63.9.**

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. Digging the Glyphs: Adventures in Decipherment (122942)

Nicholas Carter

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Writing is an ancient technology, independently invented and forgotten in different times and places over human history. Some ancient scripts can now be read again, while others remain undeciphered – but what makes the difference between them? In this course, we will use the decipherment and interpretation of writing systems as a springboard to larger questions about knowledge and meaning: what signs are and how they work, how we "read" the world around us, and how (and whether) we can be confident that we know what we say we know. You will broaden your understanding of what writing is, the many social functions of script, and how we reason from signs to generalizations about the world. This course will prepare you to think about signs and signification in everyday life and the implicit and explicit role of communications technologies in shaping social realities.

Ballots and Bibles: Why and How Americans Bring Scriptures into Their Politics (212843)

David Holland

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

In 2018, in a public speech to law enforcement officers, the attorney general of the United States used a scriptural passage to defend tougher implementation of immigration laws. His reference bewildered observers who were unaware of a long tradition of citing Romans 13 in American political controversies, including such formative conflicts as the American Revolution and the sectional crisis over slavery.
This course introduces students to a complex history of political invocations of scripture, encouraging them to think about why this practice persists, the interpretive strategies it involves, and the implications of such scriptural appeals for civic culture. Co-taught by faculty with expertise in biblical studies and American history, the course asks students to engage texts thoughtfully, to consider historical contexts thoroughly, and to see why these texts and their use matters in the present.
Course materials includes primary sources (e.g., campaign speeches, Congressional debates, Civil Rights slogans) and scholarly literature, such as the wealth of research on the history of biblical justifications for war or the legal theories that guide applications of the First Amendment.
Student projects afford class participants the chance to engage in both historical research and textual hermeneutics. The objective of the course is to equip students to recognize the historical legacies that contemporary political conversations carry, to engage critically the modes of textual interpretation that inform political rhetoric, and to write cogently about the complex implications of political appeals to scriptural authority.

World Health: Challenges and Opportunities (126193)

Sue J. Goldie

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 135

Extraordinary changes in the world present both risks and opportunities to health—unprecedented interconnections across borders, rapidly shifting global demographics, and changing patterns of diseases and injuries. This course will challenge your assumptions about the world's populations, as you discover surprising similarities and unexpected differences between and within countries. Approaching the concept

of health as a fundamental prerequisite for building strong societies, we will explore its connection to human rights, international relations, and sustainable development. Using case examples of contemporary health challenges, we explore the influence of social, political, and environmental determinants on health, particularly transnational risks associated with globalization. We consider solutions from an array of perspectives, contributions from within and outside the health sector, and interventions at the local, national and global levels. By the end of the course, you will be equipped to thoughtfully analyze important health challenges and appreciate how evidence is contextualized and translated to policy and action.

Brains, Identity, and Moral Agency (109360)

Steven Hyman

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 120

Advances in brain science have the potential to diminish many forms of human suffering and disability that are rooted in disordered brain function. But what are the ethical implications involved in altering the structure and function of human brains? What's at stake when we have the ability to alter a person's narrative identity, create brain-computer interfaces, and manipulate social and moral emotion? In this course, you will ask and attempt to answer these questions, and discuss the implications of mechanistic explanations of decision-making and action for widely-held concepts of moral agency and legal culpability. This course will prepare you to be a thoughtful citizen of a world characterized by rapidly emerging understandings of human brain function, and by new technologies intended to repair or influence human brains.

Course Notes: **For students who have taken MCB 80, it is contemplated that there will be a section that incorporates more advanced concepts from neurobiology.**

Rationality (212850)

Steven Pinker

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

How can members of a species that discovered symbolic logic and the double helix also believe that the earth is flat and that Hillary Clinton ran a child-sex ring out of a pizzeria? Human rationality is very much in the news, as we struggle to understand how an era with unpreceded scientific sophistication could harbor so much fake news, conspiracy theorizing, and "post-truth" rhetoric. Rationality has also long been a foundational topic in the academy, including philosophy, psychology, economics, mathematics, and government.

Part I of "Rationality" covers the nature of rationality, including logic, statistical decision theory, Bayesian reasoning, game theory, expected value, critical thinking, and common logical and statistical fallacies.

Part II covers the cognitive science of rationality, including classic writings by psychologists and behavioral economists. Are humans a "rational animal"? Can machines be artificially rational? Could our irrational heuristics and biases be evolutionary adaptations to a vanished world? Could beliefs that are factually irrational be socially rational as expressions of loyalty to a cultural or political tribe? Can people be cured of their irrationality?

Part III covers applications. How can our opinions and practices be made more rational? Examples may include policy (Nudge), crime (Compstat), development aid (Randomistas), sports (Moneyball), reporting (Politifact), polling (538.com), health (Quality-Adjusted Life Years), psychotherapy (Feedback-informed treatment), forecasting (prediction markets & tournaments), and philanthropy (Effective Altruism—a major focus). Some topics will be presented by expert guest lecturers.

Assignments will include a midterm exam, class quizzes, and a capstone project, in which students will choose a cause or concern and explore how principles of rationality could make it more attainable.

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Faith and Authenticity: Religion, Existentialism and the Human Condition (109861)

Courtney Lamberth

David Lamberth

Cornel West

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course engages some of the most fundamental questions of human existence through the philosophical, theological and literary works of 19th and 20th century authors many of whom are associated with the movement called "existentialism." What is an authentic individual life? How does one find meaning in light of modern challenges to claims about the nature of God, revelation and the soul? Is religious faith compatible with an understanding of historicity and the threat of nihilism? With a life of integrity and freedom? Of what use are philosophical and theological reasoning in establishing meaning? This course introduces central questions in Western philosophy of religion through close reading of fundamental texts in existentialism with attention to selected philosophical and theological sources. The course focuses especially on the themes of authenticity and absurdity, finitude and death, faith and ambiguity, and the quest for freedom and responsibility.

Life as a Planetary Phenomenon (120881)

Dimitar Sasselov

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 150

What is it about Earth that enables life to thrive? This question was reinvigorated with the 2016 ground-breaking discovery of a habitable planet around the nearest star, Proxima Centauri. A decade of exploration confirmed that such planets are common in our galaxy, and the commonality of habitable planets has raised anew some age-old questions: Where do we come from? What is it to be human? Where are we going? Are we alone in the universe? And last, but not least, what are the dangers of becoming a multi-planet species? Life and planets are intricately linked through geological processes, chemistry, and ultimately, biology, all of which you will explore in this course as we endeavor to answer questions about our place on this planet and beyond. You will gain knowledge of some natural sciences fundamentals while exploring current issues in biotechnology and space exploration technology. This course aims to equip you with both a conceptual understanding of Earth and its place in the universe as well as the quantitative reasoning to think critically about it. Hands-on experiences are central to accomplishing these objectives.

Wakanda Revisited: African Spirituality in Ancient and Modern Times (212849)

Jacob Olupona

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** 50

Taking the Marvel blockbuster "Black Panther" as a starting point, the course will explore the African spiritual heritage both on the continent and the diaspora communities (Black Atlantic diasporas). We will begin by spelling out the features of African indigenous religious traditions: cosmology, cosmogony, mythology, ritual practices, divination, healing ceremonies, sacred kingship, etc. We will then explore how these traditions have travelled across the oceans to the new world and how they have contributed to the emergence of new forms of black identities in Brazil, the Caribbean, the USA, etc. This class will equally look at African religious encounters with Islam and Christianity on the continent, resulting in what we often call "Africa's Triple Heritage". It then considers African religious sensibilities in the contemporary period, as they relate to the issues of modernity, economic and social development, ethnic and cultural identities, class, and community relations. Finally, we will look at the status of African religion as a global tradition, not necessarily in competition with other religious traditions, but in its relationship to other world religions.

Guns in the U.S.: A Love Story (212845)

Caroline Light

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 75

The U.S. comprises 5% of the world's population but holds approximately 40% of the world's guns. We also experience more gun-related deaths than any economically comparable nation. How did the nation become a "gun culture," and whose rights and interests does widespread armament serve? Who is included in the Second Amendment's appeal to "the right of the people to have and bear arms," and how have notions of race, gender, class, and sexuality framed popular understandings of "good guys" and "good women" whose armed citizenship is required for the nation's security? We'll read analyses from public health, history, literary/cultural studies, political science, and gender/ethnic studies to help unpack collective assumptions and historical blindspots about the purposes and effects of contemporary gun ownership.

The Ancient Greek Hero (113501)

Gregory Nagy

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

How to face death? Concentrating on this central human question, we will explore some of the greatest works of ancient Greek literature (in English translation). For the Greeks, a special way to address the problem of death was to think long and hard about what they called heroes in their myths. Our purpose in this course is to extend that kind of thinking to the present. Assignments invite you to engage in personal reflections on the meaning of life and death in the light of what we read in Greek literature about the ordeals of becoming a hero.

Equity and Excellence in K12 American Schools (107341)

Katherine K. Merseth

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 80

Each year, between September and June some 52 million students attend public schools in America. But why? Why do we have K-12 schools in America? What is their purpose? What we do expect schools to accomplish? Headlines decrying the failed state of our nation's schools and clarion calls for the improved quality and reach of American schooling in the 21st century are commonplace. Against this backdrop, the course grapples with questions that have defined American K-12 education throughout history. What constitutes educational excellence? Is it realistic or naïve to strive for both equity and excellence for all students? Who are we educating and how important are student identities to schooling outcomes? Given that educators, families, politicians, and the courts often disagree vehemently about the answers to these questions, the course explores these debates and considers who and what will define the future of American K-12 education and its role in society.

Class Notes: **This course has an enrollment cap and requires that you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on the date listed on the course syllabus. If interest exceeds available seats, a lottery of those who have requested permission will determine which students may enroll. Disease, Illness, and Health through Literature (214343)

Karen Thornber

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Inevitably, at some point in our lives, most of us will develop a health condition that requires medical treatment and care. We also, regardless of our career, are likely to be called on to provide care for those whose health conditions make it impossible for them to care for themselves. What does it mean to be an effective partner in care, both in our personal lives and, for those in the health professions, in our professional lives? How can we best prepare ourselves to be effective care partners, whether we are the givers of care, the receivers of care, or often both? What should our short-term and long-term goals be and how can we best implement these goals? As healthcare costs soar and considerable suffering from disease and illness continues despite regular advances in medical technology, what should we advocate for in our communities, our societies, our nations, and beyond to ease the burden of disease and illness on caregivers and care recipients alike?

This course provides the ideal space for you to contemplate these and similar fundamental questions, which all of us increasingly must face. Class discussions, readings, and written assignments will provide the tools for you to become more effective advocates for compassionate care, both now and in the future. Engaging with a diverse range of memoirs, creative non-fiction, life writing, and novels from five continents by physicians, patients (including physician-patients), and concerned citizens alike, the course challenges many fundamental preconceptions regarding disease, illness, health, and care. We will interrogate what it means to promote healing and wellbeing in our personal and professional lives.

General Education 1079

Why is There No Cure for Health? (125932)

David Cutler

2019 Fall (4 Credits) **Schedule:** MWF 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** 250

Around the world, billions of dollars are spent on health care treatments, public health initiatives, and pharmaceutical research and development. So why are we still not able to prevent preventable diseases, provide affordable healthcare for millions of people, and deliver cures for curable diseases? And what are the best ways to address these issues?

Because these questions are so large, we will focus our discussion around questions like: What steps should be taken to end HIV/AIDS? How should the United States reform its health care system? And how should prescription drugs be produced and sold?

We will explore how social scientists address empirical questions, the types of data that are available, how those data are analyzed, and the confidence with which causal statements are made. By the end of the course, you will be able to dissect a large question—such as how to reform American healthcare—into its technological, social, economic, and moral components, and weigh potential solutions according to these guiding vectors.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. How Music Works: Engineering the Acoustical World (205412)

Robert Wood

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 60

How does Shazam know what song is playing? Why do some rooms have better acoustics than others? How and why do singers harmonize? Do high-end musical instruments sound better than cheap ones? How do electronic synthesizers work? What processes are common in designing a device and composing a

piece of music? How is music stored and manipulated in a digital form? This class explores these and related themes in an accessible way for all concentrators, regardless of technical background. The class is driven by hands-on projects to enhance your technical literacy, a critical skill for anyone designing solutions to today's most pressing and complex issues. The projects are designed so that the creativity of students in all fields will have a role to play. Lectures, demonstrations, and guest lecturers/performers are integrated into the class to build foundational knowledge and to inspire. We will also explore wider social and historical themes related to music and acoustics. The class is approached from an engineering perspective, using music and musical instruments as the framework to introduce a broad array of concepts in physics, mathematics, and engineering. Requires no previous exposure to physics or calculus beyond the high school level.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. The Celts: People or Construct? (212846)

Catherine McKenna

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 250

We are exposed every day to terms referring to ethnic groups, and we tend to accept these terms uncritically, assuming that we know what they mean and to whom they refer. These labels help to shape our sense of ourselves, of others, and of ourselves in relation to others. Yet the ethnic identities associated with such terms are in fact ambiguous and malleable, constructed of a shifting array of elements, including genetics, shared history, language, religion, economy, political institutions, music, architecture, and foodways. Ethnic descriptors encode attributes, either positive or negative, with which people want to associate themselves or others. So, in order to understand the claims implicit in the use of an ethnic label, we need to evaluate the bases for assigning it and who allows a people the identity they claim for themselves.

This course takes as a case study the idea of the "Celt," a term thrown around so freely that it sometimes seems to be as much a brand as an ethnonym. In our readings and a series of hands on exercises, we explore the ways in which the history, languages, material culture, and cultural mythology of Celtic peoples are used both to construct and to deconstruct Celtic identity. Then we examine the cultural and political forces that have motivated these constructions and deconstructions.

Studying what "Celt" has meant over the course of the past 2500 years, you will develop tools for analyzing the bases of ethnicity claimed by a people or attributed to them by others. And by examining the ways in

which the name "Celt" has been both adopted as a badge of honor and assigned as a way of dismissing conquered peoples, you will better understand the ways in which ethnic labels manipulate attitudes toward the groups with which they are associated.

Permanent Impermanence: Why Buddhists Build Monuments (207917)

Jinah Kim

Yukio Lippit

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Everything changes. This is, in its simplest and most fundamental formulation, one of the essential teachings of Buddhism. Buddhist communities throughout history have preached, practiced, and written about the ephemerality and illusoriness of our everyday lives and experiences. Ironically, however, many of these same communities have attempted to express these teachings in the form of monumental structures meant to stand the test of time. Some of the world's greatest cultural heritage sites are a legacy of this seeming contradiction between the impermanence that is a central presupposition of Buddhist thought and the permanence to which these same monuments seem to aspire. If the world is characterized by emptiness and the Self is illusory, how does one account for the prodigious volume of art and architecture created by Buddhists throughout history? This Gen Ed course takes a multicultural and reflective engagement with the challenges presented by this conundrum through a study of Buddhist sites scattered throughout time and space. Pertinent topics such as cosmology, pilgrimage, materiality, relics, meditation, and world-making will be explored. Through these Buddhist monuments in South and Southeast Asia, the Himalayas, Central Asia, China, Korea, and Japan, students will learn about the rich, diverse world of Buddhist practice and experience.

The First Nine Months (212874)

David Haig

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

What makes a human? A baby develops from a single cell during the nine months of gestation, but the process that begins so simply has complications that stretch beyond the womb into questions of human identity and individuality. This course will explore the process of embryonic and fetal development, highlighting complicated questions such as the medical dilemma of maternal-fetal conflict, which occurs when doctors must evaluate the competing health needs of both fetus and mother. You will study disorders of pregnancy such as gestational diabetes and preeclampsia, as well as types of nonstandard fetal development, like monozygotic twins or microchimerism, that result in human diversity. The course will also consider the kinds of families made possible by ovum donation, sperm donation, surrogate pregnancies, and the like, as well as the questions of bioethics raised by such assistive reproductive technologies.

Energy Resources and the Environment (156316)

John Shaw

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 112

This is a revolutionary time of change regarding how we produce and utilize energy around the world. How will we provide enough energy to support our growing global economy while protecting our environment? This class examines the full life cycle of each energy resource, including where it comes from geologically, how we acquire it, the way it is used in our economies, and the environmental impacts of these activities. We will run the gamut from conventional to emerging sources of energy: coal, petroleum, geothermal and nuclear systems, as well as renewable energy options. By the end of this course, you will be familiar with the materials, tools and methods used in modern energy industries. You will be able to understand the ways in which we currently produce usable energy, and their effect on our environment. These insights into current practices, combined with an assessment of future trends in technology and energy demand, will help you to become a citizen who understands and can therefore help shape our energy systems, and preserve our environment in the face of expanding human development.

Multisensory Religion: Rethinking Islam Through the Arts (125190)

Ali Asani

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

One need only walk into a church, a mosque, a temple, a synagogue or any place of worship to experience the complexity, beauty and aesthetic power of religion through the senses. For millions of believers the world over, their experience of religion is not only—or even primarily—dictated by ideological teachings; it is forged through personal and private experiences, very often sensory in nature and embedded in the arts broadly defined. These "silent" forms of religion—silent because we generally do not hear about them in the media or in political and social spaces—are centered on the individual believers' faith and relationship to the divine or the transcendent. The arts are key to understanding religion as a multisensory experience rather than just an ideology of identity and to asking questions like: What does it mean to call some art "religious"? Who decides what counts? On what basis? How can interpreting an individual believer's engagement with the arts as an exercise of religious authority help us see "religion" in a new light?

This course focuses on Islam as a case study through which we can explore the complex and multifaceted relationship between religion and the arts. We will learn to listen, see, and experience those "silent" forms of Islam by studying Muslims' engagement with the literary arts (scriptures, panegyrics, love lyrics, epic romances, folk songs, and folk tales), as well as sound and visual arts (Quran and poetic recitations, music, dance, drama, architecture, calligraphy, and miniature painting). In the process, we will create a nuanced picture of the rich and multicolored tapestry of the ways in which the arts create religious tradition and innovation, weaving the voices of poets, novelists, short-story writers, folk musicians, and rock stars with those of clerics, theologians, mystics, scholars, and politicians.

Given the cultural diversity of Muslim societies, the course draws on material from regions beyond the Middle East, particularly sub-Saharan Africa and South and Southeast Asia. This course assumes no prior knowledge of Islam.

The Crusades and the Making of East and West (212838)

Dimiter Angelov

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** 60

A series of wars in the later Middle Ages, the Crusades are one of the most significant and deeply symbolic events in human history. Marked by warfare and cross-cultural encounter between Christians and Muslims, they saw the first large-scale migration and colonization by Europeans before the Age of Discovery, the rise of the Italian merchant republics, and the solidification of religious and cultural identities across Europe and the Mediterranean. Students will learn about the origins of the Crusades, the most important expeditions, the expansion of crusading toward new targets, and the decline of crusading after the sixteenth century. This course is about the Crusades both in history and in memory, about communities in war and peace, and about stories and memories that have endured to the present day. With the help of fascinating texts written by Westerners, Byzantines, and Muslims, it explores how each culture interpreted and remembered the Crusades, and how the Crusades have come to mark our understanding of the East and West as distinct cultural traditions.

Who Lives, Who Dies, Who Cares? Reimagining Global Health (124127)

Arthur Kleinman

Paul Farmer

Anne Becker

Salmaan Keshavjee

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 250

If you are sick or hurt, whether you live or die depends not only on biological factors, but social ones: who you are and where you are, what sort of healthcare system is available to help you survive, and what kind of care is available to help you recover, if society believes you deserve it. Most medical research narrowly focuses on the biological basis of disease, but this course takes a novel biosocial approach to reveal how governments, institutions, and histories shape health and well-being, how poverty and racism get into someone's lymph nodes, how cost- saving measures manifest as tuberculosis in someone's lungs. In doing so, the course challenges the conventional assumptions within the field of global health—examining how interventions influence what happens after a catastrophe in unexpected ways, how the persistence of health inequalities over centuries can be explained, how the structures of powerful institutions influence the policies they develop, how the poor deserve not only health care but high quality health care, and how caregiving and global health are urgent moral practices.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. The Climate-Energy Challenge (126633)

Daniel Schrag

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 75

This course will examine future climate change in the context of Earth history, and then consider various strategies for what might be done to deal with it. The likely impacts of continued greenhouse gas emissions will be explored, emphasizing the scientific uncertainties associated with various predictions, and how this can be understood in the context of risk. In the latter third of the class, the question of how to mitigate climate change will be discussed, including an examination of various options for advanced energy systems. By the end of the semester, you will be able to design a low-carbon energy system for the U.S. with a consideration of each of our four basic energy sectors (transportation, industry, residential and commercial, and electricity). You will also develop an understanding of international climate efforts and consider the policy options to combat climate change.

Class Notes: **This course has an enrollment cap and requires that you use my. harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on the date listed on the course syllabus. If interest exceeds available seats, a lottery of those who have requested permission will determine which students may enroll. For more information, including how to request permission, please visit the course's Canvas site and gened. fas.harvard.edu/enrollment.**

Is War Inevitable? (214413)

Derek Penslar

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Why is there war? Will there always be war? This course tackles these questions through a historical overview of human conflict that incorporates approaches from International Relations, Psychology, Ethics, and Comparative Literature. The course begins by discussing the socio-biological roots of human aggression and altruism, and pre-modern justifications for war and attempts to place limits on its conduct. We will then move on to a series of case studies of modern wars, divided into six types - interstate, revolutionary, civil, colonial, separatist, and global. We will examine each type of war's effects on fighters and non-combatants alike and repercussions for post-war society. We will see how each type of war has fostered different approaches – ranging from international humanitarian law, organizations like the League of Nations and United Nations, and anti-war protest movements –to the prevention, mitigation, or resolution of conflict. We will conclude with two final case studies: the Cold War (1947-1991) and "War on Terror" (2001 -), which have reduced war's intensity but rendered it more difficult to eradicate and more potentially destructive.

Our readings will combine textbook overviews of wars and their aftermath, in-depth studies of specific topics, and primary sources such as works on military strategy and just war theory, representations of war in literature and cinema, and diaries and memoirs. Course requirements include a take-home midterm, a final examination, and two short papers based on the primary sources.

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Tradition, Performance, and Culture (125216)

Stephen Mitchell

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** 75

What is culture, and how does it shape us? This class explores how folklore (a broad term meant to include all aspects of tradition, custom, and heritage) and its expressive manifestations shape national, regional, and ethnic identities. In particular, we examine the function of folklore within the communities that have, perform and use these cultural goods, as well as the ways traditions are expressed and performed in daily life. In this

course, you will study major forms of folklore (e.g., myths, legends, beliefs, rituals, festivals), as well as the theoretical approaches (e.g., performance theory, the ethnography of communication) used to interpret cultural documents drawn from the world of traditional expression and ritualized behavior.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on Friday, September 6. If interest exceeds available seats, a lottery of those who have requested permission will run on Friday, September 6, and all participants will be notified of the results via Harvard email. Natural Disasters (112430)

Brendan Meade

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 70

From Mexico to India, San Francisco to Tokyo, natural disasters have shaped both the surface of our planet and the development of civilizations. These catastrophes claim thousands of lives and cause tens of billions of dollars in damage each year, and the impact of natural disasters is only increasing as a result of human population growth and urbanization. This course uses the methods and skills associated with earth science to help you to develop an understanding of both the causes and impacts of these events. By the end of this course, then, you will be able to understand the ways in which societies can systematically anticipate and prepare for the kinds of natural disasters which many people have come to assume are inevitable.

Pyramid Schemes: What Can Ancient Egyptian Civilization Teach Us? (126641)

Peter Manuelian

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 120

How much of your impression of the ancient world was put there by Hollywood, music videos, or orientalist musings out of the West? How accurate are these depictions? Does it matter? This course examines the quintessential example of the "exotic, mysterious ancient world" – Ancient Egypt – to interrogate these questions. Who has "used" ancient Egypt as a construct, and to what purpose? Did you know that pyramids, mummies, King Tut, and Cleopatra represent just the (overhyped) tip of a very rich civilization that holds plenty of life lessons for today? Combine the ancient Egyptians' explanations of the world's natural forces with all the social complexity of human interaction and you have a fully formed society—about four millennia of accumulated experience!

Can investigating the "real" ancient Egypt unpack our current misconceptions about the land of the pharaohs? Hardly morose, tomb-building "zombies," the Egyptians embraced life in all its messy details. Piety and corruption, imperialism and isolationism, divinity and mortality all played significant roles in life along the Nile. What can we learn about the nature of politics and society in our time by seeing the parallels between the ancient past and today?

We will explore archaeology, modern Egyptomania, repatriation, new digital visualization technologies, and international politics. What was ancient Egyptian racism? What is archaeological racism? Who owns the past? Who needs it? We will take excursions into Egyptian art, history, politics, religion, literature and language (hieroglyphs), plus the evolution of Egyptology as a discipline. Field trips to the Museum of Fine Arts, Boston, the Peabody Museum, and the Harvard Semitic Museum are included, along with the Giza Pyramids in 3D, viewed in Harvard's Visualization Lab classroom.

Students will gain a transformative appreciation for the outstanding monuments and intellectual traditions of ancient Egypt. And with newly broadened horizons, we will debunk the popular myths.

The Two Koreas in the Modern World (116999)

Carter Eckert

2020 Spring (4 Credits) **Schedule:** MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 60

How and why did there come to be two competing and adversarial states on the Korean peninsula in our contemporary world, one a prosperous capitalist democracy of global reach, and the other an impoverished dictatorship, bordering on theocracy and almost totally estranged from the international community—both claiming exclusive rights to speak for the Korean people and the Korean "nation" as a whole? In this course, we will explore not only the two contemporary Korean societies, North and South, but also to Korea's pre-modern and colonial periods, and to explore together the roles played by China, Japan, the United States, and Russia (Soviet Union) in shaping modern Korean history. We will look beyond the headlines to come to a more complex and nuanced understanding of the conflict on the Korean peninsula as one grounded in the history and legacies of the past hundred years. By showing the tumultuous changes, some good, some ill, on the Korean peninsula since the late 19th century, the course challenges us to confront the constantly shifting nature of historical forces, and to examine the ethical dimensions of particular historical choices. Readings will include primary source materials from each period, and assignments will culminate in a research paper or other capstone project that engages with the individual actors, historical forces, and global politics that have shaped the two Koreas.

