African & African Amer Studies 11

Introduction to African Studies (123591)

Daniel Agbiboa

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to the rich diversity and complexity of Africa, including its historical dynamics, economic developments, social and political practices, and popular cultures. Throughout, we assume that Africa is not a unique isolate but a continent bubbling with internal diversity, historical change, entrepreneurial spirit, and cultural links beyond its shores. Our goal is to train students to think rigorously about Africa from interdisciplinary and transnational perspectives. We also aim to equip students with the analytical tools necessary for recognizing and deconstructing reductionist and stereotyped narratives of Africa. The course is open to all students who are interested in exploring various dimensions of African life, politics, peoples and cultures from the past to the postcolony.

Course Notes:

Required of concentrators in African Studies track.

African & African Amer Studies 20

Introduction to African Languages and Cultures (118883)

John Mugane

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction to Africans through African languages and cultures. The course explores how sub-Saharan Africans use language and cultural production to understand, organize, and transmit indigenous knowledge about the world to each other and to successive generations. Language serves as a road map to comprehending how social, political, and economic processes like kinship structures, the evolution of political offices, trade relations, and environmental knowledge develop. Oral histories and cultural and intellectual products like novels, music, poems, essays, films, and photographs offer opportunities to open eyes to, interact with, listen and speak to, and think alongside Africans they entrepreneurs, artists, authors, teachers, thinkers as they uncover, communicate, and debate the major topics and issues facing African societies and people today.

As a Social Engagement course, AAAS 20 will wed scholarly inquiry and academic study to practical experience and personal involvement in the community. Students will be given the opportunity to study Africans, their languages, and their cultures from the ground up, not only through textbooks and data sets but through personal relationships, cultural participation, and inquisitive explorations of local African heritage communities with Harvard's African Language Program instructors as guides. Throughout the

semester you will be asked to employ video production, ethnographic research, creative writing, "social-portraiture," GIS mapping, and linguistic study as you engage with Africans, their languages, and their cultures. By examining individual lives of select Africans, linguistic debates, cultural traditions and interrogating their import in the daily lives of Boston-area Africans, we hope to bridge the divide between grand theories and everyday practices, between intellectual debates and the lived experiences of individuals, between the American academy and the African world. Ultimately, this course aims to see and present Africans themselves as visible, audible and coherent articulators at the center of professional work and disciplinary study of Africa.

Sophomore Tutorial: Understanding Race and Racism (123590)

Carla Martin

2025 Spring (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

18

This course will examine the history of race and racism – key analytical constructs that express fundamental issues not only of power and inequality, but also of justice, democracy, equity, and emancipation. The study of race in the social sciences and humanities is an established, dynamic, multidisciplinary, and international field. To understand race and racism with a global perspective, it is necessary to have a transdisciplinary, cross-cultural view to read critically the phenomena that intersect with this variable. Course readings are drawn from the fields of African and African American Studies, sociology, history, cultural studies, political science, anthropology, philosophy, journalism, and public health. The vast literature produced by scholars in diverse fields provides evidence of how race is based on narratives created to enslave, subordinate, exploit, and exclude millions of human beings across the globe. Assignments will address pressing real-world questions related to race and racism, as well as pedagogically significant areas of undergraduate intellectual and academic development.

Course Notes:

**Required for concentrators in African and African American Studies.
Open to all undergraduates.**

Africa in the Twentieth Century: Culture, Representation, and New Diasporas (222142)

Timothy Ogene

2024 Fall (4 Credits)

Schedule: M 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course will explore how Africans on the continent and its new diasporas have represented their communities, cultures, and histories in the last century. Drawing on archival sources, works of literature, and documentaries, this course will trace and contextualize the network of individuals, communities, and organisations that have shaped and influenced the direction of African representation in the world. As a study of self-representation and response to colonialism and settler narratives, this course will also emphasize the importance of individual and collective agency in the fashioning of the continent's image at

home and abroad. We will engage the archives of colonial and settler narratives and consider how these are re-thought in the present. The emergence and formation of new diasporic identities, in the contexts of global migration and colonial/postcolonial encounters, will be considered alongside the transnational circulation of African cultures and the enduring influence of global black identities in Europe and the Americas.

Introduction to African Popular Culture (218819)

Timothy Ogene

2024 Fall (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will introduce students to defining trends, movements, and practices in twentieth and twenty-first century popular culture in Africa. Focusing on the lives, interventions and innovative practices of key figures in music, television, fashion, dance, and publishing, we will examine the socio-political and the historical in relation to broader aesthetic and stylistic links to the rest of the world. This will be discussed in the larger context of colonial and postcolonial class formation, the afterlives of Cold War cultural diplomacy, access to education and accumulation of socio-political capital, the emergence of new conceptions of self and nationhood in relation to the global, new modes of cultural circulation, and the new lives of rediscovered archives. Figures such as Fela Kuti, Ousmane Sembene, Fela Sowande, J.D. 'Okhai Ojeikere, Miriam Makeba, Duro Olowu, Charley Boy, Dele Momodu, and William Onyeabor will be discussed alongside new figures, with a focus on lines of influence, self-fashioning, and the interface between the socio-political and the commercial. The ubiquitous power of diasporic/Afropolitan presence (and

performance of access) will be considered alongside the local and vernacular/indigenous, and the cosmopolitan and secular will be discussed alongside the traditional and religious. The steady rise/use of social media platforms as generative, where new forms of culture-driven protests and negotiation of identities unfold, will be considered alongside the history of audio-visual communication and the emergence of modern African celebrity culture. This course is suitable for students with a general interest in the production, circulation, and consumption of culture in modern Africa.

African American Theatre (108167)

Robin Bernstein

Glenda Carpio

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course investigates the history of African American theatre from the antebellum era through the present. Students will: a) gain knowledge of the general history of Black theatre in the United States; b) develop understanding of what African Americans have done with and through theatre—that is, how theatre has been a vital tool for Black politics, culture, communities, and knowledge; and c) develop hands-on skills in archival research while critically analyzing the functions of archives in a Black context. We will read plays and scholarly analysis, work directly with historical artifacts in the Harvard Theatre Collection, and attend a live performance of James Ijames's Pulitzer Prizewinning play, *Fat Ham*, after which we will have a classroom conversation with the playwright. The course culminates with a flexible project in which students will engage deeply with artifacts in a Harvard archive.

Course Notes:

Enrollment limited to 12 students.

African Literature and Culture in Context, 1891—1995 (224009)

Timothy Ogene

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

30

This course will bring together a variety of texts, archives, and visual representations from the late nineteenth century to the twentieth century, and explore how African writers, artists, and thinkers have consistently responded to major sociocultural, environmental, and geopolitical changes on the continent and beyond. This course will emphasize and engage key moments and encounters that have shaped the development of modern cultural and political thought on the continent and its new diasporas, with a focus on the multivocality of modern and traditional modes of storytelling and representation on the continent. The fictional depiction of historical experiences will be read alongside personal accounts of travels and encounters at home and abroad. And the double contexts of protest and pleasure will be paired with the conscious modes of self-representation that began to emerge in the early days of pan-Africanist thought and politics, in further relation to the movement of ideas across the Black Atlantic. The broader contexts and entangling impact of the two World Wars and the long Cold War will be considered in relation to the wave of decolonial politics and culture that swept through the continent in the last century. The chosen timeline begins with the publication of Joseph Jeffrey Walters's *Guanya Pau: A Story of an African Princess* (1891) and ends with Ken Saro Wiwa's final work, *A Month and a Day: A Detention Diary* (1995), marking a century of continuous intellectual and political engagement. Designed to encourage a comprehensive approach to modern Africa, this course is also about the public role of writers and thinkers in society.

African Landscape Architecture: Alternative Futures for the Field (224017)

Gareth Doherty

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

20

A central aim of this seminar is to reveal the plurality of ways landscapes are shaped across the African continent and how they help mitigate the impacts of changing climates and social injustice now and in the future. Africa is a continent rich in landscape projects and practices but only eight out of fifty-four African nations have professional associations of landscape architects. The course is framed around three central questions: 1.) How is landscape architecture currently practiced in African countries? (2.) What lessons can we learn from landscape practices in various African societies that can help mitigate the impacts of climate change and social inequities? (3.) As landscape architecture unfolds across the continent in the next 50–200 years, how can it continue assert its agency in the fight against changing climates and social inequity and claim a central space in the shaping of African cities of the future? Each week we will focus on a different country including South Africa, Botswana, Tanzania, Rwanda, Kenya, Ethiopia, Egypt, Tunisia, Morocco, Côte d'Ivoire, Ghana, and Nigeria. In collaboration with several landscape architecture university programs across Africa and including practitioners and academics from across the continent, this seminar will explore what it means to practice and teach landscape architecture in societies in which the profession is nascent or non-existent and speculate on the future of the shaping of landscapes in the Global South.

This course will consist of a series of interviews and conversations with emerging and established African creatives and cultural activists across genres and disciplines, including but not limited to writers, scholars, translators, filmmakers, cultural entrepreneurs, publishers, and educators. Bringing together creatives and experts from the continent and its new diasporas, this course will trace the trajectories of African cultural and political thought while situating same in lived practices. The pan-Africanist and anti-colonial ideologies that shaped the creative practices of the past will be considered alongside their new iterations in relation to emerging practices across the continent and its multiple diasporas. While developing new critical vocabularies for articulating the cultural present, the actual politics and logistic of cultural production on the continent will be considered and engaged. The emergence of new diasporic networks in Europe and the Americas will be considered alongside their older equivalents at home and abroad, in further relation to the vibrant histories of global Black cultures. Designed to bridge the gap between scholarship and creative-critical practices, this course will introduce students to the idea and practice of cultural engagement and community-building from a modern African perspective, with a particular focus on the link between global practices and local realities.

COLONIALISM AND ITS POSTCOLONIAL/DECOLONIAL AFTERLIVES: Critical Readings (221650)

John Comaroff

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In an age in which decolonization and decoloniality have become the object of a great deal of popular

concern and scholarly debate, this course will ask the question, "to what conception, and critique, of colonialism are these reactions? It will focus on contrasting theoretical approaches to the analysis of modern colonialism, postcoloniality, and decoloniality, addressing the vexed, much debated issue of what was or is colonialism to begin with? And, concomitantly, how are we to understand postcoloniality and decoloniality in its aftermath? In exploring theoretical approaches to the analysis of colonialism – from Lenin through Fanon and Césaire to Walter Rodney ("How Europe Underdeveloped Africa") among others – the course will explore the relationship between empire and the rise of industrial capitalism, the significance of race, class, and gender in colonial extraction, and the modes of violence on which it was founded. It will also analyze the nature of the states, legal orders, and criminal justice systems developed to govern racialized populations abroad, the impact of the colonial encounter on the consciousness, cultures, material conditions, and lifeways of the colonized, and the kinds of refusal and resistance to which they have given rise – leading to the afterlives of colonialism: neocolonialism, postcoloniality and, in recent times, decoloniality.

W.E.B. Du Bois and His Critics (223916)

Henry Gates

2025 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

W. E. B. Du Bois was among the most profound thinkers of his time, devoting a forensic and evolving attention to the issue of race over a varied career that extended from the turn of the century to his death on the eve of the March on Washington in 1963. Although he earned his PhD from Harvard in history, he is increasingly seen as one of the pioneering scholars in the then-nascent field of sociology. In this course, we will employ a structure of text and critique to evaluate the reach and utility of his ideas, on subjects ranging from the development of racial consciousness to nuclear disarmament to the international order and the role of Africa, Africans, and African Americans in it. This course will examine Du Bois's original writings in the context of the debates they sparked and will revisit his interactions with key figures, both Black and white, of the twentieth century.

Jim Crow: Histories and Revivals (220490)

Myisha Eatmon

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

Some historians believe that people should understand the historical and political context of the world and communities in which they live and engage with facts and reality that makes them better-informed citizens.

Being of that mindset, this course will be offered to students who want to engage critically with history and the present. The purpose of this course is three-fold. First, it is meant to allow students to begin to parse out the continuities and discontinuities between the Jim Crow era (broadly defined) and our current historical moment. Second, the course is meant to push students to engage with the historiographical debates surrounding the history of black lived experiences, race (not just black and white), and immigration (from South America, Central America, and Asia) as they relate to Jim Crow, structural racism, and white nationalism. Third, the course is meant to teach students how to write and support coherent historical arguments.

MEDICINE, SCIENCE, AND EMPIRE (108677)

Jean Comaroff

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

30

This class examines the changing place of medicine in the long history of modernity. Focusing on key moments—the birth of the clinic, the colonial encounter, the consolidation of medicine as profession, the age of genomics and biocapital, and the empire of global health—it explores the distinctive role of medical knowledge and practice in the making of modernist persons, identities, economies, and political vocabularies. Readings are drawn from anthropology and the wider social sciences, with cases from Africa, Asia, Europe, and North America. The course is a mix of lecture and discussion.

The Anthropology of Law: classical, contemporary, comparative, and critical perspectives (108678)

John Comaroff

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The early weeks will be devoted to (i) classical themes in the field, among them the legal anthropology of conflict/dispute and the practical hermeneutics of the law in cross-cultural perspective; this will be followed by a discussion of (ii) "big" theoretical questions, old and new, including relationship between law and violence, the nature of sovereignty, and the (alleged) fetishism human rights. The later weeks will address (iii) the legal anthropology of colonialism and postcoloniality, addressing law and colonial state and the invention of customary law, postcolonialism and policulturalism, and law, disorder, and informal ("vigilante") justice; (iv) crime and policing, and finally (v) lawfare, life, and the judicialization of politics.

Throughout, attention will be given to comparative perspectives in both time and space – and to the lessons to be learned from the anthropology of law, and its decoloniality, for interrogating the present moment in the USA, Europe, and Africa. Each session, with the exception of the first (September 6), will begin with an overview of the topic under discussion, and end with a summary statement; in between, the set readings will be introduced by participants in the course, who will be expected to offer a critical synopsis of the most significant points at issue and raise questions for our collective conversation. Grades will be determined by a term paper no longer than 15 pages (d/s, excl. notes + bib), on any one of the topics covered, and by class participation.

African American Lives in the Law (127960)

Evelyn Brooks Higginbotham

2025 Spring (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

30

This seminar focuses on biographical and autobiographical writings in a historical examination of the role of the individual in the American legal process. We will seek to understand how specific African Americans (as lawyers, judges, and litigants) made a difference-how their lives serve as a "mirror to America"-and also to understand the ways personal experience informs individual perspectives on the law and justice.

Religion and Society in Nigeria (122498)

Jacob Olupona

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

30

Nigeria is a dynamic, diverse, and globally influential country within Africa. Religion is pivotal to understanding the history, culture, and politics of Nigeria's nation-state, its precolonial situation. This course examines the historical development of religion in Nigeria and explores its intersection with ethnic identity, culture, and society in pre-colonial, colonial, and contemporary periods. Topical issues for the course include indigenous religious culture; European Missionary Movements; Emergence of Islamic traditions, Christian and Muslim identities; Islam, Christianity, and the State; Civil religion and national identity; Muslim-Christian relations; Religion and law; Civil society and democratization; Emerging themes in religion in contemporary Nigeria, and many vital interpretations of religion and politics in present-day Nigeria.

Poverty, Race, and Health (123435)

David Williams

2024 Fall (4 Credits)

Schedule: T 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course critically examines the health status of the poor, and of African Americans and other socially disadvantaged racial and ethnic groups in the US. Attention will be focused on the patterned ways in which

the health of these groups is embedded in the social, cultural, political, and economic contexts, and arrangements of US society. Topics covered include the meaning and measurement of race, the ways in which racism affects health, the historic uses of minorities in medical research, how acculturation and migration affects health, and an examination of the specific health problems that disproportionately affect nondominant racial groups.

Theory and Race in Africa (222201)

Daniel Agbiboa

2024 Fall (4 Credits)

Schedule:

R 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course focuses on theoretical debates and frameworks in African studies from the past to the postcolony. The course strives to open up a critical, open-ended discussion that treats Africa as People, and reclaims the epistemic freedom and virtue of African people through a double-consciousness of deprovincializing Africa and provincializing Europe. The course will examine the lines of knowledge production in Africa, beyond hegemonic Eurocentric knowledge-production, with the aim of achieving what the writer Chinua Achebe calls a "balance of stories." What, for instance, does a decolonized, African-centered approach to knowledge production look like? Ultimately, the course belies entrenched and racialized notions of Africa as a residual category, the study of which adds nothing (theoretically) meaningful to world knowledge or the human condition.

Theory and Race in the Americas (218312)

Jesse McCarthy

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

12

This course surveys myths, theories, discourses, and debates surrounding the meaning of race and its role in the historical formation of the "New World" in the Americas. Beginning with the origins of racial theory in Renaissance and Enlightenment Europe, we will follow their evolution and expansion into scientific and culturalist discourses in the nineteenth century, and through the dramatic transformations of the twentieth century leading up to the present. Readings will range from canonical scholars, orators, social scientists, and philosophers up to the most contemporary thinkers. Along the way, we will read work by Ottobah

Cugoano, W.E.B. Du Bois, C.L.R. James, Hortense Spillers, Paul Gilroy, Sylvia Wynter, Walter Rodney, Frantz Fanon, Denise Ferreira da Silva, James Baldwin, Cedric Robinson, Angela Davis, Imani Perry, Khalil Muhammad, Saidiya Hartman, Charles Mills, Jackie Wang, Michel-Rolph Trouillot, Audre Lorde and Cornel West among others. The course places an emphasis on building foundations in the historiography and intellectual genealogy of racial discourses as they have been constructed, reproduced, contested, reimagined, and ultimately disseminated throughout the American hemisphere and beyond.

Music, Emotion and Social Reparations. The graduate seminar explores connections between Black American Musics (BAM), Africa and themes of social justice and liberation historically, theoretically, and in relationship to economic reparations. The power of music to inspire activism, assuage grief, manage fear, create spiritual connection, celebrate victory, and find joy has been an especially strong theme of African American and Pan-African music and history. The seminar then poses the question, what would economic justice and structural reparations look like for Black music in the U.S. and on the African continent? How do copyright laws help or hinder? What proposals for reparations have the strongest potential to address structural racism in Black communities in the U.S. and abroad?

The Ethnic Avant-Garde (222658)

Jesse McCarthy

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

We begin with Steven S. Lee's 2015 book, *The Ethnic Avant-Garde: Minority Cultures and World Revolution*, a study of the relation between minority writers and the Soviet Union. How can this model apply to other minority vanguardist literatures? What is or what was the avant-garde? How should we read that phrase today? Recent debates in Black Studies over temporality, periodization, affect, and antagonism, suggest that we may not have an adequate theory of the avant-garde, or at least we may need to update the ones we inherit from Renato Poggioli (1968) and Peter Bürger (1984) in their accounts of the historical formation of European vanguards. By revisiting the avant-garde, we renew a concept that touches on a wealth of topics of interest to contemporary theoretical and methodological debates: taste, politics, publics and counter-publics, signifying, archives, transnationalism, translation, incompleteness, failure, and the circulation and

manipulation of new medias. There are also the classic questions: Who gets to decide what constitutes an "avant-garde" or avant-gardes? What is the relationship between avant-garde artistic movements and political or militant ones? This course will explore these themes comparatively, with readings drawn from poems, plays, novels, films, and ranging widely across the African diaspora, South and East Asia, the Caribbean, and Latin America. This is a graduate seminar and will typically only admit graduate students; undergraduate students may apply for special permission in writing but admittance will be strictly limited.

Subject: African & African Amer Studies

African & African Amer Studies 108

Black Religion and Sexuality (223002)

Ahmad Greene-Hayes

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0459 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course examines the co-constructed histories of religion, sexuality, and race in the Americas from the vantage of the African diaspora. Drawing upon foundational and newer works in the field, we will explore how the construction of these categories, largely rooted in biological essentialism, has had immense consequences for the enslaved and their descendants, indigenous peoples, other people of color, and women, queer, transgender, and gender-nonconforming individuals. This course also homes in on how those marginalized by these categories have challenged and subverted them using a hermeneutics of suspicion, political organizing, and other methods of resistance and feminist and queer theologizing.

Additional Course Attributes:

African & African Amer Studies 109

Religion, Theory, and the Archive (223003)

Ahmad Greene-Hayes

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0159 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Black and indigenous scholars have long argued that archives are often violent and dismembering, especially as the universities which house them preserve the physical and immaterial remnants of slavery and colonialism. Religious studies scholars, especially historians of religion, have attended to this quandary while sifting through archives of slavery, colonialism, conquest, and sexual violence. At Harvard, this conversation has re-emerged in unique ways through Harvard & the Legacy of Slavery: Reckoning with the Past to Understand the Present, and the question of what lies in university archives has taken center stage. This course examines these archival dilemmas and the violent hauntings of the past with an eye

towards the historical study of religion in the Americas. We will read work by such scholars as Saidiya Hartman, Christina Sharpe, Robert Orsi, Solimar Otero, Toni Morrison, and more.

African & African Amer Studies 112

Black Art and the Refounding of America: Art, Race, and U.S. Law (222670)

Sarah Lewis

Marcus Mayo

2024 Fall (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

It is hard to look anywhere and not see the force of black culture in media, entertainment, and the visual arts, now more heavily represented in the exhibitions and displays in museums around the country.

It is impossible to read the political landscape in American life and not engage with the work of black culture from film to sculptures, public installations to paintings.

This course focuses on the visual work of racial politics as a critical technology for contestation, redress, and rights-based advocacy in the United States. It addresses the founding of the United States through the works of contemporary artists from Gordon Parks to Isaac Julien, Mark Bradford, Hank Willis Thomas, and Amy Sherald.

The final portion of the class will give students an opportunity to present exhibitions proposals about artists who perform this critical work in American life or submit a 15-20 page research paper.

This course method represents a change in how we can study the arts and humanities today. It was once possible to produce scholarship on vision and visibility in the United States as if it was somehow sealed off from the discursive force of racial formation. It is not any longer. In the 1990s, a methodological shift occurred as scholars including but not limited to Martin Berger, Maurice Berger, Kirsten Pai Buick, Eddie Chambers, Hal Foster, Édouard Glissant, Kellie Jones, Nicholas Mirzoeff, W. J. T. Mitchell, Toni Morrison, Steven Nelson, Michele Wallace, and Deborah Willis began to focus on the polemics, process, and construction of vision, absence, and opacity in the history of racial formation and social power.

The dual aim of this course is to give students-undergraduate and graduate-of all backgrounds and concentrations an understanding of core topics in Black Art, and a critical understanding of the imbrication of visibility, race, and politics in the United States through a series of case studies.

ENROLLMENT

The course is open to all Harvard graduate students (in GSAS, GSD, Law school, and beyond), and to Harvard undergraduates through an application process. Please note that this class is well suited for undergraduates.

TO APPLY, please simply email sarahlewis@fas.harvard.edu

with your reasons for taking the course, and include your concentration(s) and Harvard school by August 28th.

Enrollment is limited to 30 to accommodate the trips into Boston and out of state. If numbers exceed 30 there will be an application for enrollment. This seminar will include trips to the King Embrace Memorial in Boston and a trip to the Wadsworth Athenaeum in Hartford, Connecticut to see the show co-curated by Professor Lewis and Professor Henry Louis Gates, Jr., *I am Seen ... There For I am*; and an in-class visit from Hank Willis Thomas.

Exploring the meaning of religion and its impact of on African culture and society broadly, this course will highlight both religious traditions and innovations. Instead of treating each of the religions of Africa, the triple heritage in the words of Ali Mazrui of indigenous African religions, Islam, and Christianity, as distinct and bounded entities, we will explore the hybridity, interaction, and integration between categories throughout Africa. Using case studies, a unique perspective on religious diversity on the African continent and diaspora will emerge.

Doris Sommer

Nicole Suetterlin

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

17

To explore key literary, cultural and critical theories, we pose questions through readings of classic and contemporary theorists, from Aristotle to Kant, Schiller, Arendt, Barthes, Foucault, Glissant, Ortiz, Kittler, and Butler, among others. Their approaches include aesthetics, (post)structuralism, (post)colonialism, media theory, gender theory, ecocriticism. Each seminar addresses a core reading and a cluster of variations. Weekly writing assignments will formulate a question that addresses the core texts to prepare for in-class discussions and interpretive activities.

The 2023-2024 Warren Center for American History workshop brings together an interdisciplinary group of

historians, social scientists, humanists, and scholars of black political thought to explore what might be at stake — philosophically, theoretically, culturally, and politically — in revisiting the Black Power Movement in the present. Building on the successes of Black Power Studies scholars, this seminar seeks to resist unduly defensive and siloed forms of scholarly engagement, to openly and critically interrogate Black Power's political and cultural dynamics, social formations, and conceptual contributions to political and social thought across such key concerns as political violence, education, the philosophy of race, cultural politics, gender, political economy, and more. Engaging the work-in-progress of visiting scholars, faculty, and other guests, the seminar will provide an extended opportunity to reflect upon the political and intellectual legacy of Black Power, the place of black radical traditions in academic scholarship, and how historians, theorists, and social scientists might work more collaboratively to pursue the hard questions the movement continues to raise.

To receive credit for this course students must enroll in part A and part B in the same academic year

Afrodescendant Citizenship in Latin America: Mobilization, Contestation, and Change (222097)

Alejandro de la Fuente

Paulina Alberto

2024 Fall (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar studies contemporary struggles over citizenship and belonging by Afrodescendants in Latin America, situating these struggles within historical patterns of nation building, racial stratification, and political mobilization. Afrodescendants have been at the forefront of struggles typically associated with liberal values—equality, democracy, voting rights—since the colonial period. But Afrodescendant activists, thinkers, and artists have also articulated alternative visions of freedom and belonging that are frequently sidelined in the dominant narratives about rights and citizenship in Latin America. The seminar is conducted in conjunction with the Sawyer Seminar "Afrodescendant Citizenship in Latin America" funded by the Mellon Foundation. This will allow us to bring scholars, activists, artists and other practitioners involved in struggles for racial justice in Latin America to our class and our campus.

E. Gabriella Coleman

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This course is designed to introduce undergraduate students to social/cultural theory in light of anthropological methods, arguments, concerns, and writing. As a discipline, anthropology is rooted in conveying and theorizing the particularities of lived social realities—which are often messy, complex, and unruly. On the other hand, social theory tends to provide a more abstract, though still empirically grounded, analytical framework, concepts, and theories about the nature of social life, the body, power, the economy, etc. While this class will introduce students to bodies of theory that have been particularly influential in anthropology, this course does not offer a general survey of social theory. The course seeks primarily to train students to learn how to read and write about theory in light of anthropological concerns, writing, and ethnography that you will come across in your concentration.

Course Notes:

Required of all concentrators. Weekly 2-hour sections to be arranged.

Additional Course Attributes:

Attribute	Value(s)

Junior Tutorial in Anthropology (205494)

Damina Khaira

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

ANTHRO 98a is a research design course: geared towards guiding and developing an anthropological research project that you are curious and passionate about. We will read, discuss and consider case studies that reflect lived experiences from diverse communities and contexts across a variety of topics and frameworks within the discipline. As we walk through on-the-ground and recorded examples of ethnographic/ archaeological research, we will explore and compare different approaches in identifying research problems, conducting research, and writing anthropologically. We will also read latest works produced by departmental faculty, including your Tutor, to get a sense of the range of topics, questions, and new methods that are possible in anthropological research. This course also offers you a space to then apply what you have learned through designing your projects and sharing your research goals, experiences, and components of your emerging work with peers for feedback. Through structured

assignments, seminar workshops, discussions with invited faculty and regular individual meetings with instructors, you will produce an original anthropological essay based on your research over the course of the semester. In short, this course will arm you with the critical tools to start thinking about your own independent research project. Please note that the research project you start to brainstorm in this course does not have to be your Senior Thesis project. In other words, your chosen research topic for this semester is only for the purposes of this course, and you are not confined to this research topic beyond this semester, although you can certainly continue to pursue this same research topic. As part of this course, you will be asked to reach out to at least one departmental faculty member to discuss the direction and feasibility of your research ideas. Please note that this course has a weekly 1.5 hour course meeting that is complemented with 1 hour tutorial/section meetings with your Tutor.

Anthropology 98B

Junior Tutorial for Thesis Writers in Anthropology (205522)

Damina Khaira

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This individual tutorial is for anthropology students intending to write a senior thesis, and is normally undertaken with an advanced graduate student during the second term of junior year. Students will have weekly meetings with the project advisor for the purposes of developing the appropriate background research on theoretical, thematic, regional, and methodological literature relevant to their thesis topic, and fully refining their summer research proposal. The tutorial's final paper will be comprised of a research proposal representing the research undertaken during the semester.

Anthropology 99A

Thesis Tutorial in Anthropology - Senior Year (205184)

Damina Khaira

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 30

This is a full year research and writing seminar limited to senior honors candidates. The course is intended to provide students with practical guidance and advice during the thesis writing process through structured assignments and peer feedback on work-in-progress. It is intended to supplement not replace

faculty thesis advising (with the requirement of consulting regularly with the advisor built into the assignments) and, most importantly, allow students to share their work and experiences with other thesis writers in a collegial and supportive environment. The seminar will be run jointly by the Department of Anthropology Assistant Director of Undergraduate Studies and the Writing Tutor. Part one of a two part series.

Introduction to Archaeological Science (111192)

Christina Warinner

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course offers an introduction to eight major areas of archaeological science: (1) relative and absolute dating, (2) human osteology, (3) paleoethnobotany and micro remains, (4) stable isotopes, (5) organic residue analysis, (6) zooarchaeology and ZooMS, (7) proteomics, and (8) paleogenomics. Students will gain

an understanding of the history of the field and its future directions, the method and theory behind how different tools and techniques work, and how archaeological science is transforming archaeology today.

Recommended Prep:

One year of college-level chemistry or physics.

American Invasions: Archaeological Tales of Encounter, Exploration, and Colonization, 1492-1830 (125450)

Matt Liebmann

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

In 1492 Native Americans discovered Europeans, changing the world forever. The European invasion of the Americas triggered demographic, economic, and ecological changes on an unprecedented scale. The subsequent movement of people, plants, animals, and goods prompted global shifts in population, exploitation of resources, and the transformation of environments on both sides of the Atlantic. What can anthropology and archaeology tell us about early encounters between Native Americans and Europeans? Why did the European conquest of the Americas play out as it did? This course investigates these questions through the sites where first contacts occurred, the objects exchanged by Indigenous peoples and settler-colonists, and the scars that remain in the ground. Through investigations of first contacts, politics, epidemics, Indigenous resistance, and ecological changes, Anthropology 1190 presents a sweeping continent-wide treatment of the historical archaeology of Native America between 1492-1800.

Focuses on the Pyramids, Sphinx, and tombs at Giza (ca. 2500 BC), in the context of ancient Egyptian history, art, and archaeology. The HU-MFA Expedition excavated Giza, resulting in today's Giza Project at Harvard. Seminar takes place in Harvard's Visualization Center with 3D viewing of the Giza Necropolis on a 23-foot screen, and consists of introductory lectures, student presentations, and field trips. Topics range from challenges of archaeological information processing to Old Kingdom mortuary art and architecture, to issues of ownership and repatriation. Students will also contribute to the (real world) Giza Project at Harvard.

Challenging Collections: Critical Reflections on Collecting Through Harvard's History (218189)

Diana Loren

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Harvard's museum collections have often been used to interrogate the world outside of "us": peoples, events, places, and things. This course reverses that gaze and asks what the collections and the processes of collecting reveal about the history of Harvard and its institutional identity as "the" place of learning. In this course, we unpack the historical circumstances surrounding the arrival of particular collections of photographs and objects at Harvard's Peabody Museum: such ones related to imperial desires, scientific inquiry, academic curiosity, and the violence of colonialism. How does critically examining this past inform present action and future strategies in contemporary museum practice at the Peabody Museum? This is a hands-on collections course that will be taught at the Peabody Museum and will include visits to other museums, archives, and libraries on campus.

Introduction to Sociocultural Anthropology (224348)

Nicholas Harkness

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to the discipline of Sociocultural Anthropology. Lectures will develop and explain sociocultural anthropology's central questions and discoveries, concepts and innovations, methods and theories, placing each in their historical and political context. The course will give special attention to two distinctive, interrelated, and sometimes controversial features of the discipline within the social sciences: culture as a foundational concept for social analysis, and ethnography as a foundational research method and mode of social representation.

Ethnographic Research Methods (119379)

Julia Fierman

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Taught as part seminar and part practicum, this course introduces undergraduate students to the craft of ethnographic research. Through weekly readings and semester-long practice projects, students critically examine and put to practice key elements of qualitative research methods used by anthropologists. Varied ethnographic assignments allow students to practice skills central to field work: participant observation, taking and organizing field notes, conducting formal and informal interviews, carrying out archival work and artifact analysis, and using audiovisual tools.

While recognizing the longstanding centrality of ethnographic methods to anthropological scholarship, the

course examines critical perspectives that challenge and call for reimagining the discipline's methodological repertoire – including decolonial, collaborative, community-based, and multimodal approaches. The ethics and politics of ethnographic fieldwork figure prominently in class discussions throughout the semester.

Course readings include a selection of ethnographic monographs and articles alongside practical guides. The close reading of ethnographic texts during the semester orients students toward detailed examination of each author's methodological choices and invites consideration of the relationship between ethnographic data and theoretical analysis. In addition to assigned readings, all students are expected to read and comment on portions of each other's works-in-progress.

The Price of Solidarity: Value, Sacrifice, Capital (218708)

Julia Fierman

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar in social anthropology presents value and the exchange of value as the foundations of economic, social, moral, and political life. The authors we read will argue that the exchange of value(s) between humans creates social solidarity. We are tied to our communities and friends through relationships of debt and expenditure; we give a gift with the expectation of receiving something in return, binding the gift giver and receiver in a social relationship that extends over space and time. For sociologist Marcel Mauss, even gestures of altruism are an attempt to create value and establish (or reinforce) relationships of alliance. We begin the semester with Mauss's bold contention that no gift is given selflessly; we give in order to receive something in return. Mauss's *The Gift: Forms and Function of Exchange in Archaic Societies* is a foundational text of economic social thought; he and the authors who follow him on the syllabus, foreground how social relationships of all sorts are governed by exchange, including relationships between the state and the pensioned worker (Mauss), between friends (Julian Pitt-Rivers), and between members of a community (Roberto Esposito). We then examine the moral and spiritual side of exchange through a close investigation of sacrifice and expenditure through the works of various philosophers, such as Jacques Derrida and Soren Kierkegaard. Ethnographic forays into value supplement these texts and foreground how notions of exchange, obligation, and expenditure guide religious, economic, and political cosmologies across societies. In the last third of the semester we turn to capitalist commodity production and the reified "money-form," which Karl Marx argues are socially alienating and economically exploitative. We reflect on productions of value in the context of globalized capitalism and neoliberalism.

Anthropology of Death and Immortality (109571)

Anya Bernstein

2024 Fall (4 Credits)

Schedule:

M 0600 PM - 0800 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores how different cultures imagine death and the afterlife, drawing on insights from the anthropology of religion, politics, and medical anthropology. Based on readings that range from classical ethnographies of death and dying to contemporary debates on the politics of death, we will discuss cultural theories on what constitutes the moment of death and what happens after, as well as investigate the political lives of dead bodies. The topics covered include conceptualizations of the body and mind, ideas of the spirit world, witchcraft, mortuary rituals, relic veneration, royal and communist corpses, organ donation, end-of-life care, and concepts of biopolitics and bare life.

The Anthropology of Power: Sovereignty, Hegemony, and Resistance (218709)

Julia Fierman

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What does it mean when we speak of "political power"? We know, from the work of many anthropologists, that power is not a question of the state. The political anthropologist Pierre Clastres wrote about non-state societies with a deep sense of law, tradition, and propriety that actively combat the emergence of a state system. In an age where we feel constantly surveilled, it is clear that power can be invisible, yet palpable; physical force is not necessary to encourage obedience among a population. In other words, power, specifically political power, is quite a complicated manner. At a moment in global history when traditional political paradigms are being increasingly called into question, this seminar asks us to reflect on power and politics from historical and cultural perspectives that broaden our conception of political identity and political participation. By focusing on the themes of sovereignty, hegemony, and resistance, we move away from traditional notions of power as that which is yielded by individual authority figures or state actors—although, we will certainly spend time reflecting on traditional paradigms of sovereignty. Instead, we contemplate the many shapes political power takes in geographically and ideologically diverse contexts. In doing so, the following questions emerge: Why do so many seem willing to kill and die for political causes? What does it mean to have a political identity? Where is the boundary between complicity and resistance? We will approach these questions through a combination of political theory and ethnography that will place political philosophers in conversation with anthropologists with the aim of elucidating the genealogy of shared preoccupations across the disciplines.

Anthropology 1781

What Is Latin America? Politics, Culture, Identity (218707)

Julia Fierman

2024 Fall (4 Credits)

Schedule: W -

Instructor Permissions: None

Enrollment Cap: n/a

This seminar focuses on the anthropology of Latin America in the context of late capitalism to understand the political, economic, and cultural consequences of particular modes of production and the social worlds they create. Through the genre of ethnography, we examine these consequences by focusing in on the major thematic foci of anthropologies of Latin America: labor, political economy, illiberal governance, crime and policing, political violence, poverty, and corruption. We will read several texts that address each theme, often providing insight into these topics from different geographical contexts within Latin America. In doing so, we will contemplate what it means to examine Latin America as a discreet region, interrogating the structural similarities that supposedly unite this extremely diverse part of the world, while also noting differences and inconsistencies that are often obscured when we mistakenly consider it to be a homogenous part of the world. We will also understand Latin America, and the academic study of Latin America, in the context of global North-South relations, as we are attentive to how scholarship has both problematized and reinforced the structural inequalities of the North-South binary. At the same time, this course's focus on Latin America in the context of late capitalism places the provocative texts we will read together in conversation with broader global debates about the effects of globalization and the expansion of neoliberalism on communities across the globe.

How to Tell A Story: Visions and Explorations in Ethnography (222156)

Damina Khaira

2025 Spring (4 Credits)

Schedule:

T 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

How are stories told?

How do anthropologists render lived experiences into ethnographic text?

How might ethnography - as a mode of witnessing and a way of knowing - be distinct from other genres of writing?

Geared towards undergraduates at any level, this course explores the craft of storytelling within the genre of ethnography. In so doing, the course seeks to introduce students to the critical issues, limits and possibilities that underlie ethnographic writing as a particular way of representing social experience. It will also acquaint students with the rich heritage of innovative and experimental works within the discipline.

Our classroom materials will include ethnographic and literary readings (primarily by historically underrepresented writers and scholars, with a special interest in the Global South) that allows us to consider questions of ethics, epistemology, conventions, politics, and representation that arise in the practice of ethnographic writing. Students will also learn key aspects of ethnographic writing by engaging in a variety of writing exercises informed by everyday lived experiences.

Holding a vision of creative ethnography and transcending disciplinary boundaries, this course encourages students to not only write well and with pleasure, but to nurture an awe and attentiveness to the unexpected worlds that can emerge from the encounters that take place in and beyond the ethnographic text.

***Note:** Interested graduate students should contact course instructor. In your email, please outline your current project and motivations for the course.

Care in Critical Times (216164)

Andrea Wright

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 18

What is care? How can and do communities mobilize care as a social intervention, political act, and tool for building intimacy, healing, and hope? Now, more than ever, it is imperative that we care for ourselves and our communities, but caring is not an apolitical or individual act and we must analyze the inherent inequalities and social dimensions of what it means to give and receive care. Employing a feminist mode of inquiry and an engaged anthropology approach, this course requires students to not only ask how they might engage in caring acts with their own communities, but to complete a locally based community project that brings care, in all its multifariousness, to the fore. Readings will focus on ethnographic, scholarly, and public-facing works that illustrate how culture, social relations, and systems of power shape the experiences, roles, practices, and interactions of individuals and their communities in the exchange of care.

Stone tools are the oldest known human technology. They represent the most abundant and arguably one of the most informative elements of the archaeological record for reconstructing ancient human behavior over the last 3.3 million years. In this graduate seminar that is open to undergraduates with permission, students are provided with a solid methodological and theoretical grounding in how to interpret stone (lithic) tools. The course includes hands-on training in how to identify and analyze stone tools, qualitative and quantitative approaches to process and interpret lithic data, and detailed discussions of current theoretical perspectives that use stone tools to understand broader questions about the evolution and diversity of human behavioral adaptations.

Kings and Criminals: Figurations of Sovereignty (215947)

Malavika Reddy

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course considers how anthropology has understood sovereignty, as theoretical object and political

process. What is at stake in asking about how authority is founded and sustained? How have anthropologists posed these questions and, in so doing, related their findings both a) to philosophical inquiries into the ontology of politics and b) to colonial and imperial projects? A central concern of the course is how sovereignty is embodied, hence a focus on figuration. Close attention will be paid to the ways in which anthropologists have grappled with the material worlds of sovereignty – crowns, ritual, flesh and so on – in part to enable students to construct a methodological toolkit to apprehend and analyze sovereign forms.

Remaking Life and Death (211109)

Anya Bernstein

2025 Spring (4 Credits)

Schedule:

T 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course is a critical reading graduate seminar focusing on how defining the boundaries between life and death became a matter of profound political, cultural, and scientific debate. Guided by the concepts of bio- and necropolitics, we will explore the shifting relations between body and person, human and time, and technology and biology while attending to the changing political, biomedical and religious contexts. The course includes readings from a number of anthropological subfields, including medical anthropology, anthropology of science and technology, religion, politics, and the Anthropocene. We will discuss the range of issues, from the classic studies of mortuary rituals to political lives of dead bodies to technoscientific reconfigurations of the human and of life itself.

Anthropology 2800

Social Theory, In and Out of Africa (160345)

Jean Comaroff

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Social Theory, In and Out of Africa examines some of the major conceptual and methodological approaches that have shaped the history of social thought in, from, and about Africa. In so doing, it will address the historical roots, political investments, and philosophical foundations of theory-making as they have taken shape in the crucible of empire, with Africa serving largely as the object of hegemonic Eurocentric knowledge-production. The readings will explore the interplay of scholarly practice and political historical struggle in the unfolding of social theory from colonial to postcolonial times. While "Africa" has long served as foil to European constructions of history, civilization, culture, and society, scholars on the continent have always disrupted these schemes, refuting and rewriting them in globally consequential ways. The course strives to open up a critical, open-ended discussion about the genealogy of disciplinary knowledge in the social sciences, especially as revealed by arguments emerging from the vexed place of Africa, in theory and in practice. Readings cover classic Africanist texts but focus mainly on scholarship emerging from the continent itself, examining a range of key issues – from Marxist and liberationist thought to questions of political economy, colonialism, development, gender, generation, and future-making. The readings are available on the course Canvas site.

Anthropology 3626

Research Design/Proposal Writing (116522)

Anya Bernstein

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course is part seminar, part practicum. Its purpose is to help students conceptualize and design a research project, to craft effective research and grant proposals, and to prepare for ethnographic and archival work. The first and longest part of the course will focus on formulating a researchable project, in all its various elements; how to write a statement of problem, to frame arguments/theses, to situate work in the appropriate anthropological literature/s, to develop a methodological approach, and techniques, commensurate with the objectives and claims of the study, and to make a case for its significance and contribution to the discipline. To the extent time permits, the class will also pursue a secondary objective: imparting professional skills, primarily in the area of writing and publishing, but also in oral presentation, that will be useful to students throughout their professional lives.

Course Notes:

By permission only. The class is open to third year social anthropology students who have done most of the background reading for their PhD dissertation research and are actively working on a formal research proposal, of which they have a draft in hand.

Requirements:

Course open to Graduate Students Only

Additional Course Attributes:

Anthropological Research Methods (108949)

Lindsey Zeve

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course offers a conceptual overview of research methods used by anthropologists. We will hear from faculty members their experience of doing fieldwork—from formulating a research question, choosing a site, entering the field to ethical issues they face in the field. Students will not only learn about but also practice these various methods and reflect on their projects in lights of the discussion about methods. To that end, students will complete several exercises and craft a method paper for their own project.

Course Notes:

This course is limited to graduate students in anthropology.

Requirements:

Course open to Graduate Students Only

Anthropology 3636

Pedagogy in Anthropology (214587)

Matt Liebmann

2025 Spring (2 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course has two aims: 1) to provide graduate students with the necessary training to be effective Teaching Fellows at Harvard, and 2) to give you the tools to develop your own approach to critical pedagogy in the field of Anthropology. Required for graduate students in the Spring of their second year. Classes will also be advertised to all Anthropology graduate students as optional Pedagogy Workshops for professional development. While discussions will be tailored to the unique challenges of teaching in Anthropology (across Archaeology and Social Anthropology), students will also be prepared to TF outside of Anthropology. Workshop-style classes are interspersed with formal office hours throughout the semester. Office hours are designed for one-on-one or small-group consultation with the Pedagogy Fellow in conjunction with course requirements.

Requirements: Course open to Graduate Students Only

Systems Development for Computational Science (128105)

Ignacio Becker Troncoso

2024 Fall (4 Credits)

Schedule:

TR 0215 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing and data sciences. The class is focusing on a thorough introduction of the Python programming language with discussion of core concepts in object oriented programming as well as essential data structures useful in most programming tasks. Students will work in groups on a semester long project that combines the subjects discussed in class and applies them to the topic of automatic differentiation. Students will further learn how to work with SQL databases and how to integrate them in Python using SQLite3 and Pandas. After completion of this course, students will be able to adapt basic tools and techniques to design complex software systems aimed at solving computational and data processing problems in academic and industrial environments.

Recommended Prep:

Students are expected to have basic programming experience (CS 50) and be familiar with entry level calculus and the chain rule.

Applied Computation 209A

Data Science 1: Introduction to Data Science (109898)

Pavlos Protopapas

Kevin A. Rader

2024 Fall (4 Credits)

Schedule:

MWF 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis - generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication - summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part one of a two part series.

Course Notes:

Only one of CS 1090a, CS 109a, AC 209a, Stat 109a, or Stat 121a can be taken for credit.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements:

Not to be taken in addition to Computer Science 109, or Computer Science 109A, or Statistics 109A, or Statistics 121, or Statistics 121A.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Full Year Course	Divisible Course
Quantitative Reasoning with Data	Yes
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Computation 209B

Data Science 2: Advanced Topics in Data Science (203547)

Pavlos Protopapas

Alex Young

2025 Spring (4 Credits)

Schedule:

MWF 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for statistical modeling, representation, and prediction. Topics include multiple deep learning architectures such as CNNs, RNNs, transformers, language models, autoencoders, and generative models as well as basic Bayesian methods, and unsupervised learning. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two-part series.

Course Notes:

Can only be taken after successful completion of CS 1090a, CS 109a, AC 209a, Stat 109a, or Stat 121a, or equivalent.

Recommended Prep:

CS 1090a, CS 109a, AC 209a, Stat 109a, or Stat 121a required.

Requirements:

Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 109A OR STAT 121A before taking APCOMP 209B) AND (Cannot take APCOMP 209B, if already taken Not to be taken in addition to APCOMP 209 OR CS 109 OR CS 109B OR STAT 109B, OR STAT 121 OR STAT 121B)

Additional Course Attributes:

Attribute	Value(s)
Full Year Course	Divisible Course
FAS: Course Level	Primarily for Graduate Students
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Computation 215

Advanced Practical Data Science (215121)

Pavlos Protopapas

2024 Fall (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The primary objective of this course is to provide a comprehensive understanding of the Deep Learning process in a practical, real-world context. With a strong emphasis on Machine Learning Operations (MLOps), this course not only reviews existing Deep Learning flows, but also enables students to build, deploy, and manage applications that leverage these models effectively. In the rapidly evolving field of data science, merely creating powerful predictive models is not enough. Efficiently deploying and managing these models in production environments - a practice often referred to as MLOps - has become an essential skill. MLOps bridges the gap between the development of Machine Learning (ML) models and their operation in production settings, combining practices from data science, data engineering and software engineering. This course is built upon the model of balancing conceptual understanding, theoretical knowledge, and hands-on implementation. It introduces students to the iterative process of model development, testing, deployment, monitoring, and updating, ensuring they acquire a strong foundation in MLOps principles.

Recommended Prep:

AC 209A, AC 209B

Applied Computation 221

Critical Thinking in Data Science (207093)

Michael Smith

2025 Spring (4 Credits)

Schedule:

TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course examines the wide-ranging impact data science has on the world and how to think critically about issues of fairness, privacy, ethics, and bias while building algorithms and predictive models that get deployed in the form of products, policy and scientific research. Topics will include algorithmic accountability and discriminatory algorithms, black box algorithms, data privacy and security, ethical frameworks; and experimental and product design. We will work through case studies in a variety of contexts including media, tech and sharing economy platforms; medicine and public health; data science for social good, and politics. We will look at the underlying machine learning algorithms, statistical models, code and data. Threads of history, philosophy, business models and strategy; and regulatory and policy issues will be woven throughout the course.

Course Notes:

This does not count as a technical or disciplinary course for SEAS PhD students, nor for SEAS masters-degree students outside of CSE and Data Science.

Recommended Prep:

CS 109A, Introduction to Data Science or equivalent by instructor approval.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Computation 275

Computational Design of Materials (128103)

Boris Kozinsky

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers theoretical background and practical hands-on applications of modern computational atomistic methods used to understand and design properties of advanced functional materials. Topics include classical interatomic potentials and machine learning methods, quantum first-principles electronic structure models based on wave functions and density functional theory, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties. Applications include atomistic and electronic effects in materials for energy conversion and storage, catalysis, alloys, polymers, and low-dimensional materials.

Course Notes:

Applied Computation 275 is also offered as Applied Physics 275. Students may not take both for credit.

Recommended Prep:

Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Computation 297R

Computational Science and Engineering Capstone Project (156202)

Weiwei Pan

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The capstone course is intended to provide students with an opportunity to work in groups of 3-4 on a real-world project. Students will develop novel ideas while applying and enhancing skills they have acquired from their core courses and electives. By requiring students to complete a substantial and challenging collaborative project, the capstone course will prepare students for the professional world and ensure that they are trained to conduct research. There will be no additional homework. There will be several mini-

lectures, focusing on supplemental skills such as technical writing, public speaking, reading research papers, using version control software, identifying biases, etc. Since the projects concern real-world projects, datasets will likely be messy, and there is a focus on effectively communicating your progress to both the staff and partner organization.

Applied Mathematics 10

Computing with Python for Scientists and Engineers (213407)

Efthimios Kaxiras

Logan McCarty

Georgios Neofotistos

2024 Fall (4 Credits)

Schedule:

TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is a systematic introduction to computing (with python and jupyter notebooks) for science and engineering applications. Applications are drawn from a broad range of disciplines, including physical, financial, and biological-epidemiological problems. The course consists of two parts: 1. Basics: essential elements of computing, including types of variables, lists, arrays, iteration and control flow (for, while loops, if statement), definition of functions, recursion, file handling and simple plots, plotting and visualization tools in higher dimensions. 2. Applications: development of computational skills for problem solving, including numerical and machine learning methods, and their use in deterministic and stochastic approaches; examples include numerical differentiation and integration, fitting of curves and error analysis, solution of simple differential equations, random numbers and stochastic sampling, and advanced methods like neural networks and simulated annealing for optimization in complex systems. Course work consists of attending lectures and labs, weekly homework assignments, a mid-term project and a final project; while work is developed collaboratively, coding assignments are submitted individually.

Course Notes:

This course satisfies the QRD requirement. Lectures meet concurrently with Physics 20, although sections, homework and project assignments are different between the two courses.

Recommended Prep:

Mathematics 1b is a prerequisite, although it can be taken concurrently (particularly for sophomores). Some limited concepts from Mathematics 21a are used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, using Python, and starts from the level of a complete beginner.

FAS: Course Level	Primarily for Undergraduate Students
Quantitative Reasoning with Data	Yes

Applied Mathematics 22A

Solving and Optimizing (211334)

Margo Levine

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers a combination of linear algebra and multivariate calculus with an eye towards solving systems of equations and optimization problems. Students will learn how to prove some key results, and will also implement these ideas with code. Linear algebra: matrices, vector spaces, bases and dimension, inner products, least squares problems, eigenvalues, eigenvectors, singular values, singular vectors. Multivariate calculus: partial differentiation, gradient and Hessian, critical points, Lagrange Multipliers.

Course Notes:

Not to be taken in addition to AM21b or Math21b. Some overlap with AM21a and Math21a. Can be used in conjunction with Stat110 to fulfill the mathematics requirements for computer science.

Recommended Prep:

Mathematics 1b or an equivalent background in mathematics.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 91R

Supervised Reading and Research (121692)

Margo Levine

Sarah Iams

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Supervised reading or research on topics not covered by regular courses. For AM concentrators, work may be supervised by faculty in other departments. For non-concentrators, work must be supervised by an AM faculty member. Students must receive the approval of an (Associate) Director of Undergraduate Studies and obtain their signature before submitting AM91r forms.

Course Notes:

Students cannot take AM 91r and 99r simultaneously with the same supervisors. Normally may not be taken more than twice. May be counted once for concentration credit in Applied Mathematics (as a breadth course). May be taken in either term. When project work from APMTH 91R is used to satisfy the honors modeling requirement, a paper describing the project must be submitted to the concentration for evaluation by the end of the final exam period in the semester in which the 91R is undertaken. For further information, write am-advising@seas.harvard.edu.

Applied Mathematics 104

Complex and Fourier Analysis with Applications to Art, Science and Engineering (122094)

L Mahadevan

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Complex analysis: complex numbers, functions, mappings, Laurent series, differentiation, integration, contour integration and residue theory, conformal mappings. Applications to visualization, art (especially M.C. Escher). Anamorphic images. **Fourier Analysis:** orthogonality, Fourier Series, Fourier transforms. **Signal processing:** sampling theorems (Nyquist, Shannon), fast Fourier and other discrete transforms, wavelets. Applications to image, audio and morphological analysis: filtering and deblurring.

