Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 305

Endothelial Cell, Nitric Oxide, Proteomic Redox Regulation (124268)

Joseph Loscalzo

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Bio & Translational Med 305

Endothelial Cell, Nitric Oxide, Proteomic Redox Regulation (124268)

Joseph Loscalzo

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 307

Mechanisms of Heart Growth, Regeneration, and Failure (124270)

Anthony Rosenzweig

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Human Bio & Translational Med 307

Mechanisms of Heart Growth, Regeneration, and Failure (124270)

Anthony Rosenzweig

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 315

Hypothalamic Gene Function and Regulation (124279)

Joseph Majzoub

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Human Bio & Translational Med 315

Hypothalamic Gene Function and Regulation (124279)

Joseph Majzoub

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 320

Endothelial Progenitors in Health Disease (125270)

Joyce Bischoff

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 320

Endothelial Progenitors in Health Disease (125270)

Joyce Bischoff

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 321

Regenerative Biology (110151)

Richard Lee

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Human Bio & Translational Med 321

Regenerative Biology (110151)

Richard Lee

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 322

Cardiac Repair and Regeneration (125284)

Ronglih Liao

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 322

Cardiac Repair and Regeneration (125284)

Ronglih Liao

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 324

Principles/Practices of Developing Human Antibody Therapies (125273)

Wayne Marasco

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 324

Principles/Practices of Developing Human Antibody Therapies (125273)

Wayne Marasco

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 326

Human Genetics of Neuroinflammatory and Neurodegenerative Disorders (125390)

Philip De Jager

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 326

Human Genetics of Neuroinflammatory and Neurodegenerative Disorders (125390)

Philip De Jager

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Human Bio & Translational Med 327

Translational Research on Kinase Inhibitors (125398)

Pasi Janne

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 327

Translational Research on Kinase Inhibitors (125398)

Pasi Janne

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 331 Section: 0001

Tumor Microenvironment, Angiogenesis and Metastasis: from Bench-to-Bedside-to-Biomarkers (125405)

Rakesh Jain

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 331 Section: 0001

Tumor Microenvironment, Angiogenesis and Metastasis: from Bench-to-Bedside-to-Biomarkers (125405)

Rakesh Jain

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Human Bio & Translational Med 334

Response and resistance to cancer therapies (160773)

Peter Hammerman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	None

Human Bio & Translational Med 334

Response and resistance to cancer therapies (160773)

Peter Hammerman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Human Bio & Translational Med 335

Molecular Genetics, Cell, Gene Therapy, & Retinal Disease (160774)

Neena Haider

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 335

Molecular Genetics, Cell, Gene Therapy, & Retinal Disease (160774)

Neena Haider

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 336

Cellular and molecular basis of vascular integrity in adult retina and brain (160776)

Joseph Arboleda-Velasquez

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Human Bio & Translational Med 336

Cellular and molecular basis of vascular integrity in adult retina and brain (160776)

Joseph Arboleda-Velasquez

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 340

(LHB). Disease-Centered Tutorial Clinics (125582)

Jordan Kreidberg

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Human Bio & Translational Med 340

(LHB). Disease-Centered Tutorial Clinics (125582)

Jordan Kreidberg

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Bio & Translational Med 341

Gene Regulation of Metabolism in Cardiovascular Health and Disease (126373)

Zoltan Arany

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Human Bio & Translational Med 341

Gene Regulation of Metabolism in Cardiovascular Health and Disease (126373)

Zoltan Arany

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 342

Research in Hematology and Oncology (126374)

Benjamin Ebert

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Human Bio & Translational Med 342

Research in Hematology and Oncology (126374)

Benjamin Ebert

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Human Bio & Translational Med 343

Genetics of hypertension, arrhythmias and heart failure (126375)

Christopher Newton-Cheh

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Human Bio & Translational Med 343

Genetics of hypertension, arrhythmias and heart failure (126375)

Christopher Newton-Cheh

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Human Bio & Translational Med 345

Tuberous Sclerosis and LAM: Pathogenic Mechanisms (126949)

Elizabeth Henske

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 345

Tuberous Sclerosis and LAM: Pathogenic Mechanisms (126949)

Elizabeth Henske

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 350

Molecular basis of hematologic and solid cancers (109090)

Roberto Chiarle

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Human Bio & Translational Med 350

Molecular basis of hematologic and solid cancers (109090)

Roberto Chiarle

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 351

Biology and Immunotherapy of Chronic Lymphocytic Leukemia (109091)

Cathy Wu

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Human Bio & Translational Med 351

Biology and Immunotherapy of Chronic Lymphocytic Leukemia (109091)

Cathy Wu

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 352

Regulation of Vascular Development and Pathology (109122)

Patricia D'Amore

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Bio & Translational Med 352

Regulation of Vascular Development and Pathology (109122)

Patricia D'Amore

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 353

Mechanobiology and Developmental Control (109123)

Don Ingber

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Bio & Translational Med 353

Mechanobiology and Developmental Control (109123)

Don Ingber

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 354

Epithelial:stromal Interactions in the Formation and Progression of Carcinomas (109124)

Antoine Karnoub

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 354

Epithelial:stromal Interactions in the Formation and Progression of Carcinomas (109124)

Antoine Karnoub

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 355

Epigenetic Mechanisms in Mammalian Development (109125)

Bradley Bernstein

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Human Bio & Translational Med 355

Epigenetic Mechanisms in Mammalian Development (109125)

Bradley Bernstein

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Human Bio & Translational Med 356

Genetic Models of Leukemogenesis (109139)

A. Look

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 356

Genetic Models of Leukemogenesis (109139)

A. Look

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 358

Control of Cell Proliferation by RB/E2F (109126)

Nicholas Dyson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Bio & Translational Med 358

Control of Cell Proliferation by RB/E2F (109126)

Nicholas Dyson

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 359

Genetics of Neurodegenerative Disease (109127)

Mel Feany

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 359

Genetics of Neurodegenerative Disease (109127)

Mel Feany

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 360

Molecular characterization of circulating tumor cells (109128)

Daniel Haber

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Bio & Translational Med 360

Molecular characterization of circulating tumor cells (109128)

Daniel Haber

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 361

Molecular Approaches to Cell Immortalization and Transformation (109129)

William Hahn

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 361

Molecular Approaches to Cell Immortalization and Transformation (109129)

William Hahn

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Human Bio & Translational Med 363

Recombination Functions of the BRCA Genes (109131)

Ralph Scully

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 363

Recombination Functions of the BRCA Genes (109131)

Ralph Scully

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 365

Biology and Genetics of Human Cancers (109133)

Matthew Meyerson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 365

Biology and Genetics of Human Cancers (109133)

Matthew Meyerson

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Bio & Translational Med 366

Molecular Genetics of Erythroid Iron Metabolism (109134)

Mark Fleming

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Human Bio & Translational Med 366

Molecular Genetics of Erythroid Iron Metabolism (109134)

Mark Fleming

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 367

Control of Endothelial Cell Fate and Vascular Development by Fluid Mechanical Forces (109135)

Guillermo Garcia-Cardena

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Subject: Virology

Virology 200

Introduction to Virology (116413)

Jonathan Abraham

Philip Kranzusch

2024 Fall (4 Credits)

Schedule: MW 0130 PM - 0345 PM

Instructor Permissions: Instructor

Enrollment Cap: 20

Introduction to virology. The lecture component reviews the basic principles of virology and introduces the major groups of human viruses. Weekly discussion groups critically analyze selected papers from the literature.

Course Notes:

There will be mid-term and final projects consisting of proposals based on laboratory rotations. <http://www.courses.fas.harvard.edu/6075>

Recommended Prep:

Pre-Requisite: Current Virology PhD student, or upon special consent

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

Virology 201

Virology (110546)

Benjamin Gewurz

Silvi Rouskin

Amy Lee

Sizun Jiang

Jonathan Li

Aaron Schmidt

Todd Allen

James Cunningham

Joseph G. Sodroski

Smita Gopinath

2025 Spring (4 Credits)

Schedule:

TR 0930 AM - 1059 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

The course focuses on the following areas of virology: (i) RNA and DNA virus replication mechanisms, (ii) innate responses to viral infection (iii) adaptive immune responses to viral infection, (iv) viral latency and reactivation, (v) inhibition of viral infection. The course will comprise lectures as well as reviewing literature that describes fundamental breakthroughs relevant to these areas. Within those areas, the class will read and discuss papers dealing with virus structure, replication, pathogenesis, evolution, emerging viruses, chronic infection, innate and adaptive immunity, anti-viral drugs/vaccines. Special emphasis will be placed on preparing students to critically evaluate the literature, formulate hypotheses and design experiments.

Course Notes:

Course format will be lectures, literature-based critical reading and discussion. Prepare and defend a written research proposal. Offered jointly with the Medical School as MG 723.0.

Recommended Prep:

Virology 200, graduate standing and permission required.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Virology 202

Proposal Writing (117649)

Silvi Rouskin

Sizun Jiang

Todd Allen

Smita Gopinath

Max Nibert

2024 Fall (4 Credits)

Schedule:

T 0200 PM - 0359 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Students will write, present, and evaluate research proposals in the areas of virus replication, viral pathogenesis and treatment and prevention of viral infections.

Recommended Prep:

General background in biochemistry and virology.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Genetics

Genetics 201

Principles of Genetics (113752)

Fred Winston

Maxwell Heiman

Tom Bernhardt

Matthew Warman

Jenna Galloway

2024 Fall (4 Credits)

Schedule:

MWF 0910 AM - 1040 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An in-depth survey of genetics that covers basic principles and modern approaches. We will draw on examples from various systems, including bacteria, yeast, *Drosophila*, *C. elegans*, zebrafish, mouse, and human.

Course Notes:

Intended for first-year graduate students.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 216 Section: 0001

Advanced Topics in Gene Expression (111358)

Fred Winston

Scott Kennedy

Stephen Buratowski

2025 Spring (4 Credits)

Schedule:

T 0200 PM - 0459 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

This course covers different topics in gene regulation, covering genetic, genomic, biochemical, and molecular approaches. A small number of topics are discussed in depth, using the primary literature. Topics range from prokaryotic transcription to eukaryotic development.

Course Notes:

Offered jointly with the Medical School as GN 703.0.

Recommended Prep:

BCMP 200 and Genetics 201. All students taking Genetics 216 should read and be prepared to discuss the papers for the first meeting. The readings can be downloaded from the course website.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Genetics 228

Genetics in Medicine - From Bench to Bedside (121745)

David Sweetser

2025 Spring (4 Credits)

Schedule:

F 0200 PM - 0459 PM

Instructor Permissions: Instructor**Enrollment Cap:**

45

Focus on translational medicine: the application of basic genetic discoveries to human disease. Each three-hour class will focus on a specific genetic disorder and the approaches currently used to speed the transfer of knowledge from the laboratory to the clinic. Each class will include a clinical discussion, a patient presentation if appropriate, followed by lectures, a detailed discussion of recent laboratory findings and a student-led journal club. Lecturers will highlight current molecular, technological, bioinformatics and statistical approaches that are being used to advance the study of human disease. There is no exam. Students will present one paper per session in a journal club style.

Attendance and active participation for the duration of all class meetings is required. If you are unable to attend class or cannot be present for the entire session, you are expected to contact the course instructor. Two incomplete or missed sessions will result in a failing grade. Please do not sign up if you know you will have to miss 2 or more sessions. For more information visit https://ecor.mgh.harvard.edu/Default.aspx?node_id=375

Course Notes:

Undergraduates wishing to enroll should contact the instructor at dsweetser@mgh.harvard.edu to request permission and give a description of their previous genetics training.

Recommended Prep:**Genetics 201 or equivalent.****Additional Course Attributes:**

Attribute	Value(s)

Genetics 305QC Section: 0001

CRISPR genome editing techniques and applications (223987)

Richard Sherwood

Mandana Arbab

2025 Spring (2 Credits)

Schedule: TR 1230 PM - 0159 PM

Instructor Permissions: Instructor

Enrollment Cap: 48

CRISPR genome editing has revolutionized the study of genetics and has shown promise to treat genetic disease at its roots. This course will provide an overview on how CRISPR-based genome editing tools work, how they are used to unravel the genetics of complex disease, and how they are being deployed to ameliorate genetic diseases. The course will combine lectures from experts on the development and use of CRISPR-based tools with seminars on the practical application of and ethical issues surrounding genome editing.

Course Notes:

Strong background in genetics expected. Course expected to be offered annually.

The structure of this course also includes a discussion component. Any additional details about this component will be provided by the course faculty.

Fred Winston

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Genetics 309

Gene Expression in Yeast (113402)

Fred Winston

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 310

Molecular Genetics of Neural Development and Gene Therapy to Prevent Blindness (118193)

Connie Cepko

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 310

Molecular Genetics of Neural Development and Gene Therapy to Prevent Blindness (118193)

Connie Cepko

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Genetics 311

Molecular Mechanisms of Transcription Regulation in Mammals (121057)

Robert Kingston

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Genetics 311

Molecular Mechanisms of Transcription Regulation in Mammals (121057)

Robert Kingston

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 312

Genetic analysis of small RNA pathways and surveillance of core cellular systems (123512)

Gary Ruvkun

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 312

Genetic analysis of small RNA pathways and surveillance of core cellular systems (123512)

Gary Ruvkun

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 313

Genomic Approaches to Human Disease Genetics (117268)

David Altshuler

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 313

Genomic Approaches to Human Disease Genetics (117268)

David Altshuler

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course

FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 315

Molecular Genetics of Inherited Disorders (112919)

James Gusella

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 315

Molecular Genetics of Inherited Disorders (112919)

James Gusella

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 316

Transcription Factors and DNA Regulatory Elements (117269)

Martha Bulyk

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 316

Transcription Factors and DNA Regulatory Elements (117269)

Martha Bulyk

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Genetics 317

Signaling Networks in Development and Disease (111381)

Jordan Kreidberg

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Genetics 317

Signaling Networks in Development and Disease (111381)

Jordan Kreidberg

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 318

Genome Structure (114865)

George Church

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Genetics 318

Genome Structure (114865)

George Church

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 319

Genetic epidemiology of behavior and cognition (124059)

Elise Robinson

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Genetics 320

Genetics of Common Human Disease (126368)

Mark Daly

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Genetics 320

Genetics of Common Human Disease (126368)

Mark Daly

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Genetics 321

Genetic Analysis of Growth and Homeostasis (118751)

Norbert Perrimon

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 321

Genetic Analysis of Growth and Homeostasis (118751)

Norbert Perrimon

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 322

Vertebrate Pattern Formation (113859)

Clifford Tabin

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 322

Vertebrate Pattern Formation (113859)

Clifford Tabin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 323

Molecular Biology of V(D)J Recombination (143860)

Marjorie Oettinger

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 323

Molecular Biology of V(D)J Recombination (143860)

Marjorie Oettinger

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 325

Human Genetics, Genomics and Complex Traits (117273)

Joel Hirschhorn

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Genetics 325

Human Genetics, Genomics and Complex Traits (117273)

Joel Hirschhorn

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 325L

Kleinstiver lab (215769)

Benjamin Kleinstiver

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Genetics 325L

Kleinstiver lab (215769)

Benjamin Kleinstiver

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 326

Human Molecular and Cancer Genetics (114753)

David Kwiatkowski

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 326

Human Molecular and Cancer Genetics (114753)

David Kwiatkowski

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 327

Systems Biology of Mammalian Cell Fate Decisions (126370)

Suzanne Gaudet

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 327

Systems Biology of Mammalian Cell Fate Decisions (126370)

Suzanne Gaudet

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 328

Lymphocyte Differentiation, Recombination, DNA Repair, Cancer (111897)

Frederick Alt

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 328

Lymphocyte Differentiation, Recombination, DNA Repair, Cancer (111897)

Frederick Alt

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 329

Genetic Analysis of Synaptic Transmission (117637)

Joshua Kaplan

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 329

Genetic Analysis of Synaptic Transmission (117637)

Joshua Kaplan

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Genetics 332

Combining genetic and biochemical approaches to elucidate mechanisms underlying cancer (115971)

Karen Cichowski

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 332

Combining genetic and biochemical approaches to elucidate mechanisms underlying cancer (115971)

Karen Cichowski

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 333

Computational biology of transcriptional and epigenetic regulation (109352)

Xiaole (Shirley) Liu

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 333

Computational biology of transcriptional and epigenetic regulation (109352)

Xiaole (Shirley) Liu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 334

Genomics and the Genetics of Human Disease (117271)

Raju Kucherlapati

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course

FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 334

Genomics and the Genetics of Human Disease (117271)

Raju Kucherlapati

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 335

Genetics, epigenetics, gene regulation, evolution, disease (114764)

Chao-ting Wu

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 335

Genetics, epigenetics, gene regulation, evolution, disease (114764)

Chao-ting Wu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 336

Developmental Biology of Hematopoiesis (120540)

Leonard Zon

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 336

Developmental Biology of Hematopoiesis (120540)

Leonard Zon

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 337

Human Molecular Genetics (120637)

Stuart Orkin

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 337

Human Molecular Genetics (120637)

Stuart Orkin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 338

Epigenetic inheritance and small regulatory RNAs (159949)

Scott Kennedy

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 338

Epigenetic inheritance and small regulatory RNAs (159949)

Scott Kennedy

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 340L

Mechanisms of microtubule organization (203801)

Radhika Subramanian

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 340L

Mechanisms of microtubule organization (203801)

Radhika Subramanian

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 341

Development and Homeostasis of the Skeleton (124135)

Matthew Warman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 341

Development and Homeostasis of the Skeleton (124135)

Matthew Warman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 342

Genetic Analysis of Zebrafish Kidney Organogenesis (124201)

Iain Drummond

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 342

Genetic Analysis of Zebrafish Kidney Organogenesis (124201)

Iain Drummond

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 343

Zebrafish Cardiovascular Development and Regeneration (110244)

Charles Burns

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 343

Zebrafish Cardiovascular Development and Regeneration (110244)

Charles Burns

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Genetics 345

Computational Biology of Cancer (160951)

Franziska Michor

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 345

Computational Biology of Cancer (160951)

Franziska Michor

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Available for Harvard Cross Registration

Genetics 345L

Molecular basis of digit tip regeneration (217450)

Jessica Lehoczky

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 30

Dissertation reserach under the supervision of members of the Department

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Genetics 345L

Molecular basis of digit tip regeneration (217450)

Jessica Lehoczky

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 30

Dissertation reserach under the supervision of members of the Department

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Genetics 347

Ras signaling and colon cancer (107886)

Kevin Haigis

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Genetics 347

Ras signaling and colon cancer (107886)

Kevin Haigis

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Genetics 348

The Regenerative Biology of Tendons and Ligaments (156719)

Jenna Galloway

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Genetics 348

The Regenerative Biology of Tendons and Ligaments (156719)

Jenna Galloway

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Genetics 349 Section: 0001

Current Tools for Gene Analysis (156915)

Neena Haider

2025 Spring (4 Credits)

Schedule:

TR 0100 PM - 0259 PM

Instructor Permissions: Instructor**Enrollment Cap:**

18

The goal of this course is to apply a number of genomic tools over the course of a semester-long guided research project, learn how to utilize the complimentary statistical tools for analysis, and to discuss the strategies. Using example sequence datasets, students will analyze differential gene expression and changes. The class will explore the featured tool, related statistical methods together in an interactive manner followed by a discussion of the tools/stats as seen in published work. After taking this class students will be able to apply each online tool to their own research and will be able to identify and use new genomic computational resources to address future research directions

Course Notes:

Students will need to bring a laptop to class each day.

Genetics 390QC

Bootcamp: Experimental Approaches in Genetics (125362)

Scott Kennedy

2025 Spring (2 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 8

The goals of this course are to provide learners with a hand-on survey of major topics and themes in genetic and genomic analysis and exposure to numerous experimental techniques and model organisms. Over the course of eight days, students will spend each day in a new lab and gain experience in using genetic approaches to address biologically relevant questions in a variety of experimental systems, including bacteria, yeast, nematode, fly, zebrafish, mouse, and cancer. The course will combine lectures, group-activities and hands-on laboratory exercises that emphasize experimental methods, hypothesis generation and testing, and data analysis.

Students will be graded on a pass/fail basis. To receive credit for this course, students are expected to attend and arrive prepared for every course session. Students should aim to complete daily evaluations of course activities and a final overall course evaluation. The participating labs are listed within the course notes.

Course Notes:

Priority will be given to first-year graduate students.

Recommended Prep:

Genetics 201 or permission from the Course director/Curriculum Fellow

Subject: Microbiology

Microbiology 201

Molecular Biology of the Bacterial Cell (126271)

David Rudner

Tom Bernhardt

Simon Dove

Sophie Helaine

2025 Spring (4 Credits)

Schedule: TR 1000 AM - 1159 AM

Instructor Permissions: Instructor

Enrollment Cap: 25

This course is devoted to bacterial structure, physiology, genetics, and regulatory mechanisms. The class consists of lectures and group discussions emphasizing methods, results, and interpretations of classic and contemporary literature.

Course Notes:

The Spring 2024 version of this course will include in person lectures and paper discussions as well as asynchronous paper reading and problem set assignments.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Microbiology 202

Mechanisms of Bacterial Pathogenesis and Host Immune Response (126269)

Marcia Goldberg

Jonathan Kagan

Michael Starnbach

Sophie Helaine

Amy Barczak

Lauren Essler

Jacob Lemieux

2024 Fall (4 Credits)

Schedule:

TR 1000 AM - 1200 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course focuses on molecular mechanisms of bacterial pathogenesis and the host response to infection. The class consists of lectures and group discussions emphasizing themes of pathogenesis, methods, results, and interpretations of classic and contemporary literature.

Subjects including bacterial secretion systems, mechanisms of entry into host cells, biofilm formation, and motility are viewed primarily from the pathogen's perspective, whereas topics including inflammasome activation, TLR signaling, and adaptive immune responses provide a host-centric view. Additional sessions are spent examining current methods of antibiotic discovery and vaccine development.

The course also introduces students to the wide diversity of pathogenic bacteria. Organisms discussed include pathogenic *E. coli*, *Shigella* species, *Vibrio cholerae*, *Listeria monocytogenes*, *Chlamydia trachomatis*, *Pseudomonas aeruginosa* and *Staphylococcus aureus*, as well as a discussion of the challenges presented by currently unculturable species. Where relevant, connections will also be made with pathogenesis and immune responses to viruses, parasites, and fungi.

Course Notes:

Designed to complement Microbiology 201; however, students who have not taken Microbiology 201 previously are welcome. Designed for graduate students in their first year or beyond, however undergraduates with specific interest in the field may also enroll.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Microbiology 210

Microbial Sciences: Chemistry, Ecology and Evolution (124109)

Michael Gilmore

2025 Spring (4 Credits)

Schedule:

F 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, host-microbe associations in health and disease, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology. Course will limit enrollment to 20 students.

Course Notes:

Also offered as Microbiology 210.

Recommended Prep:

For graduate and advanced undergraduate students, Life Sciences 1a and 1b or their equivalent are required, or permission of instructor. MCB 60 or equivalent is recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Microbiology 213

Social Issues in Biology (122708)

Richard Born

2025 Spring (4 Credits)

Schedule:

W 0500 PM - 0659 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

The course covers historical and contemporary readings about controversial issues related to biology and the social responsibility of scientists. Topics vary from year to year. Examples from previous course offerings include: Jill Fisher on racial inequalities in testing new pharmaceuticals; Emily Hamilton on the public perception of vaccinations; Michael Pollan on the history and current uses of psychedelic drugs; Sarah Lewis on the legacy of Louis Agassiz and the Zealy Daguerreotypes; and Christine Korsgaard on the ethics of animal experimentation. Our goal is to provide future scientists with a background for considering the ethical and social implications of biology.

Course Notes:

Offered jointly with the Medical School as MG 722.0.

Recommended Prep:

Some background in genetics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students

Subject: Immunology

Immunology 201

Advanced Topics in Immunology (148547)

Thorsten Mempel

Shiv Pillai

2024 Fall (4 Credits)

Schedule: TR 0100 PM - 0359 PM

Instructor Permissions: Instructor

Enrollment Cap: 40

This course provides an intensive and in-depth examination of a selection of fundamental concepts in immunology. It takes advantage of the unique expertise of members of our Immunology faculty to illustrate how these concepts have been established and continue to be developed based on seminal work in the field including contributions from their own laboratories.

Course Notes:

Intended for students who have had prior exposure to immunology on the undergraduate level. In the absence of such exposure, students must obtain the permission of the Course Director.

Recommended Prep:

A background in genetics and biochemistry strongly recommended.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students

Immunology 202

Immune and Inflammatory Diseases (148503)

Wendy Garrett

2025 Spring (4 Credits)

Schedule: TR 0130 PM - 0329 PM

Instructor Permissions: Instructor

Enrollment Cap: 100

IMMUN 202 builds on IMMUN 201 and explores fundamental principles of immunology in the context of immune and inflammatory diseases. Through a series of lectures and discussion, students will survey a

broad range of diseases in which the immune system is essential. Topics will include not only diseases that mobilize classical immunity but also conditions to which we now know the immune systems contributes. Students will use oral (paper discussions) and written exercises (problem sets) to learn how to critically evaluate and synthesize major concepts and tools essential for the study of immunology.

Recommended Prep:

Immunology 201 or its equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

Immunology 203

Advances in Immunology (215751)

Daniel Lingwood

2025 Spring (4 Credits)

Schedule:

T 0230 PM - 0329 PM

R 0300 PM - 0359 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Semester long course, intended for graduate students at Harvard and MIT, jointly taught by Harvard and MIT faculty members at the Ragon Institute of MGH, MIT, and Harvard.

Recommended Prep:

Students should have completed or be concurrently enrolled in a basic immunology course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Immunology 204

Critical Readings for Immunology (143254)

Duane Wesemann

2025 Spring (4 Credits)

Schedule:

R 1000 AM - 1259 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Original research articles from fields including immunology, biochemistry, genetics, and cell and developmental biology will be critically analyzed in an intensive small group format. Grading will be based on class participation and oral presentations.

Course Notes:

Required for first-year immunology students, open to second-year immunology students. No auditors. Offered jointly with the Medical School as IM 703.0.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 301

Immunology Seminar (142204)

*Shiv Pillai**Lydia Lynch*

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 1259 PM

W 0200 PM - 0329 PM

W 0400 PM - 0515 PM

Instructor Permissions: Instructor**Enrollment Cap:** 20

Gives students exposure to research topics in Immunology. Students prepare for the weekly seminar through readings, discussions, and preparing brief write-ups. These discussions are facilitated by members of the Committee on Immunology.

Course Notes:

Required for, and limited to, first-year Immunology graduate students. Attendance is required at the Meet and Greets, the discussions and the seminars.

Individual event timing can be found in class notes.

Additional Course Attributes:

Immunology 305QC

Neuroimmune interactions in health and disease (130342)

Isaac Chiu

Jun Huh

2025 Spring (2 Credits)

Schedule: T 0400 PM - 0559 PM

Instructor Permissions: None

Enrollment Cap: n/a

It is increasingly clear that communication between the nervous system and the immune system plays a significant role in homeostasis and disease. This course will investigate current topics in neuro-immunology such as: Gut-brain axis, neuron-glia interactions, brain border tissues, CNS development,

pain, itch, neurodegeneration, allergy, autoimmunity, and host defense. Neurons and immune cells crosstalk within the central nervous system and in peripheral tissues, mediating homeostasis, barrier protection, and host defense. Dysregulation in neuroimmune communication underlies both neurological and immunological diseases. Guest lecturers will give seminars on each topic in neuroimmunology, followed by class discussion on papers in the field.

Course Notes:

Each class will cover a specific topic in neuro-immunology. Students should be prepared to lead discussions on pre-selected papers for each session.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

The focus in this course is on the emerging area of systems immunology. We will learn how leading-edge approaches in genetics, transcriptomics, epigenomics, proteomics, genetic perturbation screens, T/B repertoires, microbiomes, and tissue architecture can be used to understand immune cell types and states, intracellular and intercellular circuits underlying immunity, and mechanisms of immune diseases. Classes will consist of pre-recorded lectures, live sessions to discuss leading-edge studies, followed by a companion workshop for hands-on computational analysis of data related to key topics.

Instructor Permissions: Instructor

Enrollment Cap:

20

There have been many exciting recent developments in the cancer immunology field, and multiple therapeutic approaches have shown efficacy against diverse types of cancer. This course will emphasize new mechanistic insights, specifically on the following topics: mechanisms of spontaneous protective anti-tumor immunity; key effector cell populations of anti-tumor immunity; innate immune pathways in tumor immunity; inflammation and tumor microenvironment; immunosuppressive mechanisms in tumor immunity; targeting of inhibitory receptors; cancer vaccines.

Course Notes:

Must be PhD student at Harvard or postdoctoral fellow.

Therapeutic Antibody Engineering – From Bench to Bedside (208013)

Wayne Marasco

2024 Fall (2 Credits)

Schedule: T 1000 AM - 1159 AM**Instructor Permissions:** Instructor**Enrollment Cap:** 15

This quarter course will focus on all aspects of therapeutic antibody (Ab) engineering from bench to bedside with an emphasis on translational research. Each class will focus on a different aspect of Ab engineering and will start with short didactic lectures followed by discussion of 2-3 seminal papers that are assigned readings. Students are expected to present assigned papers and lead discussions. Ab discovery will include readings on generation of diverse Ab repertoires, in vitro microbial discovery platforms such as Ab-phagemid and Ab yeast display as well as single B cell cloning strategies. Current state of the art of human Ig locus transgenic mice and gene-editing strategies will be discussed. Engineering strategies will include chimeric, humanized and human Abs, and different formats including single chain Abs (scFvs), domain Abs, BITEs and Bi-specific Abs. Human Fc engineering to increase or decrease immune-mediated clearance will be discussed including glycan engineering. Manipulating engineered Ab in vivo clearance through size and FcRn interactions will be discussed. We will also discuss nanobodies, antibody drug conjugates and immunotoxins and chimeric antigen receptors as well as the necessary steps to move from bench to bedside will be discussed. A final exam will be an engineering project using an unknown antibody sequence. Lots to learn, it's good stuff!

Course Notes:

Must be a MS or PhD student at Harvard or postdoctoral fellow;
otherwise course director permission will be needed to enroll.

Recommended Prep:

Immunology 201. Background in genetics and biochemistry strongly

recommended.

Immunology 319QC

Mechanisms and therapeutics of inflammation and resolution (218590)

Timothy Hla

Charles Serhan

Matthew Spite

2024 Fall (2 Credits)

Schedule: R 1000 AM - 1159 AM

Instructor Permissions: None

Enrollment Cap: n/a

Physiologic inflammation is followed by active resolution mechanisms to return the tissues to normal homeostasis. Uncontrolled inflammation and/or defective resolution mechanisms lead to many diseases, including asthma, fibrosis, cancer, autoimmunity, neurodegeneration and cardiovascular diseases. This course will cover multicellular interaction networks that involve immune, vascular and parenchymal cells, lipid mediators, signaling pathways and organ system-specific mechanisms. Discrete lipid mediator networks, namely, eicosanoids, SPMs, S1P, and LPA that are therapeutically employed to treat diseases will

be highlighted. In addition, development of novel therapeutics to control inflammatory and resolution pathology will be discussed.

The course will have an hour of didactic lectures given by expert faculty. The second hour will feature a student-led discussion of a recent journal article in the area of the lecture. Students will also have an opportunity for synthesizing the lecture and/or the journal club in a social media format (i.e. Tweetorial, YouTube video, minipodcast) for the purpose of communication/ dissemination of scientific information.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Immunology 320

Cell Adhesion in Vascular Biology and Innate Immunity (146636)

Denisa Wagner

2024 Fall (4 Credits)

Immunology 339DR

Graduate Research – Quintana Lab (219995)

Francisco Quintana

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Immunology 340DR

Graduate Research – Nowarski Lab (219996)

Roni Nowarski

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Immunology 340DR

Graduate Research – Nowarski Lab (219996)

Roni Nowarski

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Immunology 341

Gene Regulation in Normal and Leukemic Stem Cells (144368)

Daniel Tenen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Immunology 341

Gene Regulation in Normal and Leukemic Stem Cells (144368)

Daniel Tenen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Instructor Permissions: Instructor

Enrollment Cap: 30

Dissertation reserach under the supervision of members of the Department

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Immunology 362

Chemokine and Lipid Chemoattractants in Immune Cell Trafficking in Normal Physiology and Disease (131559)

Andrew Luster

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Immunology 362

Chemokine and Lipid Chemoattractants in Immune Cell Trafficking in Normal Physiology and Disease (131559)

Andrew Luster

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 363

Regulation of Immune and Inflammatory Responses by the Leukocyte Immunoglobulin-like Receptor Family (131556)

Howard Katz

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Immunology 363

Regulation of Immune and Inflammatory Responses by the Leukocyte Immunoglobulin-like Receptor Family (131556)

Howard Katz

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Immunology 364

T-cell Differentiation, Tolerance and Autoimmunity (131766)

Diane Mathis

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 364

T-cell Differentiation, Tolerance and Autoimmunity (131766)

Diane Mathis

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 365

The Sage Lab studies how the immune system regulates B cell responses in disease (213721)

Peter Sage

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 365

The Sage Lab studies how the immune system regulates B cell responses in disease (213721)

Peter Sage

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 366L

Graduate Research - Barrett Lab (213722)

Nora Barrett

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Immunology 366L

Graduate Research - Barrett Lab (213722)

Nora Barrett

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Immunology 368

RNA Granules (131552)

Paul Anderson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 368

RNA Granules (131552)

Paul Anderson

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Immunology 369

Mechanisms of Autoimmune Disease (146788)

Vicki Kelley

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Immunology 369

Mechanisms of Autoimmune Disease (146788)

Vicki Kelley

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Immunology 371

Cellular and Molecular Mechanisms of Eosinophil and Other Leukocyte Involvement in Allergic Flammati (131563)

Peter Weller

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 371

Cellular and Molecular Mechanisms of Eosinophil and Other Leukocyte Involvement in Allergic Flammati (131563)

Peter Weller

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Immunology 372

Immunopathogenesis & Regulation of Immune Response in EAE (148335)

Samia Khoury

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Immunology 372

Immunopathogenesis & Regulation of Immune Response in EAE (148335)

Samia Khoury

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 374

Tumor Necrosis Factor-Alpha Gene Regulation in the Immunopathogenesis of AIDS and TB (131555)

Anne Goldfeld

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Immunology 374

Tumor Necrosis Factor-Alpha Gene Regulation in the Immunopathogenesis of AIDS and TB (131555)

Anne Goldfeld

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Immunology 375

Biology and Function of Immunoreceptors (131557)

Jean-Pierre Kinet

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Immunology 375

Biology and Function of Immunoreceptors (131557)

Jean-Pierre Kinet

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Immunology 376

Molecular Basis of Immunodeficiencies; Immunological and Molecular Basis of Atopic Dermatitis (131564)

Raif Geha

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Immunology 376

Molecular Basis of Immunodeficiencies; Immunological and Molecular Basis of Atopic Dermatitis (131564)

Raif Geha

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course

Subject: Biomedical Informatics

Biomedical Informatics 201

Concepts in genome analysis (208016)

Shamil Sunyaev

Michael Baym

Heng Li

Cheng-Zhong Zhang

2024 Fall (4 Credits)

Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course focuses on quantitative aspects of genetics and genomics, including computational and

statistical methods of genomic analysis. We will introduce basic concepts and discuss recent progress in population and evolutionary genetics and cover principles of statistical genetics of Mendelian and complex traits. We will then introduce current genomic technologies and key algorithms in computational biology and bioinformatics. We will discuss applications of these algorithms to genome annotation and analysis of epigenomics, cancer genomics and metagenomics data. Proficiency in programming and basic knowledge of genetics and statistics will be assumed.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

Biomedical Informatics 320DR

Graduate Research - Zitnik Lab (217879)

Marinka Zitnik

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Subject: Medical Sciences

Medical Sciences 300QC

Responsible Conduct of Science (127507)

Rosalind Segal

Aimee Hollander

2024 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The 2023 Fall RCoS course will run for 10 weeks. There will be 7 in-person classes, and 3 Zoom lectures. Each class and lecture will be scheduled for an hour and a half. Section meeting dates and locations will be determined by specific section leaders, and announced to students prior to the start of the course.

This course is a required course for all DMS students and all who receive support from NIH training grants. The goal of this course is to inform students about the appropriate conduct of research and the many ethical and social problems that they may encounter during their research career in graduate school. The

course consists of three lectures for the entire class and several highly interactive sessions with a small group of fellow students moderated by a faculty member. Some of the issues that will be discussed in this course include experimental design and practices, equity in research, conflict of interest, research misconduct, interactions with members of the laboratory and the mentor, and the ethical role of the scientist in society.

Course Notes:

All current G2 students must register for this course on their Fall Semester study cards. Specific enrollment instructions will be sent to current G2s and other eligible students prior to the first day of class. Please contact Bethany_Krevat@hms.harvard.edu, for enrollment inquiries. Restricted to HILS graduate students within programs on the Longwood campus.

BBS 230A is an integrated literature analysis course comprised of two related components: (1) seminar-style, small group paper discussions with BBS faculty members that focus on understanding, dissecting, and evaluating seminal research papers; and (2) sections led by teaching fellows that focus on developing each student's analytical approach to scientific literature, publication, and professional growth.

BBS 230A will take place between September and mid-October, with one additional session in December.

Course Notes:

BBS 230A is open for enrollment only to BBS and BIG students. This course and its second part, BBS 230B, is required for first-year BBS students. Students must complete the fall semester (BBS 230A) to enroll in the summer semester (BBS 230B).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological & Biomedical Sci 230B Section: 0001

Experimental Analytics, Design, and Platforms (221791)

David Van Vactor

2025 Spring (2 Credits)

Schedule:

MTWRF -

Instructor Permissions: Instructor

Enrollment Cap:

70

Biomedical research advances through the publication of novel results and independent verification studies upon which other scientists build new projects and discoveries. Reproducible research practices are integral to the scientific method, as they enable the acquisition of reliable data and actionable results that can be efficiently translated/applied to clinical settings. Through a series of workshop style modules, panel discussions, and TF-led peer critique sections, this course will (a) examine multiple dimensions of experimental design through the lens of rapidly evolving technologies, (b) explore practices that promote research rigor and data transparency, and (c) promote the development of skills needed to design and communicate rigorous experiments and study design.

Course Notes:

BBS 230B is open for enrollment only to students who have completed BBS 230A. Students must complete the fall semester (BBS 230A) to enroll in the summer semester (BBS 230B). BBS 230A and this course, are required for first-year BBS students.