The Business of China (108854)

William Kirby

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 60

China will become the world's largest economy by 2030. Chinese firms have transformed business landscapes at home and now seek a global role. What can we learn about China—its people, its government, its culture—from its transformative enterprises? This course uses business as a lens through which to study modern China and its global impact. Using Harvard Business School case studies, we explore the drivers of China's growth: traditional family firms and internet startups; state-owned enterprises and private-sector challengers; and the catalytic role of Hong Kong, Taiwan, and foreign enterprise in shaping contemporary China. We study the role of the Communist Party and government (local and national) in business and society. The course puts special attention on how U.S.-China relations are shaped by business in the era of Xi Jinping and Donald Trump. Can China lead? Will the 21st century be "the Chinese century?" At the end of this course you will be able to make well-informed judgments.

Making Change When Change is Hard: the Law, Politics, and Policy of Social Change (212858)

Samantha Power

Cass Sunstein

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 255

How does change happen? When, why, and how do people, and whole nations, come to together to influence large-scale policies and actions on issues like the environment, equality, criminal justice? Why do revolutions occur? This course will try to answer these questions, and do so by exploring a diversity of efforts related to societal change. In an effort to draw general lessons for those interested in making change, we will assess a range of political and legal approaches; examine mass movements and the leadership by organizations, governments, and individuals; and attempt to gauge outcomes. Using research from psychology, political science, and economics, and focusing on case studies, the course will explore the ideas behind several arguments: 1) big problems are rarely resolved with comparably big solutions, but instead are better met with small acts of reform; 2) coalition-building among strange bedfellows is usually indispensable; 3) agents of change fare best when they look to measure their impact and never lose sight of the real world results they seek, rather than the expressive highs along the way; 4) informational "cascades" are possible and critical, as people follow one another; and 5) group polarization can be both desirable and dangerous, as groups become more heated and more extreme.

Science and Cooking: From Haute Cuisine to Soft Matter Science (126638)

David Weitz

Pia Sorensen

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Food and cooking are part of your everyday life. Whether you are a skilled chef or a home-cook, what you do in the kitchen is deeply rooted in science. This class brings together top chefs and Harvard scientists to explore how everyday cooking and haute cuisine can illuminate basic principles in physics and chemistry. Throughout the semester you will watch as chefs reveal the secrets behind some of their most famous culinary creations. Inspired by such cooking mastery, we will then explore the science behind the recipes. Students will gain a solid understanding of the properties and fundamental behaviors of soft matter materials. All food is made of soft materials, and cooking relies on many of their fundamental properties. Topics will include: emulsions, illustrated by aioli; elasticity, exemplified by the done-ness of a steak; and diffusion, revealed by the phenomenon of spherification, the culinary technique pioneered by Ferran Adria. The course includes laboratory work where students develop their skills as experimental scientists. Other assignments include weekly homeworks, in-class exercises, and a final project where students explore the science of a culinary topic of their choosing.

Course Notes: **Occasionally there will be an optional 15-30 minute question and answer session with visiting chefs.**

Can We Know Our Past? Archaeology's Dirty Little Secrets (112378)

Rowan Flad

Matt Liebmann

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 90

What happened in the past? How do you know? Even though today we take great pains to document every major event that occurs, more than 99% of human history is not written down. How, then, can we determine with any certainty what people did, let alone thought about, hundreds, thousands, and even millions of years ago? This course addresses these and other fundamental questions: Can we ever really know what happened in the past? If the past is "dead and gone," how do we know what we (think we) know about it? And what is our degree of certainty about the past societies and cultures that historians, archaeologists and others study today? Through hands-on interaction with artifacts, experiments and other analytical methods you will consider how these approaches relate to different "stakeholders" – groups of people whose understanding of themselves is rooted in a connection to history. By the end of this course, you will have a sense of how your knowledge of the seemingly-distant past is, in fact, intimately tied to your experiences in the contemporary world.

Why You Hear What You Hear: The Science of Music and Sound (114922)

Eric Heller

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

Sound and music are integral parts of all human cultures, and play critical roles in communications and social interactions. In this course, we study the production, transmission, and perception of sound, with the aim of expanding communication, musical, and artistic horizons. The course includes many class demos and hands on tools for students to explore. Psychoacoustics (the study of how we perceive and interpret sound) is a central theme of the course, providing a lens through which we can better understand the generation, propagation, and analysis of sound. Student-selected projects (with staff consultation) are an important part of the course.

Energy Bodyworks (212766)

Scot Martin

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** 60

How we conceptualize the universe influences what we can discover and know – and vice versa. The history of the understanding of the human body puts forth an instructive embodiment of this principle. This course explores historical and contemporary thinking about the human body, the most recent paradigm of which is as a machine of interconnected components that function together according to force (N) and energy (J) laws. Course topics include historical thinking, the scientific method, and the human body as a force machine. This machine acts through the forces of muscles, leading to movement such as walking and gait, and it is driven by the interconnected system of lungs, heart, blood, and metabolism. The machine constantly interchanges gravitational, mechanical, and chemical energies to do useful actions. How the machine can and does break down, represented by illness and disease, is considered within this context. The student who graduates from Energy Bodyworks should (i) expect and welcome the evolution in scientific understanding in all matters health and otherwise during the span of a lifetime, (ii) be critically cognizant of the body as a mechanical and chemical machine, and thereby (iii) be positioned as a lifetime steward of the body, both personally for one's own well-being as well as civically for health issues that transect country and globe.

Classical Mythology: The Power of Myth in Antiquity and Today (126004)

Brigitte Libby

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 140

The myths of ancient Greece and Rome embody both our worst nightmares and our most fabulous fantasies. Heroism, happy endings, and everlasting love blend with disturbing themes of parricide, cannibalism, incest, misogyny, and unthinkable violence. The resulting stories have fascinated artists, writers, and thinkers throughout western civilization, and this course will serve as an introduction to this distant but strangely familiar world. We will move from the very first works of Greek literature through the classic Greek tragedies and the Roman tales in Ovid's Metamorphoses. Along the way, we will ask these fundamental questions: What is "mythology"? What can these ancient stories tell us about ourselves as human-beings, and why are they still so resonant thousands of years later? And how does mythology both ancient and modern continue to reflect and shape our world view today? We will use examples from

classical mythology to see how a society can re-remember and revise traditional stories to fit changing cultural circumstances and political ideologies. Our discussions will consider ancient rationalizations of myth, psychoanalytic approaches to myth, the use of myth in politics, and the reception of classical myth in the modern world.

Prediction: The Past and Present of the Future (212919)

Alyssa Goodman

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

Human beings are the only creatures in the animal kingdom properly defined as worriers. We are the only ones who expend tremendous amounts of time, energy, and resources trying (sometimes obsessively) to understand our futures before they happen. While the innate ability of individual people to predict has not changed much in the past few millennia, developments in mathematical and conceptual models have inordinately improved predictive systems. These systems have integrated comparisons to past results and quantified how "certain" we can be about various aspects of the future -- processes that were, in many cases, inconceivable at one point in the past. This course is a coordinated investigation of the history and future of prediction, beginning with Ancient Mesopotamians reading signs in sheep entrails and ending with modern computer simulations for climate, health, wealth, and the fate of our Universe. In this class, you will design your own predictive systems to critically engage with assumptions about how the world works and situate your explorations in a study of how motivations and techniques for divining the future have changed–and not changed–throughout human history.

Painting's Doubt: A Studio Course (212855)

Matt Saunders

2020 Spring (4 Credits) **Schedule:** R 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 72

Painting is an engagement between the self and the world. It is a practice of embodied making, and, as a language outside of words, can think around conditioned understanding. This introductory studio art course proposes learning to paint as a new experience of relating to the world, and through painting we will investigate not only what we have to say, but what we have to see.

Studio assignments in small sections are complemented by weekly lectures, visiting artist presentations, readings and visits to Harvard's collections. The primary materials for this course will be oil on canvas, with some excursions into drawing and work on a paper. No experience is necessary, except a willingness to make a mess.

Class Notes: **Studio sections scheduled for W 9 a.m.-1 p.m., Th 9 a.m.-1 p.m., F 9 a.m.-1 p.m., W 3-7 p.m., Th 3-7 p.m., or F 3-7 p.m. You must be able to attend one of these sections to enroll in the course. If you are granted permission to enroll, you will be able to select your section based on a first-come, first-served process at the time of enrollment.**

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen**

Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.

Human Trafficking, Slavery and Abolition in the Modern World (214486)

Orlando Patterson

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

We often think of slavery as being a dark chapter in our past, but this is a tragic oversimplification. What defines slavery in the modern world, and what are the moral, political and social implications of its continued existence? As we explore its underpinnings, we discover that all of us may be in some way complicit in its survival. This course surveys the nature, types and extent of modern servitude such as transnational and domestic prostitution, forced marriage, labor trafficking and forced domestic labor, child soldiering and other forms of enslavement of children, organ trafficking and other health aspects of trafficking, debt-bondage, and the forced exploitation of other vulnerable groups such as refugees and stateless persons. Throughout the course, but especially in the final part, we examine anti-trafficking and anti-slavery measures and movements and ways in which you can increase awareness or become involved. You will, by the end of our exploration, be able to trace the moral and ethical arguments surrounding human slavery in its various forms, understand the ways in which this problem still affects so many people, and what can and should be done about it.

Medical Ethics and History (108405)

David Shumway Jones

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** 250

Students will encounter the ethical dilemmas of medical practice throughout their lives, whether with their own health, or with the health their families and friends. This course will equip them with the tools of moral philosophy so that they can recognize, critique, and craft arguments grounded in appeals to utilitarianism, deontology, or rights. But the course will focus on historical analysis of the debates so that students understand how social, economic, and political contexts have influenced moral reasoning. By clarifying their own thinking in the classroom, students will be better equipped to engage in the debates and contribute to the ongoing efforts by medicine to relieve human suffering.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on Friday, September 6. Nature (109030)

Joyce Chaplin

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

The planet is in crisis; we live in a state of emergency. Our emergency circumstances encompass a range of daunting environmental problems that make inaction simply not an option. We need to think clearly and calmly about this crisis to craft the best possible solutions. But the kind of clear, calm thought we will need to use requires two kinds of understanding. First, we must think with precision about what nature is, especially in its ethical dimensions. Second, we will need to understand how to deal with the inevitable tradeoffs any solutions to our environmental crises will bring with them. How, in short, is it possible to craft solutions that will be as just as possible, to as many people as possible? And if that justice should extend beyond the human community, to include the nonhuman parts of nature, how will this be accomplished? This class is designed to give you an intellectual, verbal, and ethical toolkit for dealing with the important debates over imperiled natural resources and competing human needs that will only become more urgent as the years go by.

The Holocaust (212918)

Kevin Madigan

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Who is responsible for genocide? Through the lens of the Holocaust – perhaps the most-studied genocide of the modern era – we will grapple with the issues of good and evil, blame and responsibility, duty and dissent as they pertain to violence enacted at the personal and state levels. What is the responsibility of "citizens and citizen leaders" in the face of local and global crises brought on by genocide, refugee catastrophes, terror, neo-fascism, etc.? And how do we make meaning out of what seems senseless? The course will address the historical background and context of the Holocaust, competing theories about who was responsible and why, and representations of the Holocaust in film and literature.

Course Notes: **This course is open to undergraduate students only.**

Law, Politics, and Trade Policy: Lessons from East Asia (212842)

Christina Davis

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

How do states balance the challenges and opportunities of international markets? Importing ideas and resources while exporting manufactured goods underlies the East Asian growth miracle but also builds conflict with other governments. This course examines the transformative role of trade policy for Japan, Korea, and China. From the "unequal treaties" of the nineteenth century to the World Trade Organization today, trade law binds the interactions between East Asia and the world. Japan grew from an isolated samurai nation to a leading economic power but now confronts stagnating growth. Korea relied on business conglomerates for rapid industrialization and embraced liberalization to steer its way out of financial crisis. China turned to the WTO to anchor domestic economic reforms but now faces U.S. resistance to its export dominance. East Asia offers models of the success and problems that accompany

globalization.

The Political Economy of Globalization (107821)

Lawrence H. Summers

Robert Lawrence

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Why is populism becoming pervasive - and is there a revolt against global integration? What is the right balance between national sovereignty and international integration? Is the US equipped to sustain its role as a global leader? How does international trade affect prosperity and inequality? Should we regulate multi-national companies who move their factories to countries with lower labor standards? How should the IMF respond to financial crises in Europe and the developing world? How will the rise of China change the world system? This course uses basic economic logic to illuminate the choices - and trade-offs - faced by governments, international institutions, businesses and citizens as the global economy evolves. Our course is based on the premise that passion without careful reason is dangerous and that reliance on solid analytics and rigorous empirical evidence will lead to a better world. Policy issues are debated in class by the professors and guest speakers, and students will participate in simulated negotiations on Brexit and on the US-China economic relationship, experiencing the issues first hand, as well as illustrating the importance of decisions made by individual actors for the evolution of the global system.

Economic Justice (159809)

Mathias Risse

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Which is more just: capitalism or socialism? Capitalism has long reigned as the ideological solution to organizing society, yet recent social science literature makes clear that the pursuit of seemingly boundless material gain for some comes at the expense of others. Climate change is increasingly tied to capitalism and industrialization, and the U.S. has seen growing discontent around an ever-widening gap between the richest of the rich and the poorest of the poor. Socialism addresses this wealth gap, but has had a checkered past around the world. So what is the answer? In this course, you will reflect on social justice in industrial societies over the last 250 years and grapple with potential answers to questions of economic justice.

Islam and Politics in the Modern Middle East (126908)

Malika Zeghal

2019 Fall (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Today's news headlines consistently point to the role that religion plays in the political life of Middle Eastern societies. But do these headlines tell the whole story? This course will challenge simplistic explanations of the dominant role of Islam in Middle Eastern politics by putting it in historical perspective. You will explore the genealogy of some of the most important debates about the role of religion in politics: the extent of Middle Eastern states' involvement in religion, the place of religious minorities, whether religious norms should infringe on individual freedoms, and the various political theologies at play in Islamist opposition movements, in liberal conceptions of religion, and in state religious interpretations. At the crux of these vigorous debates is the issue of the meaning of a "Muslim state," an issue that has shaped vibrant discussions and deep political disagreements that you will discover through textual and historical analysis of primary sources. Understanding who were the men and women who participated in these debates over the modern history of the Middle East, what they argued for and against, and the context in which they made their claims will provide you with the historical and textual perspective to make sense of the news headlines about religion and politics in the Middle East.

The Conduct of Life in Western and Eastern Philosophy (122544)

Roberto Mangabeira Unger

Cornel West

2020 Spring (4 Credits) **Schedule:** R 0100 PM - 0259 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

A study of approaches in the philosophical traditions of the West and the East to the conduct of life. Philosophical ethics has often been understood as meta-ethics: the development of a method of moral inquiry or justification. Here we focus instead on what philosophy has to tell us about the first-order question: How should we live our lives?

Course Notes: **No prerequisites other than a willingness to consider a wide range of problems and materials. Extended take-home examination.**

Offered jointly with the Law School as 2392 and the Divinity School as 2313.

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Infectious Diseases and Social Injustice (110382)

Donald Goldmann

Ken McIntosh

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 75

Advances in prevention and treatment of infectious disease have left large segments of the global population behind. This course studies the societal impacts of nine infectious diseases: HIV/AIDS, malaria, plague, polio, cholera, smallpox, yellow fever, syphilis, and tuberculosis. As you trace these diseases through history, you will learn about their epidemiology and how they make people sick, explore their effects on humanity as seen through the lenses of history, literature, film, music, and drama, and grapple with questions about injustice, inequity, and stigmatization. Classes will be highly interactive and include case studies, provocations, role plays, advocacy pitches, a mock trial, debates, and collaborative learning. You will leave this course with a holistic understanding of infection as an issue that requires not only medical and scientific advances, but also societal cures.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on Friday, September 6. Loss (212841)

Kathleen Coleman

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** 120

Loss is an inevitable fact of human existence. Small losses most of us learn to bear with equanimity. But enormous, wrenching, life-changing losses open voids in our lives for which we can never feel adequately prepared, even if we can see them coming. This course tries to understand the nature of loss on a physical and emotional level, to give us some framework for coping with it and to help us develop some empathy in those very difficult situations when someone else has faced a loss and we do not know how to react. Our main focus will be upon the loss of someone "close" to us, through either death or a personality-changing accident or illness ("close" is in quotation marks, because some of these losses may be of public figures whom we have never met personally, but whose loss makes an impact on our entire society). We will compare this form of loss with others, such as loss of country through exile or forced migration and loss of part of oneself through amputation. Our approach will be threefold: we will try to understand the physiological and psychological effects of loss; we will study the rituals that different societies have evolved to mark loss and memorialize the lost; and we will analyze textual, artistic, and musical expressions of loss, chiefly "great works," but also some more humble attempts to record the emotional rupture that loss entails. We will work on a broad canvas, both spatially and chronologically, looking at personal testimonies as various as Cicero's reactions to the death of his adult daughter; the diary of the nineteenth-century Japanese poet, Kobayashi Issa, charting his father's last days; two great twentieth-century authors, C. S. Lewis and Joan Didion, writing about the loss of their life partners; and many others. We will encounter tombstones with simple inscriptions commemorating the death of family pets from the Roman world and set these in the context of scientific research on the human-animal bond, as manifested by both humans and animals reaching the end of their life. We will study prayers for the dead in the major faith traditions, and visit (virtually) the Rothko Chapel in Houston, Texas, to consider the therapeutic effects of the somber walls of its octagonal interior. We will listen to two Requiem Masses, one religious and one secular. We will examine mourning rituals in the Shona culture of Zimbabwe, to see how pre-colonial beliefs and practices have become melded with the religious practices of the colonizers. By the end of the course, which will have ranged far beyond these few examples, we will have gained a deeper understanding of the effects of loss on us both individually and collectively, and of the rituals and therapies that different societies have developed over time to mark and memorialize it.

Is the U.S. Civil War Still Being Fought? (128327)

John Stauffer

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Most of us were taught that the Civil War between the Confederacy and the Union was fought on battlefields chiefly in the American South between the years of 1861-1865. In this narrative, the North won and the South lost. But what if the issues that resulted in such devastating bloodshed were never resolved? What if the war never ended? This course demonstrates the ways in which the United States is still fighting the Civil War, arguably THE defining event in U.S. history. In each class, we connect current events to readings and themes in the course, highlighting how and why the war is still being fought. From Nat Turner's slave rebellion in 1831 to the recent riot (or battle) in Charlottesville, we trace how and why the South was in certain respects the victor, even though the Confederacy was destroyed and the Constitution amended. We explore the different kinds of war—ideological, political, cultural, military, and para-military—that placed the unfreedom of blacks—as slaves, serfs, and prisoners—at the center of larger conflicts over federal versus state and local rule, welfare, globalization, and free trade. We analyze the Civil War in literature, art, politics, photography, prints, film, music, poetry, speeches, and history, while also discovering how these cultural forms worked to shape our memory of the event itself. By the end of the course, we will be able to show how and why contemporary U.S. debates are rooted in this defining narrative, and we will better understand the dilemmas the nation faces today.

Interracial Encounters in American Literature and Culture (146591)

Ju Yon Kim

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

From depictions of exchanges in the early colonial Americas to efforts to envision alternate and imminent futures, this class will examine representations of interracial encounters in U.S. American culture. We will explore how various texts and performances have conceived, embodied, and reimagined the relationships not only among differently racialized groups, but also between race and nation, individual and community, and art and politics. Topics addressed in this course will include narratives of indigeneity, contact, and migration; cross-racial performances and the question of cultural appropriation; political and artistic collaborations; and interracial encounters in a transnational context. Course requirements will include two exams, two papers, and individual and group creative projects.

Power and Civilization: China (142451)

William Kirby

Peter K. Bol

2019 Fall (4 Credits) **Schedule:** W 0900 AM - 1100 AM

Instructor Permissions: Instructor **Enrollment Cap:** 56

In China today we see a new country built on the bedrock of an ancient civilization. China's re-emergence as a global economic power and political model has deep roots. From Rome to the Romanovs, from Byzantium to the Ottomans, on to the global empires of the West, all the great multiethnic empires of the world have come and gone, while a unitary, multi-national, Chinese empire has endured. The ancient Chinese ideal of a single, unified civilized world has had consequences. It was, and still is, a grand vision: all peoples unified under a single ruler and an integrated social order that finds a place for every person in security and harmony. It created the first centralized bureaucratic state; it institutionalized meritocracy; its economy became the world's greatest market; its philosophies provided models of humane governance; its inventions spread across the globe. And yet in practice it has also been a story of conflict and control, of warring states and competing peoples. We will discuss how the choices China has made in the past bear on the challenges it faces today, when a modern "China model," with ancient roots, competes with the United States for global leadership.

The Challenge of Human Induced Climate Change: Transitioning to a Post Fossil Fuel Future (120031)

Michael McElroy

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

Human induced climate change has the potential to alter the function of natural ecosystems and the lives of people on a global scale. The prospect lies not in the distant future but is imminent. Our choice is either to act immediately to change the nature of our global energy system (abandon our dependence on fossil fuels) or accept the consequences (included among which are increased incidence of violent storms, fires, floods and droughts, changes in the spatial distribution and properties of critical ecosystems, and rising sea level). The course will be designed to provide students with an understanding of relevant physical, technical and social factors including an historical perspective. In the latter half of the course, the plan will be to engage students in an interactive dialogue on possible responses recognizing explicitly differences in motivations for different constituencies - for developed as distinct from developing economies for example. We plan to explore options for a zero carbon future energy system including the challenges involved in implementing the necessary transition. If we fail to abandon our dependence on fossil fuels - and the time scale over which we must do so to realize even the minimal objectives outlined in the recent Paris climate accord is as brief as a couple of decades or even less – might we need to explore possibilities for geoengineering, for purposeful intervention in the global climate system? Arguments for and against such options will be discussed and debated. We will expect students to be actively involved in exploring, researching and debating responses to any and all of these interrelated issues.

Course Notes: **Students who have taken Science A-52 may not take this course for credit.**

Class Notes: **Beginning in Spring 2020, there is a new enrollment process for all Gen Ed courses. See https://gened.fas.harvard.edu/enrollment for more information and detailed instructions.**

Politics, the Greatest Art (123834)

Doris Sommer

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How does thinking like an artist ignite political change? We explore the question in collaboration with the Institute of Politics at Harvard Kennedy School. Through guest lectures, we update classic readings on the effects of creative interruption. Readings from Aristotle to Habermas will arouse questions and speculations in written assignments. The final project is to design a collaborative creative intervention for a political challenge. An accompanying individual essay traces the development of this intervention with references to cases and readings covered in class. Students can pursue practical work while reflecting on general issues through an engaged learning option. This course will prepare you to recognize and to contribute to political change through unconventional interventions broadly defined as art.

Martin Luther King, Jr. and the Question of Conscientious Citizenship (207580)

Brandon Terry

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

What does it mean to be a conscientious citizen? What are our responsibilities as civic-minded, morally-engaged members of overlapping communities? This course seeks to answer such questions by exploring the ethical, religious, and political thought of arguably the greatest public intellectual and activist that the United States ever produced, Martin Luther King, Jr. In interrogating King's body of public philosophy, as well as its leading critics and interpreters, we will pursue a body of questions that remain essential to thinking through the problems of citizenship in the current age. Students will debate: How should we think about the tensions between conscience and community? How ought we think about the alignment of moral ends with practical and political means (e.g., violence, law, civil disobedience, coercion, revolution, rebellion, etc.)? Is there room for public profession of faith in political discourse or is it a conversation stopper? Lastly, given the persistence of evil and injustice, can suffering in service of justice be redemptive or does such hope simply reify the structures of injustice?

Race and Justice (212856)

Tommie Shelby

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 90

We all agree that racism is wrong. Yet beneath this abstract consensus we find deep disagreements about what to do about it, and even about what racism is. We will address these questions by thinking about some very specific issues, drawing on work in philosophy, law, history, and the social sciences. Is racism best understood as a system of beliefs or social structures? What makes racial discrimination wrongful? Should we seek to discourage hate speech, and if so, should it be regulated by law or through informal social norms? Is a just society colorblind? If so, how should we think about the justice of desegregation, affirmative action and reparations for slavery, all of which aim to use racial categorization to address racism? On the other hand, if a just society need not be colorblind, is it wrong for police departments to use racial profiling where profiling enables them to deploy resources more efficiently? All of these are important questions for us to confront, for the very answers that seem obviously right to some us will seem obviously wrong to others.

This course will require us to probe our convictions about some deeply held beliefs on significant issues. Students will seek out the best arguments that can be marshaled on behalf of their own moral and political views, identify the vulnerabilities of these arguments, and seek to understand those who disagree by considering the strongest arguments for the views they reject. Our understanding of our own values will deepen and may shift in the process. We will emerge from this investigation with a clearer grasp of what racism is, why it is wrong, and what a world without racism might look like.

Moctezuma's Mexico, Then and Now: The Past as Present in North America (112754)

Davíd L. Carrasco

William Fash

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course provides students with the opportunity to explore how the study of pre-Hispanic and Colonial Mexican and Latina/o cultures provide vital context for understanding today's changing world. The emphasis is on the mythical and social origins, glory days and political collapse of the Aztec Empire and Maya civilizations as a pivot to the study of the sexual, religious and racial interactions of the Great Encounter between Mesoamerica, Africa, Europe, and the independent nations of Mexico and the United States. The study of the archaeology, artistic media, cosmovision, capital cities, human sacrifice and the religious devotions of ancient Mesoamerica illuminate the Day of the Dead and Virgin of Guadalupe phenomena today. Hands-on work with objects at the Peabody Museum aids in examining new concepts of race, nation and the persistence of Moctezuma's Mexico in Latino identities in the Mexico-US Borderlands. One of the biggest student/museum events at Harvard is the Day of the Dead celebrations at the Peabody Museum, which provides the opportunity for students to work directly with the materiality of the longue duree of Mexico's storied history and evocative worldview. The museum objects and sections exercises provide the students with ways to integrate their classroom work to the collections and public program of the museum, plus experience community both locally and across cultural boundaries and physical borders. This course empowers our students to evaluate the ways the U.S. is changing and struggling to define itself in relation to Latin America and especially the migration of peoples, ideas, arts, music, food from and through Mexico.