Recommended Prep:

Applied Mathematics 22a and 22b or Mathematics 21a and 21b.
MATLAB or PYTHON experience recommended.

Nonlinear Dynamical Systems (121989)

Sarah Iams

2025 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

45

An introduction to nonlinear dynamical phenomena, focused on identifying the long term behavior of systems described by ordinary differential equations. The emphasis is on stability and parameter dependence (bifurcations). Other topics include: chaos; routes to chaos and universality; maps; strange attractors; fractals. Techniques for analyzing nonlinear systems are introduced with applications to physical, chemical, and biological systems such as forced oscillators, chaotic reactions, and population dynamics.

Recommended Prep:

Mathematics 1b, 21a, and 21b.

Applied Mathematics 109

Introduction to PDEs and their Applications (222553)

Nick Trefethen

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course serves as an introduction to partial differential equations (PDE) and their applications across the sciences. The course will familiarize students with the process of starting with a model, deriving the appropriate PDE, and solving it. Examples include wave equations, diffusion equations, the Laplace equation, and several nonlinear equations such as the Burgers and KdV equations. To build intuition for the analytical solutions, simple numerical simulations will be utilized.

Requirements:

Pre-Requisite: APMTH 105

Applied Mathematics 111

Introduction to Scientific Computing (120198)

Sarah Iams

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Many science and engineering problems don't have simple analytical solutions or even accurate analytical approximations. Scientific computing can address certain of these problems successfully, providing unique insight. This course introduces some of the widely used techniques in scientific computing through examples chosen from physics, chemistry, biology, computer science and other fields. The purpose of the course is to introduce methods that are useful in applications and research and to give the students hands-on experience with these methods. The main programming language will be Python.

Course Notes:

Applied Mathematics 111 is also offered as Engineering Sciences 111. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 111.

Recommended Prep:

Mathematics 1b, 21a, and 21b

Requirements:

Pre Req: APMTH 10, COMPSCI 32, or COMPSCI 50.
Anti-Req: Students may not take APMTH/ES 111 after APMTH 205 or simultaneously with APMTH 205.

Additional Course Attributes:

Applied Mathematics 115

Mathematical Modeling (118021)

Zhiming Kuang

2025 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes:

Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Recommended Prep:

Prerequisite: Applied Mathematics 21a and 21b, or Mathematics 21a and 21b or permission of instructor. Taking APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115 is recommended but not required.

Additional Course Attributes:

Applied Mathematics 120

Applied Linear Algebra and Big Data (113876)

Eli Tziperman

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Topics in linear algebra that frequently arise in applications, especially in the analysis of large data sets: linear equations, eigenvalue problems, linear differential equations, principal component analysis, singular value decomposition; data mining and machine learning methods: clustering (unsupervised learning) and classification (supervised) using neural networks and random forests. Examples from physical sciences, biology, climate, commerce, the internet, image processing, and more will be given. The approach is application-motivated, focusing on an intuitive understanding of the algorithms behind these methods obtained by analyzing small data sets. Programming assignments can be done using Python or Matlab.

Recommended Prep:

Mathematics 21a,b or equivalent, Computer Science 50 or Applied Mathematics 10 or equivalent programming experience.

Applied Mathematics 121

Introduction to Optimization: Models and Methods (123662)

Melanie Weber

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

75

Introduction to basic mathematical ideas and computational methods for solving deterministic optimization problems. Topics covered: linear programming, integer programming, branch-and-bound, branch-and-cut. Emphasis on modeling. Examples from business, society, engineering, sports, e-commerce. Exercises in AMPL, complemented by Mathematica or Matlab.

Course Notes:

Applied Mathematics 121 is also offered as Engineering Sciences 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.

Recommended Prep:

Mathematics 21b or equivalent preparation in linear algebra.

Physical Mathematics I (112798)

Michael P. Brenner

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to methods for developing accurate approximate solutions for problems in the sciences that cannot be solved exactly, and integration with numerical methods and solutions. Topics include: dimensional analysis, algebraic equations, complex analysis, perturbation theory, matched asymptotic expansions, approximate solution of integrals.

Recommended Prep:

Applied Mathematics 104 and 105, or equivalent; basic programming knowledge at the Computer Science 50 level.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 205

Advanced Scientific Computing: Numerical Methods (110684)

Nick Trefethen

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

100

Mathematical theory and implementation aspects of well-established numerical algorithms applied in various scientific and engineering disciplines. The course will cover data fitting, numerical linear algebra, numerical differentiation and integration, optimization, and numerical solvers for differential equations. There will be a significant programming component. Students will be expected to implement a range of numerical methods as part of individual and group-based projects. The material is sufficiently diverse to match each student's background and programming skills.

Recommended Prep:

Familiarity with linear algebra and calculus; basic programming knowledge (Python or MATLAB recommended).

Quantitative Reasoning with Data	Yes

Applied Mathematics 207

Advanced Scientific Computing: Stochastic Methods for Data Analysis, Inference and Optimization (127561)

Petros Koumoutsakos

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

100

The class aims to highlight the process of scientific discovery under uncertainty in the age of data. The class content stresses a unifying approach to data driven modeling and inference through stochastic simulations, optimization and Bayesian uncertainty quantification. The class projects require transferring an idea to software in multi- and many-core computer architectures.

Recommended Prep:

STAT 110, CS 50 or proficiency in a computer programming language (C++ and python strongly recommended) as well as CS 107.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes

Applied Mathematics 216

Inverse Problems in Science and Engineering (135919)

Michael P. Brenner

2025 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Many problems in science and engineering are inverse problems. Any experiment that requires an explanation can be couched thus - given the data, what is the theory/model that provides it - this is an inverse problem. In engineering, a given function (in a product/software) requires a design - again an inverse problem. This course will introduce a wide array of features of inverse problems from science and engineering - from oil prospecting and seismology to cognitive science, from particle physics to engineering design. We will then introduce deterministic and probabilistic algorithms for solving these problems. Much of the class will be spent studying how the recent revolution in deep neural networks can (and cannot) be used to solve such inverse problems. The class will have a substantial computational component -- part of every class session will contain instruction and computer implementation of the algorithms in question. Students will carry out final projects in their own area of interest. Programming will be taught and carried out in Python and Tensorflow.

Recommended Prep:

Linear algebra, Differential equations, Basic probability.

Additional Course Attributes:

Applied Mathematics 220

Geometric Methods for Machine Learning (221929)

Melanie Weber

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Recently, there has been a surge of interest in exploiting geometric structure in data and models in machine learning. This course will give an overview of this emerging research area and its mathematical foundation, with a focus on recent literature and open problems. We will cover a range of topics at the intersection of geometry and machine learning including basic differential geometry, graph representation learning, manifold learning, graph neural networks, machine learning on manifolds, and geometric deep learning. Lectures will be complemented by student-led discussions of relevant papers.

Recommended Prep:

Introductory-level knowledge of differential geometry is helpful, but not required.

Requirements:

Pre-Requisite: APMTH 120 and COMPSCI 181

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 226

Theory of Neural Computation (212912)

Cengiz Pehlevan

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction to the theory of computation with biological and artificial neural networks. We will cover selected topics from theoretical neuroscience and deep learning theory with an emphasis on topics at the research frontier. These topics include expressivity and generalization in deep learning models; infinite-width limit of neural networks and kernel machines; deep learning dynamics; biologically-plausible training of neural networks and models of synaptic plasticity; reinforcement learning in the brain; neural population codes; normative theories of sensory representations; computing with dynamics in recurrent neural networks; attractor network models of memory and spatial maps. Concrete examples of applications of these ideas to the brain will be discussed.

Recommended Prep:

APMTH 21A and APMTH 21B or equivalent.

Applied Mathematics 230

Active Matter (220128)

L Mahadevan

2025 Spring (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Active matter describes out of equilibrium systems that consume energy to do work and become functional. Understanding their behavior and function has implications for biology and complex systems across scales, from cells to ecosystems, e.g., morphogenesis, collective behavior of flocks and herds, neurodynamics of locomotion, etc. The tools and concepts needed include non-equilibrium statistical mechanics, kinetic theory, soft matter, and hydrodynamics; methods for the analysis of the models include scaling, coarse-graining (homogenization, renormalization) and computational algorithms (for stochastic and deterministic DE). This course will provide an introduction to the questions, techniques and successes of this exploding field that cuts across the physical and biological sciences.

Course Notes:

Open to PhD students and [AB/SM students or advanced undergraduate students] by permission of instructor. Applied Math 230 is also offered as Physics 230. Students may not take both for credit.

Recommended Prep:

Applied Mathematics 105, Applied Mathematics 201, Physics 153, Physics 181, Engineering Sciences 220, Engineering Sciences 240, or equivalent.

Requirements:

PHDs Only

Applied Physics

Subject: Applied Physics

Applied Physics 50A

Physics as a Foundation for Science and Engineering, Part I (108880)

Eric Mazur

Giulia Semeghini

2024 Fall (4 Credits)

Schedule: TR 0945 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap: 160

AP 50A is the first half of a year-long, team- and project-based introduction to physics focusing on the application of physics to real-world problems. The AP 50A and B sequence, designed for engineering and physics concentrators, is equivalent in content and rigor to a standard calculus-based introductory physics course sequence. Lectures and exams are replaced by interactive, hands-on, and collaborative learning activities that will not only help you master physics concepts and hone your scientific reasoning and problem-solving skills, but also grow your capacity for self-directed learning and develop your collaborative skills.

Course Content: Kinematics, mechanics, waves

Course Notes:

The assigned course time (Tu/Th 9:45 am to 12:30 pm) includes regular class activities, section activities, and time for project work. There are no other sections or laboratories.

Recommended Prep:

Physics prerequisite: None. Prior physics at the high-school or college level not required. **Math prerequisite:** Single-variable calculus at the level of Mathematics 1b (can be taken concurrently). You should be comfortable performing basic derivatives and integrals of a single variable.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
Quantitative Reasoning with Data	Yes

Applied Physics 50B

Physics as a Foundation for Science and Engineering, Part II (108882)

Kelly Miller

Doeke Hekstra

2025 Spring (4 Credits)

Schedule: TR 0945 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap: 160

AP 50B is the second half of a year-long, team- and project-based introduction to physics focusing on the

application of physics to real-world problems. The AP 50A and B sequence, designed for engineering and physics concentrators, is equivalent in content and rigor to a standard calculus-based introductory physics course sequence. Lectures and exams are replaced by interactive, hands-on, and collaborative learning activities that will not only help you master physics concepts and hone your scientific reasoning and problem-solving skills, but also grow your capacity for self-directed learning and develop your collaborative skills.

Course Content: Electromagnetism and optics

Course Notes:

The assigned course time (Tu/Th 9:45 am to 12:30 pm) includes regular class activities, section activities, and time for project work. There are no other sections or laboratories.

Recommended Prep:

Physics prerequisite: AP50a or equivalent. Math prerequisite: Multivariable calculus at the level of Mathematics 21a (can be taken concurrently). You should be comfortable performing basic vector calculus, including line and surface integrals.

Additional Course Attributes:

Attribute	Value(s)

Applied Physics 195A

Introduction to Solid State Physics (131331)

Julia Mundy

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); x-ray diffraction; electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); magnetism; superconductivity.

Course Notes:

APPHY 195A is also offered as PHYSICS 195A. Students may not take both for credit.

Recommended Prep:

Physics 15a, 15b and 15c or the equivalent. Physics 143a. Physics 181 and Physics 143b (taken concurrently) helpful but not required.

Additional Course Attributes:

Attribute	Value(s)

Applied Physics 195B

Introduction to Quantum Materials and Devices (215415)

Robert Westervelt

2025 Spring (4 Credits)

Schedule:

MWF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to quantum materials and devices, including low-dimensional materials, single and double quantum dots, Josephson junctions, and graphene. Their behavior is explained using quantum and semiclassical transport, the Coulomb blockade, and superconductivity. Quantum devices offer new approaches for electronics and photonics.

Course Notes:

Formerly AP 171 and ENGSCI 171. Applied Physics 195B is also offered as Physics 195B. Students may not take both for credit.

Recommended Prep:

Applied Physics 195A or Physics 195A, and Physics 143A or ES 170.

Applied Physics 216

Quantum and Classical Electromagnetic Interaction with Matter (141253)

Donhee Ham

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The first half of the course will cover the interaction of quantized atoms with electromagnetic fields, introducing a number of basic concepts such as coherent Rabi transitions vs. rate-equation dynamics, stimulated & spontaneous transitions, and energy & phase relaxations. These will be then used to study a range of applications of atom-field interactions, such as nuclear magnetic resonance, molecular beam and paramagnetic masers, passive and active atomic clocks, dynamic nuclear polarization, pulse sequence techniques to coherently manipulate atomic quantum states, and laser oscillators with applications. We will also touch upon the interaction of quantized atoms with quantized fields, discussing the atom + photon (Jaynes-Cummings) Hamiltonian, dressed states, and cavity quantum electrodynamics. The second half will cover the classical interaction of electromagnetic fields with matter, with special attentions to collective electrodynamics in particular, magnetohydrodynamics and plasma physics with applications in astrophysics, space physics, and Bloch electrons in crystalline solids.

Recommended Prep:

Undergraduate-level electromagnetism and quantum mechanics are recommended.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Electrical, Optical, and Magnetic Properties of Materials (121594)

Xin Li

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers the electrical, optical and magnetic properties of technologically important materials. It provides a quantitative description of structure-property relation by introducing tensor property, crystal symmetry, Neumann's principle and Curie principle. A variety of properties of materials are then introduced, including pyroelectricity, dielectricity, piezoelectricity, ferroelectricity; pyromagnetism, magnetoelectricity, piezomagnetism, ferromagnetism; defect chemistry, transport properties and applications in semiconducting, dielectric and energy storage materials; crystal optics including birefringence, Pockels effect, Kerr effect, photoelastic effect and optical activity. In addition, special topics will cover ferroelectric and ferromagnetic phase transitions and electrical, optical and magnetic properties of energy storage materials.

Recommended Prep:

Introductory solid-state physics or equivalent course.

Additional Course Attributes:

Attribute	Value(s)

Applied Physics 225

Introduction to Soft Matter (121403)

David Weitz

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will present a survey of soft matter physics, providing an overview of the richness and breadth of the field. The emphasis will be on the physics of the systems, rather than on the formalism. It will cover most of the fields of interest within soft matter physics, both current and through the history of the field. The course is intended to be of value to both experimentalists and theorists.

Recommended Prep:

Applied Physics 284 or Physics 262. Knowledge of basic thermodynamics, statistical mechanics and differential equations.

Additional Course Attributes:

FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 242

Introduction to Single-Molecule Biophysics (218614)

Maxim Prigozhin

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Single-molecule biophysics is a vibrant research field within the Quantitative Biology umbrella that has grown substantially over the past ~30 years. The impact of single-molecule biophysics has been significant in terms of not only the experimental and theoretical methods that have been developed, but also the scientific insights in biological and soft matter science that these tools have generated. This new course will cover the motivation behind single-molecule measurements in biology and, for the majority of the time, focus on discussing state-of-the-art experimental and computational techniques in single-molecule measurements as well as the key biological discoveries that they have enabled.

Course Notes:

Applied Physics 242 is also offered as MCB 161. Students may not take both for credit.

Recommended Prep:

First-year college physics.

Computational Design of Materials (110087)

Boris Kozinsky

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers theoretical background and practical hands-on applications of modern computational atomistic methods used to understand and design properties of advanced functional materials. Topics include classical interatomic potentials and machine learning methods, quantum first-principles electronic structure models based on wave functions and density functional theory, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties. Applications include atomistic and electronic effects in materials for energy conversion and storage, catalysis, alloys, polymers, and low-dimensional materials.

Course Notes:

Applied Physics 275 is also offered as Applied Computation 275. Students may not take both for credit.

Recommended Prep:

Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 276

Platforms for Quantum Science (223996)

Giulia Semeghini

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The course introduces various aspects of quantum science, including quantum computing, quantum simulation, quantum communication and quantum metrology. It will particularly focus on the presentation of different experimental platforms currently used in the field and include superconducting qubits, trapped ions, neutral atoms, defects in solids, photons, among others. The course will cover an introduction of the general goals and essential prerequisites for these platforms; it will elucidate their operational principles and highlight some of their most significant and recent achievements, as well as the main challenges in their development.

Recommended Prep:

Quantum mechanics at the level of introductory graduate courses.

Additional Course Attributes:

Attribute	Value(s)

Applied Physics 282

Solids: Structure and Defects (142998)

Frans Spaepen

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Bonding, crystallography, diffraction, phase diagrams, microstructure, point defects, dislocations, and grain boundaries.

Course Notes:

Intended for students in applied mechanics, materials science, condensed matter physics, chemistry, and earth sciences. Offered every other year.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 284

Statistical Mechanics (131392)

Vinothan Manoharan

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Basic principles of statistical physics with applications including: the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical points, as illustrated by the gas-liquid transition and simple magnetic models; Bose-Einstein condensation.

Course Notes:

Also offered as Physics 262. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program.

Recommended Prep:

Physics 143a and Physics 181 or Engineering Sciences 181.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 291

Electron Microscopy Laboratory (116509)

David Bell

2025 Spring (4 Credits)

Schedule:

M 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Lectures and laboratory instruction on transmission electron microscopy (TEM) and Cs corrected, aberration-correction microscopy and microanalysis. Lab classes include; diffraction, dark field imaging, X-ray spectroscopy, electron energy-loss spectroscopy, atomic imaging, materials sample preparation, polymers, and biological samples.

Course Notes:

Primarily for graduate students planning to use TEM for their research.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 292

Kinetics of Condensed Phase Processes (134488)

Frans Spaepen

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Kinetic principles underlying atomic motions, transformations, and other atomic transport processes in condensed matter. Application to atomic diffusion, continuous phase transformations, nucleation, growth, coarsening and mechanisms of plastic deformation.

Course Notes:

Intended for students in applied mechanics, materials science, condensed matter physics, chemistry, and earth sciences.

Recommended Prep:

An undergraduate-level course in thermodynamics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 295A

Introduction to Quantum Theory of Solids (143855)

Subir Sachdev

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

AP295a is an introductory graduate level course in solid-state physics. Lattices and symmetries. Phonons and electronic structure of crystals. Metals, semiconductors, and insulators will be covered. Electrical, optical, and thermal properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Additional topics selected from the integer quantum hall effect, an introduction to topological insulators with edge states and the theory of interacting electrons.

Course Notes:

PHYS/AP 295a is an introductory graduate-level course.

Recommended Prep:

One course on graduate quantum mechanics and one course on graduate statistical mechanics. Undergraduate course on solid state physics helpful, but not necessary.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 295B

Quantum Theory of Solids (146948)

Subir Sachdev

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A course on the application of the principles of many-particle quantum mechanics to the properties of solids. The objective is to make students familiar with the tools of second quantization and diagrammatic perturbation theory, while describing the theory of the electron liquid, the BCS theory of superconductivity, and theory of magnetism in metals and insulators. Modern topics on correlated electron systems will occupy the latter part of the course.

Course Notes:

Applied Physics 295b is also offered as Physics 295b. Students may not take both for credit.

Recommended Prep:

Physics 251a,b, an introductory course in solid state physics, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 296

Mesoscale and Low Dimensional Devices (204955)

Donhee Ham

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits.

Course Notes:

Also offered as Physics 296 and QSE 296. Students may only take one of AP 296, Physics 296, and QSE 296 for credit.

Recommended Prep:

Undergrad level condensed matter physics (AP/P195).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 299QR

Special Topics in Applied Physics (2-unit version) (218911)

Federico Capasso

2024 Fall (2 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Supervision of experimental or theoretical research on acceptable problems in applied physics and

supervision of reading on topics not covered by regular courses of instruction.

Course Notes:

2-unit version of AP 299r. Open to graduate students and AB/SM candidates only. This course is graded and is ordinarily taken with the approval of the Committee on Higher Degrees. AB/SM students must obtain CHD approval for this course to count toward their SM requirements and the course must be bracketed accordingly; it cannot be used towards also meeting AB degree requirements. Applicants must file a 299r Special Topics Form approved by the advisor before the course registration deadline; contact gradprograms@seas.harvard.edu if you have any questions. The form may be obtained at <https://www.seas.harvard.edu/office-academic-programs/graduate-policies-procedures-and-forms/graduate-student-forms>.

Art, Film, and Visual Studies

Subject: Art, Film, and Visual Studies

Art, Film, and Visual Studies 11G

Exploring the Human Form: An Introduction to Figure Drawing (222793)

Maria Gamboa

2025 Spring (4 Credits)

Schedule:

F 1200 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

In this introductory figure drawing course, you'll embark on a structured and guided journey of exploration into the world of figure drawing. Through direct observation of a live nude model, you will progressively establish a strong foundation in the fundamentals of life drawing and approach. The course is designed around a series of assigned projects that will challenge you to address both technical and conceptual aspects of figure drawing. You will be encouraged to view the human body as a source of artistic exploration, fostering a deeper understanding of its form and expressive potential.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Art, Film, and Visual Studies 12

Drawing 1: Drawing as a Visual Language (203312)

Katarina Burin

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

A studio course to build the skills of drawing incrementally and expand students' visual vocabulary. Drawings will be made from life, photographs and invention. Emphasis will be placed on enhancing our observational sensibilities through life drawing and the figure, focusing on all aspects of technical development, particularly the importance of line. The aim of this course is to expand drawing skills with intention and purpose.

Course Notes:

This class is for beginners or anyone furthering their skill level.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration

Art, Film, and Visual Studies 14 Section: 1

Making Things [Breaking Things] (203314)

Katarina Burin

2024 Fall (4 Credits)

Schedule:

T 0430 PM - 0715 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The focus of this course is two-fold; to strengthen technical and material skills in sculpture, and to thoroughly explore our own conceptions of failure as the basis of artistic practice.

The course will introduce you to a variety of foundational skills in three-dimensional art and design, and provide time for you to build a deeper hands-on understanding of material and construction. We will work with paper and cardboard, and then with wood, plaster, clay and a variety of other mold-making, casting and sculpting materials.

We each walk into a circumstance with a given set of expectations concerning success and failure; expectations we have of ourselves, and expectations we believe others have of us personally, institutionally, culturally. These often become the driving force behind our actions. If we take time to explore the nature of these performance expectations and flip them on their heads, they can become the basis for rich and thorough artistic pursuit. We learn to embrace the experience of making with curiosity, uncertainty of our trajectory, and discover surprises - strange, awkward, and compelling.

Course Notes:

This course is open to all, no prerequisites or experience necessary.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration

Silkscreen (121758)

Annette Lemieux

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

For the student who is interested in the manipulation of found and original imagery. Students will create monotypes on paper and other surfaces utilizing the silkscreen process. Through slide presentations, the class will be introduced to the work of artists such as Rauschenberg and Warhol, as well as others who use the silkscreen process.

Course Notes:

No previous studio experience necessary.

Additional Course Attributes:

Creating Comics and Graphic Novels (222766)

Peter Kuper

2024 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

11

This course examines the history of the form, including graphic novels and comic strips, and explores the building blocks necessary to create effective comics based upon personal experiences and research. Students are taught ways to access their writing and artistic abilities and apply them to sequential narratives. There is an emphasis on capturing ideas through regular sketchbook exercises and the exploration of social and political subject matter as a basis for assignments. Students are encouraged to explore an array of visual approaches and techniques in the creation of weekly assignments within the confines of a single black-and-white page.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Art, Film, and Visual Studies 24 Section: 1

Painting, Smoking, Eating (127177)

Matt Saunders

2025 Spring (4 Credits)

Schedule:

W 0130 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Titled after Philip Guston, this course has two agendas: technical assignments that improve your ability to move paint around and developing groundwork for personal projects. From the space of the studio an artist reflects on the world. We will consider the role of artists in society and the boundaries between interior and exterior meaning, as we develop practices that are both self-expressive and self-reflective, with special curiosity about auteurs, flaneurs, and all painters with individual and committed voices.

Additional Course Attributes:

Attribute	Value(s)

Enrollment Cap:

12

This studio course explores the role of material, visual thinking, observation, and the physical application of paint toward the realization of three dimensional worlds on a two dimensional surface. The initial in studio assignments seek to provide a foundation of formal visual principles. Looking at many artists, including the work of Max Ernst, who inspires this particular session, we will take on the challenge of representation - with the goal of accurately capturing light, weight and form on the two dimensional surface. As such, this course requires us to look intently at objects and the many textures that compose our lived experience. Assignments progress to improve skill and experimentation. The goals are to gain confidence articulating goals, rendering objects and developing individual will. This course is well suited for beginners, and includes discussions, presentations and excursions.

Introduction to Still Photography (220429)

Patrice Helmar

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course serves as an introduction to photography. We will concentrate on the contemporary and historic nature of the medium through lectures, discussions, and visiting artists. Tutorials and workshops using programs from the Adobe suite will cover digital workflow and proper camera operation. These sessions will include image capture, file management, image processing, and digital printing. Weekly assignments will include photographic exercises, readings, and written responses. Structure of the course will alternate between technical instruction, lab days, and critique. The culminating assignment will be a final series of photographs akin to a well honed collection of songs.

Sharon Harper

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

This studio course will introduce you to the conceptual and artistic potential of photography. Your understanding and use of the medium will be contextualized within contemporary and historic photographic art practices. Your own art practice will be developed alongside technical skills. We will discuss topics such as the ethics of photographing people, how to make meaningful images amid the proliferation of digital images, and traits that are unique to photography. This class is organized around presentations on artists' work, presentations on photographic concepts, studio making assignments, individual meetings with the instructor, small discussions with peers to develop your practice, technical skill workshops, readings, reading discussions, group critiques, and visiting artist presentations. Curiosity, a strong work ethic, and a sense of adventure are required. No prior art experience necessary for enrollment in this class.

Course Notes:

No prior art experience necessary for enrollment in this class.

Approaching Narrative: Introduction to Fiction Filmmaking (127469)

Alain Gomis

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

In this production course, students will learn the basic principles of narrative filmmaking, experiment with the visual language of cinema, and push the boundaries of their own moving image work. Students will be introduced to the aesthetic and formal elements of cinema and the terminology of film production. Techniques explored include cinematography, sound recording, and editing. In-class screenings and lectures will give an overview of different modes of filmmaking, including narrative, documentary, and experimental. Students will hone their powers of observation, communicate visual ideas with clarity and simplicity, explore personal storytelling, and develop the ability to read films as trained and informed viewers. Classes will consist of weekly critiques of student work. By the end of the course, students will be equipped with the necessary tools to produce two short 5-7 minute films with sync sound.

Course Notes:

No prior filmmaking experience necessary.

Introduction to Time-Based Media (205410)

Karthik Pandian

2024 Fall (4 Credits)

Schedule:

TR 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

An introduction to drawing, sculpture, performance, and film through time-based materials and practices. Students will develop their own relationship to the creative process through the transformation of humble materials (cardboard, charcoal, found objects), inspiration from a diverse range of artists, and critical reflection guided both by the instructors and the students themselves.

Course Notes:

First year students and students who have not taken any AFVS courses are encouraged to apply.

All materials will be provided (or found by the students at no cost to themselves).

Photographic/Cinematic: introduction to lens-based practices (220433)

Joana Pimenta

2025 Spring (4 Credits)

Schedule:

M 1200 PM - 0415 PM

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 20

Introduction to lens-based practices. We will focus on the photographic principles of cinematography for filmmakers (camera, lenses, scale of shots, exposure, composition, lighting, among others), and work with a series of photography-based exercises for moving image, using both still and moving image cameras, and working across film and video. This is a foundations course for work in film/video, with a specific focus on cinematography, where students will learn through practice photographic fundamentals that will be central to their moving image work.

Drawing 2: Emotion and Notation (222787)

Katarina Burin

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

The close look at, and adoption of, drawing as a functional tool. This typology of drawing is often found in scientific journals and extra-artistic contexts in the form of diagrams, symbols, maps, calendars, graphic models, architectural renderings and technical illustrations of many kinds. These drawings often imply or suggest a lack of poetic and artistic goals, inviting unambiguous readings of specific content. We will explore, manipulate, subvert, or find alternative uses for these often overlooked drawing conventions. A new drawing vocabulary will emerge from our research and practice.

Through the use of these new drawing vocabularies we will develop our own systems of visual communication and conceptual experimentation. The result will be the creation of experimental bodies of knowledge and new forms of thought - essentially developing an archive based on individual interests and goals. These archives can be subversive, interrogative, playful or serious. Along with projects and assignments we will delve into a long tradition of artists who have undermined established systems of knowledge, taste, and hierarchy by rethinking and sometimes fictionalizing their archives.

Curating Contemporary Art (213509)

Daniel Byers

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course introduces the practice and study of curating contemporary art. We will travel often to area museums and prioritize discussions in the presence of artworks. We will pay special attention to the institutional contexts in which exhibitions are produced, the art historical, political, and cultural implications of curatorial practice, and how curators work with living artists. How do curators navigate these simultaneous engagements? What do artists, artworks and art viewers need? What is the relationship between museum exhibitions and the art market? How are ideas, histories, relationships, and polemics articulated within an exhibition space?

Course Notes:

History of Art and Architecture 17K: Introduction to Contemporary Art or advanced classes in the Department of Art, Film, and Visual Studies. Students should have a basic understanding of contemporary art history.

Painting and the Multiverse (222905)

Kianja Strobert

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

12

What meaning can evolve from bringing disparate visual languages together on a single surface? This course explores painting as a visual field that can take sharp turns over time, proposing new understandings at each stage. Initial assignments seek to introduce students to the role of chance and intention, removing painting from an object with a finished intention into a record of points of time. While grounded in the language of painting, students are required to move from assignments into their own proposals which can expand into any media. This course's theoretical framework is intended for intermediate students, however technique can be grasped by introductory students as well. The initial main material is acrylic paint. Studio time will be buttressed by texts, presentations, field trips and discussions.

Additional Course Attributes:

Abstraction (223943)

Kianja Strobert

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1145 AM

Instructor Permissions: Department**Enrollment Cap:**

12

This course emphasis the role of composition, color and form outside of representation. How does an artist

working outside of nameable objects transfer intent? Far from creating a mess - this course seeks to explore through making, the means, reasons and many definitions of abstraction. Starting with the square - students will move from visual problem solving on two dimensional surfaces into their own projects. While the initial emphasis will focus on abstraction in painting, students are encouraged to branch out into other dimensions as the semester progresses. Rigorous making will be buttressed by discussion, texts, videos and material questioning.

Course Notes:

This course is open to all levels, however those with previous painting/ AFVS course experience are encouraged.

10

Sleight of Hand Sleight of Mind is an intermediate/advanced studio photography seminar. Your self-directed image-making practice will be balanced by learning to parse creative decisions that are part of image-making. Supported by readings on contemporary photography and creative process, the class is designed to sharpen your understanding of lens-based and image-based creativity. We will analyze unaltered photographs, as well as photographic processes such as cutting, collaging, hammering, painting, soaking,

blotting, erasing, lighting, digging, and dismantling. Some of the artists we will study include Paul Mpagi Sepuya, Farah Al Qasimi, Tarrah Krajnak, and Jan McCullough, among others. Class time will be structured around small group discussions, group critiques, field trips to see relevant exhibitions, and individual meetings with the instructor. The development of your work will be supported within regularly scheduled evening lab time with a teaching assistant present. *The prerequisite for this class is an introduction to photography class or permission of the instructor.*

Course Notes:

The prerequisite for this class is an introduction to photography class or permission of the instructor.

Patrice Helmar

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

"Photography is also an act of love," Hervé Guibert begins his memoir, the namesake of this course published in 1982, nine years before his death in 1991 due to complications from HIV/AIDS. The locus of this class will be the production of a semester-long independent photographic series and include hands-on technical workshops including color theory, printing, lighting, and advanced image post-processing. In-class seminar-style readings, slideshows, and cinema viewed at the Harvard Film Archive will focus on the work of queer artists. Also notable, are class visits to the Harvard Art Museum collections, the Harvard Fine Art Library photo book and print collections, and visiting artist and critic lectures.

Course Notes:

The structure of this course relies on a digital workflow and is not a film photography class.

Film Directing: Approaching Fiction Now (114116)

Alain Gomis

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course guides students through different issues and challenges in the filmmaking process from the initial development of ideas through to completion.

Throughout the semester, students will write and discuss their own short film scripts. At the end of the first semester, these projects will be ready to move through the pre-production process so that they can be shot during the second semester.

Emphasis is placed on finding a voice, point of view and approaching the film language. There will be formal explorations and various assignments which impose restrictions.

Throughout several personal and group exercises different topics will be explored, such as: directing actors, composition, directorial authorship, as well as the role of camera work in conjunction with narrative structure.

In-class screenings and critiques of student assignments will form an important component of the course.

Recommended Prep:

AFVS 50 or two other AFVS courses in video or film production required.

Film Direction: From Script to Screen (113516)

Alain Gomis

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This production course is an advanced continuation of 150A. It is compulsory for students to have the first draft of their short screenplays on the first day of class. Content includes scene analysis and script revision, directing professional and non-professional actors, cinematography, blocking and mise-en-scène, sound design, editing and post-production. Students will be given assignments related to their written screenplays throughout the course, culminating in what will be their final project: the production of a narrative short film. Film professionals will occasionally be invited to conduct workshops or hold masterclasses with students.

Recommended Prep:

AFVS 150A or two courses in video production.

Nonfiction Video Projects (113447)

Ross McElwee

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

Working from a proposal approved in advance by the instructor, each student plans, shoots, and edits a documentary video of his or her design. Shooting should take place over the summer and editing during the fall term. Readings and screenings augment individual work.

Course Notes:

In exceptional cases, a student will be permitted to take the course without having filmed over the summer, but the student must have a specific proposal for a documentary that can be both shot and edited during the term. An interview with the instructor is required for admission.

Recommended Prep:

At least one AFVS course in live-action film or video.

The Bolex: Working in Film (220435)

Alfred Guzzetti

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

All work in this course will be shot on 16mm film using Bolex cameras. Some projects will be silent and cut with splicers, others will add a soundtrack and will be edited using a computer. Through a series of non-fiction projects, students will explore the possibilities of the 16mm film image and the freedom of working with silence or in non-synchronous sound. Class time will include technical workshops, film screenings and discussions of student work.

Course Notes:

Pre-requisite: One course in video or film production.

In this film production course, students will make short films that explore the fluid boundaries between fiction and documentary. We will discuss the generative possibilities of the real in the production of fiction works, and fictional strategies for working in documentary film. Assignments will encompass video and sound recording and editing, cinematography and montage. Close attention will be dedicated to writing for hybrid fiction/non-fiction works, to cinematography for filmmakers, to model building and working with objects, and to directing non-professional actors. Class time will include technical workshops, film screenings, discussions of student work and occasional visiting filmmakers.

Experimental Animation: Moving in Place (222904)

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

Experimental animation values process and reflection over linear narrative and character development and will help us find new, old, or latent connections through play and meandering curiosity. We will intentionally make space for different ways to consider themes of belonging, identity, movement and place with in-class screenings, readings, and occasional visiting artists. Students will then actively reflect on these themes by engaging in individual and collaborative animation projects. Class time will also include technical workshops on various animation techniques, original sound recording, editing and discussion of student work. Some previous art making experience required.

Course Notes:

There are weekly screenings for this course on Fridays from 12pm to 2pm.

Recommended Prep:

Previous art making experience required.

Sky Hopinka

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course focuses on the essay film as a cinematic form of expression and argument. It is a wide ranging genre of film that touches on the personal, the poetic, the biographical, and the historical ways of understanding one's own world and identity. It is a form that employs many different filmic approaches, including documentary, experimental, and fiction. Screenings include contemporary and historical works, and you will make a series of short films over the course of the semester engaging in those various tactics and styles.

Recommended Prep:

Intermediate level, knowledge of camera use and audio equipment and editing software.

Contemporary Moving Image Practices (222792)

2025 Spring (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course looks at diverse practices that comprise the contemporary moving image landscape including avant-garde film, video and installation art, experimental narrative cinema, and documentary. Most weeks will feature a guest artist who will be present (in person or virtually) for a screening and presentation of their work, and students will have the opportunity to engage in close dialogues with them in a seminar setting. Guests will include a broad range of international filmmakers and artists, as well as faculty and alumni. Readings and supplemental materials will be assigned for each session and discussed in conjunction with the moving image work. In addition to a paper, students will conduct short interviews with the artists that will be compiled into a collaboratively edited and designed digital publication at the end of the term.

Additional Course Attributes:

Traditions of Avant-Garde Cinema (222790)

Haden Guest

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

14

This course studies traditions and legacies of avant-garde cinema from the 1920s through the present day. Special emphasis is placed on experimental film movements that emerged in the US, Europe, Latin America, South Korea and Japan; among them Surrealist cinema, avant-garde feminist filmmaking, structuralist/materialist cinema, and the found-footage, diary, essay and landscape film. Filmmakers will regularly visit to present and discuss their work and active study will be made of unique collections (both films and papers) housed at the Harvard Film Archive. Attendance of weekly screenings is a course requirement.

Recommended Prep:

AFVS 70: The Art of Film recommended, but not required.

Under Surveillance: Media, Security, and the Loss of Privacy (216275)

Eric Rentschler

2025 Spring (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

With a camera positioned at the entrance to the director's factory, Louis Lumière's famous early film of 1895, *La Sortie de l'usine Lumière à Lyon*, captured workers as they left for the day. Today, surveillance practices have infiltrated daily lives around the globe, from the ubiquitous cameras on city streets and public spaces to tracking systems that monitor, store, and monetize even our most intimate activities. In this class we will probe and problematize the modern history of surveillance technologies and monitoring practices, from the first manifestations of police photography to CCTV, drones, racial profiling, GPS technology, and user security on social media and digital platforms. To this end we will look at exemplary features such as *The Conversation* (1974), *Strange Days* (1995), *Caché* (2005), *Red Road* (2006), *The Lives of Others* (2006), and *Snowden* (2016), documentaries like *13th* (2016), *The Creepy Line* (2018), and *The Great Hack* (2019) as well as selected videos and tv programs. We will also consider the analytical and theoretical perspectives of, among others, Michel Foucault, Jean Baudrillard, Wolfgang Ernst, Gilles Deleuze, Harun Farocki, Shoshana Zuboff, Catherine Zimmer, Lev Manovich, Mark Andrejevic, Thomas Levin, Patricia Pisters, and Christian Parenti.

Course Notes:

This course is equivalent to AFVS 184E. Credit may be earned for German 150 or for AFVS 184E, but not both.

The Frankfurt School on Film and Mass Culture (156172)

Eric Rentschler

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This seminar considers the Frankfurt School's deliberations on film, radio, television, and mass culture. We will devote the majority of the course to three seminal figures: Siegfried Kracauer, Walter Benjamin, and T. W. Adorno. More generally, we will focus on the debates catalyzed by the emergence of modern mass media and an industrialized visual culture; we will also reflect on the pertinence of these debates for our own contemporary culture of media convergence.

Course Notes:

This course is also offered through Germanic Languages and Literatures as German 154. Credit may be earned for either AFVS 189G or German 154, but not both.

Requirements:

Anti-Req: may not be taken for credit if GERMAN 154 already complete.

Feminist Approaches to Film (222791)

2025 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

15

How are stories told differently through a feminist lens? Whose histories and experiences are centered and how? What patriarchal narratives and metanarratives are taken as a given in film viewing, and should be questioned, critiqued, and upended? This seminar will examine how feminist theory, methodology, and aesthetics are expressed through the moving image medium. We will encounter a multitude of filmmaking practices that radically rethink cinematic conventions by applying feminist tools to create new forms of expression. We will think through the ways in which feminist practices of resistance are integral to ongoing struggles for social justice and intersect with discourses of equity across disciplines. The class serves as an introduction to film studies by providing a framework for visual analysis and a vocabulary for the critical examination of moving images. The course includes narrative film, documentary, and artist-made film and video, and will begin with historical films from the 70s and move to contemporary work. With films by Chantal Akerman, Camille Billops, Kathleen Collins, Sara Gómez, Naomi Kawase, Barbara Loden, Mira Nair, Wang Qiong, Helke Sander, Leilah Weinraub; and texts by Sara Ahmed, bell hooks, Ursula K. Le Guin, Audre Lorde, Trinh T. Minh-ha, Laura Mulvey, Lola Olufemi, Linda Tuhiwai Smith, and many others.

Incorporating both studio and seminar instruction, this intensive course will explore printmaking's history, trace its particular forms of intelligence, and test its future potential. The class will meet for three hours of studio and two hours of seminar/discussion per week. Assignments will include weekly readings, a short scholarly paper, and two studio projects. For the first half of the semester, students will pursue a rigorous grounding in a particular historical technique (etching/intaglio); in the second half students will translate what they have learned to another medium, thus exploring printmaking as an expanded field of practice.

The Present Tense (222767)

David Joselit

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course will chart a history of 20th century art and culture through attention to the impulse to remain in the present tense. Presentness does not happen naturally: it is a production, sometimes violent, of a forced contemporaneity, best expressed by the 24-hour news cycle where "breaking news" is constantly recycled to produce the effect of a perpetual now. This course will demonstrate how the present tense is both the temporality of capitalist modernity and of aesthetic modernism. Topics addressed are: Phenomenology of the Present, Liveness, Performativity, and Artificial Intelligence. Authors and artists considered will include Gertrude Stein, Pablo Picasso, Simone Browne, Nam June Paik, Judith Butler, Fred Moten, and Donna Haraway.

Course Notes:

Students should be prepared for significant reading and discussion in this course.

Karthik Pandian

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

A workshop for advanced students pursuing self-directed projects in film, video, performance, or other time-based media. Students are expected to produce one substantial project which can take the form of a single-channel film or video, moving image installation, live event, or other time-based work. One-on-one meetings with the instructor, midterm in-progress and final group critiques, and a small production budget support the development of student work. Screenings, visits by guest artists, workshops, and field trips will also be organized in relation to student interests, which should be articulated when expressing interest in the course via a brief project proposal.

Course Notes:

Experience producing time-based media is a prerequisite for this course. Basic skills in shooting and editing video will not be covered. Submission of a brief (one paragraph) project proposal is required for consideration.

Multiple intellectual lineages intersect in the field we call "Film and Visual Studies." This graduate seminar explores the lived history of FVS as a field of study, and considers its potential futures, via a sequence of in-depth discussions with members of the AFVS faculty, curators of Harvard collections, scholars in allied fields, and visiting faculty. This course is required for first-year students in the FVS Ph.D. program, and recommended for those pursuing FVS as a secondary field. In special cases, other graduate students may join the class; those interested should consult with the instructor as early as possible.

Course Notes:

12

What is the ecology of the arts in our visual age of changing media? Can media be understood as environments? This seminar investigates a "material and environmental turn" in philosophy and visual culture, focusing on the atmosphere of visual arts, architecture and screen media. Topics include: new materialisms, agential realism, poetics of relationality, media ecologies, elemental philosophy, plant thinking, light and projection, and the energy of atmosphere.

Course Notes:

Pre-requisite: A course in film and media theory, visual studies, art history, architecture studies, philosophy, literary theory, gender studies, or the equivalent course in cultural history or theory.

This course is jointly offered at the Graduate School of Design as HIS 4451; GSD students should enroll in the course via the GSD.

FVS Writing Seminar (208018)

Laura Frahm

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This dissertation writing course is offered to all graduate students within Film and Visual Studies. FVS students at an earlier stage will begin structuring their dissertation projects, work on their prospectus, and establish productive writing routines. FVS students in their higher years will work on their dissertation chapters, journal articles, and book proposals. The course will include weekly discussions of writing practices, dissertation outlines, and chapters in progress while also featuring guest lectures, conversations with authors and editors, and professional development workshops. Dedicated writing sessions throughout the week will further deepen existing writing routines and establish new writing practices.

Course Notes:

This course is only offered to graduate students in Film and Visual Studies.

Subject: Astronomy

Astronomy 1

The Big Questions of Astronomy (113797)

David Charbonneau

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

We will discuss the big questions of astronomy that have engaged scientists and the general public alike for centuries: How did the universe begin? What is the ultimate fate of the Sun? How do planets form? Is there life outside the Solar system? Students will use telescopes to study the night sky and examine how the combination of astronomical observations and physical theory have led to an understanding of the vast and dynamic cosmos we inhabit.

Astronomy 2

Celestial Navigation (111305)

Philip Sadler

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

T 0700 PM - 1000 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

Never be lost again! Find your way on sea, land, or air by employing celestial and terrestrial techniques. Acquire expertise in using navigators' tools (sextant, compass, and charts) while learning the steps to the celestial dance of the sun, moon, stars, and planets. This 108-year-old course continues to rely on practical skills and collaborative problem-solving, while utilizing historical artifacts (instruments, maps, captains' logs) and student-built devices. Culminating in a day-long cruise to practice navigation skills.

Astronomy 5

Astrosociology (205519)

Gerhard Sonnert

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

25

In an age of magnificent astronomical progress and discoveries, the increasing knowledge of the cosmos has manifold repercussions in society and culture. This course will examine how outer space-related phenomena impact, or potentially impact, society and culture, and vice versa. Especially in light of the proliferating discovery of exoplanets, an intriguing topic of astrosociology is presented by the possibility of the existence of extraterrestrial civilizations, their detection, communication with them, and even contact.

Stellar and Planetary Astronomy (118136)

John Johnson

2025 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to the physical principles describing the formation and evolution of stars and their planetary companions. Topics include thermal radiation and stellar spectra; telescopes; energy generation in stars; stellar evolution; orbital dynamics; the Solar system; and exoplanets. This course includes an observational component: students will determine the distance to the Sun, and use the Clay Telescope atop the Science Center to study stellar evolution and detect exoplanets.

Course Notes:

This course is offered each year.

Recommended Prep:

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16 or Physical Sciences 12a.

Requirements:

Prerequisite: Physics 15a, Physics 16, or Physical Sciences 12a. May be taken concurrently.

Instructor Permissions: None

Enrollment Cap: n/a

This course will introduce you to the physical principles describing galaxies and the composition and evolution of the Universe. We will cover a wide range of topics from nearby galaxies to quasars to the Big Bang.

The goals of the course are 1) to introduce you to the broad sweep of extragalactic astronomy and cosmology, including major concepts and common jargon, 2) to develop detailed applications of physics, particularly mechanics, to galaxies and cosmology, 3) to gain exploratory experience in observational astronomy.

Course Notes:

This course is offered each year.

Recommended Prep:

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics Ila, Physics 15a, Physics 16, or Physical Sciences 12a, as well as a course in integral calculus, which may be taken concurrently, satisfied by Math 1b.

The Unity of Science: From the Big Bang to the Brontosaurus and Beyond (212793)

Irwin Shapiro

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

TBD

Instructor Permissions: None

Enrollment Cap: n/a

Science is like a well-woven, ever-expanding fabric, designed to uncover Nature's secrets. This course emphasizes the strong connections between subfields of science, showing it as the never-ending and greatest detective story ever told, with evidence always the arbiter. These characteristics are exhibited in the semi-historical treatment of three main themes: unveiling the universe, the earth and its fossils, and the story of life.

Astronomy 50

Introduction to Space Exploration (215962)

Josh Grindlay

2025 Spring (4 Credits)

Schedule:

MWF 0200 PM - 0315 PM

Instructor Permissions: None

Enrollment Cap: n/a

The 1960s were the early glory days of space exploration, driven by the space race between the U.S. and the U.S.S.R., the Apollo program, and the successful Moon landings. After this heroic decade, space exploration lost a great deal of its impetus. Yet, very recently, there are clear signs of a reemerging dynamic in space exploration, now characterized by both the emergence of new players and new fields of exploration. This course introduces the students to a comprehensive array of diverse topics. These range from the history and sociology of space exploration to space law and space policy, from the space economy to the physical, astronomical, and engineering basics of space exploration. [Offered in Spring 2024.]

Recommended Prep:

There are no prerequisites to register for this course.

Methods of Observational Astronomy (125880)

Edo Berger

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

15

In this course we will learn the basic tools of modern astronomical research, including telescopes, detectors, imaging, spectroscopy, and common software. Emphasis will be placed on both the theory behind telescopes and their use, and hands-on experience with real data. Using this basic knowledge we will analyze science-level astronomical data from a wide range of telescopes and review the basic properties of stars, galaxies, and other astronomical objects of interest. The course includes a trip to the F. L. Whipple Observatory on Mount Hopkins, Arizona, to gather data with various telescopes.

Course Notes:

This course is offered each year.

Recommended Prep:

Astronomy 16 or Astronomy 17.

Astronomy 140

Introduction to General Relativity (218228)

Xingang Chen

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Recent exploration of black holes and gravitational waves have revealed the relativistic Universe like never before. This course will introduce students to the theory of general relativity and some of its key applications. Topics include: review of special relativity, physics in curved spacetimes, the Einstein field equations, gravitational lensing, black holes, gravitational waves and cosmology. Mathematics used in general relativity will be introduced along the way.

Course Notes:

Course offered annually in the Fall

Recommended Prep:

Multivariable calculus (e.g. Math 21A), linear algebra and differential equations (e.g. Math 21B), college-level Mechanics including special relativity (e.g. Physics 15A), and E&M (e.g. Physics 15B).

Astronomy 191

Astrophysics Laboratory (113262)

John Kovac

2025 Spring (4 Credits)

Schedule:

WF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Laboratory and observational projects in astrophysics. Students design and undertake two projects, under the guidance of Center for Astrophysics scientists and staff, from a selection that includes areas of active research such as: observational studies of the cosmic microwave background radiation, molecules in interstellar clouds, the rotation of the galaxy, galactic molecular sources with the submillimeter array (SMA), and laboratory experiments including submillimeter optics, superconducting detectors, x-ray CCDs, and hard x-ray imaging detectors and telescopes. Students will learn the end-to-end practice of experimental astrophysics, including measurement design and proposal, execution, analysis and appropriate use of statistical techniques, and presentation of results, all done in small teams. They will individually write the results of each project in a format that is appropriate for a peer-reviewed journal.

Course Notes:

Primarily for concentrators in astrophysics or combined concentrators with physics, in their third or fourth year. A substantial amount of outside reading is expected. Students with physics as their primary concentration, but with a serious interest in astrophysics, may take this to satisfy their laboratory requirement (in lieu of Physics 191) upon petition to the Head Tutor in Physics. Offered each year.

Recommended Prep:

Astronomy 16/17 and Physics 15a/15b/15c, or equivalent courses

Requirements:

Prerequisite Astronomy 191: Astronomy 16, OR Astronomy 17, OR Physics 15C

Observational Astronomy (220177)

Daniel Eisenstein

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course will focus on the principles of observational astronomy, with a focus on the physical principles, design considerations, and operational concerns of telescopes and instruments. It is not a course on the analysis of observational data, nor on the design of astronomical observing programs.

This year's course will focus on two modules, the first on optical & near-infrared astronomy presented by Daniel Eisenstein and the second on high-energy astronomy presented by Josh Grindlay.

The first module has already occurred, as it was built around a one-week class trip in June 2022 to Arizona to visit the MMT and other local telescopes. This trip was highly intensive, with of order 8 hours of class activities per day. We toured the telescopes and had seminar-style classes and problem sessions at the facility. The focus of the material was on how telescopes and instruments work, using back-of-the-envelope calculations to explore the physical aspects of the key constraints.

The second module will occur during the Fall 2022 teaching term. We will have 6 weeks of seminars focusing on telescopes and instrumentation for high-energy astrophysics, particularly X-ray and gamma-ray astronomy. These seminars will require a modest amount of preparatory reading and post-class quantitative exercises.

Students will complete term papers and present them to the class in November, before Thanksgiving break.

The course will meet on Thursday September 1 for a short (15-20 minute) orientation meeting, and then the high-energy module will run for 6 weeks from Tuesday September 13 to Thursday October 19. This is being done to reduce time pressure on the start and end of term.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Astronomy 300

Topics in Modern Astrophysics (122728)

Charles Lada

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Astronomy 305

Topics in Origins of Life Research (161303)

2025 Spring (4 Credits)

Schedule: TR 0200 AM - 0315 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This semester we will lay out a plausible story of how life emerged on Earth from chemistry that led to the synthesis of molecular building blocks, which in turn self-assembled to form cells. I will do that by reviewing two recent papers – the required reading for this course [1,2]. Each week we will also use, as necessary, relevant papers to the topics to be discussed. The list of topics is enclosed in the syllabus, as are some of the papers.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Astronomy 311 Section: 1

Astrophysics Writing Intensive (224326)

Lisa Kewley

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor**Enrollment Cap:**

12

This writing intensive will provide astronomy students with the skills, tools, and techniques to prepare clear and concise scientific publications. This course is for graduate students who will have completed observational or theoretical data analysis and figure preparation, and who will be ready for publication writing at the time of the intensive week. Students will be required to work on a paper outline with their project supervisor prior to the intensive week. Class participants will meet in early July for a preparatory session to ensure readiness for the intensive week.

The intensive week consists of 40 contact hours. The intensive week includes lectures, goal setting sessions, writing focus sessions, peer review sessions, and writing problem-solving sessions. Most students are able to write a half to a full publication draft during the writing intensive week (depending on the length of the publication). The publication will then be completed during the semester, with regular check-ins to be scheduled.

By the end of the Fall, students will have completed a draft publication. Participants will meet in November for a wrap-up session.