For enrollment questions, please email payel_ganguly@hms.harvard.edu

Biological & Biomedical Sci 311

Meromit Singer lab (215771)

Meromit Singer

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The Singer group focuses on elucidating gene networks that regulate T cell function in cancer and autoimmunity, as well as the mechanisms by which bi-directional interactions take place between the T cells and their environment.

We use statistics, machine learning and algorithmic design to analyze high-throughput data generated in our lab (e.g. single-cell RNA-Seq) and model T cell regulation and function in tissue. We follow up on our predictions with in vivo perturbations (e.g. with CRISPR-Cas9) to validate and improve our models.

Additional Course Attributes:

2024 Fall (4 Credits)

Schedule:

R 0200 PM - 0329 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A small group tutorial systematically guiding students in the writing of original, hypothesis-driven research proposals from initial topic selection through completion of a final draft.

Course Notes:

This course is open to second year BBS students. Others need permission of the instructors. Students will be placed in small groups using the sectioning tool in my.harvard. Dates, times and locations for Sessions 3 and 4 will be determined by the faculty running the small group sessions. Group assignments will be posted on the course website.

Recommended Prep:

Drug Use in Nature (222978)

Naomi Pierce

2024 Fall (4 Credits)

Schedule: T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

Humans are not the only organisms that use drugs. In their natural environments, animals and plants use a great variety of chemical substances that elicit physiological or psychological effects when consumed or absorbed that are not simply those involved in metabolic maintenance, growth and nutrition. Examples

include chemical manipulation of conspecifics and/or adversaries, self-medication or zoopharmacognosy, and different kinds of sensory enhancement. Drug use, in its many forms in the natural world, can have important effects on animal behavior. In this seminar, students will explore the diverse ways that organisms perceive, extract and use drugs in their natural environments. Students will explore both the how and why of drug use in nature by discussing primary literature that examines drug use from different scientific perspectives including evolutionary biology, behavioral ecology, molecular biology, chemistry, anthropology, and psychology. At the end of this seminar, students will have a better understanding of and be able to critically assess the diverse ways that animals and plants use drugs.

Your Brain on Poetry (223012)

Anne Dymek

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Poetry is a powerful tool for expressing and exploring the human experience. But what is it about poetry that allows it to connect with us so deeply? What can we learn about the workings of the brain, the mind, and the nature of human experience through the study of poetry? In this course, we delve into the science and art of poetic expression, reception, and interpretation, drawing on insights from literary and cultural studies, neuroscience, philosophy, linguistics, new media and technologies, and psychology. We explore the ways in which poetry engages our senses, imagination, cognition, and behavior. Furthermore, as we delve into the fascinating world of poetry, we also contemplate the exciting possibilities that the future may hold. Considering the advancements in brain technologies, we explore how poetry could potentially pave the way for an entirely new art form, one that emerges from the reactions of our brains to language and engages us in a virtual reality of creative expression like never before imagined.

The Microbiota-Gut-Brain Axis: How Gut Microbes Modulate Human Cognition and Mental Health (224043)

Elizabeth Phelps

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

The idea of a brain-gut connection has long been recognized. From Hippocrates' famous declaration that "all diseases originate in the gut," to contemporary idioms such as "trust your gut," and "feeling butterflies in your stomach," it seems evident that the gut is somehow connected to cognition and feelings. Today, we not only know that they are anatomically connected but are also functionally intertwined. More interestingly, evidence emerging from various fields of study underscores the pivotal role of the gut-residing microbes in the gut-brain communication and the preservation of cognitive and mental health. Excitingly, the plasticity of the gut microbiota composition opens up exciting potential for innovative therapeutic interventions. In this course, students will explore the microbiota-gut-brain axis and its role in human cognition and mental health. We will discuss literature coming from different research fields, including studies in rodents and humans, investigation involving patients with gastrointestinal, metabolic, and neurodegenerative diseases, and epidemiological studies related to nutrition and mental well-being. We cover the evolutive significance of the gut-brain connection and discuss how contemporary lifestyles may be influencing its composition and, consequently, human health. By the conclusion of this seminar, students will acquire insights into the pathways through which gut microbes influence diverse brain functions, the external factors shaping the gut microbiota, the repercussions of its disruption, and the current methodologies employed to study and modify its composition. The course will comprise a mix of brief lectures and discussions centered around papers previously curated by the instructor or suggested by the students. Students will be encouraged to ask questions and pursue the answers by exploring the available literature and propose experimental ideas. In this way, students will be able to shape the class content according to their own interests. Additionally, we have two guest speakers scheduled to join us.

What Disease Teaches about Cognition (109866)

William Milberg

2025 Spring (4 Credits)

Schedule:

T 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

14

This course seeks to reconcile the complicated and messy problems of patients with brain disease with the concise analysis of precisely defined cognitive functions in normal subjects. Students will learn to overlap cognitive functions on to the brain in disease - at the gross dissection and imaging levels - and to understand some of the complex interactions of individual cognitive operations in disease using the examples of famous landmark cases in the literature (e.g. Broca's Monsieur Leborgne, Phineas Gage, HM and others). The course will include a dissection of a human brain, an examination of how the actual brain maps onto two dimensional neuroimages, and discussions of how the classic lesion based maps of cortical function are related to contemporary maps based on functional neuroimaging.

Mind, Brain & Behavior 980M

Functional Neuroimaging of Psychiatric Disorders: Insights into the Human Brain-Mind (160759)

David Silbersweig

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Functional brain imaging has revolutionized the study of systems-level behavioral neuroscience and psychiatric disorders, through the ability to localize and characterize distributed brain activity directly associated with perception, cognition, emotion and behavior in disorders where there are not gross brain lesions. This seminar will introduce students to translational neuroimaging methods at the interface of neuroscience, psychology and medicine. It will cover recent and ongoing advances in our understanding of fronto-limbic-subcortical brain circuitry across the range of psychiatric disorders (e.g. mood disorders, anxiety disorders, psychotic disorders, personality disorders, addictions). It will discuss new, emerging biological (as opposed to descriptive) taxonomies and conceptualizations of mental illness and its treatment. It will explore the implications of such knowledge for issues such as consciousness, meaning, free will, emotion, resilience, and religiosity. It will incorporate clinical observations, scientific data and readings, and examine future directions in brain-mind medicine.

Neuroaesthetics (161267)

Nancy Etcoff

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Focuses on neuroaesthetics, an emerging field offering a scientific perspective on the nature of art and the ways that art reveals human nature. Integrates findings from neuroscience, psychology, evolutionary biology, philosophy, and scholarship in the arts and humanities. Begins with a brief history of ideas on aesthetics, art, beauty, and pleasure. Considers the neural underpinnings of response to art in the brain's reward system and default network. Among the questions considered: Why are people drawn to art that is neither conventionally beautiful nor entirely pleasurable? Is art a vehicle for simulating experiences and understanding other minds? What does it mean to "enjoy" sad music or chills and thrills in response to fiction or film? Can art promote well-being? The course will focus on visual art, fiction, film, and to a lesser extent, music, and on our response to art rather than its creation. The course will include a semester long gallery classroom at the Harvard Art Museum with original works of art from the museum's collections that will serve as primary source materials for study and as subjects of assignments.

Mind, Brain & Behavior 980P Section: 1

The Role of Music in Health and Education (205158)

Lisa Wong

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Music shapes the course of human history at both a micro and macro scale; The "universal language" has the power to connect people who share no other common ground. Its power to bind people together is intuitively understood, but only through recent neuroimaging advances over the past few decades have scientists been able to move past intuition to reveal its impact on the brain. In this course, we will examine the exciting progress of the fields of music, science, and social science, through a variety of lenses, and meet some of the experts in the field. Who are the key investigators and practitioners in today's emerging music/brain landscape? What are the latest discoveries about how music affects the brain? How does how we hear and listen impact our perception of music? Who are some of the key influencers in music and social change? This course invites students to deepen their relationship with music, exploring different aspects of the art form through the lens of neuroscience, education, medicine, music therapy, public health and social justice. By the end of this course, the learner will (1) understand the effect of music on the developing brain; (2) understand the mechanism of hearing music; (3) consider the pathophysiology of disordered movement and hearing and how music can be used therapeutically; and (4) understand how other disciplines can add to their knowledge of the therapeutic uses of music. Given the transdisciplinary nature of the work, students will be introduced to literature from different disciplines and use these resources to explore their own individual interests in music.

Mind, Brain & Behavior 980T Section: 1

Sleep and Mental Health (207092)

Edward Pace-Schott

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

The scientific study of sleep is an area of research that is both highly diverse and among the most interdisciplinary and unifying of topics in psychology and neuroscience. In the past several decades, exciting new discoveries on the neurobiology of sleep have been facilitated by technologies such as functional neuroimaging and molecular genetics. Nonetheless, sleep remains mysterious and controversial and, remarkably, there still is no generally agreed upon function for this behavioral state that occupies one third of our lives! Sleep science exemplifies the translational approach in biomedical science whereby human and animal research together continually advance the field of sleep medicine. In this seminar, lectures during the first half of each class will provide overviews of the physiology and behavioral neuroscience of sleep. The second half of each class will be devoted to student-led discussions of assigned study questions as well as free discussions. In a short term paper, students will research in depth a topic of their choice that they find particularly interesting related to sleep neuroscience or mental health. Students will also briefly present what they have learned about their topic during the final class meetings. Some topics students might choose are described in the following paragraph. In addition, students will keep a

nightly sleep and/or dream diary for 2-3 weeks at some point during the semester in order to learn more about sleep from their own experiences. They will then describe what they have observed in a short essay. In the past, students have found this exercise to be especially interesting. Lastly, there will be a short open-book, unlimited-time final exam on material from the lectures. Topics for term papers might include the characteristic abnormalities of sleep in mood, anxiety, psychotic, addictive or neurodevelopmental disorders. Scientific findings increasingly point to the importance of sleep for mental health and optimum performance, as well as to sleep disruption as both a result and a contributing cause of mental illnesses. Thus, one might focus on the contribution of primary sleep disorders to psychiatric and neurological illness, such as the circadian rhythm disorders in bipolar illness or insomnia as a risk factor for mood and anxiety disorders. Still other topics might focus on the contribution of normal sleep to emotional regulation, memory consolidation, and cognitive performance. For those with more cellular neuroscience interests, topics might focus on linkages between sleep and immunity or the role of sleep in disposal of abnormal proteins as it relates to neurodegenerative diseases.

Mind, Brain & Behavior 980X

Translational Neuroscience: Limits of Adaptation from Extreme Environments to Clinical Practice (219973)

Gary Strangman

Vladimir Ivkovic

2025 Spring (4 Credits)

Schedule:

F 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Within the translational neuroscience paradigm, this course explores the concepts of neurobehavioral adaptation, stress, resilience, and neuropsychiatric disorders, in relation to the underlying neurophysiologic mechanisms that regulate them. What can we learn about the limitations of human neurobehavioral function through exposure and adaptation to extreme environments, as well as readaptation to "normal" environment, or onset of neuropsychiatric disorders?

We will explore neurobehavioral adaptations to extreme activities such as spaceflight, expeditionary (polar, underwater, desert exploration, military deployments), emergency response services (e.g. firefighting), and impact sports (e.g. football). The limits to neurobehavioral adaptations will be discussed in the broader context of mental and occupational health, gender differences, and understanding the etiology of neuropsychiatric conditions such as, depressive and anxiety disorders, post-traumatic stress disorder (PTSD), traumatic brain injury (TBI), Chronic Traumatic Encephalopathy (CTE), intracranial hypertension and stroke, etc. These will be augmented with insights from COVID-19 pandemic which placed a large portion of the world's population in an extreme environment defined by social and physical isolation/confinement, movement and travel restrictions, disruption of personal and professional activities, novel health risks, and behavioral adjustments.

Contemporary findings from research studies conducted in laboratory, occupational/extreme, and clinical environments will be discussed in the context of translational neuroscience paradigm including neurocognitive, neurophysiological, and psychoneuroimmunological considerations. Special focus will be placed on demonstrations of research/clinical application of novel technologies such as ambulatory brain and physiologic monitoring. Theoretical concepts and research findings will be evaluated relative to their utility in developing prevention and mitigation strategies in extreme environments, as well as translational implementation in clinical treatments for related medical conditions in the general population.

This course may be particularly interesting to Mind Brain and Behavior students pursuing careers in

translational neuroscience, psychology, medicine, and related fields. This course features expert guest lecturers (e.g. NASA astronauts and researchers, Antarctic expeditionary physicians, underwater explorers, etc.), demonstrations of unique experimental methodologies and equipment (e.g. ambulatory brain and physiologic monitoring) used in extreme environments, and field visits to operational facilities such as Boston Fire Department Training Academy and/or Neural Systems Group (NSG) at Massachusetts General Hospital (directed by course head, Dr. Strangman).

n/a

MCB 60 provides an introduction to the principles of molecular and cellular biology and their connections to biomedicine. The course explores how medical syndromes provide insights into biological processes and how biological mechanisms underlie human disease and physiology. Topics range from DNA repair, protein folding and vesicle transport to metabolism, cell migration, and cancer. Content for lecture topics comprising of reading and viewing material will be released weekly followed by mandatory, interactive live sessions with the instructors. Weekly sections will combine a laboratory that focuses on experimental design and data analysis, primary literature reading, and review of lecture materials.

The course integrates an introduction to the structure of macromolecules and a biochemical approach to cellular function. Topics addressing protein function will include enzyme kinetics, the characterization of major metabolic pathways and their interconnection into tightly regulated networks, and the manipulation of enzymes and pathways with mutations or drugs. An exploration of simple cells (red blood cells) to more complex tissues (muscle and liver) is used as a framework to discuss the progression in metabolic complexity. Students will also develop problem solving and analytical skills that are more generally applicable to the life sciences.

The course aims to develop fundamental concepts of biochemistry as they apply to macromolecules, including protein and nucleic acid structure, thermodynamics and kinetics, ligand interactions and chemical equilibria. The course will also emphasize how these concepts are used in studies of the structure and function of biological molecules, including examples from metabolism. The course will consist of synchronous, interactive lectures and a weekly synchronous section. In section, students will undertake a discovery-based laboratory research project in which they will apply these concepts toward understanding the structure and function of the ATPase domain from the ABC transporter associated with antigen processing (TAP).

Requirements:

Prerequisite: (LPS A OR LS 1a) AND (CHEM 20 OR CHEM 17)

Molecular & Cellular Biology 66

Pathological Cell Biology (220875)

Sam Kunes

Michele Markstein

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

50

Pathological cell states are at the heart of human disease: in this course, we view cell pathology as a window into the normal state of the cell; the robustness of its homeostatic mechanisms and the alternative modes a cell may adopt in order to contribute to multicellular structures as precise as a nervous system and as chaotic as a malignant tumor. The curriculum draws upon foundational courses in genetics and cell biology (e.g. LS1A, LS1B, MCB60 and related coursework) and supports further understanding of normal cell states through exploration of cell's pathological states. The curriculum emphasizes advanced experimental approaches and current findings in oncogenic transformation and other pathologies.

The prereqs for this course are: LS1A, LS50A, or LPSA with Recommended Prep of LS1B.

Recommended Prep:**LS1B****Requirements:****Requires LS1A, LS50A, or LPSA****Additional Course Attributes:**

Molecular & Cellular Biology 68

Cell Biology Through the Microscope (109851)

*Ethan Garner**Jeff W. Lichtman*

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

24

MCB 68 explores three fundamental fields of eukaryotic cell biology: chromosome segregation, cell motility, and neuroscience. Each topic is approached from a historic and technical perspective. Students will discover these systems as the scientific field did, learning how each successive advance in microscopy revealed new biological details. Students will come away with a theoretical and hands-on understanding of microscopy as well as a grasp of the biological findings each technology revealed.

Recommended Prep:

An additional introductory course in biology (e.g., MCB 60, MCB 80 or SCRB10) is recommended but not required. The course design, level, and content is best suited for students in their sophomore year

Requirements:**Prerequisite: LS 1a OR LPS A****Additional Course Attributes:**

Attribute	Value(s)

Molecular & Cellular Biology 80

Neurobiology of Behavior (117711)

*Jeff W. Lichtman**Katie Quast*

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic lecture videos with live Tuesdays and

Thursdays featuring guest lectures, hands-on demonstrations, and review sessions in addition to small discussion sections.

Course Notes:

The course is open to students with little formal training in biology.

Requirements:

Anti-Requisite: Cannot be taken for credit if MCB 81 or NEURO 80 already complete.

Additional Course Attributes:

Attribute	Value(s)

Laboratory Research for Honors Thesis (122530)

Dominic Mao

Monique Brewster

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Laboratory research in topics related to the MCB concentration, culminating in an undergraduate thesis submitted to the MCB undergraduate office for review by members of the Board of Tutors in Biochemical Sciences and the greater Boston research community. The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Notes:

Limited to students writing a thesis in MCB. Students are required to submit a written proposal to the MCB undergraduate office in the summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Molecular & Cellular Biology 100

Experimental Research in Molecular and Cellular Biology (160364)

Alain Viel

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100

Recommended Prep:

LPS A or LS 1a or permission of the instructor. Students interested in a neurobiology project will need MCB 80 or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 111

Mathematics in Biology (117342)

Elena Rivas

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

MCB111 is meant for biologists who want to learn mathematical principles relevant to current biological research, as well as for mathematically oriented students who want to explore applications in biology. The course theme is mathematical modeling of biological processes, with a special emphasis on probabilistic models and inference. More than half of the course covers topics on information theory, Bayesian inference, statistics, probabilistic modeling, and neural networks. The last section of the course covers dynamical systems in biology, including random walks, feedback control, and molecular population dynamics. Each week-long unit is devoted to one specific topic, and is based in one or more scientific papers selected from the recent literature. The best way to learn in this course is through the homework. They are very hands-on, and usually require coding to implement some mathematical concept through a particular biological example. For instance, one unit is devoted to maximum likelihood methods in the context of Quantitative Trait Loci analysis; another unit explores probabilistic models in the context of inferring ancestry and recombination breakpoints from genomic reads in fly populations. More information about the course can be found at mcb111.org.

Recommended Prep:

Mathematics 19 or higher.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 115

Cellular Basis of Neuronal Function (114789)

Ryan W. Draft

Katie Quast

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

24

The essential function of a neuron is to process complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits.

In lieu of section, this course will have a weekly 75 minute fun, hands-on lab for students to learn to record neurons. Please complete the lab time preference form on the Course website by the lottery deadline (Nov 8): <https://forms.gle/7AvnFRXcDLC5XpLa6>

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval.
Anti-requisite: Cannot be taken for credit if NEURO 115 is already complete

Molecular & Cellular Biology 143

Neurobiology of Vision and Blindness (207772)

Joshua Sanes

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

The visual system fascinates biologists, in part because humans are such visual animals. This also makes loss of vision a pressing concern: many Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer's or AIDS. For these reasons, as well as because of its relative accessibility, the visual system is a favored model for studying fundamental aspects of neurobiology, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in the structure, function and development of the mammalian visual system, and then use them as a basis for considering causes of blindness and potential cures.

Recommended Prep:

MCB 80 or NEURO 80 is recommended.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval.
Anti-requisite: Cannot be taken for credit if NEURO 143 is already complete.

Molecular & Cellular Biology 161

Introduction to Single-Molecule Biophysics (220621)

Maxim Prigozhin

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

45

Single-molecule biophysics is a vibrant research field within the Quantitative Biology umbrella that has grown substantially over the past ~30 years. The impact of single-molecule biophysics has been significant in terms of not only the experimental and theoretical methods that have been developed, but also the scientific insights in biological and soft matter science that these tools have generated. This new course will cover the motivation behind single-molecule measurements in biology and, for the majority of the time, focus on discussing state-of-the-art experimental and computational techniques in single-molecule measurements as well as the key biological discoveries that they have enabled.

Course Notes:

MCB 161 is also offered as APPHY 242. Students may not take both for credit.

Recommended Prep:

First-year college physics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 169

Molecular and Cellular Immunology (111720)

Shiv Pillai

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The immune system is the frontier at which molecular biology, cell biology, and genetics intersect with the pathogenesis of disease. This year the entire course will be taught through the lens of COVID19, examining the underlying scientific bases of pathogenesis, protection, treatment and prevention. The course examines

in depth the cellular and molecular mechanisms involved in the development and function of the immune system and also analyzes the immunological basis of human diseases in general. Apart from COVID19, we will discuss AIDS, autoimmunity, allergic disorders, primary immunodeficiency syndromes, transplantation, and cancer

Recommended Prep:

Genetics and cell biology strongly recommended.

Requirements:

Prerequisite: LPS A OR LS 1a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Molecular & Cellular Biology 170

Brain Invaders: Building and Breaking Barriers in the Nervous System (109636)

Laura Magnotti

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Requirements:

Pre-requisite: (LPS A OR LS1a) AND MCB/NEURO 80 or Instructor Approval.

Anti-requisite: Cannot be taken for credit if NEURO 170 is already complete

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 175

Principles of Cell Physiology (218679)

Nicholas Bellono

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How do cells communicate and respond to their environment? MCB 175 explores foundational principles in cell physiology and membrane biophysics, including ion channel structure and function; transport mechanisms; electrical signaling in the brain and nonexcitatory cells; second messengers; organellar

signaling. We delve into these core concepts through examples of signaling mechanisms in specialized cell types, disease states, and organismal adaptations. Through reading and discussing primary literature and scientific writing assignments, students strengthen skills in critical thinking, interpretation of data, and experimental strategy. Students also give presentations and design a research project based on course topics.

Recommended Prep:

MCB 60 or MCB/Neuro 80

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Molecular & Cellular Biology 182

Bacterial Diversity and the Human Microbiome (224022)

Annie Park

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Where are bacteria found, and how do they affect our lives? Bacteria are mostly known for their role in human diseases, but the range and function of bacteria are incredibly diverse and go far beyond disease. This course begins with the exploration of the physiological and functional diversity of bacteria, then delves into the way humans have harnessed bacteria for medicine and biotechnology. The latter half of the class focuses on microbiomes, which are communities of microbes that interact with each other. Microbiomes affect everything from the environment to human health, and its scope and importance is an exciting emerging field. This discussion-based seminar will focus on reading and discussing primary literature, with student-led discussions and discussion posts. The final project and presentation will be based on research in primary literature to propose a new company focused on bacteria. Students will establish skills in critical reading and thinking, interpretation of data, and facilitation of meaningful discussions.

Recommended Prep:

Ls1a/LPSA and Ls1b, MCB 60

Additional Course Attributes:

Attribute	Value(s)

Molecular & Cellular Biology 188

Chromosomes (114864)

Nancy Kleckner

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Chromosomes are the repositories of our genetic material. Their evolution, dynamics, transmission and management (and the ways in which these aspects go awry) is fundamental to life. The goal of this course is to provide a broad understanding of these issues from diverse perspectives and length scales, ranging

from molecules to whole chromosomes, and from genetics to biochemistry to physical and mechanical aspects, with implications for evolution and disease.

Course Notes:

If you have not taken MCB 60 and LS1B or the equivalent you may request permission of the instructor.

Recommended Prep:

LS1b and MCB60 or equivalent or permission of instructor.

Requirements:

Prerequisite: LS 1b AND MCB 60

Additional Course Attributes:

Attribute	Value(s)

Molecular & Cellular Biology 231

Computational Neuroscience (117859)

Haim Sompolinsky

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep:

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements:

Anti-Requisite: Cannot be taken for credit if NEURO 131 already complete.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students

Interesting Questions in Physical Biology (122422)

Nancy Kleckner

2024 Fall (4 Credits)

Schedule:

TR 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Physical biology can be defined as a discipline that seeks to understand biological processes through the lens of physics and engineering. Faculty and students will unite to review current research with the aim of identifying and pondering interesting emerging questions in this area. Combination of lecture and discussion format. Comprises a series of two-week modules, most of which are given by a one or a pair of faculty drawn from MCB, Physics and SEAS.

Course Notes:

Intended primarily for first year graduate students and advanced undergraduates in any department, but the course is available to other interested students, at any level, as space permits.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 296

Scientific Journeys (223030)

Vladimir Denic

2024 Fall (2 Credits)

Schedule:

R 0600 PM - 0715 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

In this course one faculty member (typically from the MCO training program) meets each week with students for a one hour casual discussion of how specific events during their previous training (typically the PhD years) shaped their long-term scientific interests and career trajectory.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Molecular & Cellular Biology 297

Methods and Logic in Cell Biology (223831)

Vladimir Denic

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Two hour discussions, once per week, of one primary literature papers with the pedagogical goals of extracting from them the principles of experimental design leading to successful factor identification (What cell components mediate process X?) or mechanistic dissection of a cell process (How does factor X work as part of a molecular pathway?). Each paper will be presented on the chalkboard, by one "defender" and one "prosecutor," to the rest of the class acting as the "jury." With help from faculty and TF, students will also prepare by the end of the semester an individual research plan (in both written and oral form) that

attempts to distinguish between competing mechanistic hypotheses about a given cell process.

Cait Moffatt

Vladimir Denic

2025 Spring (2 Credits)

Schedule: T 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

This is a semester-long course aimed to help you reflect on your teaching goals and practices. The course will cover topics such as: active learning, backward design, student feedback and evaluation, equity and inclusion, disciplinary transparency, and content delivery. The course will meet once a week and is designed to minimize work outside of class time. It is intended for graduate students in the life sciences and adjacent fields.

Additional Course Attributes:

Molecular & Cellular Biology 350

Scientific Integrity (156950)

Polina Kehayova

Naoshige Uchida

2024 Fall (2 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

10

MCB 350 is a discussion forum on scientific integrity using case studies to examine basic ethical and regulatory requirements for conducting research, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction. Students are required to complete a pre-course assignment, attend all lectures including the final lecture in February, participate in class discussions, and complete a final course evaluation. A certificate will be issued upon successful completion of the course.

Course Notes:

According to NIH Guidelines, students are required to take a Scientific Integrity Refresher Course every four years (*MCB 351).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Molecular & Cellular Biology 351

Scientific Integrity Refresher (156951)

Sam Kunes

Polina Kehayova

2025 Spring (2 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

MCB 351 is a refresher course in the Responsible Conduct of Research which must be completed by graduate students in the MCO PhD program every 4 years, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 352

Microscopy (156952)

Jeff W. Lichtman

Douglas Richardson

2025 Spring (2 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course presents the fundamental concepts that underlie modern light microscopy in a rigorous but

non-mathematical way for biological applications. The students will learn about the four major frameworks for light (ray optics, wave optics, electromagnetism, and quantum optics). The ways lenses work, the theory of resolution, and the optical design of the compound microscope will be described. The course will also describe the photo-physical principles that underlie fluorescence and genetically encoded fluorescent proteins, and light detector and imaging strategies. Scanning (confocal and 2P), light sheet and super-resolution microcopies will also be described. We will end with a tour of the Harvard Center of Biological Imaging.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular & Cellular Biology 354

Introduction to Model Organisms (160493)

Craig Hunter

2024 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 20

Model organisms are embedded in our scientific culture, from text books on the discovery of genetic material, to mod-encode genome projects. This quarter course is a means to formally introduce an enormously successful experimental scientific approach that has revealed uncountable new biological mechanisms for the last 70 years. Students in this class will engage in hands-on learning exercises to become familiar with commonly used model organisms. They will learn about the genesis of each model system and compare and contrast the features and available experimental approaches that govern whether a particular organism is an appropriate model for different biological phenomena.

Course Notes:

Limited to first year graduate students in the MCO Ph.D. program.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Molecular & Cellular Biology 355

Visualizing, Analyzing and Presenting Macromolecular Structures with PyMOL (160523)

Rachelle Gaudet

2025 Spring (2 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

PyMOL is one of the most popular software programs to display and explore high-resolution structures of macromolecules. It is readily used to create publication-quality figures, and movies and animations of structural information. In this course, you will learn the basics of PyMOL and be able to display, explore and present three-dimensional structures of macromolecules. With this basic training, you will be able to

generate high-quality images and simple movies, and have the resources to learn more on your own to generate more complex displays.

Course will be held March 18, 20, 25, 27 at 3:00-5:45pm.

Course Notes:

Course will be held March 18, 20, 25, 27 at 3:00-5:45pm.

Subject: Life Sciences

Life Sciences 1A

An Integrated Introduction to the Life Sciences: Chemistry, Molecular Biology, and Cell Biology (121189)

Daniel Kahne

Rachelle Gaudet

Rebecca LaCroix

Sien Verschave

2024 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

What are the fundamental features of living systems? What are the molecules imparting them and how do their chemical properties explain their biological roles? The answers form a basis for understanding the molecules of life, the cell, diseases, and medicines. In contrast with traditional presentations of relevant scientific disciplines in separate courses, we take an integrated approach, presenting chemistry, molecular biology, biochemistry, and cell biology framed within central problems such as the biology of viral infections.

Course Notes:

For more information about the assignment process, please see the course website in the fall. This course, in combination with Life Sciences 1b, constitutes an integrated introduction to the Life Sciences.

Additional Course Attributes:

Attribute	Value(s)

An Integrated Introduction to the Life Sciences: Genetics, Genomics, and Evolution (121191)

Andrew Berry

Monica Boselli

Maria Ostapovich

Terence Capellini

2025 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How are observable characteristics of organisms influenced by genetics? How do genomes change over time to produce the differences we see among species? This course takes an integrated approach, showing how genetics and evolution are intimately related, together explaining the patterns of genetic variation we see in nature, and how genomics can be used to analyze variation. In covering Mendelian genetics, quantitative genetics, and population genetics, this course will emphasize developments involving our own species.

Course Notes:

This course, in combination with Life Sciences 1a, constitutes an integrated introduction to the Life Sciences.

Benjamin de Bivort

Kara McKinley

Doeke Hekstra

2024 Fall (8 Credits)

Schedule:

MTWRF 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

This is an intensive two-semester, double course that introduces the natural sciences as an integrated whole to students who have a very strong interest in science. Our goal is to teach students how to solve scientific problems by drawing methods and concepts from biology, chemistry, physics, and mathematics. The course uses examples from biology as an integrating theme, principles from physics and mathematics to reduce complex problems to simpler forms, and computer simulation to allow students to develop their intuition about the behavior of the dynamical systems that control the physical and biological universe. The course includes bootcamps to introduce students to biological experiments and the computer language, Python. Each semester will include a project lab, in which students will work in small teams to do original research on unsolved biological problems.

Experimental Research in the Life Sciences (119061)

Alain Viel

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A laboratory course that immerses students in a dynamic project-based research environment. Participate

in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series.

Course Notes:

Location of the first meeting will be announced on the course website. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience. The course may only be repeated once and the second enrollment must be approved by the instructor.

Recommended Prep:

Students interested in a neurobiology project will need MCB 80 or permission of the instructor. Please also note that students cannot take MCB 100 and LS 100 at the same time.

Requirements:

Prerequisite: LPS A OR LS 1a

Additional Course Attributes:

Attribute	Value(s)

Music

Subject: Music

Music BHFA

Graduate Musicianship (112235)

Liam Hynes-Tawa

2024 Fall (2 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This musicianship course encompasses multiple sections, which follow independent paths of study based on the general exam requirements of different degree programs. Students may expect to engage with music from across a wide range of historical and cultural contexts, covering topics such as functional harmony or post-tonality, while also branching into popular and non-Western music-theoretical systems and styles based on student research interests. In weekly assignments, students will learn how to apply analytical tools through close readings of music examples, and they will further aim to forge connections between theory and practice through sight-singing and ear-training activities. Students should plan to consult with the professor at the beginning of the semester to establish which areas of musicianship will be prioritized in their course of study. Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Notes: Required of all graduate students. This requirement must be met before admission to the General Examination.

Music 1

Introduction to Western Music, from Bach to Beyoncé (114594)

Michael Uy

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

105

This course introduces you to a variety of Western art musics, and a range of ways to think, talk, and write about them. While we explore some of the great "classics" of the Western musical canon, including works by male composers Bach, Beethoven, and Stravinsky, we also delve into the critical roles played by renowned female performers, patrons, and writers, as well as the significant impacts made by artists of color, including Beyoncé and Pulitzer-prize winner Kendrick Lamar. Ending in the present day, we investigate what music means in a global context, and a world increasingly shaped by new technologies and digital networks. During the semester, you will build a robust vocabulary to analyze music and talk about it. You will gain an understanding of social, political, and cultural histories of art music, and deepen your awareness of the role of music in your life. Finally, you'll possess a strong command over a substantial repertory, understanding its harmony, rhythm, melody, instrumentation, and form, among other musical features. No prior knowledge of music history or musical notation is necessary. Students are graded on the improvements they make in engaging with the material.

Additional Course Attributes:

Music 2 Section: LEC

Introduction to Music Theory (118594)

Liam Hynes-Tawa

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Seeks to develop a greater understanding of music, musical analysis, and critical listening. We will study some principles of musical organization (within a range of styles and historical periods) by means of composition projects, score analysis, improvisation, and aural skills. No prior experience with music performance or with reading notation is required. Additional sections required on Mondays and Fridays, 10:30 - 11:45 am

Course Notes:

Open to all students.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students

Music 4 Section: SEM

Introduction to Composition (111353)

Yvette Jackson

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 12

Open to students with little or no prior experience in composition. Explores ways of thinking about and organizing basic compositional elements such as melody, harmony, rhythm and instrumental color, as well as developing skills of score preparation and analytical listening. The primary focus of the course is a series of short compositional exercises, culminating in a somewhat longer final project.

Recommended Prep:

Some prior experience in music theory or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

2024 Fall (2 Credits)

Schedule: M 0700 PM - 0930 PM
F 0300 PM - 0530 PM**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

This is an experiential learning course. The ensemble gives four main concerts each year, sometimes joining with the chorus to perform large-scale works. Repertoire includes major works of the classical symphonic repertoire, solo concertos (selected through an internal competition), contemporary or late 20th century music and special projects. Students are required to attend all rehearsals and HRO activities (including Wednesdays for large project rehearsals and Saturdays for concerts/special activities). Students are expected to practice their music outside the rehearsal time. Grades are given pass/fail based on attendance and participation. Students are expected to enroll in the course for the duration of the season (both Fall and Spring semesters).

Course Notes:

Students interested on the integrative academic portion and/or
students interested to be considered as principal players and/or
students wishing to be part of special projects should instead enroll in
Music 107 for a letter grade.

Prerequisites: Admission based on performance in HRO auditions (2 pieces in contrasting style) to be held before the beginning of the Fall semester classes.

Recommended Prep:

Two contrasting movements or pieces chosen by candidate.

Additional Course Attributes:

The Harvard-Radcliffe Collegium Musicum ("Collegium") performs a dynamic and innovative repertoire for mixed voices (SATB), ranging from classical masterpieces to new compositions by renowned, emerging, and student composers. Through creative projects, tours, and community engagement, the ensemble fosters a passionate community of student musicians. Collegium frequently partners with local arts organizations, as well as the other Harvard Choruses—the Harvard Glee Club, and the Radcliffe Choral Society.

Collegium has been recognized as one of America's finest collegiate mixed choruses; in April 2023, the ensemble will be performing by invitation in concerts at Carnegie Hall and Lincoln Center in New York. Collegium will be premiering works by Caroline Shaw, Joel Thompson, Molly Joyce, and Tesfa Wondemagegnehu. The group will explore the European choral-orchestral canonic works, including the Christmas Oratorio of J. S. Bach and the Verdi Requiem. We will also study and experience the rich traditions of Scandinavian folk and classical choral music in preparation for a two week tour to Sweden in May/June 2023.

In addition to being an accredited FAS course, Collegium is an independent 501(c)(3) organization, allowing members to gain valuable experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. Graduates often embark on related careers, and lifelong arts and music education advocacy. Through music making and community building, Collegium aspires to a more just, inclusive, loving, and musical world. We strive to deepen our understanding of each other and strengthen the connections among us.

Course Notes:

Course Notes: Audition required. For audition and further information, visit www.singatharvard.com. The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly.

Music 15

Harvard Glee Club (110115)

Andrew Clark

2024 Fall (2 Credits)

Schedule: MWF 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Founded in 1858, the Harvard Glee Club (a tenor-bass ensemble) performs music written in the male chorus tradition. HGC collaborates with arts groups on campus and across the world through national and international tours. Through excellence in performance, student-management, education, community, tradition, and service, the Glee Club offers a unique musical experience for all members.

The Glee Club's repertoire this year includes folk music from around the world, Renaissance polyphony and European art songs, commissioned/world premiere performances by renowned composers Dan Locklair and Trevor Weston, in addition to works composed by Harvard students. In addition, HGC will be exploring Dominican choral traditions in preparation for a spring break performance tour of the Dominican Republic in March 2023. After a three-year hiatus, the ensemble will resume its century-old tradition of fall concert performances with both the Princeton and Yale Glee Clubs. HGC frequently partners with local arts organizations, as well as the other Harvard Choruses—the Harvard-Radcliffe Collegium Musicum, and the Radcliffe Choral Society. The combined choirs will present J.S. Bach's Christmas Oratorio in December and the Verdi Requiem (with the Harvard-Radcliffe Orchestra) in April 2023.

The Harvard Glee Club sustains its core virtues of glee, good humor, unity, and joy, and sings timeless and timely choral works from a variety of eras and cultures. Enrichment opportunities in individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire may be explored optionally as students desire. Glee Club members will also design and implement community engagement projects guided by Harvard's Mindich Program for Engaged Scholarship, including collaborations with the Ashmont Boy Choir in Dorchester.

Course Notes:

Audition required. The group is open to tenor and bass singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com. The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly.

Founded in 1899, the Radcliffe Choral Society is Harvard's oldest women's organization and one of the country's preeminent collegiate treble (SSAA) choruses.

RCS promotes excellence in women's and treble choral music and celebrates the extraordinary community formed through its music-making. The ensemble fosters the appreciation and enjoyment of choral music through the commissioning of new works for women's voices and exploring music from Medieval chant and Renaissance polyphony to Romantic partsongs and folk music from around the globe.

This year, RCS will also be exploring Korean choral traditions in preparation for a two-week tour to South Korea in May/June 2023. RCS frequently partners with local arts organizations, as well as the other Harvard Choruses—the Harvard-Radcliffe Collegium Musicum, and the Harvard Glee Club. The combined choirs will present J.S. Bach's Christmas Oratorio in December and the Verdi Requiem (with the Harvard-Radcliffe Orchestra) in April 2023.

As a student run and managed 501(c)(3) non-profit, singers are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. The course offers voluntary opportunities for singers to cultivate their musicianship in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire. Students may also participate in RCS's student-lead a cappella group, 'Cliffe Notes.

Course Notes:

Audition required. The group is open to soprano and alto singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com. The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly.