Medicine and Conflict: The History and Ethics of Healing in Political Turmoil (212839)

Soha Bayoumi

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

"War is the only proper school for surgeons," the Ancient Greek physician, Hippocrates, is quoted to have said. This saying has been used to show how medicine and war have been thought for millennia to shape each. Medicine has played a major role in situations of political conflict, ever since human societies engaged in war and started elaborating "just war doctrines," that determine how belligerent parties should conduct war, as an attempt to "civilize" war and mitigate its scourges.

Through an investigation of case studies from the modern and contemporary world, this course will examine the role played by medicine in situations of political conflict, as well as the role played by war and humanitarian crises in the history of medical thought and practice. It will explore how medical knowledge and expertise have been deployed in situations of political violence or tumult and will ponder some of the ethical dilemmas faced by medical professionals in those contexts. Covering cases ranging from surgery in the American Civil War to the provision of medical care in the Syrian refugee crisis, some of the themes discussed will include biomedical ethics in armed conflict, torture, trauma, contagion, and medical innovation in conflict contexts.

The Incas and Their Empire (117137)

Gary Urton

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 250

The Incas forged an empire across altitudinal extremes and without writing, markets, and the wheel – all typical components of the standard conception of "empire." How did they do it, and what made their civilization so different from other ancient empires? Did their empire's collapse after the Spanish conquest eliminate the beliefs, values, and institutions at the heart of Inca society, or might the Spaniards have been influenced by the Incas without knowing it? This course will engage you in conversations about empire and influence, power and defeat, contrasting what we know of the Inca Empire with our knowledge of other ancient civilizations, as well as the first global empire of early modern Spain. In addition to lectures, films and discussions, students will explore the cultural world of the Inca Empire through the hands-on study of ancient Peruvian artifacts in the Peabody Museum of Archaeology and Ethnology. Readings will include such texts as T. D'Altroy's, The Incas (2015), on the nature and organization of the Inca Empire, and J. Sharman's Empires of the Weak (2019), arguing against the long-held belief that European military superiority after 1500 was decisive in Europe's global expansion.

The Science of Happiness (212847)

Jason Mitchell

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 270

Recent research in the cognitive sciences—especially psychology, economics, and neuroscience—has begun to examine the factors that promote personal well-being and happiness. One surprising, but consistent, observation has been that many of the things that are widely believed to be crucial for our happiness—wealth, material possessions, "not missing out", even good grades—not only fail to make many people happy but can actively undermine the sense of well-being. The course begins by introducing some misconceptions that many people might have about what makes for a satisfying life. We will then examine the psychological biases and other mental quirks of our mind that make it hard for us to identify what actually makes us happy, and we will then discuss what recent research reveals about factors that promote happiness. Importantly, throughout the course, students will be invited to apply these strategies in everyday life. In other words, we will both discuss what new results in cognitive science suggest to anyone interested in better understanding the factors that promote happiness, and also actively put these scientific findings into practice. Along the way, we will review historical and cross-cultural views on the meaning of "happiness", discuss the limitations of scientific approaches to the topic, and identify aspects of modern life (especially modern life at Harvard) that make it difficult to develop habits that support happiness. Finally, we will also discuss how to apply the new science of happiness beyond our own lives to improve our communities and our planet too.

Class Notes: **This course has an enrollment cap and requires that by 11:59 p.m. Thursday, September 5, you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on Friday, September 6. If interest exceeds available seats, a lottery of those who have requested permission will run on Friday, September 6, and all participants will be notified of the results via Harvard email. For more information, including how to request permission, please see gened.fas.harvard.edu/enrollment or visit the course's Canvas site.**

Literatures of Decolonization (212883)

Annette Lienau

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** 60

The first Asia-Africa conference of newly independent states (held in Indonesia in 1955) was hailed by contemporary observers as an event as significant as the European renaissance in global importance. It inspired a sequence of political and cultural initiatives (including several African-Asian writers' conferences) in pursuit of new forms of cultural exchange and political brokering unmediated by former colonial centers. This course explores the historic tensions of this transition towards a post-colonial global order across two continents. It takes as its point of departure historic notions of African-Asian political and cultural solidarity to explore important questions about counter-imperial forms of autonomy and anti-colonial practices of lateral alliance and cultural exchange. Moving through a range of literary texts and historical documents that mark this historical transition and its internal tensions, the course invites you to engage with the comparative legacies of African-Asian independence movements and solidarity initiatives as they rose to international circuits of recognition, with implications for enduring cultural debates across the Global South.
To the extent that 20th century African-Asian independence movements were considered by many authors in the mid- to late- twentieth century to be politically ambiguous and perennially incomplete, the course more specifically raises the following questions: how did several influential, anti-colonial African and Asian authors and political figures consider the fields of culture and literature to be an extension of their own political engagements? How were the fields of literature and culture comparatively viewed as a way of advancing (anti-colonial) forms of revolutionary change, or of addressing entrenched social grievances and enduring global inequalities? How did writers in the wake of anti-colonial movements reconcile the ambiguities of national independence with the risks of neo-colonial or ethno-nationalist exploitations—at times pursued in the name of lateral solidarities and liberation? And how would counter-colonial efforts to develop transregional, African and Asian forms of cultural exchange contend with the paradox that their "common ground" or shared purpose both derived from and sought to transcend a colonial past?
Readings for the course will include Richard Wright's The Color Curtain, an iconic account of the first Asian-African conference of independent states, on the cultural commonalities and uneven temporalities of African-Asian independence movements; theoretical texts on the cultural ambiguities of anti-colonial nationalisms (such as Fanon's The Wretched of the Earth); and essays by major anti-colonial, political figures such as Sukarno, Nasser, Nkrumah, and Senghor. Literary texts will include revolutionary poetry

and prose works, from examples of the "strike novel" to writing that challenged the post-revolutionary emergence of dictatorial regimes and cultural censors across both continents. Course assignments will include three analytical papers.

Class Notes: **This course has an enrollment cap and requires that you use my.harvard to request instructor permission to enroll. If requests to enroll do not exceed available seats, permission to enroll will be granted on the date listed on the course syllabus. If interest exceeds available seats, a lottery of those who have requested permission will determine which students may enroll. For more information, including how to request permission, please visit the course's Canvas site and gened.fas.harvard.edu/enrollment.**

Water and the Environment (213406)

Kaighin McColl

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 50

What do landslides in Brazil, droughts in California, mass migration in Syria and the collapse of Mayan civilization all have in common? Water. This course introduces students to the terrestrial water cycle: how it works, how humans manipulate it, and how it manipulates us. Students will learn about the major components of the terrestrial water cycle, including precipitation, evapotranspiration, runoff and streamflow, and saturated and unsaturated subsurface flow. We will also learn about the causes and consequences of natural hazards associated with the water cycle -- including floods, landslides and droughts – and examine several case studies, with a focus on human impacts. The course will consider how the water cycle has contributed to the demise of past civilizations, and explore implications for modern society in a warming world.

American Capitalism (125496)

Sven Beckert

2020 Spring (4 Credits)		**Schedule:**	TR 1200 PM - 0115 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	250

How did capitalism emerge, expand and transform daily life in North America over the past 500 years? In this course, students will gain an in-depth understanding of how North America turned from a minor outpost of the Atlantic economy into the powerhouse of the world economy, how Americans built a capitalist economy and how that capitalism, in turn, changed every aspect of their lives. In the process, they will come to understand how contemporary capitalism is the result of centuries of human engagement, struggle, and aspirations. Topics range from the structure of Native-American economies to the economic consequences of the Civil War; from the impact of capitalism on gender relations to the changing structures of American businesses; and from the position of the United States in the world economy to the role of the government in channeling economic development. Boston merchants and Georgia sharecroppers, enslaved cotton growers and reforming statesmen, workers at the Ford assembly line and Silicon Valley entrepreneurs will all appear in the story. The course will put particular emphasis on the global context of American economic development and situate it deeply in political and social changes. Ultimately, students will gain an understanding of how the contemporary capitalism that so powerfully shapes all of our lives has emerged over the course of several centuries, and how the tools to understand the history of American capitalism can be applied to understanding our contemporary situation. Assignments in particular will encourage students to think about contemporary problems from historical perspectives.

One Hundred Years of Scandinavian Cinema (159715)

Agnes Broome

2020 Spring (4 Credits)

Schedule: M 1200 PM - 0245 PM
W 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course explores Scandinavian cinema from the pioneers of the silent era to the globally successful hit films of the present day. Students will trace the development of Scandinavian cinema through the films of directors such as Viktor Sjöström, Carl Th. Dreyer, Lars von Trier, Ingmar Bergman and Lukas Moodysson and discover the profound influence the region's films have had, and continue to have, on filmmaking in America and the world.

Germany and Europe: Heimat, Exile, Return (160494)

Nadine Schwakopf

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course discusses 20th and 21st Century German culture and poetics in dialogue and dispute with its European neighbors. Particular emphasis will be put on the effect of history on contemporary political, cultural and historical issues. How did the rest of Europe react to the German unification? How does Germany relate to its „Gastarbeiter" today? This course is designed to provide students with the ability to gain insights into how personal and collective identity is constructed and problematized through art and culture. In this interdisciplinary course we will work with a variety of written genre (poetry, short stories, plays, essays, journalistic non-fiction), as well as visual art, architecture, and film. We will take a cultural studies approach to understanding how to read effectively and interpret textual and visual materials. Conducted in German.

German Drama and Theater: Brecht and Beyond (207676)

Lisa Parkes

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0100 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Close reading, analysis, and full production of a play in German. The first part provides an introduction to a small selection of dramas, dramatic theory, the vocabulary of theater, as well as intensive pronunciation practice. The second part focuses on the rehearsal and production of a German play. Students participate on stage and collaborate on different aspects of the production, including costumes, set, sound, and program. Two performances take place at the end of term. Conducted in German.

Course Notes: **Conducted in German. Class meets for one hour twice weekly during weeks 1-5; the remaining weeks are reserved for two-hour rehearsals at the scheduled time.**

German Literature, Culture, and Society (159603)

Nadine Schwakopf

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines the major social-political trends and tensions that have informed literature and culture in the German-speaking countries. Students will develop the language skills to discuss, analyze, and interpret a variety of texts and cultural phenomena from the 18th to the 21st centuries, with special attention to social theory and political critique. Our readings and discussions are organized around pairs of thinkers who address the same issues from a different time, place, angle, or genre. Further emphasis is placed on the history of ideas and how it contributes to current issues and debates. Paired readings may include Kant and Kleist, Freud and Kafka, Benjamin and Brecht, Böll and Celan, Seghers and Wolf.

Course Notes: **Readings and discussion in German.**

German 108 Section: 1

Introduction to the History of the Modern Self: Meister Eckhart and His Successors (213620)

Benjamin Morgan

2019 Fall (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will be equally accessible to students in philosophy, religious studies, German or comparative literature (all texts will be available in translation). It will offer an introduction to the thought of the medieval mystic and philosopher Meister Eckhart, and explore how Eckhart's writing allows us to re-think how we write the history of the modern Western self. Eckhart is often credited with having first forged the language of German philosophy. The focus of the course will be the 12 sermons included in the Reclam selection of his writings (translations will also be provided). Comparisons with Aristotle's 'De anima' and Augustine's 'Confessions,' both of which shaped Eckhart's thinking, will help us consider how questions of embodiment and questions of narrative alter the way we think about forms of selfhood. Eckhart's use of gendered images will be contrasted with that of a late medieval woman mystic, Julian of Norwich. Eckhart' s thought will be compared with that of Luther's, before we move on to explore how Eckhart's approach allows us to re-read major modern thinkers, such as Schelling, Nietzsche, Heidegger, Arendt and Daniel Dennett. By the end of the course students will have a firm grasp of key elements of Eckhart's thinking. The course will also show how his thought can productively renew how we think about questions of selfhood and personal identity.

Translating German: Theory and Practice (215682)

Lisa Parkes

2020 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This seminar introduces the methodology, theory, and practice of translating German into English. By working through the fundamental issues, strategies, and ethical responsibilities of the translator, students will encounter the delights and dilemmas of mediating between two different languages and cultures.

Workshops address literary, scientific, technical, media- and consumer-orientated texts, while refining advanced language skills. Special attention is given to the many challenges of translation, such as literal and connotative meaning, semantic and cultural distinctions, humor, dialect, style, social and tonal registers, literary devices, as well as subtitling, and machine translation.

Course Notes: **Note: Conducted in English.**

Recommended Prep: **Prerequisite: Advanced German (60-level) or equivalent.**

Postwall German Cinema (213433)

Eric Rentschler

2020 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Filmmakers from the Federal Republic of Germany like Rainer Werner Fassbinder, Werner Herzog, and Wim Wenders would become internationally prominent during the 1970s and lauded for their formal experimentation, stylistic allure, and political outspokenness. What happened, though, after the demise of the so-called New German Cinema in the early eighties and the fall of the wall in 1989? This class will focus

on postwall German cinema and discuss a rich sampling of features from a very seismic and eventful decade, the 1990s. Our weekly sessions will probe the textual idiosyncrasies of representative films as well as their socio-political determinations. We will look at mainstream offerings as well as arthouse entries, probing commercial features that seek to optimize their popular appeal as well as more ambitious works that speak out, act out, and take exception. In this way, we will gain an appreciation for the variety of voices within the media ecology of this national cinema, its hearty blend of affirmation, dissent, and diversity. This course will seek to foster students' ability both to fathom the formal workings and historical meanings of films as well as to enhance their analytical capacities and critical skills.

Course Notes: **This course is equivalent to AFVS 188G. Credit may be earned for German 153 or AFVS 188G, but not both.**

No previous course work in film studies nor any knowledge of German is required or presumed.

Class Notes: **This course has mandatory film screenings on Fridays from 12:45-3:15.**

Katastrophe Erzählen (213378)

Cornelia Zumbusch

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

In dramatic theory »katastrophe« means the moment when a sequence of events changes from bad to good (comedy) or from good to bad (tragedy). Around 1800, the German word »Katastrophe« comes to denote sudden events with serious consequences such as earthquakes, storms, floods or volcanic eruptions. Narration plays an important part in interpreting these natural phenomena as »Katastrophen«. The seminar will focus on the novella as a genre especially apt to represent and imagine incidents as disasters. Starting with a broad overview on narratives like the Great Deluge as well as pictorial representations of natural disasters, the main focus will be on texts by Kleist, Goethe, Stifter, Storm and Frisch.

Course Notes: **Readings and discussions will be in German.**

Bargaining with the Devil: the Faust Legend (205080)

John T. Hamilton

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Seduction and transgression, forbidden knowledge and the insatiable lust for learning, the limits of cognition, human will, and the problem of evil – these are the central themes that circulate through the legend of Faust, who is said to have exchanged his immortal soul for infinite wisdom and power. The seminar examines the elaboration and complication of this legend across the centuries and its formative role in the development of European literature and philosophy. In addition to studying Goethe's masterwork, the seminar includes analyses of related works in European literature, music, and the visual arts, all with reference to shifting historical contexts and philosophical reflections.

Course Notes: **All readings are available in English.**
Offered jointly with the Comparative Literature Department as Comp. Lit. 180. Credit may be earned for Comp. Lit. 180 or German 180, but not both.

Schelling, Goethe, and Dorothea and Friedrich Schlegel c. 1809: A Genealogy of the Present (213610)

Benjamin Morgan

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will be equally accessible to students in philosophy, German or comparative literature (all texts will be available in translation). The main focus is Schelling's treatise on freedom and Goethe's 'Elective Affinities', both published in 1809, unpacking the dark, dynamic view they have of nature, and the implications this has for current debates (new materialisms, enactivism). Schelling's treatise was published with a selection, by Schelling, of four other essays (first published 1795-1807) that are his attempt to reframe an understanding of philosophy, physics and aesthetics contra Kant and Hegel. The volume thus opens up a view on a cultural history that didn't happen (after Schelling had published these texts together under the title 'Philosophical Writings' volume 1, he didn't publish another major text), but which helps us re-imagine our own cultural inheritance. Over the 12 sessions, we will start by reading Schelling's 1809 treatise, excerpts from Spinoza, the 1807 lecture on art Schelling included in the 1809 volume, and selections from Friedrich Schlegel, whose book on Indian language and literature (1808) was understood by Schelling to be the one main rival position, i.e. Schelling oriented his new account of a dynamic nature with/against an historically informed hermeneutics. Dorothea Schlegel's novel 'Florentin' (1801) will then be studied as a contrasting attempt to come to grips with the present moment, preparing the way the way for a clearer understanding of the path Schelling hoped to embark on, which we will contextualise by a contrast with the preface from Hegel's 'Phenomenology of Spirit' (1807). Having characterized Schelling's project of 1809, the course will explore its implications for literature. The position Schelling arrives at, which balances the claims of a dynamically grasped nature, of historical hermeneutics, and of the dialogical processes he refers to with the term 'freedom of inquiry,' finds its fullest expression in novels of the period, as we will explore focusing on Goethe's 'Elective Affinities' (1809), Scott's 'Waverley' (1808-1814) and Austen's 'Mansfield Park' (1814). By the end of the course students will have an understanding of rival narratives of the development of German philosophy and of the implications these narratives have both for literary studies and for key contemporary philosophical debates.

Fontanes Romane (213380)

Cornelia Zumbusch

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Recurring themes in Theodor Fontane's novels are not only the political, economic and social upheavals in Wilhelminian Germany, but also innovations in the fields of transportation, information and communication. In describing these modern phenomena, Fontane develops special modes of narration. As the narrator recedes further and further behind the characters' speech, the text of the novels seems to consist only of conversation, causerie and chitchat. Despite the seeming lightness and randomness of what is said, Fontane creates densely woven texts, characterized by the calculated return of idioms, images, and motifs. The seminar will focus especially on these modes of narration and connect them to the ways in which (inter-)mediality is reflected: How do the texts stage images and imagery? How are other literary texts, letters and newspaper articles included? What is the role of modern communication techniques such as telegraphy? The aim of the seminar is to provide an overview of Fontane's novels and to afford insight into the poetics of German ›Poetischer Realismus‹ as well as to deepen competences in narrative text analysis. Readings include L'Adultera, Cécile, Effi Briest and Der Stechlin. Readings and discussions will be held in German.

Course Notes: **Readings and discussions will be in German.**

The Frankfurt School on Film and Mass Culture (203378)

Eric Rentschler

2019 Fall (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This seminar considers the Frankfurt School's deliberations on film, radio, television, and mass culture. We will devote the majority of the course to three seminal figures: Siegfried Kracauer, Walter Benjamin, and T. W. Adorno. More generally, we will focus on the debates catalyzed by the emergence of modern mass media and an industrialized visual culture; we will also reflect on the pertinence of these debates for our own contemporary culture of media convergence.

Course Notes: **This course is equivalent to AFVS 289. Credit may be earned for German 254 or AFVS 289, but not both.**

Requirements: **Anti-Req: Cannot be taken for credit if AFVS 289 (formerly VES 289) is already complete**

Literature on Trial: Kafka in Paris (212931)

John T. Hamilton

2020 Spring (4 Credits) **Schedule:** F 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The seminar engages in a close study of Kafka's major stories and novels, diaries and correspondence; and how this body of work was received, explicated and interpreted by key figures in post-war France: Maurice Blanchot, Jacques Lacan, Deleuze & Guattari, Jacques Derrida, and others.

Course Notes: **Readings in German and French, with English translations available. Discussion in English.**

This course is equivalent to CompLit 212. Credit may be earned for CompLit 212 or German 287, but not both.

Questions of Theory (205260)

Nicole Suetterlin

Doris Sommer

2019 Fall (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

To explore key literary, cultural and critical theories, we pose questions through readings of classic and contemporary theorists, from Aristotle to Kant, Schiller, Arendt, Barthes, Foucault, Glissant, Ortiz, Kittler, and Butler, among others. Their approaches include aesthetics, structuralism, discourse analysis, media theory, deconstruction, psychoanalysis, gender theory, ecocriticism. Each seminar addresses a core readingand a cluster of variations. Weekly writing assignments will formulate one or two questions to the core text and the cluster, to prepare for seminar discussions.

Course Notes: **Conducted in English. This course is also offered as Romance Studies 201. Credit may be earned for Romance Studies 201 or German 291, but not both.**

Intermediate Swedish: Childhood in Swedish Literature and Culture (112472)

Agnes Broome

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Sweden and Swedish Finland have produced some of the most translated and beloved works of children's fiction in the world. In this intermediate Swedish language course, we will review the essentials of Swedish grammar and vocabulary as we explore some of these classic works of children's fiction, film, and comic books and the aspects of Swedish culture they illuminate. The final project for this class involves producing your own work of children's fiction or film.

Course Notes: **Conducted in Swedish. Not open to auditors.**

Prerequisite: Swedish Ab or equivalent.

Global Response to Disasters and Refugee Crises (161268)

Stephanie Kayden

Michael VanRooyen

2020 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Climate change, urbanization, and conflict mean that global disasters are on the rise. How should the world respond when disasters force people from their homes? How can we better help the world's refugees? This course examines the past, present, and future of the international humanitarian response system. We will explore how Doctors Without Borders, the United Nations, the Red Cross, and other aid agencies came to be and how global response standards, international humanitarian law, and new technologies are shaping worldwide disaster relief.

Through interactive discussions and case studies, students will learn how aid workers interact with governments, militaries, and civil society to provide refugee aid. At the end of the course, students can choose to live the refugee experience during a large-scale, weekend outdoor simulated humanitarian response training program together with other students and professional aid workers from around the world.

Course Notes: **Lotteried course, enrollment limited to 30.**

Research in Global Health and Health Policy (123102)

David Cutler

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Global health and health policy are interdisciplinary fields that apply the theories and methods of statistics, sociology, political science, economics, management, decision science, and philosophy to the study of population health and health care. Research from these fields influences policymaking in a variety of settings. For example, the Patient Protection and Affordable Care Act (ACA) drew upon health policy research to develop programs for improving access and quality of care in the United States. Similarly, global health research guides international institutions, such as the World Health Organization, in determining health guidelines for all countries. Global health and health policy research can also inform practices inside hospitals, initiate programs for diseases like HIV, and regulate the food and drug industries. This course introduces the fundamentals of research design and methods in global health and health policy and assists students in developing research projects and crafting policy recommendations that can impact health care systems and public health.

Course Notes: **This course fulfills the research requirement of the Secondary Field in Global Health and Health Policy and enrollment is ordinarily limited to seniors in the GHHP Secondary Field. Underclass GHHP students may petition to take the course if all other Secondary Field requirements have been met. Course is primarily taught by graduate students in the PhD in Health Policy program and guest lecturers. May not be taken pass/fail.**

Foundations of Political Theory (124414)

Eric Beerbohm

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course investigates the central problems of political theory that concern the justification of democracy. Is democratic rule the uniquely just form of collective decision-making? What political institutions best express the democratic values of equality, deliberation, and participation? What are the moral responsibilities of citizens - whose representatives exercise political power in their name? Is democracy a human right? Readings integrate contemporary work in political philosophy with canonical thinkers, including Plato, Aristotle, Rousseau, and J.S. Mill.

Foundations of Comparative Politics (117853)

George Soroka

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Provides an introduction to key concepts and theoretical approaches in comparative politics. Major themes include the causes of democratization, economic development, ethnic conflict, and social revolutions; as well as the role of the state, political institutions, and civil society. Examines and critically evaluates different theoretical approaches to politics including modernization, Marxist, cultural, institutionalist, and leadership-centered approaches. Compares cases from Africa, Asia, Europe, Middle East and Latin America to provide students with grounding in the basic tools of comparative analysis.

American Government: A New Perspective (111813)

Paul Peterson

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Provides an overview of contemporary American politics. It analyses the way in which recent changes in elections and media coverage have helped shape key aspects of American government, including the courts, Congress, and the Presidency, the workings of interest groups and political parties, and, also, the making of public policy. Permanent political campaigns have altered governmental institutions and processes. The course explains how and why.

International Conflict and Cooperation (126258)

Stephen Chaudoin

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is an introduction to the analysis of the causes and character of international conflict and cooperation. The course begins with a foundational review of the different levels at which states interact and the primary theoretical paradigms in the field. It then addresses how states achieve cooperation in the face of international anarchy. The course next addresses basic bargaining theory, which uses insights from economics to explore how bargaining breakdowns, commitment problems, and incomplete information can lead to war. Thereafter we examine three popular topics in contemporary international relations research: the roles that psychology, leaders, and domestic politics play in explaining international conflict and cooperation. We will also look at international organizations/law, terrorism, trade, foreign aid, international development, and climate change.

Introduction to Political Science Research Methods (123443)

Santiago Olivella Sierra

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This class will introduce students to techniques used for research in the study of politics. Students will learn to think systematically about research design and causality, how data and theory fit together, and how to measure the quantities we care about. Students will learn a `toolbox' of methods---including statistical software---that enable them to execute their research plans. This class is highly recommended for those planning to write a senior thesis.

Course Notes: **This course must be taken for letter grade.**

Research Practice in Qualitative Methods (108287)

Frances Hagopian

2020 Spring (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

With the goal of preparing students to undertake original research, this course introduces students to basic principles and tools of qualitative research in the social sciences. Focus is on comparative research design and the principal tools of qualitative research. Topics examined include the pitfalls of selection bias, the logic of causal inference, measurement and conceptualization, and the potential of mixed methods. Research techniques covered are process tracing, analytic narratives, natural experiments, archival research, interviews, and ethnography.

Topics and Resources in Political Theory (108285)

Michael Rosen

2020 Spring (4 Credits) **Schedule:** F 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course introduces students to the most important debates in contemporary English-language political theory, centered on questions of justice, equality and rights. We then turn to topics that reflect the individual interests of students who enroll. The course is designed to help participants to make the transition from being critical readers of political thought to being independent contributors to debate. It will be especially useful for those considering writing a thesis in political theory.

Technology Science Practicum (207920)

Latanya Sweeney

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This practicum is a capstone to the Technology Science Program, designed to give students the opportunity to conduct original research and write a publication-ready research paper. In consultation with the instructor, students select a concrete technology-society conflict to address, produce autonomous research to analyze it, and provide a set of actionable recommendations or produce appropriate technology to solve it. Throughout the semester, students receive feedback both from their peers and the instructor to aid the development of their projects. Class meetings include the development of writing schedules, discussions focused on framing, analysis, methodology, and peer-review of student projects. Emphasis is

placed on issue spotting, academic story-telling and research framing for maximum impact. The course culminates with a formal presentation of the students' projects and papers.