Topic: Astrophysics Writing Intensive**Class Notes:** Writing intensive week to be held July 29-Aug 2, 2024, off campus (TBD). Science papers to be reviewed over course of fall 2024 term.**Additional Course Attributes:**

Human Physiology (113276)

Nancy Long Sieber

2024 Fall (4 Credits)

Schedule: MW 0945 AM - 1114 AM

Instructor Permissions: Instructor

Enrollment Cap: 68

As an introduction to the principles governing function in the human body, this course is designed to provide a framework in physiology for future public health researchers and professionals who have not taken college level physiology courses. Emphasis is placed on the concept of homeostasis and on integrative aspects of physiology. Examples of pathophysiology and environmental physiology will highlight these processes.

Course Activities: Problem sets, exams, laboratory

Course note: students should have taken college level introductory biology before taking this class

Course Notes:

Offered jointly with the School of Public Health as EH 205

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
Course Evaluation	FAS small class override
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Sci in Public Hlth 210

Pathophysiology of Human Disease (112431)

Nancy Long Sieber

Kristopher Sarosiek

2025 Spring (4 Credits)

Schedule:

MW 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

Surveys major human disease problems in the cardiovascular, respiratory, hematopoietic, reproductive and gastrointestinal systems. Emphasis on understanding the pathophysiologic basis of common disease manifestations and the pathogenesis of the disease process. Relevant public health perspectives on the epidemiology or control of diseases are also integrated.

Recommended Prep:

Prior coursework in normal physiology is recommended but not mandatory

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	FAS small class override
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biological Sci in Public Hlth 215

Principles of Toxicology (115767)

Jin-Ah Park

2024 Fall (4 Credits)

Schedule:

MW 0945 AM - 1114 AM

Instructor Permissions: Instructor

Enrollment Cap:

32

The course is designed to expose students to the principles and methods that should be used to determine whether a causal relationship exists between specific doses of an agent and an alleged adverse effect, observed primarily in humans. Integration of principles and methods of toxicology is extremely important since the primary purpose of toxicology is to predict human toxicity. Toxicological data obtained in animal studies must be placed in proper relationship to the exposure observed in the human population. The course deals with organ systems and whole organisms but relies on an understanding of the mechanistic approaches covered in EH508. Key target organs, selected classes of toxic agents and the application of toxicological principles are covered. Students are assigned a topic for a short presentation.

Course Notes:

Offered jointly with the School of Public Health as EH 504.

Recommended Prep:

Organic chemistry and mammalian physiology or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	FAS small class override

Biological Sci in Public Hlth 219

Biological Sciences Communications (110521)

Zachary Nagel

2024 Fall (4 Credits)

Schedule:

MW 0230 PM - 0400 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Emphasis of this course is effective scientific communication. Students will develop skills in writing and critiquing grants and scientific papers, learn about the grant application process, and present seminars that focus on structure, language, and content appropriate for technical and lay audiences. Topics covered will apply to research in the biological sciences across various disciplines related to public health and medicine.

Course Notes:

Course intended for first year BPH PhD students only.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
Course Evaluation	FAS small class override
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Sci in Public Hlth 250

Biology and Control of Vector-Borne Parasites (214578)

Daniel Neafsey

Flaminia Catteruccia

2025 Spring (4 Credits)

Schedule:

MW 0200 PM - 0259 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This advanced readings course focuses on a group of vector-borne parasitic protozoa and helminths that are responsible for the highest burden of disease in developing countries. Central themes in the biology of transmission, parasite-host interactions and opportunities for control will be covered in the framework of the unique biology of eukaryotic parasites including Plasmodium, Leishmania, trypanosomes and schistosomes. Weekly lectures from Harvard faculty and invited speakers will enhance critical readings of the current literature and student-led discussions, and will emphasize experimental approaches and mechanisms of parasitic infection from the perspective of molecular and cellular biology, genomics, and evolution. Final group presentations of short research proposals will be required. The primary course goal is for students to attain deep mechanistic understanding of select topics in vector-borne parasite biology and to be able to critically evaluate and explain to others the rationale and limitations of disease control measures.

The target audience for this course is early PhD students interested in parasite and vector biology as well as students in the Infectious Disease Epidemiology (ID-Epi) concentration or medical students.

Recommended Prep:

Strong background in molecular biology, cell biology, genetics; ability to critically read primary experimental literature. If you are unsure of your preparation for this class, please contact the course director.

The content of this course is complementary to IID 201 but does not overlap; IID 250 will focus on biological/molecular aspects of parasitic disease control, whereas IID 201 focuses primarily on epidemiological and programmatic aspects of parasitic disease control. IID 201 is not a prerequisite for this course.

Interdisciplinary Training in Pulmonary Sciences Part II (127599)

Quan Lu

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1044 AM

F 0101 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

20

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing

interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Additional Course Attributes:

Eradicating Malaria and Neglected Tropical Diseases (127601)

Jeffrey Dvorin

Manoj Duraisingh

Dyann Wirth

2024 Fall (2 Credits)

Schedule:

TR 0345 PM - 0515 PM

Instructor Permissions: Instructor

Enrollment Cap:

45

This course is a survey to introduce core concepts and tools of disease eradication. We will discuss the current tools (or lack of tools), the evidence for their effective use, and their successes and failures, and we will discuss the policies and programs required to effectively use these tools for infectious disease control and eradication. In Session 1-6, we will focus on malaria as a context for introducing the many aspects of disease eradication. From Session 7-13, each session will focus on control and/or eradication of a new neglected tropical disease. Session 14-16 will then synthesize the course content and introduce new real-world challenges that will shape the implementation of disease control and eradication programs discussed in this course.

The class will meet twice a week, and each session will be divided into a didactic/lecture part and a discussion part. During the discussion, we will actively evaluate the evidence behind current global public health practices, emphasizing "cross-cutting" concepts and tools that are relevant to several of the diseases discussed in this course.

The tangible skills that will be obtained during this course include the ability to recognize, utilize, and critically evaluate strategies for disease eradication and the ability to effectively communicate a plan for systematic control and/or eradication of malaria and neglected tropical diseases.

Molecular Mechanisms of Aging (127931)

William Mair

2025 Spring (2 Credits)

Schedule:

MF 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

We will explore molecular mechanisms underlying aging and aging-related disease. Topics will include nutrient signaling and energy metabolism, genome stability and proteostasis, interventional approaches to extended longevity, and theories of aging including the free radical theory. Recent and classic literature will be critically discussed.

Course Notes:

This course will be taught every other year (odd years). Offered jointly with the School of Public Health as MET 212.

Recommended Prep:

Preference given to PhD students in HILS-affiliated programs (e.g., BPH, BBS, etc.)

Biological Sci in Public Hlth 328

Scientific Research Related Work (208167)

2024 Fall (2 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: 30

This course may be used to indicate that research work is being undertaken that is not directly related to the student's dissertation work (i.e., additional laboratory research for a faculty member).

Course Notes:

For GSAS PhD students only.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Biological Sci in Public Hlth 328 Section: 1

Scientific Research Related Work (208167)

2025 Spring (2 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: 30

This course may be used to indicate that research work is being undertaken that is not directly related to the student's dissertation work (i.e., additional laboratory research for a faculty member).

Course Notes:

For GSAS PhD students only.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Biological Sci in Public Hlth 329

Scientific Teaching Fellow Related Work (208168)

2024 Fall (2 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

This can be used to indicate that a student has received a teaching appointment and is engaged in teaching a course.

Course Notes:

For GSAS PhD students only.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Biological Sci in Public Hlth 329

Scientific Teaching Fellow Related Work (208168)

2025 Spring (2 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

This can be used to indicate that a student has received a teaching appointment and is engaged in teaching a course.

Course Notes:

For GSAS PhD students only.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Biological Sci in Public Hlth 330

Study of the interactions of Environmental Exposure on Immune Homeostasis (224222)

Kari Nadeau

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Biological Sci in Public Hlth 332

Metabolic Signaling in Health and Disease (219975)

Nika Danial

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Biological Sci in Public Hlth 334

Molecular Basis of Host Cell Invasion, Signaling, Differentiation by the Human Pathogen, T. cruzi (112702)

Barbara Burleigh

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biomedical Engineering

Subject: Biomedical Engineering

Biomedical Engineering 110

Physiological Systems Analysis (150189)

Maurice Smith

2024 Fall (4 Credits)

Schedule:

MW 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A survey of systems theory with applications from bioengineering and physiology. Analysis: differential equations, linear and nonlinear systems, stability, the complementary nature of time and frequency domain methods, feedback, and biological oscillations. Applications: nerve function, muscle dynamics, cardiovascular regulation. Laboratory: neural models, feedback control systems, properties of muscle, cardiovascular function.

Recommended Prep:

Engineering Sciences 53 (or equivalent); Physical Sciences 12b (or equivalent); and Math 21a and Math21b (or equivalents)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 121

Cellular Engineering (119067)

Kit Parker

2025 Spring (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes:

BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.

Requirements:

Prerequisite: LS1a (or LPS A); LS 1b; Math 21b (or equivalent); Physical Sciences 12a and 12b (or equivalents); and Engineering

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Biomedical Engineering 124

Biomechanics of Movement and Assistive Robotics (222521)

Patrick Slade

2025 Spring (4 Credits)

Schedule:

TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will study the fundamentals of human movement, emphasizing applications in rehabilitation, athletics, and assistive devices. Topics will focus on the biomechanical principles of movement (muscle and tendon properties), experimental data collection techniques (motion capture, wearable sensing, and imaging), simulation with musculoskeletal modeling, and cutting-edge topics in assistive robotics (human-centered design, human-in-the-loop optimization, exoskeletons, etc). A semester-long project will allow students to apply the topics to solve a problem of interest relating to human movement or assisted mobility.

Course Notes:

Open enrollment to graduate and upper-level undergraduate students. BE 124 is also offered as ES 224. Students may not take both for credit.

Recommended Prep:

Linear algebra (Math 21b or equivalent) and intro to programming (CS50 or equivalent).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Biomedical Engineering 125

Tissue Engineering (121282)

David Mooney

2024 Fall (4 Credits)

Schedule:

MW 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Fundamental engineering and biological principles underlying field of tissue engineering, along with examples and strategies to engineer specific tissues for clinical use. Students will prepare a paper in the field of tissue engineering, and participate in a weekly laboratory in which they will learn and use methods to fabricate materials and perform 3-D cell culture.

Recommended Prep:

LS1a, Chem17 or 20, or biochemistry and cell biology background.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 129

Introduction to Bioelectronics (211359)

Jia Liu

2025 Spring (4 Credits)

Schedule:

MW 1115 AM - 1230 PM

Instructor Permissions: Instructor**Enrollment Cap:**

10

This course introduces bioelectronics and its applications in neuroscience, neuroengineering, cardiology, wearable technology, and so on. The focus is on the basic principles of bioelectricity, biochemistry, and physiological behaviors of biological systems and how to design electronic tools to precisely measure and control them. Key themes throughout the course will include bioelectricity, biochemistry, cellular and tissue physiological behavior, optogenetics, sensors, stimulators, circuits, signal processing, electronics-biology interface, and applications. This includes both the practical and theoretical aspects of the topic. Three experimental demonstrations will be included as part of the normal class meeting time. Given its broad coverage, students who enroll in this course are expected to have a substantial background in chemistry, biology, and electrical engineering (see recommended prep and course requirements).

Course Notes:

This course is intended for juniors and seniors. The total enrollment limit for BE 129 and ES 258 is 20 students.

Recommended Prep:

ENG-SCI 50, ENG-SCI 52, or ENG-SCI 152.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Biomedical Engineering 131

Neuroengineering (216486)

Jia Liu

2024 Fall (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

This course provides an introduction to biological neural systems, and current engineering efforts to understand, control, and enhance the function of neural systems. The focus is on the basic knowledge of molecular basis, anatomic structures, and electrical functions of central and peripheral nervous systems, and the most state-of-the-art genetic/genomic, optical, electrical, magnetic, and computational tools for nervous systems. Key themes throughout the course will include structures of central and peripheral nervous systems, genetic engineering, RNA sequencing, optogenetics, microscope, bioelectronics, MRI,

and computational neuroscience. This includes both the practical and theoretical aspects of the topic.

Recommended Prep:

This course is intended for juniors and seniors with some background in biology or engineering. ENG-SCI 54 and one life science course are recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Biomedical Engineering 191

Introduction to Biomaterials (110020)

Jennifer Lewis

2024 Fall (4 Credits)

Schedule:

F 0945 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A biomaterial is any form of matter that is produced by or interacts with biological systems. One of the pillars of biomedical engineering is to use naturally derived and synthetic biomaterials to treat, augment, or replace human tissues. This course examines the structure, properties and processing of biomaterials.

Recommended Prep:

Physical sciences 1, Math 1b.

Requirements:

Prerequisite: (LS 1A or LPS A or PS 1 or PS 11) AND (Math 1b or higher)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
GSD: Recommended Elective	MDE approved SEAS 100 level course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Subject: Biophysics

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular Biology (MCB 60 or equivalent), solid understanding of basic probability and statistics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Biophysics 242R

Special Topics in Biophysics (117635)

Joseph John Loparo

Wesley Wong

Vassilios Bezzerides

Lucas Farnung

Martha Bulyk

Rachelle Gaudet

Sahand Hormoz

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Biophysical topics emerging from special interest research not normally available in established curriculum. The 2023-24 year's course (Spring 2024) is focused across 4 topic blocks: Making Sense of High-Dimensional Data; Structural Biology with a focus on Cryo-EM and AlphaFold; Electrophysiology (the development, regulation, and transmission of electrical signals in excitable organs); and Single-Molecule Biophysics.

Course Notes:

Lectures, Problem Set, Research Papers, proposal writing, and potential lab components.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 300

Introduction to Laboratory Research (121518)

Martha Bulyk

Rachelle Gaudet

2024 Fall (4 Credits)

Schedule:

MWF 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

50

Introductory lectures by associated Biophysics faculty members. Lectures Fall semester only accompanied by three periods of instruction in laboratories of structural biology, cell and membrane biophysics, molecular genetics and development, neurobiology, bioinformatics, and physical biochemistry.

Course Notes:

**Fall semester only: meets on both the Cambridge and HMS campuses.
Contact department Admin for fall course location and individual
faculty member presentation schedule.**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 334

Decision Making in Cells and Organisms (126675)

Sharad Ramanathan

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 335

Developing novel single-molecule methods to study multi-protein complexes (127686)

Joseph John Loparo

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 335

Developing novel single-molecule methods to study multi-protein complexes (127686)

Joseph John Loparo

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 371

Neurons, circuits and computation (115671)

Venkatesh Murthy

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Biophysics 371

Neurons, circuits and computation (115671)

Venkatesh Murthy

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Biostatistics

Subject: Biostatistics

Biostatistics 230

Probability I (119844)

Jeffrey Miller

2024 Fall (4 Credits)

Schedule:

TR 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Notes:

Offered jointly with the School of Public Health as BST230.

Requirements:

Prerequisite: Biostatistics PhD Program

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Biostatistics 231

Statistical Inference I (119845)

Rui Wang

2025 Spring (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

17

Exponential families, sufficiency, ancillarity, completeness, method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, Neyman-Pearson theory, likelihood ratio, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency.

Course Notes:

Offered jointly with the School of Public Health as BST231.

Requirements:

Prerequisite: Biostatistics 230

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 232

Methods (119846)

Rachel Nethery

2024 Fall (4 Credits)

Schedule:

MW 0800 AM - 0930 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Notes:

Offered jointly with the School of Public Health as BST232.

Requirements:

Prerequisite: Biostatistics PhD Program

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 234

Introduction to Data Structures and Algorithms (160641)

Georg Hahn

2025 Spring (4 Credits)

Schedule:

MW 1130 AM - 0100 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

Introduction to the data structures and computer algorithms that are relevant to statistical computing. The implementation of data structures and algorithms for data management and numerical computations are discussed.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 235

Advanced Regression and Statistical Learning (119848)

Junwei Lu

2024 Fall (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components

and dimension reduction, and classification methods. Background in matrix algebra and linear regression required.

Course Notes:

Offered jointly with the School of Public Health as BST235.

Requirements:

Prerequisite: Biostatistics 231 AND Biostatistics 232

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Biostatistics 238

Principles and Advanced Topics in Clinical Trials (125262)

David Wypij

2025 Spring (4 Credits)

Schedule:

MW 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course focuses on selected advanced topics in design, analysis, and interpretation of clinical trials, including study design; choice of endpoints (including surrogate endpoints); interim analyses and group sequential methods; subgroup analyses; and meta-analyses.

Course Notes:

Offered jointly with the School of Public Health as BST 214 & BST 238.

Requirements:

Prerequisite: BIST 230 AND BIST 231 (may be taken concurrently)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 241

Statistical Inference II (119855)

Rajarshi Mukherjee

2025 Spring (4 Credits)

Schedule:

TR 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Advanced topics in statistical inference. Limit theorems, multivariate delta method, properties of maximum likelihood estimators, saddle point approximations, asymptotic relative efficiency, robust and rank-based procedures, resampling methods, nonparametric curve estimation.

Course Notes:

Offered jointly with the School of Public Health as BST 241.

Requirements:

Prerequisite: Biostatistics 240

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 244

Analysis of Failure Time Data (119849)

L. Wei

2025 Spring (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods.

Course Notes:

Offered jointly with the School of Public Health as BST 244.

Requirements:**Prerequisite: BIostat 231 AND BIostat 232****Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Biostatistics 245

Analysis of Multivariate and Longitudinal Data (119850)

Tom Chen

2024 Fall (4 Credits)

Schedule:

TR 1130 AM - 0100 PM

Instructor Permissions: Instructor**Enrollment Cap:**

18

The multivariate normal distribution, Hotelling's T², MANOVA, repeated measures, the multivariate linear model, random effects and growth curve models, generalized estimating equations, multivariate categorical outcomes, missing data, computational issues for traditional and new methodologies.

Course Notes:

Offered jointly with the School of Public Health as BST 245.

Requirements:**Prerequisite: Biostatistics 231****Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 249 Section: 01

Bayesian Methodology in Biostatistics (119853)

Lorenzo Trippa

2024 Fall (4 Credits)

Schedule:

TR 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

General principles of the Bayesian approach, prior distributions, hierarchical models and modeling techniques, approximate inference, Markov chain Monte Carlo methods, model assessment and comparison. Bayesian approaches to GLMMs, multiple testing, nonparametrics, clinical trials, survival analysis.

Course Notes:

Offered jointly with the School of Public Health as BST249.

Requirements:

Prerequisite: Biostatistics 231 AND Biostatistics 232

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Biostatistics 258

Causal Inference: Theory and Practice (223906)

Nima Hejazi

2025 Spring (4 Credits)

Schedule:

TR 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

Randomized experimentation is the standard for quantifying the causal effect of an intervention in the public health and biomedical sciences, yet randomization may be impossible, impractical, or unethical, leading to real-world scenarios in which causal inferences are based upon observational comparisons. This course reviews the foundations of causal inference in (bio)statistics, outlining causal-analytic methods that help to extract as much evidence as imperfect observational studies carry about causal effects commonly of interest in applied health science settings. This survey of statistical causal inference begins with foundational concepts: the potential outcomes framework and counterfactual random variables, graphical modeling frameworks, and common assumptions and strategies for the identification of the causal effects of static and dynamic interventions. Methodological extensions for studying the causal effects of time-varying, longitudinal interventions will be touched upon as well. Further topics to be addressed may include instrumental variables approaches, principal stratification, causal mediation analysis, treatment effect heterogeneity, the causal dose-response curve, and causal survival analysis. This course may also introduce elements of semi-parametric theory necessary for the development of asymptotically efficient estimators of causal effect estimands. Where possible, the role of modern regression (i.e., machine learning) techniques and tools for the practical estimation of causal effect estimands will be emphasized.

Additional Course Attributes:

Attribute	Value(s)

Biostatistics 281

Genomic Data Manipulation (126944)

Eric Franzosa

Kelsey Thompson

2025 Spring (4 Credits)

Schedule:

MW 0345 PM - 0515 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Introduction to genomic data, computational methods for interpreting these data, and survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.

Course Notes:

Offered jointly with the School of Public Health as BST 281.

Requirements:

Prerequisite: BST 272 or BST 273

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Irish

Irish 132

Introduction to Modern Irish (119128)

Catherine McKenna

2024 Fall (4 Credits)

Schedule:

TWRF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Irish is the first official language of Ireland, and it has been officially recognized in Northern Ireland since 1998. Today Irish is spoken not only in the western 'Gaeltachtaí' (Irish-speaking regions), but also in cities like Dublin and Belfast. There is Irish-language television, film, radio, and print journalism, and many wonderful poets and fiction writers continue into the present a literary tradition that dates back to the sixth century.

The course introduces students to Irish as it is spoken and written today. Class work is participatory, and includes conversational role play and games as well as grammar study and drills. Audio and audiovisual resources reinforce pronunciation and aural comprehension. Songs, proverbs, and poems are an integral part of the course, introducing students to the vibrant oral and literary tradition of Gaelic Ireland. Meets 4 times a week.

Course Notes:

The combination of Irish 132 and 133r satisfies the language requirement. It is recommended in any case that this course be followed by Irish 133r. May not be taken Pass/Fail. Not open to auditors. Meets four times a week for an hour.

Additional Course Attributes:

Irish 133R

Intermediate Modern Irish (119063)

Natasha Sumner

2025 Spring (4 Credits)

Schedule:

TWRF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A continuation of Irish 132, developing students' fluency in spoken and written Irish. As our knowledge of the language expands, we venture into storytelling, journal writing and writing and performing short skits. Internet, audio and video resources complement the study of grammar and select prose texts.

Course Notes:

This course, when taken following Irish 132, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.

Recommended Prep:

Irish 132 or permission of instructor.

Requirements:

Prerequisite: IRISH 132

Additional Course Attributes:

Celtic 109

Finn: The Great Gaelic Hero (127630)

Natasha Sumner

2025 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course explores the lengthy and wildly popular Irish and Scottish Gaelic tradition surrounding the hero Finn mac Cumail (Finn McCool). Stories about Finn and his legendary warrior band, the Fianna, have circulated in manuscript, print, and oral forms for well over a millennium. The protectors of Ireland and Gaelic Scotland, Finn and the Fianna are presented alternatively as hunters, warriors, and seers. Embodying heroic qualities valued by their culture at different periods, they undertake seemingly impossible tasks and defend Gaels from foreign and supernatural threat.

In the course, we examine literature about Finn and the Fianna as it is presented in medieval and early modern manuscripts; we engage with the rich modern folklore of Ireland, Scotland, and Nova Scotia; and we consider the international impact of the tradition by examining James Macpherson's infamous English-language adaptations and the vicious controversy over their 'authenticity' that erupted in the eighteenth century and persists to this day. All Gaelic texts are read in English translation.

Celtic 120

Food and Fantasy in Irish Tradition (203245)

Joseph Nagy

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Many aspects of food—growing, cooking, eating, drinking, and distributing it—have served as powerful cultural symbols in Irish oral and literary tradition from medieval to modern times. A survey of the environmental, historical, and economic background to food and its production in Ireland of the early Middle Ages will lead to the close reading of medieval texts (in translation) such as "News about Mac Dathó's Pig," "The Vision of Mac Conglinne," and "The Battle of Mag Tuired," in each of which the "what," "why," and "how" of eating determine the outcome of the story. In addition, we will examine the lively symbolism of food as perpetuated in Irish legend and folktale, and also in post-medieval Irish literature.

Celtic 137

Celtic Mythology (111202)

Joseph Nagy

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Medieval Irish and Welsh texts reflect underlying story patterns, characters, and motifs that are rooted in pre-Christian tradition and in some cases witnessed in the archaeological evidence and in the ethnographic writings of ancient Greek and Roman authors. We will examine these texts in translation and track the reconstruction of the "pagan past" undertaken by medieval Celtic writers, as well as the new mythologies they developed to suit the evolving ideological agenda of their world, from ca 600 to 1500 CE.

While conquered and annexed by England centuries ago, Wales has nonetheless maintained a distinct and vibrant cultural identity. The Welsh language has stubbornly survived the ravages of industrialization, the zenith of British imperialism, the onslaught of Anglo-American popular culture and the challenges of globalization. We will consider ways in which modern Wales has been imagined and re-imagined, studying writing ranging from fiction, poetry and drama to political polemic, watching films and listening to popular music. All material will be read in English translation (or, in the case of film, available with English subtitles).

Transatlantic Celts: Narratives of Loss and Belonging (222197)

Thomas Hunter

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Over the course of the past five hundred years, millions of people from the countries traditionally thought of as Celtic—Ireland, Scotland, Wales— migrated to North America, with smaller numbers settling in South America. Driven by hardship and attracted by the promise of a better life, immigrants who had thought of themselves as the oppressed in 'the old country' found themselves in the role of colonizers. We study stories, songs, essays and poetry by these new Americans, exploring topics such as the construction of identity, the transplantation and adaptation of cultural traditions, engagement with the abolitionist movement and the interpretation of experiences brought by war.

Course Notes:

This course will be taught by Prof. Jerry Hunter (Bangor University)

FAS Divisional Distribution	Science & Engineering & Applied Science

Chemical and Physical Biology 99A

Laboratory Research for Honors Thesis (122592)

Dominic Mao

Monique Brewster

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Laboratory research in topics related to the CPB concentration, culminating in an undergraduate thesis submitted to the CPB undergraduate office for review by members of the Board of Tutors in Biochemical Sciences and the greater Boston research community. The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Notes:

Limited to students writing a thesis in CPB. Students are required to submit a written proposal to the CPB undergraduate office in the summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Additional Course Attributes:

Attribute	Value(s)
Thesis Attribute	Undergraduate Thesis
FAS Divisional Distribution	Science & Engineering & Applied Science
Full Year Course	Indivisible Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Chemical and Physical Biology 99B

Laboratory Research for Honors Thesis (159732)

Dominic Mao

Monique Brewster

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: 30

Laboratory research in topics related to the CPB concentration, culminating in an undergraduate thesis

submitted to the CPB undergraduate office for review by members of the Board of Tutors in Biochemical Sciences and the greater Boston research community. The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Notes:

Limited to students writing a thesis in CPB. Students are required to submit a written proposal to the CPB undergraduate office in the summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Requirements:

Pre-requisite: CPB 99A

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Thesis Attribute	Undergraduate Thesis
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
Full Year Course	Indivisible Course

Chemical Biology

Subject: Chemical Biology

Chemical Biology 300HFA

Introduction to Chemical Biology Research (126695)

Daniel Kahne

Suzanne Walker

2024 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Lectures introduce the research areas of current program faculty in Chemical Biology. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
Full Year Course	Indivisible Course
Course Evaluation	Course Evaluation Exempt

Chemical Biology 300HFB

Introduction to Chemical Biology Research (160580)

Daniel Kahne

Suzanne Walker

2025 Spring (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Lectures introduce the research areas of current program faculty in Chemical Biology. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Requirements: Pre-requisite: CHEMBIO 300HFA

Additional Course Attributes:

Attribute	Value(s)
Full Year Course	Indivisible Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350

Graduate Research (124362)

Daniel Kahne

Suzanne Walker

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350

Graduate Research (124362)

Daniel Kahne

Suzanne Walker

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 002

Graduate Research (124362)

Emily Balskus

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 002

Graduate Research (124362)

Emily Baskus

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Chemical Biology 350 Section: 003

Graduate Research (124362)

Stephen Blacklow

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 350 Section: 003

Graduate Research (124362)

Stephen Blacklow

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Chemical Biology 350 Section: 004

Graduate Research (124362)

Philip Cole

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 004

Graduate Research (124362)

Gad Getz

2025 Spring (4 Credits)

Schedule: TBD

TBD

TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Chemical Biology 350 Section: 005

Graduate Research (124362)

Sara Buhrlage

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Upper level Chemical Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemical Biology 2200

Tools and Methods in Chemical Biology (124812)

Randall King

Melissa Leger-Abraham

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 35

This course will provide a survey of major topics, technologies, and themes in Chemical Biology, with hands-on exposure to a variety of experimental approaches.

Course Notes:

Intended for first-year graduate students in the Chemical Biology Program; permission of the instructor required for all others.

Course is intensive. Should be worth 4 credits, per Jason Millberg's email: RO2704027

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry and Chemical Biology

Subject: Chemistry

Chemistry 10 Section: LEC

Quantum, Statistical, and Computational Foundations of Chemistry (222540)

Adam Cohen

Lu Wang

2024 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

An introduction to the fundamental theories of quantum mechanics and statistical mechanics and their role in governing the behavior of matter. The course begins with the quantum behavior of a single electron and develops the elements of the periodic table, the nature of the chemical bond, the bulk electronic and thermal properties of materials, and the thermodynamics of chemical reactions. Applications include semiconductor electronics, solar energy conversion, medical imaging, and the stability and dynamism of living systems. Calculus and numerical simulations will be used extensively. In the weekly laboratory sections and the final project, students construct technical instruments that they then use in directed and open-ended explorations of the core concepts of the course.

Course Notes:

The general chemistry requirement for the Chemistry concentration can be met by: one course CHEM 10; or two courses, one being LPS A or LS 1A, and the other being PHYSCI 10 or PHYSCI11; or satisfactory placement out of the requirement. Students may not count both CHEM 10 and PHYSCI 11 for degree credit. Students may not count both CHEM 10 and PHYSCI 10 for degree credit.

CHEM 10 satisfies two semesters of general chemistry with lab for most medical schools; courses accepted by most medical schools as one semester of general chemistry with lab are LPS A, LS 1A, LS50a, or PHYSCI 11. Please refer to the Premedical Information for Harvard Students: Timelines, Courses, & Resources (aka "the Blue Premed Guide") for an overview of courses that meet the academic requirements and application timelines for admission to U.S. medical schools and email premed@fas.harvard.edu with any questions. The enrollment is limited to 30 students. Please see the course website (to be released by August 14) for the Petition Form that you need to fill out by August 29

Recommended Prep:

A strong background in chemistry (Chemistry AP score of 5, or equivalent preparation), mathematics at the level of Mathematics 1b (may be taken concurrently; some ideas from linear algebra will be introduced in class), and some familiarity with physics (force, energy, work, and electric charge). No coding experience is required. You will learn how to code throughout the course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 17 Section: LEC

Principles of Organic Chemistry (115137)

Sirinya Matchacheep

2024 Fall (4 Credits)

Schedule: MWF 0130 PM - 0245 PM**Instructor Permissions:** None**Enrollment Cap:** n/a

An introduction to organic chemistry, with an emphasis on structure and bonding, reaction mechanisms, and chemical reactivity.

Course Notes:

Open to freshmen with a score of 750 or higher in the College Boards or the Chemistry Placement Examination; and to students who scored 5 on the Chemistry Advanced Placement Examination; and to the students who achieved a grade of B or higher in either Physical Sciences 1, 10, 11, or another college-level introductory chemistry course. Others may enter only by permission of the instructor. The Chemistry 17/27 sequence is intended primarily for students in chemistry or the life sciences, who have completed LPSA or LS1a and one of the PS courses (PS1, PS10, PS11). The Chemistry 20/30 sequence is intended primarily for students planning a concentration in chemistry or the physical sciences. Either sequence satisfies the organic chemistry requirement for medical school. Students may not count both Chemistry 17 and Chemistry 20 for degree credit. On the other hand, Chemistry 27 and Chemistry 30 cover different material, so students interested in taking both courses may choose to do so via one of two sequences: Chemistry 17-27-30 or Chemistry 20-30-27. Chemistry 27 satisfies the biochemistry chemistry requirement for most medical schools.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 20 Section: LEC

Organic Chemistry (124312)

Richard Liu

2025 Spring (4 Credits)

Schedule: MWF 0900 AM - 1015 AM**Instructor Permissions:** None**Enrollment Cap:** n/a

An introduction to structure and bonding in organic molecules; mechanisms of organic reactions; chemical

transformations of the functional groups of organic chemistry; synthesis; determination of chemical structures by infrared and NMR spectroscopy.

Course Notes:

Chemistry 20/30 is an integrated two-semester sequence that prepares students to study chemistry and other physical sciences, whereas the Chemistry 17/27 sequence focuses on application of organic chemistry concepts to the life sciences. Either sequence satisfies the organic chemistry requirement for medical school and the chemistry concentration. The content of Chemistry 17 is accelerated and overlaps with topics from both Chemistry 20 and 30. Students may not count both Chemistry 17 and 20 toward the degree. However, Chemistry 27 and Chemistry 20/30 cover different material, so students may choose to take Chemistry 27 after completing the 20/30 sequence.

Recommended Prep:

Open to students who scored 4 or 5 on the Chemistry Advanced Placement Examination, or who successfully completed Life Sciences 1A or Life and Physical Sciences A. Others should contact the instructor to discuss their preparation.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 27

Organic Chemistry of Life (117558)

Brian Liao

Sirinya Matchacheep

2025 Spring (4 Credits)

Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Chemical principles that govern the processes driving living systems are illustrated with examples drawn from biochemistry, cell biology, and medicine. The course deals with organic chemical reactivity (reaction mechanisms, structure-reactivity relationships), with topics specifically relevant to the life sciences (chemistry of enzymes, nucleic acids, drugs, natural products, cofactors), and with applications of chemical biology to medicine and biotechnology. An understanding of organic reactions and their "arrow-pushing" mechanisms is required.

Recommended Prep:

Chemistry 17 or Chemistry 30 or Chemistry 20 with permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 30

Organic Chemistry (118925)

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Continuation of Chemistry 20 with a greater focus on complex chemical reactivity and challenging problem solving. Carbonyl chemistry and pericyclic reactions are covered in particular detail, using principles of stereochemistry, stereoelectronic theory, and molecular orbital theory as a foundation. Students develop skills in planning organic chemical syntheses and are given an introduction to organometallic chemistry.

Course Notes:

The course has been updated to feature a problem solving and review session led by Prof. Myers, with a focus on challenging, collaborative problem solving using the week's lecture material. Students are expected to attend both lectures and the review session during the week (Lectures: Tuesday and Thursday, 10:30AM-11:45AM; Problem Session: Friday, Time TBD). In a typical week, there will be one problem set and two lecture integration problems. In addition to problem sets and laboratory work, the course will be assessed over three midterm examinations (1 hour each) and one final examination (3 hours). Office hours and help rooms will be available throughout the week. Recommended Prep: Chemistry 20 or the equivalent. Chemistry 27 and 30 may both be taken for degree credit. Students who have taken Chemistry 17 are welcome to take the course but should contact the teaching staff to discuss preparations at the start of the semester. Freshmen have taken Chem 30 and excelled at it, but it is recommended that any freshmen considering the course first contact the teaching staff to discuss their background preparation.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 40

Inorganic Chemistry (123126)

Theodore Betley

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Students will be introduced to the basic concepts of inorganic chemistry. Principles of chemical bonding and molecular structure will be developed on the basis of electronic structure, symmetry, and group theory. These concepts will be applied toward understanding coordination chemistry and organometallic chemistry.

Recommended Prep:

Chemistry 17 or 20

Additional Course Attributes:

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Reading and laboratory work related to one of the research projects under way in the department.

Open to a limited number of chemistry concentrators who are accepted as research students. To be eligible to enroll, you must have a Harvard-affiliated principal investigator agree to mentor you for the semester. For this reason, students must reach out to labs ahead of the start of the semester. Before registering for the course, please obtain written permission of the professor to do research for credit in their lab by emailing them copying Dr. Gregg Tucci (tucci@fas.harvard.edu) and Dr. Lu Wang (wang29@fas.harvard.edu). At the time when you petition to join the course on My.Harvard, please write again in the comment the professor's name. Must be taken Sat/Unsat. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Course Notes:

Experimental Chemistry and Chemical Biology (123022)

Heidi Vollmer-Snarr

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A project-based course, where groups of 2–4 students engage in synthetic organic or bioanalytical chemistry research. Students are introduced to experimental problems encountered in the synthesis, isolation, purification, characterization, and identification of potentially therapeutic organic compounds. Students also learn to design and create ion-selective electrode systems to detect medical biomarkers and environmental toxins. Throughout the research process, students gain technical proficiency and develop an understanding of both the theory and practice of organic synthesis, spectroscopy, and bioanalytical analysis. Students complete problem sets in spectroscopy and use electronic notebooks to keep track of their research findings, which they present in group meetings and write up for publication. As students learn to communicate technically with other scientists and peers, they also learn to communicate about the broader applications of their research to nonscientific audiences through science advocacy.

Course Notes:

Recommended as preparation for research in synthetic organic or bioanalytical chemistry (Chemistry 98R and 99R), or related disciplines. This course is suitable for students with or without extensive laboratory experience. This course includes a Harvard-paid science advocacy trip to Washington, D.C. Students complete a Chemistry or Climate Change Advocacy Workshop throughout the semester, where they learn to schedule and prepare to meet with their

members of Congress about legislation related to their research.

Recommended Prep:

Chem 20/30, 17/27, or S-20ab; and permission of the instructor.

Advanced Organic Chemistry (109454)

Eric Jacobsen

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Advanced reactivity principles in organic chemistry. Students learn 1) fundamentals of structure, bonding, and reaction energetics, 2) to identify and propose mechanisms for common organic, organometallic, and catalytic reactions, along with experiments to test those mechanisms; 3) to evaluate the factors controlling rate and selectivity in organic reactions; 4) to understand and analyze the current organic chemistry literature. The overarching goal of this course is to provide students with a solid foundation for a research career in organic chemistry and adjacent fields (chemical biology, inorganic chemistry).

Course Notes:

Prerequisites: Two semesters of college-level organic chemistry. At least one prior or concurrent course in physical and/or inorganic chemistry is recommended.

The Chemistry and Biology of Therapeutics (110241)

Matthew Shair

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course will cover the chemical and biological principles that govern small molecule therapeutics. We will discuss small molecule conformational analysis, chemical forces that drive small molecule-protein interactions, and small molecule binding to proteins to affect disease states. We will also discuss how protein targets are identified and the frontiers of modern small molecule therapeutics. Protein targets include, but are not limited to kinases, proteases, GTPases, scaffolding proteins, epigenetic modifiers, metabolic enzymes and transcription factors. This course will teach students how to use modern computer modeling applications to perform structure-based design of small molecule ligands.

Experimental Inorganic Chemistry (109110)

Dilek Dogutan Kiper

2024 Fall (4 Credits)

Schedule: TR 1200 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Chemistry 145 is a laboratory course designed to introduce students to inorganic laboratory synthesis, purification, and characterization techniques. Students will learn proper and safe techniques for handling and storing air, light, water-sensitive compounds, including the use of an inert-atmosphere glovebox and a Schlenk line. Synthesized compounds will be analyzed by various methods including infrared (IR), Electron Paramagnetic Resonance (EPR), paramagnetic and Nuclear Magnetic Resonance (NMR), and electronic absorption spectroscopies; and electrochemical techniques. Emphasis will be placed on rigorous adherence to the scientific method in the form of neat, comprehensive, clear entries in electronic laboratory notebooks hosted at Harvard Wiki including characterization data. Students will also develop the ability to read, understand, interpret, and explain the primary scientific literature, write research papers as manuscripts, and learn how to use different search engines, such as SciFinder, Web of Science.

The Quantum World (112976)

Khaled Abdelazim

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Quantum mechanics is the fundamental principle of the microscopic world. Quantum mechanics allows us to understand the motion of electrons, atoms and molecules. Only with such understanding, we can rationally design and engineer quantum materials, in order to realize quantum technologies such as quantum information, quantum sensing, and quantum computation. In this class, you will learn the fundamental postulates of quantum mechanics and their implications for the structure and behavior of atoms and molecules. In particular, we will explore the mathematical framework behind molecular bonding, vibration, and rotation. We will also discuss how to probe the properties of atoms and molecules using tunable electromagnetic radiation, more commonly known as light!

Recommended Prep:

Mathematics 21a or 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 11 or equivalent preparation in chemical bonding and fundamental principles; two introductory physics courses (e.g., Physical Sciences 2 and Physical Sciences 3).

Additional Course Attributes:

Schedule:

MW 1200 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The goal of this course is to provide students with both detailed knowledge of established and fundamental methods of experimental physical chemistry and an introduction to selected state-of-the-art experiments that address contemporary scientific questions. You will learn about tools that are of broad utility in many areas of science and have fun discovering how to make these experimental apparatus work. The fundamental methods discussions will demonstrate how specific chemical phenomena can be used to interrogate complex molecular systems. Some of the experimental techniques introduced in this class are now employed in many different fields of fundamental and applied science and are considered the often cornerstones of modern day experimental nanoscience. The class will provide a hands-on introduction to physical methods and techniques used widely in chemistry and chemical physics research laboratories. Computer-based methods of data acquisition and analysis are used throughout.

Course Notes:

Recommended as preparation for research in experimental chemistry (Chemistry 98R and 99R), chemical physics, engineering sciences, or related disciplines. Lecture is each Monday 12:00–1:15 pm. Lab is either Monday or Wednesday 1:30–5:00 pm until Spring break. Following Spring break students will attend lab eight hours/week to complete their independent projects

Recommended Prep:

Physical Sciences 11 or equivalent preparation in chemical bonding and fundamental principles; two introductory physics courses (e.g., Physical Sciences 2 and Physical Sciences 3). Chem 160 is recommended but not strictly required.

Quantum Materials, Where Physics and Chemistry Meet (223111)

Suyang Xu

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

The discoveries of new materials have been so definitive that they are used to name periods in the history of mankind, such as Stone Age, Bronze Age, Iron Age, and Silicon Age. As we enter the quantum era, research focuses on Quantum Materials, where quantum mechanical effects are pronounced, holding promising for quantum computer, space technology, and clean energy. In this class, we will teach you the quantum theory of crystalline materials, including the cutting-edge quantum materials such as superconductors, magnets, topological insulators, light-harvesting materials, etc. We will teach these from a chemistry perspective, i.e., by drawing orbitals, chemical bonds and electron clouds in real space, in contrast to the typical quantum theory of solids in physics (solving Hamiltonians in momentum space). For chemistry and engineering students, we hope this class can teach you solid state theory without being bogged down by heavy math. For physics student, we hope this class can help you to establish a real space intuition for many of the concepts, which are lacking in present education. Overall, we hope to teach you the research frontiers in quantum science entered on materials discovery.

Recommended Prep:

Recommended Prep: Chem 160 (The Quantum World) or an equivalent quantum mechanics course.

Additional Course Attributes:

Attribute	Value(s)

Chemistry 170 Section: LEC

Chemical Biology (122175)

Christina Woo

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

Applying chemical approaches to problems in biology. Topics include: physical properties of amino acids and proteins, synthesis and interrogating proteins with chemistry, natural proteins as chemical tools, unnatural amino acid incorporation, post-translational modifications, chemical glycoscience, chemical proteomics; physical properties of nucleic acids and DNA, interrogating nucleic acids with chemistry, engineering functional RNA, genomics and epigenetics, directed evolution, genome editing; drug discovery libraries and screening, macromolecular drugs, molecular glues.

Recommended Prep:

Basic organic chemistry knowledge (Chem 17, Chem 20, Chem 30, or the equivalent) is required. Undergraduate biochemistry and molecular biology knowledge (e.g., LS1a, Chem 27, MCB 60, MCB 63) is also assumed, although this can be remedied during the semester by diligently reviewing the relevant materials.

The Chemistry, Biology, and Societal Implications of Genome Editing (216524)

David Liu

2024 Fall (4 Credits)

Schedule:

F 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

30

The life sciences and medicine are undergoing a revolution stimulated by breakthrough advances in genome editing technologies. These technologies, including those enabled by CRISPR systems, enable researchers and physicians to modify target DNA sequences in the genomes of living cells, including those in plants, animals, and human patients. This class will overview the chemistry and biology underlying recent and current genome editing agents. We will also discuss their current limitations, how they are reshaping medicine and agriculture, and some social and ethical implications of their use. In addition to attending lectures that present the chemistry and biology of genome editing, students will analyze recent reports from the scientific literature, and will present their analyses and reasoned opinions during the semester. Participants will also develop and present final projects on an aspect of genome editing to the class at the end of the semester. For advanced undergraduates and graduate students with undergraduate-level understanding of molecular biology and either organic chemistry or biochemistry.

Foundations of Quantum Mechanics (220706)

Federico Capasso

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is an introduction to the foundations of quantum mechanics, with specific focus on the basic principles involved in the control of quantum systems. Experimental foundations of quantum mechanics. Superposition principle, Schrödinger's equation, eigenvalue and time dependent problems, wave packets, coherent states; uncertainty principle. One dimensional problems: double well potentials, tunneling and resonant tunneling; WKB approximation. Hermitian operators and expectation values; time evolution and Hamiltonian, commutation rules, transfer matrix methods. Crystals, Bloch theorem, superlattices. Angular momentum, spin, Pauli matrices. Coherent interaction of light with two-level systems. Quantization of the EM field, spontaneous and stimulated emission; qubits, entanglement, teleportation.

Taking this course meets the quantum mechanics core course requirement for the Applied Physics model programs.

Course Notes:

This course is also offered as QSE 200 and ENG-SCI 200. Students may only take one of ENG-SCI 200, QSE 200, and Chem 200 for credit.

This class is for students who have undergraduate-level background in statistical mechanics but would like to explore how statistical mechanics helps to expand frontiers of research in modern biophysical chemistry, systems biology and materials science. The course includes regular lectures and journal club style in-depth discussion of current literature. The course starts with introductory lectures with emphasis on statistical mechanics of complex multi-particle systems including theory of phase transitions, statistical mechanics of complex systems and related topics. Next, we proceed with discussion of topics at the forefront of current research. These include but not limited to biomolecular folding and organization including protein and genome folding and assembly of supramolecular complexes, statistical mechanics of liquid-liquid phase separation in living cells, statistical mechanics of biological evolution, thermal and dynamic properties of complex materials (polymers, gels multicomponent solutions). Special emphasis will be placed on current developments that revolutionized life sciences such as application of artificial intelligence in structural biology (AlphaFold2) and AI-based approaches to computational drug discovery

Recommended Prep:

Chem 161 (Statistical Thermodynamics), Physics 181 (Statistical Mechanics and Thermodynamics), MCB 199 (Statistical Thermodynamics and Quantitative Biology) at Harvard, or an equivalent course at another college

Practical Crystallography in Chemistry and Materials Science (107709)

Shao-Liang Zheng

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Due to great technical advances, crystal structure analysis plays an increasingly important role in the structure determination of complex solids. This course involves the basic principles of crystallography and covers advanced aspects of practical crystal structure refinement. Topics include crystal symmetry, space groups, geometry of diffraction, structure factors, and structure refinement. Students will gain a working knowledge of x-ray crystallographic techniques, including how to: grow quality crystals, collect data, reduce data, determine a structure, visualize structure, utilize structural databases, publish crystallographic results. Watch [Learning Crystal Structure Analysis at Harvard](#).

Chemistry 301HFA Section: 1

Scientific Teaching and Communications: Practicum (124905)

*Lu Wang**Gregory C. Tucci*

2025 Spring (2 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

This course will teach graduate students how to communicate scientific concepts in the classroom. Students will focus on becoming effective teachers in discussion sections and in the laboratory. The course will emphasize hands-on experience in teaching and explaining scientific concepts. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes:

Required of all first-year graduate students in the Department of Chemistry and Chemical Biology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Full Year Course	Indivisible Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Life & Physical Sciences

Life & Physical Sciences A

Foundational Chemistry and Biology (123833)

Gregory C. Tucci

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces fundamental concepts in chemistry and biology. Topics in chemistry include stoichiometry, acids and bases, aqueous solutions, gases, thermochemistry, electrons in atoms, and chemical bonding. The course also examines biological molecules, the transfer of information from DNA to RNA to protein, and cell structure and signaling.

Requirements:

Anti-req: Cannot be taken for credit if Life Sciences 1a, OR Physical Sciences 1, OR Physical Sciences 10, OR Physical Sciences 11, OR Chemistry 17 OR Chemistry 20 already complete

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Subject: Physical Sciences

Physical Sciences 11 Section: LEC

Foundations and Frontiers of Modern Chemistry: A Molecular and Global Perspective (107368)

Gregory C. Tucci

Lu Wang

Frank Keutsch

2025 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The Physical Sciences hold the key to solving unprecedented problems at the intersection of science, technology, and an array of rapidly emerging global scale challenges. The course emphasizes a molecular scale understanding of energy and entropy; free energy in equilibria, acid/base reactivity, and electrochemistry; molecular bonding and kinetics; catalysis in organic and inorganic systems; the union of quantum mechanics, nanostructures, and photovoltaics; and the analysis of nuclear energy. Case studies are used both to develop quantitative reasoning and to directly link these principles to global strategies.

Course Notes:

Courses accepted by most medical schools as one semester of general chemistry with lab are LPS A, LS 1A, LS50a, or PHYSICI 11. The general chemistry requirement for the Chemistry concentration can be met by: one course CHEM 10; or two courses, one being LPS A or LS 1A, and the other being PHYSICI 10 or PHYSICI11; or satisfactory placement out of the requirement. Students may not count both CHEM 10 and PHYSICI 11 for degree credit. Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep:

A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed.

Students are expected to have high school chemistry, or have completed Life and Physical Sciences A (LPS A) or Life Sciences 1a (LS 1a), or have received permission of the instructors.

Additional Course Attributes:

Classics, The

Subject: Latin

Latin 1

Introductory Latin 1 (203025)

Ivy Livingston

2024 Fall (4 Credits)

Schedule:MF 1030 AM - 1145 AM

Instructor Permissions:None

Enrollment Cap:n/a

Latin 1 is a starting point for those interested in learning to read the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings.

Course Notes:

Students wishing to continue after Latin 1 should proceed to Latin 2, which continues the introductory sequence and prepares students for Latin 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep:

None. Latin 1 is an introductory course for students with no prior experience. Those who have studied Latin formally are not permitted to enroll in Latin 1, but should instead consider Latin 3; please consult with the Senior Preceptor in Classics (livings@g.harvard.edu).

Additional Course Attributes:

Latin 3

Introductory Latin 3 (203227)

Ivy Livingston

2024 Fall (4 Credits)

Schedule:

MWF -

Instructor Permissions: None

Enrollment Cap:

n/a

Latin 3 concludes the normal introductory sequence, following Latin 1 and 2 (or equivalent experience). By the end of the course, participants will have been introduced to all the fundamentals of the language and had practice applying their knowledge to the reading of authentic texts. Latin 3 may also serve as a review course for students who are already acquainted with most of the common language structures, but have little experience with unadapted literature.

Course Notes:

Students who have studied Latin elsewhere should take the Latin Placement Test before enrolling in Latin 3. Students wishing to continue after Latin 3 may proceed to Latin 10 or Medieval Latin 10. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep:

Latin 2. Students who have not studied Latin at Harvard should take the Latin Placement Exam and consult with the Senior Preceptor in Classics (<mailto:livings@g.harvard.edu> >livings@g.harvard.edu).

Latin 10

Introduction to Latin Literature (203228)

Ivy Livingston

2025 Spring (4 Credits)

Schedule: MWF -

Instructor Permissions: None

Enrollment Cap: n/a

Latin 10 offers close reading and analysis of Latin literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.

Course Notes:

After Latin 10, students may take Latin courses at the 100-level, but are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@fas.harvard.edu) about their choice of course. Students may also take Latin 10 more than once, with the permission of the course head. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep:

Latin 3 or Latin Ax. Students who have not studied Latin at Harvard should take the Latin Placement Exam and consult with the Senior Preceptor in Classics (<mailto:livings@g.harvard.edu>).

Latin 122

Horace, Odes (116735)

Richard Thomas

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course will study Horace's *Odes*, with attention to their language, meter, social context, literary models, and above all to the inimitable *persona* they construct, with its unique combination of humor and pathos, wit and resignation. In addition to close reading of Horace's Latin, we will examine some of his

Greek models (in translation) and will read selected contributions of modern criticism, with an eye in particular to Horace's place in the history of European lyric.

Recommended Prep:

Latin 175

Syntax and Stylistics (218242)

Jared Hudson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course examines how to write in Latin and how Latin authors influenced artistic prose, combining an in-depth overview of Latin prose syntax, a historical survey of styles of Latin prose, and an introduction to Latin prose composition. Assignments consist of close readings, translation exercises, and longer compositions. Students will gain a detailed understanding of the range and development of Latin expression and a sensitive appreciation of the nuances of artistic Latin prose.

Recommended Prep:

Undergraduates with sufficient preparation in Latin (the equivalent of at least one 100-level course) are welcome to enroll. Interested students should contact the instructor for more information.

Subject: Classical Studies

Classical Studies 97A

Introduction to the Ancient Greek World (116729)

Paul Kosmin

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course will cover the history of ancient Greece from the Bronze Age Minoan and Mycenaean palace civilizations to the Roman conquest of the East Mediterranean. Attention will be paid to the major political, social, economic, and cultural transformations, all set within their Mediterranean and west Asian environments. Students will explore the wide variety of textual sources (in translation) and archaeological evidence out of which historians seek to understand ancient Greece.

Course Notes:

Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Classical Studies 97B

Introduction to the Ancient Roman World (124050)

Kathleen Coleman

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course has three components: a chronological survey of Roman history from the beginnings to Late Antiquity; thematic explorations of key features of culture and daily life in Rome as well as other parts of Roman Italy and the provinces (including religion, law and government, elite society, Romanization, urban topography, etc.); and an introduction to the tools and methods available for research on the Roman world, with an emphasis on material culture and documentary sources.

Course Notes:

Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Classical Studies 112

Regional Study: Macedonia (156313)

Paul Kosmin

Emma Dench

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

10

This course will explore the political and cultural history of Macedonia and northern Greece, from the archaic period to late antiquity. We will focus on questions of change, recurrence, and continuity within the long history of this frontier region, at the threshold of the Aegean and Balkan worlds.

The course will be discussion-based, and texts, objects, and ideas will be brought into dialogue around themes that are arranged roughly chronologically. These will include the formation and identity of the Macedonian kingdom, interactions with Balkan and Asian neighbors, conflicts with Greek poleis, imperial expansion and consolidation, provincialization by Rome, and the dynamics of early Christian community building.