Radcliffe Choral Society (110128)

Andrew Clark

2025 Spring (2 Credits)

Schedule:

MW 0430 PM - 0630 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Founded in 1899, the Radcliffe Choral Society is Harvard's oldest women's organization and one of the country's preeminent collegiate treble (SSAA) choruses.

RCS promotes excellence in women's and treble choral music and celebrates the extraordinary community formed through its music-making. The ensemble fosters the appreciation and enjoyment of choral music through the commissioning of new works for women's voices and exploring music from Medieval chant and Renaissance polyphony to Romantic partsongs and folk music from around the globe.

This year, RCS will also be exploring Korean choral traditions in preparation for a two-week tour to South Korea in May/June 2023. RCS frequently partners with local arts organizations, as well as the other Harvard Choruses—the Harvard-Radcliffe Collegium Musicum, and the Harvard Glee Club. The combined choirs will present J.S. Bach's Christmas Oratorio in December and the Verdi Requiem (with the Harvard-Radcliffe Orchestra) in April 2023.

As a student run and managed 501(c)(3) non-profit, singers are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. The course offers voluntary opportunities for singers to cultivate their musicianship in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire. Harvard Jazz Orchestra (000018)

Yosvany Terry

2024 Fall (4 Credits)

Schedule:

T 0715 PM - 0915 PM

R 0715 PM - 0815 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

The Harvard Jazz Orchestra was created in 1971 by Director of Bands Tom Everett when he first arrived at the University. Passionate that exposure to this unique American art form be part of students' education, he created a rag-tag jazz band of primarily Harvard [marching] Band recruits. Since its inception, the Harvard Jazz Orchestra has served as the vehicle for students across disciplines to study and learn the jazz canon. Over the years, the Jazz Orchestra has focused on the literature of Duke Ellington and complete retrospective concerts of the music of Charles Mingus, Charlie Parker, Gerry Mulligan, Lee Konitz, Benny Carter, Buck Clayton, Clark Terry, J. J. Johnson, and Julius Hemphill. Other literature has ranged from the classic arrangements of Count Basie and Fletcher Henderson to the modern jazz of Gil Evans and Charles Mingus, the contemporary ensemble improvisations of Barry Guy and Lester Bowie, and the jazz-rock of Michael Gibbs, Russ Gershon Harvard '81, Rufus Reid, George Cables and Cassandra Wilson. In 2015, Yosvany Terry was appointed Director of Jazz Bands. Under his direction, the Harvard Jazz Orchestra continues this tradition of focusing on a program of study that provides students with a grounding in a wide range of iconic and new literature. The curriculum builds throughout the year.

Course Notes:

The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly.

Music to Re-imagine the World: From Afrofuturism to Experimental Music across Planet Earth (132991)

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1130 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Music to Re-imagine the World: From Afrofuturism to Experimental Music across Planet Earth. This course explores music that aims to reimagine our world. Afrofuturism as a methodology of critical re-imagining of our world builds the foundation for our own critical study of musics from our planet. How can the study/practice of music and sounds change how we imagine and make our futures, how we live on this planet?

Some of the musicians we will learn from includes those connected to the Black Panther films, but also pioneers of Afrofuturism, and related methods of imaginative music making such as the Sun Ra Arkestra, Alice Coltrane, Michiko Toyama, Jon Jang and the Pan-Asian Arkestra, Raven Chacon, Beethoven, and more. Our listening journey will take us to Blombos cave 30'000 years ago, foreign planets (like Mars), and across high-speed networks (like the internet).

Course Notes:

Attendees develop critical listening skills and an expanded knowledge of musical works from across the globe and various time-periods. No previous knowledge of music is required.

Theory Ia (125212)

Liam Hynes-Tawa

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The Music 51a/51b sequence introduces students to a variety of tools for analyzing, understanding, and listening to music. In Music 51a, we will explore topics in tonal harmony such as chords, voice leading, tonality, and melodic structure. Students will also be introduced to the basics of rhythm and meter, timbre, and form across a variety of Western and non-Western musical styles, with a focus on popular music, Western art music, and gagaku. Students will work with a variety of notational systems, including Western staff notation, the Nashville number system, lead sheet notation, and others. In addition, the class will feature a series of workshops on digital audio workstations to develop skills for manipulating and analyzing recorded material.

Course Notes:

For this course a placement exam is required, which is offered the

Monday (August 28) before classes begin. Please see the Canvas course website for M51a for more information. Music 51a is highly encouraged for concentrators, especially those who wish to take additional and more advanced theory courses in the department. Students interested in theory are encouraged to take the placement exam in their freshman year. Dual degree students are likewise encouraged to take Music 51a and Music 51b.

Recommended Prep:

Music 2, or equivalent experience (knowledge of basic tonal theory and ability to read Western staff notation).

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

The Music 51a/51b sequence introduces students to a variety of tools for analyzing, understanding, and listening to music. In Music 51b, students will build on knowledge and skills acquired in the fall semester (51a), gaining greater familiarity with advanced theoretical and analytical approaches on diatonic modes, chromatic harmony, chord extensions, form, and timbre. Repertoires from Western art music and popular music will be a central focus, and we will be working from a variety of notational systems. Continuing the trajectory established in Music 51a, the class will feature a series of workshops on digital audio workstations and audio analysis software.

Course Notes:

You must either place directly into Music 51b via the August placement test or pass 51a in order to register for this course. If more than two semesters have passed since completing 51a, you will need permission from the Instructor to register for the course; this may include a quick refresher test. This course, when taken for a letter grade, meets the Distribution Requirement for Arts and Humanities.

Recommended Prep:

Music 51a or equivalent.

Sophomore Tutorial (204967)

Alexander Rehding

2024 Fall (4 Credits)

Schedule: T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 8

The sophomore tutorials introduce students to hearing (in new ways), listening attentively to, thinking about, and writing about music and music-making. Students choose from an array of small individual seminars that are centered in broad topics. For fall 2023, there are two seminars: MUS97f1 (Music in Multimedia Art) and MUS97f2 (Capturing Music: Notation, Recording, Expression). In spring 2024 there will be two seminars: MUS97s1 (Music After 1900) and MUS97s2 ("Bad" Music: A How-To Guide). Please see the individual websites for syllabuses and course materials. There are no prerequisites for the sophomore tutorials. Every individual seminar focuses on developing skills that will carry forward to further work in the music concentration, in performance, in sociological research and ethnomusicology, in composition and creation, in music history and theory.

Performing Bach Cantatas (127668)

Andrew Clark

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 30

This seminar, co-taught by Andrew Clark and Edward Jones, presents an in-depth study of "Bach's most ambitious compositional project" (Christoph Wolff, 2021). Written over a span of just ten months, Johann Sebastian Bach's second cantata cycle manifests his consummate compositional mastery and ingenuity for

the purpose of a radical exploration of the human psyche. Bach's musical ideas illuminate, penetrate, and sometimes contradict the theology of the time, and his searing insights into human nature make this music as pertinent to today's secular audiences as to his own Lutheran congregations.

Focusing on one cantata per week—corresponding to the timetable followed by Bach in the Fall of 1724—our journey will mirror the weekly routine of the composer and his students in Leipzig.

Through listening, reading, studying, and performance, students will gain a deeper understanding not only of Bach's musical universe and compositional acumen, but also of the practical demands of composing, copying, rehearsing, and performing such works on a weekly basis. In addition, students will learn from internationally renowned Bach scholars and practitioners visiting the course throughout the semester.

The course will culminate in a class performance of selected works from the chorale cantata cycle and a final written or creative project that further examines a topic drawn from our work.

Recommended Prep:

Ability to read music.

Foundations of Modern Jazz (138072)

2024 Fall (4 Credits)

Schedule:

Instructor Permissions: Instructor

Enrollment Cap: n/a

Art Blakey's Jazz Messengers. The Jazz Messengers were more than just a musical group; they were one of the greatest institutions in modern jazz, paving the way for several generations of musicians to develop new and original approaches to composition and improvisation. This course will introduce students to the Jazz Messengers and the concept of hard bop created by artists searching for new musical expressions, as a necessary evolutionary step after Be-Bop in modern Jazz. Students will become familiar with the Jazz Messengers' repertoire, gaining insight and practical experience by first playing and memorizing their songs, and, afterwards, transcribing and studying the recordings of key compositions. Additionally, students will gain proficiency in performing compositions by some of the Messengers' most prolific alumnae, including pianist Horace Silver, saxophonist Wayne Shorter, pianist Cedar Walton, saxophonist Benny Golson, and trumpeter Freddie Hubbard. Each week the students will make presentations on the selected class readings which are intended to deepen their understanding of the music by providing the social context in which this music was developed. Finally, students will select, rehearse, and perform some of the Jazz Messenger compositions in an end-of-semester concert.

Music Theory & Interpretation (114188)

Alexander Rehding

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This iteration of Music Theory and Interpretation focuses on the intersection of music, voice, and text. We will begin by looking at issues of form, rhetoric, and narrative in instrumental Western art music of the 18th- and early 19th-centuries. How did Martines, Mozart, Beethoven, and others create direction and closure in music with no text? We will then shift our focus to art songs in the 19th and 20th centuries, by studying the ways in which form, pitch, and texture give rise to unique relationships between text and music in this repertoire. Lastly, we will delve into issues of intertextuality, vocal performance, and musical covers in the recorded music of 20th- and 21st-century popular singers. Moving away from score-based analysis, this final unit will introduce students to embodied and computer-assisted methods for analyzing recorded vocal performances. Through various writing assignments—concert reviews, liner notes, and analytical essays—students will hone their music analytical skills by interpreting the ways in which music, voice, and text are intertwined.

Recommended Prep:**Music 51 or equivalent (by permission of instructor).**

Analyzing Pop Music (218277)

Michèle Duguay

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

40

How can music analysis inform the way we understand, listen to, and write about popular music? This course introduces tools and methods for studying the features, technologies, and compositional styles of post-2000 popular music. Weekly readings will address issues of form, rhythm & meter, instrumental and vocal timbre, computer-assisted analysis, vocal performance, and music videos. An ever-present concern of the class will be the ways in which these analytical tools and methods interact with issues of race, gender, and sexuality. The repertoire under study in the readings will focus on American popular music broadly construed, including Taylor Swift, Mitski, SZA, Kendrick Lamar, and Rihanna. In weekly assignments, students will experiment with analytical tools to provide critical insights on the music of their choice.

Course Notes:

There are no pre-requisites for this course, and students outside the music department are welcome to enroll. No knowledge of Western staff notation is required and students are not expected to have prior musical experience.

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 18

In this course, students will be engaged with different modalities of creation through composing, listening, and discussing. At times students will become storytellers in sound, at other times, they will try to create meaningful musical phrases by using one tone only. The class offers space for experimentation and provides ways of discoveries and out-of-the-box thinking as one works with sound and sonic ideas. Students will work within their aesthetic preferences while also being challenged to grow by going beyond their comfort zone and imagining new possibilities. The final project will be a class concert.

Recommended Prep:

One course in theory/composition or permission of the instructor.

Creative Music Workshop (116445)

2025 Spring (4 Credits)

Schedule:

Instructor Permissions: Instructor

Enrollment Cap: n/a

Across Methods of Music Making. This course explores various approaches to working across and at the borders of methods of music making in the 20th and 21st century. Attendees gain knowledge of some strands of compositional and performance methods that developed in the 20th century, including novel approaches to composition, improvisation, instrument modification, extended techniques. Foregrounding ways of communicating and translating across different approaches, we develop strategies to navigate today's variegated music world. Attendees develop their own projects and collaborate in class.

Course Notes:

Previous knowledge in music is required.

Performance and Culture: Renaissance Music (108419)

Kate van Orden

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 8

In this course, you become an amateur musician in Renaissance England and learn to play the viola da gamba in a consort. Through this combination of research and hands-on learning, we investigate repertory, culture and musical life circa 1600.

Course Notes:

No string experience is necessary, but you do need to be able to read music. May be taken by students from other departments and graduate students with permission of instructor.

Chamber Music Performance (153042)

Jessica Bodner

Daniel Chong
Kee-Hyun Kim
Ken Hamao

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Through auditions, students will be divided into chamber music ensembles by the Parker Quartet, and have weekly coachings with members of the Parker Quartet and pianist Katherine Chi. Instrumentalists and vocalists are welcome to audition; however, duos or vocal-only ensembles are not allowed. Students will be expected to rehearse between each coaching and to participate in class meetings throughout the semester. There will be a final jury evaluation prior to the final public performances, to be held sometime during Reading Period--all students are required to be available. Students who do not meet the requirements in the Course Notes below may take the course for Pass/Fail credit. Please check audition dates and other mandatory meetings/classes on the Canvas Music 189R home page.

Women Creators. The course focuses on the contributions of female and non-binary musicians who have composed, improvised, or collaboratively created music primarily in the 19th, 20th, and 21st centuries. We will listen closely to their music, asking questions such as: what were the historical, institutional, cultural and educational factors that supported or hindered their work? How do they define their gender identities, gender roles, and sexual orientation, and to what extent do they relate these to their work? How do these identities function intersectionally with others, such as racial, class, national, and transnational identities? How has their work been received? What structures have historically enabled inclusion or fostered exclusion into the musical canon?

The course is not just about individuals overcoming obstacles; it is intended to celebrate and acknowledge the contributions of women creators to the history of music. We will also talk about activism: how to "move the needle" and work towards great representation of women's music in different genres today. A class visit to the Schlesinger Library will help us to unlock the potential in women's archives. Guest speakers will offer additional perspectives.

We will consider a wide range of women creators from the early 20th century to the present, with examples from classical, jazz, and popular music.

Goals:

To recognize women's experiences and contributions in music of the 20th and 21st centuries

To listen to a lot of good music

To gain a basic understanding of gender theory and feminism

To learn about how using a gender lens changes how we think of music and music history

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course introduces students to the discipline of musicology. Particular attention will be given to emerging trends, methodologies, and modes of writing history. That is, we will concentrate not on music history per se, but on historiography—the way scholars write about music's past and present. We will examine the premises by which scholars frame their arguments, the methods they adopt (and neglect), and the basic problematics of research. We will also consider issues that connect musicology to the broader world. Emphasis will be on weekly readings of recent publications, brief writing assignments, and discussion.

Course Notes:

Graduate students only. Undergraduates may enroll only with prior approval from faculty.

Gods of Hip Hop and Black Pop. This course explores representation and employment of religion and spirituality among contemporary hip hop and black pop stars such as Beyoncé, Ye (also known as Kanye West), Jay-Z, and more. The course engages scholarly works in religion, cultural studies, and ethno/musicology to understand and decode performances and repertoires that draw from a range of religious traditions. The goals of the course are to: observe performances of major hip hop and black pop artists who employ or rely on religious ideas and motifs; develop perception of religious valences of black popular music and fandom; understand how scholars have studied and theorized the impulses and effects of spiritual work in commercial black popular music; and critically analyze ways in which black religion, spirituality, and culture are conflated, collapsed, and (re-)constructed in the commercial music and entertainment industries.

Course Notes:

Students from other departments are welcome. Open to undergraduates with permission of instructor.

Near Eastern Languages and Civilizations

Subject: Ancient Near East

Ancient Near East 109

First Civilizations: History and Archaeology of the Ancient Near East (121859)

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces the geographies, cultures, and histories of the ancient Near East through a survey of some of the world's earliest civilizations. Focus is placed upon the regions of Mesopotamia, Egypt and the Levant, and includes comparative material from Anatolia and Iran. The course emphasizes various themes including urbanism, climate change and human responses, conflict, migrations and refugees, cultural exchange, the development of writing, literary traditions, and religious innovations. This course situates the ancient Near East within a social history framework, drawing analogies to modern events to emphasize the significance of early civilizations to our understandings of our own similar circumstances.

Ancient Near East 115

Archaeology of the Levant (131488)

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course examines past societies of the ancient Levant through the archaeological record from the Neolithic through to the end of the Persian period (c. 9750–332 BCE). Artifacts and archaeological remains will be discussed in the context of past societies and contemporary interpretations. Specific topics include archaeological methods, the development of agrarian societies, urbanism, social hierarchies, technological innovations, diplomacy, economic interconnections, state formations, environmental change, colonialism, and state/household ritual. Specific focus will be given to the periods of the Late Bronze and Iron Age in the Levant, examining the formation and dissolution of Bronze Age city-states, and the rise and fall of Iron Age kingdoms including ancient Israel, Moab, and Edom. As a part of the course, students will interact with archaeological material culture at the Harvard Museum of the Ancient Near East.

Introduction to the Hebrew Bible/Old Testament 1: Pentateuch and Former Prophets (118849)

Andrew Teeter

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A critical introduction to the literature and theology of the Hebrew Bible, considered in light of the historical contexts of its formation and the interpretive contexts of its reception within Judaism and Christianity. The course, the first part of a divisible, year-long sequence, will focus on the major biblical narrative traditions, the Pentateuch and Former Prophets.

Course Notes:

Offered jointly with the Divinity School as 1102.

How do rituals work? Ancient Ritual and Modern Theory (222677)

Celine Debourse

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How do rituals work? What makes them succeed (or fail)? For whom do they work? Why do we perform them? Which experiences do rituals elicit? In this class, we will explore these questions, by looking at evidence from the ancient world in light of modern theories of ritual. The study of ritual draws from many disciplines, ranging from religion, philosophy, anthropology, and history to sociology, psychology, and biology. We will draw connections between all these disciplines and the ancient data, so as to come to a broader understanding of what ritual is and how it works.

In this seminar, we will focus on specific ancient rituals (e.g., the New Year Festival); on specific types of ritual (e.g., royal ritual); and on broader trends underlying ritual (e.g., magic). We will explore what these case studies reveal about ritual in general, connecting the ancient world to our modern experience. We will also dwell on the question of how we can study ritual through ancient data. How does ritual performance relate to text? How does material culture help us to study ritual practice?

We emphasize class participation and discussion in this seminar. Students will be asked to engage deeply with both the ancient sources and ritual theory through reading, writing, and presenting.

Ancient Near East 151

Women in the Ancient Middle East (223952)

Celine Debourse

2025 Spring (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Western outlooks on the Middle East come with many biases, which are particularly poignant in perceptions of women in the region. This is perhaps even more true for the study of the region's past, which we access primarily through texts that were written largely by men, for men, and about men. In this course, we will learn to observe and think differently about the ancient Middle East by focusing on women's lives. We will adopt a broad chronological perspective, asking which roles women held at different times and places, and how and why that was so. Through these vignettes we will gain unique insights into the daily life of ancient Near Eastern people of all genders and social backgrounds. Focusing on female agency, mobility, and identities will thus allow us to gain a deeper understanding of social, economic, and cultural processes that took place throughout Middle Eastern history. We will also make use of modern theories to frame these findings into a broader feminist discourse, connecting the ancient world to our own experiences and challenges today.

Food, Identity, and the Biblical World (218547)

Julia Rhyder

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How did ancient people decide what to eat, and what not to eat? And why do the ancient texts of the Bible continue to shape the way many people think about diet and identity today? This course will explore the importance of diet in establishing social bonds and ethnic boundaries in the ancient Near East, as well as the role food played in mediating relationships with God, animals, and the environment. The course will be highly interactive. We will visit the Museum of Fine Arts to see how food featured as part of burial rituals in ancient Egypt; we will explore the archaeology of food and everyday life at the Harvard Museum of the Ancient Near East; and we will even try cooking some ancient recipes together. Students will also be introduced to anthropological approaches to food, diets, and commensality, and learn to reflect critically on how such theoretical lenses might be applied to the study of ancient dietary patterns and contemporary religious practice. No prior knowledge of the Bible or ancient history required.

Hebrew 131

The Book of Daniel (222992)

Andrew Teeter

2024 Fall (4 Credits)

Schedule: T 0300 PM - 0459 PM

Instructor Permissions: None

Enrollment Cap: n/a

A critical and exegetical study of Book of Daniel, based on a close reading of the text in Hebrew and Aramaic. Special attention will be given (1) to compositional poetics (i.e., large-and small-scale compositional strategies, principles of literary organization, textual logic, and analogical patterns); and (2) to inner-scriptural relationships, and to the nature and function of allusion and analogy within this book. This will be undertaken with a view toward understanding the overall expectations made of readers, ancient and modern. The text of Daniel and its underlying principles of design will be considered in the context of major critical debates within the current state of the field.

The course presumes basic proficiency with Biblical Hebrew. Minimum of one year of Hebrew required. No previous knowledge of Aramaic required.

Recommended Prep:

Minimum one year Classical Hebrew

The History of God: Evidence from the Psalms (218548)

Julia Rhyder

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The Israelite deity, with an unpronounceable name, may seem to have no history, having simply existed from the beginning of time. Yet, closer examination of the biblical evidence reveals a complex story of how a wilderness god associated with storms and warfare gradually emerged as the one God of Israel. This course analyzes key texts of the book of Psalms that, in extolling the qualities of the Israelite deity, reveal different aspects of his character: his nature as a storm god and warrior; his eventual preference for the city of Jerusalem; his adoption of the traits of a sun god, connected to the domains of law and justice; and his emergence as the head of the heavenly council and creator of the world. The course presumes basic

proficiency with Biblical Hebrew.

This course seeks to provide a general introduction to classical Judaism and Jewish identity. It will focus on Judaism as a way of living and thinking throughout its various historical permutations, and on Jews as bearers of a evolving identities. We will focus on four broadly defined periods: the biblical, second Temple, rabbinic and medieval. We will examine the diversity of Jewish religious and "ethnic" identities across these periods, and within them.

Why is it that Jews and discussions of Jewishness appear with such frequency and with such prominence in American culture of the twentieth and the twenty-first century? One can often hear the claim that Hollywood is "owned by Jews." Many call attention to the number of Jews involved in comics and graphic novels. The State of Israel, and its definition of Judaism, has become an important touchstone in American politics, while antisemitic dog whistles have become commonplace in contemporary political discourse. Contemporary left-wing activists often refer to the legacies—contested or otherwise—of Jewish American labor politics of the nineteenth and early twentieth century. What can we make of these intersecting and surprising references to Jews/Judaism/Jewishness in the current American moment? This seminar discusses the ways that images of the Jew—philosemitic, antisemitic, and everything in between—recur in the American mainstream. Through analysis of film, television, music, comics, and other mass media, we will track the multiple and contradictory portrayals of Jewishness in the popular American imagination.

Jewish Studies 159

Cultures of Praise in Medieval Jewish, Islamic, and Christian Contexts (224003)

Jonathan Decter

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Alongside recognized rituals of praising God through liturgy, a common practice among medieval Jews, Muslims, and Christians was the offering of praise to men of power. These praises (known as panegyrics), which survive in epistolary correspondences, literary compilations, and records of public ceremonies, reveal a great deal about how members of these religious communities imagined human virtue, group cohesion, leadership, political legitimacy, and interreligious relations. Often dismissed as mere sycophancy, the production of these praises was meaningful both for power-holders and power-subjects. As is the case with visual portraits, they tell us at least as much about the societies that produced them as the individuals they portray.

Jewish Studies 204

Messianism in Early Judaism and Christianity (223946)

Annette Reed

David Stern

2025 Spring (4 Credits)

Schedule:

W 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Messianism is one of the most fraught topics in the history of ancient Judaism and Christianity. This seminar will trace the development of the many different ideas of the messiah—his (unhappily, gender never seems to have figured) character, his fate, his role in history—from the the Hebrew Bible into Jewish and Christian traditions up until the rise of Islam. We will also pay attention to parallel developments within the Hellenistic and Roman imperial cultures. Topics to be studied include the semi-divinity of the messiah, the idea of the suffering or dying messiah, and the relationship between messianism and

apocalyptic eschatology. Readings will include primary sources as well as the relevant secondary literature. All primary source readings will be provided in English translation. Depending on the make-up of the class, the instructors will make special provisions (like an extra class hour) for those students interested and able to read the primary sources in their original languages (Greek and Hebrew). Students will be expected to make regular presentations in class.

Recommended Prep:

Some background in ancient Judaism and/or early Christianity, but not required.

Jewish Studies 208

Invention and Development of Jewish Law (halakhah) (224282)

Shaye Cohen

2024 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course traces the rise and development of Halakha, usually translated "Jewish law," sometimes spelled "Halachah." The course combines historical, textual and conceptual perspectives. When does Halakha begin? what exactly is it? Law? Interpretation? normative practice? The "Oral Law"? What is Halakhah's relationship to varied social groups in antiquity such as priests, scribes, sects, apocalyptic seers, "common Judaism", Pharisees, Christians?

No prerequisites; all texts read in translation. If the course attracts a large enough enrollment of Hebrew readers, we may try to have an additional Hebrew session from time to time.

Jew Theory (215968)

Saul Zaritt

2024 Fall (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar will discuss the possibility of "Jew theory" as a method for theorizing the modern. Beginning with a survey of the history of Jewish studies and its place in the academy, the course will then examine how the figure of the Jew, as symbol and stereotype, enters the work of important thinkers of the nineteenth, twentieth, and twenty-first century—from Marx to Slezkine, from Rosezweig to Blanchot, Derrida, and Agamben. In parallel we explore the potential of new modes of "Jewish cultural studies" emerging over the last decades in Jewish studies.

Advanced Yiddish I (123432)

Sara Feldman

2025 Spring (4 Credits)

Schedule:

MTWR 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:** n/a

Building on the skills gained in Yiddish BA/BB, the emphasis of this course is on gaining ease in reading, speaking, writing, and listening comprehension. Students will be guided in exploring their individual areas

of interest in Yiddish culture, and will be encouraged to begin producing their own research, creative projects, and translations; taking part in the latest developments in online Yiddish publishing and digital humanities scholarship. Continued exposure to a wide variety of textual and cultural materials, including literature, journalism, folklore, music, film, and theater; with a special focus on the diversity of Yiddish in terms of dialects, vocabulary, historical development, and writing conventions. Ample use of audiovisual and digital materials.

The Yiddish Short Story: Folk Tales, Monologues, and Post-Apocalyptic Parables (203377)

Saul Zaritt

2025 Spring (4 Credits)

Schedule:

F 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

30

Who are the storytellers of Yiddish literature? Where did their stories come from? Why did the short story become the central genre of modern Jewish literary culture? This course explores the genealogy of the Yiddish short story from the hasidic folk tale to the modernist sketch, from the monologues of Sholem Aleichem and Isaac Bashevis Singer to the haunting narratives of David Bergelson and Der Nister. Stretching from the nineteenth century to the present, we follow the short story in its comparative contexts from Eastern Europe to Western Europe, Palestine/Israel, and the US.

Course Notes:

All texts will be taught in translation; optional reading section for those with Yiddish knowledge.

Jews, Humor, and the Politics of Laughter (214613)

Saul Zaritt

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

By mistake some thieves found their way into Hershele's house late at night while he was sleeping. They searched and searched but found nothing. Meanwhile, Hershele heard their rummaging and slowly crept up behind one of the thieves. He grabbed him by the arm and the thief, naturally, tried to run away. Hershele held him close, whispering, "Be still. Maybe together we'll actually find something." Beginning with jokes like this one, this course will examine the question of Jewish humor, exploring the concept of therapeutic joking, the politics of self-deprecation, and strategies of masking social critique behind a well-timed joke. Rather than reach some essential definition, we will instead investigate literature, stand-up comedy, film, and television of the twentieth and twenty-first century in order to 1) think together about the theory, mechanics, and techniques of comedy and humor and 2) ask how and when a text or performance gets labeled Jewish, by whom and for what purposes. Texts, films, and performers include: Freud, Kafka, Sholem Aleichem, the Marx Brothers, Belle Barth, Mel Brooks, Joan Rivers, Larry David, Sarah Silverman, Broad City, and Rachel Bloom.

Subject: Classical Hebrew

Classical Hebrew AA

Elementary Classical Hebrew I (123023)

2024 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course offers a thorough and rigorous introduction to Classical Hebrew grammar. In this first semester, students will learn the Hebrew script and the basics of Hebrew morphology. This will allow students to begin reading and translating biblical prose in the second semester. By the end of the year, students who have taken both semesters will have covered all the basics of nominal and verbal morphology and will know the foundations of Classical Hebrew syntax. Daily preparation and active class participation mandatory.

Course Notes:

Offered jointly with the Divinity School as 4010A.

Schedule:

MWF 0900 AM - 1030 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The goal of this course is to help students develop fluency and confidence in reading texts from the Hebrew Bible in Hebrew. To this end, the bulk of the course will consist of close readings of select narrative passages from the Bible, with a focus on understanding and analyzing their vocabulary, morphology, and syntax. Students will also systematically review the most common vocabulary found in the Hebrew Bible as a whole as well as the grammar covered in first-year Hebrew, besides being introduced to more advanced aspects of syntax and to a more nuanced approach to the Masoretic text. **Prerequisite:** Introductory Classical Hebrew I and II (CLAS-HEB AA+AB = HDS 4010 A+B) or the equivalent. Daily preparation and active class participation mandatory.

Course Notes:

Offered jointly with the Divinity School as 4020.

Recommended Prep:

Classical Hebrew AA/AB sequence or equivalent.

This course is centered on the close reading of select poetic texts from the Hebrew Bible in Hebrew, with a focus on deepening one's knowledge of morphology and syntax, broadening one's vocabulary base, and understanding how Hebrew poetry works. The latter will include, among other things, giving attention to the rhetorical devices found in the poems that are studied and to appreciating these poems as compositions that were intended to be heard rather than simply read from the page. **Prerequisite:** Intermediate Classical Hebrew I (Classical Hebrew 120B / HDS 4020) or the equivalent.

Course Notes:

Offered jointly with the Divinity School as 4021.

Recommended Prep:

Classical Hebrew 120a or equivalent.

Rapid Reading Classical Hebrew I (122692)

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0159 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is designed to cover large areas of Biblical Hebrew narrative and thus assist students in increasing their speed and fluency while reading biblical prose. It will also deepen their knowledge of Hebrew syntax and expand their biblical Hebrew vocabulary. Students will learn and practice useful skills relevant to the academic study of Biblical Hebrew, including reading the critical apparatus of the BHS and interpreting the Masora. **Prerequisites:** Classical Hebrew AA/AB sequence, CH 120a, and 120b, or equivalent to two years of academic study of Classical Hebrew. This course is supervised by Dr. Olivero but taught by instructional staff.

Course Notes:

Offered jointly with the Divinity School as 1625.

Recommended Prep:

Classical Hebrew AA/AB sequence, CH 120a, and 120b, or equivalent.

Instructor Permissions: None

Enrollment Cap:

n/a

The book of Psalms presents one of the key poetic texts of Hebrew Bible, showing great variety of style and emotion, from lamentation to praise. This course provides a flexible and group-oriented approach to 'rapid' reading larger quantities of biblical Hebrew poetry using a wide selection of psalms, along with selected texts from the prophetic corpus. The focus of the course is on facility in recitation and translation, but also includes a review of vocabulary and advanced grammar, as well as discussion of poetic syntax. Because students come to the course with various backgrounds in classical Hebrew, the assignments, readings, and exams may be individualized, allowing some students to focus more on grammar questions, others on facility in recitation and translation, as needed. This course may be considered preparatory for advanced seminars in both Hebrew Bible narrative and poetry.

Recommended Prep:

Classical Hebrew 130a or equivalent. Offered jointly with the Divinity School as 1626.

Intellectual and Literary Foundations of Persian Sufi Poetry (223951)

Nicholas Boylston

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

This seminar examines the transformations that occurred in classical Persian poetry through the influx of Sufi themes in the 12th century CE. Building on the study of courtly poetic forms and philosophical poetry covered in PERSIAN 220, themes to be explored include: the Quatrain and the social context of the Sufi khānaqāhs; the 'religion of love' and the emergence of the ghazal as a prestige genre; antinomian poetry (qalandariyyāt); and, the emergence of the Sufi masnavī. This is an advanced graduate seminar, presupposing background in the study of classical Persian literature and the willingness to read broadly for each session. All readings are in English, but there may be an additional class session for those who wish to read texts in the original Persian.

Historical Background to the Contemporary Middle East: Religion, Literature and Politics (110914)

Christina Maranci

2025 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM**Instructor Permissions:** None**Enrollment Cap:** n/a

What defines the Middle East? What long-term historical and cultural developments can we trace in the region? How do these affect contemporary global order and policy? This team-taught course in the NELC department will address these three fundamental questions of great present relevance by introducing students to the ancient and modern peoples, languages, cultures, and societies of Western Asia and North Africa. The study of this diverse region is uniquely aided by a deep-time perspective afforded by thousands of years of vibrant art, writing and cultural artefacts. Relying on the classic expertise integral to area studies, the course brings together faculty from a variety of disciplines – from history and archaeology to

literature and philology, and from sociology and economy to the political sciences – in a common endeavour to explore the rich cultural complex of the region through four key topics: history, religion, literature and politics.

Course Notes:

Formerly NEC 97r, this course satisfies the NELC Sophomore Tutorial requirements.

The History of the Book: Using Harvard's Greatest Treasures to Study the Material Text (219718)

David Stern

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

You have been reading books since first grade if not earlier, but how much do you actually know about the physical object you've been reading—the book, the material artifact? Drawing on a great deal of recent scholarship and the incredible treasures in Houghton Library's Special Collections, this course will study the history of the book in Western culture from its earliest stages in cuneiform tablets through ancient scrolls, hand-written medieval manuscripts of all types, early and late printed books down through children's books of the nineteenth and twentieth centuries, and modernist artists' books of the twentieth and twenty-first centuries including recent ones utilizing digital technology. The heart of the course will be weekly assignments in which students in groups of three each will be asked to intensively examine books in Houghton's reading room and then report on them in the weekly seminar. Books studied in class will include papyrus fragments of Homer and the Old and New Testaments; Hebrew scrolls; early Qur'an leafs; Greek and Latin codices; Books of Hours and many other illuminated and decorated medieval manuscripts; the Gutenberg Bible; Copernicus, Galileo's and Vesalius' scientific works; censored books; the First Folio edition of Shakespeare; Alice in Wonderland; and Mallarmé's *Un coup de dés*. For the final paper, each student will choose a book from Houghton's collection and write a biographical study of its "life."

All readings for the course are on the Modules section of the Canvas site, which is organized by the weekly sessions. Each module includes an Assignment sheet with the specific readings and books to be studied for the session.

For a full description of each session of the course, see the Course Plan posted under the first module, or [click here](#)

No previous background in book history is required for this course.

Note: Because of space requirements in Houghton, the class has to be capped at twelve students. The course is primarily intended for undergraduates but depending on enrollment, graduate students may be admitted if there is room; if they are interested, they should contact the instructor. All students wishing to take the course should write a short (one paragraph) statement explaining their interest in the history of the book and the course and send it to the instructor BEFORE NOON (WEDNESDAY) AUGUST 24 at dstern@fas.harvard.edu

NELC Doctoral Colloquium: Research, Resources and Pedagogy (203473)

Malika Zeghal

2024 Fall (2 Credits)

Schedule:

M 0600 PM - 0715 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This practical colloquium addresses major issues of research and teaching competence. Designed to introduce G-1 students to the Ph.D. requirements, to methodological issues and examples of ongoing scholarship in NELC, it further offers opportunity for reflection on the art of teaching (leading discussion sections, designing syllabi, giving lectures, etc.). Questions covered will include: How to choose coursework? How to prepare for qualifying and general exams? What are the challenges of language training? How does one prepare and write a prospectus? How to use the library resources most efficiently? What type of investment does recourse to digital and quantitative methodology require? How best to prepare for professional life after the Ph.D., both inside and outside of academia? In addition, NELC faculty will informally present their respective fields (main issues and methods), in broad strokes through their current research, and advanced Ph.D. students will present their prospectus for discussion and feedback before submitting it to the faculty.

This course consists of a series of workshops in which NELC doctoral students in their G3-year will develop a strong foundation of skills to prepare them for their first teaching at Harvard and to enhance the effectiveness of their teaching in the long term. Each session will inculcate best practices for major Teaching Fellow roles and introduce key topics in pedagogy, such as teaching languages (ancient and modern), communicating with students, and grading and providing feedback on student work. In addition, a few sessions throughout the semester will be devoted to workshoping the dissertation prospectuses of NELC PhD students prior to their presentations to the faculty; these sessions afford a chance to share feedback and to learn about the research of other NELC doctoral students.

Shi'a Islam and Politics in the Middle East (220696)

Mohammad Sagha

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

From the conflict in Yemen pitting the Shi'a Houthis against a Saudi-led coalition, to the civil war in Syria and the Shi'a majority militia-led fight against the remnants of ISIS in Iraq, dominant media narratives portray conflict in today's Middle East as part of a proxy battle between Iran and Saudi Arabia rooted in an ancient dispute within the Muslim world between the Shi'a and Sunni sects of Islam. In this rendering, primordial hatreds are driving religious wars and civil conflict with Iran, at the heart of the so-called Shi'a crescent, and Saudi Arabia, the stalwart of true Sunni identity. However, such thinking masks over a more complex understanding of the changes occurring in today's Middle East and prevents accurately differentiating between distinct yet overlapping factors such as actual substantive theological and intellectual differences between Shi'a and Sunni Islam, state competition (that is, between Iran and Saudi Arabia), and historical legacies of empire and state building in the Middle East. This course addresses such dominant narratives and challenges conventional understandings of the interplay between religion and politics in the Middle East and how sectarianism, Shi'a Islam, and geopolitical conflict can be more properly understood from a rigorous analytical perspective and focuses on the foundations and varieties of modern Shi'a political thought; religious clerical institutions; Shi'a political parties and militias in Iraq, Syria, Lebanon, and Yemen; and Iran's Islamic revolution, the Islamic Revolutionary Guards (IRGC), and the Basij paramilitary organization. The course assumes no prior knowledge of Islam or the Middle East.

Modern Middle East 104

Sectarianism and Islamic Identities in the Middle East: Modern and Medieval (221631)

Mohammad Sagha

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course examines the origins and contemporary significance of sectarianism and internal religious diversity within Islam in the Middle East. It investigates the rich and multilayered phenomena of sectarianism and sectarian violence—particularly focusing on the Sunni and Shi'a sects of Islam—by approaching its study over time, space and diverse socio-political, cultural, and intellectual arenas. The class will study how the boundaries of Shi'a and Sunni Islam were diversely constructed and imagined across modern and medieval history. We examine the early Islamic period and origins of Shi'a and Sunni Islam, episodes in medieval Islamic history and confessional ambiguity prior to and after the Safavid-

Ottoman dispute, as well as the European colonial period in the 19th century, and the rise of ethno-national ideologies and sectarian identity under the modern state-building project. The course will additionally survey sectarian geopolitics in the contemporary Middle East—and embed these debates in a larger global context of resurgent messianic nationalism and ethno-sectarianism—with a focus on the Iran-Saudi rivalry, the civil wars in Iraq, Syria, and Yemen, as well as dynamics related to sectarian identity and politics in Turkey and Afghanistan. The course assumes no prior knowledge of Islam or the Middle East.