Public Policy Practicum (214596)

Leslie Finger

2020 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This course provides students an opportunity to do policy research. Students will read academic research on policy and the politics of policy making, and then do their own research for a policy proposal commissioned by a real client, such as a legislator or an NGO. Each student will write a research paper on a topic related to the group project. This research will also contribute to a single, integrated report and oral presentation for the client. The focus of the course this year will be education policy.

Class Notes: **Gov 93c will be meeting in HKS Littauer L166.**

Politics of Inequality in Latin America (212899)

Alisha Holland

2020 Spring (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Latin America is the most unequal region in the world. Why? And what can be done about it? Topics include the origins and types of inequality, social policies to help the most vulnerable, and tax and corporate policies to restrain the most powerful. The course emphasizes the political effects of inequality, from populism to government dysfunction, and reflects on what wealthy countries with rising inequality like the United States can learn from Latin America.

The Politics of Virtual Realities (213530)

Allison Stanger

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

How has technology changed our politics? Are those changes all for the good? In this course we will explore the political, legal, and normative consequences of the Internet for liberal democracy. We start with the US Constitution and examine arguments that it cannot by itself prevent the Internet from becoming a domain of manipulation rather than of freedom. How can we uphold the ideals of liberty and equality? And, since cyberspace has no country, whose rules should govern it? Topics will include foreign electoral intervention, virtual war, ethics of AI, corporate and government surveillance, cybersecurity, and the Snowden and WikiLeaks controversies.

Global Governance and the Role of International Organizations (213436)

Christina Davis

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This seminar examines the role of international organizations as a tool to manage global problems. We will review international relations theories that account for why states establish institutions and assess the effectiveness of specific organizations to improve policy outcomes as well as explore their legitimacy within society. In light of the backlash against these institutions that can be seen in the Brexit vote and U. S. rejection of new international trade agreements, what is their role going forward? The scope of organizations that we examine will range across issue areas in security, economic, and human affairs. We will consider how selection effects and indirect influence present challenges to research on the effectiveness of international organizations. Through analysis of a variety of sources, including negotiation archives and quantitative measures of policy outcomes, students will be encouraged to probe the conditions under which international organizations promote cooperation.

Political Economy of the Environment (207736)

Alexander Gard-Murray

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This course will apply the tools of political economy to the study of environmental policymaking, both in the United States and around the world. How are different interests represented in the creation and implementation of environmental policy? What makes some countries more active on environmental issues? When do businesses choose to support environmental action? Why do some kinds of environmental problems seem easier to solve than others? We will study these questions with a range of contemporary and historical case studies, drawing on both the academic literature and accounts from activists, lobbyists, and policymakers.

Crime, responsibility, and the law (213657)

Gabriel Katsh

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

One of the central questions of any political system is how to respond those

who violate the legally enforced norms of behavior—in other words, what to do about crime and criminals. In this seminar, we will consider the philosophical justifications that have been given for the operation of the criminal justice system and, in particular, for the practice of punishing offenders. We will focus on the contrasting ideologies of retributivism and consequentialism and how those systems address moral principles such as responsibility, agency, blame, and desert as well as more practical concerns such as deterrence and public safety. Readings will be drawn from a wide range of sources, primarily political theory and law, but also the philosophy of mind, sociology, history, and neuroscience.

Politics of Climate Change (207733)

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

This course will explore the political problems involved in mitigating and adapting to global climate change. We will draw on both the empirical and normative political literatures, as well as climate science and economics, to approach key questions about climate politics. What do we owe to the future and to people elsewhere? What are the costs of different policy options, and how should they be distributed? How have different governments responded, and what factors shape their responses? What role do international treaties, social movements, and public opinion play? And what can or should be done to change our current trajectory?

Transitional Justice and the Politics of Truth Commissions (207734)

Gloria Ayee

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Scholars, policymakers, and political leaders have long debated appropriate responses to severe human rights violations that occur during periods of periods of civil conflict, war, and genocide. This course introduces students to interdisciplinary studies in transitional justice and post-conflict reconciliation by focusing on the work of truth and reconciliation commissions. Students will examine key concepts and theoretical perspectives that are central to the field of transitional justice. Drawing on cases such as South Africa, Chile, Peru, and Canada, the course will critically examine how truth commissions are used to provide accountability for human rights abuses carried out by the state.

Technically Justice? The Politics of Technology and Criminal Justice Reform (214573)

Jennifer Halen

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

The U.S. criminal justice system is rife with problems that have devastating consequences for individuals, families, and communities. How can we fix this troubled institution? This class examines the politics and policies behind the explosion of tech-based reforms, including surveillance tech, predictive policing, Virtual Reality, and many other theoretical and applied reforms. Additionally, the class will explore activists' and prison abolitionists' perspectives and technologies used to resist or alter the carceral system. The empirical and normative consequences of each of these perspectives and technologies will be discussed throughout.

Peace-Building: Approaches to Reducing Ethnoreligious Conflict (213364)

Melani Cammett

2019 Fall (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Since the end of the Cold War, identity-based conflict has been on the rise. Many countries in Africa, South and Southeast Asia, the Middle East and the Former Soviet Union have witnessed wars and conflict and riots that are ostensibly waged for ethnic or religious reasons. Even if they are not the root cause of these conflicts, such identities often *become* politically salient as a result of political violence targeting ethnic or religious "others" and, once activated, exhibit remarkable stickiness in social and political life. When intergroup tensions have ratcheted up, is it possible to reduce their importance? Can a shared civic identity be constructed in the wake of violence waged in the name of ethnicity or religion? This course aims to explore these questions through an exploration of relevant social science literature and in-depth analyses of case studies of conflict and conflict resolution.

The Politics of Spatial Inequality in the United States (213451)

Shanna Weitz

2020 Spring (4 Credits) **Schedule:** T 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

In this course, we will examine the spatial, or geographic, aspect of inequality and its relationship to politics in the United States. This includes examination of racial segregation, class segregation, and rural and urban divides. In addition, we will investigate the role of public policies in contributing to this spatial inequality, as well as how this inequality influences political behavior, representation, and policy outcomes. Finally, we will use the concepts and arguments learned in this course to analyze contemporary political events.

Capitalism, Socialism & Democracy (213368)

William Clark

2019 Fall (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Since the financial crisis a decade ago, discussions of capitalism and socialism have become increasingly politically salient in the United States. This inter-disciplinary seminar will compare capitalism and socialism, in both theory and practice, and explore their relationship to democracy. We will approach the subject from multiple perspectives: normative, analytical, and historical. Consequently, we will use tools from moral philosophy, economics, social choice theory, and comparative historical sociology. Historical materials will be drawn primarily from the last three centuries of European history.

Global Ethnic Politics (207739)

Gloria Ayee

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 16

Global Ethnic Politics is an undergraduate course that focuses on the social and political implications of

ethnic identities in different parts of the world. The course provides a comparative, global analysis of race and ethnicity, and is designed to help students understand the history, dynamics, and salience of ethnic inequality and political cleavage. Issues under consideration include definitions of race and ethnicity, colonization, nationhood, the politics and political history of indigenous peoples, the history and persistence of White supremacy, multiculturalism, legacies of slavery, ethnic political mobilization, panethnicity, diasporas and transnationalism, migration, ethnic cleansing and genocide, and contemporary racial stratification.

Undergraduate seminar. Enrollment by lottery. Please see Gov Dept undergraduate website for details.

Data (115859)

David Kane

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 100

This course, an introduction to data science, will teach you how to think with data, how to gather information from a variety of sources and in various formats, how to import that information into a project, how to tidy and transform the variables and observations, how to visualize the data, how to model relationships, how to assess uncertainty, and how to communicate your findings in a sophisticated fashion. Each student will complete a final project, the first entry in their professional portfolio. Our main focus is data associated with political science, but we will also use examples from the social sciences more broadly.

Models (211173)

David Kane

2020 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 35

Statistical models help us to understand the world. This class explores the use of models for analysis in the social sciences broadly, and in political science specifically. Do get-out-the-vote calls affect turnout? Does a history of slavery in a county influence contemporary political views? Does demographic change impact policy preferences? We use the R programming language, RStudio, and GitHub. Each student will complete a "replication" as their final project, an attempt, successful or not, to replicate the results from a published article in the academic literature. This class is especially designed to lay the groundwork for an empirical senior thesis.

Recommended Prep: **Gov 1005 and statistics at the level of Gov 50, or permission of the instructor.**

Spatial Models of Social Science (207780)

Jill Kelly

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will survey the theory and application of airborne and satellite remote sensing, primarily as a tool for spatial social science. Students will learn the basics of electromagnetic radiation, reflection and absorption, satellite and sensor technology, and digital image analysis, with a focus on data acquisition and preparation. Students will learn the use of software for image processing and analysis, the fundamentals of raster GIS, and the use of a scriptable online platform for quick remote processing. Applications will have a social focus, including urbanization and development, infrastructure, settlement

morphology, change detection, and interactions between the human and natural environments.

Available for undergraduate and graduate students.

Educational Justice (204038)

Jacob Fay

2020 Spring (4 Credits) **Schedule:** MW 1000 AM - 1159 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Educators and educational policy makers regularly face challenging ethical decisions. For example, what should be done about a student with diagnosed emotional issues who frequently disrupts class, but who benefits from being mainstreamed? Should teachers resist grade inflation even if it helps their students in the college and labor market? Is it just to expand a charter school that achieves outstanding academic outcomes at the cost of high attrition rates? When school closure or teacher evaluation policies disproportionately impact low-income communities of color, is that in itself evidence of an injustice that must be addressed? These kinds of questions are often addressed as technocratic challenges of leadership, legal compliance, or accountability. This course, by contrast, addresses the ethical dimensions of educational practice and policy, with justice as our primary focus. We will engage with philosophical, theoretical, and empirical readings from a wide variety of disciplines. We will also grapple with case studies of dilemmas of educational justice from classrooms, schools, districts, and organizations in the United States and abroad. Our goals will be to deepen our own understandings of educational justice, to engage with others about complex ethical judgments across multiple lines of difference, and to learn how to enhance educators' and policymakers' capacities to make ethical decisions under challenging conditions.

Political Thought of the American Founding (156108)

Eric Nelson

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

John Adams observed that the American Revolution took place, not on the battlefield, but rather "in the minds of the people...before a drop of blood was shed at Lexington." This course will examine the political debates leading to American independence, and, later to the ratification of the Federal Constitution. Famous works of the period, such as Paine's Common Sense and The Federalist, will be placed in the wider context of American political writing from 1763 to 1789.

Progressive Alternatives: Institutional Reconstruction Today (125860)

Roberto Mangabeira Unger

2020 Spring (4 Credits) **Schedule:** T 0100 PM - 0300 PM

Instructor Permissions: None **Enrollment Cap:** n/a

An exploration of the past and future agenda of progressives, whether self-described as liberals or as leftists. What should they propose, now that they no longer believe in the usefulness of governmental direction of the economy or in the sufficiency of redistributive social programs? A basic concern is the relation of programmatic thought to the understanding of change and constraint.

In the recent historical period, progressives have sought to humanize the established order rather than to reimagine and remake it. Here the main focus is on institutional or structural change in the market system and in democratic politics. Among the themes to be discussed are the nature and future of the knowledge economy, the status of free labor vis-à-vis capital, the relation of finance to production, the making of a high-energy democracy that no longer needs crisis to make change possible, and the education required by such economic and political alternatives. A central theme throughout is the content and implications of the idea of freedom.

The course will draw on many disciplines and consider examples from many settings. It will try to develop ways of thinking as well as proposals for change.

Extended take-home examination.

US-Mexico Relations (208265)

Viridiana Rios

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 36

Mexico is one of the U.S.'s most important political, economic, and strategic allies. The history of both nations is inherently intertwined, and thus bears a unique combination of characteristics unseen in the rest of the world. This course will explore Mexico's idiosyncratic political identity and the distinctive ways in which the U.S. has shaped it. We will explore critical debates between the two countries such as immigration, transnational crime, national security, and trade. Our goal is to discover the relationship between the U.S. and Mexico, in all its complexities, debunking the cartoonish stereotypes.

Geopolitics of Energy (213670)

Aurelie Bros

2019 Fall (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course is an introduction to geopolitics of energy. The primary objective is to gain in-depth knowledge of the interconnected challenges facing the energy sector—and more broadly, the political, economic, and social actors involved. Emphasis is on introducing an academic understanding of geopolitics of energy and investigating how politics and space are inseparable. This course includes three main case studies: (A) EU-Russian energy relations, (B) energy transition in Ukraine and Ukrainian emerging soft power since the Chernobyl disaster, (C) coercive diplomacy towards Russia and Iran.

Improving Governance in Developing Countries: What Can We Learn from Experiments? (207164)

Horacio Larreguy

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Experimental research is an exciting new part of the political science toolkit. This course will introduce students to a number of field and natural experiments that have been conducted in developing countries to study governance failures. Can such experiments help us to understand how social and ethnic divisions prevent cooperation on problems affecting the common good? how corruption, vote-buying, and diversion of public funds can be overcome? how elites might become more accountable to voters? how opposition parties can be made more effective? how the capacity to deliver public goods might be created in places where it appears that the state has failed? Students will get the chance to collaborate on designing their own experiments to generate insight into these and other urgent issues facing developing countries.

China's Economic Development (213449)

Nara Dillon

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

How has China achieved high economic growth rates for 40 years? Have the post-Mao economic reforms created a market economy, or a new form of state capitalism? To answer these questions, this course explores the causes and consequences of China's market reforms, placing the Chinese experience in comparative perspective. The focus of this course will be on the politics of economic reform: seeking to understand how and why different policies have been adopted in China, to analyze their impact, and to seek lessons for reform in other countries.

Race, Film, and American Politics (211313)

Gloria Ayee

2020 Spring (4 Credits) **Schedule:** W 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Race, Film, and American Politics **is a course that examines the multifaceted ways in which racial and ethnic identity has been represented in American film. Drawing on political science, sociology, anthropology, and film and media studies, we will assess the ways in which the mainstream media in the United States — focusing primarily on the Hollywood film industry — has portrayed different population groups and shaped our understanding of what it means to be American. The course will address issues of social stratification, and consider the intersection of identity and politics by analyzing historical shifts in cinematic representation in the United States.**

Government 1389

How Decision Makers Translate Public Opinion into Policy Action (213624)

Benjamin Schneer

2019 Fall (4 Credits) **Schedule:** MW 0115 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Government officials both shape and respond to the policy preferences of the electorate. Understanding this dynamic process is critical for policymakers as well as for informed observers of politics, and it illuminates a number of questions with practical applications: How would public policies change if everyone voted? What mechanisms might compel government officials to be more responsive to the

wishes of their constituents? How representative is representative democracy anyway? In answering questions such as these, this course covers topics including how citizens form opinions, the role of traditional and social media as a source of information (and misinformation), the place of elections and electoral institutions in a representative democracy, and how alternative forms of political action such as the petition and the initiative process may influence policymaking. This course offers students interested in a career in politics or policymaking an opportunity to examine what matters when decision makers are translating public opinion into public policy.

Tech Science: From Democracy to Technocracy and Back (207711)

Latanya Sweeney

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

We live in a new kind of technocracy –a society in which technology design dictates the rules that govern daily life. In the race to construct the latest gadget, app and online service, winning depends on rapid uptake and business success. Losing are social norms and democratic values. This course uses case studies to understand issues, introduces a formal framework to model and reason about technology-

society conflicts and then demonstrates the power of scientific experimentation and ability to exploit paradigm shifts as means to a victorious future where society reaps the benefits of technological innovations without sacrificing critical values.

The Politics of Terrorism: Causes and Consequences from a Global Perspective (212602)

Erica Chenoweth

2020 Spring (4 Credits) **Schedule:** MW 0845 AM - 1000 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Terrorism dominates the headlines, but few observers attempt to think critically about the origins, evolution, and variable impacts of terror groups over the course of history. Alongside many enduring myths and misperceptions about terrorism, the history of this violent technique is rife with puzzles. Why is it so difficult for people to agree on a common definition of terrorism across the globe? Why do groups take up arms against civilians to effect political change? Why do some groups remain fairly restrained in their use of violence while others routinely engage in mass atrocities? Why do some terror groups end within a year of their emergence, whereas others toil along for decades? What are the most effective ways to combat terrorism? What is really "new" about the "new terrorism"? The course takes a theoretical and historical approach, attempting to nest contemporary challenges within the broader global context of terrorism as a phenomenon. To this end, the course will acquaint students with the historical evolution of

domestic and international terrorism while introducing them to the major analytical approaches to the study of terrorism. The five primary goals of the course are for students to: (1) present leading theories, approaches, and concepts for understanding terrorist behavior around the globe; (2) evaluate current approaches to terrorism against prevailing evidence; (3) apply cumulative knowledge to current policy problems and make informed inferences about future developments; (4) deepen their knowledge about particular cases or topics regarding terrorism and counterterrorism; and (5) synthesize their knowledge during in-depth course discussions and several written assignments. By the end of the course, students should understand the fundamental analytical and policy debates surrounding terrorism globally, as well as several policy alternatives that may lead to solutions. Students should also develop substantive knowledge about current trends in terrorism and counterterrorism. By the end of the term, students should be comfortable taking an intellectual stand about topics related to terrorism, defending their positions with evidence, engaging in self-critique, deriving actionable policy recommendations, and communicating those recommendations to both specialist and non-specialist audiences—particularly when the empirical record contrasts with the conventional wisdom. Course assignments are designed to enhance those skills.

Controlling the World's Most Dangerous Weapons (147213)

Matthew Bunn

William Tobey

2019 Fall (4 Credits) **Schedule:** TR 1015 AM - 1130 AM

Instructor Permissions: Instructor **Enrollment Cap:** 10

Preventing nuclear war is one of the truly existential challenges facing the human species -- but the danger is rising, as tensions among nuclear powers increase, nuclear agreements are challenged, and new technologies and arms competitions create new uncertainties. From Iran to North Korea, from U.S.-Russian and U.S.-Chinese nuclear competition to Syria's deadly chemical assaults, decisions about nuclear, chemical, and biological weapons can make the difference between war or peace and between safety or grave danger for people around the world. This course will give students an understanding of these weapons and the global efforts to prevent their use and control their spread. The course covers policy tools from treaties and diplomacy to sanctions and war. This year, particular attention will be paid to emerging great-power competition and its implications for deterrence and arms control. Students will learn to use an integrated, risk-informed approach to assessing policy options when difficult choices need to be made in the face of large uncertainties. This will help prepare students for careers dealing with choices about these deadly weapons.

Central Challenges of American National Security, Strategy, and the Press (113210)

Graham Allison

2019 Fall (4 Credits) **Schedule:** M 0415 PM - 0700 PM

Instructor Permissions: Instructor **Enrollment Cap:** 23

Using a series of case studies from the front page, and from the most urgent and important issues on the U. S. national security agenda, this course will engage students in grappling with the hardest American national security challenges of the decade ahead. Issues range from Russiagate and the economic and military rise of China to Iran, Syria and the continuing war on terrorism. Assignments require strategic thinking: analyzing dynamics of issues and developing strategies in a government whose deliberations are discombobulated by leaks, reports about internal differences among policymakers, and press analyses. Students will learn to devise strategies and write Strategic Options Memos as participants in the policymaking process. Strategic Options Memos combine careful analysis and strategic imagination, on the one hand, with the necessity to communicate to major constituencies in order to sustain public support, on the other. A major subtheme of the course explores coping with a world where a pervasive press makes secrecy more often the exception than the rule. In each case, there will be exploration of how media coverage affects decision making, with an examination of leaks about Russia's cyber intervention in the 2016 election, WikiLeaks, and the Snowden case as well as the revelations about drones and secret, American-led cyberattacks, and other examples of the publication of classified information.

Causal Inference (111530)

Kosuke Imai

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Substantive questions in empirical scientific and policy research are often causal. Does voter outreach increase turnout? Are job training programs effective? Can a universal health insurance program improve people's health? This class will introduce students to both statistical theory and practice of causal inference. As theoretical frameworks, we will discuss potential outcomes, causal graphs, randomization and model-based inference, sensitivity analysis, and partial identification. We will also cover various methodological tools including randomized experiments, regression discontinuity designs, matching, regression, instrumental variables, difference-in-differences, and dynamic causal models. The course will draw upon examples from political science, economics, education, public health, and other disciplines.

Recommended Prep: **Probability, Statistical theory, Linear models**

Requirements: **Prerequisite: STAT 110 AND STAT 111 AND STAT 139 or Gov 2000 AND Gov 2001**

Kosuke Imai

Santiago Olivella Sierra

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course introduces social science students to applied Bayesian statistics. We will begin by introducing the Bayes' rule that allows us to learn from data in an intuitive and coherent way. We then cover a set of simple probabilistic models and cover powerful computational tools that will be used for the remainder of the course. Finally, we will learn the social science applications of Bayesian models including regression models, topic models, social network models, and dynamic models. The course will build everything up from the basic principles, only requiring the knowledge of elementary probability and statistics along with the familiarity with R programming.

Recommended Prep: **Gov 2000 or the equivalent or the permission of instructor.**

Strategic Models in International Relations (123597)

Stephen Chaudoin

2020 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course focuses on canonical and recent theoretical models of conflict, cooperation, and exchange in international relations. We asses how these theories have successfully (or unsuccessfully) generated empirically accurate predictions about conflict and cooperation. We also ask how theories formalized with game theoretic models differed from their non-formal counterparts. This course focuses on theory, though we will also consider some empirical applications and the relationship between theoretical and empirical arguments. Formal I or an equivalent class is strongly recommended.

Graduate School of Arts and Sc 299

Introduction to Graduate School: Skills and Practices for Scholarly Success (213514)

Robin Bernstein

2019 Fall (4 Credits)		**Schedule:**	M 0600 PM - 0845 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	30

The course trains graduate students in the humanities and social sciences in fundamental skills that lead to scholarly success. Students learn to read journal articles swiftly and with high comprehension and retention, to write clear and persuasive prose, to teach effectively, and to identify and apply for grants. The course also leads students through a process by which they orient themselves to the major journals, scholarly organizations, and conferences in their respective disciplines. During the semester, each student produces a series of documents of direct, practical value: a polished academic C.V., a Harvard Scholar website, an Individual Development Plan, and a syllabus, among others.

Course Notes: **Course is only open to doctoral students in the Social Sciences and Arts and Humanities.**

Requirements: **GSAS Students Only**

Communal Life through the Ages: Monasteries, Cults & Collectives (213264)

Claire Adams

2020 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar examines the global history of communal life from the ancient world to the present. We take an expansive interpretation of what constitutes communal life: we examine not only the phenomena of monasteries and communes, but also socialist utopias and labor towns. What these have in common is a desire to separate themselves from contemporary society. We discuss how different communities dealt with the material realties of food production and shelter, together with each community's proposed ideals, be they religious, social, or political.

Identity before Identity Politics: America in the Progressive Era (213259)

Abigail Modaff

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

What is an American? How did we end up with the assumptions about race, gender, and national origin that we have today? What does it mean to be "progressive," and has Progressivism historically been a force for inclusion or for exclusion? This course explores ideas about difference, identity, and American belonging in the "Progressive Era" (1877-1924). This time of continent-wide activism spawned the intellectual, legal, and social structures that defined the twentieth century and still shape our present moment. Students will consider how the "Progressives"—and their critics—understood identity and difference in a time of conflict, inequality, and change.

Out of the Vault: Material Culture and Harvard's Collections (213388)

Caitlin Hopkins

2020 Spring (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Harvard's libraries and museums house extensive collections of objects from around the world. Why did Harvard collect these things? What did they mean to the people who collected them? What do they mean now? In this seminar, we will use a hands-on, material culture studies approach to examine the history of university museums. This will include class sessions held in museums and archives to meet with curators and examine artifacts, including objects that are not normally on display to the public. Throughout, this course will interrogate collections and exhibitions with attention to concepts like colonialism, nationalism, racism, commodification, and historical memory.

Histories of the Third World: Asia, Africa, and Internationalism (213260)

Ruodi Duan

2020 Spring (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar explores the rich history of interchange, solidarities, and conflicts within the Third World. This story takes us from Paris in the 1920s, where Asian and African anti-colonial nationalists worked alongside each other, to Oakland in the 1970s, where the Black Panther Party believed that the fortunes of Third World liberation and the U.S. black freedom struggle were entwined. In examining the conceptual rise and pragmatic limits of the Third World, we will grapple with some of the most important political currents of the twentieth century: decolonization, Marxism, black internationalism, Afro-Asianism, and competing visions of international development.

St. Louis from Lewis and Clark to Michael Brown (159640)

Walter Johnson

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

St. Louis was the epicenter of American empire in the nineteenth century: the point of embarkation for Lewis and Clark; the military headquarters for U.S. Indian wars. It was likewise central to the history of slavery: from the Missouri Compromise to Dred Scott. The city's intertwining of the history of empire and race continued through the twentieth century in its prominent role in the defense industry as well as the history of segregation, urban "redevelopment," and police violence. How does the global capitalist and imperialist history of St. Louis relate to its recalcitrant inequality, structural racism, and endemic violence?

From the Belle Époque to the Third Reich: Culture and Aesthetics in France and Germany, c. 1880–1945 (205253)

Carla Heelan

2020 Spring (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar explores French and German culture in comparative perspective, from the last two decades of the nineteenth century through the end of World War II. In this course we will consider culture and aesthetics broadly conceived, from formal artistic and intellectual movements, to institutions, and customs. We will examine a range of primary sources in historical context in order to ask why French and Germans believed that culture was vital to understanding the transformative era in which they lived. Students should expect rigorous discussions that question the historical and ongoing dynamic between culture and power.

The Crisis of Social Democracy: Its History and its Future (212654)

James Kloppenberg

E. J. Dionne

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Social democracy, which in the US has been associated with the left-wing of the Democratic Party, has attracted non-communist leftists around the world for over a century. Securing equal participation for all persons in political, economic, and social decision-making has been the aim of social democrats. Will social democracy--and the regulated capitalist welfare states it created--survive, or give way to autocracy, ethnic and national exclusion, and/or neoliberal globalism? Students will read and discuss primary and secondary sources and write research papers on the past or the present of social democracy.

Course Notes: **This course will be lotteried. This course is also offered through the Social Studies Department as SOC-STD 96SD. Credit may be earned for either History 14L or SOC-STD 96SD, but not both.**

"Black Indians": The Making of an Identity (212655)

Tiya Miles

2019 Fall (4 Credits)		**Schedule:**	W 1200 PM - 0200 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	15

This seminar will explore intersections in African American and Native American histories with an emphasis on pivotal moments in the shaping of a modern identity referred to as "Black Indian." Students in this seminar will explore and analyze historical contexts and contingencies leading to thick interactions between people of African descent and indigenous Americans as well as experiential testimony by individuals asserting mixed race and/or bi-cultural Afro-Native identities. During our time together, students will discover not only the impact that black and native peoples have had on one another, but also the impact they (and ideas about them) have had on the development and sustainment of an American national identity.