Our enquiry will be conducted on several different scales: we will be informed both by close reading of texts and close examination of individual sites and objects, by the different, broader modern arguments into which texts, sites and objects are drawn, and by the big, overarching questions that we will ask as we move across time and place. We will take a week-long, funded tour of Macedonia during Spring Break, in order to visit the most significant archaeological sites and museum collections.

Course Notes:

This course is required for concentrators in the Classical Civilizations track, joint concentrators in Ancient History, and all joint concentrators in Classical Civilizations and an Allied Field. Admission is by application only. Students interested in enrolling should contact the Director of Undergraduate Studies (classicsDUS@fas.harvard.edu).

Classical Studies 122

Identity and the Self in the Medieval Greek Tradition (218327)

Alexander Riehle

Dimiter Angelov

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This seminar explores the construction and complexity of identities in the Greek tradition (300-1500). Students will read fascinating narratives, biographies, and autobiographies, and will learn how to analyze them from historical and literary perspectives. Questions for discussion include political, religious, and ethnic identity in late antiquity and Byzantium, the meaning of being "Roman" and "Greek," the plasticity of self-representation, and the interpretation of religion, gender, and class as both social and cultural categories.

Course Notes:

This course is also offered through the History Department as History 12V. Credit may be earned for either Classics 122 or History 12V, but not both.

Classical Studies 165

Medicine in the Greco-Roman World (124969)

Mark Schiefsky

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Theories and practices of health and healing in the ancient Greco-Roman world, with emphasis on the relationship of medicine to philosophy. Key themes include medicine as a systematic discipline or art, dissection and the knowledge of human anatomy, gynecology and the female body, and the relationship between bodily and mental conditions. All readings will be in English and include both ancient texts (e.g. the Hippocratic writers, Galen, Plato, Aristotle) and modern secondary sources. The course welcomes students in any field of study, including the sciences, and encourages the drawing of connections between ancient medicine and modern medical practice. Some knowledge of philosophy and/or the ancient world is helpful but not required.

Class Notes: Some of the lecture sessions will take place over Zoom. All sections will be held in person. Please consult the course site for more details.

Classical Studies 166

Bob Dylan the Classic (222226)

Richard Thomas

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course examines Bob Dylan the creative genius and enduring and continuing musical, literary, and general cultural phenomenon, in the context of popular and higher literary culture of the last 60 years; also in the context of those long-lived literary and musical cultures with which he works: the Beats and Moderns of the 20th and Romantics of the 19th century; Poe, Melville, Whitman and Americana of the same 19th century; Shakespeare and the old ballad traditions; and in more recent songs going back to Homer, Virgil, Ovid, and the western literary canon. Traces the evolution of his songs and lyrics from their early folk, blues, rock, gospel, and protest roots, through the transition from acoustic to electric, in studio and performative contexts, also through the many persona evolutions and reinventions that have characterized and continue to characterize his career in songwriting, performance, literature, film and painting. Lectures, listening to, viewing, and discussing a broad representation of Dylan's output.

Adapting to the Present: Rewriting Ancient Greek Classics in Contemporary Fiction (224307)

Emily Greenwood

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

"We are still mythical" as Kae Tempest intones in *Brand New Ancients* (2013, p.1). This course will analyze creative rewritings of ancient Greek literature in contemporary Anglophone fiction, spanning the novel, lyric poetry, and drama. We will also read Han Kang's *Greek Lessons* (in Deborah Smith's and Emily Yaewon's translation, 2023) as an innovative counterexample of how to write with and back to ancient Greek literature in contemporary fiction. Broadly, we will consider why and how contemporary authors turn to ancient Greek literature and myth to give form and fresh meaning to contemporary experience, ranging from autofiction to crises of culture, politics, and society. The authors studied in this course come from several different countries and write from diverse cultural, ethnic, racial, religious, and LGBTQ backgrounds. In addition to analyzing the dynamics of rewriting works received as classics of world literature, we will also study what happens to the alterity of antiquity in the process of adaptation and rewriting. Above all, this course is an opportunity to analyze and discuss some stunning contemporary Anglophone fiction. We will study works by Anne Carson, Natalie Diaz, Michael Hughes, Daisy Johnson, Tayari Jones, Han Kang, David Malouf, Alice Oswald, Kamila Shamsie, Kae Tempest, and Ocean Vuong.

Recommended Prep:

This is an upper-level seminar. Some prior knowledge of the ancient Greek texts (in translation or in ancient Greek) whose adaptation we will be discussing is assumed.

Classics Proseminar (113591)

Irene Peirano Garrison

2024 Fall (4 Credits)

Schedule: F 0945 AM - 1145 AM**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

This class aims to provide a basic introduction for beginning graduate students to the history, methods, and theories of Classics. Students will have the opportunity to learn about the specialized subfields and material resources pertinent to the study of ancient Greece and Rome at Harvard and beyond. In addition, the course lays a solid foundation for a thriving graduate career by introducing students to the wider network of resources, programs, and research cultures available to GSAS students.

Course Notes:

For new students working toward the PhD in the Department of the Classics. Open to other students by permission of instructor.

Subject: Greek

Greek 1

Introductory Ancient Greek 1 (203024)

Ivy Livingston

2024 Fall (4 Credits)

Schedule:

MTWR -

Instructor Permissions: None

Enrollment Cap:

n/a

Greek 1 is a starting point for those interested in learning to read ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes:

Students wishing to continue after Greek 1 should proceed to Greek 2, which continues the introductory sequence and prepares students for Greek 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep:

None. Greek 1 is an introductory course for students with no prior experience. Those who have studied Greek formally are not permitted to enroll in Greek 1, but should instead consider Greek 3; please consult with the Senior Preceptor in Classics (livings@g.harvard.edu).

Additional Course Attributes:

Attribute	Value(s)
FAS: Meets Foreign Lang Req	Ancient Greek
HCOL: Foreign Lang Citation	Ancient Greek
Course Evaluation	FAS small class override
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Greek 2

Introductory Ancient Greek 2 (203256)

Ivy Livingston

2025 Spring (4 Credits)

Schedule:

MTWR -

Instructor Permissions: None

Enrollment Cap:

n/a

Greek 2 continues from Greek 1. Participants will continue to develop their ability to read Greek with increasing emphasis on authentic texts.

Course Notes:

Students wishing to continue after Greek 2 should proceed to Greek 3, which concludes the normal introductory sequence. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep:

Greek 1 or equivalent experience; please consult with the Senior Preceptor in Classics (livings@g.harvard.edu).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Greek 3

Introductory Ancient Greek 3 (203229)

Ivy Livingston

2024 Fall (4 Credits)

Schedule: MWF -**Instructor Permissions:** None**Enrollment Cap:** n/a

Greek 3 concludes the normal introductory sequence, following Greek 1 and 2. By the end of the course participants will have been introduced to all the fundamentals of the language and had practice applying their knowledge to the reading of authentic texts.

Course Notes:

Students wishing to continue after Greek 3 should proceed to Greek 10. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep:

Greek 2 or equivalent experience; please consult with the Senior Preceptor in Classics (livings@g.harvard.edu).

Additional Course Attributes:

Greek 10

Introduction to Ancient Greek Literature (203230)

Ivy Livingston

2024 Fall (4 Credits)

Schedule: MWF -**Instructor Permissions:** None**Enrollment Cap:** n/a

Greek 10 offers close reading and analysis of Greek literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.

Course Notes:

After Greek 10, students may take Greek courses at the 100-level, but

are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@fas.harvard.edu) about their choice of course. Students may also take Greek 10 more than once, with the permission of the course head. Auditors allowed with permission of course head.

Recommended Prep:

Greek 3. Students who have not studied Greek at Harvard should take the Greek Placement Exam and consult with the Senior Preceptor in Classics (livings@g.harvard.edu). Auditors allowed with permission of course head. May be taken Pass/Fail.

Additional Course Attributes:

Greek 112A

Ancient Greek Literature: Texts & Contexts (112288)

Naomi Weiss

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This year-long course is designed to help students develop a map of ancient Greek literary culture and influential approaches to the interpretation of Greek literature. Greek 112a and 112b may be taken independently. (Both semesters are required for graduate students in Classical Philology.) The class prepares students to discuss ancient Greek literature in its historical and cultural context with chronology, genre, theme, performance, and reception context as organizational frameworks. Through prepared translation and analysis of assigned text, and discussions of assigned scholarly works, students will improve their reading fluency and enhance their ability to read, interpret, and teach a range of Greek texts. Greek 112a focuses on poetry, from Homeric epic to Hellenistic pastoral. Greek 112b focuses on prose, from Herodotus to the ancient novel.

Class Notes: Students who are concerned about their level of preparation should consult with Professor Weiss (nweiss@fas.harvard.edu).

Recommended Prep: This course is designed for advanced readers of ancient Greek with

previous experience with a range of Greek authors and genres. Enrollees should have taken at least one 100-level Greek course or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Greek 112B

Ancient Greek Literature: Texts and Contexts (119867)

Emily Greenwood

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This year-long course is designed to help students develop a map of ancient Greek literary culture and influential approaches to the interpretation of Greek literature. Greek 112a and 112b may be taken independently. (Both semesters are required for graduate students in Classical Philology.) The class prepares students to discuss ancient Greek literature in its historical and cultural context with chronology, genre, theme, performance, and reception context as organizational frameworks. Through prepared translation and analysis of assigned text, and discussions of assigned scholarly works, students will improve their reading fluency and enhance their ability to read, interpret, and teach a range of Greek texts. Greek 112a focuses on Greek poetry from the archaic into the classical period. Greek 112b focuses on prose literature from the classical, Hellenistic, and imperial periods. This course is designed for advanced readers of ancient Greek with previous experience with a range of Greek authors and genres.

Class Notes:

The class will meet three times a week, with two seminars supplemented by a weekly section meeting. Attendance is required at all three classes.

This is a reading-intensive course. We will aim to read ca. 10 OCT pages of Greek prose each week. You are expected to use commentaries to help you in this reading. In addition, you are also expected to read a selection of scholarly articles, totaling ca. 50 pages in English per week. All required scholarly literature will be available on Canvas.

Students who are concerned about their level of preparation should consult with Professor Greenwood (emilygreenwood@fas.harvard.edu).

Recommended Prep:

This course is designed for advanced readers of ancient Greek with previous experience with a range of Greek authors and genres. Enrollees should have taken at least one 100-level Greek course or equivalent.

Greek 187

Greek Palaeography (160157)

Alexander Riehle

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Do you want to learn how to read the Greek classics from the manuscripts in which they survive?

This course offers an introduction to late antique and medieval Greek book culture and handwriting. On the basis of selected manuscripts of a variety of texts (for example, the Homeric epics, Plato's dialogues, classical tragedies and the Bible), we will trace the main lines of development of Greek script from the majuscule (uncial) of the earliest codices to the minuscule of Byzantine manuscripts and the type of early printed books in Renaissance Italy. Although the focus will be on deciphering, transcribing, and contextualizing handwriting in various styles, we will also discuss material aspects of the manuscripts (codicology), important institutions of book culture (scriptoria and libraries, education and schooling, patronage, etc.), as well as basic elements of transmission and text editing. In this context, we will look into important works of reference and useful online tools. Towards the end of the semester, we will examine a few original Greek codices from Harvard's manuscript collection at Houghton Library.

Recommended Prep:

Greek 10 or equivalent experience; please consult with the Preceptor

in the Classics (livings@g.harvard.edu).

Modern Greek 10

Introduction to Modern Greek Texts (212818)

Panagiotis Roilos

2024 Fall (4 Credits)

Schedule:

MWF -

Instructor Permissions: None

Enrollment Cap:

n/a

This course is designed for students who possess an intermediate level in Modern Greek. It aims at further development of reading and listening comprehension as well as oral and written expression. The students will expand their vocabulary in thematic areas, such as technology, arts, environment, education, and politics. The course will also offer a targeted review of advanced grammatical phenomena, such as passive voice, indirect speech, and subordinate clauses. At the same time, the students will delve deeper into Modern Greek culture by being exposed to various cultural media, including prose (literary and journalistic), film, and music.

Course Notes:

Conducted in Modern Greek. It prepares students to take "MODGRK 100: Introduction to Modern Greek Literature" in the spring.

Recommended Prep:

Modern Greek Ba or Bb or equivalent. Consult with instructor.

Subject: Medieval Latin

Medieval Latin 208

Folk and Learned Literature: Materials and Methods (224310)

Jan Ziolkowski

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Explores the vast body of narratives in Latin that are extant from the medieval West. Surveys epics, proto-romances, folktales, legends, fables, and preaching exempla. Includes heroic poems (on ancient and other themes), Bible poems, saint's lives, and miracles. Considers the complexities caused by changes in language (multilingualism, diglossia, and global Latinity), education, and religion. Investigates passages from oral to written and from manuscript to print. Touches on techniques for identifying images, especially but not exclusively from the Middle Ages, that relate to the literature. Examines tools, both digital and print, that help in identifying and analyzing the texts. Surveys theories and methods that have been developed, from the late nineteenth century to the present day, for interpreting both oral and written tales preserved in Latin.

Recommended Prep:

Though intended for graduate students, motivated undergraduates with Latin who are interested in medieval studies are warmly welcome

Subject: Medieval Greek

Medieval Greek 115

Introduction to Byzantine Greek (121896)

Alexander Riehle

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course provides an introduction to the language of late antique and Byzantine Greek texts. This "Medieval Greek" should not be understood as a particular, intermediate stage in a linear development from Ancient to Modern Greek, but rather as a conventional designation for a broad continuum of linguistic registers, ranging from archaizing usages ("Atticism") to the so-called vernacular. In the surviving texts, these registers may vary significantly, depending on the author and their audience, the genre and other contextual factors. Through a close reading of representative literary and "sub-literary" texts from various periods and genres, the course gives students a first impression of this diversity and multi-layeredness of Greek writing in late antiquity and the Middle Ages. Although the main focus will be on grammatical and lexical analysis, we will also discuss related aspects of literary composition and style.

Recommended Prep:

Greek 10 or equivalent experience; please consult with the Senior Preceptor in the Classics (livings@g.harvard.edu).

Classical Philology 235

Sappho and her Reception in the Ancient World (203652)

Gregory Nagy

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The poetics (or songmaking) of Sappho will be studied from a wide variety of perspectives, suited to the research interests of the students enrolled, who are also encouraged to compare the texts of classical Greek and Latin poets like Euripides and Catullus.

Classical Philology 285

Greek Palaeography (204040)

Alexander Riehle

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course is intended as an introduction to late antique and medieval Greek book culture and handwriting. On the basis of selected manuscripts of a variety of texts, ranging from classical authors to the Bible and Byzantine writers, we will trace the main lines of development of Greek script from the uncial (majuscule) of the earliest codices to the minuscule of the manuscripts and early printed books of Renaissance humanists. Although the main focus will be on deciphering, transcribing and contextualizing various handwritings, we will also pay attention to material aspects of the manuscripts (codicology), important institutions of book culture (scriptoria and libraries, education and schooling, patronage, etc.) as well as to basic elements of transmission and text editing. In this context, we will look into important works of reference and useful online tools (such as manuscript catalogues, the *Repertorium griechischer Kopisten* and the database *Pinakes*), and discuss various ways of getting access to manuscript reproductions (microfilms, digital photographs, etc.). Towards the end of the course, we will examine a few original Greek codices from Harvard's manuscript collection at Houghton Library.

Recommended Prep:

Reading proficiency in at least one of the following modern languages will be an advantage (but not a requirement): Italian, German, French, Greek.

Computer Science

Subject: Computer Science

Computer Science 1

Great Ideas in Computer Science (119953)

Henry Leitner

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the most important discoveries and intellectual paradigms in computer science, designed for students with little or no previous background. Explores problem-solving and data analysis using *Python*, a programming language with a simple syntax and a powerful set of libraries. This course covers basic data types and collections (lists, dictionaries, tuples, and sets), control flow, recursion, information hiding and encapsulation using classes and objects, and introduces the analysis of program performance. Presents an integrated view of computer systems, from switching circuits up through compilers, and examines theoretical and practical limitations related to unsolvable and intractable computational problems. Other topics include the social and ethical dilemmas presented by such issues as software unreliability, algorithmic bias, and invasions of privacy.

Course Notes:

May not be taken for credit after completing Computer Science 50.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration

Computational Thinking and Problem Solving (219744)

Michael Smith

2025 Spring (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to computational thinking, useful concepts in the field of computer science, and the art of computer programming using Python. Significant emphasis is placed on class meetings and learning to use computers to solve complex, real-world problems. Concepts and techniques are introduced as they are needed to help solve the problems confronting us. Students will learn how to go from an ambiguous problem description to a running solution and will leave the class knowing how to instruct computers to do what they want them to do. Prior experience in computer science or computer programming is not necessary.

Additional Course Attributes:

Computer Science 37

Incentives in the Wild: from Tanking in Sports to Mining Cryptocurrencies (221933)

Yannai Gonczarowski

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

50

How could it be that paving a new road might increase congestion for all drivers? Why would a professional sports team ever try not to score in a game that it wants to win? Why would any student rank high schools not in their order of preference when applying? And what are some incentive pitfalls that the designer of a cryptocurrency system should be aware of? In this course, we will examine seemingly strange social phenomena, use mathematical tools to model them and to analyze how and why distorted incentives give rise to them, and explore potential mechanisms to eliminate such phenomena.

Course Notes:

Course is also offered as ECON 1071. Students may not take both for credit.

Recommended Prep:

We will assume mathematical proficiency consistent with having already taken Statistics 110 and having already taken or concurrently taking Math 21a.

Introduction to Computer Science (152514)

David J. Malan

2024 Fall (4 Credits)

Schedule:

M 0130 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is CS50, Harvard University's introduction to the intellectual enterprises of computer science and the art of programming, for concentrators and non-concentrators alike, with or without prior programming experience. (Two thirds of CS50 students have never taken CS before.) This course teaches you how to solve problems, both with and without code, with an emphasis on correctness, design, and style. Topics include computational thinking, abstraction, algorithms, data structures, and computer science more generally. Problem sets inspired by the arts, humanities, social sciences, and sciences. More than teach you how to program in one language, this course teaches you how to program fundamentally and how to teach yourself new languages ultimately. The course starts with a traditional but omnipresent language called C that underlies today's newer languages, via which you'll learn not only about functions, variables, conditionals, loops, and more, but also about how computers themselves work underneath the hood, memory and all. The course then transitions to Python, a higher-level language that you'll understand all the more because of C. Toward term's end, the course introduces SQL, via which you can store data in databases, along with HTML, CSS, and JavaScript, via which you can create web and mobile apps alike.

Course culminates in a final project. See <https://cs50.harvard.edu/spring> for advice, FAQs, syllabus, and what's new. Email the course's heads at heads@cs50.harvard.edu with questions.

Course Notes:

CS50 is ordinarily graded SAT/UNS, though students whose concentration requires letter grades should change their grading status to letter-graded by the term's fifth Monday. Students may take CS50 SAT/UNS to fulfill the Science and Engineering and Applied Science distribution requirement or the Quantitative Reasoning with Data requirement, but not both. First years may take both CS50 and a freshman seminar SAT/UNS. Graduate students are welcome to enroll in or cross-register for CS50.

Abstraction and Design in Computation (112960)

Stuart Shieber

2025 Spring (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap: n/a

Fundamental concepts in the design of computer programs, emphasizing the crucial role of abstraction. The goal of the course is to give students insight into the difference between programming and programming well. To emphasize the differing approaches to expressing programming solutions, you will learn to program in a variety of paradigms -- including functional, imperative, and object-oriented. Important ideas from software engineering and models of computation will inform these different views of programming.

What is privacy, and how is it affected by recent developments in technology? This course critically examines popular concepts of privacy and uses a rigorous analysis of technologies to understand the policy and ethical issues at play. Case studies: database anonymity, research ethics, wiretapping, surveillance, and others. Course relies on some technical material, but is open and accessible to all students, especially those with interest in economics, engineering, political science, computer science, sociology, biology, law, government, philosophy.

Course Notes:

This course was previously numbered CS 105.

2024 Fall (4 Credits)

Schedule:

TR 0215 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing and data sciences. The class is focusing on a thorough introduction of the Python programming language with discussion of core concepts in object oriented programming as well as essential data structures useful in most programming tasks. Students will work in groups on a semester long project that combines the subjects discussed in class and applies them to the topic of

automatic differentiation. Students will further learn how to work with SQL databases and how to integrate them in Python using SQLite3 and Pandas. After completion of this course, students will be able to adapt basic tools and techniques to design complex software systems aimed at solving computational and data processing problems in academic and industrial environments.

Course Notes:

This course was previously numbered CS 107.

Recommended Prep:

Students are expected to have basic programming experience (CS 50) and be familiar with entry level calculus and the chain rule.

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Only one of the following can be taken for credit: Stat 109a, Stat 121a, CS 1090a (previously CS 109a), AC 209a. This course was previously numbered CS 109a.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements:

Not to be taken in addition to Applied Computation 209, or Applied Computation 209A, or Statistics 109A, or Statistics 121, or Statistics 121A.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
GSD: Recommended Elective	MDE approved SEAS 100 level course
Quantitative Reasoning with Data	Yes

FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 1090B

Data Science 2: Advanced Topics in Data Science (203546)

Pavlos Protopapas

Alex Young

2025 Spring (4 Credits)

Schedule:

MWF 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for statistical modeling, representation, and prediction. Topics include multiple deep learning architectures such as CNNs, RNNs, transformers, language models, autoencoders, and generative models as well as basic Bayesian methods, and unsupervised learning. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two-part series.

Course Notes:

Can only be taken after successful completion of CS 1090a (previously CS 109a), AC 209a, Stat 109a, or Stat 121a, or equivalent. This course was previously numbered CS 109b.

Recommended Prep:

CS 1090a (previously CS 109a), AC 209a, Stat 109a, or Stat 121a required.

Requirements:

Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking CS 109B) AND (Not to be taken in addition to CS 109, OR APCOMP 209, OR APCOMP 209B, OR STAT 121, OR STAT 121B.)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Computer Science 1200

Introduction to Algorithms and their Limitations (218613)

Anurag Anshu

Salil Vadhan

2024 Fall (4 Credits)

Schedule:

TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introductory course in theoretical computer science, aimed at giving students the power of using mathematical abstraction and rigorous proof to understand computation. Thus equipped, students will be

able to design and use algorithms that apply to a wide variety of computational problems, with confidence about their correctness and efficiency, as well as recognize when a problem may have no algorithmic solution. At the same time, they will gain an appreciation for the beautiful mathematical theory of computation that is independent of (indeed, predates) the technology on which it is implemented.

Course Notes:

This course was previously numbered CS 120.

Recommended Prep:

Experience with proofs and discrete mathematics at the level of Computer Science 20, and Python programming at the level of Computer Science 50.

Additional Course Attributes:

Attribute	Value(s)
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 1210

Introduction to Theoretical Computer Science (119064)

Adam Hesterberg

2024 Fall (4 Credits)

Schedule:

TR 0345 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Computation occurs over a variety of substrates including silicon, neurons, DNA, the stock market, bee colonies and many others. In this course we will study the fundamental capabilities and limitations of computation, including the phenomenon of universality and the duality of code and data. Some of the questions we will touch upon include: Are there functions that cannot be computed? Are there true mathematical statements that can't be proven? Are there encryption schemes that can't be broken? Is randomness ever useful for computing? Can we use the quirks of quantum mechanics to speed up computation?

Course Notes:

Students may not receive credit for both CS 1210 (formerly CS 121) and CS 125. This course was previously numbered CS 121.

Recommended Prep:

Experience in formal mathematics at the level of CS 20. A "Homework Zero" is posted on the course website https://cs121.boazbarak.org/ and students should complete it before the first lecture.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Computer Science 1240

Data Structures and Algorithms (115384)

Madhu Sudan

Sitan Chen

2025 Spring (4 Credits)

Schedule:

MW 0215 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Design and analysis of efficient algorithms and data structures. Algorithm design methods, graph algorithms, approximation algorithms, and randomized algorithms are covered.

Course Notes:

Students will not receive credit for both CS 1240 (formerly CS 124) and CS 125. This course was previously numbered CS 124.

Recommended Prep:

Knowledge of how to write mathematical proofs, such as from Computer Science 20, Applied Math 22, or Math 22, is required; more advanced courses such as Computer Science 1200 (formerly CS 120), Math 23, Math 25, and Math 101 may be helpful but are not required.

Basic programming skills, such as from Computer Science 32 or 50, are required; Computer Science 51 and/or 61 may be helpful but are not required. No specific programming language is required.

Knowledge of discrete math and probability, such as from Computer Science 20 or self-study, is required. Statistics 110 may be helpful but is not required.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
GSD: Recommended Elective	MDE approved SEAS 100 level course

Computer Science 1260

Fairness and Privacy: Perspectives from Law and Probability (204972)

Cynthia Dwork

2024 Fall (4 Credits)

Schedule:

M 0900 AM - 1015 AM

W 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Students will learn the mathematical foundations of key aspects of Responsible AI, with a focus on the analysis and mitigation of privacy loss and unfairness in machine learning and in data analysis more broadly. Principal techniques will come from differential privacy, cryptography, and the emerging theory of algorithmic fairness. Through joint readings and weekly class meetings with the HLS course of the same name, students will develop disciplinary "bilingualism."

Course Notes:

This intensive course will bring together advanced students in

computer science, statistics, law, and government to tackle these and related questions. Offered concurrently in HLS and in SEAS, with interwoven tracks emphasizing, respectively, law and CS. This course was previously numbered CS 126.

Recommended Prep:

Experience writing proofs and familiarity with statistics basics (for example, mean, variance, Chernoff bounds); a theoretical computer science course such as CS 1210 (formerly CS 121) or CS 1240 (formerly CS 124) is recommended but not required.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 1270

Cryptography (109566)

Boaz Barak

2025 Spring (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Cryptography is as old as human communication itself, but has undergone a revolution in the last few decades. It is now about much more than "secret writing" and includes seemingly paradoxical notions such as communicating securely without a shared secret, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as fully homomorphic encryption and software obfuscation. This is a proof-based course that will be best appreciated by mathematically mature students.

Course Notes:

This course will be offered in both an undergraduate and graduate versions. The graduate version will involve an additional project. This course was previously numbered CS 127.

Recommended Prep:

Comfort with mathematical proofs at the level of CS1210 (formerly CS 121), CS1240 (formerly CS 124) or similar. Please contact the instructor if you're unsure if your background is sufficient.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 1360

Economics and Computation (128164)

Ariel Procaccia

2024 Fall (4 Credits)

Schedule:

MW 1115 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

100

The interplay between economic thinking and computational thinking as it relates to the design of the digital economy, and emphasizing fundamental concepts, modeling, and mathematical analysis. Topics covered include: game theory, auction design, incentive alignment, information elicitation, matching, reputation systems, cryptoeconomics, and privacy and ethics. Illustrative applications include to advertising, pricing, crowdsourcing, personalization, social networks, market platforms, DeFi, prediction markets, and AI mediation. Students will complete theoretical and computational exercises and work on a final project.

Course Notes:

This course was previously numbered CS 186 and CS 136.

Recommended Prep:

Applied Math 21b or equivalent, Computer Science 51 or equivalent, Statistics 110, and one of Computer Science 1810 (formerly CS 181), Computer Science 1820 (formerly CS 182), Economics 1011a, Economics 1052, Economics 1071, or Economics 2056.

Computing Hardware (113856)

Woodward Yang

Vijay Janapa Reddi

2024 Fall (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on *digital* devices and systems, and it complements ENG-SCI 152, which focuses on devices and systems that use analog electronics. Topics include: combinational and sequential logic; computer architecture; machine code; and altogether the infrastructure and computational framework composing a MIPS processor. Consideration is given in design to interactions between hardware and software systems. Students will design application specific hardware for an embedded system.

Course Notes:

This course was previously numbered CS 141.

Recommended Prep:

CS50 or programming experience required.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Networks (118418)

H. Kung

2025 Spring (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Computer networking has enabled the emergence of mobile and cloud computing, creating two of the most significant technological breakthroughs in computing. Computer networks have become even more critical these days since remote activities have become a new norm. We expect several focuses in the coming years. First, we will witness the emergence of 5G wireless mobile networks, which have already begun to replace the current 4G networks. Second, cybersecurity and privacy will receive unprecedented attention from the industry. Third, blockchain technology, which underlies Bitcoin, creates a new trusted network infrastructure for many new distributed applications. Fourth, distance learning and virtual meetings will push the limits of current multicast and network management technologies. In this course, students will learn basic networking protocols as well as these timely topics.

Course Notes:

This course was previously numbered CS 143.

Recommended Prep:

CS50 (or programming experience) and a strong interest in the subject matter. Lab sessions will be provided to give extra support.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 1450

Networking at Scale (208314)

Minlan Yu

2025 Spring (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course studies computer network topics including Layer 2/Layer 3 topology, routing, transport protocols, traffic engineering, network functions, programmable switches, and software-defined networking. Modern networks have grown to large scale (connecting millions of servers) and high speed (terabits per second) to meet the needs of cloud applications in business and society. Thus, in addition to learning the conventional concepts in networking, we will also discuss how to adapt these concepts to large-scale networks. These discussions will hopefully help deepen our understanding of networking technologies. This course includes lectures and system programming projects. More information can be found at <https://github.com/minlanyu/cs145-site>.

Course Notes:

This course was previously numbered CS 145.

Recommended Prep:

System programming at the level of CS 61.

Additional Course Attributes:

Attribute	Value(s)
GSD: Recommended Elective	MDE approved SEAS 100 level course

Computer Science 1520

Programming Languages (119629)

Nada Amin

2025 Spring (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Comprehensive introduction to the principal features and overall design of both traditional and modern programming languages, including syntax, formal semantics, abstraction mechanisms, modularity, type systems, naming, polymorphism, closures, continuations, and concurrency. Provides the intellectual tools needed to design, evaluate, choose, and use programming languages.

Course Notes:

This course was previously numbered CS 152.

Recommended Prep:

Computer Science 51; Computer Science 1210 (formerly CS 121) is recommended. Students must have good programming skills, be very comfortable with recursion, proofs, basic mathematical ideas and notations, including sets, relations, functions, and induction.

Additional Course Attributes:

Computer Science 1610

Operating Systems (113847)

James Mickens

2025 Spring (4 Credits)

Schedule:

MW 0215 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course focuses on the design and implementation of modern operating systems. The course discusses threads, processes, virtual memory, schedulers, and the other fundamental primitives that an OS uses to represent active computations. An exploration of the system call interface explains how applications interact with hardware and other programs which are concurrently executing. Case studies of

popular file systems reveal how an OS makes IO efficient and robust in the midst of crashes and unexpected reboots. Students also learn how virtualization allows a physical machine to partition its resources across multiple virtual machines. Class topics are reinforced through a series of intensive programming assignments which use a real operating system.

Course Notes:

This course was previously numbered CS 161.

Recommended Prep:

Computer Science 61.

Data Systems (119249)

Stratos Idreos

2024 Fall (4 Credits)

Schedule:

TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

We are in the big data era and data systems sit in the critical path of everything we do. We are going through major transformations in businesses, sciences, as well as everyday life - collecting and analyzing data changes everything and data systems provide the means to store and analyze a massive amount of data. This course is a comprehensive introduction to modern data systems. The primary focus of the course is on the modern trends that are shaping the data management industry right now: column-store and hybrid systems, shared nothing architectures, cache conscious algorithms, hardware/software co-design, main-memory systems, adaptive indexing, stream processing, scientific data management, and key-value stores. We also study the history of data systems, traditional and seminal concepts and ideas such as the relational model, row-store database systems, optimization, indexing, concurrency control, recovery and SQL. In this way, we discuss both how and why data systems evolved over the years, as well as how these concepts apply today and how data systems might evolve in the future. We focus on understanding concepts and trends rather than specific techniques that will soon be outdated - as such the class relies largely on recent research material and on a semi-flipped class model with a lot of hands-on interaction in each class.

Course Notes:

This course was previously numbered CS 165.

Recommended Prep:

Computer Science 51 and Computer Science 61.

Computer Science 1780

Engineering Usable Interactive Systems (220125)

Elena Glassman

2025 Spring (4 Credits)

Schedule:

MW 0345 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

In this course, students learn critical techniques, concepts, and technologies for building usable interactive systems, alone and in pairs. Assignments provide hands-on experiences with different modern frameworks, platforms, and libraries while conceptual commonalities and distinctions are annotated and explained. Lectures cover relevant basic and advanced topics, such as human cognitive capabilities, iterative prototyping, and human-AI interaction. The final project will require both front-end and back-end development, iterative prototyping with humans, and a final evaluation with target users. Designed for advanced undergraduates.

Course Notes:

This course was previously numbered CS 178.

Recommended Prep:

Programming experience required, i.e., CS 51 and/or CS 61; some experience debugging on one's own with online community resources, and some familiarity with design recommended, e.g., CS 179, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)

Introduction to Computational Linguistics and Natural-language Processing (117372)

Stuart Shieber

2024 Fall (4 Credits)

Schedule:

MWF 1115 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

75

Natural-language-processing applications are ubiquitous: Alexa can set a reminder, or play a particular song, or provide your local weather if you ask; Google Translate can make documents readable across languages; ChatGPT can be prompted to generate convincingly fluent text, which is often even correct. How do such systems work? This course provides an introduction to the field of computational linguistics, the study of human language using the tools and techniques of computer science, with applications to a variety of natural-language-processing problems such as these. You will work with ideas from linguistics, statistical modeling, machine learning, and neural networks, with emphasis on their application, limitations, and implications. The course is lab- and project-based, primarily in small teams, and culminates in the building and testing of a question-answering system.

Course Notes:

This course was previously numbered CS 187.

Recommended Prep:

Programming ability and computer science knowledge at the level of CS51; knowledge of discrete mathematics, including basic probability, statistics, and logic at the level of CS20; some familiarity with Python programming.

Computer Science 1960

Designing K-12 Computer Science Learning Experiences (221939)

Karen Brennan

2025 Spring (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

From computational thinking to workforce arguments, there is considerable interest in and excitement about including computer science education for all K-12 students. Yet, unlike other disciplines with a much longer history in formal schooling, the interest in computer science education is not yet supported by commensurate attention to research and teacher practice. In this course, we will examine the state of K-12 computing education: questioning its value, examining its history, and imagining and contributing to its potential. The course will be organized as both a reading group and a lab, building a community of people who are committed to K-12 CS education. Each week you will read classic and current research, and write accompanying memos to document your evolving understandings of the field. Throughout the course, either individually or with partners, you will develop an independent project that explores the design of K-12 computer science learning experiences. Some examples of possible projects include: designing CS-standalone or cross-curricular learning activities and curriculum, building a programming language for novices, developing an annotated bibliography, critically analyzing policy documents such as curriculum frameworks and standards from around the world, or contributing to current K-12 CS education research initiatives.

Course Notes:

The course enrollment procedure will be posted to the course website. Students who enroll in the course will be expected to engage in a term-long project related to K-12 computer science education. No auditors. This course is also offered as EDU T217 at HGSE. This course was previously numbered CS 196.

Recommended Prep:

Prior (or anticipated) experience with K-12 computer science is encouraged.

High Performance Computing for Science and Engineering (128104)

Ignacio Becker Troncoso

2025 Spring (4 Credits)

Schedule:

TR 0215 PM - 0330 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

With manufacturing processes reaching the limits in terms of transistor density on today's computing architectures, efficient modern code must exploit parallel execution to maintain scaling of available hardware resources. The use of computers in academia, industry and society is a fundamental tool for solving (scientific) problems while the "think parallel" mindset of code developers is still lagging behind. The aim of this course is to introduce the student to the fundamentals of parallel programming and its relationship on computer architectures. Various forms of parallelism are discussed and exploited through different programming models with focus on shared and distributed memory programming. The learned techniques are tried out by means of homework, lab sessions and a term project.

Course Notes:

This course was previously numbered CS 205.

Recommended Prep:

Students are expected to have some programming experience and understanding of algorithms and data structures. Basic familiarity with C, C++ or a similar lower level compiled programming language is required. Some knowledge of navigation in the Linux command line is needed to work with the compute cluster. Prerequisites include CS50, CS61, CS1070 (formerly CS107), CS1610 (formerly CS161) or AC207. This class is not suited for first-year students. This class will not teach basics of programming.

Computer Science 2241

Algorithms at the Ends of the Wire (111994)

Michael Mitzenmacher

2025 Spring (4 Credits)

Schedule:

TR 0345 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Covers topics related to algorithms for big data, especially related to networks and database systems. Themes include sketch-based data structures, compression, graph and link information, and information theory. Requires a major final research-based project.

Course Notes:

This course was previously numbered CS 222.

Recommended Prep:

Computer Science 1240 (formerly CS 124).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 2243

Algorithms for Data Science (156211)

Sitan Chen

2024 Fall (4 Credits)

Schedule:

MW 0215 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

50

This is a graduate topics class on algorithmic challenges in modern machine learning and data science. We will touch upon a number of domains (generative modeling, deep learning theory, adversarial robustness, inverse problems, Bayesian inference) and frameworks for algorithm design (spectral/tensor methods, moment methods, message passing, SDP hierarchies), focusing on provable guarantees. The theory draws upon a range of techniques from stochastic calculus, harmonic analysis, statistical physics, algebra, and beyond. We will also explore the myriad modeling challenges in building this theory and prominent paradigms (semi-random models, smoothed complexity, oracles) for going beyond traditional worst-case analysis.

Course Notes:

This course was previously numbered CS 224.

Recommended Prep:

Mathematical maturity and proficiency with proofs, probability, and linear algebra strongly recommended. Stat 110 and CS 1210/1240 (or equivalent) required, except with permission from the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Computer Science 2252

Topics in Theoretical Computer Science: Spectral Graph Theory in CS (211336)

Salil Vadhan

2025 Spring (4 Credits)

Schedule:

MW 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Eigenvectors and eigenvalues of graphs and their applications to computer science problems, such as clustering, solving linear systems, derandomization, sampling via MCMC, counting, web search, and

maximum flow.

Course Notes:

This course was previously numbered CS 229CR.

Recommended Prep:

Algorithms and theoretical computer science at the level of CS 1240 (formerly CS 124) or CS 1200+1210 (formerly CS 120+121) and linear algebra at the level of Applied Mathematics 22a or Math 21b.

Additional Course Attributes:

Computer Science 2270

Cryptography (213331)

Boaz Barak

2025 Spring (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Cryptography is as old as human communication itself, but has undergone a revolution in the last few decades. It is now about much more than "secret writing" and includes seemingly paradoxical notions such as communicating securely without a shared secret, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as fully homomorphic encryption and software obfuscation. This is a proof-based course that will be best appreciated by mathematically mature students.

Course Notes:

This course will be offered in both an undergraduate and graduate versions. The graduate version will involve an additional project. This course was previously numbered CS 227.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Computer Science 2280

Computational Learning Theory (113296)

Leslie Valiant

2025 Spring (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Possibilities of and limitations to performing learning by a computational process. Computationally feasible generalization and its limits. Topics include computational models of learning, polynomial time learnability,

learning from examples and from queries to oracles. Applications to Boolean functions, languages and geometric functions. Darwinian evolution as learning.

Course Notes:

This course was previously numbered CS 228.

Recommended Prep:

Computer Science 1210 (formerly CS 121) or equivalent.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 2370

Economic Analysis as a Frontier of Theoretical Computer Science (221932)

Yannai Gonczarowski

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

How can we use tools from statistical learning theory to design better auctions? Can we use cryptography to better implement matching mechanisms? And how should we approach formally proving that welfare in Nash equilibria for many games is not "much worse" than in the social optimum? This course explores the application of diverse ideas, techniques, and solution aesthetics from theoretical computer science to derive meaningful new insights into classic economic problems. The three main themes are approximation theorems (including bounding the loss in revenue or welfare due to lack of information, to strategic behavior, or to impracticality of the optimal mechanism); various notions of complexity (including computational complexity, communication complexity, and sample complexity); and cryptographic tools (including cryptographic commitments, multiparty computation, and zero-knowledge proofs). Economic applications mostly include analysis of equilibria, pricing, and mechanism design.

Course Notes:

This course is also offered as ECON 2070. Students may not take both for credit. This course was previously numbered CS 237.

Recommended Prep:

Computer Science 1360 (formerly CS 136)

Additional Course Attributes:

Attribute	Value(s)

FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 2380

Optimized Democracy (217635)

Ariel Procaccia

2025 Spring (4 Credits)

Schedule:

MW 1115 AM - 1230 PM

The course examines the mathematical and algorithmic foundations of democracy, running the gamut from theory to applications. The goal is to provide students with a rigorous perspective on, and a technical toolbox for, the design of better democratic systems. Topics include computational social choice (identifying optimal voting rules), fair division with applications to political redistricting (avoiding gerrymandering) and apportionment (allocating seats on a representative body), sortition (randomly selecting citizens' assemblies), liquid democracy (transitively delegating votes), and weighted voting games (analyzing legislative power through cooperative game theory).

Course Notes:

This course was previously numbered CS 238.

Recommended Prep:

Students should have a basic understanding of probability theory and algorithms. Examples of concepts that are useful to know include Markov chains, concentration inequalities, NP-hardness and linear programming. Mathematical maturity (following proof sketches in real time) is expected. Although this is primarily a graduate course, undergraduate students who have previously taken Stat 110 and CS 1240 (formerly CS 124, or similar courses) are very welcome.

Computer Science 2420

Computing at Scale (160624)

H. Kung

2024 Fall (4 Credits)

Schedule:

MW 0345 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Specialized AI accelerators enable efficient AI computations for a variety of tasks at various scales using a wide range of parallel, distributed, and embedded computing platforms. For example, for large generative AI applications such as ChatGPT and Stable Diffusion, these accelerators allow (1) distributed model training and low-latency, high-throughput inference serving in the cloud, and (2) efficient private training and inference using local knowledge on resource-constrained edge devices. In this course, students will learn systematic methods for mapping typical deep learning computations, such as convolutional neural networks and transformers, onto numerous computing cores or nodes. They will also learn techniques for co-designing machine learning models, computational algorithms, software, and hardware. Upon successful completion of this course, students will be equipped to tackle the challenging tasks of designing and utilizing energy-efficient, high-performance AI accelerators.

Course Notes:

This course was previously numbered CS 242.

Recommended Prep:

Recommended prerequisites include: (1) programming experience (Python, MatLab or C/C++ should be fine); (2) basic knowledge in systems and machine organization; (3) familiarity in data structures and algorithms; and (4) maturity in mathematics (e.g., being able to

make use of undergraduate linear algebra and statistics). For students with strong interest in the subject matter and related research experience, one of these four requirements may be waived. Labs and extra support will provide preparation in the first weeks of the semester to help students quickly obtain parts of the background necessary to excel in the course.

Advanced Computer Networks (212686)

Minlan Yu

2024 Fall (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a graduate-level course on computer networks. This course offers an in-depth exploration of a subset of advanced topics in networked systems. We will discuss the latest developments in the entire networking stack, the interactions between networks and high-level applications, and their connections with other system components such as compute and storage.

In this year's edition, we will use machine learning as a prime example to understand its unique requirements and challenges in the context of networking. As machine learning applications increasingly rely on larger models and faster accelerators, the demand for enhanced networking capabilities becomes imperative. Throughout this course, we will study cutting edge networking solutions and principles for co-designing networks with compute and storage, to meet the evolving needs of machine learning applications. The course will include lectures, in-class presentations, paper discussions, and a research project.

More information of this course is at <https://github.com/minlanyu/cs243-site>.

Course Notes:

This course was previously numbered CS 243.

Recommended Prep:

System programming at the level of CS 61, CS 1430 (formerly CS 143), CS 1450 (formerly CS 145). Prior knowledge of basic networking concepts is useful.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 2540

Formal Methods for Computer Security (223992)

Stephen Chong

2025 Spring (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores formal methods for computer security, including formal security models, relationships between security properties/policies and enforcement mechanisms, principled techniques and tools to specify, analyze, and construct secure computer systems. Specific topics include properties, hyperproperties, side channels, reasoning about cryptographic protocols, information flow, authorization logics, and verification techniques. Assessment will include homeworks and/or small projects during the semester as well as a final, larger project that is open-ended and driven by student interests.

Course Notes:

This course was previously numbered CS 254.

Recommended Prep:

Suitable for graduate students and advanced computer science undergraduates. Undergraduates should be comfortable with programming (e.g., CS51 or more advanced), systems (e.g., CS61 or more advanced), and formal reasoning and proofs (at least two #formalreasoning courses).

Additional Course Attributes:

Big Data Systems (113660)

Stratos Idreos

2025 Spring (4 Credits)

Schedule:

TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Big data is everywhere. A fundamental goal across numerous modern businesses and sciences is to be able to utilize as many machines as possible, to consume as much information as possible and as fast as possible. The big challenge is how to turn data into useful knowledge. This is a moving target as both the underlying hardware and our ability to collect data evolve. In this class, we discuss how to design data systems, data structures, and algorithms for key data-driven areas, including relational systems, distributed systems, graph systems, noSQL, newSQL, machine learning, and neural networks. We see how they all rely on the same set of very basic concepts and we learn how to synthesize efficient solutions for any problem across these areas using those basic concepts.

Course Notes:

This course was previously numbered CS 265.

Recommended Prep:

CS 1650 (formerly CS 165) or permission of instructor.

Additional Course Attributes:

Computer Science 2790R

Research Topics in Human-Computer Interaction (121985)

Elena Glassman

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Students will read, write about, prepare presentations about, and discuss human-computer interaction (HCI) and HCI-relevant work with a focus on papers about interfaces and automation that work especially well with (or clash against) human cognitive capabilities. Papers will primarily be on the building and evaluation of novel systems, as well as theories of and studies characterizing human cognition relevant to human-AI interaction scenarios. As a semester-long final project, students will pursue a research project of their own design in self-organized groups and present their findings in writing and orally in a conference-style format, as means to understand more deeply the processes behind HCI research.

Course Notes:

Designed for PhD students from all areas; a diversity of disciplinary backgrounds has greatly benefited past student teams. Several student teams have subsequently iterated on and published their projects in top-tier venues. Masters students and advanced undergraduates are welcome, particularly those who wish to write a thesis or apply for a PhD in an area related to Human-Computer Interaction. This course was previously numbered CS 279R.

Recommended Prep:

Undergraduates are strongly recommended to have taken at least one of these related Computer Science classes first: 1710/171, 179, 1780/178, 79, 73, or 2760/276. Exceptions may be made in light of prior relevant research experiences.

Computer Science 2822R

Topics in Machine Learning: Inverse Problems in Reinforcement Learning-with healthcare applications (156936)

Finale Doshi-Velez

2024 Fall (4 Credits)

Schedule: MW 0945 AM - 1100 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

In the standard reinforcement learning setting, an agent learns how to optimize its rewards via interactions with the world. In this course, we will consider the flip of this question: suppose that we observe an agent acting in the world, and we know that agent is acting reasonably (that is, somehow near optimal). What does that tell us about the agent's goal, that is, their reward function? About the dynamics of the world? We will first review the fundamentals through lectures, readings, and coding assignments. Students will also engage in a semester-long project applying and extending these ideas to problems related to a real healthcare scenario: decision-making in the ICU. Decisions in the ICU are made by multiple different people, each of whom may have a different focus. What can we learn by observing their behavior? (Other project options also possible.)

Course Notes:

This course was previously numbered CS 282R.

Recommended Prep:

Students are expected to be fluent in basic linear algebra (matrix

manipulation), basic statistics (e.g. rules of expectations, importance sampling), basic reinforcement learning (at a CS181/181 level), and basic software engineering (e.g. programming in Python and numpy, data with 10,000+ rows).

Multi-Robot Systems: Control, Communication, and Security (216508)

Stephanie Gil

2024 Fall (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The ability to connect devices over long distances, via the internet, changed our world. The second phase of this revolution, that we are still living in today, came about when these devices became wireless. Now we are at the cusp of a new phase of this evolution where devices are connected, wireless, and controlled – i.e. the robot revolution.

Multi-robot systems are becoming more pervasive; from future autonomous vehicle fleets, to drones, to manufacturing robots. As a result, the question of how to control, coordinate, and secure these systems has been a growing topic in the robotics literature in recent years. In this seminar-style course we will do a deep dive into this topic by reviewing classic and recent results in multi-agent planning and control literature. We will cover a wide gamut of applications from control of groups of flying drones, to decision making in autonomous car networks, to space exploring CubeSats.

This class will treat both the theory and the practical applications behind multi-robot systems. Students with mathematical inclinations and exposure to graph theory, probability theory, linear algebra, and algorithms will derive the most benefit from this course.

Course Notes:

This course is a graduate-level seminar course. Motivated advanced undergraduate students are also welcomed. This course was previously numbered CS 286.

Recommended Prep:

It will be assumed that students have a strong command of calculus and basic probability theory. An understanding of mathematical optimization methods is preferable. A background in algorithms, dynamics/controls, and intro to robotics would be beneficial.

Additional Course Attributes:

AI for Social Impact (217643)

Milind Tambe

2024 Fall (4 Credits)

Schedule:

MW 0345 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Recent years have seen AI successfully applied to societal challenge problems. Indeed, recognizing the potential of AI for tremendous social impact in the future, "AI for social impact" is growing as a subdiscipline within AI. In this course, we will discuss successful case studies of use of AI for public health, environmental sustainability, public safety and public welfare. Simultaneously, we will discuss key foundations of the area of AI for social impact. To that end, among other topics, we will focus on challenges in AI for Social Impact, what makes projects successful, how to investigate project impact in the field and ethical considerations for such projects. A key part of this course will be AI4SI projects with non-profits.

Course Notes:

This course was previously numbered CS 288.

Recommended Prep:

Students must have adequate background in AI, such as CS 1810 (formerly CS 181) or 1820 (formerly CS 182) or equivalent introductory courses. Students who have previous experience in AI for social impact, e.g., interdisciplinary projects that considered direct societal applications, will be given priority.

Seminar on Effective Research Practices and Academic Culture (216811)

John Girash

2024 Fall (2 Credits)

Schedule:

F 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a reading and discussion-based seminar designed for entering Computer Science Ph.D. students. This course prepares students to manage the difficult and often undiscussed challenges of Ph.D. programs through sessions on research skill building (e.g. paper reading, communication), soft skill building (e.g. managing advising relationships, supporting your peers), and academic culture (e.g. mental health in academia, power dynamics in scientific communities), as well as research and professional-oriented discussions.

This is a full-year, 4-unit course, meeting once a week in each of the fall and the spring. Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Notes:

This course is required for new (G1) Computer Science Ph.D. students. It satisfies one of the CS 200-level electives (one of the 10 required classes for the Computer Science Ph.D. degree). SEAS G1 Ph.D. students in related fields may petition to enroll with instructor permission. This course was previously numbered CS 290A.