Modern Middle East 107

Regional Order, U.S. Wars, and the Politics of Iraq and Afghanistan (221632)

Mohammad Sagha

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Regional order in the Middle East has significant consequences and reverberations around the globe ranging from inter-state rivalries, ethno-national violence, world energy markets, and international great power competition for influence in western Asia and interconnected world regions. One of the most significant chapters impacting regional order and global affairs in recent decades has been marked by the U.S. wars in Afghanistan and Iraq following the attacks of 9/11 and state and nation-building projects undertaken in these countries. This course focuses on the modern histories and domestic politics of Iraq and Afghanistan, the legacy and impact of U.S. invasions and occupations of these two states, domestic political party mobilization and the prevalence of non-state actors in Iraq and Afghanistan, global geopolitical competition, and the surrounding regional and sub-regional politics of the Persian Gulf and Central Asia. The course assumes no prior knowledge of Islam or the Middle East/Central Asia.

History of Modern Iran and Turkey (222652)

Mohammad Sagha

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

As two of the most populous and important states in the Middle East comprising almost 40% of the population of the region, Iran and Turkey have shaped the foundations of core regional trends from the 19th century up to until the contemporary period. As non-Arab majority states that are often fundamental in setting larger political trendlines, Iran and Turkey's transnational influences on the Middle East directly impact models of modernization, development, and nation-building for the broader Middle East and Muslim

world. They also influence the balance of power in West Asia, the Eastern Mediterranean, and associated subregions of the Caucuses, Balkans, and the Persian Gulf. This course focuses on core themes interlinking Iran and Turkey in the modern Middle East, including: secular state-building and development, ethno-nationalism, Islamism, global geopolitics, and domestic political competition for power. The course will also cover key moments in national and regional histories that have left lasting impacts for contemporary Iran and Turkey including the post-WWI borders of the Middle East, the Cold War and influence of NATO in the region, and minority dynamics such as that of the Alevi and Kurdish communities, the Islamic Revolution of Iran, transnational Islamist politics and, the influence of Shi'a reformism in Iran and Sunni Islamism in Turkey in post-Cold War era, as well as the aftereffects of the Arab Spring, Iran-Turkish rivalries in Syria and Iraq, and beyond. The course assumes no prior knowledge of Islam or the Middle East.

The Middle East and the Great Divergence: An Economic History (223872)

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will survey the economic history of the Middle East from the rise of Islam to the present. It will also engage with the recent literature and debates on global history and the "Great Divergence". The course will focus on different periods and examine the economic organization and achievements of different states and economies in the region and their relations with the rest of the world. The Middle East experienced a period of economic prosperity during the early centuries of Islam, emerging as one of the higher per capita income regions of the world. In later centuries, however, it lagged behind in economic terms. The course will make use of the existing economic history literature to explore the possible explanations for this trajectory. Amongst the explanations to be considered are: geography; Islam and its institutions; demography; social structure and political economy Western economic expansion and colonialism; and Western economic expansion and colonialism. The course will be based primarily on lectures but there will also be student presentations and classroom discussion with the proportions depending on class size and the backgrounds of students.

Modern Arabic Literature Seminar: Displacements in Mod. Arabic Lit.: An Introduction (156227)

Nader Uthman

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How have Arab writers and artists from the past century to the present narrated a variety of displacements – among them migration, diaspora, exile, imprisonment, banishment, and resettlement? How do such narratives address philosophical questions as well as contemporary challenges facing individuals and collectivities? In what ways have scholars and thinkers reckoned with displacements and literary narratives that stage them? The focus of the seminar is on the poetics of these narratives, with reference to how authors' own experiences of displacement may structure their writing. We will investigate how these narratives may interrupt hegemonic discourses, claim multiple sites of belonging and depict hybrid subjects.

All readings are available in translation; those with sufficient competence in Arabic or other languages are highly encouraged to read the original texts and work comparatively between them and translations.

Course Notes:

Auditing is not permitted: students must register for the course and take it on a letter-grade basis.

Akkadian AA

Introductory Akkadian I (114320)

Celine Debourse

2024 Fall (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to the Semitic language of Akkadian, primarily through the Old Babylonian dialect and cuneiform writing system as used during the time of Hammurabi (c. 1750 BCE). Students learn the fundamentals of grammar and the writing system, as well as the most common cuneiform signs in official and cursive script. Readings span a variety of genres, including private letters, judicial documents, literary and religious texts, divinatory compendia, legal code, and royal inscriptions. The course also briefly introduces students to examples of texts from other periods and dialects of the Akkadian language for cultural and comparative purposes. This course is supervised by Dr. Debourse but taught by instructional staff.

Akkadian AB

Introductory Akkadian II (159801)

Gojko Barjamovic

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the Semitic language of Akkadian, primarily through the Old Babylonian dialect and cuneiform writing system as used during the time of Hammurabi (c. 1750 BCE). Students learn the fundamentals of grammar and the writing system, as well as the most common cuneiform signs in official and cursive script. Readings span a variety of genres, including private letters, judicial documents, literary and religious texts, divinatory compendia, legal code, and royal inscriptions. The course also briefly introduces students to examples of texts from other periods and dialects of the Akkadian language for cultural and comparative purposes.

Akkadian 240

Late Babylonian Priestly Literature (223953)

Celine Debourse

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

During the second half of the first millennium BCE, Babylonian priests engaged in the creation of a new literature in which they themselves occupied a central role. This Late Babylonian Priestly Literature reflects the ways in which the priesthood dealt with the absence of native kingship, the loss of political centrality, and other uncertainties that came with foreign imperial rule. This course aims to give an overview of the most important tenets of this literature by engaging closely with the Akkadian textual sources. While the focus lies on reading these Babylonian records, attention will also be paid to relevant comparanda from the Biblical world, Ptolemaic Egypt, and other places and times in history. Akkadian required.

Recommended Prep:

Basic knowledge of Akkadian and cuneiform script.

Philosophy in Muslim Contexts (224335)

2024 Fall (4 Credits)

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

"Philosophy in Muslim Contexts" is a dynamic undergraduate course that delves into the fascinating evolution of philosophical thought in Islamic civilizations. Over twelve modules, students explore the historical roots, early challenges, and the diffusion of philosophical ideas. The course introduces prominent philosophers and examines reactions, defenses, and the decline of philosophy in Muslim contexts. It also considers the European perspective and modern Muslim thinkers' responses. Through engaging discussions and primary readings, students gain a nuanced appreciation of the complex relationship between philosophy, culture, and religion in Islamic history.

Medieval Islam: An Age of Revolutions (222686)

Lorenzo Bondioli

2025 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course covers a millennium of history unfolding between Morocco and Indonesia. You will learn how the rise of one of the largest empires in human history, the Islamic Caliphate, forever changed the face of Afro-Eurasia, and how the societies that emerged out of this historical Big Bang initiated some of the most revolutionary transformations of the medieval period. This is the story of the astonishing achievement of

mighty empires, pious mystics, and adventurous merchants, but also of the unsung toil of the common people who made medieval Islamic civilization possible: the peasants, the workers, the women, the enslaved.

Course Notes:

We are preliminarily planning to hold sections on Tuesdays at 3-4pm. If enrollment is high, we plan to add sections on Wednesdays 9-10am and Thursdays 3-4pm.

Indian Ocean Islam (223918)

Ali Asani

Teren Sevea

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Does thinking oceanically influence the study of Islam? Can we remember a people's history of the Indian Ocean world? This course considers these questions and others as it focuses on religious worlds within port cities and the networks of Indian Ocean Islam. The course examines how religion in port cities and islands was centered upon a plethora of saints, missionaries, divinities and other agents of Islam, who have been marginalized in academic literature on the Indian Ocean. It simultaneously examines how oceanic religion was intimately connected to economic, political and technological developments. Students will be introduced to scholarship on oceanic Islam and monsoon Islam, before they are introduced to a variety of sources on transregional Islamic networks and agents of Islam, including biographies, hagiographies, travelogues, novels, poems and ethnographic accounts. Students will, moreover, be encouraged to consider ways in which approaches to studying Islam could be enhanced by a focus on religious economies and networks, as well as the lives of 'subalterns' who crossed the porous borders of the Indian Ocean world and shaped its religious worlds.

Shīʿī Islam in Safavid Iran: Religion, Culture, and Change (223950)

Shahrad Shahvand

2025 Spring (4 Credits)

Schedule:

F 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The purpose of this course is to introduce students to various aspects of the religious history of Iran during one of its most crucial periods, the rise of the Safavid Empire in the early sixteenth century. The course explores a wide range of topics including conversion, polemics, sectarian rituals and practices, pilgrimage, the religious education of scholars, their legal debates, as well as the relationship between Shīʿism, Sufism, and philosophy, as well as its manifestation in literature and art/architecture. It is intended for graduate students (and advanced undergraduates) in Islamic Studies, Ottoman history, Middle Eastern Studies, and

Shīʿī Studies.

Critical Perspectives on the Dynamics and Development of Islam in Africa (205305)

Ousmane Oumar Kane

2025 Spring (4 Credits)

Schedule:

F 1100 AM - 0100 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An estimated 450 to 500 million Muslims live in Africa—close to a third of the global Muslim population. The overwhelming majority of them live in the northern half of the continent, above the equator. The spread of Islam increased the contact between the peoples of North Africa, the Sahara, and parts of sub-Saharan Africa. The course is designed to provide an understanding of the spread of Islam and the formation and transformation of Muslim societies in Africa. It is organized in two parts. The first part of the course will focus on the history of Islamization of Africa, and topics will include the ways in which Islam came to Africa, the relationships of Islam to trade, the growth of literacy in Arabic and Ajami, the rise of clerical classes and their contribution to State formation in the pre-colonial period. The second part of the course will feature guest lecturers who will present cutting edge research on the transformation of Islam in postcolonial Africa.

Non-demonstrative Logical Arts among Philosophers in Muslim Contexts: Dialectic, Rhetoric, and Poetics (224336)

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

"Non-demonstrative Logical Arts among Philosophers in Muslim Contexts: Dialectic, Rhetoric, and Poetics" is an illuminating graduate course that delves into the fascinating intersection of philosophy, rhetoric, and poetics within Muslim intellectual traditions. Through a series of structured modules, participants explore the evolution of logical arts, drawing from the insights of prominent thinkers such as al-Fārābī, Ibn Rushd, and Ibn Ṭūmālūs. From Aristotle's Corpus to the expanded Organon, the course navigates through pre-Islamic commentaries and the profound contributions of medieval Arabic philosophers. Participants dissect the components, values, and limitations of dialectic, rhetoric, and poetics, uncovering their intricate roles in shaping philosophical discourse and theological perspectives. Engaging with primary texts and scholarly analyses, participants embark on a scholarly journey that illuminates the rich tapestry of intellectual history within Muslim contexts.

Ruling Medieval Egypt: A History Through Documents (224339)

Lorenzo Bondioli

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In *Ruling Medieval Egypt: A History Through Documents* we will explore the establishment, consolidation, and evolution of Islamic state structures along the Nile Valley between the seventh and the twelfth century CE. We will do so by looking at the unique surviving original documents on papyrus and paper that Egypt has preserved in dazzling quantities; documents such as official letters, petitions, land leases, tax receipts, and fiscal registers. Focusing on the documents will allow us to reconstruct the infrastructure of state power from the ground up and to investigate the daily reality of power relations that bound together rulers and ruled. By doing so, we will make Egypt into our laboratory of investigation to understand how medieval Islamic states worked, how they reproduced themselves, and how they impacted the societies that they ruled.

This language course explores the fundamentals of Middle Egyptian, the classical stage of Egyptian hieroglyphs used throughout much of ancient Egyptian history. Lessons in the Egyptian writing system, grammar, and culture, with weekly vocabulary and exercises, will introduce the language and verbal system in a systematic fashion. By the end of the semester, students may begin to read selections from Egyptian classic stories and historical texts. Visits to the Harvard Museum of the Ancient Near East and the Museum of Fine Arts, Boston, in order to read ancient hieroglyphic inscriptions on the original monuments, may also be included. This course is supervised by Dr. Manuelian but taught by instructional staff.

Critical Readings in Egyptology (218196)

Peter Manuelian

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

A weekly seminar for undergraduates and graduates in which we read and discuss a selection of important "classic" and key new books (and a few selected articles) relevant to the field of Egyptology (including Egyptomania and more recent "decolonizing" literature). The seminar targets students in Egyptology, but those in Assyriology, Classics, Divinity, History, Hebrew Bible, Religion, and other fields might also find it interesting and relevant. We will rehearse skills in critical reading, writing scholarly reviews, debating, and

will engage with relevant literature, largely selected by students themselves, that we would not otherwise find the time to read.

Introductory Sumerian I (115449)

Celine Debourse

2024 Fall (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

The course provides an introduction to the Sumerian language, a language isolate spoken in ancient Mesopotamia and probably the world's first written language. Although several aspects of Sumerian remain debatable, students learn the fundamentals of the grammar and writing system as well as the most common cuneiform signs in a variety of lapidary and cursive contexts. Many of the texts that are covered are a variety of dedicatory inscriptions from the time of Gudea (ca. mid-twenty-second century BCE) and the subsequent Ur III dynasty (ca. twenty-first century BCE), but other genres and time periods are sampled as well. This study of the Sumerian language also includes some background on the culture and history of the Sumerians.

Armenian AA

Elementary Modern Western Armenian I (205906)

Lisa Gulesserian

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to Western Armenian language, literature, and culture. Over the course of one year, students will acquire a thorough grounding in Western Armenian grammar and will develop foundational reading, writing, speaking, and comprehension skills. Students will be introduced to centuries of culture produced by the global Armenian diaspora. Readings will include modern and classical Western Armenian literature, drama, film, music, radio, periodicals, and historical documents.

Topic: Elementary Modern Armenian

Course Notes: Final class time will be determined according to enrolled students' availability. Contact instructor if you have a scheduling conflict.

Additional Course Attributes:

Subject: Semitic Philology

Semitic Philology 152

Introduction to Ugaritic (111945)

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

A thorough and rigorous introduction to the Ugaritic language, with a focus on grammar and the reading of a variety of genres of Ugaritic literature (epistolary, ritual, legal, administrative, myth, epic, etc.). The course will also provide students with the opportunity to explore themes in the religion and society of Ugarit and to reflect on their importance for understanding the literature and religion of ancient Israel. **Prerequisite:** Knowledge of Classical Hebrew or another Semitic language, such as (especially) Akkadian or Arabic. This course is supervised by Dr. Olivero but taught by instructional staff.

Course Notes:

Offered jointly with the Divinity School as 4061

Recommended Prep:

Good working knowledge of Classical (Biblical) Hebrew.

Additional Course Attributes:

Semitic Philology 153

Phoenician and Punic Language and Inscriptions (224334)

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is designed to provide students with a solid knowledge of what we know about so-called Phoenician and Punic. After an introduction to the grammar during the first few weeks, the focus will be on the texts themselves, with particular attention to the linguistic and epigraphic aspects of each corpus and inscriptions. The selected texts will be representative of all the different linguistic and epigraphic varieties of Phoenician and Punic, hailing from the Iron Age down to the Roman period. Weekly preparation and active class participation mandatory. While familiarity with another Semitic language might be advantageous, this course welcomes participants of all backgrounds. There are no pre-requisites, making it

accessible to anyone keen on delving into the language and texts.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Semitic Philology 220R

Northwest Semitic Inscriptions (112083)

Andrew Teeter

2025 Spring (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the Old Northwest Semitic languages (especially Old Hebrew, Old Phoenician, Moabite, and Old Aramaic), with a focus on comparative linguistic reconstruction of their grammars and reading and analysis of the major texts attested in these languages. Attention will also be given to the scripts in which these languages were written and to the early history of the alphabetic writing traditions that originated in the Levant and subsequently developed and spread throughout the world. Prerequisite: a good knowledge of Classical/Biblical Hebrew (represented by at least two years of study, ideally); knowledge of another Semitic language is a plus but not required.

Course Notes:

Offered jointly with the Divinity School as 1160.

Recommended Prep:

Semitic Philology 151.

Subject: Aramaic

Aramaic 251B

Aramaic: Translation and Paraphrase in Later Aramaic (108675)

Andrew Teeter

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course we will read selections from several Aramaic works loosely grouped under the category of "biblical translations:" namely, the Qumran "Genesis Apocryphon", a variety of targums, and the Syriac Peshitta. Our goals will be twofold. First, by reading widely and with careful attention to grammar, students will strengthen and broaden their knowledge of Aramaic across several ancient dialects. Second, in our

focus on "translations" we will consider the questions of the audience and purpose of these texts, their own interrelationships, and the connected interpretive categories of "translation," "paraphrase," and "expansion." Our focus will be on the three texts mentioned, but additional Aramaic sources (e.g., Christian Palestinian lectionaries, Mandaic "Johannine" literature, etc.) may be included depending on student interest. Prerequisite: a working knowledge (one year or more) of Hebrew or another Semitic language, or previous study of another Aramaic dialect.

Course Notes:

Offered jointly with the Divinity School as 4116.

Art and Culture of Armenia (220507)

Christina Maranci

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This class will explore the visual and material cultures of historical Armenia from the ancient to modern periods. The images, artifacts, and monuments surviving from this region represent, as a whole, a distinctive and complex tradition that can be approached from many directions. Topics we will study include the archaeology of the Armenian highlands, the role of images in Armenian church, the technology of the dome, Zoroastrianism in Armenia, the making of Armenian manuscripts, and the sundial. We will explore how Armenian culture interacts with a great diversity of traditions, including classical antiquity, the Ancient Near East, Sasanian and Islamic Iran, and the Byzantine empire. We will also investigate the transfer of ideas and forms from East Asia and from Europe, and the relations between Armenia and neighboring cultures of the Caucasus.

Sleep Talk: Unraveling the Mystery of Sleep (207615)

Tony Cunningham

2024 Fall (2 Credits)

Schedule: M 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This student-led, discussion-based course will build upon a foundation of basic facts of sleep physiology and circadian rhythms, and then move into sleep's influence on mental health, beginning with consideration of sleep disorders and sleep's role in optimizing human functioning. We will then examine the specific roles of sleep in neuropsychiatric disorders, human performance and societal issues related to sleep.

Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Requirements: Prerequisite: (LPS A OR LS 1A) AND (MCB 80 OR MCB 81)

Introduction to Neural Computation (220737)

Kiah Hardcastle

2024 Fall (2 Credits)

Schedule: R 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

One of the biggest mysteries in neuroscience lies in understanding how neural circuits perform complex computations to support behavior. For example – how do networks of neurons transform abstract sensory inputs, like a visual scene, into a meaningful quantity, like an estimate of one's own position within the environment? How do neural circuits use reward and prior experience to inform future actions? In this course, we'll explore how neuroscientists have investigated these and other questions over the last 50 years. We'll focus specifically on models of navigation, reinforcement learning, and decision-making, with an emphasis on understanding the intuition behind these models and the techniques used to build them.

Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Sculpting Activity: How Inhibition Shapes the Brain in Health and Disease (220865)

Saad Hannan

2024 Fall (2 Credits)

Schedule:

T 0600 PM - 0715 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Although the vast majority of neurons in the mammalian brain are excitatory, inhibitory neurons working via GABA inhibition play a crucial role in normal brain function. Inhibition balances and shapes excitatory signals to maintain neural network stability while preventing excessive excitatory signaling that feature prominently in various neurological and psychiatric disorders such as anxiety and epilepsy. This course explores molecular mechanisms of GABAergic signaling as well as its cellular, physiological and behavioral effects. In addition, the course will explore the role of dysfunctional GABA inhibition in various

neuropsychiatric and neurodevelopmental disorders along with treatment strategies targeting this essential synapse.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit

Neuroscience - Undergraduate 101WB

Auditory Cognitive Neuroscience (222862)

Sara Beach

2025 Spring (2 Credits)

Schedule:

R 0600 PM - 0715 PM

Instructor Permissions: None

Enrollment Cap:

12

How do we make meaning out of sound? Guided by classic and contemporary experimental literature, we will explore the neural basis of hearing and auditory perception. Topics will include speech, music, attention, hearing loss, neural prosthetics, nonhuman audition, and learning and plasticity.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Additional Course Attributes:

Neuroscience - Undergraduate 101XA

Stress Resilience & Susceptibility: Mechanisms & Models (222864)

Dominika Burek

2024 Fall (2 Credits)

Schedule:

M 0600 PM - 0715 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Understanding the mechanisms and factors driving resilience or susceptibility to stress is critical for improving psychiatric patient healthcare and quality of life. Although all of us experience stress – whether episodically or chronically, traumatic or otherwise, from psychosocial or physiological sources – not all of us will be diagnosed with Major Depressive Disorder, Generalized Anxiety Disorder, or Post-Traumatic Stress Disorder. This course describes the genetic, molecular, cellular, physiological, and brain circuitry mechanisms that determine how our brains respond to stressors. Focusing on primarily animal models, we learn to read and interpret high-impact, primary research journal articles written by the top investigators in this field. Through these examples, we learn how cutting-edge neuroscience methods and techniques such as RNA-sequencing, epigenetic profiling, optogenetics, chemogenetics, and calcium imaging have informed our understanding of stress resilience and susceptibility. With a combination of student-led journal club presentations, brief instructor lectures, class discussions, and written assignments such as research proposals, we develop an understanding of why stress affects us so heterogeneously and what future research can do about it.

Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Requirements:

Prerequisite: (LIFESCI 1A OR LPS A) AND (MCB 80 OR NEURO 80)

Neuropharmacology of Pain (222866)

Rasheen Powell

2024 Fall (2 Credits)

Schedule:

T 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Pain is a near-ubiquitous somatosensory experience; however, the underlying mechanisms that drive it are not fully understood. This course will offer students the opportunity to gain a deeper understanding of the neurobiological and pharmacological basis of pain. Topics of interest will include the molecular basis of pain, common analgesics (and their pharmacological actions), and current research efforts in the pain field.

Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Requirements:

Prerequisite: (LIFESCI 1A OR LPS A) AND (MCB 80 OR NEURO 80)

Additional Course Attributes:

Neuroscience - Undergraduate 115

Cellular Basis of Neuronal Function (207530)

Ryan W. Draft

Katie Quast

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

24

The essential function of a neuron is to process complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits.

In lieu of section, this course will have a weekly 75 minute fun, hands-on lab for students to learn to record neurons. Please complete the lab time preference form on the Course website by the lottery deadline (Nov 8): <https://forms.gle/7AvnFRXcDLC5XpLa6>

Requirements:

Pre-requisite: MCB/NEURO 80 or Instructor Approval.

Anti-requisite: Cannot be taken for credit if MCB 115 is already complete

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Neuroscience - Undergraduate 120

Introductory Computational Neuroscience (205105)

Kristina Penikis

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

18

There are 100 billion neurons and over 100 trillion synaptic connections in the human brain. Learning how these neurons interact to recall an old memory, construct sensory perception, and motivate behavior is no trivial venture. Computational techniques have expanded our understanding of the complex systems underlying functions of the brain. In this course, students will be introduced to a variety of tools from fields such as mathematics, physics, and computer science that have been adapted to investigate the principles of neural function. Students will learn concepts and practice skills through lectures, in-class activities, programming assignments, and a final project. Topics covered include biophysical models of neurons, sensory information processing, neural population dynamics, memory, deep learning, reinforcement learning, and techniques to analyze experimental data, among others. Tools will be applied across levels of analysis, from individual neurons to neural population dynamics. Familiarity—but not expertise—with coding and linear algebra will be assumed.

Recommended Prep:

Pre-Requisite: MCB 80 or NEURO 80 (or permission from instructor),

Linear Algebra

Some experience with coding is required. Alternatively, students can complete Harvard's Python Bootcamp before the start of the course. Email instructor with questions.

Requirements:

Pre-Requisite: NEURO 80 OR MCB 80 must be taken.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Neuroscience - Undergraduate 130

Visual Recognition: Computational and Biophysical Perspective (160750)

Gabriel Kreiman

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Examines how neuronal circuits represent information and how those circuits are implemented in artificial intelligence algorithms. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision.

Course Notes:

Course website: http://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html>Neurobiology 230, Visual Recognition

Neuro 130 cannot be taken if Neuro 230 has been taken. Neuro 130 cannot be taken concurrently with Neuro 230.

Recommended Prep:

Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

Requirements:

Prerequisite: ((LifeSci 1A OR LPS A) AND (LifeSci 1B)) AND may not be taken at the same time with NEURO 230

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Neuroscience - Undergraduate 140

Biological and Artificial Intelligence (207645)

Gabriel Kreiman

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others.

Recommended Prep:

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Neuroscience - Undergraduate 141

The Physics of Sensory Systems in Biology (207730)

Aravinthan Samuel

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

30

Living organisms use sensory systems to inform themselves of the sights, sounds, and smells of their surrounding environments. Sensory systems are physical measuring devices, and are therefore subject to certain limits imposed by physics. Here we will consider the physics of sensory measurement and perception, and study ways that biological systems have solved their underlying physical problems. We will discuss specific cases in vision, olfaction, and hearing from a physicist's point of view.

Requirements:

Prerequisite: MATH 21A and MATH 21B and cannot be taken for credit if PHYSICS 141 already complete.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Neuroscience - Undergraduate 143

Neurobiology of Vision and Blindness (207773)

Joshua Sanes

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Vision system fascinates biologists, in part because we are such visual animals. In fact, Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer's or AIDS. For these reasons, as well as because of its relative accessibility, the visual system is a favored model for studying neural circuitry, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover

key topics in visual development, structure and function, and then use them as a basis for considering causes of blindness and potential cures.

Recommended Prep:

MCB 80 or NEURO 80 is recommended.

Requirements:

Pre-requisite: MCB/NEURO 80 or Instructor Approval.

Anti-requisite: Cannot be taken for credit if MCB 143 is already complete.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Neuroscience - Undergraduate 170

Brain Invaders: Building and Breaking Barriers in the Nervous System (207770)

Laura Magnotti

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Requirements:

Prerequisite: (LPS A OR LS 1a) AND MCB/NEURO 80 or Instructor Approval.

Anti-requisite: Cannot be taken for credit if MCB 170 is already complete

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Neuroscience - Undergraduate 231

Computational Neuroscience (207731)

Haim Sompolinsky

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent

neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep:

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements:

Anti-Requisite: Cannot be taken for credit if MCB 131 already complete.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Neuroscience - Undergraduate 1202

Modern Neuroanatomy (212832)

Randy Buckner

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

How does the global architecture and local organization of brain systems support behavioral and cognitive functions? In this class, classical and newer neuroanatomical discoveries will be discussed that cover what defines brain areas; how areas are organized into parallel, distributed circuits; how distinct areas and systems are organized; and how anatomical form relates to function. Anatomy in the human brain and from model systems (worm, mouse, barn owl, and monkey) will be used to illustrate principles. Newer techniques and analytical approaches will be discussed including micro-scale and macro-scale connectomics. The goal of this class is to survey examples of how emerging understanding of neuroanatomy provides insight into function. Each class will consist of lecture and discussion.

Requirements:

Anti-Requisite: Cannot be taken for credit if PSY 1202 already complete.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Neuroscience - Undergraduate 1401

Computational Cognitive Neuroscience: Building Models of the Brain (207732)

2025 Spring (4 Credits)

Schedule:

Instructor Permissions: Instructor

Enrollment Cap:

30

"What I cannot create, I do not understand." This course applies Richard Feynman's dictum to the brain, by teaching students how to simulate brain function with computer programs. Special emphasis will be placed on how neurobiological mechanisms give rise to cognitive processes like learning, memory, attention,

decision-making, and object perception. Students will learn how to understand experimental data through the lens of computational models, and ultimately how to build their own models.

Recommended Prep:

Students be comfortable with a numerical programming language (e.g., Python, Matlab, R). Psychology concentrators should have taken Science of Living Systems 20 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, PSY 18, Science of Living Systems 15, MCB 80 or MCB 81 before enrolling in this course; or permission of instructor.

Requirements:

Anti-Requisite: Cannot be taken for credit if PSY 1401 already complete.

Independent Study 1

Independent Study (150200)

John Huguley

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the [Office of Undergraduate Education website](#).

Topic: Kirkland House

Course Notes:

A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the [Office of Undergraduate Education website](#).

Topic: Elliot House**Course Notes:**

A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Biology and Evolution of Invertebrate Animals (144597)

Gonzalo Giribet

Cassandra Extavour

2025 Spring (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

14

Introduction to invertebrate diversity, will cover the development, adult anatomy, biology and evolutionary relationships of the main animal phyla including sponges, mollusks, annelids and arthropods among others. Special emphasis is placed on understanding the broad diversity of animal forms and their adaptations to different ecosystems and how these phenomena shape animal evolution. Lectures will be complemented with a mandatory weekly lab, and the course includes a field trip to different areas of outstanding marine diversity in the Caribbean.

Course Notes:

Optional field trip to the Caribbean for research during spring break.
Mandatory Lab component: Wednesdays, 3:00-5:45 PM.

Recommended Prep:

LS1b, OEB 10, OEB 53 or permission of instructor required.

Additional Course Attributes:

The History and Evolution of Life on Earth (130331)

Javier Ortega-Hernandez

Nadja Drabon

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Within our solar system, Earth is distinguished as the planet with life. Living organisms are complex entities that originated from planetary processes, have been sustained by the same processes for approximately four billion years, and have fundamentally affected the functioning and composition of the Earth's surface and atmosphere. In this course we will investigate the ways that Earth and life interact with each other, focusing on the biogeochemical cycles of major elements, and the interplay between complex organisms and their ever-changing environment. This will provide a framework for interpreting the fascinating history of life reconstructed from a comprehensive understanding of the rock record, the diversity of life through time, and evolutionary biology.

Course Notes:

Course includes a weekly three-hour lab to be arranged and one domestic or international field trip during the Spring Break. OEB 56 is also offered as EPS 56. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

Recommended Prep:

EPS 10, OEB 10, or Life Sciences 1b, or permission of instructor.

How to Build an Animal (204989)

*Stephanie Pierce**Mansi Srivastava*

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:**

28

Ever wonder why you and other animals have eyes? What about teeth or even skin? "How to Build an Animal" answers your questions by exploring the wonders of animal biology. Each week, we consider a prominent feature of animal anatomy; study its variation in form and function; and how it's made during embryonic development. To facilitate student learning, each topic is accompanied by a 'hands-on' activity that illustrates the concepts discussed in the lecture. Further, the course introduces a number of scientific areas, including comparative anatomy, functional morphology, phylogenetics, genomics, and experimental embryology. The overall goal is to provide a basic understanding of animal evolution and development and how these processes combine to shape the diversity of life on Earth.

Organismic & Evolutionary Biol 60

Fundamentals of Marine Biology (217833)

Aaron Hartmann

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:**

50

We will explore the fundamentals of marine biology, and in doing so, learn about the complex lifestyles of organisms whose home spans three quarters of our planet. We will take a process-driven approach, focusing first on the fundamentals: the interrelated processes of marine physiology, ecology, and evolution. What biological processes help organisms succeed in the marine environment? How do species traits vary throughout the different environments in the world's oceans? How do gradual and rapid changes in the ocean environment alter the "rules of life" for marine species? As we build our understanding of these fundamentals throughout the course, we will use them as lenses to view, disentangle, and understand larger patterns in the oceans. In particular, we will focus on the diversity and distributions of biological functions, patterns of biodiversity, and the growing threats to marine life. Learning will be assessed via a first-third exam, a short paper, and a final presentation and paper. Ultimately, you will come away with a new understanding of the unique challenges and incredible opportunities that arise from life in saltwater.

Organismic & Evolutionary Biol 104

The Mouse in Science and Society (161184)

Kathleen Pritchett-Corning

2024 Fall (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 24

Mice remain the most popular vertebrates used in biomedical R&D today, with tens of millions of lab mice produced annually in the United States alone. At the same time, mice are commonly studied for their own characteristics that continue to enhance our knowledge about innate mammalian behavior, predator-prey dynamics in changing ecosystems, and reservoir hosts for emerging diseases, to name a few. This course intends to provide a strong foundation in mouse biology, both basic and applied, as well as exposure to cultural and political aspects of the current impact of mice (real or fictitious) on contemporary societal values. Instructors: Kathleen Pritchett-Corning.

Plant Development and Differentiation (148122)

Elena Kramer

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A comprehensive lecture course on the developmental biology of plants from fertilization through all phases of vegetative and reproductive growth. Material includes both morphological and genetic studies. Although the main focus of the course is angiosperms, examples are drawn from other lineages of land plants as well. Additional topics include control of cell division and elongation, signal transduction, and hormone response.

Recommended Prep:

Life Sciences 1b and OEB 52 (formerly OEB 124) or permission of the instructor.

Organismic & Evolutionary Biol 120

Plants and Climate (156118)

Noel Holbrook

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0530 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How plants are affected by climate - both spatially across the globe and as climate changes over time - is relevant to understanding patterns of plant evolution, ecosystem structure, and the impact of humans on our planet. This course examines how variation in rainfall, temperature, atmospheric humidity and CO₂ affects the growth and productivity of plants. Topics include photosynthesis, respiration, transpiration, and vascular transport; experimental approaches and measurement techniques will also be covered.

Recommended Prep:

OEB 52, 55 or OEB 10 (or permission of the instructor). Expected to be offered Fall 2016.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Organismic & Evolutionary Biol 125

Genome analysis, ecology and evolution (144180)

Scott Edwards

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A survey of theory and applications of DNA technologies to the study of evolutionary, ecological and behavioral processes in natural populations. Topics to be covered will span a variety of hierarchical levels, timescales, and taxonomic groups, and will include the evolution of genes, genomes and proteins; the neutral theory of molecular evolution and molecular clocks; population genomics and phylogenetic principles of speciation and phylogeography; metagenomics of microbial communities; relatedness and behavioral ecology; molecular ecology of infectious disease; and conservation genetics.

Course Notes:

Weekly computer laboratories will introduce the use of the internet and computational software in DNA sequence alignment and phylogenetic and population genetic analysis.

Recommended Prep:

Life Sciences 1b, OEB 10, OEB 53 or MCB 52.

From Darwin to Derrida: The Evolution of Meaning and Purpose (216473)

David Haig

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The seminar will read my recent book (of the same name as the course) intended for a general educated readership. The seminar would be suitable both for science students and for non-science students who wish to learn some evolutionary biology. Natural selection is a purposeless process that has evolved purposive creatures. The key innovation in the evolution of life was the origin of a textual record of past choices of natural selection contained within genetic sequences. The information in genes comes from the environment that selects. The textual record evolves as organisms are judged by the performance of the

text in environmental context.

Organismic & Evolutionary Biol 137

Experimental Design and Statistics for Ecology (216474)

Benton Taylor

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

Experimental Design and Statistics for Ecology provides a practical "how to" introduction to conducting ecological research. Students gain hands-on experience forming testable questions and hypotheses, designing experiments to test these questions, implementing experimental designs, taking and managing data, and conducting an array of statistical analyses in R statistical software.

Course Notes:

This course is geared toward senior undergrads and early graduate students.

Recommended Prep:

OEB 55

Genes and Behavior (145857)

Yun Zhang

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Behavior is inheritable and regulated by genes. This lecture course explores causal links between genes and behavioral traits, aiming to provide mechanistic understanding of how gene products control and influence behavioral outputs. The course will start with discoveries of genes whose mutations contribute to neurological diseases and psychiatric disorders, followed by main research approaches used to investigate genetic basis of behavior and brain function. The class will then have in-depth lectures and discussion on genes that regulate several behavioral traits including olfaction, itch and pain, circadian rhythm, sexual behavior, sleep, learning and memory.

Recommended Prep:

Life Sciences 1a or permission of the instructor

Biology of Insects (142688)

Naomi Pierce

2024 Fall (4 Credits)

Schedule:

WF 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to the major groups of insects. The life history, morphology, physiology, and ecology of the main taxa are examined through a combination of lecture, lab, and field exercises. Topics include the phylogeny of terrestrial arthropods with a review of the extant orders, an analysis of abiotic and biotic factors regulating populations, including water balance, temperature, migration, parasitism, mutualism, sociality, insect/plant interactions, medical entomology, and the use of insects in biological control.

Organismic & Evolutionary Biol 190 Section: 190

Biology and Diversity of Birds (143846)

Scott Edwards

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to the biology of birds. Covers the fossil record and theories for avian origins, physiology and anatomy, higher-level systematics and field characters of the ~27 orders, speciation processes, nesting and courtship behavior, vocalizations, mating systems and sexual selection, cooperative breeding, demography and conservation. Optional field trip during spring break. Laboratories will consist of gross anatomy, bird watching excursions in the Cambridge area, field techniques and specimen preparation, and systematic study of avian groups using the collections of the Museum of Comparative Zoology.

Course Notes:

OEB 10 or OEB 53 or permission of the instructor. Students in their third and fourth years are encouraged to enroll in the course.

What Makes a Turtle? (160459)

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

6

A student-directed course that explores the biology of different focal animals through a mixture of discussions, cadaveric dissection, and anatomical observation. Discussion topics will be broad and far reaching, and dependent on the students' interests, but could include such things as: evolutionary dynamics, ecomorphology, functional performance, conservation, disease, etc. Alongside in-class discussions, students will participate in dissecting cadaveric material with the aim to build hands-on anatomical skills.

Course Notes:

Prerequisite: With permission of instructor. Seminar for upper undergraduates and graduate students. Students are encouraged to get in touch with the course instructor early on (well in advance of the spring term) as course enrollment is limited to six students maximum.

The specific animal of focus changes regularly. Past topics include "What Makes a Cat?"

Additional Course Attributes:

Topics in Neurogenetics (145012)

Yun Zhang

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The goal of the class is to achieve an advanced understanding of the molecular and cellular mechanisms that regulate behavior. We will discuss key findings in the field, as well as the cutting-edge techniques used in these studies. The topics include decision-making, human olfaction, memory formation, inheritance of learned behavior, and mental illnesses, etc.

Course Notes:

The course is primarily planned for new graduate students, but it is also open to interested senior undergraduates who have taken OEB 57 or MCB 80 and obtained permission from the instructor.

The department of Organismic and Evolutionary Biology has an enormous breadth of scientific expertise. We ask a diverse array of questions, study an incredible variety of organisms, and use a wide set of tools, techniques and approaches. This course involves in-depth discussion of primary literature from across the fields of ecology, evolutionary, genetics, developmental, physiology, and behavior. The topics will be centered around the department's seminar series and highlight the work of both the diverse scientists that come to visit our department and the faculty labs that host them. Discussions will be guided by student presentations on the literature. In addition to scheduled course time, the students will be required to attend department seminars and have the opportunity to meet with each seminar speaker. The science content of this course will be complemented by instruction on evidence-based science communication strategies as well as opportunities for students to practice these skills.