The Uses and Abuses of the Past: History in American Public Life (212684)

Lizabeth Cohen

2020 Spring (4 Credits)		**Schedule:**	W 0300 PM - 0500 PM
Instructor Permissions:	Instructor	**Enrollment Cap:**	15

The American public learns its nation's history through many venues, most of them outside of the traditional history classroom. Different formats and media lend themselves to different historical interpretations. And many of those interpretations also reflect concerns of the present moment, held by people with varying social and political orientations, as much as understandings of the past. Thus, a nation's history is always being constructed in different ways, at different times, by different narrators, resulting frequently in a contested national story. This seminar will probe how American history is conveyed to the public through various formats and forums and with conflicting agendas that shape historical analyses and public memory. We will examine museum exhibitions, historic sites and reenactments, public memorials, documentary film and photography, oral histories, and popular movies and theatrical productions. Using three key periods of history as our focus—the founding of the United States from early conquest and settlement though the colonial era to the Revolutionary War; slavery and the Civil War; and the civil rights movement and the Vietnam War—we will grapple with differences of historical interpretation, the primary sources they are based on, and their meaning and impact in the present. At the end of the course, students will develop their own public history projects, which can range from research papers to original examples of public history, such as planning an exhibition, making a documentary film or podcast, creating a well-researched walking tour or piece of historical performance, or undertaking an oral history project. All final projects should

make use of primary and secondary materials.

A Global History of Modern Jewish Migration (212657)

Rebecca Kobrin

2019 Fall (4 Credits) **Schedule:** W 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The objective of this course is to explore the history of Jewish migration in various regions since 1800. It also aims to ask the underlying question about the comparative study of Jewish life. Does comparative analysis help one think more critically about social groups, such as Jews? Does a comparative view of Jewish migration and adaptation help us understand the social processes of migration and acculturation more fully? What can the history of Jewish migration tell us about the larger phenomenon of global movements and nation states in the last two centuries?

Amsterdam: A Global History (212672)

Pepijn Brandon

2020 Spring (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Amsterdam has long held an iconic status as a global city: beacon of religious tolerance; center of trade, arts and sciences; migrant city; and modern countercultural flashpoint. However, Amsterdam also evokes a different type of global history. It launched colonization projects from New Amsterdam/New York to Batavia/Jakarta. It controlled Dutch involvement in trans-Atlantic slavery. Today, Amsterdam has become an example for the inequalities produced by neoliberal city government and the global tourism boom. In this course, students will learn about this many-sided history, and through the lens of Amsterdam will attain a deeper grasp of Global History and Urban History.

Genocide, War Crimes Trials, and Human Rights in the Twentieth Century (212861)

Brandon Bloch

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

When does an act of state violence count as a "genocide" or "crime against humanity"? Do perpetrators of mass violence deserve a fair trial? Who should prosecute egregious violations of international law? This seminar explores these questions, and many others, by examining the international tribunals created following the Armenian genocide, the Holocaust, and genocides in Cambodia, Rwanda, and Yugoslavia. We will investigate how these trials shaped ideas about human rights and humanitarian intervention, and why they so often proved controversial. Throughout, we analyze the relationship between justice, politics, and law, and the relevance of twentieth-century war crimes trials for today.

My Country Right or Wrong? Nationalism in the Modern World (212862)

Derek Penslar

2019 Fall (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

President Trump has said that he is a "nationalist." What does this word mean, and why does its use provoke controversy? This course answers these questions via an analysis of nationalist ideas and movements throughout the world over the past 250 years. We will trace nationalism's origins in pre-modern identities, liberal and revolutionary forms of nationalisms in the nineteenth and twentieth centuries, nationalisms' relationship with religion, race, and gender, the apparent decline of nationalism in the late twentieth century, and its abrupt return to center stage in our own era. Requirements include a 15-page research essay.

The Political Thought of Christendom (212947)

James Hankins

Eric Nelson

2019 Fall (4 Credits) **Schedule:** M 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The establishment of Christianity as the state religion of the Roman Empire in the fourth century created a series of distinctive political problems that continued to shape Western ideas about government and religious belief down to modern times. This course concentrates on Christian political thought from the conversion of the emperor Constantine to the Reformation. We will look at problems such as the relationship between political and religious authority, religious pluralism in Christian societies, the morality of economic life, regime theory, popular sovereignty, the scope of the political, and the impact of Christian theology on political concepts such as freedom, equality, tyranny, and legitimacy. Readings in Augustine of Hippo, Thomas Aquinas, William of Ockham, Bartolus of Sassoferrato, Marsilius of Padua, Erasmus and Martin Luther.

Walter Benjamin (212897)

Peter Gordon

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In the eighty years since his death, the German cultural theorist and literary critic Walter Benjamin has become an indispensable resource for thinking about what it means to be modern. In this conference course, we will explore his theoretical legacy, with an emphasis on his analysis of modern experience and the nature of urban life, as found in his studies of Paris, namely, the 'Arcades Project.' We will also consider details of his biography, and the controversies surrounding his intellectual legacy, namely, whether he was in any sense thinker of the Jewish tradition, and in what ways he aligns with or departs from the canon of Western Marxism.

U.S. History: Major Themes in the Twentieth Century (125517)

Lisa McGirr

2020 Spring (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The twentieth-century United States is a vibrant and flourishing field of historical study. The goal of this seminar is to introduce students to the central questions, problems and debates in the history of the "American century." Students will learn how the literature of history has developed through reading both older and newer approaches. Readings focus on questions of politics, political culture, the state and social life. The course is both thematic and chronological (as well as necessarily selective). Students are expected to prepare well for seminar and to participate actively in discussion. Each class will begin with a brief introduction to the readings (no more than five minutes) by a member of the seminar. The idea here is for one student to take special responsibility for leading discussion, raising questions and problems posed by the reading.

"What is Intellectual History?" (109927)

Ann Blair

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Intellectual historians study almost every period, place, and theme in human history: from classical times to the present, from Asia to the Americas, by examining philosophy and religion, social and political thought, literature and art, and other expressions of human agency and intention that range from ancient epics to graphic novels. This section will draw examples from a wide range of moments and regions to ask how intellectual history has developed as a field, what methods it uses, and how it can be distinguished from other forms of history even as it informs debates of interest to all historians.

Course Notes: **Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students.**

Class Notes: **This course may not be audited or taken Pass/Fail. It enrolls prior to shopping period through the History concentration. Please contact the DUS in History if you wish to enroll without being a concentrator in History.**

"What is Environmental History?" (109929)

Sunil Amrith

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This section gives new History concentrators an introduction to environmental history. Most historians leave the natural world out of the story, but environmental historians regard nature as the inescapable context for human history, including the human impact on nature. We will explore how the histories of the environment and of humans can (and perhaps should) be written together. Is there a "natural archive" which historians can consult in parallel with conventional libraries and archives? Do places have "biographies," just as people do? Can natural entities (mountains, dogs, rivers, microbes, climate) have "agency" in the same way human actors can?

Course Notes: **Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students.**

Class Notes: **This course may not be audited or taken Pass/Fail. It enrolls prior to shopping period through the History concentration. Please contact the DUS in History if you wish to enroll without being a concentrator in History.**

"What is Family History?" (160421)

Jane Kamensky

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Every family has a history; every past actor had a family. This section investigates the practices and purposes of family history. We will explore primary sources such as diaries, child-rearing manuals, and portraits, and survey methods ranging from demography to cultural history to biography. Our topics will include the "invention" of childhood, the meanings of marriage, and the relationship between the household and the state. In addition to tracing the contours of family life across a wide array of times and places, we will investigate the ebbs and flows of family history itself, including the worldwide boom in

amateur genealogy today.

Course Notes: **Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students.**

"What is Atlantic History?" (204987)

Mary Lewis

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

We live in a world of intense exchange across borders and seas, yet most history is still taught from a national or regional perspective. By studying inter-regional developments of societies around the Atlantic Ocean, we will examine how the histories of Europe, North America, Latin America and Africa are intertwined. What methods have historians used to study the trade, migration, inter-imperial competition and revolutionary upheaval that together have helped create an "Atlantic World"? Topics include trade in commodities and slaves, the Atlantic and Haitian Revolutions, and the ecological impact of exchange, among other themes.

Course Notes: **Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students.**

Class Notes: **This course may not be audited or taken Pass/Fail. It enrolls prior to shopping period through the History concentration. Please contact the DUS in History if you wish to enroll without being a concentrator in History.**

"What is International History?" (207519)

Erez Manela

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Relations between states define some of the most important aspects of human history, including major wars, trade relations, and movements of people, ideas, and cultural productions. States, of course, have been important actors in this history, but so have other types of actors, such as international organizations, NGOs, missionary groups, philanthropic foundations, and transnational movements. In this course, we will explore major events, themes, and approaches in international history, all with the goal of better understanding how international interactions have shaped human history and experiences across time.

Course Notes: **Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students.**

The War in Vietnam (205257)

Fredrik Logevall

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The struggle for Vietnam occupies a central place in the history of the 20th century. How did it happen? Why did first France and then the United States wage large-scale war there, and why did both powers fail in their effort to subdue the revolutionary Vietnamese forces? And what is the legacy of the struggle for our world and for U.S. foreign policy today? This course examines these and related questions, with particular attention to the long period of direct American involvement. The events will be considered in their relationship to Vietnam's history, to American politics and society, and to the concurrent Cold War.

Course Notes: **This course is jointly-offered with the Kennedy School as IGA-291. The enrollment for HKS students is 10.**

The 20th Century United States: Politics, Society, Culture (212669)

Lisa McGirr

2019 Fall (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course charts key developments in the history of the 20th century United States beginning with United States emergence as a leader of global capitalism. Topics include World War I, twenties culture wars, the New Deal, World War II, the Cold War, sixties social movements, neo-liberalism, and the rise of mass incarceration. The contest over the meaning of American freedom at all levels of American society□from Congressional debates to the picket line□forms a central theme. The course includes discussion of high and low politics, political economy, and shifting patterns of culture. The course has two goals: First, to provide the foundational knowledge about past political struggles that will help students understand the roots of issues still wrestled with today; and second to introduce students to historical thinking and interpretation through the analysis of primary and secondary sources. No prerequisites are required and the course is open to all undergraduates.

Course Notes: **No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.**

The Making of the Modern Middle East (212665)

Rosie Bsheer

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How was the region of North Africa and West Asia between the Atlantic and Central Asia constructed, physically and discursively, as "the Middle East"? What were the major local, regional, and global events that have most profoundly affected the political, social, cultural, and intellectual realities of the region since the mid-eighteenth century? Throughout the semester, we will draw on interdisciplinary readings to think critically about these and related questions about the challenges of studying the modern Middle East, the politics of modernity, Ottoman reform, the formation of modern nation states, colonialism and imperialism, social and intellectual movements, petro-states in global perspective, and Islam and politics.

Coffee and the Nighttime: History and Politics, 1400-2020 (207532)

Cemal Kafadar

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Since the fifteenth century, individuals and societies in different parts of the world adopted a gradually but unmistakably quickening tempo in their everyday lives and started to make more uses of the nighttime –for socializing, for entertainment, and for work. In this reconfiguration of the architecture of day and night, people turned to various psychotropic substances such as coffee to help them better manipulate times of activity and repose. They have also created new

social institutions such as coffeehouses, which turned into public spaces for engagement with new forms of arts and politics. The course offers a history of these developments until our own time of "living 24/7" in terms of their social, economic and political consequences. Biological aspects such as addiction and pressures on our circadian rhythms will also be explored in the context of histories of sleep and nocturnal activity.

Japan in Asia and the World (142657)

Andrew Gordon

David Howell

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Japan is a collection of islands, but its past and present unfolds through continuous interaction with wider worlds. This course places Japan in contexts of Asian and global history. It begins with the people, institutions, and ideas of premodern Japan, from the emergence of a court-centered state 1500 years ago to a warrior-dominated society centuries later. We then examine the tumultuous process of change from the 19th century through the present and explore how people in Japan have dealt with the dilemmas of modernity that challenge us all.

Nazi Germany and the Holocaust (207696)

Brandon Bloch

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines the history of Nazi Germany and the Holocaust against the backdrop of global trajectories of antisemitism, colonialism, racial science, and economic crisis. Major themes include the rise of the Nazi Party in Germany; the sources of Nazi antisemitism; the role of race, gender, and disability in the Nazi state; the origins of World War II; the decision to annihilate European Jewry; collaboration and resistance during the Holocaust; the relationship between statelessness and genocide; and postwar legacies. Special attention will be paid to primary sources and methods of analyzing testimonies by Holocaust perpetrators and victims.

From the Little Ice Age to Climate Change: Introduction to US Environmental History (207839)

Zachary Nowak

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

What's the problem with wilderness? Or the environmental movement? Or invasive species? This course examines how humans thought about and used the natural world over the centuries—and the consequences of both use of and thoughts about the nature. Students will learn about food, climate change, pollution, conquest and resistance, environmentalism, and energy. This course actively seeks to show the importance of the material world and the contributions of a broad spectrum of historical actors to US history, among them Native Americans, enslaved people, women, working people, and outlaws, as well as the climate, microbes, and animals.

Course Notes: **No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.**

The New Science of the Human Past: Case Studies at the Cutting Edge (212671)

Michael McCormick

2019 Fall (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Science is powering History into a revolutionary age of discovery through microarchaeology. We will learn how ancient DNA reveals our ancestors' migrations out of Africa and across the globe and recovers ancient pathogens and their impact from Rome to the Black Death and 16th-century Mexico; how paleoclimate science reconstructs ancient environments from natural proxies (ice cores) and historical records; and how IT changes everything from shipwrecks to Roman coins, via medieval manuscripts. We'll explore the new archaeoscience as the discoveries unfold by reading, discussing, and doing, from ancient genomes to tree rings, from Roman coins to ancient pots, and more.

Reasoning from the Past: Applied History and Decision Making (213257)

Fredrik Logevall

2019 Fall (4 Credits) **Schedule:** TR 0115 PM - 0230 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

This course provides a basis for using history as a tool for analyzing foreign, security, and scientific policy. It also calls attention to some common fallacies in reasoning from history and discusses ways to avoid them. Along the way, we will consider the evolution of the modern international system and particularly the evolving role of the United States.

Course Notes: **Offered jointly with the Kennedy School as IGA-125. The enrollment limit for FAS students is 10.**

Artifacts of the Russian Empire (213241)

Megan Duncan Smith

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This survey course will explore the history of the Russian Empire through its cultural artifacts - the images, objects, and words that the Empire's inhabitants produced and possessed. Artifacts will include elements of high and low culture, material culture, print culture, and the built environment. Visual culture will be emphasized, but we will also listen, taste, touch, and smell. About 25% of the course will be dedicated to the thousand years before 1700, 25% to the eighteenth century, and 50% to the nineteenth century, ending with the revolutions of 1917.

Hegel and Marx (212689)

Peter Gordon

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Philosophy, wrote Hegel, "is its own time comprehended in thought." In this lecture course we

will seek to understand the transition from Hegel to Marx through careful philosophical reconstruction but also with some attention to the German historical context. We will explore major philosophical themes in Hegel's *Phenomenology of Spirit*, *The Philosophy of Right*, and the lectures on the *Philosophy of History*; we will then consider Marx's thought as an attempt both to fulfill and to overcome Hegel's philosophical legacy in major works such as *The Economic and Philosophic Manuscripts*, the *Critique of Hegel's Philosophy of Right*, "On the Jewish Question," *The Communist Manifesto*, and *Capital*.

History of Modern Latin America (108533)

Kirsten Weld

2020 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course surveys Latin America from its 19th-century independence movements through the present day. How did the powerful legacies of European colonialism, and the neocolonial economic order that emerged to replace it, shape the Americas' new nations? Themes include nationalism and identity, revolution and counterrevolution, populism, state formation, race and ethnicity, gender and sexuality, social movements, the role of foreign powers, inequality and social class, dictatorship, democratization, and human rights.

Environments: China, Japan, Korea (205113)

Ian J. Miller

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

The future is not what it used to be. Nowhere is this more evident than in the natural world, where climate change and fading biodiversity, energy anxieties and environmental disasters have undermined the bedrock of history: the assumption of a stable continuity between past, present, and future. This class visits East Asia—China, Japan, and the Koreas, vibrant economies and agents of historical change, to explore the transformation of the natural world in modern times. We will analyze nuclear power plants and cruise rivers, explore industrial ruins and debate public policy as we define Asia's role in the global environmental future.

Intro to Harvard History: Beyond the Three Lies (212928)

Zachary Nowak

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Harvard's history is a story of professors, students, courses, and research that has led to world-changing innovations. But it is also a story of student unrest, gender unease, and the exclusion of women and minorities, enslaved people, Native Americans, and working-class people. All of them made Harvard and left traces in its archives, libraries, and museums, its buildings, and even in its soil. Some Harvard stories have been told; others have been forgotten. In this class, we will uncover Harvard's past. There will be several field trips to Harvard's archives and museums and

other places on campus most students will never visit. If you wish, the University Archives will preserve your final paper on Harvard history for perpetuity.

Course Notes: **This class was designed especially for first-gen students, first-years, sophomores, and those who haven't taken a college History class. HIST 1636 will change the way you see Harvard and give you research and writing skills to use for all your other courses.**

West Africa from 1800 to the Present (140979)

Emmanuel Akyeampong

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The course explores the internal dynamics of West African states from 1800, and West Africa's relations with the wider world. Innovations in science, technology and finance made the 19th century an era of social and economic opportunity and of political experimentation; a phase curtailed by European imperialism. The course examines African perspectives on colonialism, the two world wars, nationalism, and the transfer of political power. We will review post-colonial political economies and the search for workable political and economic models.

History 1776 Section: 01

The American Revolution (203018)

Jane Kamensky

2019 Fall (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How, why, by whom, and for what was the United States created? How do the nation's origins—in a bloody civil war, and in a politics marked both by soaring promises and glaring faults—shape America today? This course explores the causes, experience, and consequences of the American Revolution, the conflict war that birthed the United States, among many other results. Treating the conflict as a multi-sided and multi-sited struggle, our vantage point will range among the thirteen rebellious colonies of the Atlantic seaboard, the thirteen other colonies that comprised Britain's America, and the vast stretches of the North American mainland that lay outside Britain's domain, but were nonetheless embroiled in the war. We will also take in the view from London and elsewhere around the globe, as America's revolution triggered realignments across Europe, Africa, and Asia.

Our inquiry will center on the unraveling of British America in the 1760s and 1770s, on the war years of 1775-1784, and on the first tentative steps toward nation building in the late 1770s and early 1780s. We will try, as much as possible, to view history forward rather than backward, exploring contingencies, interdependencies, possibilities, and roads not taken. We will also devote considerable time to pondering what it means to own the American Revolution in contemporary civic society: not only to admit the fissures of the founding era, but also to make good its still unrealized promises. Your final projects will ask you to connect primary-source research and your mastery of our assigned readings to various places the American Revolution lives in the twenty-first century, from high school classrooms to theatrical productions to monuments to museum exhibitions.

Course Notes: **Our format consists of three whole-class meetings, taught in hybrid lecture / breakout discussion mode, followed by one laboratory session, taught in small groups by the teaching fellow. These varied active learning formats are related to the content of the course. Rather than absorbing a pre-chewed narrative of the American Revolution, students in History 1776 will contest various perspectives, build their own interpretations, and carry those interpretations forward from the classroom to the public sphere.**

Narrative History: Art and Argument (207531)

Maya Jasanoff

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Who, what, where, when, how, and why? The elements of history are the elements of a story, and the art of writing history is the art of how to tell it. This course offers an intensive workshop on the art and craft of historical narrative. Through reading (from T. B. Macaulay to Hilary Mantel) and in-class writing exercises we will develop a repertoire of techniques to address issues central to historical story-telling, such as establishing scene and character, handling evidence, and embedding argument. Open to any advanced undergraduates and graduate students interested in writing as a craft.

How Societies Remember (and Forget) (212673)

Kirsten Weld

2019 Fall (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

As the adage goes, "All wars are fought twice: the first time on the battlefield, the second time in memory." This seminar interrogates the relationship between history and memory by analyzing how modern societies have chosen to remember – and to forget – their histories of war, conquest, violence, and dispossession. We examine cases from across the Americas and diverse strategies of memorialization and redress, including museums, monuments, reparations, and exhumations, to understand how contested pasts generate both political challenges and political possibilities.

The History of Energy (205112)

Ian J. Miller

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The history of energy is the history of modern political economy. The history of energy is the history of a scientific concept and its technological application. The history of energy is the history of climate change and environmental catastrophe. The history of energy is the history of life, the universe, and everything. All of these statements are true. This seminar is a critical introduction to the roles that energy has played in history and historiography. Using this ubiquitous and fundamental concept, we will explore questions ranging from climate change and capitalism to causality and colonialism in diverse places and times.

Dirty Wars, Peace Processes, and the Politics of History in Latin America (108531)

Kirsten Weld

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Latin America's "dirty wars" generated intense struggles over historical memory. Course focuses on Chile, Argentina, El Salvador, and Guatemala, and comparatively examines how societies reckon with bloody recent pasts that are anything but settled. Looks at both these countries' dictatorships and their fraught peace processes (including truth commissions, transitional justice, artistic representations, human rights activism, international law, foreign involvement, backlash) in order to probe the stakes and politics of historical interpretation.

Are You Now or Have You Ever Been an Android?: The New Materialism (204981)

Joyce Chaplin

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Many historians now believe that the material and nonhuman elements of human life and experience should be foreground, not background. Humans and their histories exist, after all, within and in relation to nonhuman material entities and forces: animals, climate, androids, food, computer code, commodities, inanimate things, entire landscapes, and every other kind of stuff. Several fields from the human sciences and natural sciences have been important in establishing how our material worlds are fundamental to our identities, roles, beliefs, and futures. This course will explore dimensions of the new materialism, as it is playing out in interpretations of the past.

Austrian History in Literature (212656)

Alison Frank Johnson

2020 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course uses Austrian literature to think through some of the most pressing questions of modern European (and, specifically, Austrian) history. We will read some of the greatest novels and novellas in modern German-speaking literature as learn about the Habsburg monarchy, turn-of-the-century Vienna, the First and Second World Wars, the expulsion of Austrian Jewry, and postwar mythmaking. Important themes include: women's role in society and in the family; the rise of nationalism as a social and political force and the viability of multinational empires; sex and sexuality; justice, mercy, and retribution; what Austria is and what it means to be Austrian; anti-Semitism, Zionism, and European Jewry; cultural, political, and violent forms of social protest; the transformative power of war. Open to undergraduate and graduate students, with the permission of the instructor.

The History of Law in Europe (212653)

Tamar Herzog

2019 Fall (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This is a conference course on the history of law in Europe (including both England and the Continent, as well as Europe's overseas domains) from the fall of the Roman Empire (5th century) to the establishment of the European Community (20th century). Organized chronologically, it engages with the sources and nature of Law, the organization of legal systems and the relationship between law and society, law and law-maker, law and the legal professions.

Course Notes: **This course is jointly offered with the Law School as LAW 2700. The enrollment limit for Law School students is 7.**

Fictions of Adultery: From Flaubert to Machado de Assis (202989)

Sidney Chalhoub

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course seeks to analyze the ways in which Machado de Assis, the most important Brazilian novelist of all times, appropriated the European tradition of the novel of adultery. In doing so, he sought to discuss literary models (realism), scientific ideologies (social Darwinism), gender (he expected the misogyny of readers to fill the lacunae of the narration), and class conflict (characters in dependent relations, women in particular, deploy an array of strategies to deal with the potential violence of patriarchal figures). Readings: selected pieces on theoretical approaches to fiction from the perspective of social history and novels by Flaubert and Machado de Assis.

Byzantine Imperialism (110448)

Dimiter Angelov

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The Byzantine Empire is perhaps best known today as the medieval successor to imperial Rome and as a model for later empires in the Eastern Mediterranean and Eastern Europe. The course investigates imperialism both as an idea and as a practice in Byzantium. We will focus on a variety of themes, such as the role of Constantinople, the methods of governance, the role of coercive and soft power, the integration of diverse communities, the views of empire among the inhabitants of the capital, provincials, and frontiersmen. Primary sources and important secondary works will enable us to examine the specificity of Byzantine imperialism and gain deeper insight into empire as a historical phenomenon.

Slavery and Public History (212674)

Tiya Miles

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Confronting vexed historical meanings and present-day uses of the past is the special charge of public historians. This course explores the theme of slavery through the lenses and methods of public history, a field of historical inquiry and applied knowledge production that stresses past-present connections, community engagement, collaborative work, and audiences beyond the academy. As a foundational element in the structure of U.S. society, slavery has made a lasting imprint on social, cultural, political, and economic relations. Nevertheless, American public culture has avoided sustained exploration of the broad and complex history of racialized slavery and instead maintains a stance of discomfort, distance, and ambivalence. We will discuss change over time in public representations of slavery while also addressing the tensions of collaboration and audience engagement.

The Imperial Map: Geographic Information in the Age of Empire (213281)

Kelly A. O'Neill

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Maps and empires have entangled histories. In this course we will examine the evolution of geographic information technology and the way imperial states and subjects used atlases, boundary surveys, town plans, and topographical maps to manage information flows and generate political and cultural capital. We will learn to speak the language of maps: particularly maps of the Russian Empire. Through units devoted to Siberia, the Black Sea, and European Russia, we will reconstruct the history of an empire through maps held right here at Harvard.

Jews and the City: An Introduction to Modern Jewish Urban History (212675)

Rebecca Kobrin

2019 Fall (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Over the course of the nineteenth century, millions of Jews moved to cities scattered throughout the world. This mass urbanization not only created new demographic centers of world Jewry, but also fundamentally transformed Jewish political and cultural life. In this course, we shall analyze primary and secondary sources to explore the Jewish encounter with the city. The underlying goal is to consider how comparative analysis helps one think more critically about social groups, such as Jews, or social formations, such as cities. Does a comparative view of Jewish urbanization help one understand this phenomenon better?