Course Evaluation	Course Evaluation Exempt

Computer Science 3100

Computational Mechanism Design, Electronic Marketplaces, and Multi-Agent Systems (116301)

David Parkes

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 310.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Computer Science 3100

Computational Mechanism Design, Electronic Marketplaces, and Multi-Agent Systems (116301)

David Parkes

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 310.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Computer Science 3140

Visual Computing (124155)

Hanspeter Pfister

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 314.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 3140

Visual Computing (124155)

Hanspeter Pfister

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 314.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 3160

Social Computing: Computation and Economics (125388)

Yiling Chen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 316.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

FAS Divisional Distribution	None

Computer Science 3160

Social Computing: Computation and Economics (125388)

Yiling Chen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 316.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Computer Science 3180

Machine Learning, Visualization, and Human-Computer Interaction (219963)

Martin Wattenberg

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 318.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Computer Science 3180

Machine Learning, Visualization, and Human-Computer Interaction (219963)

Martin Wattenberg

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 318.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Computer Science 3200

Data Systems Design (156744)

Stratos Idreos

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Course Notes:****This course was previously numbered CS 320.****Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Computer Science 3200

Data Systems Design (156744)

Stratos Idreos

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Course Notes:****This course was previously numbered CS 320.****Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3210

Graduate Research with Procaccia (216720)

Ariel Procaccia

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 321.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Computer Science 3210

Graduate Research with Procaccia (216720)

Ariel Procaccia

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 321.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Computer Science 3240

Human-Computer Communication through Natural, Graphical, and Artificial Languages (111666)

Stuart Shieber

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 324.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Computer Science 3240

Human-Computer Communication through Natural, Graphical, and Artificial Languages (111666)

Stuart Shieber

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 324.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Computer Science 3250

Communicating with Machines About Data (212951)

Elena Glassman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 325.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 3250

Communicating with Machines About Data (212951)

Elena Glassman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 325.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Computer Science 3260

Intelligent Interactive Systems and Human-Computer (126331)

Krzysztof Gajos

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 326.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Computer Science 3260

Intelligent Interactive Systems and Human-Computer (126331)

Krzysztof Gajos

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 326.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 3270

Tools for Reliable Meaningful Efficient Communication (160962)

Madhu Sudan

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 327.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Computer Science 3270

Tools for Reliable Meaningful Efficient Communication (160962)

Madhu Sudan

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 327.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Computer Science 3320

Complexity of Quantum Many-Body Systems: Area Laws and Hardness of Approximation (219961)

Anurag Anshu

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 332.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Computer Science 3320

Complexity of Quantum Many-Body Systems: Area Laws and Hardness of Approximation (219961)

Anurag Anshu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 332.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Computer Science 3350

Complexity, Algorithms, Cryptography, and Convex Programming (206566)

Boaz Barak

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 335.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 3350

Complexity, Algorithms, Cryptography, and Convex Programming (206566)

Boaz Barak

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 335.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 3360

Algorithmic Statistics (222933)

Sitan Chen

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Course Notes:****This course was previously numbered CS 336.****Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3360

Algorithmic Statistics (222933)

Sitan Chen

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Course Notes:****This course was previously numbered CS 336.****Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 3440

Computer Architecture: Modeling and Design (116858)

David Brooks

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 344.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3440

Computer Architecture: Modeling and Design (116858)

David Brooks

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 344.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3450

Datacenter networking (117839)

Minlan Yu

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 345.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 3450

Datcenter networking (117839)

Minlan Yu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 345.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 3460

High-Performance Computer Systems (117841)

Michael Smith

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 346.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Computer Science 3460

High-Performance Computer Systems (117841)

Michael Smith

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 346.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Computer Science 3480

Computer Vision (120091)

Todd Zickler

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Course Notes:****This course was previously numbered CS 348.****Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Computer Science 3480

Computer Vision (120091)

Todd Zickler

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Course Notes:****This course was previously numbered CS 348.****Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 3510

Research in Programming Languages, Design and Implementation (216721)

Nada Amin

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 351.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Computer Science 3510

Research in Programming Languages, Design and Implementation (216721)

Nada Amin

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 351.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Computer Science 3560

Computational Complexity, Parallel Computation, Computational Learning, Neural Computation (113027)

Leslie Valiant

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 356.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3560

Computational Complexity, Parallel Computation, Computational Learning, Neural Computation (113027)

Leslie Valiant

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 356.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Computer Science 3580

Computational Complexity, Cryptography, and Pseudorandomness (115136)

Salil Vadhan

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 358.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3580

Computational Complexity, Cryptography, and Pseudorandomness (115136)

Salil Vadhan

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 358.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3600

On-line Algorithms and Randomized Algorithms (109883)

Michael Mitzenmacher

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 360.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Computer Science 3600

On-line Algorithms and Randomized Algorithms (109883)

Michael Mitzenmacher

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 360.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Computer Science 3610

Topics in Distributed Systems (119043)

James Waldo

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 361.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Computer Science 3610

Topics in Distributed Systems (119043)

James Waldo

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 361.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Computer Science 3620

Software Systems: Security, Performance, and Robustness (160959)

James Mickens

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 362.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Computer Science 3620

Software Systems: Security, Performance, and Robustness (160959)

James Mickens

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 362.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Computer Science 3640

Programming Languages and Security (126329)

Stephen Chong

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 364.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Computer Science 3640

Programming Languages and Security (126329)

Stephen Chong

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 364.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3720

Topics in Theory for Society (204561)

Cynthia Dwork

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 372.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 3720

Topics in Theory for Society (204561)

Cynthia Dwork

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Course Notes:

This course was previously numbered CS 372.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 3740

Graduate Research with Gonczarowski (219962)

Yannai Gonczarowski

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 374.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Computer Science 3740

Graduate Research with Gonczarowski (219962)

Yannai Gonczarowski

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 374.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Computer Science 3760

Computer Graphics (121071)

Steven Gortler

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Course Notes:

This course was previously numbered CS 376.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth and Planetary Sciences
Subject: Earth & Planetary Sciences

Earth & Planetary Sciences 6

Introduction to Environmental Science and Engineering (216015)

Steven Wofsy
Bryan Yoon

2024 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a

This course will provide students with an introduction to environmental science and engineering by providing an overview of current environmental issues, including climate change, air pollution, and water pollution. Students critically evaluate underlying science and knowledge limitations, and explore the nexus between scientific knowledge, regulatory frameworks, and engineering solutions to some of the world's most pressing environmental problems. The course will emphasize the interconnected biological, geological, and chemical cycles of the earth system including the multi-dimensional impacts of human activity.

Course Notes: This course has weekly lab sections.
EPS 6 is also offered as ESE 6. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans.

Recommended Prep: Math 1B required (or concurrent), or permission of the instructor.
The course presumes basic knowledge in chemistry and physics at the high school level. Students will acquire additional skills and knowledge in these areas, as applied to environmental problems, as well as learning basic data analysis and coding skills.

Requirements: Prerequisite/Co-requisite: Math 1B (or concurrent), or permission of the instructor

Additional Course Attributes:

Table with 2 columns: Attribute, Value(s). Rows include All: Cross Reg Availability, FAS: Course Level, FAS Divisional Distribution, and Course Evaluation.

Earth & Planetary Sciences 10

A Brief History of the Earth (203888)

Rebecca Fischer

2024 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This is an introduction to Earth and Planetary science for EPS concentrators and an overview, for those outside the field, of the critical events and processes that have shaped the Earth's evolution and its place in the solar system. The course is designed to highlight the processes, from tectonic plate to microbial scale, that drive the Earth's response to (internal and external) perturbations and we will explore both the time scale of those perturbations and the limits of the Earth's resilience. By considering the full sweep of geological time, from the early Earth to the modern world, the course will take advantage of a series of natural experiments to compare the Earth system during periods with and without atmospheric oxygen, animals, land plants and polar ice sheets, and to compare it, on occasion, with other terrestrial planets.

Course Notes:

This course includes a mandatory lab component.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 50

The Fluid Earth: Oceans, Atmosphere, Climate, and Environment (128224)

Marianna Linz

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to the fluid Earth, emphasizing Earth's weather and climate, the carbon cycle, and global environmental change. The physical concepts necessary for understanding the structure, motion and energy balance of the atmosphere, ocean, and cryosphere are covered first, and then these concepts are applied in exploring major earth processes. Examples from Earth's past history, on-going changes in the climate, and implications for the future are highlighted.

Course Notes:

Course includes lectures twice a week, and either a one hour section or a lab each week. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	FAS small class override
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 52

Global Geophysics (109231)

Jerry Mitrovica

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a comprehensive introduction to global geophysics. The course serves as a bridge between introductory Earth science courses and higher-level courses in tectonics, seismology and planetary sciences, though no previous experience in Earth Science is necessary. Topics include plate tectonics, the Earth's composition and thermal state, rheology, seismology, ice age dynamics, mantle convection, the Earth's gravity field and geodesy, sea-level changes from deep time to modern, and (if time permits) Earth rotation.

Course Notes:

This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Recommended Prep:

Applied Mathematics 22a/b (or Mathematics 21a/b; or Mathematics 22a/b); Physics 15a/b (prior or concurrent) or Physical Sciences 12a/b; or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
Course Evaluation	FAS small class override
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 53

Marine Geochemistry (126174)

David Johnston

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The ocean is central to how our planet will respond to anthropogenic climate change, and understanding its chemistry unlocks a deeper look into that response. This course is an introduction to that conversation, drawing from real world examples (marine CO₂ uptake, coastal eutrophication, marine deoxygenation, the effects of mining, warming of the arctic, etc) and employs a variety of avenues for engagement. The class will include lectures, asynchronous video content, student-led modules, group work and discussions, all supported by a weekly section to dig deeper into key concepts. Along the way, the class will cover basic chemical principles (thermodynamics, solubility, saturation, redox, etc.) and the cycling of key biogeochemical elements (carbon, hydrogen, oxygen, nitrogen, sulfur, and phosphorus) in and around the ocean.

Course Notes:

This course includes a weekly one-hour section. This course fulfills the EPS sub-discipline requirement of either Atmosphere(s) and Oceans or Earth History and Geobiology. Given in alternate years.

Recommended Prep:

A course in college chemistry is recommended.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students

Earth & Planetary Sciences 56

The History and Evolution of Life on Earth (108969)

Javier Ortega-Hernandez

Nadja Drabon

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Within our solar system, Earth is distinguished as the planet with life. Living organisms are complex entities that originated from planetary processes, have been sustained by the same processes for approximately four billion years, and have fundamentally affected the functioning and composition of the Earth's surface and atmosphere. In this course we will investigate the ways that Earth and life interact with each other, focusing on the biogeochemical cycles of major elements, and the interplay between complex organisms and their ever-changing environment. This will provide a framework for interpreting the fascinating history of life reconstructed from a comprehensive understanding of the rock record, the diversity of life through time, and evolutionary biology.

Course Notes:

Course includes a weekly three-hour lab and one field trip.

EPS 56 is also offered as OEB 56. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

Recommended Prep:

EPS 10, OEB 10, or Life Sciences 1b, or permission of instructor.

The Missing Matlab Course: A Practical Introduction to Programming and Data Analysis (122333)

Miaki Ishii

2024 Fall (4 Credits)

Schedule: TR 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Being able to write a working program is not just about syntaxes of the programming language but involves other skills such as debugging and being able to convert a problem at hand to a sequence of commands. This intense course develops these skills for successful program writing by being hands-on. Students will first learn new syntaxes and then spend time writing numerous scripts.

Course Notes:

No prior knowledge of MATLAB is required. Knowledge of basic algebra (vectors and matrices) is required. Course meeting time includes lecture and lab. Students are not allowed to audit the course.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes

Earth & Planetary Sciences 101

Global Warming Science 101 (214499)

Eli Tziperman

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the science of global warming/climate change meant to assist students in understanding issues that often appear in the news and public debates. The course is meant for any student with basic math preparation, not assuming prior science courses. Topics include the greenhouse effect and the consequences of the rise of greenhouse gasses, including sea level rise, ocean acidification, heat waves, droughts, glacier melting, hurricanes, forest fires, and more. An ability to critically evaluate observations, predictions, and risks will be emphasized throughout. The students will be involved in in-class quantitative analysis of climate observations, feedbacks, and models via Python Jupyter notebooks that will be provided.

Course Notes:

This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. E-PSCI 101 is also offered as ESE 101. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 101. AB students may enroll in either E-PSCI 101 or ESE 101 to meet their concentration requirements.

Recommended Prep:

Basic calculus and ordinary differential equations, as covered, for example, by Math 19a or Math 21b. A minimal previous exposure to programming in any language is assumed; Python will be introduced as a part of the course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Quantitative Reasoning with Data	Yes
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 102

Data Analysis and Statistical Inference in the Earth and Environmental Sciences (216019)

Roger Fu

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Statistical inference, deterministic and stochastic models of data, denoising and filtering, data, visualization, time series analysis, image processing, Monte Carlo methods. The course emphasizes hands-on learning using real data drawn from atmospheric and environmental observations, applied by students in projects and presentations.

Course Notes:

E-PSCI 102 is also offered as ESE 102. Students may not take both for credit.

Recommended Prep:

Math 21 or Applied Math 22 a and b or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 109

Earth Resources and the Environment (114664)

John Shaw

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The course provides an overview of Earth's energy resources, with emphasize on the factors that control their global distributions and uses in our society. Lectures and labs will emphasize methods used to identify and exploit resources, as well as the environmental impact of these operations. Topics include: coal and acid rain; oil & natural gas, photochemical smog, oil spills; unconventional fossil resources (shale gas, tar sands); greenhouse gas emissions and climate; nuclear power and radioactive hazards; solar, hydroelectric, tidal, and geothermal power; energy storage (methane, hydrogen); and key materials (rare earth metals, lithium) required for the energy transition. Labs will emphasize datasets and tools (drilling methods, satellite remote sensing data, and subsurface imaging techniques) for discovering and developing resources, and assessing and mitigating environmental impacts.

Course Notes:

Course includes three hours of laboratory work each week and two field trips. E-PSCI 109 is also offered as ESE 109. Students may not take both for credit. Undergraduate engineering students should enroll in ESE 109. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.

Recommended Prep:

E-PSCI 10, EPS/ESE 6, an equivalent course, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	FAS small class override
FAS Divisional Distribution	Science & Engineering & Applied Science

Introduction to Planetary Materials and Earth Resources (109527)

Stein Jacobsen

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A comprehensive introduction to how the principles of mineralogy, phase equilibria, and the compositions of terrestrial and extraterrestrial materials are used to understand the evolution of the Earth and its resources. The course will discuss how we know that the Earth's crust has more than sufficient resources for its human population.

Course Notes:

Course includes a weekly lab and a 3-4 day field trip. This course fulfills the EPS sub-discipline requirement of either Earth History and Geobiology or Geology, Geophysics and Planetary Science.

Recommended Prep:

An introductory earth and or planetary science course and a course in college-level chemistry or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	FAS small class override
FAS Divisional Distribution	Science & Engineering & Applied Science

Climate and Atmospheric Physics Laboratory (213672)

Marianna Linz

2024 Fall (4 Credits)

Schedule:

R 1245 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will take a hands-on approach to learning climate and atmospheric physics. Some of the topics covered will include the Greenhouse effect, hurricanes, climate variability, the jet stream, and global climate modeling. Students will learn to create effective data visualizations and read scientific literature. Each week will have one 165-minute session to perform laboratory experiments, run models, or analyze data. In this flipped-classroom environment, knowledge transfer will occur primarily outside of class through readings and pre-class assignments in preparation for each session.

Course Notes:

E-PSCI 129 is also offered as ESE 129. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 129. AB students may enroll in either E-PSCI 129 or ESE 129 to meet their concentration requirements.

Recommended Prep:

Physics 12a/15a/16, Math 21A/B or equivalent or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 161

Applied Environmental Toxicology (216018)

Elsie Sunderland

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will examine the theory and practical application of environmental chemistry and toxicology for assessing the behavior, toxicity and human health risks of chemical contaminants in the environment. The goals of the course are to: (a) illustrate how various sub-disciplines in environmental toxicology are integrated to understand the behavior of pollutants; (b) demonstrate how scientific information is applied to inform environmental management decisions and public policy through several case studies; and (c) provide an introduction to the legislative framework in which environmental toxicology is conducted. This course will be directed toward undergraduate students with a basic understanding of chemistry and calculus and an interest in applied science and engineering to address environmental management problems.

Course Notes:

EPS 161 is also offered as ESE 161. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	FAS small class override
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 162

Hydrology (108750)

Kaighin McColl

2024 Fall (4 Credits)

Schedule:

TR 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to the global hydrologic cycle and relevant terrestrial and atmospheric processes. It covers the concepts of water and energy balance; atmospheric radiation, composition and circulation; precipitation formation; evaporation; vegetation transpiration; infiltration, storm runoff, and flood processes; groundwater flow and unsaturated zone processes; and snow processes.

Course Notes:

Course includes a weekly 1.5 hour lab session or section for discussion of assigned problems. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics, and Planetary Science. E-PSCI 162 is also offered as ESE 162. Students may not take both for credit.

Recommended Prep:

Mathematics 21a,b; AND Applied Physics 50a,b, Physics 15a,b or Physical Sciences 12a,b.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 166

State-of-the-Art Harvard Climate Observatory and Associated Instrumentation (216017)

James Anderson

2025 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

ESE/EPS 166 engages the new Harvard Climate Observatory that will fundamentally herald a new era in the quantitative dissection of the physics controlling critical climate systems. The central objective of the New Climate Observatory is to address this problem by introducing, for the first time, the development of a new generation of advanced technology that takes explicit advantage of recent major advances in laser systems, lidars, radars, nanoelectronics, photonics and optical designs in combination with advanced solar powered stratospheric aeronautical design. Together these enable a combination of long duration solar powered observing systems, each targeted at the highest priority risk factors that threaten global societal stability. The resulting observations will, for the first time, provide the irrefutable evidence needed for quantitative forecasts of the dominant risk factors stemming from the global use of fossil fuels.

While satellites have for years dominated the federal climate programs, for the purpose of developing tested and trusted quantitative forecasts of risk, satellites engender significant disadvantages. In sharp contrast to satellite systems, the new Harvard Climate Observatory provides, for the first time, orders of magnitude improvement in spatial and temporal resolution observations. ESE/EPS 166 will focus explicitly on this new generation of climate observations and forecasting.

Course Notes:

EPS 166 is also offered as ESE 166. Students may not take both for credit.

Recommended Prep:

Math 1a, b; PS 11 or equivalent; PS 12a, b (or Physics 15a, b or AP 50a, b)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 168

Human Environmental Data Science: Agriculture, Conflict, and Health (216421)

Peter Huybers

2024 Fall (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The purpose of this course is to develop understanding and guide student research of human and environmental systems. In class we will explore agriculture, conflict, and human health. Study of each topic will involve introduction data, mathematical models, and analysis techniques that build toward addressing a major question at each interface: How does climate change influence agricultural systems? Has drought or other environmental factors caused conflict? And how does the environment shape health outcomes? These topics are diverse, but are addressed using common analytical frameworks. Analytical approaches include simple mathematical models of feedback systems, crop development, and population disease dynamics; frequentist statistical techniques including linear, multiple linear, and panel regression models; and Bayesian methods including empirical, full, and hierarchical approaches. You will be provided with sufficient data, example code, and context to come to your own informed conclusions regarding each of these questions. Furthermore, topics covered in class will provide a template for undertaking independent research projects in small teams. Research will either extend on topics presented in class or address other human-environmental questions. Historically, such student projects have sometimes led to senior theses or publication in professional journals.

Course Notes:

The course is designed for upper-level undergraduates. E-PSCI 168 is also offered as ESE 168. Students may not take both for credit. Enrollment is by instructor permission. Total class capacity of 30 includes students in both E-PSCI 168 and ESE 168. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

There are no specific prerequisites but a background in environmental, physical or life sciences; experience in coding or statistical analysis; and/or facility with differential equations is useful.

Earth & Planetary Sciences 169

Seminar on Global Pollution Issues (216016)

Elsie Sunderland

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a cross-disciplinary overview of environmental science and how research contributes to public policy and human health risk assessment through a case study of a global pollution issue. The case study for the Fall of 2023 will be eutrophication and mercury cycling. The course this year will focus on exposing students to a combination of field, lab and modeling techniques used in environmental sciences through an intensive study of nutrient cycling and mercury bioaccumulation on Cape Cod, MA. The class will include field visits, lab work, and interactive group research aimed at synthesizing research findings. Experience conducting multidisciplinary environmental research and data analysis will be provided. Course Activities: Lectures, discussions, presentations, field/lab research, environmental modeling.

Course Notes:

EPS 169 is also offered as ESE 169. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

Two semesters of undergraduate chemistry including Physical Sciences 1 or Physical Sciences 11; Mathematics 1a & 1b. Knowledge of basic statistics is also helpful.

Earth & Planetary Sciences 200

Atmospheric Chemistry and Physics (111855)

Daniel Jacob

2024 Fall (4 Credits)

Schedule:

WF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Tropospheric and stratospheric gas and aerosol chemistry. Carbon, nitrogen, oxygen, and mercury cycles. Implications for climate change, air quality, ecosystems.

Course Notes:

Intended to be an introductory survey of atmospheric chemistry to serve first-year Ph.D. students in the atmospheric sciences as well as students specializing in other areas of Earth & Planetary Sciences or Environmental Science & Engineering. Undergraduate students may take EPS 200 with permission of the instructors.

Recommended Prep:

Mathematics 21 or Applied Math 22, basic college physics and chemistry.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 231

Climate Dynamics (119890)

Eli Tziperman

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The course covers climate dynamics and climate variability phenomena and mechanisms, and provides hands-on experience running and analyzing climate models, as well as using dynamical system theory tools. Among the subjects covered: energy balance and greenhouse effect, El Nino, thermohaline circulation, abrupt climate change, millennial variability (DO and Heinrich events), glacial-interglacial cycles, the ocean carbonate system and CO2 changes, warm past and future climates, and more.

Course Notes:

Given in alternate years.

Recommended Prep:

Background in geophysical fluid dynamics or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	FAS small class override
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 239

Confronting Climate Change: A Foundation in Science, Technology and Policy (126403)

Daniel Schrag

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course will consider the challenge of climate change and what to do about it. Students will be introduced to the basic science of climate change, including the radiation budget of the Earth, the carbon cycle, and the physics and chemistry of the oceans and atmosphere. We will look at reconstructions of climate change through Earth history to provide a context for thinking about present and future changes. We will take a critical look at climate models used to predict climate change in the future, and discuss their strengths and weaknesses, evaluating which forecasts of climate change impacts are robust, and which are more speculative. We will survey a range of climate change impacts, also looking at what strategies might be developed to better adapt to climate change, and the implications of those strategies for sub-national and international equity. We will look at the complex interactions between climate and human society, including climate impacts on agriculture and the relationship between climate change, migration and conflict.

The last half of the class will consider what to do about climate change. First, we will review the recent history of greenhouse gas emissions, as well as various national and international efforts to limit them in the future. We will discuss reducing carbon emissions using forestry, agriculture and land use, and then focus on how to transform the world's energy system to eliminate CO2 emissions. We will conclude by examining different strategies for accelerating changes in our energy systems to limit greenhouse gas emissions.

The course is intended as a foundational course on climate change for students from around the university, preparing them for more specialized courses in their individual concentrations or degree programs. No prerequisites are required; students will be encouraged to apply their different preparations and interests to the various individual and group assignments. The course emphasizes the scientific and technological aspects of climate change (including the clean energy transition), but in the context of current issues in public policy, business, design and public health. Graduate students in this course will be encouraged to engage with other students from around the university through regular discussion sessions. For graduate students in Earth and Planetary Sciences, this course will fulfill the departmental breadth requirement, but cannot be used as one of the 200-level required courses for depth.

Please note, graduate students will watch GENED 1094 lectures either live (or watch the recorded lectures on Panopto within 24 hours of class). GENED 1094 meets MW from 12:00-1:15 PM. In addition, all graduate students are required to attend a discussion session on Mondays at 4:30 PM at HKS.

Course Notes:

For graduate students in Earth and Planetary Sciences, this course will fulfill the departmental breadth requirement, but cannot be used as one of the 200-level required courses for depth.

Earth & Planetary Sciences 244

Atmospheric Evolution and Habitability of Terrestrial Planets (217618)

Robin Wordsworth

2025 Spring (4 Credits)

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Earth is our best-studied example of a rocky or 'terrestrial-type' planet, but there are many others. Our understanding of Earth's evolution and habitability is deepened by knowledge of the other rocky planets in

the solar system, such as Venus and Mars, as well as more distant objects such as Enceladus, Titan and Pluto. Further afield, our growing knowledge of terrestrial exoplanets is set to massively increase our understanding of planetary evolution and habitability in the future. The aim of this course is to provide a wide overview of the state of the art of this subject, with a focus on in-class discussion of the primary literature.

Earth & Planetary Sciences 248

Topics in Mineral Physics and Chemistry: Foundations of Mineral Physics (207625)

Rebecca Fischer

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This seminar course will generally focus on recent advances in understanding the physical and chemical properties of minerals and melts at extreme pressures and temperatures, with implications for the properties, composition, formation, and evolution of Earth and planetary cores and mantles. Students will read and present journal articles on relevant topics, and will rotate responsibility for leading discussions. Specific topics will vary each year offered. In spring 2023, this course will focus on the foundations of mineral physics: derivations of equations of state, discoveries of high pressure phases, comparisons to seismology, etc.

Course Notes:

The schedule for this course will be decided in consultation with students.

Additional Course Attributes:

Earth & Planetary Sciences 261

Sea Level Change (126477)

Jerry Mitrovica

2025 Spring (4 Credits)

Schedule: R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

The physical processes responsible for sea level changes over time scales extending from hours to hundreds of millions of years. Long-term sea-level trends: geological observations, physical mechanisms and eustasy, dynamic topography. Sea-level change on an ice age Earth (glacial isostatic adjustment, GIA): observations, viscoelastic loading, mantle viscosity structure, the Last Glacial Maximum (LGM), interglacial

sea-level change, archaeological applications, ongoing GIA. Ocean tides: equilibrium and non-equilibrium effects, tidal dissipation. Modern global sea level change: tide gauges and geodetic/altimetry/gravity observations (e.g., GNSS, GRACE, ICESat, CryoSat), ice melting and thermal expansion, ocean dynamics, sea-level fingerprinting, storm surges, coastal impacts and tipping points, adaptation strategies, case studies (Hurricane Katrina, Tuvalu, Bangladesh, Nile Delta).

Course Notes:

Given in alternate years.

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Recommended Prep:

College-level physics and math courses are required. Open to undergraduate students only with permission of instructor.

Projects in Sedimentary Petrology (126176)

David Johnston

2024 Fall (4 Credits)

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

This course will open with a guided tour of the types of tools and observations offered via sedimentary petrography, from the compositional and textural analyses of sedimentary rocks to the geochemical tools available to complement those observations. From here, students will develop their own set questions to pursue as the semester project, under the guidance of one of the course instructors.

This is a project-based class. The course will open with lectures on sedimentary petrology and then move to one-on-one projects that will conclude in a final project. Petrography topics will include: microscopy, mineral identification, rock fragments, texture - grain size and shape, burial diagenesis, major and trace element analysis, provenance analysis, alteration indices like CIA, A-CN-K and similar diagrams. Final projects will be at the discretion/interest of the student.

Recommended Prep:

EPS 186 and 187 or equivalent; or permission of instructor.

Science 5

An Introduction to Computation for Contemporary Science (219554)

Brendan Meade

Jeremy Bloxham

2025 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap: 50

From climate change and COVID to biological evolution and exoplanets, computation is an essential element of modern science. It allows us to find insights in a sea of data, ask principled questions about the future, and perform experiments without a laboratory. In this class, we'll learn the practice of computer programming, and quantitative questioning, through both data-driven and model-oriented case studies focused on the earth, the universe, and living systems. To explore these topics we'll use the Python programming language to create dynamic computational notebooks that interweave code, images, comments, questions, and analysis. This introductory class will illuminate how computation is changing the nature of science, and provide undergraduate students with the experience and tools to engage in scientific research.

Recommended Prep:

This course is designed as an accessible introduction to modern computer programming and does not require previous programming experience. Math experience beyond high school algebra, trigonometry, and pre-calculus is unnecessary.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes

Strange Tales: The Supernatural in Chinese Literature (212642)

Thomas Kelly

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to traditional Chinese literature by focusing on "tales of the strange." We will examine how ghosts, demons, fox spirits, and other liminal creatures haunt the literary imagination, stretching the possibilities of storytelling. Students will gain familiarity with masterpieces of Chinese literature and their intriguing afterlives in performance, film, and popular culture. Our discussions will consider how literary accounts of ghosts and the supernatural grapple with issues of gender and sexuality, the cultural meanings of death, the boundaries of human community, and the experience of historical trauma. We will focus on developing skills in close reading, while critically engaging theories of the "strange." No background in Chinese is required.

Gender, Body, and Boundaries in Chinese Culture (224277)

Wai-ye Li

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

We will explore gender and sexuality in Chinese culture through a series of topics: how is the human body and gender represented in literary, historical, and religious and philosophical writings? How have normative gender roles developed and changed? How does literature confirm or challenge these norms? How do writings on gender and sexuality help us understand desire, rituals, politics, marriage, family?

The Greatest Chinese Novel (108229)

Wai-yee Li

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The Story of the Stone (also known as The Dream of the Red Chamber) by Cao Xueqin (1715?-1763) is widely recognized as the masterpiece of Chinese fiction. It is also a portal to Chinese civilization. Encyclopedic in scope, this book both sums up Chinese culture and asks of it difficult questions. Its cult status also accounts for modern popular screen and television adaptations. Through a close examination of this text in conjunction with supplementary readings and visual materials, the seminar will explore a series of topics on Chinese culture, including foundational myths, philosophical and religious systems, the status of fiction, conceptions of art and the artist, ideas about love, desire and sexuality, gender roles, garden aesthetics, family and clan structure, and definitions of socio-political order.

Course Notes:

This course consists of a one-hour lecture followed by a two-hour seminar.

The Monster That Is History: History, Violence, and the Politics of Writing (224280)

David Wang

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This is an intermediate level course (100 level for both undergraduate and graduate students) that seeks to delineate the multivalence of Chinese violence across the modern century and inquire into its ethical and political consequences. Taking into account the campaigns of violence and brutality that have rocked generations of Chinese—often in the name of enlightenment, rationality, and utopian plenitude—this course places its arguments along two related axes: history and representation, modernity and monstrosity.

Modern Chinese Literary Discourse: A Comparative Survey (203529)

David Wang

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course aims to investigate modern Chinese literary thought by examining a range of writings, debates, and provocations from the 1910s to the 1960s. The course will guide students to read criticism by figures such as Liang Qichao, Lu Xun, and Wang Guowei; it also calls attention to writings that are less associated with literary criticism, such as those by Zhang Taiyan, Chen Yinke, and Li Zehou. Above all, The course seeks to examine the linkages between these critical discourses with both premodern Chinese literary thought and Western intellectual traditions.

Additional Course Attributes:

Chinese Literature 227R Section: 01

Early Chinese Historical Writings: Zuo zhuan and Related Materials (114804)

Wai-yee Li

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

We will study canonical works in early Chinese historical writings and explore questions of ideology, rhetoric, and narrative—the conceptions of time, change, and causation; modes of reasoning, argument, and observation; forms of speech and narrative. The purpose is to introduce seminar participants to these materials and their exegetical traditions.

Recommended Prep:

Reading knowledge of classical Chinese.

Theater and Theatricality in Early Modern China (212641)

Thomas Kelly

2025 Spring (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This seminar charts the development of Chinese dramatic literature from the fourteenth to the seventeenth centuries. We will focus on the close reading of major works in the *zaju*, *xiwen*, and *chuanqi* forms, examining how the theater shaped new practices of writing and reading. The seminar will follow two central themes: 1) the shifting relationship between the figures of the playwright and the actor; 2) the interplay between the spaces of the page and stage. Engaging with recent scholarship, we will reflect on how modes of theatrical performance and spectatorship transformed broader understandings of self and society. Our discussions will seek new frameworks for approaching the place of the theater in Chinese literary history.

Recommended Prep:

Reading ability in Literary Chinese is required.

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar investigates literary strategies for depicting and animating things in premodern China. We will trace the development of the principal genres for talking about objects, from yongwu poetry and riddle tales, to inscriptions, colophons, and manuals of taste. How, we will ask, have authors probed and reimagined human attachments to things. How have practices of collecting and connoisseurship transformed Chinese literary culture? How have objects been used to think about what it means to be human in the Chinese literary tradition. Our discussions will engage recent scholarship on materiality from the fields of literary theory and the history of material culture. The course will include viewing sessions in the Harvard Art Museums and Harvard-Yenching Library.

Chinese Literature 289 Section: 01

From Late Tang Poetry and Poetics into the Song Dynasty (222239)

Stephen Owen

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The seminar will first engage the canonical poets of the mid-ninth century, and then venture into less studied authors and issues from the last decades of the Tang to the beginning of the eleventh century. This includes some of the standard authors poetic canon, and it includes texts that have less depth of scholarship and annotation, while addressing a still popular topic (the "Tang-Song transition") from an entirely new perspective ("on the ground" rather than as reimagined in the mid-eleventh century).

Classical Korean Literature (156592)

Si Nae Park

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the literature and literary culture of the Chosŏn period (1392-1910) through deep, slow, and close reading, creative writing, and an exploration of authentic materials held by the Harvard-Yenching Library, Harvard Map Collections, and Harvard Art Museums. Students will gain a solid understanding of key literary forms, motifs, techniques, works, and modes of textual circulation while critically engaging with questions of history of reading, canon formation, cultural heritage, and world literature. All readings are in English, and no knowledge of Korean culture and history is expected.

This lecture course introduces undergraduate students to selected works of Korean literature of all periods in translation, with an eye toward the broader humanistic study of Korean literature and culture. The class activities include deep reading, seminar-style discussion, research presentation, creative writing, and field trips.

Course Notes:

All readings are in English. No knowledge of the Korean language is required. Knowledge of Korean culture and history is not required but is encouraged. Graduate students may take this course for credit after consultation with the instructor. KORLIT 134 is a 100-level EALC course that can be counted toward fulfilling EAS concentration requirements. This year, Spring 2024, KORLIT 134 is offered as a bridge course of an advanced-level Korean language course, KOREAN 166R.

Readings in Premodern Korean Literature: Literary Sinitic in Pluriliterate Chosŏn Korea (224278)

Si Nae Park

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course surveys a range of writings to explore the language and script diversity in Korea during the Chosŏn period (1392–1910). Rethinking assumptions of digraphia and diglossia that tend to explain away the dynamic and multifaceted inscriptional-linguistic-literary landscape of Chosŏn Korea, the course investigates new ways to chart contact between Literary Sinitic and spoken and written varieties of the Korean language using concepts such as "plurilinguality/pluriliterateness," "inter- and intralingual translation," "inscriptional repertoire," and "aural reading".

Continuation of Chinese 140xa.

This course aims at further developing students' ability to use Chinese in a more advanced way. Students will be introduced to a wide variety of topics and literary genres through in-depth reading and focused discussion of classical works of Chinese literature. The course will focus on accurate comprehension of texts, expansion of vocabulary for expressing more refined and sophisticated ideas, and development of ability to process complex sentence structures used mainly in formal speech and literary writing.

The objectives of this course include: 1) enabling students to gain a deeper understanding of Chinese cultural conventions and social norms in specific social and historical backgrounds, 2) building students' ability to "read between the lines" and discern the subtle connotations often present in Chinese speech and writing, 3) enhancing students' writing skills and improving students' ability to express opinions and feelings in a more accurate, appropriate and coherent manner, and to offer more detailed and vivid descriptions and narrations.

Korean BA

Elementary Korean (124296)

Hwanhee Kim

2024 Fall (4 Credits)

Schedule: MWF 1030 AM - 1130 AM**Instructor Permissions:** None**Enrollment Cap:** n/a

This introductory course is designed to provide a basic foundation in modern Korean language and culture by focusing on the balanced development of the interpersonal (speaking), interpretive (listening & reading), and presentational (formal speech & writing) skills. Students in Korean Ba begin by learning the complete Korean writing system (Hangul), which is followed by lessons focusing on basic conversational skills, cultural competence, and grammatical structures. To provide sufficient opportunities to apply what has been learned in class, there are small group drill sessions, language tables, and a number of other cultural activities.

Instructor Permissions: None

Enrollment Cap:

n/a

Korean 130a is designed for students who have completed Intermediate Korean 120b or have equivalent proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring these topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

Recommended Prep:

Korean 120b or equivalent.

Japanese 106A

Classical Japanese (110782)

Danica Truscott

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course, we will learn and practice reading the fundamental grammatical patterns of classical, or literary, Japanese (bungo). From Murasaki Shikibu's *The Tale of Genji* to Bashō's famous haiku, this linguistic form appears in a wide variety of Japanese literature. In fact, traces of classical Japanese can still be found in modern Japanese and are often employed in news articles and song lyrics. As we read poetry, short stories, diaries, and more, students will not only gain the ability to read premodern vernacular texts with the aid of a dictionary, but will also develop a deeper appreciation for Japanese language and culture across the ages.

Recommended Prep:

Japanese 130b or with instructor's permission.

Additional Course Attributes:

Attribute	Value(s)

Japanese 106B Section: 01

Introduction to Kanbun (111790)

Danica Truscott

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

In this course, students will learn how to read a variety of Japanese texts written entirely in Chinese characters, or kanbun. Specifically, we will practice the art of rendering both classical and quasi-classical Chinese script into Japanese syntax, a reading method known as kundoku or yomikudashi. After learning the basics via textbook, we will read texts from several different genres such as mythologies, histories, and official documents. By taking this course, students will begin developing the necessary skills for reading primary sources produced by Japanese officials and literati with the aid of a dictionary, laying the

groundwork for further training in students' specific fields of research.

Recommended Prep:

Japan 106A, or instructor's permission.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Japanese 106C Section: 01

Later Classical Japanese (121032)

Danica Truscott

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is a continuation of Japan 106A as we further practice reading and translating texts written in classical Japanese. Specifically, we look at works written in the writing style of the vernacular, also known as kana. Such texts include poetry, monogatari tales, and personal diaries. Our schedule will be organized into various units by format and genre as well as students' interests. As we read, we will situate these texts within their historical and social context, while also exploring what these texts tell us about their historical moment. Students will submit a working English-language translation for a text of their choosing as a final project, thereby demonstrating a nuanced understanding of premodern vernacular Japanese texts along with the societies that produced such works.

Recommended Prep:

Japanese 106A.

Japanese 106D Section: 01

Kana and Kanbun Texts in Early and Classical Japan (222803)

Danica Truscott

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Educated classes in premodern Japan read and often wrote utilizing both kana ("vernacular") and kanbun ("Chinese") writing systems in recording their lives and creating art. Following in their footsteps, students will read and translate texts written in both kana and kanbun from Japan's early and classical periods (710-1185). We will explore differences in form and content between the two writing styles along with linguistic quirks featured in our readings. We will also consider the conception of gendered writing and cross-cultural

comparisons with other East Asian literatures, including poetic treatises and histories. At the end of this course, students will be able to not only read and translate texts written in multiple linguistic forms, but also discuss such texts side-by-side in a comprehensive manner.

Recommended Prep:

Japan 106A and 106B

Introduction to the Study of East Asia: Issues and Methods (145419)

Shigehisa Kuriyama

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This interdisciplinary and team-taught course provides an introduction to several of the approaches and methods through which the societies and cultures of East Asia can be studied at Harvard, including history, philosophy, literary studies, political science, film studies, anthropology and gender studies. We consider both commonalities and differences across the region, and explore how larger processes of imperialism, modernization, and globalization have shaped contemporary East Asian societies and their future trajectories.

Course Notes:

Required of sophomore concentrators and secondary field candidates.
Open to freshmen. EAS 97ab may not be taken Pass/Fail.

Economic Governance in East Asia (218174)

Daniel Koss

2025 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

East Asia has given rise to models of development with distinct visions for the relationship between the state and the market. Hallmarks of the designs are powerful ministries, gigantic conglomerates, state-supervised labor unions, and spectacular corruption. The first part of the tutorial revisits four decades of "miraculous" growth in Japan and the Asian Tiger economies (South Korea, Taiwan, Hong Kong, and Singapore), in order to illuminate underlying development strategies from a political science perspective, including through theories of late industrialization and varieties of capitalism. The second part of this course focuses on China, whose strategists have drawn on its neighbors' experience. It highlights the vast differences between economic regions in China (the Pearl River versus the Yangtze Delta, versus lagging Western regions), as well as the significant transformation of the country's approach over the last three decades. Students will develop a deeper comprehension of phenomena such as national champions, tycoons in the digital economy, Communist party control, international expansion, and slogans such as "Made in China 2025." Throughout the course, we will occasionally go back in time to historical foundations of economic governance. This junior tutorial provides individualized support in the research process toward a final paper.

Course Notes:

This course counts toward the Junior Tutorial requirement for East Asian Studies concentrators.

Major Religious Texts of East Asia (143833)

Ryuichi Abe

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This course aims at enabling students to read and analyze in depth major religious texts of East Asia, representing diverse traditions and genres. The course encourages students to take up their reading of texts not only as ways to acquire knowledge on Asian religious traditions, but as practice, labor, and play in which their ordinary way of understanding/experiencing the world and themselves will be challenged, reaffirmed, and renewed.

Digital Tools and Methods in East Asian Humanities: No-coding Approach (218278)

Kwok-leong Tang

2024 Fall (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is designed for students in East Asian humanities with no prior background in digital literacy. It will introduce digital tools and methods used for the acquisition, transformation, analysis, and presentation of data. Coding is not required. Students completing the course will be able to integrate and apply the tools and methods into their research.

Hands-on practices will be the major core of this course. Although students will expose to a wide range of tools, we use [Konstanz Information Miner \(KNIME\)](#), an open access analytics platform, as the axle of the course. Students will learn concepts and build workflows in different aspects of digital scholarship.

Recommended Prep:

Ability to read Chinese, Japanese, or Korean documents is required.
Contact the instructor for further detail.

Tea in Japan / America (212645)

Melissa M. McCormick

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This undergraduate seminar examines the history, culture, and practice of the Japanese tea ceremony (*chanoyu*) and its reception in the United States. What began as a ritualized preparation of tea, by the medieval period had developed into a wide-ranging cultural practice the study of which opens onto issues of Japanese aesthetics, political history, and philosophy. Common perceptions of *chanoyu* today, however, are often filtered through the lens of its first systematic presentation in the United States, Okakura Tenshin's *Book of Tea* (1906). With this in mind, the course takes advantage of the rich resources in the Boston area that pertain directly to this early phase of "teaism" in America, while exploring later twentieth-century and contemporary examples of art and architecture related to tea.

Enrollment limited to 12.**Additional Course Attributes:**

Buddhism, Japanese Arts and Culture (218302)

Ryuichi Abe

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is designed to enable students to analyze a wide range of Japanese cultural creations - including the traditional Noh theater, classical and modern Japanese paintings, and contemporary anime - by illustrating the influence of Buddhism both in their forms and at their depths. The first part of the course is a study of major Buddhist philosophy and its impact on Japanese literature. The second part observes Buddhist ritual practices and their significance for Japanese performing arts. The last part traces the development of Japanese Buddhist art, and considers the influence of Buddhism on diverse contemporary popular Japanese art media.

Putting Chinese politics on the map, this course asks how the government deals with the enormous challenges of ruling over a vast terrain with a diverse population, encompassing super-rich urban metropolises as well as poor rural peripheries. We begin with statecraft traditions from the late imperial era; and end with China's place on the future global maps of the 21st century. Topics include: macro-regions; priority zones of governance; Special Economic Zones; the Chinese equivalent of "blue states and red states;" rising inequality; ethnic minorities and borderlands; economic development models; urbanization and city planning; collective action in digital space; domestic and international migration; environmental politics; and the geo-politics of the "One Belt One Road" initiative. We will set aside class time for a hands-on introduction to producing and interpreting maps of China.

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

As Africa faces daunting challenges, the "Beijing model" invites intriguing alternative visions to the poorly performing designs by traditional foreign actors in the region. Moving from Chinese farm households in Mozambique to state-owned copper mines in Zambia, military bases in East Africa and the United Nations headquarters, this seminar critically assesses the potential for China's presence to transform Sub-Saharan Africa. After identifying the intellectual stakes (week 1), and discussing anecdotal glimpses from the grassroot-levels (week 2), the class deals with traditional development assistance, along with Maoist attempts to revolutionize the "world countryside" – resulting in legacies such as a China-trained guerilla fighter serving as the President of Zimbabwe. We then discuss the current footprint of Beijing, including its influence on elite politics, Chinese public and private business interests, and the diversity of the one million Chinese migrants to Africa. Four sessions specialize on (1) resource extraction versus opportunities for human capital development (2) debt-traps of Western and Eastern origins (3) emerging tensions over human rights policies (4) and the military dimension, including China's role in Peace-Keeping Operations. Finally, the course addressees how the Chinese presence may transform established multilateral institutions, and the challenges associated with African migration to China. Social science research will be read alongside journalistic accounts and primary documents, such as leaked diplomatic cables and strategy papers. Will Africa become "Beijing's Second Continent," of the neo-colonial or tributary kind? What promises does the China model hold for Africans? How do the partners on both continents react to experiences of disillusionment and retreat? The assignments are designed to train students for public policy work and require close group collaboration.

Advanced Readings in East Asian Art (212646)

Melissa M. McCormick

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap: n/a

This is a seminar for advanced graduate students in East Asian art (and adjacent fields) focusing on reading secondary and primary sources in Japanese, as well as recent scholarship and theoretical texts in English. The topic will change each semester to accommodate the research projects, general exam fields, and interests of the participants. In addition to examining the state of the field of East Asian art history, the goal is to provide instruction in practical areas such as deciphering calligraphic texts (*kuzushiji*), improving bibliographic skills, and mastering specialized terminology.

EALC Teaching Practicum (212681)

Tomiko Yoda

2024 Fall (2 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:** n/a

This course is intended for graduate students in the Department of East Asian Languages and Civilizations, who are either first-time teachers or first-time teaching fellows (TF) in

the department. While convened by the EALC PF, who will serve as a resource on weeks that are departmentally specific, invited experts trained in each week's topics will primarily run the course. It will begin by providing students with a tool-kit for effectively fulfilling their role as TF in the remote learning environment. This will include strategies for online teaching, managing and engaging students in the virtual classroom, and effective grading and feedback methods. The course will then transition into more specific topics that may arise in the classroom, and finally expand to consider broader issues that we all face when teaching in East Asian Studies departments.

The course will meet for a total of 9 times. We will meet weekly for weeks 1-4 and bi-weekly for the remainder of the semester, in two-hour sessions. There are a total of 9 sessions, as well as the expectation that participants complete the Bok Center's self-paced Canvas site before the first course meeting. Students must successfully complete the course before advancing to their general exams. Each meeting will focus on a specific skill and is intended to give students the chance to not only think about how they want to teach, but also the opportunity to put those ideas into practice before stepping into the classroom. Beyond its specific weekly agendas, the course is intended to provide a comfortable space to voice concerns, discuss anxieties, identify fears, and share successes. Students are encouraged to raise issues about teaching and professional growth. The syllabus is flexible and can respond to student needs and concerns as the semester progresses, so please be sure to provide your feedback as we go along.

The course is primarily intended for students currently in the fall semester of their G3 year, although G2 students are also welcome to enroll in the course. For G3 students, this is a chance to use actual materials from your assigned course to prepare for leading discussion sections in parallel with the demands of the semester. For G2 students, who will not yet have a teaching assignment, you will be asked to consult with your advisor about what course you are most likely to teach in the coming year, obtain a syllabus used in previous years for that course, and prepare for class activities based on those readings and potential lecture topics. Class requirements regarding collecting midterm feedback and class observation/recording may be completed during the following academic year without repeating the course.

This course explores the explosion of media in East Asia and the resulting forms of media production, circulation and consumption that transform everyday life, economy and politics. From pop culture phenomena such as K-Pop, fan fiction and internet platforms such as Sina Weibo, 2channel or DC Inside, from mobile phone culture to video games and social networks used in political protests, complex media forms and practices are developing with lightning speed across the region and exerting global influence. The starting point of the course are questions such as: What effects does this intense new media environment have in East Asia? How are ways of thinking and behaving adjusting to completely new forms of media? What are the consequences for the future of East Asia? How do media influence us in ways that go beyond the films, music, games, news or other forms that they supply us with?

Korean Stars (224288)

David Howell

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

What makes stars "shine?" In other words, what are the conditions for stardom? In this course, we will explore how stars embody the intersection of constantly changing media infrastructures; media aesthetics; social norms concerning gender, race, age, and economic status; and geopolitics surrounding Korea. From the 1910s-1930s stardom of silent-film narrators (pyŏnsa) in colonial Korea, to the global success of Korean stars in the fields of film, music, drama, fashion, and gaming today, this course will map the trajectories of modern and contemporary media culture in Korea—and beyond—with an emphasis on stars. We will develop the analytical capacities to probe the recurring themes a star consolidates within the specific historical contexts of Korea across a series of their works. We will also consider a range of media technologies, filming and editing techniques deployed for the purpose of either retaining or changing the star's image, and the various modes of interplay between a star and their audience.

Class Notes:This course will be taught by [Chan Yong Bu](#), Assistant Professor in

EALC.

Topics in Asian Media Studies (224292)

Alexander Zahlten

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers theoretical issues connected to the emerging field of "Asian Media Studies." It surveys recent developments in the field and the disciplinary lineages they are a part of. It pays special attention to the basic conceptual friction that can result between "media" and "area."

Additionally the course puts special emphasis on professional development via concrete students' projects and will include student presentations, book reviews, and peer reviews of students' drafts. Over the course of the semester, and with feedback at various stages, students will each develop and refine one conference presentation or one journal article related to their research interests. We will also discuss framework issues such as the role of journals, how to conduct research, etc.

Some of the questions the course will address are: What are the recent approaches in the emerging field of "Asian Media Studies," what are currently urgent interventions? What intellectual issues does a possible tension between historically oriented and speculatively oriented "Asian Media Studies" raise?

East Asian Documentary Media (224289)

2025 Spring (4 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

This seminar aims to explore the concept of documentary as a gateway for the lived-reality within the geopolitical and technological contexts of East Asia. Chronologically tracing the major historical movements of documentary film in East Asia from the early 20th century to the present day, we will examine how documentary's truth claims have been mobilized and revisited in tandem with various intellectual discourses and technological developments in East Asia. Central here is to understand that documentary theorists and practitioners' pursuit of reality did not neatly converge into a single cultural essence of East Asia, but rather proceeded to reveal the material and ideological conditions that shape the notion of reality and acknowledge its malleability.

Class Notes: This course will be taught by [Chan Yong Bu](#), Assistant Professor in EALC.

Subject: Korean History

Korean History 115 Section: 01

Korean History Through Film (108233)

Sun Joo Kim

2025 Spring (4 Credits)

Schedule: M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course is to examine history of premodern Korea through select Korea's contemporary feature films. Films and dramas with historical themes and personages have been very popular in Korea. We will examine the content of the films, and investigate how ``true" or ``false" they represent Korea's past, how they imagine and invent Korea's past, in what ways films are useful in better understanding Korean history, people's lives and practices.

Japanese Literature 162 Section: 01

Girl Culture, Media, and Japan (125615)

Tomiko Yoda

2025 Spring (4 Credits)

Schedule: TR 0130 AM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

In contemporary Japan, girls and girl culture are considered to be among the most significant sources of popular cultural trends. For instance, the girly aesthetics of "cute" (*kawaii*) has animated broad areas of Japanese culture since the 1980s and has become a global cultural idiom through the dissemination of Japanese entertainment medias and fashion products abroad. The course will explore a number of key questions about Japanese (and global) girl culture. How did the conceptualization of girlhood, girl

culture, girl bodies, and girl affect transform in Japan from the early twentieth century to the present? How did various medias and media consumption help shape these trends? What can the exploration of "girls' question" tell us, not only about Japanese socio-cultural history, but also about the general conditions of youth, gender, and media culture in the world today (e.g., the *sea of pink* at Women's March, 2016)? We will begin the semester by unpacking key terms such as "girl," "girlhood," and "girl culture" in relations to the modern and contemporary notions of gender, maturity, and majority. The course materials include fiction, fashion magazines, teen films, manga, and animation. No prior knowledge of Japanese language or history is expected.

Japanese Literature 170 Section: 01

Traditional Japanese Literature: From Mythology to (Early) Modernity (204985)

David Atherton

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Poetry written by gods, incestuous aristocratic romances, exorcist theater, samurai fantasy novels, fart literature: traditional Japanese literature has something for everyone, and invites us to rethink our assumptions about what literature is and how creativity works. From the most ancient myths up to the 19th century arrival of Western style modernity, we will explore together the relationships between high art and pulp fiction, the stage and the page, words and illustrations, manuscript and print, language and the sacred. We will probe the literary imagination of beauty, nature, desire, and heroism, and ask—through creative experiments and reflections that connect what we are reading to our own lives—what Japanese literature can tell us about what it is to be human.

All are welcome; no prior knowledge of Japanese literature or history is required.

Course Notes:

This course fulfills the East Asian Studies concentration "Historical Survey" requirement.

Japanese Literature 281 Section: 01

Medieval Japanese Literature and Culture (207479)

David Atherton

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course offers a comprehensive introduction to the literature of Japan's dynamic medieval centuries (broadly conceived as the 12th through 16th centuries), together with an overview of critical approaches to its study. As the Heian aristocratic order fragmented, the medieval centuries witnessed a dramatic expansion of writers, readers, genres, styles, subject matter, routes of circulation, and social and political roles for literary works. The theory and practice of classical poetry reached new heights, and new forms such as linked verse and the *nō* and *kyōgen* theaters emerged; the connection between literature and the sacred and the unseen deepened, and literary production expanded to encompass a diverse population of warriors, monks, and commoners. We will explore the relationship between literary production and politics, visual culture, scholasticism, geography and human movement, religion and ritual, and conceptions of class and gender, as well as the materiality and circulation of texts and, ultimately, the question of "medievality" itself. Our primary readings will be taken from high and low genres of poetry, drama, and prose (including narrative fiction, essays, miscellanies, and works of poetic and dramatic theory).

Recommended Prep:

Japanese 106a or equivalent training in classical Japanese.

Economists study human behavior using a combination of models and data. Ec10a introduces students to economic models using intuitive discussions, graphical analysis, and, in some cases, basic algebra. The models study individual decision-making and markets, and range from classical approaches like supply and demand to more recent approaches that consider informational limitations and behavioral mistakes. We will also use data to understand the strengths and weaknesses of these models. The course also discusses the role that ethics and values play in people's choices and in policy discussions, including an understanding and critique of approaches like utilitarianism, Rawlsian principles of justice, and libertarianism. The goal of the course is to provide students with a set of tools that will help them develop answers for themselves on how to make better choices and participate in debates on major public policy issues in areas including tax policy, inequality, discrimination and racial justice, and the environment.

Course Notes:

Ec10a is the first half of an integrated sequence that continues with the study of macroeconomics in Ec10b. Students may elect to take only the microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec10a and Ec10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up concentrating in economics, Ec10a and Ec10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in economics to take these courses during their first year at the College. Ec10a and Ec10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy and current developments in the field of economics (e.g., behavioral economics). Either Ec10a or Ec10b fulfills the Social Sciences divisional distribution requirement. It is not necessary for students to take both halves of Ec10 to fulfill this divisional requirement.

Recommended Prep:

There is no mathematics background requirement. No calculus is used in the course and the use of algebra is limited. Ec10a is strongly recommended in advance of Ec10b, which covers macroeconomics.

Economics 10B

Principles of Economics (Macroeconomics) (109894)

Jason Furman

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Ec 10b continues the curriculum presented in Ec 10a, moving to the study of macroeconomics including the growth of the overall economy, business cycles, and economic crises. Ec 10b explains what economists do and do not understand about these issues by developing analytical approaches and examining data, including studying the global financial crisis and the economic crisis caused by COVID-19. The course also explains how policy makers can dampen economic fluctuations using monetary policy (i.e., government influence over interest rates and government regulation of banks), fiscal policy (e.g., government control of spending and taxation), and financial rescues in economic crises. We will also discuss how macroeconomic policies work in an international context, including the factors that affect exchange rates, trade deficits, international capital flows, and how these link economies around the world. Like Ec 10a, Ec 10b introduces students to economic models and discusses both how they are supported and how they are contradicted by available data.