Instructor Permissions: Instructor

Enrollment Cap:

20

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, host-microbe associations in health and disease, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology. Course will limit enrollment to 20 students.

Course Notes:

Also offered as Microbiology 210.

Recommended Prep:

For graduate and advanced undergraduate students, Life Sciences 1a and 1b or their equivalent are required, or permission of instructor. MCB 60 or equivalent is recommended.

Evolutionary Human Physiology and Anatomy (123674)

Daniel Lieberman

George Lauder

Andrew Biewener

Joanne Clark Matott

2024 Fall (4 Credits)	Schedule:	MWF 1200 PM - 0115 PM
Instructor Permissions:	None	Enrollment Cap: n/a

Why is the human body the way that it is? This course explores human anatomy and physiology from an integrated framework, combining functional, comparative, and evolutionary perspectives on how organisms work. Major topics, which follow a life-course framework, include embryogenesis, metabolism and energetics, growth and development, movement and locomotion, food and digestion, stress and disease, and reproduction. Also considered is the relevance of human biology to contemporary issues in human health and biology.

Course Notes:

This course includes a weekly 3-hour lab. This course may not be taken Pass/Fail.

Recommended Prep:

LIFESCI 1A or permission of instructor.

Philosophy

Subject: Philosophy

Philosophy 3

The True and the Good (111175)

Bernhard Nickel

2025 Spring (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

The basic outlook of value and perspective that each of us adopts as we make decisions large and small are more than mere opinion. They are commitments that are open to deeper understanding and critique. Philosophy is the pursuit of such understanding and critique, and this course will introduce you to the practice of philosophy. The course has a two-fold focus: we will look at some of the central figures and problems of the Western philosophical tradition, including Socrates, Plato, Descartes, Locke, Kant, and Mill. We'll also look at how contemporary writers have responded to this tradition, especially from a feminist and anti-racist perspective. These include Charles Mills, Helen Longino, bell hooks, and Paul Taylor.

Course Notes:

This course has no prerequisites. Students need not have taken or be enrolled in Expos before taking this course: the course will introduce you to the mechanics and practice of philosophical writing.

Philosophy 4

Logic I (000004)

Bernhard Nickel

2024 Fall (4 Credits)

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

This course is an introduction to logic for students who have no background in either logic, math, or computer science. It is designed to provide important concepts and skills that will help students succeed in fields where logical reasoning is helpful (pretty much all fields, then), and to prepare them for further study of logic at the 100-level. We will introduce logic as the study of the structural features of arguments and spend the semester developing tools to analyze arguments. As the semester progresses, the tools will become more and more sophisticated, allowing us to describe and analyze more complex types of arguments. By the end of the course, students will be familiar with, and competent to use, the propositional and predicate calculus. They will be able to assess arguments for validity and have practice at constructing counterexamples to invalid arguments. They will also have practice translating arguments from human languages into the formal terms of logic so that they can assess the quality of arguments they encounter in other contexts, including in their own writing.

Introduction to Ancient Greek and Roman Philosophy (114416)

Mariana Noe

2024 Fall (4 Credits)

Schedule:

MW 0600 PM - 0715 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to some of the most influential theories in Ancient Greek and Roman Philosophy. We will start by reading Aristotle's selection of "reputable opinions" and reflecting on his—and our—way of building a "philosophical canon." Afterward, we will study the fragments of two early Greek philosophers, Heraclitus and Parmenides, and explore the influence they had on Ancient Greek atomists and Gorgias. We will then read Plato's Meno and selections from other Platonic works, and devote a few weeks to Aristotle. Finally, we will dedicate the last part of the course to the three most famous schools in Hellenistic times: the Epicureans, the Stoics, and the Skeptics. We will read some Roman authors in these traditions, in order to flag commonalities and differences between them. This course does not presuppose any prior knowledge of philosophy. However, it does require the eagerness to learn three philosophical skills: thoughtful speaking, precise writing, and careful reading.

Philosophy 14

Morality and the Good Life: An Introduction to Ethics (132738)

Jeffrey Behrends

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

You probably want to live the best life for yourself. But what would that look like? Feeling pleasure, and avoiding pain? Having your desires satisfied? Maybe achieving knowledge, or securing fulfilling relationships? You might also care about living a moral life. But what would that look like? What actions are morally right or wrong, and what makes them that way? In this introduction to ethics, we'll begin by looking at three important theories of the good life: the pleasure theory, the desire-satisfaction theory, and the pluralist theory. We'll then turn to moral theories, investigating the relative strengths and weaknesses of those views that focus only on our actions' consequences, and those that reject this approach. In closing, we'll consider questions about the status of morality. What kind of judgment are we making when we say, for example, that something is morally wrong? Are there moral facts awaiting our discovery? If there are, how did they come to be - are they determined by humans and varying across cultures, like facts about the law or etiquette? Or perhaps determined by God? Or could they somehow have not been determined by anyone, standing as fundamental facts about reality?

Sex, Love, and Friendship (000016)

Gina Schouten

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is about love, sex and friendship. Philosophers spend a lot of time thinking about the structure of thought, language, and reasons. They have, at least in the western tradition, paid less attention to the more visceral and emotional aspects of human experience. In this course, we'll use some of the tools developed in philosophy to examine questions central to most of our lives: what makes a relationship a friendship?; what do we owe our friends, and how can we be good friends?; what is love, and why is it such an important feature of human life?; when is love bad, and when is it good?; what is sex?; when is sex wrong, and when is it good?; can friends be lovers?

Philosophy 18

Human Ethics: A Brief History (141608)

Seth Robertson

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Does might make right? Should a person focus on achieving immortality or on living a simple, happy mortal life? Is morality simply a matter of convention? Why be moral when being immoral could provide access to more wealth, fame, and power? What is the relationship between etiquette and morality? What do people owe a society that has failed in its obligations to its people? How can we identify and resist oppression, marginalization, and injustice? Human beings all over the world have been thinking about, discussing, and debating questions like these for thousands of years. This course aims to look at this history of ethics and moral philosophy from a genuinely inclusive perspective by focusing on ethical thought both from all over the world, with special emphasis on that of members of traditionally marginalized groups and from areas of the world that typically receive much less attention in academic philosophy and ethics.

Philosophy 31

Saints, Heretics, and Atheists: A Historical Introduction to the Philosophy of Religion (000031)

Jeffrey McDonough

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

60

Does God exist? What is the nature of evil and where does it come from? Are humans free? Responsible? Immortal? Does it matter? This course will explore foundational questions in the philosophy of western religion through the study of classic works by Plato, Augustine, Anselm, Ibn Sina, Al-Ghazali, Aquinas, Pascal, Spinoza, Hume, Mill, Nietzsche and James, as well as discussions by contemporary authors such as Pamela Milne, Marilynne Robinson and Daniel Dennett. Students will have the opportunity to reexamine their own views and assumptions about religion in dialogue with great thinkers of the past and present.

Philosophy 96

Preparation for the Senior Thesis (218313)

Seth Robertson

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

PHIL 96 is an optional tutorial for philosophy concentrators who are planning to pursue the honors track, and for joint concentrators for whom philosophy will be their "primary field." It is designed for juniors, but is open to interested sophomores if space allows. The purpose of PHIL 96 is to help students make the transition from writing shorter papers in the context of a class to developing their own research project, in particular, a senior honors thesis. Students will receive guidance for conducting preliminary background research, selecting thesis topics, staying motivated and continuing to make progress in large projects, developing good, personalized writing habits, conducting deep research dives into the literature on a thesis topic, organizing a thesis, revising it and incorporating feedback from advisors and peers, and avoiding common pitfalls for thesis writers.

Art and Public Policy in Plato, Aristotle, and Beyond (222798)

Mariana Noe

2025 Spring (4 Credits)

Schedule:

W 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

We can think about policies as political solutions to puzzles. The central purpose of this course is to introduce you to the puzzle of art, to its nuances, and to examine the political solutions offered by Plato in the Republic and the Laws, and by Aristotle in the Politics. The puzzle of art has a past and a future, and we will devote the first weeks of the course to studying them. We will start by examining how art is regulated in our present day, in order to flag our contemporary pre-conceptions on the topic before entering the ancient world. We will then discuss the historical, literary, and philosophical past of Plato's and Aristotle's proposals. Afterward, we will analyze the different sets of policies that Plato and Aristotle designed to solve the social puzzle of art, paying close attention to their relationship with human psychology. We will close the course with a debate on what constitutes an "ideal" artist for a happy city.

James Doyle

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course is an introduction to the life and thought of Augustine of Hippo (354-430), the last great philosopher of antiquity and the first great philosophical expositor of Christianity. The primary focus will be on his spiritual autobiography Confessions. Topics covered will include the existence and nature of God, the problem of evil, the influence of Plotinus and other neoplatonists, the ideas of divine illumination and an 'inner realm', the relation between belief and the will, Augustine's ethical and political thought and his influence on Malebranche, Descartes, Wittgenstein and others.

Early Chinese Ethics (213581)

Seth Robertson

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Early (Pre-Qin era) China was a hotbed of philosophical activity: scholars developed careful and fascinating ethical views in the context of serious philosophical debates between major schools of thought. This course focuses on some of these ethical debates between Confucian, Mohist, Daoist, and Legalist

philosophers in early China. We'll read both classical texts such as the Analects of Confucius, Mengzi, Xunzi, Mozi, and Zhuangzi and important contemporary scholarship on these texts. Several moral questions will be of particular importance: What is the relationship between etiquette and morality? What are the most important virtues to acquire? Should we think of morality and moral development as something natural or artificial? Are we justified in caring more about some people (our closest friends and family) than others? We will have a special focus on three important interpretive themes for the course: (1) How can understanding the particular contours of the debates each scholar is engaged in help us understand their overall views? (2) How does each philosopher's view of human psychology and epistemology constrain, guide, and support their moral theorizing? (3) How can an understanding of early Chinese ethical thought, theory, and debate help enrich contemporary discussions in ethics and moral philosophy? No previous experience or coursework in Chinese philosophy is required for this course.

Life and Death: A History (222480)

Alison Simmons

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This is a course on the metaphysics of life and death: what, exactly, is the difference between a living thing and a dead (or inanimate) thing? You might hope the distinction is a clean one: you are either alive or dead (or inanimate). Once upon a time the distinction was clean: living things have souls; dead (or inanimate) things do not. Not anymore. After looking at some recent attempts to establish a line between the two, we will return to the past to explore the ways in which the metaphysics of life and death has changed over the past 2000 years in the Western tradition.

The Philosophy of Mary Shepherd (218627)

Jeffrey McDonough

Alison Simmons

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A pioneering philosopher, Mary Shepherd developed her own systematic philosophy during the first half of the 19th century. In this course, we will examine Shepherd's two major works: *Essay upon the Relation of Cause and Effect* (1824) and *Essays on the Perception of an External Universe* (1827). We will also consider

the philosophical context in which she wrote, particularly the influence of George Berkeley's idealism and David Hume's skepticism. Through a close examination of her writings, we will aim to reconstruct Shepherd's original views and evaluate them in relation to the ideas of Berkeley and Hume. Despite her importance in the history of Western philosophy, Shepherd's work remains greatly understudied and offers students a unique opportunity to engage in original research on a neglected figure.

Kant's Critique of Pure Reason (117823)

Samantha Matherne

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

90

In this course, we will work through Immanuel Kant's *Critique of Pure Reason* (1781/87). In analyzing this text, we will explore the account of metaphysics, epistemology, and philosophy of mind that Kant defends. More specifically, we will address the negative aspects of his project, including his criticisms of rationalism and empiricism. We will also examine his positive views regarding the nature of the mind, the nature of experience, the metaphysics of transcendental idealism, and the foundations of mathematics and natural science. At the end of the course we will consider the limits and prospects of Kant's critical project. In the former vein, we will discuss concerns pertaining to Kant's view on race. In the latter vein, we will address Kant's hope of building a system of nature and freedom.

Modal Logic (156023)

Mark Richard

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Modal logic is the study of the meanings and logical properties of words like 'necessarily', 'ought', and 'could'. As such, it is concerned with concepts central to ethics, metaphysics, semantics and philosophy of science. The course's first half covers elementary propositional modal logic and its metatheory. We then discuss uses of modal concepts in philosophy and computer science. While the course's pace is brisk, it is an introduction which presupposes no prior knowledge of logic.

Foundations of Space-Time Theories (118349)

Peter Koellner

2025 Spring (4 Credits)

Schedule:

TR 0600 PM - 0715 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Space and time have always seemed rather mysterious. Yet space and time ubiquitous in that the events of everyday life and physics are described within the framework of space and time. What exactly is this framework? Is it merely conventional or does it capture a fundamental feature of reality? What is the relationship between space and time? Are they independent of one another? Are they intertwined? Are they fixed? Can they be manipulated? In this course we will try to get clear on such questions by tracing the historical development from the time of Newton to the present, while also employing tools of modern geometry to sharpen the fundamental notions and the central questions. Some of the main spacetimes we shall see along the way are: Newtonian Spacetime (the spacetime associated with everyday common sense), Minkowskian Spacetime (the spacetime of special relativity, where space and time are intertwined), and Einsteinian Spacetime (the spacetime of general relativity, where space and time can be warped and manipulated). We will see that our understanding of spacetime has undergone radical transformations, that there has been a great deal of progress in our understanding, and we shall get a into some of the more fascinating issues that arise with our contemporary understanding, issues involving black holes, singularities, time travel, and other spacetime anomalies. Prerequisites: An introductory course in linear algebra and calculus.

Philosophy 159A

Epistemic Injustice (218324)

Seth Robertson

2025 Spring (4 Credits)

Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 25

Who do we believe, and who do we dismiss? Who tend to get treated as trustworthy, credible sources of information, and who tend not to? Whose voices get amplified and whose get silenced? Whose ideas are taken up and whose are ignored? Whose problems get studied, and who lacks the educational, financial, personal, emotional, or political resources and opportunities to adequately study theirs? Who gets to be ignorant?

These are all central questions in the study of epistemic injustice. The growing realization that injustice, marginalization, oppression, and violence can take distinctly epistemic forms and lead to distinctly epistemic wrongs has quickly become one of the most important discussions in epistemology – the study of knowledge and related topics such as learning, understanding, justification, evidence, trustworthiness, and ignorance. In this course, we will look at some of the most influential research on epistemic injustice, including special attention to Miranda Fricker's seminal work *Epistemic Injustice: Power and the Ethics of Knowing*, important historical precursors to it, criticisms of it, and recent literature expanding on our

understanding of ways that epistemic injustice can affect us.

Skepticism (156126)

Susanna Rinard

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course will primarily focus on attempts to develop a workable skeptical philosophy. Much effort has been, and continues to be, expended in trying to defeat, or argue against, or undermine, skepticism. Here we will look at what happens if we take seriously the possibility that skepticism is actually true. How can we build a philosophy, and a life, that acknowledges the truth of skepticism? We will look at a number of different attempts to do this from a wide range of times. We will pay particular attention to the Ancient Greek Pyrrhonians and the Ancient Chinese philosopher Zhuangzi, reading both the original texts and later commentaries on them.

Metaphysics (156025)

Selim Berker

2024 Fall (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Metaphysics is currently undergoing a revolution: the era of "intensional" metaphysics in which the machinery of possible worlds takes center stage is giving way to a new period of "hyperintensional" metaphysics in which notions—such as grounding, fundamentality, essence, and real definition—that allow us to draw distinctions between items obtaining in all of the same possible worlds become the focus. We will read some of the seminal texts in this new approach to metaphysics, as well as work by authors who are critical of the turn toward a hyperintensional metaphysics. In addition to exploring metaphysical questions as ends in themselves, we will consider ways in which hyperintensional tools can be applied to debates in epistemology, metaethics, philosophy of mind, philosophy of religion, and social ontology, among other subareas of philosophy. There are no formal pre-requisites for the course, but some previous exposure to logic will be helpful.

Philosophy of Technology: From Marx and Heidegger to AI, Genome Editing and Geoengineering (HKS) (222837)

Mathias Risse

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

Technology shapes how power is exercised in society, and thereby also shapes how the present changes into the future. Technological innovation is all around us, and new possibilities in fields like artificial intelligence, genome-editing and geoengineering not only reallocate power, but might transform human life itself considerably, to the point of modifying the essence of what it is to be human. While ethical considerations enter prominently, the philosophy of technology is broader than its ethics. It aims to interpret and critically assess the role of technology for human life and guide us to a more thoughtful integration of technology in our individual lives and in public decision making. This course aims to teach you to do just that, starting with basic stances and key figures in the field and then progressing towards a number of challenges around specific types of technology as they arise for the 21st century. At times it is tech optimism that dominates these debates (sometimes even techno-boosterism that sees technology as key to heaven on earth), at other times it is more low-spirited attitudes from romantic uneasiness to doom-and-gloom Luddism and technology-bashing. A closer look at these attitudes – alongside reflection on how technology and power are intertwined -- will help generate a more skeptical attitude towards all of them and contribute to more level-headed debates, which is badly needed.

Privacy, Security, Connectivity (123092)

Peter Koellner

2024 Fall (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

The world has become more and more interconnected in a manner that has radical implications for privacy, security, and the flow of information, which in turn has radical implications for public discourse and collective decision making. We will begin by examining the technological landscape from the point of view of the "security engineer" who aims to build dependable distributed systems. Topics include cryptography and side channel attacks. We will then turn to social and political matters. Topics include surveillance, privacy, security, and the question of legitimate governance over the "distributed attack surface."

The Philosophy of Bernard Williams (proseminar) (220569)

Richard Moran

2024 Fall (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

In this seminar we will explore the work of the philosopher Bernard Williams (1929 – 2003), with special attention to one of his major works *Ethics and the Limits of Philosophy* (Harvard, 1985). We will also read widely in other, shorter works of his and take up such questions as morality and the emotions; action, responsibility, and blame; moral luck, the idea of moral obligation, realism and relativism in ethics, egoism and altruism. We will also take up Williams' thoughts on philosophy and its relation to its history, including both historical figures and the nature of history as a form of humanistic understanding. Additional readings from McDowell, A. W. Moore, Raz, Scanlon, Wolf, and others.

Well-Being: Proseminar (159747)

Jeffrey Behrends

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Well-being, or welfare, is a kind of personal value – it is a value for some individual. We say that someone enjoys a high level of well-being when the life that they lead is a good one for them, and that when someone's life goes poorly for them, their level of well-being is low. We can all probably point to certain kinds of lives that are paradigmatically high or low in well-being. But it is harder to identify what makes it the case that someone has a particular level of well-being, primarily because it is not obvious what things fundamentally contribute to or detract from the value of one's life. In this seminar, we will consider contemporary approaches to welfare, including recent defenses of monistic theories like hedonism and the desire-satisfaction theory, as well as pluralistic theories. New in 2024, the course will conclude with Guy Fletcher's recent book, which extends traditional questions in metaethics to theorizing about well-being.

Educational Justice (203447)

Gina Schouten

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course will explore the kinds of experiences children and adults should have in schools and institutions of higher education, and how those experiences should be distributed. We'll proceed by examining key topics pertaining to educational justice, including competing principles of justice in the

distribution of education (egalitarian principles, sufficientarian principles, prioritarian principles, etc.); competing reform agendas; the justifiability and relative priority of different educational aims (education for citizenship, education for career preparation, education for social justice, etc.); the family and its role in educational inequality; and higher education access. In addition to the philosophical contributions to these conversations, we'll read enough of the relevant empirical literature to provide a working understanding of the structure and consequences of schooling in the US. Finally, we'll explore some case studies that look at specific choices that arise in real time for educational decision-makers. These case studies highlight the moral dimensions of decisions about discipline, charter schools, special education, and school districting.

Inequality (205060)

Lucas Stanczyk

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Many people believe that growing inequality is one of the defining challenges of our time. In this class, we will examine some of the main problems thought to be raised by inequality through the lens of several systematic ways of thinking about social justice.

Philosophy and Architecture (000185)

Remei Capdevila Werning

2024 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar examines the main issues discussed in the philosophy of architecture: What is architecture? Is architecture an art? Do buildings have a meaning? If so, what is it and how is it conveyed? What is the aesthetic experience of architecture? How does architecture determine the way we live and how we ought to behave? Does architecture have a political function? By reading analytical and continental authors, this course proposes a critical overview of the most relevant metaphysical, epistemological, aesthetic, phenomenological, ethical, and political questions concerning architecture. We will also reflect on the intricacies of the discipline of philosophy of architecture as such. We will reflect upon assigned readings by addressing actual buildings and other architectural works from drawings, renderings, and plans to artworks representing architecture. Prerequisite: One course in philosophy OR one course in architecture OR one course in history of art and architecture.

Feminism in Arts and Sciences (136603)

Remei Capdevila Werning

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

15

This course addresses underlying philosophical assumptions in the arts and sciences from the perspective of feminist theories and approaches. Through readings of texts by contemporary feminist philosophers, examinations of scientific and artistic practices, including scientific case studies and artworks from the Harvard Art Museums, we will address the central issues raised by feminist epistemology, philosophy of science, and aesthetics. These issues include: systematic gender bias, situatedness, standpoint theories, objectivity, neutrality and impartiality (or lack thereof), epistemic and non-epistemic values in the sciences; conceptions of art versus crafts, the canon, genius, autonomy, beauty, sublime, the body and gaze in the arts. We will also participate in the yearly Art+Feminism Wikipedia Edit-a-Thon where we will contribute in shaping public discourse on feminism and arts.

Philosophy 188

Philosophy and Literature: Proust (113962)

Richard Moran

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

The course will attempt to achieve a sense of Proust's great novel, *In Search of Lost Time*, as a whole, necessarily in an abbreviated form, but with the aim of tracing the plan that Proust worked out when he began the project. The bulk of the reading will be in Proust's text, but there will be regular secondary readings in philosophy and in the critical literature on Proust. Philosophical themes to be emphasized will include: the nature of subjectivity and the problem of other minds, the strategies of solipsistic desire, freedom and dependence, amour-propre and the desire for approbation, the nature and limits of the will (including 'involuntary memory'), personal identity and artistic vocation, the will to knowledge and self-deception.

The Philosophy of Jane Austen (222503)

Samantha Matherne

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

15

Was Jane Austen a philosopher? Are her novels philosophy in another guise? To explore these questions, we will read Austen's six novels (Sense and Sensibility, Pride and Prejudice, Mansfield Park, Emma, Northanger Abbey, and Persuasion) through the lens of philosophical texts, including texts that were contemporary for her, texts that are contemporary for us, and some texts in between. By approaching Austen through the lens of philosophical thinkers such as Mary Wollstonecraft, Adam Smith, Friedrich Schiller, Simone de Beauvoir, D.A. Miller, Edward Said, Patricia Matthews, Miranda Fricker, among others, we will endeavor to gain a philosophical perspective on Austen's novels and ideas, as well as on the interactions and boundaries between literature and philosophy.

Philosophy 192

Buddhist Philosophy (159688)

Parimal Patil

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

In this course, we will discuss topics in Indian Buddhist epistemology, ethics, metaphysics, philosophy of action, and philosophy of mind. We will pay particular attention to the arguments that Buddhist philosophers used to defend their views and respond to their critics. In addition to understanding these arguments in their historical contexts, we will ask what we can learn from then today and, when relevant, assess how they are being used in contemporary philosophy.

Thomas Hobbes (1588-1679) was one of the most influential philosophers of the early modern period. Known today primarily for his work in political philosophy, Hobbes had wide ranging interests from mathematics and physics to history and translation. This course will meet weekly to read passages in Latin from the first book of Hobbes's masterpiece *The Leviathan*. It is open to undergraduates, graduates, and faculty of all reading levels. It can be audited with minimal commitment or taken as a course towards the satisfaction of the Philosophy Department's language requirement. Please contact the instructor if you would like to be placed (with no commitment) on the course e-mail distribution list.

Course Notes:

Texts available online through Hollis.

Foundations of Set Theory (221992)

Peter Koellner

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The program of inner model theory has led to a principle that has been proposed as a new axiom to be adopted, one that concerns not just a specific region of the universe of sets, but one that rather governs the entire universe of sets. Let us call such axioms "axioms of V" (where V is the universe of sets) and say that such axioms are part of "the theory of V". In this seminar we will approach the question: "What should a theory of V look like?" This will involve taking abstract approach, canvassing various general principles which have been proposed as "axioms of V" and seeing whether or not they are collectively consistent. The interest of "the theory of V" is that it is the analogue in mathematics of the "theory of everything" in physics. In addition to approaching our question from a technical point of view, along the way we shall address more philosophical questions such as: Are there reasons to believe that the hope for

a final theory is more realistic in the case of mathematics than in physics? Are there are general theorems which show that the various principles we think must hold of V cannot jointly hold? What are the philosophical presuppositions of the entire enterprise — is it legitimate or is it based on a fundamental misconception of the nature of truth in mathematics?

Social and Personal Identities (000247)

Mark Richard

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

We address two sets of related questions. The first set is from metaphysics: What sort of things are (human) persons? Is the person Mark Richard the human animal MR, or is he simply constituted by that animal? Are properties like his sexual characteristics, gender, ethnicity, and the like essential to him? The second set is from social philosophy: Assuming that social identities like gender and race are not biological properties, what are they? Are they in some sense socially constructed, and if so what exactly does that mean? Are they malleable in the sense that whether someone has such an identity is a matter of factors which can be affected by individual or group decisions?

Barry Mazur

Eric Maskin

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

What does it mean to say that two things are equal? The answer differs depending on whether we are comparing two formulae, as in mathematics; two countries' welfares, as in economics; or two individuals' treatments under the justice system, as in law. We will discuss the concept of equality from mathematical, economic, legal, philosophical and other vantage points in this seminar course, which will be limited to about 25.

Emotions (222504)

Shaun Nichols

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Should we feel guilty for hurting someone even if it was completely unforeseeable? How long should we grieve the loss of a loved one? Are there emotions it's never appropriate to feel? Emotion theorists take different approaches to answering such questions. One approach appeals to the function of the emotion: e.g., on a functional approach, fear is an appropriate response to danger because the function of fear is to facilitate effective responses to imminent dangers. The other approach appeals to the fit between the situation and the emotional response: e.g., on a fit-based approach, amusement is an appropriate response to The Onion because The Onion is funny. In this course, we will consider recent attempts to answer questions about when emotions are appropriate, drawing on both functional and fit-based accounts.

Greek in Translation (159750)

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Seneca was a Roman Stoic philosopher, essayist, celebrity, and renown playwright. Exorbitantly rich, he defended the virtues of poverty. Advisor to Nero, he insisted that political power is worthless. Maintaining that death is not evil, he was compelled to commit suicide in his sixty-ninth year. This course will meet weekly to read letters Seneca wrote to Lucilius near the end of his dramatic life. The course is open to undergraduates, graduates, and faculty of all reading levels. It can be audited with minimal commitment or taken for course credit. Please contact the instructor if you would like to be placed (with no commitment) on the course e-mail distribution list.

Preparation for the Topical Examination (111147)

Sean Kelly

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Philosophy 333 Section: 060

Preparation for the Topical Examination (111147)

Peter Koellner

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Philosophy 333 Section: 070

Preparation for the Topical Examination (111147)

Christine Korsgaard

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Philosophy 333 Section: 078

Preparation for the Topical Examination (111147)

Samantha Matherne

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Philosophy 333 Section: 080

Preparation for the Topical Examination (111147)

Jeffrey McDonough

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Philosophy 333 Section: 090

Preparation for the Topical Examination (111147)

Richard Moran

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Philosophy 333 Section: 100

Preparation for the Topical Examination (111147)

Bernhard Nickel

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Philosophy 333 Section: 110

Preparation for the Topical Examination (111147)

Mark Richard

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Philosophy 333 Section: 120

Preparation for the Topical Examination (111147)

Susanna Rinard

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Philosophy 333 Section: 140

Preparation for the Topical Examination (111147)

Thomas M. Scanlon

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Philosophy 333 Section: 150

Preparation for the Topical Examination (111147)

Gina Schouten

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Philosophy 333 Section: 160

Preparation for the Topical Examination (111147)

Amartya Sen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Philosophy 333 Section: 170

Preparation for the Topical Examination (111147)

Tommie Shelby

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Philosophy 333 Section: 180

Preparation for the Topical Examination (111147)

Susanna C. Siegel

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Philosophy 333 Section: 190

Preparation for the Topical Examination (111147)

Alison Simmons

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Philosophy 333 Section: 200

Preparation for the Topical Examination (111147)

Lucas Stanczyk

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Philosophy 333 Section: 210

Preparation for the Topical Examination (111147)

W. Hugh Woodin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Philosophy 333 Section: 220

Preparation for the Topical Examination (111147)

Patrick White

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Philosophy 333 Section: 230

Preparation for the Topical Examination (111147)

Zoe Johnson King

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Required in both fall and spring terms of all third-year graduate students in the Department.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Philosophy 344

Logic Colloquium (213419)

Peter Koellner

2025 Spring (4 Credits)

Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Philosophy 344

Logic Colloquium (213419)

Peter Koellner

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Physics

Subject: Physics

Physics 15A

Introductory Mechanics and Relativity (111164)

Julia Mundy

Stephen Adams

Anna Wang-Holtzen

2025 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

Newtonian mechanics and special relativity. Topics include vectors; kinematics in three dimensions; Newton's laws; force, work, power; conservative forces, potential energy; momentum, collisions; rotational motion, angular momentum, torque; static equilibrium, simple harmonic motion, damped and driven oscillations; gravitation; fictitious forces; fluids; special relativity.

Course Notes:

Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15a. Topics include experimental design, model testing, error analysis, basic programming, and oral presentations. PSI will meet weekly throughout the semester.

Recommended Prep:

Mathematics preparation at least at the level of Mathematics 1b concurrently is required. However, some elementary ideas from multivariable calculus may be used and students are encouraged to take Mathematics 21a concurrently.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
FAS: Course Level	Primarily for Undergraduate Students

Physics 15B

Introductory Electromagnetism (111896)

Carlos Arguelles Delgado

Gregorio Ponti

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an *undergraduate*-level course on electromagnetism. Topics include electrostatics, electric currents, magnetic field, electromagnetic induction, Maxwell's equations, electromagnetic radiation, magnetic fields in materials, and some basic notions in kinetic theory, entropy, temperature, and phase transition associated with electricity and magnetism.

Course Notes:

Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15b. The labs are designed to enhance your understanding of material presented in lectures. They also present applications of electricity and magnetism, as well as offering opportunities to build simple circuits and develop experience using measuring instruments, including oscilloscopes.

Recommended Prep:

We recommend that you take Physics 15a, Physics 16 (or you have a written permission from the Head Tutor in Physics). Mathematics preparation at least at the level of Mathematics 21a taken concurrently is required. Vector calculus (divergence, gradient, curl) is used extensively (and taught) in this course.

Physics 16

Mechanics and Special Relativity (111197)

Howard Georgi

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Newtonian mechanics and special relativity for students with good preparation in physics and mathematics at the level of the advanced placement curriculum. Topics include oscillators damped and driven and resonance (how to rock your car out of a snow bank or use a swing), an introduction to Lagrangian mechanics and optimization, symmetries and Noether's theorem, special relativity, collisions and scattering, rotational motion, angular momentum, torque, the inertia tensor (dynamic balance), gravitation, planetary motion and a little glimpse of quantum mechanics.

Course Notes:

Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 16. Topics include experimental design, model testing, error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester. Emphasis is placed on collaborative teaching and learning. Many class materials are Mathematics notebooks.

Recommended Prep:

Score of 5 on the mechanics section of the Physics C Advanced Placement exam, or equivalent. Mathematics preparation at least at the level of Mathematics 21a taken concurrently is required. Thorough knowledge of calculus of one variable and vectors plus some mathematical sophistication. The mathematical level will be significantly higher than that of Physics 15a. If in doubt, check the Canvas site ahead of time, or email the professor at hgeorgi@fas.harvard.edu, or just shop.

Additional Course Attributes:

Physics 19

Introduction to Theoretical Physics (207005)

Jacob Barandes

2024 Fall (4 Credits)

Schedule:

MWF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Physics 19 is a comprehensive introduction to the foundations of theoretical physics, with a first-principles approach to its five main areas: analytical mechanics, thermodynamics, fields, relativity, and quantum theory.

The course is aimed especially at those who are considering pursuing advanced study of physics in the concentration, as an option alongside Physics 15A and Physics 16. (Most physics concentrators start by taking either Physics 15A, 16, or 19.) The course is also meant for undergraduate and graduate students in other fields of study—such as math, philosophy, astronomy, biology, chemistry, computer science, and engineering—who are interested in developing a better understanding of physics either to serve the needs of their own academic work or as a first step toward switching their area of study to physics.

The purpose of the course is to present the foundations of modern theoretical physics in a welcoming setting for students from a variety of backgrounds. The course is intended to present a clear, faithful picture of what theoretical physics looks like. We will derive nearly everything from scratch in as self-contained a manner as possible—with occasional exceptions for special cutting-edge examples. We will also introduce all the necessary mathematics along the way.

Specific topics will include Newtonian mechanics, chaos, perturbation theory, orbital mechanics, the Lagrangian and Hamiltonian formulations, the connection between symmetries and conservation laws, statistical physics and thermodynamics, electromagnetism, special relativity, relativistic gravitation, black holes, and an extensive introduction to quantum theory. In-class discussions will regularly address relevant issues in the history and philosophy of physics, as well as the conceptual implications of our modern physical theories for making sense of the world around us.

Cooperation and diversity strengthen our academic community, so the course will prioritize collaboration and aim to provide a welcoming and inclusive environment for students with diverse identities and backgrounds. The instructor will help students form study groups as needed.

Course Notes:

Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 19. Topics will include experimental design, model testing, measurements, data collection, data and error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester, and will emphasize collaborative teaching and learning.

Recommended Prep:

The course will assume a working knowledge of single-variable differential and integral calculus at least at the level of Mathematics 1A, as well as a high comfort level with abstract concepts, but will not assume previous coursework in physics or multivariable calculus. Mathematics 1A is not a strict requirement, and students who are unsure whether they have adequate background should contact the instructor. The course will cover relevant topics from vector calculus, complex analysis, linear algebra, and other areas of mathematics as needed, so a prior familiarity with these subjects, while helpful, will not be required.

Physics 20

Introduction to Computational Physics (220605)

Efthimios Kaxiras

Logan McCarty

2024 Fall (4 Credits)

Schedule: TR 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap: n/a

This course is a systematic introduction to computing with python and jupyter notebooks designed for concentrators in physics and related fields. The course consists of two parts: 1. Basics: essential elements of computing, including types of variables, lists, arrays, iteration and control flow (for, while loops, if

statement), definition of functions, recursion, file handling and simple plots, plotting and visualization tools in higher dimensions. 2. Applications: development of computational skills for problem solving, including numerical and machine learning methods, and their use in deterministic and stochastic approaches; examples include numerical differentiation and integration, fitting of curves and error analysis, solution of simple differential equations, random numbers and stochastic sampling, and advanced methods like neural networks and simulated annealing for optimization in complex systems. Course work consists of attending lectures and labs, weekly homework assignments, a mid-term project and a final project; while work is developed collaboratively, coding assignments are submitted individually.

Course Notes:

Lectures meet concurrently with APMTH 10, although sections, homework and project assignments are different between the two courses.

Recommended Prep:

Multivariable calculus (e.g. Mathematics 21a) is a prerequisite. Introductory courses in physics, such Physics 15a, 16 or higher are useful for better understanding of the applications. The course provides an introduction to programming using python, and starts from the level of a complete beginner.

Supervised Research (111672)

Anna Klates

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Primarily for selected concentrators in Physics, or in Chemistry and Physics, who have obtained honor grades in Physics 15 and a number of intermediate-level courses. The student must be accepted by some member of the faculty doing research in the student's field of interest. The form of the research depends on the student's interest and experience, the nature of the particular field of physics, and facilities and support available. Students wishing to write a senior thesis can do so by arranging for a sponsor and enrolling in this course.

Course Notes:

A list of possible faculty sponsors and their fields is available in Lyman 238 and on the Physics Department Web page. Course enrollment forms may be obtained from Lyman 238.

Topics in Current Research (111967)

Aravinthan Samuel

2024 Fall (4 Credits)

Schedule: TBD

TBD

Instructor Permissions: None

Enrollment Cap: n/a

This tutorial is based on the Wednesday Night Seminars. Each Wednesday night, one or two Harvard faculty members introduce their research to interested students, including undergraduates enrolled in the course, as well as graduate students who would like to learn about the topics investigated. The talks illustrate how research is done, and provide research examples of projects graduate students might study if they join the group. Before each seminar, the enrolled students read examples of previous work, and in the Monday class, they present and discuss the concepts. Students learn how to express scientific concepts verbally, and in writing for their final report. The course is aimed at juniors and seniors who are familiar with the basics in classical mechanics, electricity and magnetism, and quantum mechanics.

Course Notes:

Primarily for junior and senior concentrators, however interested sophomores are welcome.

Electronics for Physicists (216641)

Masahiro Morii

Kathryn Ledbetter

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

24

Introduction to electronics for the physical sciences, focusing on skills applicable to laboratory work. Topics include instruments (multimeter, oscilloscope, function generator, power supply), analog circuits (amplifiers, filters, integrators), digital logic, analog/digital interfaces, noise reduction, PID control, and microcontrollers. Emphasis on circuit understanding and use of laboratory instrumentation. The class meets twice weekly, with an hour of lecture/discussion, followed by lab.

Recommended Prep:

Some familiarity with resistance, capacitance, inductance, and dc circuits (e.g., Physics 12B, 15B, or equivalent) is helpful; no prior coursework or experience with electronics is required.

Additional Course Attributes:

Physics 123

Laboratory Electronics (124108)

Kathryn Ledbetter

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

An introduction to electronic circuit design intended to develop circuit intuition and debugging skills through daily design exercises, discussion and hands-on lab exercises. The approach is intensely practical, minimizing theory. Moves quickly from passive circuits to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Notes:

Physics 123 is the same course as Physics 223; if you are a graduate student, please enroll in 223. Limited to 20 students. Physics 123 is also offered as Engineering Sciences 153. Students may not take both for credit. Undergraduate engineering students should enroll in Engineering Sciences 153.

Recommended Prep:

Some prior experience with computer programming, especially C or Arduino is helpful.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Physics 125

Widely Applied Physics (120167)

David Morin

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Uses physics to analyze important technologies and real-world systems. Stresses estimation and "back of the envelope" calculations, as are commonly used by research physicists. New physical concepts are introduced as necessary. Example topics: energy production and storage, nuclear physics, nuclear power and weapons, health effects of radiation, risk analysis, airplanes, spy satellites, rockets, fluids, water waves, mechanical design and failure, global warming, and cosmology. Emphasis is on developing physical intuition and the ability to do order-of-magnitude calculations.