The Dutch Empire (212676)

Pepijn Brandon

2020 Spring (4 Credits) **Schedule:** T 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

It is hard to fathom that a small European nation like the Netherlands for several centuries stood at the center of a vast global Empire. And yet, the Dutch once were the territorial overlords of colonies reaching from North-America to Brazil, and from South Africa to Indonesia. The legacies of this Empire are undeniable, but its internal dynamics, as well its place within comparative histories of imperial domination are still hotly disputed. This course examines the Dutch Empire from its inception to decolonization, focusing in particular on the interconnections between trade, violence, and forced labor.

Hegel and Marx: Seminar (212898)

Peter Gordon

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The transition in nineteenth-century German social thought from the metaphysical systems of German Idealism to a critical and practically-oriented social theory is associated most of all with two names: G.W.F. Hegel and Karl Marx. In this graduate seminar we explore both the internal (philosophical) and external (historical) significance of this formative moment in the emergence of modern social theory. We will concentrate on the canonical works—Hegel's *Phenomenology of Spirit, The Philosophy of Right*, and *The Lectures on the Philosophy of History*, and then turn to Marx's *Economic and Philosophic Manuscripts*, the *Critique of Hegel's Philosophy of Right* the political commentaries, and *Capital*. We will also consult the secondary literature, e.g., inter alia, Herbert Marcuse's *Reason and Revolution*.

Histories of Emotion: Research Seminar (212677)

Derek Penslar

2019 Fall (4 Credits) **Schedule:** W 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The history of emotion is a subset of cultural history – the study of how humans make sense of themselves, their environment, and their experience. This seminar will historicize emotion within specific social contexts and explore the intertwining of emotion, cognition, and judgment in public as well as private life. Although our emphasis will be late modernity, our common readings will explore the medieval and early modern periods for which pioneering work in the field has been done. This seminar culminates in an article-length (30-40 page) research essay whose methodology engages substantively with the history of emotion.

Class Notes: **This course will meet in the Giedrojć Gallery at the Center for European Studies, 27 Kirkland Street.**

Oil and the Arabian Peninsula: Culture, Power, History: Seminar (212678)

Rosie Bsheer

2020 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The principal analytical focus in this seminar will be the role of oil in shaping the cultural, social, political, and economic relations of the Arabian Peninsula. This region has long been at the center of global circulations of commodities, capital, military power, and cultural knowledge. Popular and academic representations, however, tend to render the Arabian Peninsula as insular, homogenous, and historically static. Rather than isolate the Arabian Peninsula from these broader connections, this course uses its focus on oil to examine the complex global linkages – through financial and resource flows, regulatory bodies, political institutions, labor markets, kinship networks, and religious circuits – that shape the region.

History from Things: Seminar (205145)

Gabriel Pizzorno

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar focuses on the use of material culture as a primary source for constructing historical narratives that access aspects of the past not covered by written words. We will look closely at how materiality theory relates to the methodologies and conceptual categories used by historians to understand the past. Students will also be trained in the specific skills needed for interpreting material sources. Because material history relies on methodologies and theoretical approaches that transcend the fields that define our discipline, the course's coverage will be broad across both time and space, allowing for participants to explore corpora of materials according to their own interests and expertise.

Sunil Amrith

David Shumway Jones

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Air pollution has become a leading cause of death worldwide, killing more people than AIDS, tuberculosis, and malaria. This seminar draws on environmental history, history of science, and history of policy to understand this problem. It will examine the material history of air pollution, from the ancient world, to the industrialization of Europe and America, to contemporary India and China. It will track the shifting configurations of how air pollution has been understood as a social, medical, or moral problem. It will assess the measures taken by different societies to control air pollution, exploring histories of activism, policy, and regulation.

Political Meritocracy in Comparative Historical Perspective: Seminar (212946)

James Hankins

Peter K. Bol

2020 Spring (4 Credits) **Schedule:** T 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

How does a society get morally good and competent rulers into power, and how can it get them to rule in the interests of the whole community? These are questions that have occupied political thinkers, statesmen and legislators in numerous historical societies, East and West, for many centuries. This course explores meritocratic political thought and institutions principally in imperial China, ancient Greece, the Roman and Byzantine empires, and Western Europe since the Renaissance. We will address questions such as: What counts as merit in political elites? What kind of learning can best produce personal virtue and insight into government, and how can these qualities be assessed? How can a society or a political system "elevate the worthy"? Can or should merit be linked with legitimacy? Is meritocracy a regime type, or is meritorious governance a political excellence to which any regime may aspire? What laws and constitutional devices have been used to support meritocracy and to minimize corruption, closed elites, and popular discontent with elite claims to authority?

Introduction to Islamic Law (214429)

Intisar Rabb

2019 Fall (4 Credits) **Schedule:** M 0500 PM - 0700 PM

Instructor Permissions: Instructor **Enrollment Cap:** 5

This course will survey core concepts of Islamic law (*sharia*) in historical and comparative modern contexts. Popular perceptions of this legal system imagine it to be a static code from 7th-century Arabia. Islamic law is in fact a dynamic legal tradition, with a rich history that reveals processes of "legislation" and interpretation analogous to our own. It also developed substantive rulings and out of institutional structures quite different from our own. Those laws and structures evolved over time, with notable changes accompanying the breakup of the Islamic empire in the 10th and 12th centuries, colonial interventions in the 18th and 19th centuries, and independence movements in the 20th and 21st centuries. How and why did Muslim jurists, judges, and political leaders define or operate within the grammar of Islamic law? Did the law impose religious-moral values or reflect cultural and socially constructed ones? What explains the recent appeal of shari?a in the last few decades and how might we understand Islamic law in our times? This course will equip students with tools to examine these questions in the course of conversations about five core subjects: Islamic legal theory, family law, criminal law, property and contract law, and constitutional law. We will relate each to the central-most question in law of any system today, through focus on Islamic law as a compelling subject of legal history and comparative law with a widespread contemporary reach: how and why do shifts in *institutional structures, moral values*, and the *legal process* affect law? *Students may opt for a long paper or four short papers for an additional credit.* Students need not have prior knowledge of Islamic law.*

Class Notes: **Students may opt for a research paper (15pp) or three short papers (4-5pp each).**

History of Global Capitalism: Seminar (212679)

Sven Beckert

Sophus Reinert

2019 Fall (2 Credits) **Schedule:** M 0345 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The history of capitalism is one of the most important topics in the study of the past, as the expansion of capitalism has revolutionized almost all aspects of human life in almost all areas of the world during the past 500 years. The seminar will introduce students to a lively debate among social scientists on what this capitalist revolution has been about and how best to explain it. We will read canonical texts in the field, debate current research and guide student research in the field. We will study capitalism from a global and historical perspective. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

The Postwar American Road Narrative (108091)

Patrick Whitmarsh

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course examines a vibrant subgenre of post-World War II American literature. We will read major novels by Kerouac, Nabokov, and Didion as well as less familiar (yet still fascinating) writings by Hunter S. Thompson, Tom Wolfe, Patricia Highsmith, Ralph Ellison, and others. In addition, students can expect to analyze both primary and secondary historical sources, while giving some attention to visual art (e.g. John Chamberlain) and to film (e.g. Bonnie and Clyde).

The American Prison & The Literature of Punishment (203218)

Thomas Dichter

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The United States currently keeps more people behind bars than any other country. While the US's emergence as the leader in incarceration rates is relatively recent, the prison has loomed large in American public life for 200 years. In this class, we will approach the prison not as a marginal phenomenon, but as an institution central to American culture. Readings include works of literature by and about prisoners as well as reformers' pamphlets, sociological studies, government reports, and inmate manifestos. We will trace debates about freedom and captivity from the birth of the penitentiary through the era of mass incarceration.

Fashion and Slavery (205574)

Jonathan Square

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course examines the politics of fashion among people of African descent during slavery and the period immediately followed emancipation. Fashion is generative, yet underutilized analytic to explore the experience of the enslaved and their descendants. Geographical breadth is crucial to examining the African Diaspora in its full complexity; therefore, course material will cover the United States, Caribbean, Latin America, and Africa. We will examine in particular the relationship between slave consumerism and the development of modern capitalism in the Atlantic World. Other topics of the course will include: sumptuary law, wealth accumulation among the enslaved and formally enslaved, honor and respectability politics, commodification of the enslaved, gendered sartorial expression, etc.

Everyday Life in Cold War Berlin (207846)

Briana Smith

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In this course, we will examine the history of Berlin from the "rubble years" after World War II, through the aftermath of German unification in the 1990s from the perspective of the history of everyday life. Our discussion of diaries, primary source documents, historical studies, literature, films, art, and music produced in divided Berlin will reveal how the divided city shaped individual lives and subjectivities, and how individual Berliners shaped the history of Cold War Berlin.

Students at the Barricades: Student Activism in Global Perspective (207847)

Beatrice Wayne

2019 Fall (4 Credits) **Schedule:** T 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

What is the role of the student in the struggle for global justice? Do students bear particular responsibility in addressing global inequalities? How does student activism differ from other forms of activism, and how do they intersect? Has student activism changed over time, and have different student movements across the world exhibited different characteristics? What are the economic, cultural and political factors that have animated the emergence of vibrant student movements? And how has this particular form of activism been

portrayed and fostered through literature and film? This course will explore the role that students have played and continue to play in social justice movements around our world. Throughout our study of student mobilization across time and geographies, we will debate how these movements should be understood, and the role they play in altering social values, practices and institutions. The purpose of this course is to theorize the ways in which these critical movements come into being and their consequences. This course aims to be directly relevant to your lives as students, and to encourage you to think broadly about the struggle to enact change in our world.

Speculative Fictions in Multiethnic America (207848)

Ellen Song

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Speculative fiction, especially science fiction, is known to be a predominantly white genre; data from one source, the sci-fi trade journal *Locus*, indicates that less than 5% of SF and fantasy books published are by writers of color. This course examines in an intentionally multi-ethnic framework speculative fiction written by African American, Asian American, and white authors alike in the 20th and 21st centuries, which opens us up to the diversity of themes, concepts, and settings to be found – should we be interested in looking for it. From the early Afro-futurism of W.E.B Du Bois's "The Comet," to the techno-orientalism of Paolo Bacigalupi's *The Windup Girl*, to the environmental critique of Karen Tei Yamashita's *Through the Arc of the Rainforest*, contemporary speculative fiction asks us to imagine a world completely alien to us and works to uncover the hidden operations, institutions, and power structures of our own – often, though not always, at the same time. Yet, some of the authors examined in this course also reveal that their writings are not necessarily dictated or primarily influenced by their identity markers. Ultimately, in this course, we will gain a nuanced appreciation for the breadth of conceptual concerns covered in contemporary speculative fiction. We will also learn to read both with and against the grain of our expectations as readers, and to use this fluidity to reflect on the ethical dimensions of reading and writing.

History & Literature 90DJ

From Wounded Knee to Standing Rock: Native America in the Twentieth Century (207849)

Christopher Clements

2019 Fall (4 Credits) **Schedule:** M 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will explore various forms of Native American cultural and political production in the twentieth century. Drawing on fiction, film, historical documents, documentaries, photographs, nonfiction, and memoirs, this class will explore the ways in which Indigenous people have articulated both belonging and separateness from the United States. In addition to its focus on key aspects of modern indigenous culture and politics—sovereignty, self-determination, decolonization, anti-racism, gender equality, and land claims, to name a few—we will also consider broader conceptual questions. What, for example, is the relationship between indigeneity and modernity? Does the twentieth century mark a distinct break from the first four hundred years of Native-settler history? How does settler colonialism intersect with other forms of oppression? And, why have events like Wounded Knee II and Standing Rock gained support from wider, non-indigenous publics while issues like police brutality against Native people and the ongoing crisis of Missing and Murdered Indigenous Women (MMIW) have not?

Asian/American Graphic Novels (207850)

Catherine Nguyen

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The seminar works through Asian American literature by focusing on the genre and form of comics and graphic novels. Through these illustrative and textual works, we will explore the Asian American experience of immigration and racial difference as well as the construction of Asian American identity and representation through possible works, such as Adrian Tomine's Shortcomings, and Thi Bui's The Best We Could Do. The course will also open up to consider the transnational and global literature of Asian/American graphic novels from other sites of Asian migration and diaspora, including Vietnamese Australian Matt Huynh's *The Boat*, Japanese Gengoroh Tagame's *My Brother's Husband*, and Korean Belgian adoptee Jung's *Couleur de peau: miel*. As such, this course seeks to examine literary works and cultural productions in the form of comics and graphic novels that engage with and articulate the Asian American experience as well as the sense of being Asian in the world. The seminar will also have an art workshop series on the practice of developing and drawing comics and graphic novels with an eye towards the creative option of the final project. This workshop will be led by local-MA comic artist Erica Henderson and is an integral part of the seminar, and students are required to attend and participate in all workshops.

Old Weird America (207854)

Jennifer Brady

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This seminar focuses on the United States before 1865. Poised halfway between our current moment and the seemingly archaic, superstitious fervor of the Salem Witch Trials, America in the antebellum era was in the process of fitfully, at times reluctantly, becoming modern. We will focus on strange objects—daguerreotypes of dead children, the spectacles created by P. T. Barnum, the seedy newspapers of antebellum New York—and texts that figure the disorienting changes to media, transportation, personhood, and nation that unfolded as the United States settled uneasily into nationhood. Considering literary and subliterary texts, religious beliefs, visual culture, and political practices with an eye to race, gender, sexuality, and class, students will learn about a period that is in many respects deeply alien to contemporary Americans but offers surprising moments of coincidence with the present.

American Speeches (212821)

Drew Faust

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will explore speeches across the sweep of American history, examining them both as windows into their own era and as texts created to inform and persuade. We will ask who speaks and how and the ways that has evolved over time, and we will seek to identify the enduring and changing elements of effective oratory from Jonathan Edwards to Frederick Douglass to J.K. Rowling's Harvard commencement address, to the emergence of TED. Assignments will include the composition and delivery of a speech.

Asian American History (212823)

Mark Sanchez

2019 Fall (4 Credits) **Schedule:** M 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will focus on Asian American history from the 19th and early 20th centuries. Our aim will be to engage the longer history of Asian migration and labor in the United States. As such, we will focus on topics prior to the Immigration Act of 1924 (also sometimes known as the Asian Exclusion Act). We will explore how empire, capital, and labor informs the transnational movements of ideas, commodities, and

people. Topics we will discuss include coolie labor, immigration exclusion, and U.S. empire. Readings and discussions will aim to think through how ideas of race, gender, and sexuality operate and change over time within these histories. Our readings will focus on monographs on Asian American history combined with primary sources.

Queer Oral Histories (212824)

Devin McGeehan Muchmore

2019 Fall (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course introduces students to twentieth-century U.S. LGBTQ history through a deep engagement with one of its signature methods-—oral history. Oral history has been an essential method for queer historians because personal narratives shed light on the experiences, perceptions, and desires of sexual and gender minorities who too often appear in textual records only as criminals or patients, if they appear at all. Yet far from being a transparent or privileged window into the past, oral history practice highlights how emotions, memory, identity, and power shape historical knowledge production. By reading life histories and other genres of personal testimony alongside scholarly articles and monographs, documentary films, performance, and public history projects, students will develop analytical tools for thinking through the complexities of historical research and interpretation. The final assignment asks students to collect and analyze life histories related to Harvard's LGBTQ history.

Red Scares (212825)

Steven Biel

Lauren Kaminsky

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

When, in his 2019 State of the Union address, President Trump said, "We are born free, and we will stay free. Tonight, we renew our resolve that America will never be a socialist country," he invoked American rhetoric that is at least one hundred years old. The first so-called Red Scare, precipitated by World War I and the Bolshevik Revolution in Russia, produced the Espionage Act, which was recently used to charge former CIA analyst Edward Snowden in the leak of classified documents related to the NSA's surveillance program. In the second Red Scare that followed World War II, the House Un-American Activities Committee

(HUAC), Senator Joseph McCarthy, the FBI, and others conducted widespread investigations of suspected communists and purged "subversives" from all levels of government, the entertainment industry, public and private schools, colleges and universities. Beginning with early 20th-century fears that revolutionary socialism could spread from Russia around the world, this course explores anxieties about subversion and perversion in American politics and culture at the dawn of the Cold War. Readings will include texts by Emma Goldman, Sacco and Vanzetti, John Dos Passos, Langston Hughes, Elia Kazan, Richard Wright, Lillian Hellman, E. L. Doctorow, and Tony Kushner, as well as films such as *The Manchurian Candidate*, *Pickup on South Street*, *Invasion of the Body Snatchers*, *My Son John*, and *On the Waterfront*. Assignments will include research involving Harvard archives and FBI files.

Queering the South: Race, Gender, & Sexuality in the American South (213371)

Andrew Pope

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The course examines the intertwined histories of race, gender, and sexuality in the American South from the end of Reconstruction in 1877 through the present. We will consider how struggles for gender and sexual freedom are linked to race in the modern South. The course proceeds along two tracks: first, we gain knowledge about the lives of women, trans people, and gay people in the South. Second, we consider how African Americans, women, and LGBTQ individuals struggled for freedom and how these efforts changed over time in response to opposition, developments elsewhere in the world, and victories. We will explore the circumstances under which people from different backgrounds come together in pursuit of a common goal and the times when conflicts arise. We will read poetry and novels, manifestos and diaries, and secondary literature written by historians. In addition, we'll watch videos and listen to music to understand the different ways people queered the South during the last century. The course recognizes that Southerners do not fit neatly into racial, gender, or sexual boxes and so investigates the intersections of identities to lend complexity and verve to the histories of people often forgotten.

Environmental Justice in North America (213372)

Arianne Urus

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course examines how the right to natural resources became contested in North America following European conquest and westward expansion, with a particular emphasis on the period before 1865. Sometimes these contested resources have been clean air, soil, and water, while at other times they included fisheries, forests, agricultural fields, animal pastures, or oil. From when pilgrims first arrived at Plymouth Rock in 1620, race, class, and gender have been the determining factors in regulating resource access rights. We will explore the social, political, and economic processes by which some people have been denied the basic right to resources by studying the histories of European colonization, indigenous dispossession, the enslavement of Africans, "Manifest Destiny," and the rise of capitalism. We will look at the diversity of indigenous resource management regimes at work across the continent, and consider how these methods changed in response to encounters with colonialism and capitalism. We will interrogate what happens when natural resources become capitalist commodities, and how the history of European colonialism heralded the transformation of North American nature—a process which produced such contradictions as the beauty of Yellowstone National Park and the carnage of the Cuyahoga River which famously caught on fire in downtown Cleveland in 1969. Throughout the semester alongside these transformations we will study the ways people organized in response to them. The course culminates with the 2016-17 protests at Standing Rock to ask how the past informs the future of resource conflict between the government and business on one side and indigenous and other underrepresented populations on the other in the twenty-first century.

Race and American Empire (213373)

Ernest Mitchell

2019 Fall (4 Credits) **Schedule:** R 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course examines the early 20th century expansion of U.S. military influence in the Atlantic and Pacific, and how this expansion shaped and was shaped by theories of race. Beginning with the Spanish-American War (1898), we will follow a series of U.S. interventions in the Atlantic (Cuba, Dominican Republic, Haiti, Honduras, Mexico, Nicaragua, Panama, Puerto Rico, Venezuela) and Pacific (Guam, Hawaii, Philippines). We will also explore the tensions between imperialism and white supremacy, as theorized by Madison Grant and Lothrop Stoddard. Special attention will be paid to black intellectuals (W.E.B. Du Bois, Anna Julia Cooper, Katherine Dunham, Jessie Fauset, Amy Jacques Garvey, Langston Hughes, Zora Neale Hurston, James Weldon Johnson, Eric Walrond, Ida B. Wells) who both aided and contested U.S. imperial designs. Through photographs, architecture, film, novels, ethnographies, memoirs, speeches, and cartoons, we will study debates about the international role of the U.S. through World War II.

Too Soon? Comedy in Europe's Tragic Twentieth Century (213374)

Kathryn Brackney

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In the first half the twentieth century, Europe was the site of two wars that depleted the world's population, dislocated millions, and stripped once diverse regions of the continent of their minority populations. Even as Europe started to rebuild itself in the 1950s, progress occurred under the shadow of two hegemonic superpowers in possession of weapons capable of incinerating not just both sides of the Iron Curtain but the entire planet. What cultural role has comedy played in coming to terms with all of this tragedy? In a 1966 profile of Bertolt Brecht for *The New Yorker*, Hannah Arendt wrote of "the terrible freshness of the post-war world"—in which all that poets could do in the rubble was laugh at the sky that remained. As Europe destroyed and reinvented itself through the twentieth century, how did humor serve as a tool for working through the past and its relation to the present? This course will draw on sources in various media to examine how comedy can be a means of not just coping with history but understanding it. We will consider humor as a tool of political critique, historical analysis, and mourning and pay particular attention to the boundaries and historicity of taste. Assigned readings and films include works by Terry Eagleton, Sigmund Freud, Hannah Arendt, Karel Čapek, Ernst Lubitsch, Jean-Luc Godard, Milos Forman, Leander Haußmann, and Yasemin Şamdereli.

Water Justice and Resistance in the Americas (213375)

James Mestaz

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Water is life, but is it a human right? Water governance is a contentious issue globally because humans rely on water for nearly every productive activity; moreover, it is often scarce and not distributed equally. To better understand the persistence and escalation of struggles over water access around the world, this course uses a multidisciplinary approach that allows students to examine both the social and physical shape of water in a modern and historical context. While all bodies of water deserve mention, civilizations have most often centered on rivers acting as veins pumping their life blood. This class discusses water issues in a global context, but pays particular attention to populations from South America through Canada. This course often takes an ethno-gendered approach by specifically examining women's and indigenous peoples' hydraulic social mobilization practices through the lens of their physical and cultural connection to water sources. Students will have the opportunity to interrogate the complexity of water policies, and learn how marginalized groups executed water justice strategies to defend their identity, material wealth, and health.

Gender and Empire in the Modern Mediterranean (213376)

John Boonstra

2020 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Questions of empire are fundamentally intertwined with questions of gender. This course will focus on the imperial and intercultural contact zones of the Mediterranean—at once connecting and dividing Europe, the Middle East, and North Africa—from the eighteenth to the twenty-first century. With an interest both in men's and women's experiences and in representations of masculinity and femininity, our inquiry will also straddle the divide between colonizer and colonized. Readings will include both primary and secondary sources, ranging from images, novels, and films to memoirs, testimonials, and government documents, and from Edward Said and Frantz Fanon to Assia Djebar and Tahar Ben Jelloun. Students will learn to assess how modern imperial encounters were mediated by gendered logics of power; how these overlapped with dynamics of race, class, and nation; and how the Mediterranean region itself gave rise to different understandings of gender and empire.

History of Art & Architecture 11

Landmarks of World Architecture (113337)

David Roxburgh

Lisa Haber-Thomson

2020 Spring (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Examines major works of world architecture and the unique aesthetic, cultural, and historical issues that frame them. Faculty members will each lecture on an outstanding example in their area of expertise, drawing from various historical periods and diverse cultures such as modern and contemporary Europe and America, early modern Japan, Mughal India, Renaissance Europe, and ancient Egypt. Weekly discussion sections will develop thematically, expanding on the given examples to focus on significant issues in the analysis and interpretation of architecture.

GENGHIS KHAN AND HIS SUCCESSORS:
ART IN THE WAKE OF THE MONGOL CONQUESTS (114627)

David Roxburgh

2019 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Is Genghis Khan's characterization "as terrifying as genocide and as dreadful as the plague" (Time, Dec. 31, 1999) sufficient? His legacy entailed the destruction of social and cultural order, but paradoxically, his empire also forged a dynamic relationship between nomadic and sedentary societies. Genghis Khan's successors fostered a climate of intense cultural activity in art and architecture, producing complex fusions of artistic traditions between the Middle East and China. These are the major concerns of the course, which focuses on the art and architecture produced from the thirteenth century on under Genghis Khan and his successors. Genghis Khan and his Mongol horde traversed Eurasia to create a world empire, their most enduring legacy stamped on the lands of Iran and Central Asia through their successors, the Ilkhanid and Timurid dynasties. This imperial order established a new relationship between nomadic and sedentary societies, an ongoing symbiosis of "steppe" and "sown." To bolster their claim to rule, successive leaders exploited the knowledge of indigenous bureaucrats and craftsmen to execute their cultural program. Regional artistic traditions were manipulated and transformed into new hybrids that could demonstrate the ruler's power to the nomadic elite and to the multi-cultural urban populations under their control. These works reveal an evolving political structure and social order. The course examines how meanings are

encoded through language, forms, and aesthetic features, how they are made legible, and how they may function as propaganda.

The environments from which the Mongols emerged and into which they journeyed are initially considered in terms of the heritage, culture, and ecology of the Mongols and the peoples of the lands they conquered. How did the Mongols remember their nomadic past as the balance of their lives shifted, when they became increasingly sedentarized? Which symbolic elements could be easily translated through the available forms of sedentary art and architecture? In subsequent lectures, key monuments of Ilkhanid and Timurid art and architecture will provide a framework for analyzing different facets of the process of cultural assimilation, the changing Mongol response—at first hostile and then receptive—to the sedentarized cultures that they encountered and then ruled.

Key readings are extracted from a wealth of recent literature in addition to primary sources available in English translation. No previous classes in Islamic art and architecture or in Middle Eastern history and culture are required.

Northern Renaissance and Baroque Painting and Sculpture: Van Eyck to Vermeer (131346)

Joseph Koerner

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Between 1400 to 1700 artists in Northern Europe created new imagery and new image technologies that helped lay the foundations of our modern world. We explore painting, sculpting, and printmaking in Germany, the Netherlands, France, and England, looking closely at the art of Van Eyck, Bosch, Dürer, Holbein, Bruegel, Rubens, Rembrandt, Vermeer, and many others. We also study the violent struggles about art that broke out during this period, as people killed each other over whether images were the enemy of truth. Meanwhile, printing emerged as a powerful means for communication, changing forever the experience of art.

Introduction to Contemporary Art (207735)

Carrie Lambert-Beatty

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This class is about encountering the art of your time. You will learn why artists today have such a different range of choices than their counterparts in other periods, and how to make sense of the experiences they create, in order to take up the opportunities contemporary art provides: to retune your senses, reassess your assumptions, and reencounter matters that concern you as one of the globally interconnected, differently positioned constituents of the contemporary period.