Course Notes:

Ec 10b is the second half of an integrated sequence that begins with the study of microeconomics in Ec 10a. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Ec 10a or 10b fulfill the Social Sciences distribution requirement for the General Education program. It is not necessary for students to take both halves of Ec 10 to fulfill this requirement.

Recommended Prep:

There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Taking Ec 10a which covers microeconomics and is taught in the Fall is strongly encouraged but is not a formal prerequisite.

Economics 50A

Using Big Data to Solve Economic and Social Problems with Laboratory Component (216409)

Gregory Bruich

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course is a modified version of Economics 50, ordinarily taught by Raj Chetty and Gregory Bruich. Economics 50a will instead be taught by Gregory Bruich.

Economics 50a will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as for more advanced students. The course will include discussions with leading researchers and practitioners, who use big data in real-world applications.

Topics include equality of opportunity, education, racial disparities, innovation and entrepreneurship, health care, climate change, criminal justice, tax policy, and poverty in developing countries. In the context of these topics, the course will provide an introduction to basic methods in data science, including regression, causal inference, and machine learning.

In empirical projects and weekly labs, students will work with real data to learn how the methods discussed in the course can be implemented in practice.

Students will participate in weekly labs, collaborative work, and discussions with leading researchers and practitioners. The class content will include short videos featuring Raj Chetty, Greg Bruich, and others.

Education in the Economy (126777)

Lawrence Katz

2025 Spring (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

An exploration of the role of education in the economy using historical, comparative, and current policy perspectives. Topics include the theory of human capital, the role of education in economic growth and distribution, vouchers and charter schools, higher education and student debt, alternative pathways to skill formation and online education, and the impact of COVID-19 on child learning. Students will take part in the creative process of researching, writing, and presenting an original paper using primary sources (mainly large-scale data sets). Several short critical essays of the literature are also required. This is a junior seminar.

Course Notes:

This course requires special action- application or lottery- to enroll. Visit <https://economics.harvard.edu/junior-seminars> and the course canvas site for more information.

Recommended Prep:

Ec 1010a (or 1011a), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980BB

Behavioral Economics of Risk and Learning (156369)

Tomasz Strzalecki

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The seminar will focus on theoretical and experimental issues in behavioral economics. We will focus on two topics: risk and learning. How much risk are people willing to take and how their beliefs change in response to new data, so things like certainty effect, overconfidence, confirmation bias, belief polarization, stereotyping, etc. We will study relationships between mathematical models of individual behavior and the kinds of behavior we can observe in the lab. We will design experiments to test various theories and also study the types of behavior for which we don't have good models yet, and try to understand what a good model would look like. This is a junior tutorial.

Recommended Prep:

Prior knowledge of behavioral economics will be useful but not necessary. The course will focus on analytical methods and therefore requires knowledge of probability and statistics.

Field Experiments (212568)

Amanda Pallais

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Field experiments (experiments that take place in real-world settings) are increasingly being used to analyze public policies, make business decisions, and test theories. The most recent economics Nobel Prize recognized experiments' role in alleviating global poverty. This class will dive into how to design a field experiment and learn about some of the most exciting recent experimental research. It will also use experiments to learn about the research process. We will discuss how to frame a question so that the research informs policy, when to trust research discussed in the popular press, and how to interpret and apply results to improve decision-making.

Economic Growth and the Social Issues of Our Time (224343)

Benjamin Friedman

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

100

Economic improvement is more than just a matter of economics. The course explores where economic growth comes from, how it matters in material ways and what indirect consequences – some positive, others negative – it brings for citizens individually and for society. The course also examines the role of education, both in enhancing an economy's growth potential and in either mitigating or exacerbating social inequalities. Approaches taken are mostly economic but also historical and philosophical.

Recommended Prep:

Economics 10 is required in order to take this course.

Black Genius (207170)

Roland Fryer

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Examines the life and work of African-American geniuses – both historic and contemporary – in social justice, academics, the arts, and education with a particular focus on how their life and work affects economic thought and our understanding of human behavior. Profiles include: W.E.B. Dubois, Ida B. Wells, David Blackwell, Martin Luther King, Geoffrey Canada, Mary McCleod Bethune, and more. The economic topics that are highlighted include the economics of slavery, identity and social interactions, integration, health, education, and labor markets.

Recommended Prep:

Ec 10A or equivalent.

Using Markets to Solve Social Problems (218817)

Roland Fryer

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:**

20

This course will demonstrate how one can use the power of the free market to address some of the most vexing social and economic problems of our time, with a particular emphasis on issues that plague minority communities and women. The course will give students an introduction to social finance and impact investing in a manner that does not require prior coursework in Economics. It is intended not only for those interested in finance or social justice, but also for students with a disruptor spirit. Students will study situations in which market-based approaches were used to solve problems in areas such as education, discrimination, economic mobility, crime, healthcare, food instability, and the future of work. In the context of these topics, the course will provide an introduction to basic principles in finance and for-profit enterprises, venture capital, and other alternative investment strategies. The course will include discussions with leading investors and entrepreneurs who are determined to have positive social impact and culminates in a team-based capstone project in which you build your own startup to take on an important social issue and demonstrate its commercial viability.

Course Notes:

An application is required, please visit the Canvas site for more information.

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course will apply economic principles from game theory, labor economics, and econometrics to analyze a wide range of issues primarily in the realm of professional sports and collegiate athletics rigorously with a focus on causality. Topics include: the hot hand; expansion and rival leagues; franchise relocation and venue construction; revenues from merchandising, broadcast rights and their distribution; free agency, arbitration, and salary caps; player development through amateur drafts and minor leagues; NCAA rules on scholarships and eligibility; in-game strategy; and financial aspects of collegiate athletic programs. Class discussion, problem sets, and an exam will form the bulk of the course requirements.

Readings will draw upon a variety of sources, including Andrew Zimbalist's *Baseball and Billions*, Robert Frank and Phil Cook's *The Winner-Take-All Society*, and newspaper, magazine and academic journal articles.

Recommended Prep:

**Econ 1010a, Stat 104, Concurrent Enrollment in econometrics
(Previous completion recommended)**

Strategy, Conflict, and Cooperation (123893)

Robert Neugeboren

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Game theory is the study of interdependent decision-making. In the early days of the cold war, game theory was used to analyze an emerging nuclear arms race; today, it has applications in economics, psychology, politics, the law and other fields. In this course, we will explore the "strategic way of thinking" as developed by game theorists over the past sixty years. Special attention will be paid to the move from zero-sum to nonzero-sum game theory. Students will learn the basic solution concepts of game theory -- including minimax and Nash equilibrium -- by playing and analyzing games in class, and then we will take up some game-theoretic applications in negotiation settings: the strategic use of threats, bluffs and promises. We will also study the repeated prisoner's dilemma and investigate how cooperative behavior may emerge in a population of rational egoists. This problematic -- "the evolution of cooperation" -- extends from economics and political science to biology and artificial intelligence, and it presents a host of interesting challenges for both theoretical and applied research. Finally, we will consider the changing context for the development of game theory today, in particular, the need to achieve international cooperation on economic and environmental issues.

The course has two main objective: to introduce students to the fundamental problems and solution concepts of noncooperative game theory; and to provide an historical perspective on its development, from the analysis of military conflicts to contemporary applications in economics and other fields. No special mathematical preparation is required.

Recommended Prep:

Economics 10a and Math 1a

Game Theory with Applications to Social Behavior (203555)

Erez Yoeli

Moshe Hoffman

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

Game theory is the formal toolkit for analyzing situations in which payoffs depend not only on your actions (say, which TV series you watch), but also others' (whether your friends are watching the same show). You've probably already heard of some famous games, like the prisoners' dilemma and the costly signaling game. We'll teach you to solve games like these, and more, using tools like Nash equilibrium, subgame perfection, Bayesian Nash equilibrium, and the one-shot deviation principle.

Game theory has traditionally been applied to understand the behavior of highly deliberate agents, like heads of state, firms in an oligopoly, or participants in an auction. However, we'll apply game theory to social behavior typically considered the realm of psychologists and philosophers, such as why we speak indirectly, in what sense beauty is socially constructed, and where our moral intuitions come from.

Each week, students are expected to complete a problem set, to read 2-3 academic papers, and to complete a 1-2 page response to short essay questions ('prompts') on these readings. All assignments can be completed in groups of two. Tutorials are not required but are highly recommended for students without a substantial background, especially in math. There will also be a final exam.

Recommended Prep:

Math 18a or Math 21a or Applied Math 21a or talk to instructor

Analyzing Education Policy (204433)

Michela Carlana

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

50

This course examines a variety of education policy issues in the United States and abroad, with an emphasis on rigorous econometric evaluation of such policies. By the course's end, students should have an analytical framework that allows them to think clearly about the impacts of education policies, as well as be able to distinguish good research from bad. The first half of the course reviews important empirical techniques in the context of broad questions, such as whether people make educational decisions by weighing benefits and costs and whether education improves students' long-term outcomes. The second half of the course centers on debates in which teams of students will argue for a given policy proposition and I will argue against it, with the aim of sharpening everyone's arguments on the basis of existing empirical evidence. . Prerequisites: Familiarity with regression analysis and causal inference, or permission of the instructor.

Finance for Inclusive Growth (213522)

Emily Breza

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Over the past decade, access to financial services has expanded by 50%, yet a quarter of adults globally still do not have access to a formal financial account. Why has it been so challenging to reach this population? What financial product innovations have worked for banking poor customers? How do the underbanked make do without access to the formal financial market? What opportunities and challenges are presented by the global rise of digital payments and fintech? This course investigates the functioning of the financial market for low-income populations, with a focus on developing countries. Example topics include: 1) the link between financial market development and economic growth; 2) financial literacy and consumer protection; 3) savings; 4) credit; 5) insurance; 6) mobile banking and digital payments. The course will cover relevant economic principles, business case studies, product design experiments, and research papers.

Recommended Prep:**Pre-requisites:** Econ 10A, Stat 100, 104, 110 or equivalent**Co-requisites:** Econ 1123 or 1126, Econ 1010A/1011A**Additional Course Attributes:**

Economics 1133

Authoritarian Superpower: The Political Economy of Modern China (219753)

David Yang

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The rise of China is undoubtedly one of the great dramas of the 21st century. This course provides an overview of China's economy and its politics, as well as China's relationship with the world. We aim to understand modern China with an appreciation of China's past and its connection to other parts of the globe.

The course offers insights on a number of puzzles of a rising authoritarian superpower, and overturns several conventional wisdoms in political economy. In the course, you will learn about topics such as: (1) What drives China's economic development? What explains its rise? (2) What are the key forces of stability and forces of change in modern China? (3) How does China engage with the world, and what are the implications of China's rise for the world?

The objectives of the course are three-fold: (1) to learn about important institutional and contextual knowledge of China; (2) to use China as a lens to understand authoritarian regimes, as well as basic political economy frameworks that are more generally applicable; and (3) to learn about empirical methods through exposure to big data on China, frontier academic research, and occasionally case-study style discussions.

The Economics of Development and Global Health (219614)

Matthew Basilio

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Why are some places poorer than others? Why do some places have better health than others? In this class, we will harness the core development and health economics literature to approach some of the most fundamental questions facing humanity today. We will review the historical determinants of our present-day puzzles, including critical relationships between economic development and health. We will consider challenges affecting health and development including political institutions, micro development, environmental change, and psychological wellbeing. Methodologically, the course will review canonical approaches in applied econometrics, and will cover theories in development, macro-growth, and health. It will also consider perspectives on our core questions from neighboring disciplines, including social theory, anthropology and psychology.

Course Notes:

A research paper option is available for this class which can be used to fulfill the writing requirement for Economics concentrators.

Recommended Prep:

Economics 10a and 10b, familiarity with introductory statistics (e.g. Stat 100, 104 or 110), and calculus are recommended but not required.

Closed Borders and Crowded Buses: The Economics of Human Mobility (220386)

Gabriel Kreindler

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Movement is inextricably linked to economic activity. In this course, we study the fundamental forces that enable and constrain spatial movement and how this affects economic outcomes. We study international and regional migration, residential patterns, commuting, inequality in access to mobility. We draw on recent rigorous evidence from around the world, with a focus on rapidly growing urban areas in developing countries. Students gain hands-on experience with modern "big" mobility data sources, and workhorse analytical models to study spatial choices.

Recommended Prep:

Economics 1010a or 1011a and familiarity with econometrics (at a level of economics 1123 or 1126) or permission of the instructors.

Economics 1410

Public Economics: Designing Government Policy (117818)

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course analyzes what role the government plays and should play in a market economy. It covers topics such as tax policy, health care policy, retirement policy, environmental protection, and state and local policy. The course emphasizes recent empirical research on policy issues and teaches students how to conduct such studies. Much of the material we will cover relates directly to ongoing policy debates.

After an introduction to some of the key theoretical concepts and empirical methods in public economics, we will consider how the public sector in the United States (and in advanced, democratic economies more generally) is organized. We will look at how it raises revenue; what it allocates resources to; and how it uses regulations to shape economic activity.

We conclude by analyzing how to deploy these policy instruments—taxation, spending, and regulation—in three specific areas: climate policy, trade policy, and income redistribution.

Course Notes:

Offered jointly with Kennedy School as SUP-125.

Recommended Prep:

Familiarity with intermediate microeconomics, multivariate calculus, and econometrics (at the level of economics 1123 or 1126) is strongly recommended.

Political Economics (125716)

Andrei Shleifer

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Discusses several research areas in political economy, including the origins of the state, comparative political systems, culture, mobility, democracy, ethnicity, corruption, rule of law, and regulation.

The main purpose of this course is for each student to write a serious empirical paper, preferably with new data, in the field of political economics. The course relies on frequent (approximately 5 times over the semester) office hour meetings with the instructor, as well as meetings with the TF. To enable such frequent interactions, the course is limited to 18 students.

Course Notes:

A research paper is required. This course meets the concentration writing requirement.

Recommended Prep:

Economics 1010a1, 1010a2, or 1011a.

The Political Economy of Religion (107425)

Robert Barro

Rachel McCleary

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The study of the political economy of religion is grounded in two intellectual strands of thought developed in economics and sociology. The economic approach views religious competition and church-state relations as market phenomena. The absence of state religion allows for competition, thereby creating an environment for a plurality of religious faiths in society. The continual subdividing of religion into sects ensures an open and competitive market whereby no one single religion dominates. The sociological approach focuses on religious beliefs and activities as rational choices as well as cultural phenomena. Religious beliefs are a part of cultural traits, values, and organizations which contribute to economic outcomes. As in commercial activity, people respond to religious costs and benefits in a predictable, observable manner. Religious beliefs that promote hard work, thrift, and honesty can be found across the world's major religions. The key question is: How does a society promote these values and in what circumstances does it, intentionally or unintentionally, discard them? People choose a religion (the theory of sects) and the degree to which they participate and believe (if at all). In this course we discuss a wide range of topics--religious competition, secularization (and its varieties), pluralism and tolerance, the structure of religious organizations, religion and individual behavior—that highlight the contributions and areas of further research in the field of political economy of religion.

The Global Economy (111749)

Pol Antras

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A wave of protectionism has rocked the world economy in recent years. In the United States, the Trump administration abandoned the country's traditional position as a defender of international trade, viewing global trade as a "zero-sum" game in which only some countries benefit at the expense of others. In the UK, the consequences of voting for Brexit are not yet entirely clear, but free access to the European market that guaranteed membership of the European Union is no longer possible. Contemporaneously, there has been an active debate on the extent to which geopolitical tensions (such as the increasing tensions between Russia and the West) and technological change (automation, 3D-printing, etc) might work to reduce the level of trade integration across countries. What would be the economic consequences of the increase in protectionism and of technologically driven "de-globalization" around the world?

The purpose of this course is to review in an accessible and concise manner the causes and consequences of globalization and of (potential) "de-globalization" episodes. In the first lectures, the concept of "globalization" will be defined and an overview of the benefits and costs associated with trade integration will be offered. The course will highlight the role of firms, and of multinational firms more specifically, in shaping global production and consumption patterns. A few lectures will be devoted to the economics and politics of trade policy.

Recommended Prep:

Economics 1010a, or 1011a.

Market Power in the New Economy (217793)

Myrto Kalouptsi

2025 Spring (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course studies firms, markets and competition, in the context of today's (globalized) world. Nowadays, in the majority of markets, a handful of firms interact strategically and compete in numerous dimensions, including prices, products offered, advertising and investment. We will use formal models in order to address questions like: Why are markets organized the way they are? How does market organization affect firm behavior, such as firm production or pricing? How does the behavior of firms in turn affect the market structure? How does government policy shape firm behavior and market structure? What is the impact on welfare? Through the use of both theory and data, we will attempt to answer these questions.

The course will proceed in three parts. We will first tackle decentralized markets; i.e. markets where many small firms compete in an ad hoc fashion (e.g. taxis, oceanic shipping, real estate). A recent and growing phenomenon in this setup is the emergence of platforms, such as Uber and Lyft, Uber Freight, Airbnb, etc. We will discuss their impact on markets and societal welfare.

Then, we will introduce key concepts from the field of Industrial Organization in order to study oligopolistic markets. Through the use of models (mainly game theory) but also empirical analysis, we will explore the strategic interactions between firms and the impact of market power on society. Using these tools, we will study collusion and mergers. We will rely on game theory to analyze the strategic environment under study.

Finally, we will study market power in global markets. In a strong recent trend, governments around the world are engaging in industrial policy (e.g. Made in China 2025). What are the rationales behind these initiatives? Are they effective? What is their impact on both domestic and global societal welfare? In this last part of the course we will focus on the role of governments in shaping global competition.

The goal of this class is to get you engaged in topics of current interest and heated policy debates; "what is market power and how does it affect the world?", "how has uber changed transportation?", "does industrial

policy work?" but also to get you to think about these questions through the rigorous lens of an economist armed with a good combination of formal modeling and empirical tools.

Economics 1661

Economics of Climate Change and Environmental Policy (111261)

Robert Stavins

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Provides a survey, from the perspective of economics, of global climate change and public policies to address it, including international, regional, national, and sub-national policies. The political economy and politics of alternative policies are also covered. Methodological topics that are broadly relevant for other resource and environmental issues are featured.

Course Notes:

Offered jointly with the Kennedy School as API-135.

Recommended Prep:

No prerequisites, but introductory microeconomics recommended.

Economics of Discontinuous Change (112195)

Richard Freeman

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Explores discontinuous changes in the economic position of groups and countries and presents mathematical and computer simulation models designed to illuminate the theme that economic and social lives are changed by sudden sharp shocks that generate positive feedback loops rather than the normal workings of markets that equilibrate through negative feedbacks. Will include effects of the Covid19 pandemic on the economy, Great Depression and 2008 collapse of Wall Street, growth/decline of trade unions which occurs in spurts, and such patterns as segregation of groups, power laws in income inequality growth/decline in social pathologies in neighborhoods, and Malthusian concerns about the environment. Models include nonlinear simulations, neural networks, finite automata, evolutionary stable strategies, and agent-based simulations with attention on getting evidence on key parameters from diverse empirics, from big data to case studies.

Course Notes:

Key requirement is an independent research paper. Professor and TF will provide guidance on topic, help in obtaining data, information from firms, etc. This course meets the concentration writing requirement, if the paper is a substantive, solo-authored, original research work (not a literature review). Students should have some mathematical background, but there is no prerequisite.

Keynes (107388)

Stephen Marglin

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0530 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the birth, death, and resurrection of The General Theory of Employment, Interest and Money from the Great Depression (1929-1939) to the Great Recession (2008-?). A major goal is to lay out a coherent argument that, for all its theoretical innovation, The General Theory did not deliver: the argument why a market system, even an idealized system with all of the warts removed, may fail to provide jobs for willing workers. In the process we will examine the orthodoxy that Keynes attacked and that resurfaced in the 1960s and 70s; the key concepts underlying the models implicit in The General Theory; and the attempts of the Keynesian mainstream to make peace with both Keynes and orthodoxy. We will also explore the applicability of The General Theory to the long run. A final section will view the present economic difficulties through a Keynesian lens.

Recommended Prep:

Economics 1010b or 1011b, or permission of instructor; a year of college calculus allowing students to understand mathematical notation and concepts (derivatives, maximization, etc.) even though mathematics will be used very sparingly.

Introduction to Quantitative Economics (113716)

2024 Fall (4 Credits)

Schedule:

TR 1000 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Quantitative economics is the use of economic models to interpret data. The course proceeds through a series of economic settings, each of which motivates a canonical economic model. Readings and ungraded written reflections guide students through core concepts. Graded written work includes both pen-and-paper exercises designed to extend concepts and data exercises designed to apply them. Classroom discussion focuses on reviewing concepts, reflections, and exercises in parallel with students' reading and written work. At the end of the course, students are prepared to begin using economic theory to interpret data. They are also prepared to continue the study of quantitative economics within particular subfields, where they may encounter more elaborate or specialized economic models, and more complex data structures. The course requires microeconomics at the level of Economics 2010a/b and econometrics at the level of Economics 2120 or 2140.

Computing for Economists (223960)

Jesse Shapiro

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

30

Computing for Economists is a month-long course introducing concepts in software engineering and scientific computing that are essential for modern economics research. Concepts will be introduced via videos that students will watch in advance of class sessions. Class sessions will be devoted to supervised group work on exercises. Students can choose six out of twelve modules, including topics in software engineering (e.g., object-oriented programming, metaprogramming, parallelization, computational complexity), scientific computing (e.g., non-linear equation-solving, numerical optimization, integration, differentiation), data manipulation (e.g., data normalization, large-scale data handling, data visualization), and some other advanced topics (e.g. combinatorial optimization). The course is designed to accommodate students with all levels of programming background, providing a flexible and practical approach to applying computational tools in economics. The course is based in Python, but will convey computational

concepts that are portable across programming languages. Class sessions will be synchronous and will feature both in-person and remote options.

Experimental Economics (123849)

Benjamin Enke

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course introduces students to the current research frontier in experimental economics and its applications. We will focus on the use of lab, internet, and field experiments in (i) establishing causal effects, testing models, and illuminating mechanisms; and (ii) the measurement of preference parameters or beliefs in lab-in-the-field settings and surveys. Substantive topics are primarily drawn from behavioral economics, and include bounded rationality (complexity, cognitive noise, inattention, memory), motivated reasoning, morality, social signaling, and risk and time preferences. Methodological topics include simple neuro process-tracing techniques, machine learning in experiments, experimental platform choice and incentives. Students will become acquainted with the process of designing and programming an experiment. Class discussions will focus on recent contributions to the experimental frontier, and we will place heavy emphasis on the development of students' own early-stage research ideas.

Course Notes:

Open to undergraduates with permission of the instructor.

Economics 2059

Decision Theory (121331)

Tomasz Strzalecki

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course prepares students for pure and applied research in axiomatic decision theory. We start with a rigorous treatment of the classical topics that are at the heart of all of economics (utility maximization, expected utility, discounted utility, Bayesian updating, dynamic consistency, option value). We then delve into a number of modern topics inspired by the observed violations of the classical models ("exotic preferences" used in macro-finance, ambiguity aversion, temptation and self-control). The last part of the course explores the recently flourishing literature on stochastic choice (which is related to, but distinct from, discrete choice econometrics). Prerequisites: basic microeconomic theory at the level of Mas Colell, Whinston, Green; being comfortable with abstract models.

Additional Course Attributes:

Economics 2070

A Computer Science Toolbox for Modern Economic Theory (219636)

Yannai Gonczarowski

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

How can we use tools from machine learning theory to design better auctions? Can we use cryptography to better implement matching mechanisms? And how should we approach formally proving that welfare in Nash equilibria for many games is not "much worse" than in the social optimum? This course explores the application of diverse ideas, techniques, and solution aesthetics from theoretical computer science to derive meaningful new insights into classic economic problems. The three main themes are approximation theorems (including bounding the loss in revenue or welfare due to lack of information, to unpriced externalities, or to restricting the functional form of mechanisms); various notions of complexity (including computational complexity, communication complexity, and machine-learning sample complexity); and cryptographic tools (including cryptographic commitments, multiparty computation, and zero-knowledge proofs). Economic applications mostly include analysis of equilibria, pricing, and mechanism design. No prior knowledge in computer science is required.

Recommended Prep:

Basic microeconomic theory at the level of MWG.

Econometrics I (120668)

Gregory Bruch

2024 Fall (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 45

Economics 2110 and 2115 comprise a two-course sequence for first-year Ph.D. and D.B.A. students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2110 (fall) reviews probability and statistics, then covers the fundamentals of modern econometrics, with a focus on regression methods for causal inference in observational and experimental data. **Prerequisites:** undergraduate courses in probability and statistics, regression analysis, linear algebra,

and multivariate calculus.

Course Notes:

Enrollment limited to PhD candidates in economics, business economics, health policy, public policy, and political economy and government (PEG).

Recommended Prep:

The two-course sequence is open only to qualified PhD and DBA students from HKS, HBS, GSE, and HSPH, but occasionally others may be admitted at the discretion of the instructor (if the instructor is convinced that such individuals can perform well and would not negatively affect the nature and pace of the course).

Econometric Methods (120662)

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course continues the first year sequence in econometrics and covers a variety of topics and ideas that are important for pursuing and interpreting empirical research in economics. The first half of the course covers core econometric approaches that are important for a wide range of applications, including identification analysis, asymptotic approximations, large sample theory for estimation and hypothesis testing, and the bootstrap. The second part of the course examines a range of complementary topics and new developments, including reasons why canonical econometric methods may be unreliable (such as model misspecification, identification failure, and the incidental parameters problem) and extensions of and alternatives to the traditional econometric paradigm (such as partial identification, Bayesian inference, nonparametrics, and machine learning). Economic applications will be discussed throughout. Enrollment limited.

Recommended Prep:

Economics 2120 or equivalent.

Time Series (113904)

Neil Shephard

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Time series centers around three main goals: describing data (e.g. seasonal adjustment, detrending), predicting future variables given the past data, and drawing causal conclusions about the effect of changing one variable on the future path of another. We will delve into principles and methods for all three of these goals. Due to the complexity of these problems, a three-pronged approach is often needed, combining theory, simulation, and data. Throughout problems from Economics and Finance will be used to illustrate time series methods. Likely topics covered include: martingales, theory of prediction, linear models and projection, control, reinforcement learning, causality (e.g. SVAR, local projection), hidden Markov models, stationarity and non-stationarity, spectral and wavelet methods.

Spatial Mobility and Development: Evidence and Quantitative Models (215901)

Gabriel Kreindler

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

How does spatial mobility affect firms, migrants, commuters and job-seekers? What barriers hamper mobility at these different scales? What are the equilibrium implications of changes in travel costs, for example, due to infrastructure improvements? This course discusses recent research on the links between

transportation and the economy, with a focus on developing countries. It focuses on the interplay between empirical evidence and quantitative models, and students will gain hands-on experience with both. The first part of the course introduces the workhorse models and empirical tools, which we then apply to topics in infrastructure, migration, urban traffic congestion, and urban mobility and labor markets.

Unleashing Novel Data at Scale (217485)

Melissa Dell

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A vast number of important economic questions remain unanswered, in substantial part because the data required to examine them has traditionally been inaccessible. For example, much historical data remains trapped in hard copy. More broadly, information that could elucidate important questions is scattered throughout text, or contained in scans, photographs, videos, or audio files. This course will provide an introduction to deep learning-based methods and other data science tools that can process such sources on a massive scale.

The course will cover natural language processing, computer vision, and multimodal methods. Topics in NLP include neural language modeling, topic and sentiment classification, text retrieval named entity recognition, dependency parsing, and knowledge intensive NLP.

Topics in computer vision include convolutional neural networks, vision transformers, object detection, document layout analysis, image classification, image retrieval, GANs, and OCR. Efficiently harnessing the power of large-scale computing will receive emphasis throughout the course. By introducing a range of methods to convert diverse information into computable data, we aim to increase the number of questions that students can feasibly research.

The Microeconomics of Development (207641)

Emily Breza

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course covers the microeconomic foundations of development economics. We will focus on market frictions that may hinder growth in developing countries. Topics include labor markets, land markets, and credit markets. We will also discuss the economics of the household and social networks. The course will

use both theoretical and empirical tools.

Macro-Finance: Rational and Behavioral (125372)

Xavier Gabaix

2025 Spring (2 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

0

(1) **Bounded rationality:** we'll go over a behavioral version of basic microeconomics (consumer theory, Arrow Debreu), basic macroeconomics (real and monetary) and public economics.

(2) **Macroeconomics with heterogeneity:** we'll study how microeconomic shocks can generate macro fluctuations; network models in macro-finance; models of the income distribution.

(3) **Finance:** we'll study unified macro-finance models. First, with perfect financial markets: we'll review unified models of stocks, bonds, options and exchange rates. Second, with imperfect financial markets: we'll study how this sheds light on financial crises and currency movements. Time permitting, we'll review some behavioral finance, merging all three themes.

The course is geared toward two types of students, and has accordingly two tracks, "behavioral" and "finance", with corresponding emphasis in the homework and exam.

Course Notes:

This is a six week course that occurs in the first part of the semester.

Additional Course Attributes:

Economics 2411

Advanced Topics in Macroeconomics (207820)

Ludwig Straub

2025 Spring (2 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This is a class in empirical macroeconomics, covering empirical methods and their relation to structural macroeconomic modeling. Topics include: state-space and sequence-space representations of structural macroeconomic models; basics of time series inference; time series methods for causal identification; uses and limitations of cross-sectional analysis; and a brief overview of non-linear methods. The objective is to bring students to the research frontier in these topics.

Course Notes:

This is a 6 week course scheduled for the second half of the semester.

Advanced Topics in Empirical Macroeconomics (207940)

Gabriel Chodorow-Reich

2024 Fall (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The course will explore topics in applied macroeconomics, with emphasis on the intersection of empirical analysis and theory. Topics may include monetary policy, fiscal policy, financial frictions, and labor markets. The course will present a variety of empirical methods, such as the narrative approach, VAR analysis, and the use of cross-sectional data in macroeconomics.

Political Economy of Non-Democracies (215796)

David Yang

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Non-democratic regimes have been the oldest and most common form of political governance. This course studies the forces of stability and forces of change in non-democratic regimes. Concerning the forces of stability, we will cover topics such as repression, hatred, state coercion, information control, corruption, co-optation, and political trust and norms. Concerning the forces of change, we will cover topics such as democratization, collective actions, conflict, nation building, reform and privatization, state capacity, bureaucracy, and the role of institutions on economic development and innovation. We will explore these topics both theoretically and empirically. Students will be exposed to various workhorse models in political economy, as well as recent advances in empirical methods such as natural experiments, field experiments, lab experiments, lab-in-the-field experiments, and text analyses.

Public Economics and Fiscal Policy I (110660)

Stefanie Stantcheva

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers optimal labor income taxation and redistribution, behavioral responses to taxes and transfers, inequality, the distribution and taxation of wealth and capital income, social preferences (normative analysis), dynamic taxation and mechanism design. For each topic, we will cover the theoretical models and the empirical evidence.

Course Notes:

Requirements: (Economics 2010a AND economics 2010b) OR (Economics 2020 AND Economics 2020b). Good understanding of core empirical methods (event studies, diff-in-diff, regression discontinuity) is encouraged.

Recommended Prep:

In addition to the requirements above, you are strongly encouraged to review i) labor supply concepts (Hicksian elasticity, Marshallian elasticity, income effects); ii) "dynamic programming" and "optimal control methods"; iii) constrained optimization and the envelope theorem.

Requirements:

Prerequisite: (Economics 2010a AND Economics 2010b) OR (Economics 2020a AND Economics 2020b)

Public Economics and Fiscal Policy II (118658)

Nadarajan Chetty

David Deming

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is the second of two courses offered in the Public Economics sequence at Harvard in 2023-24. This course covers core issues related to the optimal design of government policies, with a special focus on recent empirical work analyzing the determinants of inequality, social mobility, and innovation. The broad goal of the course is to familiarize students with basic empirical methods and theoretical models in applied microeconomics, with a focus on connecting theory to data to inform economic policy. Specific topics include innovation, externalities and public goods, distributional effects of inflation, tax incidence, social insurance, welfare analysis in behavioral models, education and human capital, inequality and economic mobility, and corporate taxation.

Recommended Prep:

Students are strongly encouraged to take Economics 2450a before taking 2450b.

Requirements:

Prerequisite: (Economics 2010a AND Economics 2010b) OR (Economics 2020a AND Economics 2020b)

Instructor Permissions: None

Enrollment Cap:

n/a

TEPE explores scholarly work from economics and finance disciplines regarding entrepreneurship—the formation and growth of new firms. While work on this topic dates back to Schumpeter and even earlier, academic research regarding entrepreneurship has exploded over the last decade. The class has two components. First, the nine-week "core" component will span economics and finance. It will emphasize the connections between economic theory—particularly in contract theory, organizational economics, and corporate finance--and empirical work. Among the topics that will be covered are the rationale for entrepreneurial firms, the structure of arrangements between entrepreneurs and investors, the relationship with larger entities, entrepreneurial strategy, and the decision to go public. At the same time, entrepreneurship is a dynamic field, with new topics attracting academic (and real world) interest. Reflecting this dynamism, the nine core weeks will be followed by four weeks of special topics that will vary from year-to-year.

Course Notes:

Offered jointly with the Business School as 4350.

Enrollment Cap:

n/a

This is a reading group for students to discuss recent advances in the deep learning literature and brainstorm how these advances can contribute to their early-stage research ideas. The course will be organized around reading recent papers and discussing how they apply to students' own early state research ideas. Potential topics include

- but are not limited to - vision transformers; contrastive learning; text, image, and multimodal retrieval; knowledge-intensive NLP; aspect based sentiment analysis; implicit sentiment analysis; stance detection; framing; graph neural networks; and distillation. Course participants will drive the selection of topics, based on their own emerging research interests. Students must have a detailed knowledge of the material covered in Economics 2355 - in particular a well-developed understanding of CNNs, transformers, object detection, classification, language modeling, and retrieval – either through enrollment in that course, through consulting the course materials online, or through other coursework.

Early Stage Research and Discussions on the Economics of Health Equity (220488)

David Cutler

Marcella Alsan

2025 Spring (4 Credits)

Schedule:

R 0400 PM - 0515 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a reading group for students to discuss recent advances in the economics of health equity. Topics will include equity in all dimensions: race/ethnicity; gender orientation; disability status; and others. Students will read papers, present, and discuss them. Interested students should talk to Professor Alsan or Professor Cutler.

The Politics of Education in the Developing World (218917)

Emmerich Davies

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How do teachers' unions impact education policy? What role does democracy have on access to and the quality of education? What is the effect of decentralization on parental participation and educational outcomes? This course will explore these and other questions as we consider the role that political constraints play in the provision of education across the developing world. We will ask who the key actors, interests, and incentives are in education politics through individual case studies, political science theory, and empirical examples. The course will also have a strong emphasis on writing with a project that hones students' ability to convey ideas for diverse popular audiences. Through this course, students will learn to identify and critique power relations, the incentives of actors, the options such circumstances present, and how to best engage diverse actors in education policy making. The course emphasizes real-world examples and policies, and students will gain a broader understanding of the incentives and constraints political actors face in the developing world and how to engage such contexts effectively.

Career Focus:

This course is appropriate for students in all programs with an interest in understanding the role that politics, in particular educational institutions and actors, have in shaping how education resources are distributed globally. Through readings, course activities, and assignments, students will learn to identify how power operates and critique its operation, as well as understand the incentives and incentives of actors in the education space.

Educational Outcomes in Cross-National and Cross-Cultural Perspectives (218918)

Paul Harris

2025 Spring (4 Credits)

Schedule:

R 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A great deal of thinking about the relationship between psychology and education asks what psychology can contribute to the improvement of education. For example, can psychology help to improve the way that we teach reading? Can it help to close the gap in achievement between particular groups? Do preschoolers have ideas or dispositions that help--or hinder--their progress in school? However, one can also ask about the effects of education on psychological processes. There is enormous cross-national and cross-cultural

variation in the length and type of education that children receive. A major goal of this course is to help students understand the effects of such variation on the ways that people think--and feel. A secondary goal is to alert students to the ways in which those effects can be measured and to underline the contribution that different methods--experiments, large-scale surveys, and participant observation--can make to our understanding of such effects. The final goal is to underline how educational provision and its impact vary dramatically across the globe.

Learning Goals:

There is enormous variation in the length and type of education that children receive. A major goal of this course is to help you think about and understand the effects of such variation on the way that children end up thinking - and the values they hold. A secondary goal is to alert you to the ways in which those effects can be measured and to underline the contribution that different methods - small-scale experiments, large surveys, qualitative and observational studies - can make to our understanding of such effects. The final goal is to underline how far educational provision and its impact have varied in the course of history and currently vary across the globe.

Career Focus:

This course is co-listed at HGSE and The Harvard Chan School of Public Health. It is designed for masters and doctoral level students from across the University who are interested in the design, testing, and implementation of innovative, science-based strategies to promote the healthy development of young children facing adversity. Aspiring innovators and change agents with an interest in early childhood policy and practice are especially welcome.

Recommended Prep:

No prerequisites; some background in either psychology or international education desirable.

Foundations of Schooling and Teaching (218921)

Beth Simpson

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

The purpose of this course is to engage in an in depth investigation of the work of teaching. The course is designed for students who intend to enter the profession of teaching for the first time. Specifically, students will look at teachers' work in relation to students, the curriculum, and the school and the policy settings in which they are situated. This course strikes a balance between understanding focal topics from a theoretical and empirical perspective and investigating them from a practical, more hands on approach. The latter is achieved through the frequent use of case studies, videos of teaching practice, and reference to students' experiences in classroom settings.

Permission of instructor required. Enrollment for this course may be limited. Preference given to undergraduate students currently pursuing a secondary in Educational Studies or intending to pursue a secondary in Educational Studies. Open to Ed.M. students. Enrollment procedure will be posted on the course website

n/a

The duration of education is a strong predictor of health and longevity, but approximately 1 in 5 children with learning or attention issues have long-lasting negative consequences related to their academic, social, mental health, vocational, economic outcomes. In the US, over 2 million students struggle with specific learning disabilities (SLD), which represents roughly 35% of all students who receive special education services under the Individuals with Disabilities Education Act. Children with a learning disability are less likely to complete high school or enroll in postsecondary educational programs and have a heightened risk for developing mental health problems such as depression or anxiety. Currently, SLDs are primarily identified and addressed within the education system; however, these students also receive care and support outside of school and are members of various community settings. A streamlined approach that informs the coordination of general education, special education, clinical psychology, policymaking, advocacy, caregivers, and health professionals (e.g., pediatricians, speech-and language pathologists) is often absent and hinders the design of preventive approaches, identification strategies, and service implementation. It further leads to a siloed approach for care and policymaking, lack of community supports.

The course will provide a broad overview of learning disabilities and differences, including dyslexia, dyscalculia, attention deficit/hyperactivity disorder, developmental language disorder, and autism spectrum disorder, as well as the relevant policies and educational documentation for these learners. It will then cover the professional stakeholders that should be involved in an evidence-based response to a learning difference, and identify their unique knowledge base, toolset, developmental timeline, and communication strategies, both in the educational/professional environment and the community. Finally, we will focus on barriers and challenges faced by children with learning differences in the academic, professional, and community settings. Throughout the course, students will be provided with both research/evidence-based content and case-based learning opportunities, practical examples, and guest speakers drawn from the community. Class activities will include both synchronous and asynchronous learning activities led by the Instructor (Prof. Nadine Gaab), along with breakout sessions overseen by the instructor and/or Teaching Fellows.

This course is divided into thirds and will cover: (1) a broad overview of learning disabilities, educational policies, and service documentation; (2) stakeholders in academic and professional settings, including their unique knowledge base, toolset, developmental timeline, and communication strategies, barriers faced by children with learning differences in these settings, existing solutions to these barriers; and (3) stakeholders in community settings, barriers faced by individuals with learners in these settings, existing solutions to these challenges.

Ethnic Studies and Education (220790)

Christina Villarreal

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

60

How might the study of our collective past and present through a comparative, humanizing lens support our ability to contextualize and confront the challenges of our present? This course introduces students to the origins, epistemologies, frameworks, key concepts, and central questions in the field and community of Ethnic Studies, while applying these concepts and questions to our own educational experiences and the various contexts that we navigate. The course begins with an examination and analysis of self and impact of dominant and counter narratives throughout history, which will provide a foundation for the second half of the course when we examine more recent histories and issues faced by communities of color, including the ongoing struggle for Ethnic Studies here at Harvard. Topics will include, but are not limited to: settler colonialism, race, racism, ethnicity, migration, labor, colonialism, social movements, oppression, intergenerational trauma and resilience, white supremacy, power, agency, liberation, intersectionality, community action, healing centered engagement, solidarity, and social change. This course is designed to be both an individual and collective journey that challenges each of us to critically reflect upon what it means to authentically exercise solidarity in ways that actively interrupt oppression and humanize all participants in classrooms, communities, and beyond.

What Education Should Be: Purposes, Dilemmas, and Future Directions (223832)

Liao Cheng

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What is the purpose of education? Is it to promote personal growth, to teach vocational skills, to provide equal opportunities for all, or something else? Does education promote social equity or perpetuate inequity? Is there a body of universal knowledge that everyone should learn, or should the curriculum be tailored to students' individual needs? What is the balance between academic achievement and social-emotional learning in schools? Do parents have the right to opt out of classes that contradict their beliefs? Every student, parent, teacher, administrator, policymaker, and researcher may have a different answer to these questions. These disagreements are then manifested in disputes over what should be included in and left out of the curriculum, where funding should go, whether there should be more testing or less, etc. We disagree on these controversial issues, because we hold different ideas – sometimes explicit, but often implicit – about what education is and what it should be in our dynamically-changing world.

In this course, we will engage with dilemmas and controversies regarding the purposes of education, universalities and differences, and educational reform from the perspectives of various stakeholders and schools of thought. In this process, we will reflect on our own assumptions, develop our own ideas about

what education is, and examine how we can contribute to shaping its future.

This course aims at promoting the breadth and depth of students' thinking and helping you apply your learning to real-world issues including your own topics and contexts. There are three specific learning goals:

1. Understand the diverse and sometimes conflicting values and standpoints involved in educational issues to empathize, communicate, and collaborate with people from different perspectives,
2. Reflect on, examine, and revise your own assumptions about what education is and should be to develop your own understanding of and vision for education, and
3. Critically examine education at the present and make a constructive and innovative recommendation for its future.

Adolescent Development (223834)

Nancy Hill

2024 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Adolescence marks change on multiple levels (e.g., biologically, cognitively, and socially) and in multiple contexts (e.g., family, school, community, and peers). In fact, it marks the largest growth period in human development outside of infancy. Driven by enhanced thinking and reasoning capabilities, adolescents struggle with balancing their desires for autonomy and

independence with their desires for guidance and connection. These dynamics result in renegotiating family and social relationships and engagement in school, impact the effectiveness of educational practices, and enhance adolescents' ability to think and plan for their future. This course is designed to provide a practical understanding of the developmental issues, assets, and trajectories of adolescent thinking and reasoning. Based in classic and current theory and research and using real problems of practice, students will learn, integrate, and apply knowledge of biological and cognitive development and of identity processes. This course will prepare educational practitioners to integrate developmental approaches to their pedagogy and provide a foundation for those interested in applied research on adolescence.

No prerequisites; prior course work in developmental psychology is helpful, but the course is designed for students without a psychology background. Recommended for students who are planning to work directly with adolescents or are planning to engage in applied research with adolescents.

Radical Actors: The Role of Public Education in American Social Change (223833)

Nicole Simon

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

In this class, we will explore the role of public schools and educators as catalysts for change in American social movements. How have schools – including teachers and students – been central to social change? When, why, and how have they been part of a larger social movement's strategy? What has the power of student activism been over time? How has education propelled (or hindered) progress?

Our seminar will begin with a brief contextualizing unit on the purposes of public education in the American democracy. We will then analyze the role of education in three social movements over time:

The struggle for racial justice; Immigrant resistance; The fight to end gun violence.

All of these movements are as alive today as they have ever been. To better understand the role(s) that public education play[ed] in these movements, we will read books and articles, listen to and watch media, study social media, adventure to communities (virtually and in person!) and meet activists. In addition, seminar assignments will allow students to delve more deeply into the role of education in a social movement of their choice. These assignments are intended to help seminar students improve research, writing, networking and presentation skills.

Education in the East and West (223835)

Liao Cheng

2025 Spring (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Education is a universal human activity, but it takes myriad forms depending on the cultural context. When immersed in our own educational experiences and cultural backgrounds, we easily overlook cross-cultural variation and inaccurately generalize our own experiences to people in different cultures. It is therefore important to adopt a comparative approach and examine how people think about and practice education in different cultures. This not only

allows us to appreciate cross-cultural diversity and universalities, but also prompts us to reflect on how we are influenced by our own cultural backgrounds.

In this course, students will examine the educational beliefs and practices in Western and East Asian cultures. Specifically, students will compare Western and East Asian cultures with respect to their cultural values, education in the family context, and education in the school context.

This course is designed to help students achieve the following learning goals:

1. Understand the diversity in how people think about and practice education in Western and East Asian cultures,
2. Reflect on potential universal aspects in human development and education across cultures and develop

a nuanced and reflective approach to understanding culture, and

3. Critically examine your own educational experiences and communicate, empathize, and learn with people from different backgrounds.

History of Education in the United States (223836)

2025 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Contemporary education has deep roots in the past; roots that shape the purposes, practices, and organization of our educational system, and determine, in part, the possibilities of educational equity. This course seeks to understand those roots. Throughout the course we will examine how the people who shaped American schools from the colonial period to the present understood the following four primary questions: What are the purposes of public education? Who is included and why? What institutional structures and practices best fulfill these aims? Who makes these decisions and controls educational institutions? The answers to these questions have always been contested, and they have always been shaped by questions of race, power, and citizenship. We will explore whose priorities dominated, analyze how schools developed as sites of racial power, and seek to understand the impact of these historical debates on contemporary education. The focus of the course is on the relation of schooling to society. Readings are selected to illuminate the interaction between educational practices and the broader cultural, social, economic, and political context.

Leading Change in City Schools: Urban Education Reform in Action (223837)

Nicole Simon

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Public education has long strived to be society's "great equalizer." Yet, throughout its history, the American education system has failed to deliver on this promise. In this course, we will examine specific high-profile and popular system-level reform initiatives aimed at improving urban public schools. For example, we will investigate New York City's efforts to improve high schools and develop a "college for all" culture, Boston's focus on teacher quality, and Denver's school choice initiative. We will meet key leaders of these reforms: district level policy makers, principals, teachers, non-profit leaders and funders who collectively developed theories of action, negotiated new policies, and implemented the reforms with students. We will dive deep into their work to understand how political, economic, and cultural systems have enabled and constrained it, and

we will review the growing body of research on these reforms. Through course assignments, students will have opportunities to further investigate initiatives that interest them by visiting schools, interviewing education leaders, synthesizing research, and reflecting on whether and how recent reforms have influenced their own educational experiences.

20

This project-based course will introduce the physical concepts that can be applied to various human athletic endeavors. Students will focus on analyzing the dynamics of a specific sport/ physical activity through a project that they develop. This will allow students to construct physical models with an increasing level of realism that can be used to analyze sporting events. Mathematics is the language of physics, and its use will be ever-present throughout the semester. However, we will focus more on the application of the laws of physics to understand the world of athletics. Students will learn the use of motion trackers and sensors to analyze motion in its dynamical and kinematic aspects.

Recommended Prep:

Math 21a, Math 21b.

Microorganisms produce a diverse array of specialized small molecules as part of their metabolic processes. In this course we will study the production, properties, and characterization of these molecules through the lens of food fermentation. In particular, we will focus on the small molecules that contribute taste and aroma in fermented foods. Students will experience the scientific inquiry process in a creative way by designing and implementing their own research project based on a fermented food of their choosing. Still a field with much potential for discovery, interested students are invited to continue their research project in the summer.

Recommended Prep:

Ls1a , LPSA or equivalent; first semester Organic Chemistry recommended but not required.

The main course objectives are to introduce students to the exciting and powerful world of electrical engineering and to explain how gadgets that we use every day actually work. After taking ES 50, you will be able to leverage the power of electricity to build systems that sense, control and program the physical world around you. Examples include intelligent and autonomous systems (robots), audio amplifiers (e.g. guitar amp), interactive art installations, light-shows, mind-controlled machines, and so on.

Recommended Prep:

Enthusiasm, curiosity and desire to build things! Previous engineering or programming experience is NOT needed. The amount of high school physics required is minimal, and is limited to basic concepts only.

Linsey Moyer

2024 Fall (4 Credits)

Schedule:

MWF 1115 AM - 1230 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is designed as an introduction to thinking as a bio/biomedical engineer and is recommended for first years and sophomores but open to all students. Simple mathematical models are used to represent key aspects of organ systems function. Core engineering concepts are explored through mechanical and electrical examples within the human body. The primary focus is on quantitative descriptions of organ systems function and control in terms of physical principles and physiologic mechanisms. It includes a foundation in human organ systems physiology, including cardiovascular, pulmonary, and renal systems. Emphasis will be given to understanding the ways in which dysfunction in these systems gives rise to common human disease processes.

Course Notes:

Open to first-year students. Course includes a 3-hour lab section once

per week.

Recommended Prep:

Calculus at the high school level

Requirements:

Introduction to Scientific Computing (156287)

Sarah Iams

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Many science and engineering problems don't have simple analytical solutions or even accurate analytical approximations. Scientific computing can address certain of these problems successfully, providing unique insight. This course introduces some of the widely used techniques in scientific computing through examples chosen from physics, chemistry, biology, computer science and other fields. The purpose of the course is to introduce methods that are useful in applications and research and to give the students hands-on experience with these methods. The main programming language will be Python.

Course Notes:

Engineering Sciences 111 is also offered as Applied Mathematics 111. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 111.

Recommended Prep:

Mathematics 1b, 21a, and 21b

Requirements:

Pre Req: APMTH 10, COMPSCI 32, or COMPSCI 50.

Anti-Req: Students may not take APMTH/ES 111 after APMTH 205 or simultaneously with APMTH 205.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 112

Thermodynamics (160454)

Scot Martin

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:**

18

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. In addition to lectures, pedagogical approach includes real-world observations and applications through student presentations and projects.

Course Notes:

ES 112 is also offered as EPS 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. Total class capacity of 18 includes students in both ES 112 and EPS 112. Please see course page for lottery instructions.

Additional Course Attributes:

Engineering Sciences 115

Mathematical Modeling (156427)

Zhiming Kuang

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes:

Engineering Sciences 115 is also offered as Applied Mathematics 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Recommended Prep:

Prerequisite: Applied Mathematics 21a and 21b, or Mathematics 21a and 21b or permission of instructor. Taking APMTH 105 OR APMTH

108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115 is recommended but not required.

Additional Course Attributes:

FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 120

Introduction to the Mechanics of Solids (131270)

Mark Coughlin

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A first course in the mechanical sciences that introduces elements of continuum mechanics and explains how materials and structures stretch, bend, twist, shake, buckle, and break. Definitions of stress and strain. Strain-displacement relations. Stress-strain behavior of materials. Torsion, beam theory with applications to beam deflections, buckling, and energy methods. Statically determinate and indeterminate structures. Three laboratory sessions required. Strong emphasis on analytical skills and mathematics.

Recommended Prep:

Prerequisite: Mathematics 21a or Applied Mathematics 21a (or equivalent, previously); and Physical Sciences 12a, Physics 15a, or Applied Physics 50a (previously); and Mathematics 21b or Applied Mathematics 21b (or equivalent, previously or concurrently). Working knowledge of trigonometry, linear algebra, analytical integration, and differential equations.

Requirements:

Prerequisite: Math 21a or Applied Math 21a (or equivalent); AND Physical Sciences 12a, Physics 15a, or Applied Physics 50a; AND Co-requisite: Math 21b or Applied Math 21b (or equivalent)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
GSD: Recommended Elective	MDE approved SEAS 100 level course
Quantitative Reasoning with Data	Yes
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 121

Introduction to Optimization: Models and Methods (156288)

Melanie Weber

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

75

Introduction to basic mathematical ideas and computational methods for solving deterministic optimization

problems. Topics covered: linear programming, integer programming, branch-and-bound, branch-and-cut. Emphasis on modeling. Examples from business, society, engineering, sports, e-commerce. Exercises in AMPL, complemented by Mathematica or Matlab.

Course Notes:

Engineering Sciences 121 is also offered as Applied Mathematics 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.

Recommended Prep:

Mathematics 21b or equivalent preparation in linear algebra.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 123

Introduction to Fluid Mechanics and Transport Processes (144952)

Zachary Schiffer

2025 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Atomistic-Mesoscale-Continuum Fluids and Flows; Dimensional Analysis; Diffusion and Heat Transfer Processes; Fluid kinematics; Eulerian and Lagrangian descriptions of Flows; Mass conservation and potential flows; Momentum conservation and the Navier-Stokes equations; Vorticity and Vortices; Lift and Drag in Aerodynamics; Flows in Pipes and Channels; Elementary concepts of Turbulent flows.

Recommended Prep:

In addition to course prerequisites listed below, programming expertise (to the level of AM10) is highly recommended.

Requirements:

Prerequisite: (Applied Math 21a or Math 21a or equivalent) AND (Applied Math 21b or Math 21b or equivalent) AND (APPHY 50a or PHYSCI 12a or Physics 15a)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 125

Mechanical Systems (144157)

Boris Kozinsky

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Modeling and analysis of mechanical systems. Topics include 3D rigid body dynamics, resonance, damping, frequency response, Laplace transform methods, Lagrange's equations, multiple degree-of-freedom systems and an introduction to control and continuous systems. Analytical modeling will be supplemented with numerical simulations and lab experiments. Laboratory exercises will explore vibration, and stabilization using data acquisition systems.