Recommended Prep:

Physics 15a, b, c, and mathematics at the level of Mathematics 21a.
Physics 143a and 181 are very helpful, and may be taken concurrently.

Lene Hau

2025 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

With global warming and the climate crisis rapidly worsening, decarbonizing our society is more important than ever. In lectures, we will discuss the science behind possible solutions. The class will give students with an interest in physics, engineering, and/or physical chemistry a deep background in the field to optimally prepare them for making paradigm changing contributions in the future. We will cover photovoltaic cells, nuclear power, photosynthesis, and electrochemistry and batteries. Further subjects are covered in student projects. Fundamentals of electrodynamics, statistical/thermal physics, and quantum mechanics are taught as needed.

Recommended Prep:

Physics 15a (or 16), 15b,c or equivalent. Pre/co-requisite: Physics 143a or Chemistry 160 or equivalent.

One can consider this course as a general introduction and overview to theoretical physics, even though it centers on the theoretical aspects of classical mechanics. We will study problems in the mechanics of particle motion and also problems in continuum mechanics, including classical field theory. We will consider linear systems and non-linear ones. We stress the role of conserved quantities in studying the laws of physics, and emphasize the relation between conserved quantities and symmetry. We study Lagrangian and Hamiltonian mechanics from the point of view of their relation to different fields of physics, including quantum theory. We discuss soliton solutions to some non-linear classical equations. Time permitting, we will discuss other non-linear phenomena that are important in physics.

Recommended Prep:

Physics 15a, 15b or written permission of the Head Tutor; Mathematics 21a, b or equivalent.

n/a

Introduction to laser physics and modern optical physics aimed at advanced undergraduates. Review of electromagnetic theory and relevant aspects of quantum mechanics. Wave nature of light. Physics of basic optical elements. Propagation of focused beams, optical resonators, dielectric waveguides. Interaction of light with matter, introduction to quantum optics. Lasers. Physics of specific laser systems. Introduction to nonlinear optics. Modern applications.

Recommended Prep:

Physics 15b, 15c, 143a, or permission of the instructor.

Physics 181

Statistical Mechanics and Thermodynamics (143450)

Susanne Yelin

2025 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course provides an introduction to statistical mechanics and thermal physics. It surveys the fundamental elements of classical and quantum statistical mechanics (ensembles and partition functions) and thermodynamics (temperature, heat, work, free energy) and their application to a variety of physical systems. Topics covered may include heat engines, solid-state physics, blackbody radiation, phase transitions, physical chemistry, stellar physics, quantum information, Bose-Einstein condensation, and transport phenomena.

Course Notes:

May not be taken for credit in addition to Engineering Sciences 181.

Recommended Prep:

Physics 143a or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Physics 187R

Thinking Through Writing: Science Themes | 2023: The Time Things Take (222725)

Melissa Franklin

Claire Messud

2024 Fall (4 Credits)

Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

This is an open-enrollment writing course, cross-listed in both English and Physics, that requires writing 300 words a day, 4 days a week, all semester, responding to prompts. The writing portion of the class aims to enable students above all to explore writing freely, with the expectation that they will learn how to express themselves more lucidly and effectively as they grow in literary understanding. This year's theme is "The Time Things Take". In science, we ask questions like: what is the lifetime of a particle; how long does it take for raindrops to fall; how long does it take the universe to expand; how long does it take a rocket ship to reach infinity. And we ask ourselves how we might measure these times. This course will consider scientific concepts, the questions we can pose about them, and the thought experiments we might perform. The literary portion of the class involves close readings of these texts from a writerly perspective, also addressing questions of time and narrative, including pacing and form. We will examine precision in

diction and syntax, the use of metaphor and other rhetorical strategies.

The course has no prerequisites in either English or Physics. There will be no problem sets. The course will involve two lectures per week + a section. The final assessment will be a portfolio and a presentation.

Course Notes:

Physics 187r is also offered as English 187r. Students cannot take both courses for credit.

Additional Course Attributes:

Physics 191

Advanced Laboratory (121993)

Amir Yacoby

Isaac Silvera

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Students will engage in the practice and discussion of experimental science by completing three projects, drawn from the fields of condensed matter, atomic, optical, nuclear, and/or particle physics. Laboratory techniques, theoretical understanding, data analysis methods, and scientific reading and writing skills are developed in collaboration with a lab partner, and with guidance from a team of experimental physics faculty and staff. Students will learn to write the results of each project in a format that is appropriate for a peer-reviewed journal. Available experiments range from classics of the twentieth century such as relativistic mass of the electron, lifetime of the muon, superfluid helium, and the quantum Hall effect, to topics of current interest such as slow light, nitrogen-vacancy centers in diamond, superconductivity and the Meissner effect, optical tweezers, and ultrafast optical spectroscopy.

Course Notes:

A substantial amount of outside reading is expected. Physics 191 is the same course as Physics 247; if you are a graduate student, please enroll in 247.

Recommended Prep:

Physics 15a or 16, 15b, 15c. Physics 143a is highly recommended; 181 is also useful.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Physics 195A

Introduction to Solid State Physics (112107)

Julia Mundy

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); x-ray diffraction; electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); magnetism; superconductivity.

Course Notes:

Physics 195a is also offered as Applied Physics 195a. Students may not take both for credit.

Recommended Prep:

Physics 15a, 15b and 15c or the equivalent. Physics 143a. Physics 181 and Physics 143b (taken concurrently) helpful but not required.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

FAS: Course Level	For Undergraduate and Graduate Students

Physics 210

General Theory of Relativity (114266)

Jacob Barandes

2025 Spring (4 Credits)

Schedule:

MWF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to general relativity: the principle of equivalence, Riemannian geometry, Einstein's field equation, the Schwarzschild solution, the Newtonian limit, experimental tests, black holes.

Recommended Prep:

Physics 143a (quantum mechanics), 151 (mechanics) and 153 (electromagnetism), and Mathematics 21 (multivariable calculus) or equivalents.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 212

Cosmology (203431)

Cora Dvorkin

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Graduate course on Physical Cosmology. Topics will include: the physics of Inflation, Cosmic Microwave Background anisotropies, evidence for Dark Matter, discovery of the accelerated expansion of the Universe, primordial gravitational waves, gravitational lensing, likelihood analysis, structure formation.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Physics 223

Electronics for Scientists (109346)

Kathryn Ledbetter

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

An introduction to electronic circuit design intended to develop circuit intuition and debugging skills through daily design exercises, discussion and hands-on lab exercises. The approach is intensely practical, minimizing theory. Moves quickly from passive circuits to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Notes:

Physics 223 is the same course as Physics 123; if you are an undergraduate student, please enroll in 123. Limited to 20 students.

Recommended Prep:

Some prior experience with computer programming, especially C or Arduino is helpful.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Physics 230

Active Matter (220552)

L Mahadevan

2025 Spring (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Active matter describes out of equilibrium systems that consume energy to do work and become functional. Understanding their behavior and function has implications for biology and complex systems across scales, from cells to ecosystems, e.g., morphogenesis, collective behavior of flocks and herds, neurodynamics of locomotion, etc. The tools and concepts needed include non-equilibrium statistical mechanics, kinetic theory, soft matter, and hydrodynamics; methods for the analysis of the models include scaling, coarse-graining (homogenization, renormalization) and computational algorithms (for stochastic and deterministic DE). This course will provide an introduction to the questions, techniques and successes of this exploding field that cuts across the physical and biological sciences.

Course Notes:

Open only to PhD students and [AB/SM students or advanced undergraduate students] by permission of instructor. Physics 230 is also offered as Applied Math 230. Students may not take both for credit.

Recommended Prep:

Applied Mathematics 105, Applied Mathematics 201, Physics 153, Physics 181, Engineering Sciences 220, Engineering Sciences 240, or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Physics 231

Computational Neuroscience (217838)

Haim Sompolinsky

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Course Notes:

Also offered as Neuro 231 and MCB 231. Cannot be taken for credit as Physics 231 if Neuro 231 or MCB 231 is already complete.

Recommended Prep:

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements:

Anti-Requisite: Cannot be taken for credit if MCB 131 or Neuro 131 already complete.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Quantum Field Theory I (122930)

Matthew Schwartz

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to relativistic quantum field theory. This course covers quantum electrodynamics. Topics include canonical quantization, Feynman diagrams, spinors, gauge invariance, path integrals, ultraviolet and infrared divergences, renormalization and applications to the quantum theory of the weak and gravitational forces.

Recommended Prep:

Physics 143a, b or equivalents.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Physics 253B

Quantum Field Theory II (115442)

Matthew Schwartz

2025 Spring (4 Credits)

Schedule:

WF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A continuation of physics 253a. Topics include non-renormalizable theories, infrared divergences, the renormalization group, non-Abelian gauge theories, spinor helicity methods, spontaneous symmetry breaking, weak interactions, anomalies and quantum chromodynamics. Additional or alternative topics may be covered depending on time and interest.

Recommended Prep:

Physics 253a.

Additional Course Attributes:

Attribute	Value(s)

FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Physics 253CR

Quantum Field Theory III (118459)

Matthew Reece

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to conformal field theories: conformal bootstrap via the conformal block expansion and semidefinite optimization, the Ising model in 2 and 3 dimensions, and the maximally supersymmetric Yang-Mills theory in four dimensions.

Recommended Prep:

Familiarity with perturbative quantum field theory, Green functions and the S-matrix, basic knowledge of the renormalization group and the epsilon expansion, quantization of non-Abelian gauge theories and asymptotic freedom.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Physics 254

The Standard Model (109328)

Matthew Reece

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

The Standard Model of particle physics: theory and experimental implications. Topics include nonabelian gauge theory, spontaneous symmetry breaking, anomalies, the chiral Lagrangian, QCD and jets, collider physics and simulation, the Higgs at the LHC.

Recommended Prep:

Introductory relativistic field theory, at the level of Physics 253a.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Physics 260B

Introduction to quantum information II (224016)

Mikhail Lukin

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to quantum information science and quantum computation. Emphasis on fundamental concepts including qubits and quantum operations, the nature of entanglement and its manipulation, quantum error correction, and various implementation models. Topics include: basics of quantum information, different models of quantum computing, fundamental quantum algorithms, quantum error correction, and fault tolerance; as well as experimental implementations. Recent developments in the field will be discussed.

Course Notes:

Physics 260b is also offered as QSE-210b. Students may not take both for credit.

Recommended Prep:

Physics 260a or QSE 210a.

Additional Course Attributes:

Attribute	Value(s)

Physics 262

Statistical Mechanics (110526)

Vinothan Manoharan

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Basic principles of statistical physics with applications including: the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical points, as illustrated by the gas-liquid transition and simple magnetic models; Bose-Einstein condensation.

Course Notes:

Also offered as Applied Physics 284. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program.

Recommended Prep:

Physics 143a and Physics 181 or Engineering Sciences 181.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Physics 268R

Quantum Phases of Matter (147979)

Ashvin Vishwanath

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A survey of the phases of correlated electron materials and synthetic quantum matter, both with and without an energy gap above the ground state.

1. Quantum phase transition in the Ising model
2. Fermi liquid theory
3. Disordered Fermi liquids, and their transport
4. Sachdev-Ye-Kitaev model of a non-Fermi liquid
5. Quantum phase transitions in metals: non-Fermi liquids
6. Disordered non-Fermi liquids and strange metals
7. Bose gas and superfluidity
8. Bose Hubbard model
9. Z₂ spin liquids and Z₂ gauge theory
10. Dualities of XY models and U(1) gauge theories
11. Boson-fermion and fermion-fermion dualities
12. Gapless spin liquids: application to the cuprate superconductors

Recommended Prep:

Graduate courses in quantum mechanics and statistical mechanics, including familiarity with second quantization and path integrals.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 271

Topics in the Physics of Quantum Information (121970)

Mikhail Lukin

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to physics of quantum information, with emphasis on ideas and experiments ranging from quantum optics to condensed matter physics. Background and theoretical tools will be introduced. The format is a combination of lectures and class presentations.

Recommended Prep:

Quantum mechanics at the level of introductory graduate courses.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 285B

Modern Atomic and Optical Physics II (118509)

Susanne Yelin

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to quantum optics and modern atomic physics. The basic concepts and theoretical tools will be introduced. Topics will include coherence phenomena, non-classical states of light and matter, atom cooling and trapping and atom optics. The second of a two-term subject sequence that provides the foundations for contemporary research.

Course Notes:

Also offered as QSE 285B. Students may not take both for credit

Recommended Prep:

A course in electromagnetic theory (Physics 232a or equivalent); one half-course in intermediate or advanced quantum mechanics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 286

Inference, Information Theory, Learning and Statistical Mechanics (138516)

Sharad Ramanathan

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

35

This course focuses on the modern applications of Statistical Mechanics. We will learn the basics of information theory, coding and compression. We will next learn about Bayesian Inference, priors and maximizing entropy, which will naturally lead us to regularization and compressed sensing. We will then cover learning: support vector machines, vc dimension, supervised, reinforcement and unsupervised learning. These topics, which build on each other, will be taught using examples in the primary literature with an emphasis on applying the framework we develop. Applications will be taught through problems in genomics, neuroscience, geophysics and engineering.

Course Notes:

Physics 286 is also offered as Applied Physics 286. Students may not take both for credit.

Recommended Prep:

Comfort with Linear Algebra, Calculus is necessary. Undergraduate Statistical Mechanics would be useful but not necessary.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 287A

Introduction to String Theory (111191)

Xi Yin

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the perturbative formulation of string theories and dualities. Quantization of bosonic and superstrings, perturbative aspects of scattering amplitudes, supergravity, D-branes, T-duality and mirror symmetry. Also a brief overview of recent developments in string theory.

Recommended Prep:

Physics 253a, b or equivalent.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Physics 287BR

The String Landscape and the String Swampland (114008)

C. Vafa

2024 Fall (4 Credits)

Schedule:

F 0200 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A selection of topics from current areas of research on string theory with focus on String Landscape constructions and restrictions on effective field theories for consistency of quantum gravity (the Swampland program).

Recommended Prep:

Physics 287a.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Physics 287CR

Beyond the Standard Model (160571)

Lisa Randall

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

We will study beyond the Standard Model theories with an eye both to phenomenological consequences and to connections to high energy theory. We will study supersymmetry as well as extra-dimensional theories. If time permits we will also study light axions and axion-like particles and ways of detecting them.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Physics 295A

Introduction to Quantum Theory of Solids (127980)

Subir Sachdev

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

P295a is an introductory graduate level course in solid-state physics. Lattices and symmetries. Phonons and electronic structure of crystals. Metals, semiconductors, and insulators will be covered. Electrical, optical, and thermal properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Additional topics selected from the integer quantum hall effect, an introduction to topological insulators with edge states and the theory of interacting electrons.

Course Notes:

Also offered as Applied Physics 295a. Students cannot take both for credit.

Recommended Prep:

One course on graduate quantum mechanics and one course on graduate statistical mechanics. Undergraduate course on solid state physics helpful, but not necessary.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Physics 295B

Quantum Theory of Solids (127979)

Subir Sachdev

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A course on the application of the principles of many-particle quantum mechanics to the properties of solids. The objective is to make students familiar with the tools of second quantization and diagrammatic perturbation theory, while describing the theory of the electron liquid, the BCS theory of superconductivity, and theory of magnetism in metals and insulators. Modern topics on correlated electron systems will occupy the latter part of the course.

Course Notes:

Physics 295b is also offered as Applied Physics 295b. Students may not take both for credit.

Recommended Prep:

Physics 251a,b, an introductory course in solid state physics, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 296

Mesoscale and Low Dimensional Devices (214614)

Donhee Ham

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits.

Course Notes:

Also offered as Applied Physics 296 and as QSE 296. Students may not take both for credit.

Recommended Prep:

Undergrad level condensed matter physics (AP/P195).

Additional Course Attributes:

FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 297

Professional Writing for Scientists and Engineers (217830)

Suzanne Smith

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This class leads students to develop their skills in the critical reading and writing of science and

engineering. Genres will include research articles, grant proposals, school/fellowship/job applications, or lay abstracts & press releases for the non-scientific public. Crucially, students will be empowered not only to achieve their own writing goals, but also to break down these learned skills and impart them to others, as effective collaborators and mentors of younger students.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 297

Professional Writing for Scientists and Engineers (217830)

Suzanne Smith

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

6

No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 314A

Ultrafast dynamics of quantum materials (216655)

Matteo Mitrano

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Physics 314B

Ultrafast dynamics of quantum materials (216656)

Matteo Mitrano

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 314B

Ultrafast dynamics of quantum materials (216656)

Matteo Mitrano

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Physics 315A

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics (121332)

Eric Heller

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 315A

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics (121332)

Eric Heller

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Physics 315B

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics (145282)

Eric Heller

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Physics 315B

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics (145282)

Eric Heller

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Physics 316A

Topics in biophysics and physical chemistry (215741)

Adam Cohen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Physics 316A

Topics in biophysics and physical chemistry (215741)

Adam Cohen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 316B

Topics in biophysics and physical chemistry (215742)

Adam Cohen

2025 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 316B

Topics in biophysics and physical chemistry (215742)

Adam Cohen

2024 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Physics 317A

Topics in Biophysics (119763)

Xiaowei Zhuang

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Physics 317A

Topics in Biophysics (119763)

Xiaowei Zhuang

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Physics 317B

Topics in Biophysics (119764)

Xiaowei Zhuang

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Physics 317B

Topics in Biophysics (119764)

Xiaowei Zhuang

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Physics 318A

High-Energy Neutrino Physics (216657)

Carlos Arguelles Delgado

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO

Physics 318A

High-Energy Neutrino Physics (216657)

Carlos Arguelles Delgado

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 318B

High-Energy Neutrino Physics (216658)

Carlos Arguelles Delgado

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Physics 318B

High-Energy Neutrino Physics (216658)

Carlos Arguelles Delgado

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Physics 331A

Topics in String Theory (125320)

Xi Yin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Physics 331B

Topics in String Theory (125321)

Xi Yin

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Physics 331B

Topics in String Theory (125321)

Xi Yin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Physics 333A

Experimental Atomic Physics (112040)

Mara Prentiss

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Physics 333A

Experimental Atomic Physics (112040)

Mara Prentiss

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Physics 333B

Experimental Atomic Physics (112042)

Mara Prentiss

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Physics 333B

Experimental Atomic Physics (112042)

Mara Prentiss

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 334A

Theoretical and Experimental Evolutionary Dynamics (219976)

Michael Desai

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Physics 334A

Theoretical and Experimental Evolutionary Dynamics (219976)

Michael Desai

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 334B

Theoretical and Experimental Evolutionary Dynamics (219977)

Michael Desai

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Physics 334B

Theoretical and Experimental Evolutionary Dynamics (219977)

Michael Desai

2025 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Physics 337A

Topics in Experimental High Energy Physics (114834)

Masahiro Morii

2024 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Physics 337A

Topics in Experimental High Energy Physics (114834)

Masahiro Morii

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 337B

Topics in Experimental High Energy Physics (114835)

Masahiro Morii

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Physics 337B

Topics in Experimental High Energy Physics (114835)

Masahiro Morii

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Physics 339A

Condensed Matter and Atomic Physics (120869)

Subir Sachdev

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Physics 339A

Condensed Matter and Atomic Physics (120869)

Subir Sachdev

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Graduate Course

Physics 339B

Condensed Matter and Atomic Physics (120868)

Subir Sachdev

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Physics 339B

Condensed Matter and Atomic Physics (120868)

Subir Sachdev

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Physics 340A

Topics in Many-body Atomic and Condensed Matter Physics (219983)

Norman Yao

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 340A

Topics in Many-body Atomic and Condensed Matter Physics (219983)

Norman Yao

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 340B

Topics in Many-body Atomic and Condensed Matter Physics (219984)

Norman Yao

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 340B

Topics in Many-body Atomic and Condensed Matter Physics (219984)

Norman Yao

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 341A

Topics in Experimental Atomic and Condensed Matter Physics (111169)

Markus Greiner

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Physics 341A

Topics in Experimental Atomic and Condensed Matter Physics (111169)

Markus Greiner

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Physics 341B

Topics in Experimental Atomic and Condensed Matter Physics (118950)

Markus Greiner

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Physics 341B

Topics in Experimental Atomic and Condensed Matter Physics (118950)

Markus Greiner

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Dissertation research. Not a lecture or seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Physics 342A

Topics in High Energy Physics and Cosmology (223029)

Sonia Paban

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture of seminar course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Physics 342A

Topics in High Energy Physics and Cosmology (223029)

Sonia Paban

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Reading and research. Not a lecture of seminar course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Subject: Physical Sciences

Physical Sciences 2

Mechanics, Elasticity, Fluids, and Diffusion (122575)

Gregory Kestin

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to classical mechanics, with special emphasis on the motion of biological systems, from proteins to people. Topics covered include: kinematics, Newton's laws of motion, oscillations, elasticity, random walks, diffusion, and fluids. Examples and problem set questions will often be drawn from the life sciences and medicine.

Recommended Prep:

Physical Sciences 1 (or Chemistry 7), Mathematics 1b, or the equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Physical Sciences 3

Electromagnetism, Circuits, Waves, Optics, and Imaging (122576)

Timothy Milbourne

Stephen Adams

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction to electromagnetism, waves, optics and sound. Topics covered include: electric and magnetic fields, electrical potential, circuits, simple digital circuits, wave propagation in various media, microscopy, sound and hearing. The course will draw upon a variety of applications to the biological sciences and will use real-world examples to illustrate many of the physical principles described. There are six required laboratory sessions, and a weekly asynchronous discussion section.

Course Notes:

This course is part of an integrated introduction to the physical sciences intended for students who plan to pursue a concentration in the life sciences and/or satisfy pre-medical requirements in Physics. May not ordinarily be taken for credit in addition to Physics 15b.

Recommended Prep:

Physical Sciences 2, Mathematics 1b, or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Physical Sciences 12A

Mechanics and Statistical Physics from an Analytic, Numerical and Experimental Perspective (109274)

Kathryn Ledbetter

Gregorio Ponti

2025 Spring (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This is the first term of a two-semester introductory course in physics. The focus is on quantitative scientific reasoning, with the first term exploring Newtonian mechanics. Topics include kinematics, linear and rotational motion, forces, energy, momentum, collisions, gravitation, oscillations, and waves, with a brief introduction to statistical physics. Examples are drawn from across the physical sciences and engineering.

Students will gain competence in both analytic (pencil and paper) and computational tools (programming in Python) used by scientists to model simple physical systems and analyze experimental data, including problem solving, basic programming, measurement of physical quantities, and chi squared model testing and curve fitting.

The course is aimed at first year students who have an interest in pursuing a concentration in the sciences or engineering. The course includes lecture, laboratory, and discussion components.

Recommended Prep:

Students should be comfortable performing basic derivatives and integrals of a single variable. This course presumes no prior experience with calculus-based physics or programming.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
Quantitative Reasoning with Data	Yes
FAS: Course Level	Primarily for Undergraduate Students

Physical Sciences 12B

Electromagnetism from an Analytic, Numerical and Experimental Perspective (109457)

Sonia Paban

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This is the second term of a two-semester course sequence of introductory physical science and engineering. The focus is on quantitative scientific reasoning, with the second term exploring classical electricity and magnetism. Topics include electrostatics and magnetostatics, analog circuits, electromagnetic fields, and optics. Examples are drawn from across the physical sciences and engineering.

The course assumes familiarity with mechanics, experimental physics, and computational techniques covered in Physical Sciences 12a offered during Spring Term (see course description). Students will further develop competence in both analytic (using pencil, paper, and multi-variable calculus) and numerical methods (using the Python programming language) to model simple physical systems and to analyze experimental data.

The course is aimed at second year students who have an interest in pursuing a concentration in the sciences or engineering. The course includes lecture, laboratory, and discussion components.

Course Notes:

May not be taken for credit by students who have passed Physics 15b or Physics 15c.

Requirements:

Pre-Req: PS12A OR APMTH 10 OR Co-Req: APMATH 10

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
Quantitative Reasoning with Data	Yes

Physical Sciences 70

Introduction to Digital Fabrication (215717)

Nathan Melenbrink

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

An immersive introduction to rapid prototyping, fusing physics, design, computer science, engineering, and art. Students will learn to safely use software and hardware to fabricate programmable projects. Tools and topics will include programmable microcontrollers, 3D CAD/CAM, electronic circuit design, and wireless networking (Internet of Things). Additionally, students will learn operational principles for techniques such as laser cutting, 3D printing, and computer-controlled milling. The course will culminate with an individual final project of the student's own conception, integrating as many of the weekly topics as possible. The course emphasizes self-directed learning, and supports students in accessing resources to help advance the development of their unique projects. Applications may include personal fabrication, product prototyping, fine arts, and the creation of scientific research tools. Students will document work on each weekly topic in a personal website, thereby finishing the course with an online portfolio that not only illustrates their new skill sets, but also contributes to a collective repository of knowledge that serves as a foundation for continued learning.

Course website: <https://tinyurl.com/tasr7b6>

Related Sections: In addition to class times, students enroll in a lab section where they will interact with course staff for hands-on assignment work. The shop will also remain open to enrolled students at additional times throughout the week.

Course Notes:

Attendance is mandatory since safety training will occur during class times. Class will meet twice each week. The first meeting will consist of a brief review of the previous week's assignment, followed by a short introduction to the current week's topic and assignment. The second meeting will primarily focus on a hands-on training session for the accompanying assignment. Meetings may also include appearances by

guest presenters or experts on a particular topic.

Recommended Prep:

There are no formal prerequisites for this course. Students are expected to provide their own laptop computer (tablets and Chromebooks are not sufficient for some of the software required for this course, but workarounds may be available -- please contact course staff with concerns). This course is accessible to those with no prior experience. For students already familiar with some of the topics, it will be an opportunity to explore further.

Population Health Sciences 2000A

Quantitative Research Methods in Population Health Sciences I (203329)

Jarvis Chen

Issa Dahabreh

2024 Fall (4 Credits)

Schedule: MT 1130 AM - 0100 PM

Instructor Permissions: Instructor

Enrollment Cap: 50

This is part one of a two part core year-long quantitative methods course for the Population Health Science PhD students at the School of Public Health. The course integrates methods and concepts from the various disciplines represented by Population Health Sciences to equip students with the methodological tools to conduct their own research as well as collaborate across fields of study and areas of specialization. PHS2000A covers foundational statistical methods including linear and logistic regression, generalized linear models, survival analysis, longitudinal data analysis, and multilevel modeling. Discussion will be given to important concepts including sampling, measurement, model specification, interpretation, estimation, and diagnostics. Coursework will consist of two weekly lectures and a weekly lab session, problem sets, and exams. R is the main statistical computing software that will be used in the course.

Course Notes:

This course is reserved for first-year PhD students in Population Health Sciences. Population Health Sciences PhD students are required to register for both semesters of this course and to achieve a final average grade of B or higher.

Requirements:

Requisite: Course open to First Year GSAS (G1) Students Only

Additional Course Attributes:

Attribute	Value(s)

Population Health Sciences 2000B

Quantitative Research Methods in Population Health Sciences II (203330)

Jarvis Chen

Margaret McConnell

2025 Spring (4 Credits)

Schedule:

MTR 1130 AM - 0100 PM

Instructor Permissions: None

Enrollment Cap:

50

This is part two of a two part core year-long quantitative methods course for the Population Health Science PhD students at the School of Public Health. The course integrates methods and concepts from the various disciplines represented by Population Health Sciences to equip students with the methodological tools to conduct their own research as well as collaborate across fields of study and areas of specialization. Part two of the course focuses on scientific inference and causal reasoning in the population health sciences and will provide an overview of methods for sensitivity analysis, interaction, mediation, propensity scores, time-varying exposures, measurement and correction for measurement error, instrumental variables, regression discontinuity designs, difference-in-difference methods, time series, missing data, multiple testing, replication, and meta-analysis. Emphasis will be placed on understanding the basic definitions, assumptions, and methodology. Students will be referred to further readings and courses to gain more detailed understanding. Coursework will consist of two weekly lectures and a weekly lab session, problem sets, and exams. Various software resources will be used throughout the course, with R being the main statistical computing platform used. The course will prepare students to critically read through the empirical population health science literature, and to implement a number of different methods in their own research.

Course Notes:

This course is reserved for first-year PhD students in Population Health Sciences. Population Health Sciences PhD students are required to register for both semesters of this course and to achieve a final average grade of B or higher.

Psychology

Subject: Psychology

Psychology 1

Introduction to Psychological Science (123941)

Steven Pinker

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Psychology 1 is not just an introduction to the field of psychology but an owner's manual for the human mind — and an opportunity to explore some of the most fascinating issues in intellectual life. After laying a foundation in concepts about the brain, evolution, information, nature and nurture, and scientific approaches to psychology, the course covers specific topics including perception, cognition, attention, learning, memory, emotion, decision making, consciousness, development, language, personality, individual differences, psychopathology, social cognition, cooperation and conflict, and love and sex.

Requirements:

Anti-Req: Cannot be taken for credit if SLS 20 already complete.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Social Sciences

Psychology 1

Psychology 11

Cognition: How the Mind Works (224144)

Elika Bergelson

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course focuses on the impressive human cognitive capacity, asking what a mind is and how we can find out. We will cover great debates, methods, and foundational topics within Cognitive Science and Cognitive Psychology, spanning questions like how we think, decide, remember, talk, perceive, and make meaning. Students in this course will gain experience (a) reading and evaluating classic texts, cutting-edge empirical research, and popular science, and (b) learning analytic skills they can apply to understanding basic cognitive phenomena, and how they can be measured, described, or predicted at different levels of representation. This is a lecture course intended as a foundational course for Psychology concentrators but also intentionally accessible for the Cognitive Science-curious in related areas like linguistics, philosophy, computer science, neuroscience, education, and anthropology.

Course Notes:

This course counts toward foundational requirements for Psychology and should be taken before courses at the 1000 level or higher.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) before enrolling in this course; or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)

Cognitive Neuroscience (126551)

Daniel Schacter

Elizabeth Phelps

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

How do our brains give rise to our minds? Specifically, how are mental processes related to neural activity? This course will explore these questions, as well as the methods by which cognitive neuroscience seeks to answer them. We will focus on processes within perception, attention, memory, language, action, emotion, and social cognition, and methods including neuroimaging, neuropsychology, and electrophysiology.

Course Notes:

This course counts toward foundational requirements for Psychology and should be taken before courses at the 1000 level or higher.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory

psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) before enrolling in this course; or permission of instructor.

Social Psychology (114178)

Fiery Cushman

2024 Fall (4 Credits)

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to social psychological research and theory regarding everyday behavior, incorporating methods from the life sciences (neuroscience, genetics, evolutionary biology). Topics include: attitudes and social influence; obedience to authority; stereotyping, prejudice, and intergroup relations; emotion; interpersonal attraction; morality and prosocial behavior; and errors of everyday human judgment

Course Notes:

This course counts toward foundational requirements for Psychology and should be taken before courses at the 1000 level or higher.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or 1B=7 or Psyc S-1) before enrolling in this course for all freshmen and sophomores and for all students completing a concentration or secondary field in psychology.

Requirements: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1

Additional Course Attributes:

Psychology 910R

Supervised Research (110768)

Jill Hooley

Katherine Powers

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Independent empirical research (laboratory or field) conducted under the supervision of a Psychology Departmental faculty member or Board of Honors Tutors member. Research report or equivalent paper required. May be taken up to three times for College credit; limits on research courses for concentration credit apply.

The Psychology 910R Application is required for admission, which can be found at <https://undergrad.psychology.fas.harvard.edu/forms>. You must submit the completed and signed application to the Psychology Undergraduate Office - either in-person at William James Hall 218, or via e-mail at psychology@wjh.harvard.edu - by 4 PM the weekday before the Course Registration Deadline. Following initial course registration, PSY910R can only be added before 4 PM on the day of the Open Add/Drop deadline each semester.

Course Notes:

This course is administered by the Psychology Undergraduate Office.
Email psychology@wjh.harvard.edu for questions about the course.

Contemporary Issues in Psychology: Intensive Cross-level Analyses (113094)

Jill Hooley

Katherine Powers

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Examines selected issues and phenomena in contemporary psychological research. Special attention to examining topics from a variety of perspectives, to reading primary sources in the field, and to developing thinking, writing, research, and discussion skills. This tutorial, or Psychology 975, is required of concentrators upon entering the concentration, normally in the sophomore year. Letter graded.

Course Notes:

Please visit the Canvas course website for important information about the specific deadlines and processes for enrolling in this course. Section placements will occur before the first day of classes. Students may take this course before formally declaring Psychology as their concentration. PSY 971 and PSY 975 are interchangeable for Psychology requirements.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) before enrolling in this course; or permission of instructor.

Psychopathology and the Family (212743)

Jill Hooley

Katherine Powers

2024 Fall (4 Credits)

Schedule:

F 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

In this course, we will explore how the family impacts psychopathology, including relapse, recovery, and resilience, for a member with a mental disorder. We will examine the relationship between the family and mental health conditions like anxiety, autism, depression, personality disorders, and schizophrenia from a life course and a family systems perspective. We will also examine these relationships by discussing the biopsychosocial features of the family that impact child and adolescent psychopathology. The course will focus on contemporary approaches to family life (e.g., dual-earner families, gender equality, LGBTQ+

families, etc.), and the role these approaches play in family functioning. The course will also examine the impact the current COVID-19 pandemic is having on family systems, as well as the increased need for telehealth services.

Class Notes: The instructor of this course is John Knutsen, john_knutsen@g.harvard.edu.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

Psychology 980CL

Psychology and Criminal Law (220475)

Jill Hooley

Katherine Powers

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

16

Why do eyewitnesses often identify the wrong suspect? Why would an innocent person confess to a crime they did not commit? Can we predict who will commit a violent crime in the future? This course examines how behavioral science can be used to answer these and other questions central to the legal system. Psychologists with expertise at the intersection of psychology and criminal law conduct empirical research, interpret study findings and provide explanations to judges and juries, evaluate the mental states of criminal defendants and victims, consult with attorneys and law enforcement agencies, and serve in a variety of roles to help improve the fairness of our criminal justice system. Drawing on key areas of research from clinical and social psychology, we will delve into theories of criminal behavior, forensic evaluation, the role of bias in the courtroom, false confessions, eyewitness testimony, and deception. Research will be applied to real-world cases.

Class Notes: The instructor is Lindsey Davis, lindsey_davis@williamjames.edu.

Recommended Prep: The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology 980HU

Psychology of Humor (218334)

*Jill Hooley**Katherine Powers*

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 16

What makes some jokes funny but others dull? Why does the act of laughing feel good? From an evolutionary perspective, if seeking food, finding mates, and detecting predators served a clear purpose, what could be gained by mirthful laughter? What benefits could justify the energy cost of laughing? The answers to these questions are deeply rooted in ancient neurocognitive mechanisms that evolved over long periods of time. In this course, we will critically evaluate scientific perspectives on humor from different subfields of psychology including clinical psychology, social psychology, and cognitive neuroscience. Covered topics will include different styles of humor, why some jokes are funnier when we laugh with friends, why it feels hurtful when others laugh at us, and how humor and laughter are affected across certain mental health disorders.

Class Notes:

The instructor of this course is Arkadiy Makimovsky,
amaksimovskiy@g.harvard.edu.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Clinical Psychology in Everyday Life (207581)

*Jill Hooley**Katherine Powers*

2025 Spring (4 Credits)

Schedule: M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 16

The goal of this course is to give you exposure to the types of evidence-based psychological interventions available for many clinical and non-clinical conditions, such as sadness, anxiety, substance use, and arguments with your significant other. Through this seminar, you will learn to notice and apply principles of psychological intervention to the world around you, not only in theory but also in practice. The seminar is not a self-help program or a training program for providing therapeutic services to others. Instead, the weekly discussions, exercises, and assignments will help you view the world through the lens of a scientist-practitioner – and apply those insights to everyday life in a scientific manner.

Course Notes:

This is the same course as PSY 1852 Clinical Psychology in Everyday Life, which has been offered previously. Students who have taken 1852 cannot enroll in this course.

Class Notes:

The instructor is Lauren Santucci, lsantucci@fas.harvard.edu.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

Psychology 980PS

Psychosis (224349)

Jill Hooley

Katherine Powers

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 16

Psychosis is among the most mysterious states of the human mind. When someone experiences psychosis they can struggle to tell the difference between what is real and what is not. Psychosis, which can result from mental illness, exposure to trauma, stress, illness, substance use and even surgery, impairs overall functioning and may leave a person confused and distressed. In this course, we will gain a comprehensive understanding of this dynamic area of clinical science research by focusing on the following topics: 1) the psychological and neurological characteristics of psychosis; 2) the biological and environmental contributions to psychosis as well as its developmental trajectory; 3) the epidemiology, diagnosis, and treatment of psychosis; 4) the impact of psychosis, including discussion of stigma, quality of life, policy, and advocacy; and 5) the continuing debate as to how the range or spectrum of psychotic disorders should be regarded.

Class Notes:

The instructor is John Knutsen, john_knutsen@g.harvard.edu.

Recommended Prep:

The Psychology Department requires completion of Science of Living

Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and either PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

Psychology 1005

Health: A Positive Psychology Perspective (126556)

Ellen Langer

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Why does it seem that some people are so resilient and content? This course looks at psychological and physical health from the perspective of Positive Psychology. The major focus will be on mindfulness theory and its relationship to stress/coping; illness/wellness; decision-making; and placebos. The medical model, the biosocial model, and a unified mind-body model will be compared to examine their role in becoming mindful and thus healthier, happier and less stressed.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, or PSY 18 before enrolling in this course; or permission of instructor.

Requirements:

Psychology 1009

Psychology of Women (110216)

Nicole Noll

2025 Spring (4 Credits)

Schedule:

TR 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 16

How does being a woman affect our behavior, our evaluations of ourselves, and our interactions with others? This course examines psychological science on women and girls in western industrialized societies, addressing such topics as gender stereotypes, girlhood, women and work, relationships, pregnancy and motherhood, mental health, violence against women, and women in later adulthood. We will consider these topics through an understanding of gender as a social construction, being mindful of the intersections of gender, sexuality, class, and race. Although focused on women's lives and experiences, this course is highly relevant to people of all genders.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, or PSY 18 before enrolling in this course; or permission of instructor.