History of Art & Architecture 17Z

Black Rock, White City: Australian Architecture from earliest times to the present (213561)

Philip Goad

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Long regarded, often romantically, as an edge condition both intellectually and geographically, the architecture of Australia has charted theoretical and material practices that have realized a unique place in contemporary architectural production. A former British settler colony, highly urbanized and highly modernized, with divided historical, economic and political allegiances to the United Kingdom and the United States but placed within the context of Asia and the Pacific Ocean, possessing natural landscapes of profound beauty and climatic challenge, yet beset by ethical and competing crises of national identity, migration and indigenous reconciliation, the architecture of Australia has been sustained by an archipelago of discrete urban cultures rooted in deeply self-aware critique and frequent anxiety for participation in a broader global conversation.

This course follows the classical structure of an undergraduate program (weekly lectures and sections) to establish a rhythm between thematic issue and case study. The aim is to provide an overview of Australian architecture from earliest times to the present, to establish the links between this field and the key themes of Australian Studies, and to allow students to develop specific understandings of Australian culture within a local and international context. The course content ensures that students encounter architects and Australian people from diverse backgrounds, practice in diverse landscapes and urban settings, and connections to issues outside of the specialized limits of architecture as an art, discipline and profession. The practices of individual architects and firms studied will also introduce students to important works of Australian art, literature, film, music and popular culture.

Within each section, students are simultaneously introduced to prominent Australian architects, critical debates within Australian Studies and broad methodological and historiographical concepts in the interpretation of architecture and architectural history. In chronology and method, the course proposal parallels the current curriculum emphasis on cross-cultural and political aspects of the art and architecture of the twentieth century with the Harvard History of Art and Architecture program.

Introduction to the Arts of Pre-Columbian America (207737)

Thomas Cummins

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This is a general introduction to and survey of the arts of Ancient America. We will look at both Mesoamerica and the Andean art and architecture beginning with some of the earliest cultures and ending with Aztec, Maya, Muisca and Inca. Questions about the materials, urban planning,meaning and aesthetics will be addressed. The course will also take advantage of the great collections at the Peabody Museum as well as the MFA. There are no prerequisites.

Spanish Golden Age Painting: Truth and Deceit (205401)

Felipe Pereda

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

The art of the Spanish Golden Age is well known for its radical naturalism, on the one hand, and its intense religious imagery, on the other. This course will be an introduction to the major artists of this period – Murillo, Velázquez, Zurbarán and others— from the point of view of painting's power to produce visual illusions and deceive their spectators. Consequently, the course will consider artistic tropes of illusion and disillusionment in relation to early modern debates on belief and skepticism.

Between Life and Art: Sculpture in Italy and Spain, 1400-1700 (212788)

Felipe Pereda

Shawon Kinew

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

**This course examines sculpture and its principles during the early modern period between the Iberian and Italian peninsulas. Between 1400-1700, sculptors pushed the boundaries of their medium, imbuing the inert with qualities we might consider antithetical: life, motion,
color, and narrative. At the same time, sculpture, potent in its three dimensionality, prompted vigorous questions and debates around its form and function. Each week this course considers a different genre, material or technique. Of particular interest is the theory and practice of sculpture by Donatello, Michelangelo, Benvenuto Cellini, Leoni,
Giambologna, Martínez Montañés, la Roldana and Bernini.**

Design Speculations: Senior Design Tutorial (207690)

Megan Panzano

Lisa Haber-Thomson

2019 Fall (4 Credits) **Schedule:** R 0945 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 14

This seminar will serve as a design platform for inquiry, documentation and analysis in relation either to the thesis topic or capstone project of interest to each student. Thesis students will be responsible for selecting a Thesis Advisor (or Advisors) with whom they will meet regularly to develop specific intention, substance and methodology of the thesis research and paper. This seminar is a support of independent thesis and/or independent project research, extending methodological inquiry of the project topic to design where students may convene to collectively discuss and experiment with design speculations – design tests that explore research through the visual and spatial language of architecture. The course will cover topics general to design research with discussions, assignments, and readings focused on three main themes in relation to architectural design: Discourse, the development of a proposition for the role and significance of architecture relative to the project topic of interest; Method, the design steps/process of working through a design application/inquiry of those ideas; and Context, the relationship of the project topic of study to broader surroundings which include but are not limited to the discipline of architecture, cultural contexts, technical developments and/or typologies. The seminar will emphasize and support the translation of ideas emerging from independent research into visual forms of representation including, but not limited to, drawings, diagrams, images, study models, and short animations. The techniques of representation reviewed will be catered to the project topics of individual students, but will also form a part of the general discussion of the course.
HAA 96A Transformations or HAA 96B Connections design studios is a pre-requisite to the Design Speculations course.

History of Art & Architecture 96A

Architecture Studio I: Transformations (109375)

Iman Fayyad

2020 Spring (4 Credits) **Schedule:** WF 0130 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Architecture assembles multiple models, surfaces, and materials; it is not a single monolithic thing, rather it is comprised of disparate parts and organizational systems operating at different scales. Design, the bringing together of these elements, requires sensitivity, registers scale, and renders perceptual effect. This course is an introductory architectural design studio focused on building foundational architectural concepts and design methodologies studied through a process of making. A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site.

The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

History of Art & Architecture 96B

Architecture Studio II: Connections (110362)

Elle Gerdeman

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

The practice of architecture fundamentally asks us to continuously engage with, and re-conceptualize, the world for which we are designing. As such, architecture as a discipline is not only about designing buildings, but also about challenging us to imagine new ways of seeing the world. This studio takes on the challenge through a series of design exercises focused on understanding, engaging with, and reimaging the urban condition. Throughout the course, we will approach architectural design as both a method of producing urban environments, and also as an avenue through which to understand our cities. We will be directly confronting the social, political, and environmental contexts that are necessarily implicated in any design process.
Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges towards a similar end. This studio originates at the scale of the urban site, and begins with a set of design research assignments that ask students to imagine the city from the perspective of a non-human

agent. Extrapolating abstract principles from these agents, we will be mobilizing the possibilities of architectural representation to reimagine the city through mapping, diagraming, and collage.
The studio culminates in a design proposal for a site in Harvard Square. Students will be given an architectural brief, and will produce projects that address existing site conditions, programmatic space requirements, and projected users of the site. Technical workshops will provide all the necessary skills required for the course, and will allow students to develop aptitude in architectural drawing, mapping, rendering, and simple animation. No existing expertise or technical proficiency is necessary for this course. Students from all backgrounds are welcome; we will be encouraging interdisciplinary thinking throughout the design research process.

History of Art & Architecture 99B

Tutorial - Senior Year (159972)

Jinah Kim

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

In the fall term, HAA 99 includes several group tutorial meetings with the senior honors adviser, where assignments are aimed at facilitating the writing of a senior honors thesis; spring term consists of independent writing, under the direction of the individual thesis adviser. Part two of a two part series.

Course Notes: **Required of honors candidates in History of Art and Architecture. Permission of the Head Tutor required.**

Architectural Icons and Landscapes of Early Modern Islamic Empires: Between Transregional & Local (126982)

Gulru Necipoglu-Kafadar

2019 Fall (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Between the 16th and 18th centuries, three empires - the Mediterranean-based Ottomans, Safavids in Iran, and Mughals in the Indian subcontinent - developed interconnected yet distinctive architectural, material and visual cultures with individualized ornamental idioms by fusing their common transregional Timurid heritage with local traditions. The course explores connections between empire building, iconic monuments, and garden landscapes with respect to design, materiality, aesthetics, religion, imperial identity, and theories of dynastic legitimacy. Interactions with neighboring regions will be considered (Europe, Uzbek Central Asia, the Deccan and Gujarat Sultanates).

Medieval Architecture in Greater Iran and Central Asia (207669)

David Roxburgh

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

The seminar examines cities and monuments built in Greater Iran and Central Asia from the 11th through 15th centuries spanning three principal dynastic periods (Seljuqs, Mongols, and Timurids). Various functional types—mosques, madrasas, minarets, tombs—, urban systems, and spatial organization are studied including the cities of Baghdad, Bukhara, Herat, Isfahan, Mashhad, Nishapur, Rayy, and Samarqand. We will examine the materials, construction and design processes of buildings, their typologies and morphologies, as well as their relationships to law, religion, climate, social and political life. A variety of primary sources are also considered ranging from geographies to histories and travel narratives.

History of Art & Architecture 138M

From Byzantium to the British Isles: The Materiality of Late Antiquity (205052)

Evridiki Georganteli

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course explores the extraordinary cultural transformation Europe, the Mediterranean and the Middle East underwent from Diocletian's reorganization of the Roman Empire in the late third century to the Islamic conquest of the Iberian Peninsula in the eighth century. Monuments and sites, sculpture, mosaics, frescoes and ceramics, icons and relics, textiles, coins and seals chart the movement of people, commodities and ideas along routes of warfare, pilgrimage, trade and diplomacy. Was the world of late antiquity still bearing the hallmarks of Roman connectivity, administration and culture? Were Ireland and Anglo-Saxon Englans really the edge of the known world? What was the extent of the Eastern Roman Empire's cultural power in late antique Europe, Africa and the Middle East? How did religious changes influence urban topographies, geographies of power and artistic choices?

Close-up inspection of works of art in the Harvard Art Museums, the Harvard Business School and the Boston Fine Arts Museum; art making in the Harvard Art Museum Materials Lab and the Harvard Ceramics Studios; and study of archaeological records of the Archaeological Exploration of Sardis offer participants a rare insight into one of the most fascinating chapters in the history of art and architecture.

Harvard Square (212807)

Suzanne Blier

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Harvard Square has a rich history; under its earlier name of Newtowne (founded in 1630), it was once the site of the Massachusetts capital. Much has changed. This class looks back on the many changes Harvard Square has undergone, recent challenges it has faced, and asks class members to think forward about how it might be re-envisioned. This class will combine work in local archives on issues related to history and policy, meetings with local Cambridge officials, and an array of local design and drawing assignments. Learn how Harvard fits in; Be part of the change.

History of Art & Architecture 171X

Exoticism & Orientalism (124627)

Ewa Lajer-Burcharth

2020 Spring (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

The course explores cultural and artistic engagement with the trope of the "other" in 18th- and 19th-century France, Britain, and elsewhere. Paintings, prints, travel and costume books, architecture, and design will be discussed in broader social and cultural contexts. While considering different interpretive paradigms, we'll focus on the most recent approaches that depart from fixed binary oppositions and monolithic treatment of the "Orient" versus the "Occident." Special emphasis will be placed on the distinction between the 18th- and the 19th-century modes of engagement with foreignness and cultural difference. Among the issues discussed are: the relation between art and colonialism, the politics and poetic of representation, curiosity, mediation, translation, cross-cultural practices, fashion, identity, sexuality, scale, visual geography, and space (including that of World Fairs). Artists include Delacroix, Gauguin, Gérôme, John Frederick Lewis, Liotard, Renoir, Matisse, Watteau, David Wilke, and many lesser-known painters, photographers, designers, and architects. We will work directly with the objects at the Harvard Art Museum Study Room and in the Special Collections Room at the Fine Arts Library. A class excursion will offer us an opportunity to study works of art in the rich collections of the Metropolitan Museum of Art in New York.

History of Art & Architecture 179P Section: 01

Press/Reverse/Resist: Introduction to print in contemporary art (213243)

Jennifer L. Roberts

2020 Spring (4 Credits) **Schedule:** MW 0300 PM - 0415 PM

Instructor Permissions: Instructor **Enrollment Cap:** 60

We are told that print is dead. But the codes and processes of printmaking continue to shape contemporary

art, culture, and technology in powerful ways. The most basic physical fact of printing -- its use of pressure in the creation of images and texts -- makes it an ideal tool for confronting questions of oppression and resistance. The collaborative qualities of printmaking are models for new understandings of distributed creativity and intelligence. The image reversals that occur in all print processes open ways of thinking about the world from a critical perspective, approaching it from "the other side." Even the most advanced digital information technologies draw on the traditions of print in fundamental ways. This course will provide an introduction to printmaking processes and will trace the life of print in art of every medium since 1960. Along with the lectures, there will be frequent study sessions with original works in the Harvard Art Museums, and hands-on print workshops. Artists covered will include (among many others) Robert Rauschenberg, Glenn Ligon, Christiane Baumgartner, Andy Warhol, Ellen Gallagher, Julie Mehretu, Edgar Heap of Birds, Willie Cole, Corita Kent, Richard Hamilton, Ed Ruscha, and Jasper Johns.

History of Art & Architecture 179X

Tectonics Lab: Conference Course (110270)

Andrew Plumb

2019 Fall (4 Credits) **Schedule:** F 0300 PM - 0545 PM
M 0900 AM - 0959 AM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Tectonics Lab introduces students to the roles that materials and their disposition play in the production of meaningful architectural experience. We explore material properties and expand upon traditional definitions to include a critique of the ecological, social and cultural impact of their production and end use. We will consider materials through the lense of Good, Clean and Fair. Terms that are borrowed from the slow movement and which are conspicuously absent from the discipline and practice of architecture and construction.

Students will work in teams to research and experiment with wood, masonry and concrete in a series of design-build projects throughout the semester pairing concepts of making and construction with realities of material ability and craft. Through these projects, we will build our shared knowledge of material properties, their expression and their effect on architectural experience. Weekly lectures provide a theoretical basis for the design-build projects. Topics include structural fundamentals; material properties and fabrication; joinery and assembly; scalar transformations; modular construction and more.

Representation plays an important role in the exploration of analytical and intuitive modes of making throughout the design and fabrication process. The physical artifacts from each project will be discussed with reference to modes of conception and representation, both digital and analog. Project development documented through drawing, photography, and video is an essential component of the coursework, and a comprehensive portfolio will be due at the end of the term.

Painting of India (111506)

Jinah Kim

2020 Spring (4 Credits) **Schedule:** M 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

The course explores the history of Indian painting based on the collections of Harvard Art Museums and the Museum of Fine Arts, Boston. We will investigate the theory of pictorial form in India and its relationship to the society at large against the historical currents by probing the development and changes in artistic styles and material culture of painting production. We will pay particular attention to the role of media, such as palm-leaf, birch bark, paper, and pigments, along with consideration of changing symbolic and material meanings of color. Regular visits (sections) to the museums and conservations labs to examine the paintings in person are to be scheduled throughout the semester.

Edo Painting (212810)

Yukio Lippit

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar explores the history of painting during Japan's Edo period (1615-1868). Along with an introduction to major artists and schools, the course will examine themes such as the formats and materiality of Japanese painting, aesthetics and connoisseurship, display practices, seasonality, the relationship to poetry and literary traditions, the influence of European pictorialism, and the status of the painter. There are no prerequisites. Offered concurrently with the major exhibition of Edo painting from the Feinberg Collection featured at the Harvard Art Museums during the spring semester, numerous sessions will be held in the galleries and study centers of the museum.

Science and the Practice of Art History (143250)

Narayan Khandekar

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course leads students through the examination of a work of art from the collection of Harvard Art Museums using the perspectives of a curator, conservator and a conservation scientist. Students will examine and interrogate a work using these different perspectives to understand how and from what the object is made and how it has changed since its creation using visual and instrumental techniques. The course will conclude with a presentation of a forgery/attribution/authentication case by individuals. The course will be taught by curators, conservators and conservation scientists from the Harvard Art Museums.

Topics in Northern Renaissance and Baroque Art (207673)

Joseph Koerner

2019 Fall (4 Credits) **Schedule:** T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

Explores landscape drawing as a specialized genre of art production in seventeenth-century Holland, and considers its historical origins, its practical and wider cultural functions, and its historical afterlife. Special emphasis will be placed on depiction of relations between land and sea, and how such relations might re-thought in light of current ecological crises. Classes are held in the Harvard Art Museums and focused on holdings of the collection, including new acquisitions that are to be featured in a forthcoming exhibition, the nature of which the course will also consider.

Old Masters in a 'New' World (212948)

Shawon Kinew

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

As the territory of early modern European studies continues to expand, mimicking the colonization of the period under study, art historians inevitably become explorers of terra incognita claiming "marvelous possessions." Now is an ideal moment to take stock of recent global-facing literature and methods in the art history of early modern Europe: where are we, and where are we going? The first half of this graduate seminar will do just that. At the same time, in this experiment, each seminar participant will be encouraged to choose an "old master" as their compass and test the limits of the canon.

Transnational Exchange in Architecture; Australia and the Americas, 1939 to 2019 (213720)

Philip Goad

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course, designed as a graduate level seminar, has as its focus the question of transnational exchanges in architecture and urbanism. Themes of reception, transaction, technology transfer, the flows of capital and resources, professional networks and expertise are intrinsic to the seminar. Australian architecture is seen as a complex amalgam of traditions, that, like the United States, does not carry the weight of British and European traditions, but instead, as a welcome receptor, becomes a fluid setting for dynamic change in aesthetic thought, construction technologies and urban form.

Class Notes: **This course is open to qualified undergraduates with interest.**

Painting and Mass Culture after 1945 (213242)

Benjamin Buchloh

2020 Spring (4 Credits) **Schedule:** R 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This graduate seminar (qualified undergraduates will be admitted after interview), will investigate the complex relationships between painterly practices and mass cultural formations (photography, advertisement, television) from 1955 – 1965. The limited focus on two American and two European artists, and on one specific decade will allow us not only to study individual works in greater detail, but it will also provide time to pursue parallel readings in historical contextualization. These would include not only the study of actually occurring interactions with the newly expanded culture of technological and industrial media (e.g. exhibition design, advertisement commissions for artists), but also the more specifically art historical questions concerning the belated reception of Duchamp, Dada and photography in post WWII cultural production. The critical reflection of the epistemological shifts defining the nature of painting in the changing dialogues with action painting and abstract expressionism will be of equal importance, as will be the questions concerning the redefinition of the place and functions of the artist in post WW II consumer and spectacle culture.

Curatorial Praxis: Art History in the Public Sphere (215726)

Makeda Best

Mary Schneider Enriquez

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Practicing art history in today's increasingly mobile art world—whether as a field curator, academic researcher, critic, or other professional specialism—requires museum literacy, intellectual empathy, and the ability to work in multiple voices and mediums, in addition to art historical expertise. To understand the curator's place in contemporary cultural institutions, this class will explore a series of theoretical concepts such as author, connoisseurship, taste and visual culture, along with a series of curatorial research methods. Balancing critical and applied perspectives, this course investigates curatorial work as a site of cultural practice, a sphere of action and knowledge—above all, the "eye" or sense of critical taste—that is learned and performed in multiple contexts of display. Connecting curation to its etymological roots in "cure" and "care," this course will also consider curating as a remedial practice that has changed over time in relation to globalized networks of the art market, professionalization, and the phenomenon of celebrity curators. Through a series of guided steps designed to provide exposure to multiple facets of museum practice, undertaken in the Harvard Art Museums and beyond, students will work toward an exhibition built from Harvard Collections.

Japanese Buddhist Sculpture (213332)

Yukio Lippit

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This course explores the golden age of Japanese Buddhist sculpture from the seventh through thirteenth century. Each week focuses on one famous work in terms of style, iconography, technique, materials, sculptor, patronage, and ritual. Special emphasis will be placed upon the relationship of the sculpture to its temple setting, inclusive of mural décor, other sculptures in the ensemble, the mandorla, dais, and canopy. Similarly, the recent discoveries of conservation science will be debated, as well as the significance of interred objects and an interregional purview. Insofar as possible, meaning will be explored in relation to sculptural process. All readings will be in English. Several sessions will take place at the Harvard Art Museums, and there will be at least one group excursion during the semester.

Cuzco 1650-1700:

Lima, Quito, and Mexico City in Comparison

Course description: Cuzco, once the center of the Inca Empire, became a major colonial Peruvian city unlike any other in which the royal descendants of the Inca lived and ruled along with Spaniards. In 1650 an earthquake destroyed most of the city's buildings. Between 1650 and 1700 most of the city and the surrounding pueblos were re-built. This is part due to the remarkable efforts of the bishop of Cuzco Mollinedo. At the same conflicts between the bishop and the cabildo of the cathedral and between the bishop and the Jesuits focused upon power and authority as the re-building took place. Still more surprising, perhaps, most of the architects and painters for this renewal were Indians. This pro-seminar will exam both the architectural campaigns and the various genres of paintings that came to fruition during this remarkable period in which the local takes on a distinct identity from the center within a complex political and cultural struggles over power and its representation. Cuzco will be the focus of this course, but we will put its painting, sculpture and architecture into comparison with other 17th century cities such as Lima, Quito, and Mexico City.

Tutorial - Sophomore Year (115419)

Anne Harrington

2020 Spring (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 55

Sophomore tutorial is a hands-on course that introduces students to some of the most exciting and productive questions in the history of science, technology and medicine, while developing critical reading, presentation and discussion skills. Small groups of students will tackle different aspects of a larger theme

each week and share discoveries in sessions led by the faculty instructor. The course will be further enhanced by a series of supervised individual projects.

Course Notes: **Required for undergraduate concentration in History and Science. Students must register for the plenary class session that meets on Mondays from 9:00-11:45am OR 12:00-2:45pm, as well as a weekly section to be arranged.**
The 9:00 am class will begin at 9:45 am.
The 12:00pm class will begin at 12:45 pm.

Knowing the World: An Introduction to the History of Science (123398)

Alex Csiszar

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

What are the origins of modern science and of the scientific method? Have the ways of knowing the world of different cultures and societies changed over time? How has scientific knowledge been related to other enterprises such as art, religion, literature, and commerce? We will ask these questions and more through a broad survey of many of the crucial moments in the development of science from the Scientific Revolution of the 17th century to the present day. Topics and figures will include Galileo, evolution, eugenics, the atomic bomb, and the human genome project.

Sugar, Spice, and Science: Colonialism and Commerce in the Making of a Global History of Science (212949)

Kit Heintzman

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 9

In this class we will explore how new scientific discoveries were forged out of early global commercial pathways. Science, technology, and medicine were instrumental in colonial missions, from ship navigation to treating seasickness. Likewise, naturalists, physicians, and astronomers benefited from the resources, ideas, and practices from across the world. This class will study the history of empire as a part of the history of science, illuminating connections between science and capitalism in the early modern world.

Starstruck! The History, Culture, and Politics of American Astronomy (213529)

Sara Schechner

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This hands-on course will introduce key episodes and issues in the history of American astronomy by close looking at rare early scientific instruments and tangible objects in Harvard collections. Starting with the story of Captain John Smith, Pocahontas, and a sundial, the course will move from colonial relations with Native Americans to the controversial placement of observatories on sacred mountaintops today. In between, we will discuss the roles of religion, politics, science, and culture in the promotion of astronomy in American society. Topics will include comets and extraterrestrials, observatories, westward expansion, time selling, and the role of women. Each unit will begin with anchoring objects, and students will work behind the scenes in the Collection of Historical Scientific Instruments. There will also be opportunities to make and use your own instruments to engage with early methods of production and observation.

Nature, Energy, Industry: A Cultural History of Physical Science (213526)

Connemara Doran

2019 Fall (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

This seminar explores the cultural history of the physical sciences at key moments from the seventeenth through the nineteenth century. We will immerse ourselves in the cultural, social, and political concerns of diverse historical actors as we ask: How did the study of natural philosophy gradually morph into the disciplines we recognize today as physics, astronomy, chemistry, and the earth sciences? How did energy regimes transform across this period, and how were these transformations related to novel physical ideas? How did industrial development, new artistic expressions, and technological innovation emerge in tandem with the creations and practices of physical science?

History of Science 131A

Transforming Technologies: Science, Technology, and Social Change: The Past (213572)

Naomi Oreskes

2019 Fall (4 Credits) **Schedule:** W 0945 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines the problem of large-scale technological transformation. Drawing on the classic framework of technological systems by historian Thomas Hughes, we will study a number of examples of large-scale technological transformation, including electricity, automation, the internet and infrastructure. Where do new technologies come from? How do new technologies overcome technological lock-in and

displace previous ones? What has been the role of the free market v. the role of conscious planning and government regulation? How does regulation and finance stimulate or block innovation and uptake? Does technology drive social change or does social change drive technological innovation? Above all, how do we get the technologies we need? And if we don't get the technologies we need, why not?

Course Notes: **Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged, but not required, to complete both terms of this course (parts A and B).**

HISTSCI 131A will begin at 9:45am.

History of Science 131B

Transforming Technologies: Science, Technology, and Climate Change: The Present and Future (213574)

Naomi Oreskes

2020 Spring (4 Credits) **Schedule:** W 1245 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This course applies insights from the history of technology to the present challenge of climate change. We examine the required energy transition to prevent anthropogenic climate change, and the obstacles to it. Topics include the history and development of renewable energy, (including the factors responsible for the recent dramatic drop in the price of renewables), the prospects for smart grids and smart appliances, the problems of scaling, and the role of the private sector and private finance v. the role of government policy in stimulating uptake of new technologies. We will also look at the history of nuclear power, both in the United States and elsewhere, to consider what contribution nuclear power could or should make to our future energy mix.

Course Notes: **Prerequisite: HISTSCI 131A is strongly encouraged, but not required. Part two of a two part series.**

Environmental Science and its History: Big Problems and Debates (213527)

Connemara Doran

2020 Spring (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

How was the high-energy technological society of today created – and how can it be maintained in a civilizationally-responsible way? We will address the human goals, expectations, and confrontations interfacing with weather, climate, and energy resources across history. Among these are the tumultuous history of fossil fuels and "peak oil," the birth of the environmental movement, debates about pollution and acid rain, and the contentious and conflicted relationship between technology development and environmental concerns. Students will explore the history of climate change from its origin in nineteenth-century science through the most recent catastrophic environmental effects and contemporary attempts at mitigation.

Foreign Bodies: On Health and Migration (212935)

Eram Alam

2019 Fall (4 Credits) **Schedule:** T 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

During the twentieth century, unprecedented human mobility has raised significant questions regarding migration and health. Whether coerced or voluntary, these migratory flows reverberate through individuals, communities, populations, environments, and the body politic in unexpected ways. This course will focus on the relationship between health and migration and ask the following questions: How are moving bodies named and managed? What are the political, economic, juridical, and medical implications of movement? How is risk defined and constructed in relation to migration? Readings will include case studies from around the world, supplemented with theoretical and literary texts.

Course Notes: **Enrollment limited to 20.**

History and Politics of the American Obesity Epidemic (108928)

Chin Jou

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Obesity has become a leading public health concern in many parts of the world. In the United States, rates of obesity rocketed between 1980 and the early-2010s. How did this happen? And why is the obesity epidemic controversial? What does looking at the history and politics of what has been called "the obesity

epidemic" reveal about broader issues of health and society? This course will illuminate these questions and more as we survey the trajectory of obesity from many dimensions since the beginning of the twentieth century.