Requirements: Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences 12a (or equivalent)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 128

Computational Solid and Structural Mechanics (133525)

Katia Bertoldi

2025 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

Introduction to finite element methods for analysis of steady-state and transient problems in solid and structural mechanics. Implementation of simple MATLAB codes and use of existing general-purpose software (ABAQUS). Final project offers opportunities to extend focus to fluid mechanics and heat transfer and to explore additional software (e.g. COMSOL, FEniCS), if desired.

Course Notes:

Offered alternate years.

Recommended Prep:

Engineering Sciences 120 or equivalent introduction to the mechanics of deformable materials.

Additional Course Attributes:

Attribute	Value(s)
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 139

Innovation in Science and Engineering: Conference Course (118939)

David Weitz

2024 Fall (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This class integrates perspectives from leading innovators with collaborative practice and theory of innovation to teach and inspire you to be more innovative in your life and career. Our approach is to

engage with leaders and learn their perspectives and align this with innovation sprints where you learn the best tools, processes, and methods to innovate. You can see a course overview here <https://youtu.be/CqfvXf33TCE>. Find out more information on Instagram @engsci139 or <https://www.instagram.com/engsci139/>

Course Notes:

Offered jointly with the Design School as SCI-6272.

The course will be taught in two sessions per week, each with a different focus. One session will focus on Innovation Perspective and often contain guest lectures by innovators. The second session will focus on Innovation Practice and will contain interactive group work, case studies, and other educational formats about specific innovation ideas and tools. These may be taught on different days or both days, with first-half Perspective and second-half Practice.

The course will be held in person. Some classes may be held at alternative times depending on the schedule of guest speakers.

Requirements:

Anti-Req: May not be taken for credit if ENG-SCI 239 already complete

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 150

Probability with Engineering Applications (116859)

Yue Lu

2025 Spring (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces the fundamentals of probability theory for parameter estimation and decision making under uncertainty. It considers applications to information systems as well as other physical and biological systems. Topics include: discrete and continuous random variables, conditional expectations, Bayes' rules, laws of large numbers, central limit theorems, Markov chains, Bayesian statistical inferences, and parameter estimations.

Requirements:

Prerequisite: (Applied Math 21a or Math 21a or equivalent) AND
Corequisite: (Applied Math 21b or Math 21b or equivalent)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 151

Applied Electromagnetism (143005)

Evelyn Hu

2025 Spring (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Electromagnetism and its applications in science and technology. Topics: Maxwell's equations; electromagnetic waves (e.g., light, microwaves, etc.); wave propagation through media discontinuity; transmission lines, waveguides, and microwave circuits; radiation and antennae; interactions between electromagnetic fields and matters; optics of solids; optical devices; origin of colors; interference and diffraction; lasers and masers; nuclear magnetic resonance and MRI; radio astronomy; wireless networking; plasmonic wave (charge density wave).

Recommended Prep:

Basic electromagnetism (Applied Physics 50b, Physical Sciences 12b, or 15b or equivalent), basic vector calculus (Applied Math 21a or equivalent), basic differential equations (Applied Math 21b or equivalent) and familiarity with Fourier analysis (Applied Math 21b or equivalent).

Requirements:

Prerequisite: Math 21a (or equivalent); and Physical Sciences 12a and 12b, Physics 15a and 15b, or Applied Physics 50a and 50b

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 152

Circuits, Devices, and Transduction (207597)

Gage Hills

2024 Fall (4 Credits)

Schedule:

MW 0215 PM - 0330 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces the fundamentals of circuit theory for the analysis of electrical circuits and the fundamentals of semiconductor devices for the understanding of transistors circuits and other useful actuators and sensors (i.e., transducers). Building on the principles from these two core fundamental areas of electrical engineering, the analog behavior of electronic circuits and physical devices will be modelled, analyzed, and applied. Lab assignments will focus on the design, implementation, and measurement of analog electronic circuits using real electrical components which interface to the physical world. This course complements and forms the basis for many of the abstractions that are used in digital computing systems such as in COMPSCI 141, COMPSCI 146, and COMPSCI 148.

Requirements:

Prerequisite: Math 1a and 1b; **AND Co-requisite:** Physical Sciences 12b or Physics 15b or Applied Physics 50b

Additional Course Attributes:

Attribute	Value(s)
GSD: Recommended Elective	MDE approved SEAS 100 level course

FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 155

Systems and Control (207626)

Heng Yang

2024 Fall (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course and its follow-on course ENG-SCI 156 concern the fundamentals of information systems in the real world. Together they provide a comprehensive foundation in signal processing, systems design and analysis, control, and communications, while also introducing key linear-algebraic concepts in the context of authentic applications. The first course, ENG-SCI 155, focuses on the basic principles of feedback and its use as a tool for inferring and/or altering the dynamics of systems under uncertainty. Topics include linear algebra, the elemental representations of dynamic systems, stability analysis, the design of estimators (e.g., Kalman Filter) and feedback controllers (e.g., PID and Optimal Controller). The class includes both the practical and theoretical aspects of the topic.

Recommended Prep:

Applied math 21a, b or Math 21a, b or equivalent are encouraged to be taken concurrently but not required. Additional sections and materials of linear algebra will be provided in the course.

Requirements:

Prerequisite: Math 1a and Math 1b

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 156

Signals and Communications (148148)

Flavio du Pin Calmon

2025 Spring (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is a follow-on to ENG-SCI 155 and continues to develop the fundamentals of information systems in the real world. It focuses on the analysis and manipulation of signals in the time and frequency domains in the context of authentic applications. Topics include: the sampling theorem, convolution, and linear input-output systems in continuous and discrete time. Further, students are introduced to transforms—including Fourier, discrete cosine, wavelet, and PCA / SVD 'transforms'—that map between vector spaces via matrix multiplication as a method to ease analysis provided conditionalized knowledge. Randomness, noise, and filtering. Waves and interference in the context of communications; antennae, phasors, modulation, multiplexing. Applications in communications and data science.

Recommended Prep:

Applied Mathematics 21b or Mathematics 21b.

Requirements: Prerequisite: Math 21a and Math 21b (or equivalents), or Applied Math 22a

Additional Course Attributes:

Attribute	Value(s)
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 159

Introduction to Robotics (131554)

Justin Werfel

2024 Fall (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to computer-controlled robotic manipulators. Topics include coordinate frames and transformations, forward and inverse kinematic solutions to open-chain manipulators, the Jacobian, dynamics and control, and motion planning. In addition, special topics will be introduced such as computer vision, soft robotics, surgical robots, MEMS and microrobotics, and biomimetic systems. Laboratory exercises will provide experience with industrial robot programming and robot simulation and control.

Course Notes:

Eng-Sci 159 is also listed as Eng-Sci 259. Students may not take both for credit. Graduate students must enroll in 259. The material in 259 is the same as in 159, but with additional problems on the problem sets and a final project.
Jointly offered at GSD as SCI 6274.

Recommended Prep:

Prerequisites: Linear algebra (e.g., Mathematics 21a,b, Mathematics 22a,b, Mathematics 25a,b, Applied Mathematics 22a,b); introductory mechanics (e.g., Physics 15a, Physics 16, Physical Sciences 12a, Applied Physics 50a,b); programming experience (e.g., CS 50; MATLAB recommended).

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 170

Engineering Quantum Mechanics (207088)

Evelyn Hu

Nishant Sule

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will introduce fundamental concepts in quantum mechanics and the associated mathematical frameworks that will be foundational for the analysis and appreciation of emerging quantum technologies. These technologies include quantum computing and the broader field of quantum information science. We will develop the framework with a focus on spin as a quantum mechanical state, to elucidate quantum mechanical concepts, including uncertainty, superposition, and entanglement. Students will explore topics such as spin behavior in magnetic fields, interactions between spins, spin measurement, the impact of environmental factors on spins, and more. In this way, students will gain understanding of how spin states can function as qubits, the fundamental units of quantum information. Additionally, the course will survey the latest advancements in qubit technologies, delving into their underlying physical quantum states, hardware implementations, and evaluations of their resilience against external influences.

Recommended Prep:

Math 21a (multivariable calculus) and Math 21b (linear algebra)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
GSD: Recommended Elective	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 176

Introduction to Microelectromechanical Systems (127589)

Fawwaz Habbal

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The goal of this multidisciplinary course is to enable students to learn how to create miniaturized devices. In addition to the weekly lectures, hand-on activities will lead students to become capable of creating micro-nano devices. Students will understand the physics of sensors and actuators, become familiar with thin-film fabrication technologies, and understanding how these concepts were commercialized. Learning is in small teams – together, students design, simulate, build, edit, discuss, and critique their work. Students will make basic structures using lithography, deposition, and etching. Next, they integrate such structures to create, testable, devices. At the end of the semester, they reverse-engineer some commercial devices and reflect on their fabrication and function.

Course Notes:

ES 176 is also offered as ES 276. Students may not take both for credit. Students who enroll in ES 176 will learn similar content as students who enroll in ES 276 but may have fewer demanding experiments. Course includes an active learning component of labs and simulations, usually on Thursdays. Students will also use CNS on per demand bases.

Recommended Prep:

Applied Physics 50a,b, Physical Sciences 12a,b, Physics 11a,b (no longer offered) or 15a,b; College Chemistry at the level of Life Sciences 1a and Physical Sciences 1.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 177

Microfabrication Laboratory (109356)

Kiyoul Yang

2025 Spring (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

The course provides introduction to micro- and nano-fabrication processes used to realize photonic, electronic and mechanical devices. Lectures will introduce the state-of-the-art semiconductor fabrication processes, including lithography, deposition of metals and dielectrics, etching, oxidation, implantation, and diffusion of dopants. The fabrication component of the course will be carried out in a state-of-the-art cleanroom in the Center for Nanoscale Systems, where students will fabricate several electronic and photonic devices, including transistors, light-emitting diodes (LEDs), lasers and optical resonators. Device characterization will be performed in a state-of-the-art teaching labs in SEC in Allston.

Course Notes:

Course also includes a 4-hour lab session each week. The combined class capacity for ES 177 and ES 277 is 20 students.

Requirements:

Prerequisite: (Applied Physics 50a OR Physical Sciences 12a OR Physics 15a) AND (Applied Physics 50b OR Physical Sciences 12b OR Physics 15b)

Additional Course Attributes:

Engineering Sciences 181

Engineering Thermodynamics (135598)

Zhigang Suo

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to classical engineering thermodynamics. Topics: Zeroth Law and temperature. Properties of single-component gases, liquids, and solids. Equations of state for ideal and simple nonideal substances. First Law, heat and heat transfer, work, internal energy, enthalpy. Second Law, Third Law, entropy, free energy, exergy. Heat engines and important engineering applications such as refrigerators, power cycles. Properties and simple models of solutions. Phase and chemical equilibrium in multicomponent systems; chemical potential. Electrochemistry, batteries, fuel cells. Laboratory included.

Recommended Prep:

High School AP Chemistry or higher

Requirements:

Prerequisite: Physical Sciences 12a, Physics 15a, or Applied Physics 50a

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 183

Introduction to Heat Transfer (108871)

David Clarke

2025 Spring (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

The macroscopic description of the fundamentals of heat transfer and their application to practical problems in energy conversion, electronics and living systems with an emphasis on developing a physical and analytical understanding of conductive, convective and radiative heat transfer. Emphasis will be given to problem solving skills based on applying governing principles, mathematical models and physical intuition.

Topics include: steady state heat conduction in 1, 2 and 3D; transient heat conduction in 1D and 3D; introduction to convective heat transfer, forced convection as well as free convection; heat exchange analysis and design; elements of radiative heat transfer. There will be an emphasis on physical basis of heat transfer with mathematical description where appropriate, as well as using commercially available computer COMSOL software. Course includes (i) classes and problem sets, (ii) COMSOL simulations and (iii) a semester-long, multi-disciplinary team project.

Requirements:

Prerequisite: (Applied Math 21a or Math 21a or equivalent) AND (Applied Math 21b or Math 21b or equivalent) AND (APPHY 50a or PHYSCI 12a or Physics 15a)

Materials Selection and Design (216405)

David Clarke

2024 Fall (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

The repertory of materials available to engineers today and embodied in engineering systems includes tens of thousands of different materials, as well as naturally occurring ones. This course addresses why specific materials are selected for particular applications and the rational basis for their selection. The course is intended to serve as an introduction to the principles and methodology of selecting materials for engineering components based on the functionality and purpose of the component in different system applications and operating environments. The selection specification includes satisfying a variety of objectives, such as minimizing weight, cost (financial as well as environmental), end of life recycling and material scarcity.

Engineering Sciences 195

Using First Principles to Reverse-engineer Complex Biological Systems (224021)

Philippe Cluzel

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

As more modeling efforts are performed by machines, young scientists may become unfamiliar with intuitive reasoning. Here, I propose a thought-provoking class where students with quantitative background learn to develop intuitive thinking by constructing reductive hypotheses to characterize and predict the behavior of complex biological systems. All models rely on calculations made by hand without the help of any computer. Most of the tools used in the class are derived from advanced statistical physics. Students contribute during class to 'live' calculations initially derived by the instructor (black/white board) and then extended and challenged by peer-to-peer discussions in smaller groups. Learning outcome for students consists in being capable to apply first principles and simple reductive hypotheses for modeling dynamical behavior of molecular machines, stochastic intracellular networks, and large neural networks. They will also be capable to describe some physical limitations of machine learning approaches using Boolean networks. More generally, the underlying goal of the class is to demonstrate the usefulness of critical

thinking as an essential tool to assess the validity of results from 'black box' modelling (in particular those produced by new generative AI platforms).

Course Notes:

ES 195 is also offered as MCB 195. Students may not take both for credit.

Recommended Prep:

Math 21a. Students who are familiar with multivariable calculus but did not take Math21a should consult with the instructor.

Additional Course Attributes:

Engineering Sciences 200

Foundations of Quantum Mechanics (220701)

Federico Capasso

2024 Fall (4 Credits)

Schedule:

WF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction to the foundations of quantum mechanics, with specific focus on the basic principles involved in the control of quantum systems. Experimental foundations of quantum mechanics. Superposition principle, Schrödinger's equation, eigenvalue and time dependent problems, wave packets, coherent states; uncertainty principle. One dimensional problems: double well potentials, tunneling, resonant tunneling, harmonic oscillator. WKB approximation. Hermitian operators and expectation values; time evolution and Hamiltonian, commutation rules, transfer matrix methods. Schrödinger, Heisenberg and interaction representations. Perturbation theory. Variational methods. Angular momentum, spin, Pauli matrices. Coherent interaction of light with two-level systems. Quantization of the EM field, absorption, spontaneous and stimulated emission. Density matrix and applications. Elements of quantum information (qubits, entanglement, teleportation, etc.). Taking this course meets the quantum mechanics core course requirement for the Applied Physics model programs.

Course Notes:

This course is also offered as QSE 200 and Chem 200. Students may only take one of ENG-SCI 200, QSE 200, and Chem 200 for credit.

Engineering Sciences 222

Advanced Cellular Engineering (114808)

Kit Parker

2025 Spring (4 Credits)

Schedule:

TR 1115 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes:

BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.

Recommended Prep:

Inorganic chemistry, cell biology, physics, and mathematics at the level of Applied Mathematics 21 or Mathematics 21. Suggested courses include organic chemistry and molecular biology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 223

Neurophysiology and Neural Interfaces (222518)

Shriya Srinivasan

2024 Fall (4 Credits)

Schedule:

MW 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers fundamental neuroanatomy, physiology, and the principles that guide the development and implementation of peripheral neurotechnology. This course will provide an overview of the state of art in neuroprosthetics, functional electrical stimulation, and other relevant devices. Clinical case studies will be used to frame the lectures.

Recommended Prep:

ES 53 or equivalent.

Requirements:

Graduate Students Only (Undergraduates can submit a request to enroll)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 224

Biomechanics of Movement and Assistive Robotics (222519)

Patrick Slade

2025 Spring (4 Credits)

Schedule:

TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will study the fundamentals of human movement, emphasizing applications in rehabilitation, athletics, and assistive devices. Topics will focus on the biomechanical principles of movement (muscle and tendon properties), experimental data collection techniques (motion capture, wearable sensing, and imaging), simulation with musculoskeletal modeling, and cutting-edge topics in assistive robotics (human-centered design, human-in-the-loop optimization, exoskeletons, etc). A semester-long project will allow students to apply the topics to solve a problem of interest relating to human movement or assisted mobility.

Course Notes:

Open to graduate and upper-level undergraduate students. ES 224 is also offered as BE 124. Students may not take both for credit.

Recommended Prep:

Linear algebra (Math 21b or equivalent) and intro to programming (CS50 or equivalent).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 225

Neuroengineering (216799)

Jia Liu

2024 Fall (4 Credits)

Schedule:

TR 1245 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course provides an introduction to biological neural systems, and current engineering efforts to understand, control, and enhance the function of neural systems. The focus is on the basic knowledge of molecular basis, anatomic structures, and electrical functions of central and peripheral nervous systems, and the most state-of-the-art genetic/genomic, optical, electrical, magnetic, and computational tools for nervous systems. Key themes throughout the course will include structures of central and peripheral nervous systems, genetic engineering, RNA sequencing, optogenetics, microscope, bioelectronics, MRI, and computational neuroscience. This includes both the practical and theoretical aspects of the topic.

Course Notes:

The contents and course requirements are similar to those of Biomedical Engineering 131 (BE 131), with the exception that students enrolled in Engineering Sciences 225 (ENG-SCI 225) are expected to undertake a substantial course project.

Recommended Prep:

This course is intended for juniors and seniors with some background in biology or engineering. ENG-SCI 54 and one life science course are recommended.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 227

Medical Device Design (127639)

Linsey Moyer

Shriya Srinivasan

2025 Spring (4 Credits)

Schedule:

MW 0215 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Project-based course on the design of medical devices to address needs identified by hospital-based clinicians. Students work in teams with physicians to develop a novel device. The design process includes: needs finding; problem identification; prior art searches; strategy and concept generation; estimation; sketching; sketch modeling; machine elements, ergonomics and prototyping.

Recommended Prep:

Engineering Sciences 51 or machine design experience. Graduate course, but open to qualified junior and senior undergraduates.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 228

Computational Solid and Structural Mechanics (214512)

Katia Bertoldi

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to finite element methods for analysis of steady-state and transient problems in solid and structural mechanics. Implementation of simple MATLAB codes and use of existing general-purpose software (ABAQUS). Final project offers opportunities to extend focus to fluid mechanics and heat transfer and to explore additional software (e.g. COMSOL, FEniCS), if desired.

Course Notes:

Offered alternate years.

Recommended Prep:

Engineering Sciences 120 or equivalent introduction to the mechanics of deformable materials.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 229

Survey of Energy Technology (109282)

Michael Aziz

2025 Spring (4 Credits)

Schedule:

WF 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Principles governing energy generation and interconversion. Current and projected world energy use. Selected important current and anticipated future technologies for energy generation, interconversion, storage, and end usage.

Course Notes:

This course must be taken Sat/Unsat. Cannot be used for SEAS concentration credit. Students may not take both Engineering Sciences 229 and Engineering Sciences 231 for credit. Not expected to be offered in F23, S24 or F24.

Recommended Prep:

Calculus of a single variable, one semester of college-level physics, and familiarity with chemistry at the high school advanced placement level.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 234

Technology Venture Immersion (211051)

Conor Walsh

Thomas Eisenmann

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 30

Using a learning-by-doing approach, student teams will work on their own venture concepts in this intensive immersion course. The course will convey concepts and builds skills required in early stage technology ventures, including problem finding (human-centered design, customer discovery), solution finding (ideation methods, prototyping, user testing), business model validation (hypothesis generation, minimum viable products, lean experimentation), sales and marketing methods, venture financing, and team building and leadership skills. Enrollment limited to first-year MS/MBA: Engineering Sciences students only.

Course Notes:

This course is limited to first-year MS/MBA: Engineering Sciences students only.

All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 239

Advanced Innovation in Science and Engineering: Conference Course (118942)

David Weitz

2024 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

This class integrates perspectives from leading innovators with collaborative practice and theory of innovation to teach and inspire you to be more innovative in your life and career. Our approach is to engage with leaders and learn their perspectives and align this with innovation sprints where you learn the best tools, processes, and methods to innovate. You can see a course overview here <https://youtu.be/CqfvXf33TCE>. Find out more information on Instagram @engsci139 or <https://www.instagram.com/engsci139/>

Students are expected to meet all the requirements of Engineering Sciences 139 and in addition are required to prepare an individual term project with significant analytic emphasis in an area of scientific or technological innovation.

Course Notes:

May not be taken for credit if ENG-SCI 139 already complete. Offered jointly with the Graduate School of Design as SCI-6272. The course will be taught in two sessions per week, each with a different focus. One session will focus on Innovation Perspective and often will contain guest lectures by innovators. The second session will focus on Innovation Practice and will contain interactive group work, case studies, and other educational formats about specific innovation ideas and tools. These may be taught on different days or both days, with first-half Perspective and second-half Practice. The course will be held in person. Some classes may be held at alternative times depending on the schedule of guest speakers.

Information Theory (119057)

Flavio du Pin Calmon

2024 Fall (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Fundamental concepts of information theory, Entropy, Kullback-Leibler divergence, Mutual information; typical sequences and their applications, Loss-less data compression, Huffman codes, Elias Codes, Arithmetic Codes, Discrete Memory-less Channels, Channel Coding and Capacity, Differential Entropy, Gaussian Channels, rate distortion theory, Multi-user Information Theory, Connections between information theory and statistics.

Recommended Prep:

Engineering Sciences 150 or knowledge of basic probability.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 252R

Advanced Topics in Robotics Research (123580)

Robert Wood

2025 Spring (4 Credits)

Schedule:

MW 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A graduate seminar course on advanced topics in robotics research. Students read and present research papers and undertake a research project.

Recommended Prep:

Engineering Sciences 159/259 or equivalent, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 256

Informal Robotics (156726)

Chuck Hoberman

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

6

This course teaches how to create original robotic devices made of light, compliant – informal – materials.

New fabrication techniques are transforming the field of robotics. Rather than rigid parts connected by mechanical connectors, robots can now be made of folded paper, carbon laminates or soft gels. They can be formed fully integrated from a 3D printer rather than assembled from individual components. Informal Robotics draws on cutting-edge research from leading labs, in particular, Harvard's Micro Robotics Laboratory which has created unique designs for ambulatory and flying robots, end-effectors, medical instruments and other applications.

We will explore informal robotics from multiple perspectives, culminating with the design of original devices displaying animated intelligence in real-time. Going beyond traditional engineering approaches, we will also explore new opportunities for design at the product, architectural, and urban scales.

Techniques:

Hands-on: Working with the GSD's Fab Lab we are creating a kit of parts that will be available to all enrolled students. With the kit, you can create a wide range of folding mechanisms controlled by on-board miniature electronics.

Software / Simulation: Software workshops will be offered on Fusion 360 and Grasshopper to simulate robotic performance within a virtual environment.

Topics:

- **Kinematics:** design techniques for pop-ups, origami, and soft mechanisms.
- **Fabrication:** methods: for composite materials, laminated assembly, self-folding, and integrated flexures - the kit of parts will allow for hands-on exploration.
- **Controls:** how to actuate movement and program desired behavior. Topics include servos, linear actuators, and use of Arduino actuator control.
- **Applications:** takes us beyond purely technological concerns, contextualizing Informal Robotics within larger trends where materials, manufacturing and computation are starting to merge

Course Notes:

This course does not count for concentration credit for SEAS undergraduate concentrators; this course does not count as a disciplinary course for SEAS Ph.D. students. Jointly offered with GSD, SCI 6478.

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 258

Introduction to Bioelectronics (215116)

Jia Liu

2025 Spring (4 Credits)

Schedule:

MW 1115 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course introduces bioelectronics and its applications in neuroscience, neuroengineering, cardiology, wearable technology, and so on. The focus is on the basic principles of bioelectricity, biochemistry, and physiological behaviors of biological systems and how to design electronic tools to precisely measure and control them. Key themes throughout the course will include bioelectricity, biochemistry, cellular and tissue physiological behavior, optogenetics, sensors, stimulators, circuits, signal processing, electronics-biology interface, and applications. This includes both the practical and theoretical aspects of the topic. Three experimental demonstrations will be included as part of the normal class meeting time. Given its

broad coverage, students who enroll in this course are expected to have a substantial background in chemistry, biology, and electrical engineering (see recommended prep and course requirements). The contents and course requirements are similar to those of Biomedical Engineering 129 (BE 129), with the exception that students enrolled in Engineering Sciences 258 (ENG-SCI 258) are expected to undertake a substantial course project.

Course Notes:

The total enrollment limit for BE 129 and ES 258 is 20 students.

Recommended Prep:

ENG-SCI 50, ENG-SCI 52, or ENG-SCI 152.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 259

Advanced Introduction to Robotics (134052)

Justin Werfel

2024 Fall (4 Credits)

Schedule:

MW 1245 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to computer-controlled robotic manipulators. Topics include coordinate frames and transformations, forward and inverse kinematic solutions to open-chain manipulators, the Jacobian, dynamics and control, and motion planning. In addition, special topics will be introduced such as computer vision, soft robotics, surgical robots, MEMS and microrobotics, and biomimetic systems. Laboratory exercises will provide experience with industrial robot programming and robot simulation and control.

Course Notes:

Eng-Sci 259 is also listed as Eng-Sci 159. Students may not take both for credit. Graduate students must enroll in 259. The material in 259 is the same as in 159, but with additional problems on the problem sets and a final project. Jointly offered at GSD as SCI 6274.

Recommended Prep:

Prerequisites: Linear algebra (e.g., Mathematics 21a,b, Mathematics 22a,b, Mathematics 25a,b, Applied Mathematics 22a,b); introductory mechanics (e.g., Physics 15a, Physics 16, Physical Sciences 12a, Applied Physics 50a,b); programming experience (e.g., CS 50; MATLAB recommended).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 273

Optics and Photonics (123351)

Federico Capasso

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The focus is on the foundations of optics/photonics and on some of its most important modern developments and applications. Powerful and widely used computational tools will be developed in the sections. Topics to be covered: Maxwell's equations, Free space optics. Reflection, refraction, polarization (Jones Calculus and Stokes parameters); interference and diffraction. Light-matter interaction, dispersion and absorption. Guided wave optics (including optical fibers). Perturbation and couple mode theory, transfer matrix methods; numerical methods. Optical resonators. Photonic crystals. Near-field optics. Metal optics and Plasmonics. Metamaterials and Metasurfaces.

Course Notes:

Open to graduate students and advanced undergraduates.

Recommended Prep:

Elements of Electromagnetism, such as taught in Applied Physics 50b, Physics 15b, Physical Sciences 12b, Engineering Sciences 151 or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 276

Introduction to Microelectromechanical Systems (127590)

Fawwaz Habbal

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The goal of this multidisciplinary course is to enable students to learn how to create miniaturized devices. In addition to the weekly lectures, hand-on activities will lead students to become capable of creating micro-nano devices. Students will understand the physics of sensors and actuators, become familiar with thin-film fabrication technologies, and understanding how these concepts were commercialized. Learning is in small teams – together, students design, simulate, build, edit, discuss, and critique their work. Students will make basic structures using lithography, deposition, and etching. Next, they integrate such structures to create, testable, devices. At the end of the semester, they reverse-engineer some commercial devices and reflect on their fabrication and function.

Course Notes:

ES 176 is also offered as ES 276. Students may not take both for credit. Students who enroll in ES 176 will learn similar content as students who enroll in ES 276 but may have fewer demanding experiments. Course includes an active learning component of labs and simulations, usually on Thursdays. Students will also use CNS on per demand bases.

Recommended Prep:

Applied Physics 50a,b, Physical Sciences 12a,b, or 15a,b; College Chemistry at the level of Life Sciences 1a, Physical Sciences 1,

Engineering Sciences 173 and Engineering Sciences 176.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 277

Microfabrication Laboratory (109357)

Kiyoul Yang

2025 Spring (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

The course provides introduction to micro- and nano-fabrication processes used to realize photonic, electronic and mechanical devices. Lectures will introduce the state-of-the-art semiconductor fabrication processes, including lithography, deposition of metals and dielectrics, etching, oxidation, implantation, and diffusion of dopants. The fabrication component of the course will be carried out in a state-of-the-art cleanroom in the Center for Nanoscale Systems, where students will fabricate several electronic and photonic devices, including transistors, light-emitting diodes (LEDs), lasers and optical resonators. Device characterization will be performed in a state-of-the-art teaching labs in SEC in Allston.

Course Notes:

Course also includes a 4-hour lab session each week. Content and requirements are similar to Engineering Sciences 177, with the addition that students enrolled in Engineering Sciences 277 are given an additional project. The combined class capacity for ES 177 and ES 277 is 20 students.

Requirements:

Prerequisite: (Applied Physics 50a OR Physical Sciences 12a OR Physics 15a) AND (Applied Physics 50b OR Physical Sciences 12b OR Physics 15b)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 280

Designing Technology Ventures (208004)

Robert D. Howe

Thomas Eisenmann

2024 Fall (4 Credits)

Schedule:

MW 0345 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a core course for students in the MS/MBA: Engineering Sciences program. The course will begin with methods for modeling engineering and business systems, including discrete and continuous systems

and feedback controls. Students will write simple simulations and then use professional modeling software to simulate complex systems. Students will next learn design methodology, including stakeholder modeling, ideation, and decision making tools. A final team project will involve design of a system, including simulation and prototyping.

Course Notes:

This course is limited to MS/MBA: Engineering Sciences students only.

Recommended Prep:

Calculus, linear algebra, differential equations.

Requirements:

First year MS/MBA students only

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 285

Design Theory and Practice (212920)

Elizabeth Christoforetti

Roberto Verganti

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 35

Any organization, business or venture grounds its value on how "meaningful" are its products (functionally, symbolically and emotionally). Design Theory and Practice (DTP) empowers students to create products that are meaningful, to people who use them and to society at large. The course has three purposes:

1. To inspire students about the power of design in new business creation. We will address questions such as: Why is design relevant in tech ventures? How does it create value? And, most of all, why is it fundamental for a technology entrepreneur/leader?
2. To enable them to move into action, by learning the theories and practice (mindsets, processes, methods) of design: Where do ideas come from? How to frame (and especially re-frame) a problem? How to understand what is meaningful to users? How to make a product desirable (functionally, emotionally and symbolically)? How to design and build the user interface of a product? How to test it? How to narrate and visualize a novel idea?
3. To co-explore, with the class and the instructor, the use of design as a leadership practice: How does a leader who masters design can better contribute to creation of value? How can we forge a new manifesto for leadership, inspired by design?

The course is intensively project-based. Students will work in teams on a complex innovation challenge proposed by a real corporation. They will suggest a more effective framing of the problem, and create a novel meaningful solution, with a special focus on the user interface.

Course Notes:

This course is limited to MS/MBA: Engineering Sciences students only.
Requires instructor consent.

Engineering Sciences 291

Nano Micro Macro: Adaptive Material Laboratory (156219)

Joanna Aizenberg

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course is an interdisciplinary platform for designers, engineers, and scientists to interact and develop innovative new products. The course introduces ideas-to-innovation processes in a hands-on, project/product focused manner that balance design and engineering concepts with promising, real-world opportunities. Switching back and forth between guided discovery and focused development, between bottom-up and top-down thinking, and market analyses, the course helps students establish generalizable frameworks as researchers and innovators with a focus on new and emerging technologies. There are no prerequisites.

Course Notes:

This course is offered together with the Harvard Graduate School of Design as SCI 6477. Open to upper-level undergraduates.

Recommended Prep:

There are no prerequisites.

Engineering Sciences 292A

Launch Lab/Capstone 1 (214579)

Russell J Wilcox

Alan Maccormack

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

35

The MS/MBA Capstone is an intensive project that requires teams of students to apply and integrate the skills they have learned across core disciplines developed in the program curriculum. Specifically, teams will be expected to design, build and launch a new technology-based product/service venture, and thereby to demonstrate mastery with respect to three areas of knowledge: Design Knowledge: The use of human-centered design methods to understand users, identify solutions to their needs, and gather feedback via rapid, iterative prototyping. Technical Knowledge: The use of rigorous system engineering methods to plan, design, develop, build, and test a complex technology-based product/service, integrating knowledge across multiple engineering disciplines. Business Knowledge: The use of business model analysis and

lean experimentation methods to develop and test a set of hypotheses that capture how the new product/service will create value, including business model design, pricing, sales and marketing, operating model and profit formula.

The Capstone is divided into two parts, the first of which is an immersive course completed during the January term of the G2 year (Capstone I). The subsequent spring course (Capstone II) follows on from and builds upon work completed in January. Given students prior coursework, a working knowledge of human-centered design methods, systems engineering techniques, and business modeling and lean experimentation is assumed. Launch Lab therefore focuses on the practical application of these skills to team projects, supplemented by content in three areas: i) seminars on advanced methods and techniques, ii) workshops that demonstrate how to put these skills and tools into practice, and iii) guest speakers who share their experience in the areas of design, technology and business.

Course Notes:

Open to MS/MBA: Engineering Sciences students only, or to others by permission of the instructor.

The MS/MBA Capstone is an intensive project that requires teams of students to apply and integrate the skills they have learned across core disciplines developed in the program curriculum. Specifically, teams will be expected to design, build and launch a new technology-based product/service venture, and thereby to demonstrate mastery with respect to three areas of knowledge: Design Knowledge: The use of human-centered design methods to understand users, identify solutions to their needs, and gather feedback via rapid, iterative prototyping. Technical Knowledge: The use of rigorous system engineering methods to plan, design, develop, build, and test a complex technology-based product/service, integrating knowledge across multiple engineering disciplines. Business Knowledge: The use of business model analysis and lean experimentation methods to develop and test a set of hypotheses that capture how the new product/service will create value, including business model design, pricing, sales and marketing, operating model and profit formula.

The Capstone is divided into two parts, the first of which is an immersive course completed during the January term of the G2 year (Capstone I). The subsequent spring course (Capstone II) follows on from and builds upon work completed in January. Given students prior coursework, a working knowledge of human-centered design methods, systems engineering techniques, and business modeling and lean experimentation is assumed. Launch Lab therefore focuses on the practical application of these skills to team projects, supplemented by content in three areas: i) seminars on advanced methods and techniques, ii) workshops that demonstrate how to put these skills and tools into practice, and iii) guest speakers who share their experience in the areas of design, technology and business.

Course Notes:

Open to MS/MBA: Engineering Sciences students only, or to others by permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 293

Cryo-Electron Microscopy for Biological and Soft Materials Lecture/Lab (205078)

David Bell

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This class covers the fundamental principles underlying cryo-electron microscopy applied to Biological and SoftMaterials starting with the basic anatomy of electron microscopes, an introduction to Fourier transforms, and the principles of image formation. Building upon that foundation, the class then covers the sample preparation issues, data collection strategies, and basic image processing workflows.

Recommended Prep:

Freshman-level math, physics, (biochemistry preferred optional).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 297

Professional Writing for Scientists and Engineers (207614)

Suzanne Smith

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This class leads students to develop their skills in the critical reading and writing of science and engineering. Genres will include research articles, grant proposals, school/fellowship/job applications, or lay abstracts & press releases for the non-scientific public. Crucially, students will be empowered not only to achieve their own writing goals, but also to break down these learned skills and impart them to others, as effective collaborators and mentors of younger students.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Methodologies in Design Engineering (213398)

Kit Parker

Fawwaz Habbal

2024 Fall (4 Credits)

Schedule:

F 0945 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a SAT/UNSAT seminar course focused on design thinking, analysis, planning, and executing the development of engineered systems. Weekly meetings will include discussions and assigned readings of case studies and examples of the systems surrounding the developing technical system. Organizing and executing research, innovation, and product design at the scales from academic group, to startup, to major industry will be discussed. The course is designed to allow the engineer and designer to integrate technical knowledge into an executable framework as an individual or leader of a design team.

Course Notes:

Enrollment subject to approval of the instructor, with first and second year MDE graduate students receiving priority. Undergraduates are not allowed to enroll.

Engineering Sciences 299R

Special Topics in Engineering Sciences (143668)

Todd Zickler

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Supervision of experimental or theoretical research on acceptable problems in engineering and applied science and supervision of reading on topics not covered by regular courses of instruction.

Course Notes:

Open to graduate students and AB/SM candidates only. This course is graded and is ordinarily taken with the approval of the Committee on Higher Degrees. AB/SM students must obtain CHD approval for this course to count toward their SM requirements and the course must be bracketed accordingly; it cannot be used towards also meeting AB degree requirements. Applicants must file a 299r Special Topics Form approved by the advisor before the course registration deadline; contact gradprograms@seas.harvard.edu if you have any questions. The form may be obtained at <https://www.seas.harvard.edu/office-academic-programs/graduate-policies-procedures-and-forms/graduate-student-forms>.

SEAS Teaching Practicum (125374)

John Girash

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Practicum emphasizing an active but reflective approach to teaching applied sciences and engineering; designed for graduate students in any SEAS area, not specifically Engineering Sciences. Topics: presentation and communication; in-class teaching and interaction; developing, grading and giving feedback on assignments; course head / TF relations and expectations; cognition and learning. Seminar style with an emphasis on observation, practice, feedback, and reflection. While the primary context of the course is classroom-style teaching, those interested in developing instructional communication skills in other contexts within science and engineering -- labs/studios, presentations, etc. -- are quite welcome, and course tasks can be adjusted for such.

Engineering Sciences 399-TIME

Academic-Related Work for SEAS Graduate Students (208271)

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Enrollment in ES 399-TIME is open to any SEAS Ph.D., M.E., or S.M. student who holds a SEAS or FAS Teaching Fellow (TF) appointment and is engaged in teaching a course. Once hired to teach in a specific course, whether within or outside SEAS, the student must complete the online form at <http://tinyurl>.

com/seastfform.

SEAS Ph.D. students who are required to enroll in the Bok Center's non-credit *Communicating Science* seminar in order to meet the GSAS English Language Proficiency requirement may also enroll in 4 units of ES 399-TIME.

Course Notes:

Teaching Fellows may enroll in 4 units of ES 399-TIME for a .25 FTE TF appointment, or up to 8 units of ES 399-TIME for a .5 FTE TF appointment. TFs should not enroll in the course in which they are teaching.

Any enrollment in ES 399-TIME other than as described here is disallowed by SEAS policy, with exceptions requiring prior approval of the Director of Graduate Studies. ES 399-TIME cannot be used to satisfy any degree requirements.

CAFR: Advanced Fiction Workshop: Writing this Present Life (160953)

Claire Messud

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Intended for students with prior fiction-writing and workshop experience, this course will concentrate on structure, execution and revision. Exploring various strands of contemporary and recent literary fiction – writers such as Karl Ove Knausgaard, Rachel Cusk, Chimamanda Adichie, Douglas Stuart, Ocean Vuong, etc – we will consider how fiction works in our present moment, with emphasis on a craft perspective. Each student will present to the class a published fiction that has influenced them. The course is primarily focused on the discussion of original student work, with the aim of improving both writerly skills and critical analysis. Revision is an important component of this class: students will workshop two stories and a revision of one of these.

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The feature-length script is an opportunity to tell a story on a larger scale, and, therefore, requires additional preparation. In this class, we will move from writing a pitch, to a synopsis, to a treatment/outline, to the first 10 pages, to the first act of a feature screenplay. We will analyze produced scripts and discuss various elements of craft, including research, writing layered dialogue, world-building, creating an engaging cast of characters. As an advanced class, we will also look at ways both mainstream and independent films attempt to subvert genre and structure.

Students will end the semester with a first act (20-30 pages) of their feature, an outline, and strategy to complete the full script.

Initially, students can expect to read, discuss, and imitate the strategies of a wide range of poets writing in English; to investigate and reproduce prescribed forms and poetic structures; and to engage in writing exercises meant to expand the conception of what a poem is and can be. As the course progresses, reading assignments will be tailored on an individual basis, and an increasing amount of time will be spent in discussion of student work.

Julio Cortázar: "The fantastic breaks the crust of appearance ... something grabs us by the shoulders to throw us outside ourselves." This workshop will explore the art of writing literature that unsettles our understanding of reality, that splits open the world as we know it, allowing us to encounter new possibilities. The initial weeks will focus on exploratory exercises and the study of published short stories and craft essays. Later, student work will become the primary text as the focus shifts to workshop discussion. Authors on the syllabus will likely include Julio Cortázar, Mariana Enríquez, Sofia Samatar, Yoko Ogawa, and Jorge Luis Borges. This workshop welcomes writers of all levels of experience.

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

In their quest for clarity, revelation and consolation, poets engage with, reflect upon and speak back to the world in a range of ways. In pursuit of these very same aims, poets also listen closely to what has already been said by others at registers spanning intimate exchange, public discourse and sacred utterance. In this poetry workshop, we'll engage in an exploration of archival and found materials—letters, news articles, historical texts, police reports, photographs and more—to see what new forms of dialogue they might invite, and what light they might shed upon the questions, concerns and apprehensions of our current time. With readings by Reginald Dwayne Betts, Robin Coste Lewis, Solmaz Sharif, Jay Bernard and others. It will be helpful to enter into the semester with some pre-existing material that you wish to revise (a short story, several chapters of a novel). Previous experience with workshopping writing is encouraged but not required.

Course Notes:

Admission by application only. For information on specific application requirements and instructions, please see the full course listing on the English Department website. **DEADLINE:** for all Spring 2022 workshops, applications will open January 7 and are due via Submittable by 11:59pm on Saturday, January 15. Students will be notified of admissions decisions by 4:00pm on Wednesday, January 19. Workshops will meet the first week of classes.

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

What can a poem achieve when it contemplates or even emulates a work of art in another medium? In this workshop, we'll read and write poems that engage with other art forms--and we'll test out what a foray into another artistic practice allows us to carry back over into the formal methods and behaviors of poetry. With poems by Keats, Rilke, Auden, Hughes, and Brooks, as well as Kevin Young, Evie Shockley, Ama Codjoe and other contemporary voices.

Poetry Workshop: Form & Content (218756)

Tracy K. Smith

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

In this workshop, we'll look closely at the craft-based choices poets make, and track the effects they have upon what we as readers are made to think and feel. How can implementing similar strategies better prepare us to engage the questions making up our own poetic material? We'll also talk about content. What can poetry reveal about the ways our interior selves are shaped by public realities like race, class, sexuality, injustice and more?

12

This is an intermediate course in the art of writing literary fiction. Previous experience with workshopping writing is encouraged but not required. The emphasis of the course will be learning how to read literature as a writer, with special attention given to the short story, novella, or short novel. We will read these works from the perspective of the writer as craftsperson and of the critic seeking in good faith to understand and describe a new aesthetic experience. We will be concerned foremost with how literary language works, with describing the effects of different kinds of sentences, different uses of genre, tone, and other rhetorical strategies. Together, we will explore our responses to examples of literature from around the world and from all periods, as well as to the writing you will produce and share with the class. As a member of a writing community, you should be prepared to respectfully read and respond to the work of others—both the work of your peers and that of the published writers that we will explore together.

This course will serve as an introduction to the fundamentals of writing fiction, with an emphasis on the contemporary short story. How can we set about creating "big" worlds in compact spaces? What unique doors can the form of the short story open? The initial weeks will focus on exploratory exercises and the study of published short stories and craft essays. Later, student work will become the primary text as the focus shifts to workshop discussion. Authors on the syllabus will likely include Ted Chiang, Jonathan Escoffery, Lauren Groff, Edward P. Jones, Ling Ma, Carmen Maria Machado, and Octavia Butler. This workshop welcomes writers of all levels of experience.

From Fact to Fiction: Finding & Shaping a Story: Workshop (216347)

Claire Messud

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

In this course, we will explore the evolution of a story from a factual anecdote or incident to a fictional creation. The aims of the semester are to learn to listen to someone else's story in interviews, and to endeavor to find, from there, the necessary bones for a fictional narrative. What is most urgent? What is most emotionally affecting? What are the details from an interview that stay with you? And from there: what, from a broader account, is the story you are moved to relate? Once you make that choice, how do you do further research, if necessary? How do you select the point of view, the frame, the characters for your fiction? What are the ethics and responsibilities of these choices? We will read work by writers who have transformed fact into fiction, some of whom will visit the class. Past visitors include Geraldine Brooks, Akhil Sharma, Amity Gaige, Meng Jin and Paul Yoon. No previous fiction-writing experience is required for this class.

Interiority & Experience: Writing Character-Driven Fiction: Workshop (160952)

Claire Messud

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course approaches the writing of fiction with character at its center. If fiction is an exploration of what it's like to be alive on the planet, character is paramount: we are who we are because of a combination temperament and experience. You can't write convincingly if you don't know your characters: plot, voice, detail, dialogue, setting – all these elements of story are interwoven with and dependent upon character. While it will be primarily a workshop of student fiction, we will read and discuss fiction

through the lens of character – including works by Gustave Flaubert, Virginia Woolf, Toni Morrison, Anton Chekhov, Brandon Taylor, Min Jin Lee, Ling Ma and Sidik Fofana.

Genre Fiction Workshop: Sci-Fi, Speculative Fiction, Horror, The Ghost Story, The New Weird (213327)

Indraneel Mukherjee

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The course will consist of two halves. In the first hour of each class, we will be doing close readings of an assigned text, with the aim of isolating some concept or aspect of the genre under discussion in order to take bearings for your own. We will be reading authors such as Ursula Le Guin, Stanislaw Lem, Nalo Hopkinson, Octavia Butler, Ted Chiang, Kelly Link, Kij Johnson, among others. We will be looking at questions of genre, and at the reasons for the quotation marks bracketing the word genre in the heading. We will also look at the convergences and divergences in the various kinds and modes mentioned in the title of the course. We will be thinking of generic topoi, conceptual underpinnings, imagination, style, world-building, storytelling, character, and resolution, among other things. Some of the best writing in these genres is by women on issues of gender and intersectionality, so there will also be a strong feminist component to the course. These genres have also been used, with extraordinary creativity and to great effect, by writers of colour to meditate on issues of race, inequality, oppression, freedom, so the syllabus also features an introduction to that domain.

In the second half of the class, divided into two equal segments of 55 minutes each, we will be workshoping the writing of two students. To this end, every week two students will hand in something they have written, to the tune of 2,500-5,000 words, to me and to everyone in the group, ideally one week before their turn. At our first meeting, I will circulate a rota for you to put down your names and walk you through the syllabus, the aims and objectives of the course, workshop rules, expectations, requirements etc. Our goal is for each of you to have two turns, and approximately 5-10,000 words of your work critiqued, by the time semester ends. Copies of these writing samples will be returned to you at the end of each workshop with comments from me and from everyone in class.

This is a workshop intended for intermediate to advanced students. Previous experience of Creative Writing workshops is helpful but not necessary. You will have to read a short story -- sometimes, quite long -- every week, and three novels over the course of the semester.

The Other (222799)

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

In this class, we will consider how literary non-fiction articulates or imagines difference, disdain, conflict, and dislike. We will also discuss the more technical and stylistic elements present in strong non-fiction, like reflection, observation, retrospection, scene-setting, description, complexity, and strong characterization. As we read and write, we will put these theoretical concerns into practice and play by writing two or three profiles about people you do not like, a place you don't care for, an idea you oppose, or an object whose value eludes you. Your writing might be about someone who haunts you without your permission or whatever else gets under your skin, but ideally, your subject makes you uncomfortable, troubles you, and confounds you. We will interrogate how writers earn their opinion. And while it might be strange to think of literature as often having political aims, it would be ignorant to imagine that it does not. Non-fiction forces us to extend our understanding of point of view not just to be how the story unfolds itself technically—immersive reporting, transparent eyeball, third person limited, or third person omniscient—but also to identify who is telling this story and why.

Some examples of the writing that we will read are Guy Debord, Lucille Clifton, C.L.R. James, Pascale Casanova, W.G. Sebald, Jayne Cortez, AbouMaliq Simone, Greg Tate, Annie Ernaux, Edward Said, Mark Twain, Jacqueline Rose, Toni Morrison, Julia Kristeva, and Ryszard Kapuscinski.

Playwriting Workshop: Writing Plays in the 21st Century (224036)

2025 Spring (4 Credits)

Schedule:**Instructor Permissions:** Instructor**Enrollment Cap:**

12

This workshop-based class explores the pleasures of writing for the stage through in-depth readings, class

discussions, and writing exercises designed to guide students through the process of creating their own one-act play. We will investigate the fundamental principles of dramatic writing through texts such as Aristotle's *Poetics* and Elinor Fuchs's *The Death of Character*, and explore how some of the greatest playwrights have embraced or deviated from these principles. Readings will also include the work of contemporary playwrights such as Clare Barron, Aleshea Harris, Amy Herzog, Sam Hunter, and Branden Jacobs-Jenkins, as well as established playwrights María Irene Fornés, Caryl Churchill, Lisa Kron, Harold Pinter, Adrienne Kennedy, Lorraine Hansberry, and Tennessee Williams. Students will be expected to attend two live theater events during the semester, or watch two filmed productions if in-person attendance isn't possible.

Getting the Words Right: The Art of Revision (222517)

Laura van den Berg

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

A promising draft is of little use to us as writers if we have no idea what to do next, of how to begin again. This course aims to illuminate how revision can be every bit as creative and exhilarating as getting the first draft down—and how time spent re-imagining our early drafts is the ultimate show of faith in our work. We will explore the art of revision—of realizing the promise of that first draft—through reading, craft

discussion, exercises, and workshop. Students can expect to leave the semester with two polished short stories (or 40-50 polished novel pages), a keener understanding of their own writing process, and a plan for where to take their work next. Texts will include *How to Write an Autobiographical Novel* by Alexander Chee, *Refuse to be Done* by Matt Bell, and *Craft in the Real World* by Matthew Salesses. It will be helpful to enter into the semester with some pre-existing material that you wish to revise (a short story, several chapters of a novel). Previous experience with workshopping writing is encouraged but not required.

Life Writing (221780)

Louisa Thomas

2024 Fall (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

How does one tell -- vividly, interestingly -- the story of a life? How do we access a private life, or situate it in a public world? What if the subject is dead, or is famous, or is oneself? What if the subject is a dog? How do we navigate archives or reporting? This course will examine the art of writing narrative nonfiction about individual lives. We will read and discuss examples of profiles, biographies, and memoir/personal essays, paying special attention to structure, language, and style. We will also read and discuss each other's work. Students are expected to produce (and to revise) two pieces of longform nonfiction writing. Readings by authors such as Hilton Als, Rachel Aviv, Robert Caro, Wesley Morris, Hua Hsu, and others.

2025 Spring (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

In newsrooms, the sports section is sometimes referred to as the "toy department" -- frivolous and unserious, unlike the stuff of politics, business, and war. In this course, we will take the toys seriously. After all, for millions of people, sports and other so-called trivial pursuits (video games, chess, children's games, and so on) are a source of endless fascination. For us, they will be a source of stories about human achievements and frustrations. These stories can involve economic, social, and political issues. They can draw upon history, statistics, psychology, and philosophy. They can be reported or ruminative, formally experimental or straightforward, richly descriptive or tense and spare. They can be fun. Over the course of the semester, students will read and discuss exemplary profiles, essays, articles, and blog posts, while also

writing and discussing their own. While much (but not all) of the reading will come from the world of sports, no interest in or knowledge about sports is required; our focus will be on writing for a broad audience.

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The short film, with its relatively lower costs of production and expanded distribution opportunities, has become one of the most disruptive, innovative modes of storytelling--and is often an emerging filmmaker's first step into a career. This course will introduce students to the basics of short form screenwriting, including narrative theory/structure, character design, and dialogue/voice. In the first quarter of the semester, we will hone dramatic techniques through several craft exercise assignments and in-class writing. In the following weeks, students will write two short screenplays. Throughout the semester, we will be workshopping and doing table reads of student work, discussing screenplays and craft texts, and screening a wide array of short films. The emphasis will be on discovering a sense of personal voice and completing two short screenplays (under 20 pages).

Creative Nonfiction: Departure and Return: "Home" as Doorway to Difference and Identity (223905)

Melissa Cundieff

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

In this workshop-based class, students will be asked to investigate something that directly or indirectly connects everyone: what it means to leave a place, or one's home, or one's land, and to return to it, willingly or unwillingly. This idea is inherently open-ended because physical spaces are, of course, not our only means of departure and/or return-- but also our politics, our genders, our relationships with power, and our very bodies. Revolution, too, surrounds us, on both larger and private scales, as does looking back on what once was, what caused that initial departure. Students will approach "home" as both a literal place and a figurative mindscape. We will read essays by Barbara Ehrenreich, Ocean Vuong, Natasha Sajé, Elena Passarello, Hanif Abdurraqib, Alice Wong, and Eric L. Muller, among others.

12

As memoirist and author Melissa Febos puts it: "The narrator is never you, and the sooner we can start thinking of ourselves on the page that way, the better for our work. That character on the page is just this shaving off of the person that was within a very particular context, intermingled with bits of perspective from all the time since — it's a very specific little cocktail of pieces of the self and memory and art ... it's a very weird thing. And then it's frozen in the pages." With each essay and work of nonfiction we produce in this workshop-based class, the character we portray, the narrator we locate, is never stagnant, instead we are developing a persona, wrought from the experience of our vast selves and our vast experiences. To that end, in this course, you will use the tools and stylistic elements of creative nonfiction, namely fragmentation, narrative, scene, point of view, speculation, and research to remix and retell all aspects of your experience and selfhood in a multiplicity of ways. I will ask that you focus on a particular time period or connected events, and through the course of the semester, you will reimagine and reify these events using different modes and techniques as modeled in the published and various works we read. We will also read, in their entirety, Melissa Febos's *Body Work: The Radical Work of Personal Narrative*, as well as Hanif Abdurraqib's *They Can't Kill Us Until They Kill Us*, which will aid our discussions and help us to better understand the difference between persona(s) and the many versions of self that inhabit us.