Psychology 1018

The Science and Psychology of Music (218517)

Mayron Pereira Piccolo Ribeiro

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

50

Music is an important ally when we feel like celebrating and when we are feeling down. It can distract us, make us forget or remember things more easily. Why do songs like "The Scientist" give us a sad vibe while songs like "I Got a Feeling" set the stage for a fun night ahead? Is music training like CrossFit for the brain? How can music engagement (i.e., passive listening or active making of music) support well-being? In this course, we will explore how music modulates our thoughts, feelings, and behaviors through the lens of psychological science. We will look at how the brain experiences music and the impact of music and musical training on brain plasticity throughout different stages of development. Finally, using empirical research and case studies, we will discuss how music is applied to daily life and how it has benefited premature babies, individuals with mental disorders (such as depression), as well as conditions such as Alzheimer's disease and Parkinson's disease.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, or PSY 18 before enrolling in this course; or permission of instructor.

Stress & Cognition: Implications for Empowered Learning (222885)

Nancy Tsai

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:**

40

Students are reporting higher levels of stress than ever before. But what is stress, and how does it impact learning and academic outcomes? Why are some individuals more vulnerable to cognitive impairments under stress than others? How does early life stress affect later learning outcomes? This course will answer these questions and more by reviewing the theoretical and empirical work linking stress and cognitive capacities including learning and memory, with a particular focus on how individuals can demonstrate cognitive resilience and optimize learning even in times of stress. By the end of the course, students will have an in-depth understanding of the short- and long-term consequences of stress in the context of learning and the factors (e.g., beliefs and mindsets) and evidence-based strategies (e.g., mindfulness, exercise, and social support) that can be used to improve the relationship between stress and cognitive performance outcomes.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology 1032

Psychology of Addiction (224360)

Chloe Jordan

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 40

The human mind has been sculpted over millennia to pursue rewarding and pleasurable experiences. Addiction ensnares our mind's pleasure systems, replacing otherwise adaptive behaviors with a restless pursuit of reward. Addictions can occur not only to psychoactive drugs such as alcohol, stimulants, opioids, and cannabis, but also to behaviors such as gambling, sex, exercise, video games, and social media. Why are addictive behaviors so prevalent, and how can we treat them? What can we learn about our own minds, motivations, and desires, by understanding the psychology of addiction? This course will seek to answer these questions by examining everyday, reward-seeking behaviors and their dopamine underpinnings that can become hijacked to form the basis of addictions. We will interrogate how addictive drugs and behaviors can change the brain over time, leading to compulsive habits and disorders of substance use and impulse control. We will inspect societal systems designed to capitalize on our brain's reward systems, resulting in monetary profit for some and challenging addictions for others. We will also discuss innovative treatments for addiction, including medications, controversial substances like cannabis and psychedelic drugs, and magnetic brain stimulation protocols. Course content will range from preclinical studies on brain mechanisms and behaviors of reward and reinforcement to clinical and public health studies on the factors leading to addiction from individual, community, economic, and sociopolitical perspectives.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology 1060

The Science of Happiness (220086)

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

492

Recent research in the cognitive sciences—especially psychology, economics, and neuroscience—has begun to examine the factors that promote personal well-being and happiness. One surprising, but consistent, observation has been that many of the things that are widely believed to be crucial for our happiness—wealth, material possessions, "not missing out", even good grades—not only fail to make many people happy but can actively undermine the sense of well-being. The course begins by introducing some misconceptions that many people might have about what makes for a satisfying life. We will then examine the psychological biases and other mental quirks of our mind that make it hard for us to identify what actually makes us happy, and we will then discuss what recent research reveals about factors that promote happiness. Importantly, throughout the course, students will be invited to apply these strategies in everyday life. In other words, we will both discuss what new results in cognitive science suggest to anyone interested in better understanding the factors that promote happiness, and also actively put these scientific findings into practice. Along the way, we will review historical and cross-cultural views on the meaning of "happiness", discuss the limitations of scientific approaches to the topic, and identify aspects of modern life (especially modern life at Harvard) that make it difficult to develop habits that support happiness. Finally, we will also discuss how to apply the new science of happiness beyond our own lives to improve our communities and our planet too.

Modern Neuroanatomy (203208)

Randy Buckner

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

How does the global architecture and local organization of brain systems support behavioral and cognitive functions? In this class, classical and newer neuroanatomical discoveries will be discussed that cover what defines brain areas; how areas are organized into parallel, distributed circuits; how distinct areas and systems are organized; and how anatomical form relates to function. Anatomy in the human brain and from model systems (worm, mouse, barn owl, and monkey) will be used to illustrate principles. Newer techniques and analytical approaches will be discussed including micro-scale and macro-scale connectomics. The goal of this class is to survey examples of how emerging understanding of neuroanatomy provides insight into function. Each class will consist of lecture and discussion.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 18, or MCB/NEURO 80 before enrolling in this course, or permission of instructor.

Precision Cognitive Neuroscience: Opportunities Afforded by Deep, Intensive Study Within Individuals (217604)

Randy Buckner

2024 Fall (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

What are the opportunities afforded by doing experimental work fully within an individual rather than the more traditional approach of seeking central tendencies in groups? The field of cognitive neuroscience, like many others, confronts a tension between questions and experimental approaches that seek to generalize across individuals versus those that seek to describe detailed characterization within the individual. In this seminar historical perspectives and recent technological advances will be surveyed to showcase the opportunities, limitations, and unmet challenges of precision exploration within the individual. Discussions will begin from a historical perspective, then survey examples where breakthroughs were made from case studies (neuropsychology) and small N samples (neurophysiology), and then progress into approaches that allow precision neuroscientific exploration (including intensive repeat scanning as in the MyConnectome project) and dynamic behavioral phenotyping using wearables and new remote testing technologies. Challenges including how to frame hypotheses, considerations of the goals toward generalization, and discussion of new statistical approaches will be included in the readings. At the end of this seminar students will achieve practical knowledge of how within-individual experimental designs can complement the more commonly implemented group-based studies and ways to think about combining the strengths of both approaches.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Decisions Big and Small: The Cognitive Science of Making Up Your Mind (212749)

Tomer Ullman

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Life is full of decisions, but not all decisions are made equal. Choices can be big and consequential (should I focus on my success, family, or passion), or small and everyday (going out, or staying in). This course will introduce you to the cognitive science of judging and choosing. You will learn about 1) Rational planning, the kind a perfect intelligence might carry out 2) Common simplifications and shortcuts that non-perfect humans use, and how these may actually be appealing approximations for any decision-making system 3) Regret over choices taken and not taken 4) Making decisions with others 5) Transformative decisions, the ones that change who you are as a person. As we cover these topics, we will consider how to apply the insights from the psychology of decision making to your own ordinary and extraordinary choices.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, or PSY 18 before enrolling in this course; or permission of instructor.

The Emotional, Social Brain (216792)

Elizabeth Phelps

2025 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Emotions color our lives, and even everyday variation in emotional experience can influence how we think, perceive and decide. Many of our emotions stem from our experiences with others. In this seminar we will examine the science behind the influence of emotion and social interaction on human brain function and behavior. We will examine questions such as: How does the brain process threats, and how do we learn about potential threats from others? How, and why, do our memories for emotional events differ from

memories for mundane events? How does the brain process rewards, and respond to social rewards such as trust? What can we learn about implicit social biases from understanding their representation in the brain? What can we learn about the brain systems of human emotion and social interactions from studying other animals? Building on this foundational knowledge, we will explore how advances in human brain science might inform larger societal issues, including legal decisions, clinical interventions for the treatment of anxiety, and racial bias.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

First Impressions (222782)

Gregory Davis

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

50

Each day, we meet people for the first time. A bus driver or a mail carrier. A teacher or a boss. A potential significant other or a new relative. Often, the most important part of these interactions are our first impressions, or the characteristics and tendencies we attribute to people we know little to nothing about. In this course, we will explore the psychology of attribution – the methods our brain uses to understand others, and how others use their brains to understand us. In the first half of the course, we will review the mechanisms and limitations of our attribution system, from the individual level (person perception and evaluation) to the group level (perception and evaluation of social groups). In the second half, we will examine what goes wrong when we misattribute, or assume things about people that are not true, with a focus on the psychological shortcuts and biases that impair rational/"true" evaluations. Throughout the course, we will build a deep understanding of the basics of how we think of others compared to ourselves, and learn behavioral tips and tricks that can be used to make a great first impression.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Blindspot: Hidden Biases of Good People (219648)

Mahzarin Banaji

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

We coined the term implicit bias in 1995 to capture the idea that bias, i.e., a deviation from accuracy or values can be implicit, i.e., operate without conscious awareness or conscious control. The idea emerged from basic research on implicit social cognition (ISC), an area of scientific psychology that explores the hidden aspects of mental representations of self, other, and social groups. Today, 25 years later, the term implicit bias has transcended academic psychology and permeated contemporary culture where it is used and contested every day in every domain of life and living: healthcare, finance, employment, housing, education, law and law enforcement. In this course, we will study the science of implicit bias, with a focus on disparities that emerge along the lines of social categories of age, gender, sexuality, race, ethnicity, socioeconomic class, physical attributes, religion, politics, language and culture, geographic region and nationality.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, or PSY 18 before enrolling in this course; or permission of instructor.

Family, School, and Society: Shaping the Developing Child (218513)

Selva Lewin-Bizan

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

40

Why are low-income children affected more severely by the same health conditions than those from higher-income families? What obstacles do single fathers with low socioeconomic status face to becoming and staying involved in the lives of their children? Why are racial/ethnic minority parents more likely to have their children removed and placed in foster care than white parents? Which immigrants are more likely to suffer from unequal access to educational resources? Why are LGB adolescents more likely to engage in risky behavior than their heterosexual peers? Using theory, research findings and other data sources, and current news, this course focuses on the complex social issues that America's children and adolescents face both in their immediate settings of family and school, and in broader societal values, customs, and laws, and the effects of these issues on their psychological development and well-being.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one

foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Growing up in a Social World (222654)

Ashley Leung

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

40

Humans are social creatures, but how do we form social groups, or decide who to be friends with? In this interactive lecture course, we will focus on how babies and young children learn about the social world. We will start in infancy, with topics including the biases and cues babies use to identify their social group, and their emergent understanding of different types of social relationships. As we move into early childhood and beyond, we will consider how young children use a multitude of factors to decipher and build complex social networks. Finally, we will discuss the consequences of social relationships—how are different relationships maintained? What behaviors are expected from people close to you? How does friendship sometimes triumph over motivations like morality (e.g., lying for a friend)? By studying children's social development, we will get a glimpse of how human psychology shapes how we build our social networks.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology 1615

First Love: The Psychology of Caregiver-Child Relationships (222655)

Ashley Leung

2025 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

From birth, we form relationships with the people around us. Our first relationships tend to be with our

caregivers. How do these first relationships form? How do they impact our development and future relationships? In this discussion-based course, we will explore infant-caregiver relationships from multiple perspectives. We will read about theories of attachment, how infants and young children think about social groups, and discuss the extent to which caregivers may provide a blueprint for the formation of relationships later in life. We will also consider whether various theories and findings can or should apply to non-Western cultures.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology 1616

Multilingualism (222656)

Ashley Leung

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

More than half of the human population speaks more than one language. How do the languages we speak influence the way we talk, think, and act? Is there really a "bilingual advantage"? In this course, we will explore the psychology of multilingualism. We will examine adult and developmental empirical research to consider the differences and similarities between bilinguals/multilinguals and monolinguals, from the way they acquire language as babies, to how they make decisions and experience emotions as adults. We will also discuss how we use language and accents to make judgments about others.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology 1617

Language Development in the First Few Years of Life (224142)

Elika Bergelson

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

How do infants first learn the sounds that make up their native language? By what process do babies begin to understand and assign meaning to words? What allows young children to intuitively grasp the complex

rules of grammar? This course will explore these questions and more as we delve into the fascinating research on one of the fundamentally unique abilities of our species: learning language. Since young children understand more than they can say, we will also cover how researchers figure out what kids know, based on naturalistic recordings and short in-lab experiments. For psychology concentrators and students on the Cognitive Science track of affiliated departments under the Mind Brain Behavior initiative, this discussion-based seminar offers an in-depth examination of the complex yet foundational processes by which we master our very first forms of communication.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, or PSY 18 before enrolling in this course; or permission of instructor.

Developmental Disabilities and Neurodiversity (224268)

Jesse Snedeker

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to developmental disorders from the perspective of psychology and cognitive neuroscience. We will focus on the most commonly diagnosed developmental difficulties such as autism, ADHD, and dyslexia. We will take an integrative approach and consider the clinical presentation of each disorder, theoretical frameworks, research on the causes and consequences, and issues in education and treatment.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology 1622

Emerging Adulthood: Challenges and Possibilities (222786)

Selva Lewin-Bizan

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 40

I don't know about you, but I'm feeling 22! In the past half century, the typical experiences of people aged 18-25 in developed countries have changed significantly. They now spend more time on education and are delaying marriage and parenting. They are focused on personal development, with high levels of optimism about future work and relationships. This developmental stage, referred to as emerging adulthood, is distinct from late adolescence in that individuals are less dependent on their parents and are no longer minors by law, however, they have not yet settled into fully adult roles. In this course, we will critically evaluate theory and research on a variety of topics central to this "in-between" stage: identity explorations in the areas of love (sex, dating, and long-term relationships), work, and worldviews (ideology and activism); changing relationships with parents and siblings; and situations that might make the transition to adulthood more difficult, like poverty and gender norms, discrimination surrounding sexual orientation, sexual violence on college campuses, and mental health challenges. The course will highlight variations between cultures and that even within American society there are unique patterns in experiencing emerging adulthood.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Language Development: Undergraduate Laboratory Course: Research Seminar (123244)

Jesse Snedeker

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Students participate in research on language acquisition, language comprehension, and language production. Each student has responsibility for a project. Weekly meeting to discuss student projects and readings that are relevant to them. Ten hours a week commitment (includes lab meeting).

Course Notes:

For undergraduates seeking research experience, especially in preparation for undergraduate theses.
To express interest in enrollment, please email the instructor, Prof. Jesse Snedeker, at snedeker@wjh.harvard.edu.

Recommended Prep:

Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) plus either Science of Living Systems 15 or PSY 16

Requirements:

SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1

The Emotional Mind (108490)

Leah Somerville

2025 Spring (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Not only do emotions permeate our everyday lives, they have aided in the survival of the human species. But what are emotions, and what are they good for? What causes us to experience an emotion? And how do emotional responses, in turn, influence our perception, memory, decision-making, and psychological well-being? This course will address these questions by drawing on key advances from historical, philosophical, psychological, and neuroscientific perspectives.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from MCB/NEURO 80, MCB 81, PSY 14, PSY 15, PSY 16, or PSY 18 before enrolling in this course; or permission of

instructor.

Psychology of Personality (218509)

Ryan Lundell-Creagh

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

While one person prefers a large social gathering, another favors coffee with a friend. Where one person completes tasks a week in advance, another waits until the last minute. Simply put, no two people are exactly alike. To understand the many ways in which we differ as individuals, this course will survey prominent theories and contemporary empirical research in personality psychology. With an emphasis on deepening our own self-knowledge, we will discuss how psychologists study and differentiate stable traits from more transitory states and how personality develops and changes across the lifespan (e.g., temperament, attachment, etc.). We will incorporate perspectives from work on motivation, culture, cognition, and psychopathology to broaden our understanding of individual differences. Throughout this course, we will evaluate theoretical perspectives in the context of current empirical data and take deep dives into methodology to expand our understanding of how individual differences are assessed and quantified.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Technology and Mental Health (220092)

Shifali Singh

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How does screen time relate to changes in emotional states? Can using social media cause depression and disordered eating? How do influencers' online posts affect self-esteem? In what ways can technology improve equity and access in mental health care? We will explore these questions and more in this brand-new course, which will delve into the nuanced ways technology has positively and negatively impacted mental health and wellbeing. For your final project, you will have the opportunity to develop your very own technology-based intervention. Be prepared to think critically about how you and your peers engage with technology!

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

Broken Brains: Mechanisms and Markers of Mental Illness (218525)

Mayron Pereira Piccolo Ribeiro

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

20

This course will integrate clinical psychology and cognitive neuroscience to explore the biological underpinnings of mental illness. We will adopt a systems-level approach, examining the relationship between function and dysfunction of specific brain circuits and networks and mental health disorders. For example, addiction, disordered eating, depression, and psychosis have all been linked to the brain's reward system. What does this common neural foundation indicate and how has this discovery advanced treatment options? Throughout the course, we will draw on findings from traditional and cutting-edge methodologies that have produced critical insights and key breakthroughs. We will also discuss how large-scale neuroimaging studies, like the Human Connectome Project, can be used to trace disordered behaviors such as criminality, depression, and hallucinations to specific brain networks. As we explore these topics, we will discuss how these research findings inform mental health treatment and potentially complement discussions around important societal issues such as racial bias and criminal responsibility.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

Stigma, Discrimination, and Health (216272)

Mark Hatzenbuehler

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

What is stigma? How do stigmatized identities and conditions differ from each other? Why do we stigmatize? What are the consequences of stigma for cognitions and emotions, for social relationships, and for health? Through what mechanisms—individual, interpersonal, and structural—does stigma operate to produce adverse health outcomes? How do stigmatized individuals cope with and resist stigma? How can we reduce stigma and its negative effects? In this course we will consider stigma as a fundamental cause of health inequalities across a broad range of phenomena, including (but not limited to) mental illness, sexual and gender diversity, weight, disability, aging, poverty, and immigration status. Students can expect to examine stigma as a predicament that affects nearly all individuals at some point in the life course, and to develop expertise in an individual stigma that is relevant to their personal, academic, and professional interests through a series of focused course assignments.

Recommended Prep:

Psychotherapy: Science and Practice (160646)

John Weisz

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Psychotherapy is a healing art, a subject of scientific inquiry, and—for many—a business venture. In this course we will bring these strands together, focusing on how psychotherapy is practiced in the real world

and how clinical science is used to test claims of success. We will examine competing approaches to therapy and evaluate their scientific status. Each iteration of the course will have a distinctive emphasis. Contact the instructor to learn what the specific focus will be during the semester in which you are considering enrolling.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course.

This is a lecture course with a laboratory component. Our goal is for you to master the essentials of behavioral experimentation through a succession of projects, starting with a small number of fundamental skills that can be used in many areas of psychology, culminating with a larger final group project. Emphasis will be on understanding causal inference and acquiring practical laboratory skills. Basic aspects of data exploration and analysis will be covered. We will place a high value on discussion participation in

lecture and lab and the communication of results through effective visual graphics, oral presentations, and written reports.

Course Notes:

There is a required lab session in addition to lecture.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB=7 or Psyc S-1) and PSY 1900 or the equivalent (e.g., STAT 100, 101, 102 or 104) before enrolling in this course.

Garth Coombs

Susan Buck

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Modern psychology labs look similar to tech offices and startups, filled with researchers sitting behind computers writing code. In this course, we will cover fundamental coding practices and computational tools used frequently in psychology research. We will go over the basics of coding, how to program and run common statistical analyses, and how to make graphs and visualize data in R, a free open-source program which is widely-used in the field of psychology. Through this process, students will have the opportunity to conduct their own analyses using real world datasets and answer research questions that are of theoretical interest to them. This course would be ideal for students considering or beginning a thesis, students interested in graduate school, and students considering careers in industry or data science who want more programming experience.

Course Notes:

This course is open to all students who have completed the prerequisite coursework; no background in programming or coding is assumed or required.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and PSY 1900 or the equivalent of introductory statistics before enrolling in this course; or permission of instructor.

Measuring the Mind: Selecting and Designing the Right Measures for Research (220063)

Grace Lin

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

In psychology and other social/behavioral science research, we often try to capture abstract constructs using one or more types of measures or methods. The validity of our findings rests on our ability to critically evaluate potential study instruments and select those that align with our research questions. In

this course, we will explore existing measurement tools that span diverse research approaches, ranging from field observations to tablet games, with the goal of selecting measures that are appropriate, applicable, sound, and fair to your study's population of interest. Along the way, we will also consider methods commonly used to assess the function and quality of measurement tools. This course will culminate in you designing and/or evaluating a measurement tool on a construct of your choice. As such, this class is ideal for students considering or beginning a thesis, students interested in graduate school, and/or students who want more experience with measurement design and development.

Course Notes:

This course is intended for undergraduates.

Recommended Prep:

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and PSY 1901 before enrolling in this course; or permission of instructor.

Psychology 1950

Applied Statistical Data Analysis in Psychology I (121738)

Patrick Mair

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

24

The primary goal of this course is to offer intense, foundational exposure to psychological statistics, focusing heavily on applications and computation using the R environment for statistical computing. The methodological core of the first part of the course is the linear model which includes methods such as regression, t-test, analysis of variance (ANOVA), and others. The second part of the course focuses on extensions in terms of linear mixed-effects models (aka multilevel models) and generalized linear mixed-effects models for modeling longitudinal and hierarchical data structures. Students will be exposed to the Frequentist as well as the Bayesian inferential framework.

Course Notes:

Required of doctoral students in Psychology.

Recommended Prep:

One of Psychology 1900, Statistics 100, 101, 102, 104, or the equivalent.

Requirements:

PSY1900 or STAT100 or STAT101 or STAT102 or STAT104

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Social Sciences
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Psychology 1952

Applied Statistical Data Analysis in Psychology II (117879)

Patrick Mair

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

24

This PSY 1950 follow-up course continues with the exposure to state-of-the-art Bayesian and Frequentist statistical modeling techniques. We extend the GLMM framework in a nonlinear manner leading to the class of generalized additive (mixed) models (GAMM). We introduce path models which allow us to model complex variable associations.

Prominent models within this context are multivariate regression, moderation-mediation models, and latent growth models as an alternative to mixed models. We also cover missing value analysis (mechanisms for missingness, imputation), and power simulations. This is followed by a thorough treatment of Bayesian inference including probability and distribution theory, prior specifications, and advanced modeling.

Finally, we introduce causal inference techniques based on Rubin's potential outcomes framework.

Recommended Prep:

The Psychology Department requires completion of PSY 1950 or equivalent.

Requirements:

Prerequisite: PSY 1950 or equivalent

Advanced Statistical Modeling (222102)

Patrick Mair

2024 Fall (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

24

This class builds on what we've learned in Psych 1950 and 1952, and covers state-of-the-art advanced statistical modeling techniques. We start with elaborations on basic regression flavors such as outlier detection, robust regression, quantile regression, as well as models for censored and truncated data. This is followed by parametric clustering approaches (e.g., latent profile analysis) and a corresponding integration of this concept into regression (i.e., mixture regression). Next up are Markov models where we model transitions between states. This includes hidden Markov models as well as Markov models for longitudinal data. The following two units cover advanced approaches for (intensive) longitudinal data including dynamic process modeling, state-space models, panel models (e.g., cross-lagged panel models, fixed effects models), and multilevel vector autoregression. After midterm we start with model based recursive partitioning where we integrate the concept of decision trees into regression modeling. This is followed by shrinkage/regularization techniques (lasso, elasticnet) which are attractive for regression scenarios with many predictors. After an introduction to basic time series techniques and spatial regression, we have an advanced Bayesian regression modeling where we use INLA instead of MCMC for estimation. In this unit a strong focus will be on modeling spatio-temporal data. We conclude this class with two units on causal inference where we use Pearl's graph-theory approach which includes probabilistic graphical modeling and Bayesian networks. We will use R throughout the semester.

Recommended Prep:

It is required that students have completed PSY 1950 and PSY 1952 or equivalent courses. This course is intended for Harvard doctoral candidates in Psychology. Other students (e.g. Harvard undergraduates, Harvard graduate students from other fields, MIT graduate students) may obtain permission from the instructor to take the course.

History of Psychology: Seminar (118993)

Richard McNally

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Covers major issues, theories, schools of thought, and controversies integral to the development of psychology from the late 19th century to the middle of the 20th century. Readings include classic articles exemplifying these themes.

Course Notes:

Open to undergraduates with permission of instructor.

Recommended Prep:

For undergraduates: completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, PSY 18, or Science of Living Systems 15 before enrolling in this course.

Requirements:

Pre-requisite: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1 AND PSY14 or PSY15 or PSY16 or PSY18 or SLS15

Additional Course Attributes:

Attribute	Value(s)

Laboratory on Social Cognitive Development (222167)

Ashley Thomas

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This laboratory methods course provides students with hands-on experience in a cognitive development lab that focuses on social relationships. Students will engage in all aspects of the scientific process. Participants will work on topics including experimental design, data collection, and analysis. Most of the projects will involve working with infants, children and their parents. Participants will work closely with a mentor in the lab and will participate in meetings where key questions and findings in the field are discussed.

Course Notes:

Open to graduate and undergraduate students working in the instructor's laboratory. To express interest in enrollment, please email the instructor, Prof. Ashley Thomas, at athomas@g.harvard.edu.

Recommended Prep:

For undergraduates, prior coursework in psychology and a concentration in psychology is preferred, but not required.

Lab in Early Language and Cognitive Development (222219)

Elika Bergelson

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

In this lab course, students participate in research asking how we learn language in the first few years of life, and how this connects to our broader cognitive abilities to think, interact, and learn. Each undergraduate student will contribute to one or more ongoing projects and work closely with a grad and/or postdoctoral mentor. All enrollees will get front row exposure to and training in psychological research, including how experiments and observational analyses are designed, how data is collected, cleaned, and analyzed, open science practices, and how research goes from an idea to a published paper. Weekly lab meeting to discuss student projects and readings relevant to them. Each enrollee will have the opportunity to present lab or lab-relevant research once per semester. Ten hours a week commitment (includes lab meeting).

Course Notes:

Open to graduate and undergraduate students working in the instructor's laboratory. To express interest in enrollment, please email the lab manager, Lilli Richter, at larichter@fas.harvard.edu.

Recommended Prep:

For undergraduates, the Psychology Department requires completion

of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) or prior coursework in Linguistics before enrolling in this course; or permission of instructor.

Laboratory Research on Emotional Disorders (107706)

Richard McNally

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Involves readings, seminar discussion, and research on emotional disorders conducted in the instructor's laboratory (e.g., social anxiety disorder, complicated grief, obsessive-compulsive disorder).

Course Notes:

Open to graduate and undergraduate students working in the instructor's laboratory.
To express interest in enrollment, please email the instructor, Prof. Rich McNally, at rjm@wjh.harvard.edu.

Cognitive-Behavioral Treatment of Psychological Disorders (144980)

Jill Hooley

Rebecca Shingleton

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Covers current cognitive-behavioral approaches to the treatment of common psychological disorders in adults. Emphasis is on the practical aspects of treatment, and on treatment outcome research. Includes theoretical underpinnings of cognitive-behavioral therapy.

Course Notes:

Limited to Harvard Psychology graduate students in clinical psychology.

Additional Course Attributes:

Psychology 2430

Cultural and Individual Diversity (119217)

Mark Hatzenbuehler

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course will examine cultural, racial, ethnic, and other individual differences in human behavior which affect the practice of psychology. We will review the current science examining the relationship between these factors and human behavior, psychopathology, and provision of psychological services through readings and case discussion.

Course Notes:

Must be a Harvard graduate student in the clinical psychology program.

Laboratory Research on the Biopsychosocial Effects of Stigma (216182)

Mark Hatzenbuehler

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Our lab uses a range of methods to examine the biological, psychological, and social consequences of stigma as applied to a broad range of phenomena, including (but not limited to) mental illness and addiction, sexual and gender diversity, weight, race, and immigration status. The course involves readings,

seminar discussion, and research on these topics.

Course Notes:

Research Methods in Child & Adolescent Clinical Psychology (124970)

John Weisz

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course is designed to give you exposure to the concepts, as well as the nuts and bolts, of research in clinical psychology of childhood and adolescence. There is a special emphasis in this course (as in the lab) on intervention research addressing youth depression, anxiety, and conduct-related problems and disorders. If you are a psychology concentrator at Harvard, you may have already taken classroom-based courses covering theories and methods that guide research in clinical psychology, such as Abnormal Psychology and Developmental Psychopathology. You may also have taken courses that introduced you to the types of statistical analyses (Psych 1900) and research methods (Psych 1901) used in psychological research. In this course, we will build on the foundation you received in such courses by applying what you have learned to the conduct of specific research projects.

In this class, you will participate in several aspects of the clinical research process via your active involvement in the research of our psychology laboratory. More specifically, through attending weekly class/lab meetings and participating in one or more research projects, you will learn how specific research ideas take shape; how research questions and hypotheses are generated; how studies are designed to address these research questions and hypotheses; how data are collected, cleaned, entered into study datasets, then analyzed; and how findings are interpreted and organized for presentation at professional meetings and in scientific publications.

The main goals of research in our lab are to build an understanding of which interventions for child and adolescent mental health problems are effective, and to promote use of the best evidence-based assessment and intervention in everyday clinical practice for youths and families. In pursuing these goals, we and our colleagues develop ways of structuring evidence-based practices to make them user-friendly and tailored to the settings in which youngsters typically receive mental health care—e.g., community mental health clinics and schools. Much of our work focuses on developing and testing these tailored approaches. We also conduct meta-analyses of the youth psychotherapy research literature, to sum up what has been learned from all the treatment studies with children and adolescents.

This course is designed to be useful to students who plan to pursue a career in child and adolescent mental health, particularly those with an interest in psychological research. However, the skills conveyed (e.g., critical thinking, research design, science writing) may be useful in a variety of ways and relevant to a number of different career paths.

Laboratory on Complex Thought and Cooperation (123308)

Joshua Greene

2024 Fall (4 Credits)

Schedule:

R 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

In this hands-on lab course, students have the opportunity to participate in all aspects of psychological research, including experimental design, data collection, and data analysis. Each student will work closely with a graduate student or post-doctoral mentor. Topics of research are divided across cognitive and social psychology. Cognitive projects focus on the neuroscience of complex thought: Humans can understand and reason about an effectively infinite number of different ideas. How do our brains accomplish this? Social projects are applied work focused on promoting cooperation, conflict resolution, and improved social decision-making. Methods include fMRI, neural network modeling, and online and in-lab behavioral experiments.

Course Notes:

To express interest in enrollment, please email the lab manager, Isobel Munday, at imunday@fas.harvard.edu.

Lab in Intergroup Neuroscience (156624)

Mina Cikara

2024 Fall (4 Credits)

Schedule:

R 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Year-long lab course exploring how cognition, affect, neural responses, and behavior change when social relations shift from "me and you" to "us and them." Students will participate in experiment development and data collection employing methods ranging from standard laboratory experiments, implicit and explicit self-reports, and behavioral measures, to fMRI and psychophysiology. Students will also read and discuss papers on intergroup relations in our weekly meetings.

Course Notes:

To express interest in enrollment, please email the instructor, Prof. Mina Cikara, at mcikara@fas.harvard.edu.

Recommended Prep:

For undergraduates, Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from MCB/NEURO 80, MCB 81, PSY 14, PSY 15, PSY 16, or PSY 18.

Requirements:

SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1 AND MCB80 or NEURO80 or MCB81 or PSY14 or PSY15 or PSY16 or PSY18

Writing Workshop (216439)

Ashley Thomas

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The Writing Workshop is the ultimate professional development course. It was developed by Barbara Sarnecka at UC Irvine, and involves working through her witty, moving, and extremely effective book. Basically, if one cannot write effectively, and publish, one cannot succeed in academia. As Sarnecka puts in in the opening paragraph of the book, "Research is writing. No one gets a fellowship, a PhD, a postdoc, a job, a grant, or a promotion except by writing, which means that professional researchers are by definition professional writers." Sarnecka has run writing workshops as graduate classes with great success for several years now and the book distills what she has found to work. She documents increased productivity and happiness among the workshop participants. Classes will each involve some time doing actual writing, in parallel, but all at once, a feedback forum where at least once a semester a participant gets feedback on a page or two of writing, and in class exercises and discussion about the mechanics of writing, managing time, dealing with anxiety and rejections, among many other topics.

What's required: Participation in one 2 hour 50 minute seminar meeting a week which will be a workshop on academic writing. One semester commitment, but option to continue in the workshop for a second semester, and perhaps beyond. There will be a small amount of reading in advance of each class, mainly from Barbara Sarnecka's book, *The Writing Workshop: Write More, Write Better, Be Happier in Academia*, sometimes supplemented by readings from other books, such as Pinker's *The Sense of Style*.

Course Notes:

Open to G3+ graduate students and postdocs in Psychology.

Quantum Science & Engineering

Subject: Quantum Sci and Engineering

Quantum Sci and Engineering 200

Foundations of Quantum Mechanics (220210)

Federico Capasso

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction to the foundations of quantum mechanics, with specific focus on the basic principles involved in the control of quantum systems. Experimental foundations of quantum mechanics. Superposition principle, Schrödinger's equation, eigenvalue and time dependent problems, wave packets, coherent states; uncertainty principle. One dimensional problems: double well potentials, tunneling, resonant tunneling, harmonic oscillator. WKB approximation. Hermitian operators and expectation values; time evolution and Hamiltonian, commutation rules, transfer matrix methods. Schrödinger, Heisenberg and interaction representations. Perturbation theory. Variational methods. Angular momentum, spin, Pauli matrices. Coherent interaction of light with two-level systems. Quantization of the EM field, absorption, spontaneous and stimulated emission. Density matrix and applications. Elements of quantum information (qubits, entanglement, teleportation, etc.). Taking this course meets the quantum mechanics core course requirement for the Applied Physics model programs.

Course Notes:

This course is also offered as ENG-SCI 200 and Chem 200. Students may only take one of ENG-SCI 200, QSE 200, and Chem 200 for credit

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Quantum Sci and Engineering 210B

Introduction to Quantum Information Science II (220214)

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to quantum information science and quantum computation. Emphasis on fundamental concepts including qubits and quantum operations, the nature of entanglement and its manipulation, quantum error correction, and various implementation models. Topics include: basics of quantum information, different models of quantum computing, fundamental quantum algorithms, quantum error correction, and fault tolerance; as well as experimental implementations. Recent developments in the field will be discussed.

Preparation: One semester of quantum mechanics [QSE200, PHY143a, or PHY251A], or MATH 21b (or equivalent) and permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)

Quantum Sci and Engineering 245

Quantum Chemistry: Theory and Practice (223985)

Joonho Lee

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course will cover theoretical and computational approaches to electronic structure problems of molecules and materials. The foundation of Hartree-Fock, density functional theory, perturbation theory, configuration interaction, coupled cluster theory, quantum Monte Carlo, and matrix product states will be covered. Graduate-level quantum mechanics knowledge is assumed. The course will involve a computational project with Q-Chem. This course will cover theoretical and computational approaches to electronic structure problems of molecules and materials. The foundation of Hartree-Fock, density functional theory, perturbation theory, configuration interaction, coupled cluster theory, quantum Monte Carlo, and matrix product states will be covered. Graduate-level quantum mechanics knowledge is assumed. The course will involve a computational project with Q-Chem.

Course Notes:

This course is also offered as Chem 245. Students may only take one of QSE 245 and Chem 245 for credit.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Quantum Sci and Engineering 285B

Modern Atomic and Optical Physics II (223843)

Mikhail Lukin

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to quantum optics and modern atomic physics. The basic concepts and theoretical tools will be introduced. Topics will include coherence phenomena, non-classical states of light and matter, atom cooling and trapping and atom optics. The second of a two-term subject sequence that provides the foundations for contemporary research.

Course Notes:

Also offered as Physics 285B. Students may not take both for credit.

Recommended Prep:

A course in electromagnetic theory (Physics 232a or equivalent); one half-course in intermediate or advanced quantum mechanics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

Quantum Sci and Engineering 296

Mesoscale and Low Dimensional Devices (220212)

Donhee Ham

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits.

Preparation: Foundations of Quantum Mechanics (or equivalent), Physics 195 (undergraduate solid-state physics)

Quantum Sci and Engineering 301

A Practical and Effective Toolkit for Teaching and Research (222018)

Evelyn Hu

Nishant Sule

2024 Fall (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course is designed for first-year graduate students in the Quantum Science and Engineering (QSE) program. It aims to help students develop their toolkits for successfully navigating their academic life at Harvard and beyond. The course will discuss approaches, ideas, and most importantly practical skills focused on effective presentation and communication, both verbal and written, organizing thoughts, with sensitivities to colleagues, and audiences, all in the context of teaching and research.

The course will meet twice a week, integrating concepts of pedagogy and communications through student contributions of oral and written communications for different contexts. The course will also emphasize and discuss creating and sustaining a diverse and inclusive environment in the classroom and lab. Guest speakers will be invited to share their perspectives on pedagogy, writing, lab and research skills, and other useful tips for graduate students.

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How do we grow and change along the path of life's journey? How do practices of ordering shape our lives? How do we create the bonds and build the communities that give us meaning? In this course, we will look at the stages of the life journey, asking how we shape the things that matter most with practices, gestures, words, and symbols. This is a comparative course, drawing on several cultural and religious traditions as well as secular culture and our own experience. We will consider: Creating the space we live in; Daily meditation, prayer, or exercise; Beginnings and blessings; Rites of childhood, make-believe, and competition; Rites of friendship, bonding and belonging; Rites of Initiation and coming of age; Rituals of Marriage and fidelity; Ritual dimensions of protest and resistance; Facing illness, suffering, and healing; Coping with aging, grief, and loss; Rituals of renewal and beginning again. We will read scholars who have given us tools to think with, but we will also treat our exploration as a creative workshop, thinking together about the journey of life, its challenges, and the things we do to shape its meaning.

Course Notes:

Offered jointly with the Divinity School as 3320.

What is Religion? Why does it show up everywhere? Using archaeology, religious studies and social thought, this course will study the major themes in the history of religions including 'encountering the holy', 'sports and ritual', 'crossing borders', 'sacrifice as creation', 'pilgrimage and sacred place', 'suffering and quest for wisdom', 'music and social change', 'violence and cosmic law'. Readings from Native American, African American, Latinx/+, Jewish, Buddhist, Christian, Hindu traditions. Focus on the tension between individual encounters with the holy and the social construction of religion. Readings from Gloria Anzaldua, Toni Morrison, Judith Sherman, Arthur Kleinman, Popul Vuj, Mircea Eliade, Michael D. Jackson. Jointly offered in Harvard Divinity School as HDS3160.

Course Notes:

Offered jointly with the Divinity School as 3160.

Incarnation and Desire (107859)

Courtney Lamberth

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This course offers an introduction to Christianity by considering major texts, figures and ideas from the first century to the present. Readings focus on several interrelated themes: changing conceptions of what it means to be human (body, soul, spirit, flesh); notions of free will, desire and sin in relation to divine grace; the meaning of Jesus Christ as "incarnate word," that is, the Word made flesh; and how people have understood what it means to live life following Jesus's teachings and ministry. Texts include canonical and non-canonical early Christian literatures, selected Patristic and medieval texts, Reformation theologies, as well as modern and contemporary authors. Students will develop a sense of the distinguishing features of Christian worldviews, while gaining an appreciation for the significant diversity across the tradition.