Histories of Therapeutics (212958)

Scott Podolsky

2019 Fall (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Therapeutic interventions – from "bleeding" patients in the early 19th century through prescribing antibiotics today – have been central to medical practice and identity. This seminar course will rely on robust engagement with primary and secondary sources to help us examine the scientific, social, cultural, economic, and regulatory forces shaping therapeutic evolution in the United States over the past two centuries. Along the way, we will consider such issues as: the tempo and mode of therapeutic evolution; the changing notion of therapeutic efficacy; and the role of the marketplace and the parallel attempt of reformers to define and promote "rational" practice. Several sessions will be held at the Countway Medical Library, where students will be exposed to the unique archival and rare book and journal resources of its Center for the History of Medicine.

Medicine and Health in America (213244)

Eram Alam

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course surveys major historical developments in medicine and health in the United States during the modern period. We will analyze medicine and health within social, cultural, and political contexts to better understand the relationship between medicine and power. Topics will include: citizenship, nationalism, and imperialism; race, gender, and the body; capitalism and the medical marketplace; professionalization, expertise, and authority; crises and epidemics; technology and therapeutics; and questions of care.

Graphic! Visualizing Medicine from Textbooks to Comics (205361)

Soha Bayoumi

2020 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Visuals play an important role in the history and practice of medicine, from medical textbooks to medical imaging, and from hospital signage and public health posters to comics and graphic novels. This course will examine the use of visuals in medicine, but will place particular emphasis on a new academic and creative field known as "graphic medicine"—medical comics and graphic novels. Over the course of the semester, we will ask questions about how attending to the visual allows us to think in new ways about diagnostic practices, therapeutics, medical consumerism, doctor-patient communication, and ways in which patients and caregivers narrate their personal experiences of disease. We will pay careful attention to questions of class, race and gender, and to larger ethical and political issues raised by our materials.

Race, Medicine, and Mass Incarceration (213381)

Chin Jou

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

There are over two million people locked up in local jails, state prisons, and federal prisons across the United States. Toward the beginning of this multi-disciplinary seminar, we will examine the historical development of this mass incarceration, as well as racial disparities in America's criminal justice system. We will then explore some of the medical issues in historical and contemporary U.S. carceral settings, including: medical experimentation on prisoner populations, mental health and suicide, substance abuse, HIV and sexual health, pregnancy and labor conditions, foodborne illnesses, chronic disease, temperature-related medical emergencies, and aging in prisons. Please be advised that some readings for this seminar will refer to instances of violence, sexual assault, and medical trauma.

Technology and Modern Medicine: From the Stethoscope to Nanotech (212962)

Yvan Prkachin

2019 Fall (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Since the beginning of the nineteenth century, through to the rise of modern 'biomedicine,' the healing arts have been profoundly affected by the development, implementation and social construction of new medical technologies. What have been the effects of these new technologies on the practice of medicine, on our conception of our bodies, and on the success of medical care? This course will examine a number of these crucial themes, and attempt to integrate insights from the history of medicine and the history of technology more generally. In so doing, we will attempt to address a number of related and important historical questions: how do we decide which medical technologies to pursue, and which to ignore? How have we balanced medical progress and technological advancement with a concern for those who are sick now, and for the economics of health care? How and why have medical technologies shaped and been shaped by the broader culture? And, ultimately, has technology been good for medicine?

Topics to be examined will include the rise of clinical medicine in early nineteenth century France and its reliance on new diagnostic technologies; visual technologies and diagnosis; microscipal technology and the emergence of bacteriology; technologies of management and the rise of the modern hospital; the x-ray and the emergence of new diagnostic technologies; the technologies of nursing and other health-care professions; antibiotics, drugs and the technologies of mass-production; technology and disease identity; technology, gender and sexuality; technology, race and genetic medicine; contraception, obstetrics and the technologies of reproduction; digital technologies and the computerization of medical records; implantation, prosthesis, and technologies of the body. Throughout the course, we will pay particular attention to the way in which medical technologies have interacted with social categories such as race, class, gender and nationality, as well as to the unique relationship between American medicine and the world of high technology.

Biopolitical Animals: Nonhumans in Medicine, Science, and Society (213505)

Kit Heintzman

2020 Spring (4 Credits) **Schedule:** TR 0300 PM - 0415 PM

Instructor Permissions: None **Enrollment Cap:** n/a

This class will chronologically examine the relationship between politics and science in the study of nonhuman animals which, as we will see, has not been separate from human attempts to understand themselves and the world that they inhabited. As science's relationship to other animals changes over time so too have the ways of governing those animals: eg. exterminating invasive species, criminalizing ivory

trade, and regulating animal testing. By tracing scientific ideas about other animals we will acknowledge the role that nonhumans animals have played in the history of science and medicine. Students will learn how different ways of knowing animals over time are in fact political ways of knowing, ones that affect humans in terms of ideas about human difference: such as sex, race, and disability.

Broken Brains (160496)

Anne Harrington

2019 Fall (4 Credits) **Schedule:** M 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

An exploration of the complex relationship between doctors and scientists who study and treat different kinds of "broken brains," the patients they study and treat, and larger public conversations about being human in today's neurological society. Topics include iconic cases of brain damage that catalyze new scientific understandings (like the case of H.M.), the study of brain damage in war, the emergence of writings (including memoirs and novels) that attempt to describe "what it is like" to suffer from disorders like autism and Alzheimer's, and controversies over recent efforts to see psychiatric disorders like depression as simple products of a chemically "broken brain."

Course Notes: **Enrollment limited to 20.**

Brainwashing and Modern Techniques of Mind Control (126335)

Rebecca Lemov

2020 Spring (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines the phenomenon of "brainwashing" as a modern set of techniques that can apparently force a subject radically to alter her beliefs against her will. The Cold War roots of 'brainwashing' - both the myth and the reality -- lie in the politics of twentieth-century anti-Communism and the deeper fear that people's most strongly held thoughts, ideas, and ideological commitments could be vulnerable to powerful infiltration. In order to understand the dynamics of this process we will examine case studies beginning with the Korean War-era emergence of the term 'brainwashing', the American interdisciplinary science of "coercive persuasion" that arose in response, and successive waves of

technological, political, and sociocultural developments. We will also look at how brainwashing and analogous persuasive techniques may operate among larger groups, crowds, organizations, and mass societies.

The Sciences of Memory, Lies, and Pain (207906)

Yvan Prkachin

2020 Spring (4 Credits) **Schedule:** T 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This course will explore a number of key themes in the modern brain and mind sciences by tracing how different scientific fields (neuroscience, psychology, psychoanalysis and cognitive science) have understood distinctly human experiences such as memory, deception and truth, and physical and mental pain over the nineteenth and twentieth centuries. Topics to be examined include the sciences of memory in the nineteenth and twentieth centuries; the sciences of lie detection and their place in the courtroom; the emergence of pain scales and the related sciences of addiction; and the so-called 'memory wars' of the twentieth century.

Humans in Space: Past, Present, Future (160334)

Matthew Hersch

2019 Fall (4 Credits) **Schedule:** TR 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This lecture course will survey the history of spaceflight, beginning with ancient anticipations and ending with space travel in the twenty-first century and beyond. From high-altitude ballooning and airplane flight to rocketry and interplanetary travel, we will both trace the development of technologies humans have used to leave their home planet, and place these technologies within the context of political, economic, and social change. The course will also examine how the development of space vehicles was accompanied by transformations of the human body and mind, from the development of high-altitude pressure suits to the rise of space psychology.

Engineering East Asia: Technology, Society, and the State (207617)

Victor Seow

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Who creates and controls technology within society? How have technological developments shaped and, in turn, been shaped by social change? Do technological artifacts have particular politics? In this course, we will explore these and other questions concerning the intertwined relationship of technology, society, and the state within the context of East Asia's long twentieth century. From the era of steam power to the present, East Asia has undergone epochal social and technological transformations. China's recent bold forays into artificial intelligence are but among the latest in broader trends, beginning with Japanese, South Korean, and Taiwanese successes with consumer electronics manufacturing over preceding decades, that have marked the region as the site from which we may very well see the emergence of our technological future. In examining the history of technology in modern East Asia, we will gain a deeper understanding of the region and its technological revolutions and, more generally, of the workings of technology in the industrial modern age.

Harvard's Changing Landscapes: A Contemporary History Project (213483)

David Unger

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

This project-based class is designed to introduce students to the range of skills needed to research and document historical change while it is "in process." It will take as its focus the School of Engineering and Applied Sciences on the eve of their move to Allston. Students will learn the theory and technique of oral history, will practice other public history-oriented forms of documentation, and will study collecting practices used to preserve the record of modern-day science. To fully make sense of their site, they will also be introduced to scholarly perspectives on architecture and science, lab communities, and experimental practice, while also learning about the often invisible inner workings of Harvard's labs. They will also learn broadly applicable skills for project management and teamwork. The documentation gathered by the students will be part of a larger collecting initiative, and will become part of the CHSI collection.

Air Pollution: A Global History (212937)

David Shumway Jones

Sunil Amrith

2019 Fall (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Air pollution has become a leading cause of death worldwide, killing more people than AIDS, tuberculosis, and malaria. This seminar draws on environmental history, history of science, and history of policy to understand this problem. It will examine the material history of air pollution, from the ancient world, to the industrialization of Europe and America, to contemporary India and China. It will track the shifting configurations of how air pollution has been understood as a social, medical, or moral problem. It will assess the measures taken by different societies to control air pollution, exploring histories of activism, policy, and regulation.

Course Notes: **This course is also offered through the Department of History as History 2040. Credit may be earned for either History of Science 240 or History 2040, but not both.**

Documentality: On the Archive (213379)

Eram Alam

2019 Fall (4 Credits) **Schedule:** R 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

"There is no political power without control of the archive," writes Jacques Derrida, yet, "nothing is less clear today than the word 'archive'." In this course, we will examine the multivalent concept of the archive and its relationship to different forms and structures of knowledge. The course will begin with an introduction to theories of the archive, attending to issues of power, memory, subjectivity, and governance. Then, we will turn to critiques of the archive or archival practice and study texts that interrogate race, gender and the body; science, medicine, and technology; and coloniality/post-coloniality in relation to the archive. Readings will span disciplines, geographic regions, and time periods.

Science and Technology of the Self (214615)

Rebecca Lemov

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

This class examines the ambition to capture the self in scientific language via new methodologies and technologies. How did large research enterprises comprising "big social science" emerge in the 20th century at the meeting place between anthropology, psychology, psychoanalysis, and other human and life sciences? We begin by looking broadly at the history of the self, and ask how to define "technologies of the self." The course then explores 20th and 21st century attempts to represent the self in graphs, ethnographic interviews, psychograms, fMRIs, fieldwork, and large datasets of dreams. Can "inner life experience" be quantified?

Algorithms (214503)

Alex Csiszar

2020 Spring (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

This course situates the current explosion of interest in algorithms in culture by uncovering a much longer history of attempts to automate or otherwise simplify judgment, decision making, and attributions of trust and relevance. Rather than assuming that our current predicament is a direct result of recent technological advances, the course will stretch back to before the early modern period to consider recipe books and Arabic mathematics, through Enlightenment probability, and early conceptions of artificial intelligence. Taking our cue from current interest in the role algorithms play in issues of social justice, labor, discrimination, and ethics, we will look to see if we can trace a longer history of algorithms that is not simply a history of ideas but which places these issues at the center of the narrative. Note: Although the second half of the course will engage closely with new work in STS, it is possible to take this course to satisfy the Department of History of Science pre-1800 distribution requirement.

The Digital Age: Sources and Methods (214345)

Matthew Hersch

2020 Spring (4 Credits) **Schedule:** W 0900 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Moving beyond the history of any particular device or process, this advanced seminar constructs a broad social and cultural history of the computerized world, from the earliest conceptions of mechanical computation and control to the networked society in which we live today. In this seminar, we will explore the multiple uses to which information technologies—the computer and the Internet in particular—have been put, from war and crime to efforts to create new kinds of communities across a nation and across the globe. By looking at an eclectic collection of scholarly and popular sources—including film—we will situate the development of "cyberculture" in the larger history of the complex relationship between technology and Western society.

History of Science 293

Agnotology: The History of Knowledge and Ignorance (203706)

Naomi Oreskes

2019 Fall (4 Credits) **Schedule:** W 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 25

Historians of science have traditionally been concerned with the production of scientific knowledge, but in recent years have turned their attention to the production of ignorance. This course focuses on the production of ignorance as a social, political, cultural, economic and epistemic question, with attention both to techniques of deliberate ignorance production, and to the inadvertent and often uncontested production of ignorance that arises from accepted research practices and from the conditions that shape the direction and forms of scientific inquiry.

Course Notes: **Open to graduate students and advanced undergraduates in history of science, and to others with instructor's permission.**

Human Evolutionary Biology

Subject: Human Evolutionary Biology

Human Evolutionary Biology 91R

Supervised Reading and Research (122594)

Neil Roach

2019 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Special study of selected topics in human evolutionary biology, given on an individual basis and directly supervised by a member of the Human Evolutionary Biology Faculty.

Course Notes: **Signature of faculty supervisor required for enrollment.**

Requirements: **Course open to Undergraduate Students Only**

Additional Course Attributes:

Attribute	Value(s)

Human Evolutionary Biology 1210

Research in Human Biomechanics and Physiology (127206)

Andrew Yegian

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 8

Introduces students to experimental techniques used to investigate the musculoskeletal structure and physiology of humans. Students undertake a supervised research project in the Skeletal Biology and Biomechanics Laboratory. Students meet to introduce their project, discuss their work and progress, and to present their final results, as well as for several lectures on writing and presenting research findings. An extensive commitment of time in the laboratory is required. Grades are based on the work completed, the oral presentation, and a short research paper.

Course Notes: **This course fulfills the research seminar concentration requirement for Human Evolutionary Biology**

Class Notes: **The first meeting will occur as scheduled in the course catalog, but subsequent meetings will take place approximately every two weeks at a time and day that fits the students' schedules.**

Recommended Prep: **Recommended: Life Sciences 2 or Human Evolutionary Biology 1420**

Human Evolutionary Biology 1212

Climate Change and Human Evolution (205546)

Daniel Green

2020 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** 16

This course will explore the relationship between climate, environment and human evolution. How did

hominins and other mammals adapt to global cooling and grassland expansion? Is there any correlation between climate and the adaptive radiation that produced multiple Australopithecine lineages and the genus Homo? How might the environments of Eurasia have influenced the dispersal of Homo sapiens out of Africa? And how are anthropogenic climate change and environmental degradation affecting human health, subsistence and conflict today? What is the future of our species?

Course Notes: **This course counts as an HEB elective for HEB concentrators.**

Human Evolutionary Biology 1280

Human Nature (202992)

Richard Wrangham

Erin Hecht

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course will examine the evolutionary origins, biological foundations, and psychology underlying human behaviors including kinship, sexuality, incest, parental love, xenophobia, status, homicide, warfare, culture, cooking, language, and religion. Using a comparative approach, we will contextualize human behavior by examining both studies of non-human primates, especially chimpanzees, and the full breadth of human diversity, including both ethnographic and experimental data from hunter-gatherers, agriculturalists, and—the most unusual of all—people from industrialized societies.

Course Notes: **This course is most relevant for freshmen and sophomores who have not yet declared a concentration in Human Evolutionary Biology, for HEB concentrators who have not yet taken courses in the evolution of behavior, or for other concentrators looking for an introduction to evolutionary theories of human behavior.**

Graduate students interested in this course should enroll in HEB 2480.

This course fulfills the behavior subfield requirement for Human Evolutionary Biology.

Requirements: **Course open to Undergraduate Students Only**

Additional Course Attributes:

Human Evolutionary Biology 1290

Cultural Evolution (159565)

Joseph Henrich

2019 Fall (4 Credits) **Schedule:** MW 0900 AM - 1015 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Unlike other species, humans are heavily reliant on learning from others to acquire many important aspects of their behavior, and this cultural transmission has created a second system of inheritance that has driven much of our species' genetic evolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for how to tackle basic problems in psychology, economics and anthropology. The first third of this course will develop the basic principles and lines of inquiry while the remainder will apply, hone and refine them by exploring economic development, the history of modern institutions, and global inequality.

Course Notes: **Students must seek instructors' permission to enroll in the course by sending Professor Joseph Henrich a paragraph via email to explain their interest in the course.**

Human Evolutionary Biology 1311

Evolution of Human Locomotion (213579)

Nicholas Holowka

2019 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

In this course we will examine how the human body evolved to allow our extraordinary form bipedal locomotion. We will survey the hominin fossil record to understand the major transitions in human evolution from climbing to walking to running, and you will learn basic techniques in experimental biomechanics and physiology through laboratory exercises and seminar-style discussions.

Recommended Prep: **Life Sciences 2 and/or HEB 1420 recommended but not required.**

Human Evolutionary Biology 1328

Evolutionary Medicine: Comparative Perspectives on Medical, Surgical and Psychiatric Illness (205490)

Barbara Natterson-Horowitz

2020 Spring (4 Credits) **Schedule:** R 0600 PM - 0845 PM

Instructor Permissions: Instructor **Enrollment Cap:** 80

Heart attacks, breast cancer, anxiety and eating disorders occur across the animal kingdom. Taught by a physician, the course explores the species-spanning and evolutionary origins of medical, surgical, and psychiatric illnesses. A 'mini-medical school' format will be used to introduce students to ten forms of human pathology emphasizing the typical mechanistic explanations of disease causation offered by physicians followed by in depth evolutionary analyses. Both physical and mental illnesses will be explored across the animal kingdom with a special focus on how emerging awareness of psychopathology in animals can alter the perception (stigma) and treatment of mental illness in human beings.

Human Evolutionary Biology 1330

Primate Social Behavior (113837)

Martin Surbeck

Isaac Schamberg

2020 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

A review of the behavioral interactions in natural primate populations, drawing on experimental, observational, and theoretical studies. Discussion of ecological, physiological, and developmental bases of primate social behavior, with special attention to the evolution of patterns of behavioral interactions among individuals of different age, sex, relatedness, and status. Topics include sexual conflict, sexual selection, and mating systems; care of offspring and other aid-giving; manipulative and cooperative aspects of communication; competition, dominance, and territoriality; and the evolution of social relationships.

Course Notes: **This course fulfills the behavior concentration requirement for Human Evolutionary Biology.**

Human Evolutionary Biology 1337

Coexistence in Crisis: How Animals Made Us Human (214597)

Christine Webb

2020 Spring (4 Credits) **Schedule:** R 0300 PM - 0500 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Human evolution cannot be understood in isolation from other species. Our identities are the product of a multitude of interactions with other life forms, a complex web of constitutive relations. Anthropogenic activities on earth simultaneously undermine and overshadow this reality, rapidly spinning coexistence into a severe and fatal imbalance. We have diluted and dismantled our embeddedness with other beings, choosing a legacy of exploitation over symbiosis—of which our relationships with other animals are a telling manifestation. How did this come to be? How were "human" and "animal" delineated over time? How can we comprehend and improve the fraught dynamics between humans and other beings emblematic of the Anthropocene?

The animal Other has figured prominently in human evolutionary history, as evidenced by the cave art of the Upper Paleolithic. Today, animal representations abound in diverse and often contradictory forms. This course will explore the variety of ecological and cultural relationships that form between humans and other animals—wild and domesticated species, as commodities or companions, from research objects to spiritual/sacred subjects. The course will draw on an interdisciplinary literature from science and philosophy—covering themes such as deep ecology, posthumanism, and our moral obligations to Others—so majors and non-majors are equally welcome. Class sessions will be largely discussion-based, and students will develop a semester-long research project that investigates how a given nonhuman entanglement with human lives has shaped human evolution—thus exemplifying ecophilosopher David Abrams's assertion that "we are human only in contact, and conviviality, with what is not human."

Human Evolutionary Biology 1339

The Human Brain in the Animal Kingdom (214351)

Erin Hecht

2020 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 30

Our brains make us what we are. How did they get that way? How are they different from other animals', and how are they similar? This course will explore the structure and function of the modern human brain and examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition. Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of Homo sapiens within the context of the broader animal kingdom. Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of human-unique

phenomena like language, complex tool use, music, and mathematics; social cognition and theory of mind; individual variation and brain plasticity during learning; and domestication and self-domestication.

Recommended Prep: **Recommended prep/prerequisite: HEB 1280 Human Nature**

Human Evolutionary Biology 1361

Hormones and Life History Physiology (203615)

Susan Lipson

2020 Spring (4 Credits) **Schedule:** MW 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 10

A survey of human (especially female) life history physiology and the role of hormones in the orchestration of key transitions, the allocation of energy to optimize fitness, and the consequences for health and disease. Lectures will be supplemented by reading and discussion of primary literature.

Course Notes: **The course is a hybrid of lectures (occurring on Mondays) and seminar discussions (occurring on Wednesdays).**

Recommended Prep: **Prerequisite for enrollment: Human Evolutionary Biology 1418, Life Sciences 2, another relevant (e.g., OEB, SCRB) course, or with permission of instructor.**

Requirements: **Anti-req: Cannot be taken for credit if HEB 1351 already complete**

Human Evolutionary Biology 1373

Explaining Beauty: The Hidden Functions Behind Aesthetics (208137)

Bethany Burum

2020 Spring (4 Credits) **Schedule:** W 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 15

Why do people from some cultures find body modifications attractive that others find ugly? What makes a Picasso beautiful? Why are fashion trends constantly changing? This course will delve into the hidden

functions that explain our aesthetic tastes, including what we find beautiful in the physical body, art, and fashion. Drawing on classic evolutionary theory, theories of cultural evolution, and game theory, we will seek to explain both aesthetic tastes that remain relatively constant, and those that differ dramatically across time and culture. This course will feature field trips to art museums and discussions with experts in different domains of aesthetics.

Human Evolutionary Biology 1381

The Arrogant Ape: Rethinking our Relationships to Others (213580)

Christine Webb

2019 Fall (4 Credits) **Schedule:** R 0300 PM - 0515 PM

Instructor Permissions: Instructor **Enrollment Cap:** 20

Darwin's theory of evolution offered a powerful counternarrative to the scala naturæ, thus redefining the place of Homo sapiens in the natural world. But a great irony presents itself when a species so-named for its wisdom is currently causing the sixth mass extinction of life on earth. In this seminar, we will explore this apparent contradiction, assess why it has come to be part of our evolutionary legacy, and discuss theory and research that counteracts its profound negative potential.

Human Evolutionary Biology 1389

Coming of Age on Planet Earth (205493)

Barbara Natterson-Horowitz

2020 Spring (4 Credits) **Schedule:** F 0300 PM - 0545 PM

Instructor Permissions: Instructor **Enrollment Cap:** 30

The challenges of adult maturation are not unique to our species. Some young adult animals take risks and lose their lives, others respond to stress with eating problems or to traumatic first sexual encounters with subsequent dysfunction. The course will use a comparative approach to explore how young adult animals learn to be safe, how they acquire or lose status and rank, how they come of age sexually, and how they learn to survive and thrive on their own. The course will combine analysis of literature from scientific fields (behavioral ecology, endocrinology and evolutionary biology) and the humanities (coming of age short stories and novels) for a comparative analysis of the common challenges of maturation across the animal kingdom and in human life.

Human Evolutionary Biology 1392

What Game Theory Reveals About Social Behavior (208048)

Bethany Burum

2019 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM

Instructor Permissions: Instructor **Enrollment Cap:** 40

What happens when the benefits of one strategy depend on the strategy chosen by another? From doing favors to driving on the right side of the road, this interdependence characterizes much of human social behavior, and game theory is the tool designed to reveal what results. This course will draw on models from game theory and evolutionary dynamics to explain some of the most puzzling aspects of our psychology, including why we speak indirectly, why people end up in feuds over trivial resources, and where our moral intuitions come from. No prior knowledge of game theory or evolutionary dynamics is required.

Human Evolutionary Biology 1412

Human Energetics (205492)

Noreen Tuross

Linda M. Reynard

2019 Fall (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 20

In this course we will study human energy intake and expenditure, with a focus on sports. We will cover the basics of energy consumption and production, including an introduction to biochemical and physiological components. This will include understanding calories (energy) in food, the transformation of food components to usable energy in the body, and how to measure energy expenditure. The course will also feature case studies of extreme endurance feats and modern-day and historical explorers/adventurers to highlight the limits of human energy expenditure.

Course Notes: **This is the first part of a two part series. The Fall course (HEB 1412) can be taken separately. The Spring course (HEB 1427) is a laboratory based course that requires HEB 1412 as a prerequisite and will count toward Junior Research Seminar credit in HEB.**

Recommended Prep: **An introductory level LS or Chemistry course are recommended for students interested in this course.**

Human Evolutionary Biology 1418

Research Methods in Endocrinology (110741)

Susan Lipson

2019 Fall (4 Credits) **Schedule:** MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 8

An introduction to research in behavioral endocrinology (the study of how hormones and behavior are related), focusing on: 1) laboratory techniques (immunoassay) for the measurement of hormone levels (cortisol and C-peptide) in saliva and urine, 2) study design strategies and data analysis methods, and 3) writing a scientific research paper.

Students complete original research projects, collecting samples, analyzing data on hormone levels and how they are related to various aspects of behavior and/or physiology, and presenting their results orally to the class and as a written research report.

Course Notes: **This course includes a mandatory two-hour laboratory section per week (days/times to be arranged).**

Lab safety training required (after enrollment).

This course fulfills the research seminar requirement for Human Evolutionary Biology.

Preference is given to junior HEB concentrators.

Recommended Prep: **Human Evolutionary Biology 1310 or Life Sciences 2 or with permission of instructor.**

Human Evolutionary Biology 1420

Human Evolutionary Anatomy (116069)

Neil Roach

2020 Spring (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: None **Enrollment Cap:** n/a

How does the human body function? How do our organs develop and grow? Why did we evolve this strange bipedal form? This course explores human anatomy, with an emphasis on the function, structure and evolution of the muscular, skeletal, nervous, circulatory, digestive and reproductive systems. Lectures are combined with small laboratory learning experiences and visits to the Harvard Medical School to study human cadavers.

Course Notes: **This course fulfills the anatomy/physiology concentration requirement for Human Evolutionary Biology**

Recommended Prep: **Life Sciences 2 recommended, but not required**