This course is an overview of the creative nonfiction genre and the many different types of writing that are included within it: memoir, criticism, nature writing, travel writing, and more. Our readings will be both historical and contemporary: writers will include Virginia Woolf, James Baldwin, Joan Didion, Audre Lorde, Hilton Als, and Carmen Maria Machado. During the first half of the semester, we will read two pieces closely; we will use our class discussions to analyze how these writers use pacing, character, voice, tone, and structure to tell their stories. Students will complete short, informal writing assignments during this part of the semester, based on the genre of work we're discussing that week. During the second half of the semester, each student will draft and workshop a longer piece of creative nonfiction in the genre(s) of their choosing, which they will revise by the end of the semester. Students will be expected to provide detailed feedback on the work of their peers. This course is open to writers at all levels; no previous experience in creative writing is required.

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Whether it takes the form of literary journalism, essay, memoir or environmental writing, creative nonfiction is a powerful genre that allows writers to break free from the constraints commonly associated with nonfiction prose and reach for the breadth of thought and feeling usually accomplished only in fiction: the narration of a vivid story, the probing of a complex character, the argument of an idea, the evocation of a place. Students will work on several short assignments to hone their mastery of the craft, then write a longer piece that will be workshoped in class and revised at the end of the term. We will take instruction and inspiration from published authors such as Joan Didion, James Baldwin, Ariel Levy, Alexander Chee, and Virginia Woolf. This is a workshop-style class intended for undergraduate and graduate students at all levels of experience. No previous experience in English Department courses is required.

The Novel Lab: Studying Long-Form Narratives in Fiction (216098)

Paul Yoon

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

What defines a novel? And what does it mean to read one as a writer? How does a painter consider a painting or a photographer a photo? This readings class will study novels through the point of view of a practicing writer. We will read one novel a week, with the goal of exploring the ways in which long-form narratives are constructed, from chapter to chapter, from one movement to another—that is, the architecture of it. Please note: this is not a typical workshop. You will not be sharing your work every week, though later on in the semester we may participate in small group workshops and readings. Consider the class an investigation into all the tools a writer has to create fiction, with the end goal of producing 2 - 3 chapters of the beginning of a novel as your final project.

The Surrounds: Writing Interiority and Outsiderness (222543)

Rachel Kaadzi Ghansah

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The essayist, the writer of non-fiction, has historically been an oracle of opinions that most often go unsaid. They do not traditionally reinforce a sense of insular collectivity, instead they often steer us towards a radical understanding of the moment that they write from. The best essayists unearth and organize messages from those most at the margins: the ignored, the exiled, the criminal, and the destitute. So, by writing about these people, the essayist is fated, most nobly or just as ignobly, to write about the ills and aftermaths of their nation's worse actions. It is an obligation and also a very heavy burden.

In this class we will examine how the essay and many essayists have functioned as geographers of spaces that have long been forgotten. And we read a series of non-fiction pieces that trouble the question of interiority, belonging, the other, and outsiderness. And we will attempt to do a brief but comprehensive review of the essay as it functions as a barometer of the author's times. This will be accomplished by reading the work of such writers as: Herodotus, William Hazlitt, Doris Lessing, Audre Lorde, Gay Talese, Binyavanga Wainaina, Jennifer Clement, V.S. Naipaul, Sei Shonagon, George Orwell, Ha Jin, Margo Jefferson, Simone White, and Joan Didion. This reading and discussion will inform our own writing practice as we write essays.

Archival Fictions (222531)

Valeria Luiselli

2025 Spring (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

How do fiction writers interact with official narratives and the archives that support them? This is a course

both about fictions created by historical archives, and a course about using fiction to intervene historical archives. If the archive is often historically bound to power, perhaps fiction can act as a destabilizing force, throwing official narratives off balance and offering alternatives to how we can imagine possible futures. In this course we will be examining a series of works –literary, acoustic, photographic, hybrid, and others– that have worked with archives and offer insight into the relationship between document and fiction. Among others, we will be looking at work by Svetlana Alexievich, Michael Ondaatje, Layli Long Soldier, Zoe Leonard, Arlette Farge, Alice Oswald, Humane Borders, and Ecologies of Migrant Care. We will also be working directly with a selection of archives, thinking (and practicing!) ways to intervene and question them.

Art of Listening. The Politics and Aesthetics of Sound (222520)

Valeria Luiselli

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This is a course for anyone who is interested in the politics and aesthetics of sound. We will work on developing listening literacy as writers, thinking of it as a source of narrative craft. We will likewise explore listening as a collective practice that allows for intentional solidarity and creative resistance, both environmental and political. Some of our explorations will include: acoustemology, soundscaping, sound and gender, noise vs sound, archives and voices from the past, aural phenomenology, or the geophony-biophony-anthropophony triad. We will be engaging with a wide range of work from different fields, including: Anne Carson, Alice Oswald, Svetlana Alexievich, Layli Long Soldier, Fred Moten, Gloria Anzaldúa, Steven Feld, Roland Barthes, Arlette Farge, and the Ultra-red International Sound Collective.

Fiction Writing: Workshop (118456)

Jamaica Kincaid

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

12

This class is open to anyone who can write a letter, not an e-mail, a letter, just a plain simple letter, to someone who lives far away from you and who has no idea really of who you are, except that you are, like them, another human being. I have not quite yet settled on the books we will read, that usually happens when I get a sense of what the assembled personalities suggest. Usually, I suggest films, but I have lately become enamored of Korean soap operas and detective dramas: the food looks delicious, people wear the most interesting clothes and are obsessed with handbags, and small things, such as a piece of crumpled up paper lying in a corner is given serious consideration. A real delight. So, give all of

the above serious consideration before you decide to register for this class.

Words & Photographs: Workshop (218124)

Teju Cole

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

For almost two centuries now, words have accompanied photographs, sometimes to sublime effect. In this writing-intensive workshop, we will model our work on the various ways writers have responded to photographs: through captions, criticism, fiction, and experiments. Students will learn close-looking, research, and editing, and will be expected to complete a "words and photographs" project using their own photographs or photographs made by others.

Supplemental application information: please submit a photograph and up to a page of text responding (or perhaps not responding) to it, as well as a cover letter saying what you hope to get out of the workshop, and mentioning three books in any genre that have been helpful to your writerly development.

Literature Today (132844)

Indraneel Mukherjee

Namwali Serpell

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

All literature was contemporary at some point, but the literature that is contemporary now provides special opportunities for enjoying, questioning, and understanding the world. Literature Today focuses on works written since 2000—since most of you were born. It explores how writers from around the world speak to and from their personal and cultural situations, addressing current problems of economic inequality, technological change, structural prejudice, and divisive politics. We will encounter a range of genres, media, and histories to study contemporary literature as a living, evolving system. The course uniquely blends literary study and creative writing—students will analyze literature and make literature. The conviction that these practices are complementary will inform our approach to readings and course assignments.

Literary Forms (216063)

Stephanie Burt

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

27

This foundational course for English concentrators examines literary form and genre. We explore some of the many kinds of literature as they have changed over time, along with the shapes and forms that writers create, critics describe, and readers learn to recognize. The body of the course looks to the great literary types, or modes, such as epic, tragedy, and lyric, as well as to the workings of literary style in moments of historical change, producing the transformation, recycling, and sometimes the mocking of past forms. While each version of English 20 includes a different array of genres and texts from multiple periods, those texts will always include five major works from across literary history: *Beowulf* (epic), *The Winter's Tale* (tragicomedy or romance), *Persuasion* (comic novel), *The Souls of Black Folk* (essays; expository prose), and Elizabeth Bishop's poems (lyric). The course integrates creative writing with critical attention: assignments will take creative as well as expository and analytical forms.

James / Baldwin (207741)

Jesse McCarthy

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

At first glance Henry James and James Baldwin may seem worlds apart. Yet these two enormously influential writers share much in common. Both are New Yorkers; both spent a good deal of their lives as expatriates; both are celebrated for their queerness, a feature of their style as much as their sexuality. Both were serious, moralizing, and passionate observers of the "American Scene"; both writers are deeply committed to investigating and exploring the privacy of consciousness and the currency of experience. Henry James was James Baldwin's favorite writer. Colm Tóibín has called Baldwin, "the Henry James of Harlem." What attracted Baldwin to James across their vast racial and class differences? What lessons about the art of fiction can we learn by reading each in the light of the other? Not only the Jamesian influence on Baldwin—but what Baldwin allows us to see might be missing or muted in James. We will think very closely about the subject that deeply occupied both of them: America. And what America means from perspectives acquired from outside of America, looking back in. We will also investigate the expression and communication of sexuality, gender, race, class, money, politics and taste alongside assorted criticism, reviews, and other essays of interest.

The Rhetoric of Frederick Douglass and Abraham Lincoln (130670)

John Stauffer

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course is a critical examination of the speeches and rhetoric of Frederick Douglass and Abraham Lincoln, who are among the greatest orators and nonfiction writers in English. We explore Douglass's and Lincoln's rhetorical practices, especially in relation to their politics and self-making. Along the way, we analyze the influences (the Bible, the literary canon at the time, journalism, regional writings) that contributed to their oratory. And we explore the contexts of their great speeches and their legacies.

Indigenous Sci Fi, Horror, Fantasy, and Futurisms (222815)

Christopher Pexa

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course will examine contemporary writings by Native American and Indigenous authors across the genres of sci fi, horror, and fantasy, with the aim of thinking about Native American and Indigenous futures (and futurisms) more broadly, and also in ways that may exceed genre altogether. In other words, our investigation will be organized according to conventional sci fi genres of slipstream, alien contact, and apocalypse, but also to non-genre expressions of Indigenous futurity. By juxtaposing literary works from authors writing both within the boundaries of the United States and beyond, we will be able to make connections between them that highlight both their common sovereignty struggles and shared utopian

visions, but also keeps in view the many meaningful differences in how Native American and Indigenous aesthetic productions perform the work of future-making.

Global Shakespeare (214626)

Leah Whittington

2024 Fall (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

William Shakespeare drew on texts from around the world when he wrote plays for the London theater he named "The Globe." Since Shakespeare's plays were first performed in early modern England, they have become global texts, adapted and re-fashioned for diverse international audiences. This course investigates key plays by Shakespeare in relation to their multi-cultural sources and their global adaptations. Students will explore how these plays dramatize distinctly early modern approaches to nationality, ethnicity, and cross-culturalism, locating Shakespeare's works within their own historical moment of cultural transition and change. At the same time, we will study how the plays have been re-interpreted and transformed by contemporary writers, playwrights, actors, and directors from Europe, the Middle East, Africa, Asia and Asia/Pacific, Latin America, Russia, Australia, New Zealand and elsewhere. How do these contemporary performances negotiate between old and new, local and global, canonicity and cultural plurality? Tracking questions of translation, cosmopolitanism, race, gender, and regional theatrical traditions, we will ask: what can the story of Shakespeare's worldwide reach tell us about how "global" literature is conceived today?

Not Vanishing: Indigenous Literary Theory and Criticism (222139)

Daniel Justice

2025 Spring (4 Credits)

Schedule:

R 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

The past forty years have seen significant methodological and theoretical shifts in the scholarly field of Indigenous literary studies, moving from ethnographically inflected outsider analyses of culture and identity or as extensions of nation-state literatures to Indigenous-grounded concerns of peoplehood, land, language, and sovereignty in intellectual and artistic production. The range of literary forms, genres, issues, and regions represented in the scholarship has increased dramatically as well, as has attention to Indigenous voices in the archive, becoming more intentionally international in scope, culturally specific in

concern, and expansive in consideration of genre and form across time and space. The demographics of the field have changed, too, now centring Indigenous thinkers among the field's major theorists and recognizing imaginative experimentation alongside continuity of Indigenous traditions and grounded knowledge. This course offers a focused analysis of significant histories, archives, methods, and conversations in Indigenous literary studies, with particular emphasis on the field's intellectual and creative genealogies.

Harvard and Native Lands (220241)

Alan Niles

Mandy Izadi

2024 Fall (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Harvard's beginnings included a promise to educate both "English and Indian youth." From its inception, however, Harvard's endowment included Native lands expropriated through war, theft, and coercion. Drawing inspiration from Harvard's own [Legacy of Slavery](#) initiative and the [Land-Grab Universities](#) website, this class will conduct original research on these histories. We will work hands-on with archives at Harvard and other area institutions, developing research skills in navigating collections, reading early handwriting, and interpreting colonial documents. We will design our research activities in collaboration with Native communities historically affected by Harvard's institutional presence. In the first half of class, we will read primary and secondary texts engaging subjects including New England colonialism, the long history of Indigenous dispossession and resistance, and the political struggles of Indigenous communities today. We will closely examine texts including poems, speeches, short stories, and deeds, exploring the centrality of land and environment in colonial and Indigenous histories and literatures. In the second half of class, we will continue these activities even as we shift our focus towards developing individual or group research projects. The first iteration of this course in Fall 2022 resulted in the first steps towards a new database of Harvard land transactions and a set of student-driven research projects on individual sites; our research this year will build on that work. Working collaboratively, we hope to come up with both new data and new narratives for describing Harvard's pasts and possible futures.

Theory Matters: Problems in Contemporary Literary and Cultural Theory (218142)

Homi Bhabha

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Why study literary theory? Is theory a conceptual framework or a tool-kit? Is theory a companion to literary

study or is it crucial for literary interpretation? These are some of the questions I propose to address in this seminar which will address literary and cultural problems that have been shaped by theoretical concerns and concepts. This course will not adopt a historical approach nor will it be a survey of "schools" of literary theory. The syllabus will focus on topics such as Power, Race, Identity, Sexuality, Environmentalism, Postcolonialism, Inequality, Poverty etc. etc. and trace theoretical contributions that have been formative in shaping the diverse discourses around these issues. . Aesthetic, political and ethical approaches will be knotted together in our conversations. The seminar will be concerned with the relation between cultural form and cultural value. Literary texts will be used in conjunction with theoretical works.

Race and Religion in Medieval Literature (216396)

Anna Wilson

2025 Spring (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course focuses on representations of race, religion, and cross-cultural contact in literature written in western Europe between approximately 800 and 1450 CE, before colonial contact with the Americas. During this period, diplomats, pilgrims, and merchants crisscrossed Europe and Asia, generating fascination with far-away lands and a booming trade in exotic goods; Christian kingdoms of western Europe formed uneasy alliances under the banner of a shared religion to invade Muslim territories and sack Jewish communities in the Crusades; and a global pandemic spread via fleas on ship rats, killing hundreds of thousands and fomenting xenophobic violence. We will read texts from a variety of genres, including religious plays, romances about inter-faith marriage, chansons de geste (poems celebrating deeds in war, often grotesquely violent), and 'armchair travel' guides. We will trace the emergence of modern concepts of race and ethnicity in the way medieval Christian writers represented religious difference in/as bodily difference; develop a critical, historically-situated toolkit for analysing medieval concepts and terms around race, ethnicity, and nation; and analyse the role of the middle ages in current conversations about race in America.

Performing Criticism (216430)

David Levine

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

What makes "Great Criticism?" Analytic clarity? A surfeit of objectivity? Dedication to art and artists? Or is great criticism more like great art, relying on a strong point of view and deep personal investment? This course tests the latter view, by treating canonical works of criticism as dramatic monologues to be analyzed, invested with desire, and performed. Who were these critics? Why did they feel such an urgent need to speak? We'll use script analysis to pay closer attention to how arguments are constructed, and acting techniques to listen closely for the ways that criticism is always, to quote Nietzsche, "the confession of its originator, and a species of involuntary and unconscious autobiography"

This course will range through the history of criticism and theory, with special attention to literature, philosophy, and art history. Students will learn fundamental techniques of scene analysis, acting, and public speaking. The course will culminate in a durational performance at Harvard Art Museums, occupying the entire building.

This is a hybrid seminar/studio class, with academic and performance components. No previous experience of either is required, although a readiness to immerse yourself in both is expected.

Every Play Ever Written (218141)

Derek Miller

2024 Fall (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course explores the history of dramatic writing and publishing in the US and Europe by studying every play ever written. Of course, we cannot actually study all those plays—that's the point. When we learn cultural history, we necessarily encounter only a small fragment of all cultural artifacts, whether they be paintings, novels, or plays. What does it mean that we learn cultural history in this piecemeal fashion? That we study drama and yet know nothing, nothing of most dramatic writing? How should we, as people invested in the theater and its history, think about our unfathomable ignorance? And what is the relationship between those plays we do see, act in, or read, and the vastly larger number of plays we will never encounter?

This seminar puts theatrical texts in perspective by focusing on the relationship between the exemplary texts that we anthologize and the forgotten archive of, well, everything else. We will approach this problem by comparing selected exemplary texts to lists of plays and by situating both our examples and our lists within their theatrical contexts. We will worry particularly about the relationship between the examples and the lists, hypothesizing about what we can and cannot truly know about all the plays we have not read.

This course, in short, explores the limits of our knowledge of cultural history. We seek not to answer questions definitively so much as to understand better those things we do not and *cannot* know about theater. We will learn, in other words, what we can never learn. This is a seminar intended for any student. No previous experience in English Department courses or in studying theater is required.

Maria Dikcis

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Who gets to count as human? This ostensibly simple question has been complicated anew in the 20th and 21st centuries by a series of historical events and cultural representations that have racialized people of color as robots, unfeeling machines, and other synthetic forms of life. In this seminar, we will explore the fractured, queer affinities between race and artificial intelligence by considering, on the one hand, how racialized subjects have been stigmatized or oppressed through comparisons with machinic forms of life and, on the other hand, how AI has become a productive means for people of color to envision new modes of expressing emotions, sustaining communities, and challenging racism. Throughout, we will examine a wide range of literary genres—including poetry, fiction, memoir, and comics—as well as a selection of sci-fi films and new media artworks. Our explorations will start well before the digital age, in the year 1946, as we look to the graphic memoir *Citizen 13660* by Miné Okubo, which documents the daily life of Japanese internment camps and serves as an early inquiry into the racialization of Asian Americans as mechanized laborers and clones. We will conclude with Stephanie Dinkins' artworks *Conversations with Bina48* and *Not the Only One*, which over seventy-five years later explore how Black cultural practices, community formations, and storytelling methods can resist and re-code the exclusionary histories of artificial intelligence systems. For the final project, students will have the option to produce an AI prototype oriented towards racial justice (no prior technical knowledge required).

Reading Politically (222500)

Tara Menon

2024 Fall (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

"No book is genuinely free from political bias," George Orwell wrote. Indeed. But how do we know what these biases are? How can we read not for plot or character but for ideology? Or rather, how can we read plot and character closely in order to uncover the political unconscious of a novel? How exactly does the novel "do" politics? What are its capacities and limitations as a genre? To answer these questions, we will read some of the most canonical realist novels of the nineteenth century: *Mansfield Park*, *Jane Eyre*, *Oliver Twist*, *Tess of the D'Urbervilles* alongside classic works of literary criticism (Raymond Williams, Edward Said, Gayatri Spivak, Fredric Jameson, Terry Eagleton, Elaine Scarry, Claudia Johnson, and more). This is an intermediate/advanced seminar. Previous experience in English Department courses is recommended, but not necessary. If you are concerned about the level of the course, please send me an email.

Toxic Rhetoric (216199)

Sarah Dimick

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Rachel Carson, the author of *Silent Spring*, and Dolores Huerta, co-founder of the United Farmworkers Union, both campaigned against toxic exposures in the mid-20th-century United States and yet are rarely considered in tandem. This course puts the writings and activism of these two women in conversation, ranging through feminist, queer, and Latinx environmental writing to build connections between environmentalism and labor rights. Our study focuses on the craft of environmental nonfiction writing, examining contemporary practitioners working in the vein of Carson and Huerta. Students will also compose environmental nonfiction, employing the literary techniques analyzed in this course to craft a narrative addressing exposure, toxins, or the state of public health.

Authors include: Rachel Carson, Dolores Huerta, Helena María Viramontes, and Cherrie Moraga.

Enrollment Cap:

15

J. R. R. Tolkien's day job at Oxford was professor of medieval English literature. Throughout his career he cultivated a deep acquaintance with early English and other literatures from the cultures of northwestern Europe, which informed the fantasy worlds he created. We will read broad selections from translations of works that he drew from: Old English poems, Norse sagas, Celtic literature, and the Finnish Kalevala. Although Tolkien's fiction will not be an integral part of the syllabus, we will make occasional connections to passages from *The Lord of the Rings*, *The Hobbit*, and/or *Silmarillion*. The readings of medieval literature will be supplemented by relevant criticism.

Sophomore Tutorial: Literary Methods (216074)
Anna Wilson
2024 Fall (4 Credits) **Schedule:** TR 1200 PM - 0115 PM
Instructor Permissions: Instructor **Enrollment Cap:** 15

This course, taught in small groups and required for concentrators, introduces theories, interpretive frameworks, and central questions about literature and literary media. What do we do when we read? What is an author? What do we mean by "literature" itself? How might we compare and evaluate interpretations? How do the historical, social, cultural, and legal frameworks around a text shape its meanings and its effects? Combining major critical and theoretical writings with primary works, the course investigates how literary production and interpretation are informed by philosophical and aesthetic traditions, gender and sexuality, race and ethnicity, national and post-colonial identities, and the material forms in which literature circulates, from parchment books to the internet. Students will also practice fundamental literary research methods through close engagement with Harvard libraries.

English 102M

Introduction to Old English: Charms, Herbals, Folk Medicine, Miracle Cures (220053)

Daniel Donoghue

2024 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM**Instructor Permissions:** None**Enrollment Cap:** n/a

This course combines language study with the investigation of a critical theme. The narratives set for translation provide a thematic coherence as we dig into the language of Old English, which is the vernacular used in England from the sixth century until about 1100. Although some of its features remain recognizable today, Old English needs to be learned as a foreign language with its own spelling, pronunciation, syntax, and so on. The term begins with an emphasis on grammar, which will be covered in graduated steps until midterm, after which the readings and translation will take up more of our class time.

The unifying theme of the readings will be remedies to preserve the health of the human body. Old English literature offers an abundance of medical texts, including herbal remedies and magical incantations. Some come from ancient Greek and Latin sources, while others are local folk recipes. Some are fantastical, some are known to be effective, and others clearly rely on the placebo effect. The readings will move from simple prose to intricate poetry. An end-of-term project will assign each student a short Old English magical charm—think of it as a human utterance charged with power to control nature. With the help of personal coaching, each student will produce a literal and a creative translation.

English 103D

Beowulf and Seamus Heaney (146016)

Joseph Shack

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Translations of excerpts from *Beowulf* will proceed in parallel with careful reading of Heaney's verse translation. Questions concerning translation theory will emerge from the comparison of in-class efforts with Heaney's and other versions. What is the relation between translation and interpretation? How does Heaney's *Beowulf* compare with the body of poetry he has produced over the decades? The course begins with a review of grammar.

Course Notes:

Students who complete both English 102 and 103 with honors grades will fulfill the College language requirement and the English Department's Foreign Literature requirement.

Recommended Prep:

English 102e or equivalent.

Chaucer: The Canterbury Tales (146214)

Anna Wilson

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What makes stories so pleasurable and revealing but also so enraging and dangerous? How are we to think

about the strong emotions they evoke and learn to resist as well as appreciate their power? This course revisits Geoffrey Chaucer's classic fourteenth-century poem, *The Canterbury Tales*: the deepest and most caustically entertaining analysis of storytelling ever written. *The Canterbury Tales* consists of a series of tales told by members of a pilgrimage on their way from London to Canterbury, representatives of the internally divided social world of Chaucer's England. Some are serious, others funny, obscene, or offensive; some are religious, others not at all; some deal with issues local to England, others range across the Europe and the rest of the known world; many are told against other pilgrims. Written in a long-ago past, the poem jumps off the page, in turns unrecognisably weird and startlingly modern. We read the poem in the language in which it was written, Middle English, easy and fun to learn with early help: no previous experience with the language, or with the medieval era, is necessary. We will also explore the poem's long-ranging impact on English literature, including several contemporary reimaginings. Classes include a short lecture on a tale, and class discussion, which continues in weekly sections. Course projects include an essay, a collaborative report on one tale, and a creative option. Students of all years and from all concentrations and programs are welcome. If you are a graduate student interested in taking this class, please contact Prof. Wilson to indicate interest before term begins; there may be an additional graduate section if there is sufficient demand.

Sex, Gender, and Shakespeare (218754)

Alan Niles

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This class is an introduction to Shakespeare's writings and their representations of sex, gender, romance, love, and queerness. We will study poems about erotic and queer desire, plays that stage ideas about gender and gender fluidity, and film adaptations that bring modern perspectives to race and sexuality. Readings will include such plays as *Romeo and Juliet*, *As You Like It*, *Titus Andronicus*, *Macbeth*, and *Measure for Measure*; Shakespeare's *Sonnets*; and films by Derek Jarman, Vishal Bhardwaj, and Julie Taymor. Prior experience reading Shakespeare may be helpful but is not expected. Throughout our course, we will ask: how are the forms of gender identity and sexual expression we encounter in Shakespeare's works familiar, or different? How might they challenge, inspire, or disturb us today?

Milton's *Paradise Lost* (203023)

Gordon Teskey

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course focuses on Milton's most famous work, *Paradise Lost*, the greatest long poem in English and the only successful classical epic in the modern world. Milton went totally blind in his forties and composed *Paradise Lost* by reciting verses to anyone available to take them down, like the blind prophets and poets of legend. Yet the moral and political questions he raised—what is the human? what is gender? what is the political? what is religion? what is dissent? what is legitimacy? what is revolt?—are surprisingly enduring and modern. His own solutions to these questions may not be ours, but his ability to provoke thought on them speaks to our time. We will consider how Milton generates the sublime and how he builds great scenes and characters, especially his most famous one, Satan.

Literature, Science, and the Body in 18th-Century Britain (222821)

Carlisle Yingst

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What is the relation between the humanities and the sciences? What separates these broad fields of knowledge, and how do ideas move between them? This course will consider these and related questions by turning back to a moment when the boundaries between disciplines were not so clear, and by focusing on an especially rich site for considering them: medicine and writing about the body in eighteenth-century Britain.

Exploring this time and place—characterized by increasing public access to scientific knowledge, innovations in literary culture, and continuous interactions between them—the course will take as its starting point the waning of humoral theory and the emergence of the British novel; continue through the Enlightenment foundations of modern medicine; and conclude with a book often read as issuing a humanistic challenge to science: Mary Shelley's *Frankenstein*. We'll read work by physicians, novelists, and poets, as well as by writers who brought literature and medicine together, like Tobias Smollett (whose surgical training shaped his novels' descriptions of the body), Erasmus Darwin (whose poetry about the natural world was deeply intertwined with his medical studies), and William Earle (whose fictional account of obeah was shaped by a British physician practicing in Jamaica.)

More specific topics and themes are likely to include: plague narratives; accounts of illness and disability; colonialism and indigenous medicines; the popular circulation of race-science and -medicine; and anatomical and literary representations of gender, sex, and sexuality. Other readings may include: Cavendish, Defoe, Haywood, Sancho, Sterne, Austen, and the contemporary novelist Jordy Rosenberg, as well as shorter selections from periodicals, letters and diaries, physician's notes, and other related material.

The Age of the Novel (218128)

Tara Menon

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

What does the novel still have to offer? As newer genres—movies, television, Youtube, TikTok—compete for our attention, why do people still immerse themselves long works of prose fiction? And why do certain nineteenth-century British novels continue to captivate so many readers to this day? In this course, we will read five nineteenth-century novels by four authors that many consider to be the greatest writers that have ever lived: Jane Austen's *Pride and Prejudice*, Mary Shelley's *Frankenstein*, Charles Dickens's *Little Dorrit*, and George Eliot's *Middlemarch*. We will pay close attention to technique: how do these novels work? And we will also explore social and political themes: what are these novels about? At every stage, we will consider the unique capacities of narrative fiction: what can the novel do that other genres can't? Implicitly and explicitly, this course will argue first, that these superlative nineteenth-century novels let us see the world (not only then but also now) in new ways, and second, that the novel is a tool for thinking that beats all others. Alongside these texts, we will watch film adaptations and read excerpts of contemporary criticism and fiction to better understand the enduring legacy of these canonical works. No previous experience in English Department courses is required.

Keats Isn't Dead: How We Live Romanticism (214513)

Vidyan Ravinthiran

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Our thoughts and feelings about identity, self-expression, and the power of the imagination draw on the British Romantic poetry of the Long Eighteenth Century—whether we've read any or not. Focusing on John Keats (his key poems, and his key ideas, about "negative capability", the "camelion poet", and so on), this course makes unconventional connections into the twentieth, and twenty-first century. Tracking issues of race, class, gender and sexuality, we'll bounce from Keats into war verse; African-American poetries; world/postcolonial writing; the literature of social class; feminist experimentalism; and constructions of masculinity. Concentrators will learn how to analyze poetry in both closed and open forms.

The Joyce Effect (203059)

Beth Blum

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Speaking of James Joyce's *Ulysses*, T.S. Eliot confessed: "I wish, for my own sake, that I had not read it." How does one write literature after Joyce's revolutionary prose? This course explores different authors' responses to that challenge. You will be introduced to one of the most influential authors of the 20th century through selected readings from Joyce's key works: *Dubliners*, *A Portrait of the Artist as a Young Man*, *Ulysses*, and *Finnegans Wake* (excerpts). After immersing ourselves in Joyce's oeuvre, we will track its afterlife in literature (Virginia Woolf, Zadie Smith), graphic narrative (Chris Ware, Alison Bechdel), and popular culture.

American Democracy (222778)

John Stauffer

2025 Spring (4 Credits)

Schedule:

T 0100 PM - 0300 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Prerequisites: None

Exam Type: No Exam; Paper in lieu of examination

Democracy, inequality, and nationalism in America. The white working class and American politics. Class and race. Identities and interests. Conditions for socially inclusive economic growth and for the deepening and dissemination of the knowledge economy. Alternative directions of institutional change, viewed in light of American history. Democratizing the market and deepening democracy. Self-reliance and solidarity.

We explore and discuss the past, present, and especially the future of the American experiment among ourselves and with invited guests: thinkers, politicians, social activists, and entrepreneurs.

Readings drawn from classic and contemporary writings about the United States.

Note: This course is cross-listed with HLS 2955 and HDS.

The Black Lyric (218755)

Tracy K. Smith

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

African American poets have long embraced the private freedoms of the lyric poem—freedom to claim the authority of an uncontested first person "I"; freedom to wrangle language into new and startling forms; freedom to depart as needed from the strictures of linear reality. And yet, from its earliest iterations, African American poetry has also concerned itself with correcting and complicating the official narrative of Black life and Black subjectivity in America. This course will explore the means by which Black poets have innovated upon the lyric tradition to accommodate a sense of allegiance to a collective. In this tradition, the lyric poem has become a powerful tool with which to ponder the dynamics of self and other, intimate and political—and justice and injustice. Course readings will include work by seminal 20th Century American figures such as Langston Hughes, Gwendolyn Brooks, Robert Hayden and Lucille Clifton, as well as contemporary voices like Jericho Brown, Tyehimba Jess, Morgan Parker, Eve L. Ewing and others. We will also devote attention to lyric corollaries in film, music, visual art and performance. Students will be encouraged to respond to course themes and texts in both critical and creative form.

Toni Morrison (218129)

Namwali Serpell

2025 Spring (4 Credits)

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course is a survey of the work of Nobel Laureate Toni Morrison, including most of her novels, a few nonfiction essays, and a short story. We will consider her literary antecedents; follow her influence on contemporaries and future writers; trace the social, historical, and political contexts and implications of her work; and explore the critical interventions she made in historiography and literary criticism. Throughout, we will focus on Morrison's rich and complex aesthetic project: how it came into being; how it resonates with a great range of philosophical questions from epistemology to ethics; and how it changed over time.

Two Visionary Women: Julian of Norwich, Margery Kempe, and Company (222154)

Nicholas Watson

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Julian of Norwich (born 1343) and Margery Kempe of Lynn (born 1373) are the two earliest women writers in English whose names we know. They lived thirty years and thirty miles apart, met only once over a period of some days, and wrote long, completely different books, both inspired by what they understood as visionary encounters with the divine. Julian was a Christian intellectual, a brilliant writer, intensely visual but also abstract, who spent a lifetime writing and rewriting an intricate and optimistic analysis of how to live as an aspiring and suffering human being in the world that many people around the world still live by. Margery (she did not much like her husband's name) was a religious experimentalist, devout globe-trotter and performance artist, equally brilliant, whose energies seemed to have gone into living more than writing, but who in old age dictated then revised what many understand as the first English autobiography. After being mostly ignored for several hundred years, they are now being read with care, although by different readerships and in different ways. It is time they were brought together again.

In this discussion-based course, we read the versions of Julian of Norwich's *Revelation of Love* and *The Book of Margery Kempe* closely alongside one another, as well as in the light of passages from other women writers who drew, or may have drawn, inspiration from visions, revelations, and dreams, from the early Christian martyr Perpetua of Carthage in the third century CE to the reclusive New England poet Emily Dickinson in the nineteenth. We consider how it was that revelations were able to make an innovative, demanding and prestigious mode of thought and writing possible for women who were excluded by their gender from the formal education available to male contemporaries. We think about what revelations are, how they function as an embodied, kinetic, and dialogic mode of consciousness, and the stylistic and intellectual experimentation this mode of consciousness enables. We speculate on potential connections between the visionary and other non-natural ways of seeing the world, such as through the thing we call "fiction," this last with the help of a novel by Margaret Atwood, *The Year of the Flood*, where Julian makes a brief appearance. Finally, we consider the excruciating difficulty of being and writing as a visionary and the cultural and psychic pressures the role of visionary involved and involves. Although the main setting of the course is the world of Julian and Margery, we do not forget that we are reading them in the now.

Course Notes:

This course is a limited-enrollment seminar open to both undergraduate and graduate students.

Taylor Swift and Her World (223915)

Stephanie Burt

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The first song on Taylor Swift's first record, released when she was 16, paid homage (by name) to a more established country artist. Today she's the most recognizable country-- or formerly country? or pop?-- artist in North America, if not the world: her songwriting takes in half a dozen genres, and her economic impact changes cities. We will move through Swift's own catalogue, including hits, deep cuts, outtakes, re-recordings, considering songwriting as its own art, distinct from poems recited or silently read. We will learn how to study fan culture, celebrity culture, adolescence, adulthood and appropriation; how to think about white texts, Southern texts, transatlantic texts, and queer subtexts. We will learn how to think about illicit affairs, and hoaxes, champagne problems and incomplete closure. We will look at her precursors, from Dolly Parton to the Border Ballads, and at work about her (such as the documentary "Miss Americana"). And we will read literary works important to her and works about song and performance, with novels, memoirs and poems by (among others) Willa Cather, James Weldon Johnson, Tracey Thorn, and William Wordsworth.

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Cities are made of contradictions: playgrounds for the rich and sites of concentrated poverty, highly organized and totally chaotic, an endless party and the loneliest places on earth. How do we write about them? In this course, we will visit four major metropolises around the world: London, Bombay, New York, and Seoul. We will focus primarily on one narrative work set in each of these cities—Charles Dickens' *Bleak House*, Suketu Mehta's *Maximum City*, Teju Cole's *Open City*, and Hwang Sok-yong's *At Dusk*—and supplement our reading with short stories, journalism, sociology, and movies by writers including: Zadie Smith, Edith Wharton, James Baldwin, Katherine Boo, and Spike Lee.

What techniques do fiction writers, journalists, and filmmakers use to capture the constituent features of life in urban environments? What can one genre do that another cannot? How do these narratives represent social interactions? How do they depict interiority and consciousness? What kinds of characters are included in the field of vision? What kind of labour, if any, is represented? How, if at all, does the identity of the writer shape the stories they are telling? Other topics under consideration: class, race, gender, industrialisation, finance, greed, alienation, strangers, estrangement, economic inequality, cosmopolitanism, crime, immigration. No previous experience in English Department courses is required.

The Essay: History and Practice (207555)

James Wood

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Matthew Arnold famously said that poetry is, at bottom, "a criticism of life." But if any literary form is truly a criticism of life, it is the essay. And yet despite the fact that all students write essays, most students rarely study them; bookshops and libraries categorize such work only negatively, by what it is not: "non-fiction." At the same time, the essay is at present one of the most productive and fertile of literary forms. It is practiced as memoir, reportage, diary, criticism, and sometimes all four at once. Novels are becoming more essayistic, while essays are borrowing conventions and prestige from fiction. This class will disinter the essay from its comparative academic neglect, and examine the vibrant contemporary borderland between the reported and the invented. We will study the history of the essay, from Montaigne to the present day. Rather than study that history purely chronologically, each class will group several essays from different decades and centuries around common themes: death, detail, sentiment, race, gender, photography, the flaneur, witness, and so on. In addition to writing about essays – writing critical essays about essays – students will also be encouraged to write their own creative essays: we will study the history of the form, and practice the form itself. Essayists likely to be studied: Montaigne, De Quincey, Woolf, Benjamin, Orwell, Primo Levi, Barthes, Baldwin, Sontag, Didion, Leslie Jamison, Hanif Abdurraqib, Helen Garner, Cathy Park Hong.

Climate Change Literature (216071)

Sarah Dimick

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course focuses on climate change literature, the most active and popular arena of contemporary environmental writing. Examining a variety of 20th and 21st century works—including science fiction, spoken word poetry, narrative fiction, and film—we will analyze how literature shapes and responds to planetary crisis. Which imaginative currents—apocalyptic, technocratic, communalist, militaristic—are molding readers' visions of the climatic future? Is it possible to narrate climate change as a multi-century catastrophe rooted in colonialism and the acquisition of capital? What can we learn about climate change from literature that we can't grasp through other fields of study? Since the works in this class cover a broad geographic range and include relatively unknown books as well as award-winning texts, we will also theorize how—and why—particular writers' voices become central or peripheral within climate discourse.

Authors may include Octavia Butler, Franny Choi, Cherie Dimaline, Amitav Ghosh, Kathy Jetñil-Kijiner, and John Lanchester. As an inherently interdisciplinary course, both English concentrators and concentrators

from other fields are welcome to enroll.

Indigenous Literatures of the Other-than-Human (223904)

Christopher Pexa

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

"Indians are an invention," declares an unnamed hunter in Gerald Vizenor's (White Earth Ojibwe) 1978 novel, *Bearheart*. The hunter's point, as Vizenor has explained in interviews and elsewhere, is not that Indigenous peoples don't exist, but that the term "Indian" is a colonial fiction or shorthand that captures, essentializes, and thus erases a vast diversity of Indigenous lives and peoples. This course begins from the contention that other categories, and maybe most consequentially that of "nature," have not only historically borne little resemblance to the lived lives of Indigenous people but have been used as important tools for capture and colonization. We will begin with European writings on the "noble savage" who lives harmoniously in a state of Nature, then move to Indigenous writers and thinkers whose work refuses this invention, along with its corollary category of the supernatural. We will spend most of our time reading 20th- and 21st- century Indigenous literary depictions of other-than-human beings and Indigenous relationships with those beings, highlighting how forms of kinship with them are integral to Indigenous ways of understanding difference, to acting like a good relative, and to Indigenous practices of peoplehood. Readings may include works by Billy-Ray Belcourt, Ella Deloria, Louise Erdrich, Stephen Graham Jones, Leslie Marmon Silko, Leanne Simpson, Kim TallBear, and Gerald Vizenor, among others.

Thinking Through Writing: Science Themes | 2023: The Time Things Take (222134)

Claire Messud

Melissa Franklin

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is an open-enrollment writing course, cross-listed in both English and Physics, that requires writing 300 words a day, 4 days a week, all semester, responding to prompts. We will consider a variety of writing genres and ways to engage with science concepts: non-fiction, journalism, fiction, poetry, etc. The writing portion of the class aims to enable students above all to explore writing freely, with the expectation that they will learn how to express themselves more lucidly and effectively as they grow in literary understanding. This year's theme is "The Time Things Take." In science, we ask questions like: what is the lifetime of a particle; how long does it take for raindrops to fall; how long does it take the universe to expand; how long does it take a rocket ship to reach infinity. And we ask ourselves how we might measure

these times. This course will consider scientific concepts, the questions we can pose about them, and the thought experiments we might perform. The literary portion of the class involves close readings of these texts from a writerly perspective, also addressing questions of time and narrative, including pacing and form. We will examine precision in diction and syntax, the use of metaphor and other rhetorical strategies.

The course has no prerequisites in either English or Physics. There will be no problem sets. The course will involve two lectures per week + a section. The final assessment will be a portfolio and a presentation.

Course Notes:

English 187r is also offered as Physics 187r. Students cannot take both courses for credit.

Video Game Storytelling (218143)

Vidyan Ravinthiran

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Although this course does discuss blockbuster games, it's primarily concerned with indie titles prioritizing discovery over system mastery—asking us to think differently. Drawing on video game scholars—Melissa Kagen, Brendan Keogh, Ian Bogost—we'll examine the gendered deconstruction of horror-codes in *Gone Home* (described by Brigid Kennedy as "an explicitly queer videogame with an explicitly queer narrative"); the interplay between the singular and the shareable in the trans micro-narrative, *Dys4ia*; and consider how *Return of the Obra Dinn* uses retrospective plotting to query a purely economic view of the world. We'll also discuss *Firewatch*, *The Stanley Parable*, *Stray* and *Stardew Valley* among other games, and consider how this art form, better than any other, probes the division identified by Theodor Adorno within capitalist society, separating "work" from leisure, or "play". At the Bok Center Learning Lab, you'll sample games on multiple platforms and discover tools for creating game stories (engines like Unity, input devices, and storyboards).

Constellations (212761)

Homi Bhabha

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

"Constellations" is an attempt at putting key literary works in conversation with significant texts from other disciplines and discourses --- philosophy, politics, history, law, and the social sciences. The conversations initiated between these texts might converge on conceptual or historical issues; on other occasions, they may conflict on matters of aesthetic form or cultural belief. What gives these 'coupled' conversations a thematic or curricular coherence is their sustained interest in the life-worlds of minorities as they struggle to gain the recognition and protection of human rights. One of the key questions running through the course will be what it means to make a claim to human dignity from a position of inequality and injustice.

I have chosen landmark texts that describe a wide arc of historical experience from colonization and segregation to migration and the predicament of refugees. These conditions of life and literature will be framed by questions of national sovereignty and international cosmopolitanism. Discourses of race, gender and identity will intersect with conceptual issues of cultural representation and literary form. The conversations initiated by this course will be polyphonic and plural.

The Dark Side of Big Data (220130)

Maria Dikcis

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Does it sometimes feel like Instagram ads are listening a little too closely to your conversations? Have you ever wondered if certain corporations might own images of your face? Today, fears abound that algorithms are not only populating our lives with annoying targeted advertisements but might also be creating the most unequal societies that have ever existed. In this interdisciplinary seminar, we will explore key methodological overlaps and differences between humanistic and scientific approaches to the phenomenon known as Big Data, or enormously large data sets that are analyzed by computer software to reveal patterns associated with human behavior and communications. In particular, we will focus our attention on the dark side of Big Data, which is increasingly embedded with harmful biases against women, people of color, immigrants, and low-socioeconomic status communities. Our inquiries will thus concern a wide array of issues that stem from the misapplication of Big Data, such as data discrimination, biased artificial intelligence, search engines that reinforce racism, predictive policing, and surveillance capitalism, as well as how these issues intersect with race, class, gender, and citizenship. We will ground these discussions about contemporary theories of Big Data in engagements with a number of literary texts, films, and new media artworks. These cultural case studies range from a poetry collection exploring anti-Blackness and the carceral state, a documentary on social media data scandals, a glitch feminism manifesto, a memoir about working at an Amazon.com fulfillment center, queer video games, and robot love poems.

Introduction to Indigenous Literary Studies: Poetry, Prose, and Politics (222133)

Daniel Justice

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Indigenous literatures are not simply subsets of settler national literatures—they have deep roots in their respective homelands, through which storytellers, scholars, artists, activists, and visionaries have explored and articulated their own imaginative, political, and relational concerns and commitments. From codices and wampum belts to wampum belts, totem poles, medical formulae books, songs, treaties, letters, autobiographies, histories, poems, stories, novels, podcasts, comic books, plays, and many other expressive forms, Indigenous literatures across the world are as varied in aesthetic concern and literary

technique as in political, cultural, and historical context. And while necessarily grappling with the violence of colonialism, Indigenous literatures extend far beyond the limitations of the settler imaginary. This introductory course will connect students with a range of key Indigenous texts and issues as well as critical work about the field from English, Indigenous Studies, and related disciplines, framed through four key themes: sovereignty, land, kinship, and futurity.

Adaptation: The Art of Retelling (222131)

Anna Wilson

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

"What makes a good adaptation? Why retell an old story? This class explores texts that are in conversation with others: adaptation, translation, fanfiction, parody, the sequel or prequel (authorized or unauthorized), the remix, and the critical retelling. We will think about the role of form, genre, and media in adaptation, the decisions involved in transposing a story from one genre to another, from novel to screen or stage, from the printed page to digital archive, across times, contexts, languages, and audiences. We will also consider the legal frameworks, cultural institutions, and audience expectations that constrain adaptation: what is the nature of authorship? How much can a person own a text, or a character? How far can an adaptation go before audiences no longer recognize, or even refuse, an adaptation? What economic and cultural roles do adaptations play in our contemporary media landscape? The final assignment will include the option to create your own adaptation using some of the critical models we have explored. This is a lecture and discussion class accessible to non-concentrators."

Renaissance Ego-Documents (222130)

Stephen Greenblatt

Joseph Koerner

2024 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Jakob Burckhardt's claim that the Renaissance invented the self has been vigorously challenged, but it gets at something that happened in the representation of personal identity first in Italy in the 14th century and then throughout the rest of Europe. This course will consider several of the writers whose self-representations have long drawn critical attention— More, Elizabeth I, Spenser, Shakespeare, and Milton –

but now accompanied by such figures as Mary Sidney, George Gascoigne, Isabella Whitney, Elizabeth Carew, Francis Bacon, Anne Clifford, and Margaret Cavendish. The English examples will be set alongside key figures in the European Renaissance: Petrarch in Italy, Montaigne in France, and Cervantes in Spain. Students will be encouraged not only to reach out to a broad range of geographical possibilities but also to cast a wide cultural net (so as to include, for example, Osman of Timisoara or Glickl of Hameln). As represented in such works as Carlo Ginzburg's *The Cheese and the Worms* and Michel de Certeau's *The Possession of Loudun*, inquisitorial inquiries and witchcraft testimonies will also fall within the range of ego-documents that we will investigate. The seminar will be coordinated with a related course in the Art History Department taught by Professor Joseph Koerner, so that textual representations of the self will be set alongside a wide array of comparable representations in the visual arts. A central question will be the relationship between words and pictures in the fashioning of identity.

Divine Comedies: Graduate Seminar (130910)

Nicholas Watson

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

A study of a series of visionary works written between the thirteenth and early fifteenth centuries, including Jean de Meun's *Romance of the Rose*, Dante Alighieri's *Divine Comedy*, John of Morigny's *Book of Flowers*, Geoffrey Chaucer's *House of Fame*, William Langland's *Piers Plowman*, Julian of Norwich's *Revelation of Love*, and Christine de Pisan's *Book of the City of Ladies*. We read these works as contrasting products of a particular (and time-limited) conception of the imagination as an instrument of human perception and its affordances and dangers as this conception meets ancient traditions of writing about the validity or otherwise of dreams and of spiritual, or perhaps corporeal, descents into hell and/or ascents to heaven. We consider the inter-relationship between the poetic and the visionary in light of the categories of "orthodoxy" and "discretion of spirits" during a period when both were fiercely contested. We also consider visionary writing as a precursor of the concept of the "fictional" and of the novel, with particular reference to W. G. Sebald's 2001 novel *Austerlitz*.

Course Notes:

Instructor Permissions: Instructor

Enrollment Cap:

15

By focusing on literary narratives, cultural representations, and critical theories, this course explores ways in which issues related to migration create rich and complex interdisciplinary conversations. How do humanistic disciplines address these issues—human rights, cultural translation, global justice, security, citizenship, social discrimination, biopolitics—and what contributions do they make to the "home" disciplines of migration studies such as law, political science, and sociology? How do migration narratives compel us to revise our concepts of culture, polity, neighborliness, and community? We will explore diverse aspects of migration from existential, ethical, and philosophical perspectives while engaging with specific regional and political histories.

Course Notes:

Jointly offered with English as ENGLISH 290MH.

Public Humanities Workshop (212794)

Martin Puchner

2024 Fall (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 15

Public humanities are becoming increasingly central for careers both inside and outside of academia. This workshop, which is open to beginning and advanced graduate students, introduces participants to the tools they need to address audiences other than specialists in their own field. These tools range from writing op-eds based on dissertation research to writing general interest books, and also include book reviews, podcasts, social media strategies and more. While we will discuss some historical context, the emphasis is on practice and skills. Our work will be supplemented by visits from editors and literary agents.

Book Theory (222627)

Deidre Lynch

2025 Spring (4 Credits)

Schedule: W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

In this seminar we will work our way through theoretical work presenting the Western book as, variously, medium, interface, commodity, technology (including technology of empire), storage device, and "scriptive thing" --both classic theories (e.g., Jacques Derrida, Walter Benjamin, Ernst Curtius, Gérard Genette, Roger Chartier) and more recent ones (e.g., Mark McGurl, Jessica Pressman, Leah Price, Nicholas Thorburn, Kelly Wisecup, Robin Bernstein, Tia Blassingame). We'll also consider such topics as print, publics, memory, ephemera, waste, and the often-announced death of the book. And as aids to our collective theorizing, we'll derive resources from artists' books (e.g. those created by Stéphane Mallarmé, Angela Lorenz, and Tia Blassingame) and from fiction that calls attention to its own physical platform (e.g. Laurence Sterne's *Tristram Shandy*, Ling Ma's *Severance*, and Heike Geissler's *Seasonal Associate*).

Literary Institutions: The Archive (205134)

Kelly Rich

2024 Fall (4 Credits)

Schedule: W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

This course addresses the role of the archive in literary and cultural studies. It examines the debates, theories, and methods that emerge in relation to archival research, particularly around issues of memory, recovery, access, materiality, and the relationship between research and researcher. The syllabus includes units on power and history, bodies and affect, reading along or against the grain, photography and mediation, colonial archives, the Black Atlantic, and human rights. Assignments are designed to encourage students to a) consider the influence of archival encounters in their specific field and/or discipline; b) develop relationships with local archives and greater orientation in such literary institutions; and c) reflect

on how the archive might bear on their approach to literary study. This seminar is open to all graduate students in the arts and humanities.

Critical Indigenous Theory (223898)

Christopher Pexa

2025 Spring (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar gives a broad overview of key theoretical interventions in the emergent, international, and interdisciplinary field of Critical Indigenous Studies. Our exploration will begin with the emergence of American Indian Studies as an academic discipline in the 1970s and 80s, tracking its development over the next twenty years into increasingly global articulations of Indigenous studies and, more recently, of critical Indigenous studies as "a knowledge/power domain whereby scholars operationalize Indigenous knowledges to develop theories, build academic infrastructure, and inform our cultural and ethical practices" (Moreton-Robinson 2016). Moreton-Robinson's highlighting of academic theory and production as both stemming from, and being responsive to, the ethical frameworks and political demands of Indigenous communities beyond academia will inform the rest of the seminar's exploration of key political terms and sites, to include the following: Indigenous epistemologies; Indigenous ethics; sovereignty; ecological/anti-extraction movements; global Indigenities; Indigenous feminisms; queer/trans/Two-Spirit Indigenities; sound studies; literary studies; Black and Indigenous intersections.

G1 Proseminar (217789)

Gordon Teskey

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The first-year proseminar (taken in the spring semester of the first year) introduces students to the theories, methods, and history of English as a discipline, and contemporary debates in English studies. The readings feature classic texts in all fields, drawn from the General Exam list. This first-year proseminar helps students prepare for the General Exam (taken at the beginning of their second year); it gives them a broad knowledge for teaching and writing outside their specialty; and it builds an intellectual and cultural community among first-year students.

Course Notes:

This is only for first year graduate students in the English Department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

G2 Proseminar (217790)

John Stauffer

2025 Spring (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This second-year proseminar has a two-part focus: it introduces students to the craft of scholarly publishing by helping them revise a research paper for publication in a peer-reviewed journal by the end of the course. It thus gives students the tools to begin publishing early in their career. It also introduces students to the growing array of alternative careers in the humanities by exposing them to the work of scholars who are leaders in fields such as editing, curating, and digital humanities.

Course Notes:

Open to English graduate students only.
Prerequisite: For G2+ students

Placement Seminar (207884)

Louis Menand

Leah Whittington

2024 Fall (4 Credits)

Schedule:

M 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The job placement seminar will meet during the Fall semester to help students prepare dossiers of their work for the academic job market and facilitate explorations of careers beyond the academy. The class will meet roughly every two weeks, providing a supportive structure for participants to produce, workshop, and revise application materials. We will also arrange mock interviews and practice teaching demonstrations. The placement officers provide one-on-one support with editing/proofing materials and guidance in navigating the applications process. This seminar is restricted to students in the English department. We welcome students who are intending to actively apply for postdocs or jobs this year to enroll; some seminar sessions suitable for those interested in thinking about the market or their career options but not actively applying this year will be advertised more widely and open to all graduate students in the department.