The Bible and Human Sexuality (121293)

2025 Spring (4 Credits)

Schedule:

T 0345 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This is a course about reading, religion and sex – more specifically, the dynamic interplay between how Christians have read and interpreted their Bibles on the one hand, and how they have understood sex and human sexuality on the other. (We will deal briefly with the Bible and sexuality in the Jewish tradition, but the majority of the course focuses on Christianity.) Thus, the questions that will drive our inquiry are fundamentally questions about interpretation. What does it mean to make the claim that a particular perspective on human sexual experience is 'biblical'? How are we to understand the sheer variety of ways that a fixed set of canonical scriptural texts have been used as an authoritative resource for discussing and regulating sexual ethics, identity and practice? How do changing notions of what 'sexuality' is (and why sexuality matters) impact the way that biblical texts have been interpreted? We will explore these questions through the study of key texts in the Hebrew Bible and the New Testament and an examination of how these texts have been interpreted from antiquity to the present. Topics to be covered include marriage, gender identity, desire, same-sex relationships, and sexual renunciation. No previous study in religion or biblical studies is assumed, and there are no prerequisites for enrolling in the course. This course is for undergraduates only.

Denying and Defending God: Classic Texts of Modern Western Religious Thought (125125)

Charles Lockwood

2025 Spring (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

12

Drawing on thinkers from the nineteenth and twentieth centuries, this course considers questions that continue to shape modern Western religious reflection: Is religion a liberating force or one of oppression? Is religion rational or the antithesis of reason? What is the relationship between religion and morality? Can all human beings be called religious? Texts are drawn from Kant, Schleiermacher, Feuerbach, Marx, Kierkegaard, Nietzsche, Barth, Tillich, King, Cone, Gutiérrez, Daly, and Williams. Special attention will be given to the rise of the modern category of religion, especially in relation to Christian theology; modern suspicion and critique of religion; and the transformation of European theological frameworks by liberation theologians in North and South America.

Krishna and Christ: Does it Matter? (208033)

Francis Clooney

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Krishna, a supreme deity of Hindu tradition, and Jesus Christ, the central figure of Christian faith, have been compared and contrasted for well over two centuries. They been understood as similar divine persons, who descend into this world and are embodied here, gather followers, offer wise instructions, save their devotees, and are best approached by love and devotion. But differences have often been emphasized. For centuries, missionaries, scholars, and many ordinary believers have seen Krishna and Christ as competitors., pushing similarities and differences in contexts (most often in India but not only) where true religion, salvation, and conversion were at stake. Questions arose such as these: Are Krishna and Christ mythical or historical figures? The former mythical and the latter historical? Is either divine? Both? Did they truly come into this world, by incarnation or avatara? If they save, how does that happen – and save from what? Are they moral role models? Can a Hindu love Christ, and a Christian love Krishna?

Such were "hot" questions for a very long time, and even today for some. But for many, such questions have lost their urgency in the 21st century. It is good that competition is largely a thing of the past, but it may not be good that the urgency of the comparison — Krishna and Christ, Christ or Krishna? – no longer matters to most people. Do we have something to gain by taking both Krishna and Christ seriously? Facing this question sheds light on many larger questions regarding spirituality, religion, and cross-cultural learning.

The course proceeds by key readings, discussed vigorously in class, but experience, practices, and images are important as well. Course requirements include brief weekly written responses to readings, and two 12-page course papers, but no final examination. Jointly offered with the Divinity School as HDS 3070.

Religion 97

Tutorial - Sophomore Year (117043)

Courtney Lamberth

2025 Spring (4 Credits)

Schedule: T 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

The course introduces students to theories and methods in the academic study of religion, including significant themes and arguments that have defined the field over time. Students will examine some key works that helped to shape the discipline as it emerged in the nineteenth and twentieth centuries, and also consider recent work drawing on various disciplines that scholars have used in the study of religion, including philosophy, psychology, sociology, anthropology, and history. The course will take up questions such as these: What does it mean to call something "religious"? Is the category of "religion" a universal

feature in human life, or more historically specific? What is at stake in defining this category in one way or another? How do claims about religion relate to claims about politics, economics, culture, and society? The course will also enable students to evaluate the choices that scholars make about what to privilege in their investigations. The course emphasizes critical reading and thinking skills, as well as thoughtful participation in discussion and the refinement of students' academic writing.

Course Notes:

Required of all concentrators, and recommended for Secondary Field students. Enrollment open to other students with instructors' permission.

History of the Book: Using Harvard's Treasures to Study the Material Text (220613)

David Stern

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

You have been reading books since first grade if not earlier, but how much do you actually know about the physical object you've been reading—the book, the material artifact? Drawing on a great deal of recent scholarship and the incredible treasures in Houghton Library's Special Collections, this course will study the history of the book in Western culture from its earliest stages in cuneiform tablets through ancient scrolls, hand-written medieval manuscripts of all types, early and late printed books down through children's books of the nineteenth and twentieth centuries, and modernist artists' books of the twentieth and twenty-first centuries including recent ones utilizing digital technology. The heart of the course will be weekly assignments in which students in groups of three each will be asked to intensively examine books in Houghton's reading room and then report on them in the weekly seminar. Books studied in class will include papyrus fragments of Homer and the Old and New Testaments; Hebrew scrolls; early Qur'an leafs; Greek and Latin codices; Books of Hours and many other illuminated and decorated medieval manuscripts; the Gutenberg Bible; Copernicus, Galileo's and Vesalius' scientific works; censored books; the First Folio edition of Shakespeare; Alice in Wonderland; and Mallarmé's *Un coup de dés*. For the final paper, each student will choose a book from Houghton's collection and write a biographical study of its "life."

All readings for the course are on the Modules section of the Canvas site, which is organized by the weekly sessions. Each module includes an Assignment sheet with the specific readings and books to be studied for the session.

For a full description of each session of the course, see the Course Plan posted under the first module, or [click here](#).

No previous background in book history is required for this course.

· Note: Because of space requirements in Houghton, the class has to be capped at fifteen students. The course is primarily intended for undergraduates but depending on enrollment, graduate students may be admitted if there is room; if they are interested, they should contact the instructor. All students wishing to take the course should write a short (one paragraph) statement explaining their interest and send it to the instructor BEFORE August 15 2023 at dstern@fas.harvard.edu

Additional information will be shown if available from the Registrar.

Religion and Nationalism in the United States: A History (221777)

Catherine Brekus

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

Many Americans have imagined the United States as having a religious identity as a "city on a hill," a "redeemer nation," or "the new Israel." We will ask several questions in this course: How and why have

Americans conceived of the nation in sacred terms? How have religious images of the nation developed and changed over time? Does the United States have a "civil religion"? What is white Christian nationalism, and what are its historic roots? Readings will cover the period from the American Revolution to the present. This course is for undergraduates only.

Forgiveness (215765)

Matthew Potts

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

When, if ever, are we obliged to forgive? What should forgiveness look like in the aftermath of violence? What conditions should be attached to its offer? Does forgiveness foster peace at the expense of justice? Should it? This course will examine the complicated problem of forgiveness through an examination of several diverse sources: theological, philosophical, and literary. The aim will be to develop a sophisticated understanding of the promise and problems of forgiveness in human lives, and to foster the critical application of such lessons to contemporary contexts and moral problems.

30

This course will consider patterns of faith and practice in the history of Christianity through the reading of Christian biographies, autobiographies, and hagiographies. We will compare archetypal lives of early saints to a range of contemporary Christian experiences that highlight the different ways Christians have sought to describe and to live out their beliefs. The course will examine in particular the interplay of two dynamic impulses in Christian history: turning within to seek the divine and facing outward in an attempt to transform the world through action. Lives to be studied include those of Augustine, Francis of Assisi, and Dorothy Day.

Animals and the Unseen (217840)

Teren Sevea

2024 Fall (4 Credits)

Schedule:

F 0930 AM - 1159 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course considers how we can write histories of religious animals and the Unseen. Students will be introduced to academic literature that has criticized scholarly and popular conceptions of humans having a special status, and assumptions that the religious sentience of non-human animals and the materiality of spirits cannot be studied academically. Students will then be introduced to a variety of sources containing rich information on religious animals and the supernatural from Islamic societies of the globe. In doing so, the course pays particular attention to how human and non-human animals were understood to be religious beings whose bodies and activities were always tethered to the Unseen. Students will be encouraged to explore how the divide between human and non-human animals might not have been evident in societies of the past and the present. Students will moreover be encouraged to engage how these sources may prompt us to remember, or rather realize, that all aspects of material life, including animals' bodies, physical resources and technologies, were inextricably linked to the imagined non-material realms of the Unseen. On the whole, this seminar class takes steps towards recounting histories of religious animals and the Unseen.

Lives of the Special Dead (222695)

Kimberley Patton

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

25

This course deals with the historical tension between religious doctrines of afterlife transcendence and lived practices of devotion to the "special dead." Considers beliefs about fertility, power, and cult in ancient Greek hero cult; the life-giving tombs and portable relics of early Christian, Byzantine, and medieval saints; Islamic shrines of the "friends of God" and pilgrimages to their tombs; and Mahāyāna traditions of the distribution of the Buddha's remains in stupas and elsewhere. We will also reflect on American funerary practices and communities of the dead, both beloved and marginalized. Topics include postmortem corruption and holy incorruptibility; mediation; bones and resurrection in eschatology and ritual; "charisma"; and earthly "traces" of deceased holy persons.

Enrollment is limited to 25 students by application. Instructions and enrollment information will be available on home page of the course website by Monday August 21; please complete and email to instructor before 10 PM on Wednesday, August 30.

Can We Still Read Religious Classics? An inquiry with Christian, Hindu, and Confucian Classics (218583)

Francis Clooney

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Theology is grounded in belief in God, or some Transcendent Reality that engages normatively our minds, hearts, bodies, lives. It is the practice of faith seeking understanding, exploring all manner of realities, human, all other worldly life form, and the divine. And, pertinent to this course, it is very often preserved primarily in classic religious texts that have for millennia been normative for believers. Today, such texts cannot be taken for granted. Our reading of them must be purified by the hardest critical questions, such as expose biases and systemic injustice, uncover elite power structures and exclusions and, in our interreligious world, undercut overdependence on the ideas, words, and methods of the Christian West. This course experiments with the retrieval of the reading of religious classics by taking seriously classics of three normative traditions: tentatively, in Christianity, Augustine's *Instructing Beginners in Faith* (4th century CE, North African Christian); in Hinduism, Sankara's *Crest Jewel of Discrimination* (8th century CE, orthodox Hindu), and in Confucianism, Confucius's *Great Learning* (6th century BCE, Chinese). We will read each carefully, and consider each in terms of its portrayal of the human, the transcendent (God, the One), the nature of learning, and, indeed, Truth such as survives our critiques of it. Each text is taken seriously, in light of critiques, and each is comprehended in light of the other two. Yes, we can still read the classics, but only if we work really hard at doing so, with the questions of the 21st century.

Messianism in Early Judaism and Christianity (223982)

*Annette Reed**David Stern*

2025 Spring (4 Credits)

Schedule:

W 0600 PM - 0845 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Messianism is one of the most fraught topics in the history of ancient Judaism and Christianity. This seminar will trace the development of the many different ideas of the messiah—his (unhappily, gender never seems to have figured) character, his fate, his role in history—from the the Hebrew Bible into Jewish and Christian traditions up until the rise of Islam. We will also pay attention to parallel developments within the Hellenistic and Roman imperial cultures. Topics to be studied include the semi-divinity of the messiah, the idea of the suffering or dying messiah, and the relationship between messianism and apocalyptic eschatology. Readings will include primary sources as well as the relevant secondary literature. All primary source readings will be provided in English translation. Depending on the make-up of the class, the instructors will make special provisions (like an extra class hour) for those students interested and able to read the primary sources in their original languages (Greek and Hebrew). Students will be expected to make regular presentations in class

Recommended Prep:

Some background in ancient Judaism and/or early Christianity, but not required..

Enrollment Cap:

n/a

This seminar introduces the ancient Indian Upanisads, some of the oldest and most famous primary texts of Vedic and Hindu India, ranging from before 700 BCE to 200 BCE and later. Select later Upanisads too will be considered, and the reception of the Upanisads in the Advaita Vedanta tradition. Topics include: the nature of self and of absolute reality; knowledge as transformative; the limits of language; the role of God in a nondualist worldview; meditation practice; death and rebirth; knowledge and ethics. Texts will be read in translation. No language or course prerequisites, but students will be encouraged to make use of any such expertise.

The Prophet Muhammad in History, Devotion, and Polemic (222915)

Mohsen Goudarzi

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0459 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In the early seventh century, a man named Muhammad son of Abdallah founded a movement that in time grew into a global religion, empire, and civilization. This course introduces students to three discourses that developed around the life and character of the Prophet Muhammad. First, we will survey some of the biographies that Muslim scholars, both ancient and modern, have written about the life of their prophet. Second, we will explore how the Prophet's life, teachings and persona have served as subjects of Islamic devotion. Finally, the course examines some of the ways in which non-Muslims, again both ancient and modern, have perceived and portrayed Muhammad in polemic against Islam or dialogue with Muslims.

Ahmad Greene-Hayes

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0459 PM

Instructor Permissions: Instructor**Enrollment Cap:**

30

This course examines the co-constructed histories of religion, sexuality, and race in the Americas from the vantage of the African diaspora. Drawing upon foundational and newer works in the field, we will explore how the construction of these categories, largely rooted in biological essentialism, has had immense consequences for the enslaved and their descendants, indigenous peoples, other people of color, and women, queer, transgender, and gender-nonconforming individuals. This course also homes in on how those marginalized by these categories have challenged and subverted them using a hermeneutics of suspicion, political organizing, and other methods of resistance and feminist and queer theologizing

Black and indigenous scholars have long argued that archives are often violent and dismembering, especially as the universities which house them preserve the physical and immaterial remnants of slavery and colonialism. Religious studies scholars, especially historians of religion, have attended to this quandary while sifting through archives of slavery, colonialism, conquest, and sexual violence. At Harvard, this conversation has re-emerged in unique ways through Harvard & the Legacy of Slavery: Reckoning with the Past to Understand the Present, and the question of what lies in university archives has taken center stage. This course examines these archival dilemmas and the violent hauntings of the past with an eye towards the historical study of religion in the Americas. We will read work by such scholars as Saidiya Hartman, Christina Sharpe, Robert Orsi, Solimar Otero, Toni Morrison, and more.

Gender and Judaism in Modern America (214625)

Ann Braude

2025 Spring (4 Credits)

Schedule:

W 0400 PM - 0629 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Contemporary Jews are as likely to view their tradition as a source of oppressive gender roles as they are to see it as an inspiration to activism for feminism or as a resource for queer identities. This course follows the construction of Jewish gender beyond the stereotypes, sometimes in collision with modern gender

norms, sometimes in accommodation, and sometimes in open rebellion. It considers challenges to both demographic and cultural reproduction that place pressure on personal decisions, group dynamics, identity, and intergroup relations for members of minority religions. By juxtaposing modern scholarship with religious texts addressing gender in Judaism, the course incorporates historical accounts of the anxieties and opportunities that accompanied the construction of modern Jewish gender identities as well as textual traditions opening alternative possibilities.

Gender as a key marker of group identity forms a central axis of inquiry through three case studies: Jewish masculinities, from ideals of Talmud study and military service to comic book superheroes
Ultra-orthodox communities, in which the rejection of modern gender roles is a defining tenet
Jews as critics of gender and sexuality, including feminist and trans engagement with Jewish tradition

Pedagogically, the course draws on historical approaches and on developments in non-halachic Torah study closely tied to changing conceptions of gender in Judaism. Rather than assuming a fixed set of Jewish teachings about gender that confronted non-Jewish gender systems with the advent of modernity and Americanization, it invites students to participate in the ongoing process of questioning the meaning of religious texts in relation to human experience. Guest interlocutor, Yakir Englander, will visit the class twice to introduce the project of reading classical Jewish texts in modern perspectives and the practice of havruta (text study in pairs or groups). A product of both a traditional yeshivah education and a doctorate in feminist theory, Englander combines these approaches to open the topic of gender and Judaism beyond Western academic approaches. Teaching Fellow Emily Rogal, HDS alum and Rabbinical student at Hebrew College, will also lead text study throughout the term. Jointly offered with Harvard Divinity School as HDS 2050.

To enroll send a paragraph to Tracy_Wall@harvard.edu expressing your reasons for interest in the course and any relevant background. HDS students should apply as soon as possible but no later than Thursday, Jan. 20 and will be notified whether they have been admitted no later than Friday, Jan. 21. FAS students should apply by Jan. 18 and will be notified by Jan. 19.

The Book of Daniel (216806)

Andrew Teeter

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0459 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A critical and exegetical study of Book of Daniel, based on a close reading of the text in Hebrew and Aramaic. Special attention will be given (1) to compositional poetics (i.e., large-and small-scale compositional strategies, principles of literary organization, textual logic, and analogical patterns); and (2) to inner-scriptural relationships, and to the nature and function of allusion and analogy within this book. This will be undertaken with a view toward understanding the overall expectations made of readers, ancient and modern. The text of Daniel and its underlying principles of design will be considered in the context of major critical debates within the current state of the field.

The course presumes basic proficiency with Biblical Hebrew. Minimum of one year of Hebrew required. No

previous knowledge of Aramaic required.

Early Christian Apocrypha (118970)

Giovanni Bazzana

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0529 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course will survey the rich and diverse array of writings produced by early Christians in the first few centuries of the common era and usually put under the label of "Apocrypha". Combining the direct reading of primary texts with that of modern literature, the course will highlight the historical, literary, and theological significance of the "apocryphal continent". Through a series of focused case studies selected from different dates and genres, the course will discuss several traditional and emerging themes in the research on apocryphal texts, like, e.g., the definition of "apocryphon" and its relationship with the canon formation, the social dimension of apocryphal literature (on themes like the role of women in narratives or the attitude towards enslavement), the treatment of Jews and Judaism, or the influence of apocrypha on the Christian imagination and contemporary popular culture. Beginners Greek (two semesters or the equivalent) is required.

Introduction to the New Testament (111138)

Benjamin Dunning

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0459 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course will provide a basic historical introduction to critical issues in the study of the New Testament. What are the contents of these texts that make up the second portion of the Christian Bible? In what ways do they reflect the major issues, concerns, and struggles that were taking place among the earliest Christ-followers? How did they get to be grouped together in a single book called the "New Testament"? In addition to these historical questions, we will also attend to the New Testament's ongoing role as Christian scripture to consider the following: what does it mean to study a religious text critically? How might the study of the New Testament's social and historical context relate to its ongoing role as sacred and/or authoritative in the Christian tradition? And what are some of the diverse ways that contemporary readers bridge the gap between the New Testament's ancient Greco-Roman context and their own interpretation and application? We will explore these questions through careful study of the New Testament texts themselves, while also attending to issues of historical context, methodology, and hermeneutics. No previous study in religion or ancient history is assumed, and there are no prerequisites for enrolling in the course. For a final assignment, students will have the option of choosing between a final exam and a research paper.

This course is a survey of American Catholic history. We will discuss French and Spanish missions, Catholic immigration to the British colonies, the rise of the "immigrant church" in the nineteenth century, and controversies over slavery, industrial capitalism, "Americanism," race, feminism, and sexuality. We will also discuss the transformation of the Catholic Church in the wake of Vatican II and contemporary divisions between "liberals" and "conservatives." Besides discussing Catholic intellectual life, we will also explore Catholic popular religion and devotionism. Throughout the course, we will focus on the historical development of the Catholic Church and the relationship between Catholics and American culture.

Michelle Sanchez

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0559 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The sixteenth century saw turmoil and rapid change in and beyond Europe: religious fragmentation, but also rising colonization, class warfare, new media, and the seeds of absolutism and nationalism. This course examines major movements of Protestant Reform, focusing on the role of theological arguments in reshaping concepts of power and representation. Why were certain reforms persuasive, and to whom? What were their political and social implications—not only for clergy, princes, and merchant-class men, but also peasants, women, Jews, Muslims, intellectuals, and artists? Finally, we will read these histories alongside our present, in which media-driven crisis has become the norm.

12

This seminar will approach the Nazi persecution of European Jewry from several disciplinary perspectives. Initially the seminar will explore the topic historically. In these weeks, the seminar will use a variety of historical materials dealing with the history of European anti-semitism, German history from Bismarck to the accession of Hitler, the evolution of anti-Jewish persecution in the Third Reich, and the history of the Holocaust itself. Sources to be used will include primary sources produced by the German government 1933-1945, by Jewish victims-to-be or survivors, documentary films, and secondary interpretations. The aims of this part of the seminar will be to understand the basic background to and narrative of the Holocaust, to introduce students to the critical use of primary historical sources, and to familiarize them with some of the major historiographical debates. Then the members of the seminar will ponder religious and theological reactions to the Holocaust. The seminar will also consider the historical question of the role played by the Protestant and Catholic churches and theologies in the Holocaust. The seminar will conclude with an assessment of the role played by the Holocaust in today's world, specifically in the United States. Throughout the seminar, participants will use various literary and cinematographic sources and test their limits in helping to understand and to represent the Holocaust.

Enrollment limited to 15 with the permission of the instructor, by application at the first course meeting.

Recommended Prep:

Some familiarity with the general shape of modern European history is desirable but not required.

Liberal and Liberation Theologies in Dialogue (126762)

Dan McKanan

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course will explore the possibilities for fruitful interchange between classic liberal theologies and contemporary theologies of liberation. We will begin with major texts of American liberal theology (Channing, Emerson, Bushnell, Rauschenbusch), then turn to the defining liberationist texts (Gutierrez, Cone, Daly), and conclude with several attempts to integrate the traditions.

Course Notes:

Offered jointly with the Divinity School as 2415.

Nineteenth Century Religious Thought: Theology and the Critique of Religion (109865)

David Lamberth

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

The nineteenth century formulated many of the questions and frameworks that continue to dominate theology and religious reflection in the West. This course considers the developing interplay between modern Christian theology (primarily continental) and the principal philosophical and social critiques of religion in the nineteenth century. Topics include human nature, religion, the divine-human relationship, religious knowledge, the social, and historicity. Readings from Lessing, Kant, Schleiermacher, Hegel, Marx, Feuerbach, Kierkegaard, Nietzsche, Harnack, and Troeltsch. Jointly offered with the Divinity School as HDS 2431.

Pragmatism and Religion: Pierce, James, and Dewey (156099)

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course surveys the American pragmatic tradition, attending in particular to views of religion. The first part takes up the classical pragmatic period, reading Emerson, then Peirce, James, Dewey, Jane Addams and Alain Locke. Topics include belief, experience, truth, pluralism, ethics, society, and the nature and role of religion. The latter half considers late 20th century neo-pragmatism, reading Rorty, Putnam, West, Chopp and Glaude. Prior work in theology or philosophy is recommended. Jointly offered in the Harvard Divinity School as HDS 2671.

Enrollment is limited to 15. Applications for enrollment will be available on the Canvas site, and should be completed at least one week before the first class meeting; petitions should also be registered in my.harvard.

Course Notes:

Offered jointly with the Divinity School as 2671.

Spiritual Paths to Abstract Art (119908)

Ann Braude

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Recent widely acclaimed exhibitions of work by Swedish pioneer of abstraction Hilma af Klint suggests a reassessment of the relation of spirituality to modern art. Af Klint's creation of stunningly modern monumental art works while in a spiritualist trance in the early 20th century draws into question the secularism of abstract painting. This course explores alternatives to twentieth-century narratives of abstract art centered on the existential crisis of a heroic-- usually male and secular--individual. In contrast, we will center paths to abstraction--frequently tread by women--in which unconventional spirituality inspires a departure from or repurposing of the figure. Locating the artists' work within their biographies, the course focuses on abstraction as a vehicle for investigation of intersections of spirituality with race, ethnicity, class, gender and sexuality. We will attend to the outsize interest of abstract artists in Theosophy, as well as to artists' grounding in Christian Science, Indigeneity, Judaism and the Occult.

The Yoga Sutras: Text, Meaning, Purpose (126783)

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The brief Yoga Sutras (only 195 sutras) of Patanjali (c 100 BCE-100 CE) is a vastly influential and fundamental text of yoga. It is the focus of the course, along with its primary commentary (Vyasa's Bhasya), notes on other commentaries, and with some attention to BKS Iyengar's famous Light on the Yoga Sutras. What was Patanjali up to? What are the Sutras for? What do the Sutras tell us about the meaning and purpose of yoga then and now? Though not a course about the practice of yoga or yoga in the modern world, it is always attentive to the implications for practice. Thus potentially of great use for practitioners and teachers today. Apt comparisons will be made with ancient Hindu and Buddhist parallels, Al-Biruni's

11th c. Arabic translation, and modern Christian interpretations of the Sutras. Given our stressful situation, possibly some optional yoga practice together at start or end of class. Weekly written responses, plus two twelve-page course papers.

Offered jointly with the Divinity School as HDS 3931

Course Notes:

Offered jointly with the Divinity School as 3931.

Recommended Prep:

No language prerequisite, but students who know Sanskrit will be encouraged to make use of their expertise.

Exploring the Quran (124063)

Mohsen Goudarzi

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the contents of the Quran and probes its place in the history of human civilization. Students will learn about and critically reflect on the following subjects: 1) the Quran's core ideas, stories, laws, parables, and arguments; 2) the historical context in which the Quran was first promulgated and codified; 3) the relationship between the Quran and the preceding literary traditions of the ancient world, in particular the Bible and post-biblical Jewish and Christian writings; and 4) Muslim utilization of the Quran towards religious, intellectual, social, and cultural ends. To meet these goals, we will read a substantial portion of the Quran in translation and draw extensively on modern academic scholarship on the Quran. In addition, lectures will contextualize and complement our encounter with the Quranic text and secondary scholarship. By the end of the semester, students should have the ability to utilize various resources and concordances in order to independently conduct further investigations and critically evaluate claims made about the Quran. Jointly offered in the Harvard Divinity School as HDS 3339.

What is (Lived) Islam? (218823)

Teren Sevea

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0529 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

What are the anthropological and historical approaches to studying Islam? How do our academic approaches help us engage the question: what is lived Islam? This course begins by considering how 'Islam' is an object of academic inquiry but remains primarily concerned with the most prominent elements of Islam and being Islamic that have been marginalized within Islamic studies. It acknowledges the methodological difficulties involved in pursuing research on the phenomenon and practice of Islam across social contexts of the past and the present, while discussing possible methods of studying Islam as the everyday religion lived by Muslims and even non-Muslims. Students will be introduced to academic and religious sources that encourage us to (re)approach Islam as the everyday experience of believers, the multiverse of rituals and exercises of knowledge acquisition, as well as contests over moral authority. Students will, moreover, be encouraged to consider if a focus on lived Islam encourages us to discard regnant dichotomies of 'textual' and 'popular' religion, along with imagined divisions of the Islamic world into a center and peripheries.

Course Notes:

Jointly offered in the Divinity School as HDS 3176.

Indian Ocean Islam (218810)

Ali Asani

Teren Sevea

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Does thinking oceanically influence the study of Islam? Can we remember a people's history of the Indian Ocean world? This course considers these questions and others as it focuses on religious worlds within port cities and the networks of Indian Ocean Islam. The course examines how religion in port cities and islands was centered upon a plethora of saints, missionaries, divinities and other agents of Islam, who have been marginalized in academic literature on the Indian Ocean. It simultaneously examines how oceanic religion was intimately connected to economic, political and technological developments. Students will be introduced to scholarship on oceanic Islam and monsoon Islam, before they are introduced to a variety of sources on transregional Islamic networks and agents of Islam, including biographies, hagiographies, travelogues, novels, poems and ethnographic accounts. Students will, moreover, be encouraged to consider ways in which approaches to studying Islam could be enhanced by a focus on religious economies and networks, as well as the lives of 'subalterns' who crossed the porous borders of the Indian Ocean world and shaped its religious worlds.

History of Early Christianity (221796)

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course will provide a basic historical introduction to ancient Christianity from the first to fourth centuries CE. How did different Christians in this period navigate the diverse teachings, rituals, and social practices associated with Jesus of Nazareth to produce a religious movement that came to dominate the Roman Empire, even as it was itself always complex, variegated, and internally contested from its earliest moments? Throughout the course, we will explore the diversity of ancient Christian thought and practice across a range of topics and geographical areas, as well as the ways in which Christians situated themselves within the larger Roman world and in relation to others both internal and external. Note that the course is designed to complement and build upon HDS 1202 "Introduction to the New Testament." Each can be taken as a standalone class or the two can be taken in any order; but overlap between them will be kept to a minimum.

Women, Religion, and the Problem of Historical Agency (113871)

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course examines recent scholarship on women in American religious history, focusing particularly on questions of narration, agency and power. We will ask several interrelated questions: How have historians integrated women into narratives of American religious history? Whose stories have they highlighted, and why? How have they conceptualized women as historical agents? We will read major interpretive works as well as theoretical accounts of gender, social structure, and power. Readings will explore the diversity of religious traditions in America, including Puritanism, Judaism, Mormonism, Catholicism, African-American

Christianity, evangelicalism, and Islam. Jointly offered in the Divinity School as HDS 2186

Course Notes:

Offered jointly with the Divinity School as HDS 2186.

The Buddhist Body, Its Materiality, and Its Moral Cultivation (125920)

Janet Gyatso

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0459 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

This is a seminar for exploring Buddhist understandings of the human body, including such topics as the nature of its materiality, sensitivity and gender; specialized practices for the body's moral cultivation using imagination, ritual, and yoga; and types of embodied knowledge. Most readings will be primary sources in English translation, including Abhidharma materials, sutra and tantra passages, medical treatises, and descriptions of bodily performance in both ritual and artistic spheres. Students will write one midterm paper with critical reflection on course readings, and one final paper creatively engaging one or more primary Buddhist source, which may include a course reading.

Background in the study of Buddhism preferred. Enrollment limited to 16; students wishing to take the course should write a one page summary of their academic background and why they want to take the course. They will be notified of their admission before the pre-registration period ends.

This course is designed for graduate students in the Committee on the Study of Religion, and is open to students in related fields who teach courses pertaining to religion. The course aims to equip students with skills to be effective Teaching Fellows at Harvard and to develop their own approaches to pedagogy as independent instructors in the field of religion.

Classes will be workshop-style and will cover various teaching methods, course design, and professional development topics. They will also provide a space to discuss day-to-day success stories and challenges in the classroom.

Course Notes:

This course must be taken Sat/Unsat and is designed to minimize work outside class time. Classes will take place 3-5pm ET on the following six Mondays: 1/29, 2/12, 2/26, 3/18, 4/01, and 4/08.

PORTUG 11S is a continuation of PORTUG 10S. This course guides students to continue the work of confronting features of the Portuguese semantics and phonological system that are most challenging for Spanish speakers. It helps solidify student's foundation in Brazilian Portuguese, and pushes them to go deeper by engaging with literary readings, examining unique cultural aspects in addition to practical points of the language. Students will continue to experience contextualized Afro-Luso-Brazilian culture through music, film, literature, social media, and Teletandem, a weekly online interaction with Brazilian students at the Language Center.

Course Notes:

Conducted in Portuguese. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Intensive Beginning Portuguese: A Pathway to Luso-Brazilian Cultures (156944)

Cristiane Soares

2025 Spring (8 Credits)

Schedule:

MTWRF 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This intensive Beginning Portuguese course provides an accelerated introduction to Portuguese with emphasis on interpersonal communication and interpreting and producing language in written and oral forms. Goals include building students' vocabulary, fluency, proficiency, and confidence. Students will experience Brazilian Portuguese and culture through music, cinema, and various media sources. The course covers the equivalent of a full first-year of Portuguese language study.

Course Notes:

This course requires an average seven contact hours per week. To supplement the scheduled 6.25 hours, a weekly online component will be arranged. May not be taken Pass/Fail or Sat/Unsat. Not open to auditors. Students must participate in an interview with the Portuguese 15 course head and receive permission to enroll in the course.

Recommended Prep:

An advanced knowledge of at least one other foreign language but no knowledge of Portuguese.

Intermediate Portuguese I: Justice, Equity and Rights in the Lusophone world (121934)

Cristiane Soares

2024 Fall (4 Credits)

Schedule: MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

In this intermediate-level language course, students will explore social justice issues in the Lusophone world related to education, environment, health, jobs, and food. Students will also interrogate topics such as immigration, racism, and gender by studying a range of texts (e.g. written, audiovisual, visual) from different sources (e.g., social media, newspapers). Through these materials, students will build vocabulary and review and refine various grammatical structures. Students will also build on oral, written, and intercultural competences through communicative activities and interactive discussions with Portuguese-speaking guests. By the end of this class, students a) will have further developed their linguistic competence, and b) will have deepened their understanding of social justice issues that have impacted the lives of Portuguese-speaking communities.

Course Notes:

Conducted in Portuguese. Not open to auditors. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. This course is taught by members of the Department.

Recommended Prep:

Upper-level Portuguese: Traditions and Culture through Brazilian folklore (114944)

Cristiane Soares

2024 Fall (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

PORTUG 30 engages students in a systematic review of grammar, writing practice and

vocabulary development while exploring the role of Brazilian folklore and traditions in contemporary society. Through the interpretation and analysis of authentic texts from the Portuguese language press, television, and film including advertisements, documentaries, newspaper articles, folklore, and literary texts, you will refine your grammatical understanding, develop your critical thinking skills, deepen your cultural awareness, and strengthen your language proficiency.

Course Notes:

Conducted in Portuguese. Not open to auditors. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. This course is taught by members of the Department.

Advanced Portuguese I: Images of Brazil through Contemporary Cinema (124524)

Cristiane Soares

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this advanced Portuguese language and culture course, you will explore Brazilian culture(s) through contemporary films. The course examines major Brazilian films in their historical, political, and social context. You will become familiar with relevant concepts in cultural studies and explore different modalities of Brazilian film in relation to the already established tradition of the 1960s "Cinema Novo". Students will have various opportunities to engage in interactive communicative activities, participate in discussions, develop their interpretive and presentational skills in Portuguese and participate in creative assignments, including a short film by the end of the semester. No previous experience with film study is necessary. This course is conducted entirely in Portuguese and films are shown in Portuguese with English subtitles.

Course Notes:

This course meets regularly on Tuesdays and Thursdays, with additional asynchronous components. Conducted in Portuguese. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Advanced Portuguese II: Sounds of Brazil: Writing Through Music (222831)

Cristiane Soares

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Portuguese 52 focuses on music as a powerful expression of the Brazilian experience and as a means of civic engagement and social change. The course presents the main Brazilian musical styles (as samba, baião, choro, bossa nova, rap paulista, funk carioca) connecting them to specific historical periods and events. You will refine speaking and writing skills by listening, analyzing, and discussing a wide range of texts, songs, films, and materials. This course builds on the communicative competence acquired in Portuguese 40, with a particular emphasis on developing your writing proficiency through creative and analytical writing projects such as lyrics, music articles, album reviews, and essays. By the end of the course, you will be able to recognize and produce different genres of written and spoken Portuguese and

identify features of language including differences in register.

Course Notes:

No previous musical knowledge required. Conducted entirely in Portuguese. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors.

Recommended Prep:

Prerequisite: Portuguese 40, or instructor's consent.

Portuguese and the Community (118080)

Cristiane Soares

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This advanced language course examines the experience of Portuguese-speaking communities in the United States as it relates to the journey, reception, integration, and use of the Portuguese language. The course combines academic activities with a service-learning component. Students are placed with community organizations within the Boston area and volunteer for three hours a week. Classwork activities focus on expanding students' oral and written proficiency in Portuguese through discussing and analyzing readings, arts, and films by and about the Lusophone communities in the US.

Course Notes:

Conducted in Portuguese. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors.

French 10

Beginning French I: Cross-Cultural Encounters in French (126933)

Nicole Mills

2024 Fall (4 Credits)

Schedule: MTWR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This beginning French course addresses the theme of cross-cultural encounters in French through engagement in the discussion and interpretation of texts, art, images, and film. You will gain an introduction to the French language with emphasis on interpersonal communication and the interpretation and production of language in written and oral forms. You will engage in interactive communicative activities that provide rich exposure to the French language and francophone culture(s). Class sessions will be filled with ample opportunities for interaction and communication and online assignments will develop your interpretive and presentational skills in French on various platforms.

Course Notes:

French 10 is an elementary French course for students with little or no knowledge of French. French 10 may count toward the language requirement. Open to students who have not previously studied French or who have scored below 300 on the Harvard placement exam. Students who have studied French for two years or more in secondary school must begin at French 11 or higher. May not be taken Pass/Fail. Not open to auditors. Graduate students may take the course SAT/UNSAT with permission of course head. French 10 is taught by members of the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS: Meets Foreign Lang Req	French

Beginning French II: Paris in Virtual Reality (126935)

Nicole Mills

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This second course in the Beginning French sequence will immerse you in the French language and Parisian life. You will discuss what it means to be Parisian from the point of view of diverse Parisians and compare real versus imagined perceptions of Paris through immersive virtual reality experiences and interactive discussions with native French speakers. Through the exploration of various course themes centered around Parisian culture, you will begin to be able to speak and write in the past, present, and future tenses, make suggestions, express emotions, express opinions, extend, accept, and refuse invitations, give advice, and express hypothetical situations. Class sessions will be filled with ample opportunities for interaction and communication and online assignments will develop your interpretive and presentational skills in French.

Course Notes:

French 11 may count towards the language requirement. May not be taken Pass/Fail. Not open to auditors. Graduate students may take the course Sat/Unsat with the permission of course head. This course is taught by members of the Department.

Recommended Prep:

Completion of French 10, or a score no lower than 301 and no higher than 450 on the SAT II test or the Harvard Placement test.

Intensive Beginning French: Parisian Culture & Life (124332)

Nicole Mills

2025 Spring (8 Credits)

Schedule:

MTWRF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This intensive Beginning French course provides an accelerated introduction to Beginning French with intensive work on interpersonal communication and interpreting and producing language in written and oral forms. Students explore diverse facets of Parisian life through the interpretation and exploration of photos, art, and film and through interactions with native French speakers. Students learn to speak and write in the past, present, and future, make descriptions, ask questions, make comparisons, accept and refuse invitations, give advice, and express hypothetical situations, emotions, and opinions.

Course Notes:

May not be taken Pass/Fail or Sat/Unsat. Not open to auditors. Students must participate in an interview with the French 15 course head and receive permission to enroll in the course.

This course is taught by members of the Department.

Recommended Prep:

An advanced knowledge of at least one foreign language, preferably a modern Romance language, but no previous study of French.

French 16

Reading, Understanding and Translating Written French for Research (111933)

Nicole Mills

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

French 16 offers an introduction to reading and translating academic French texts for students who require a basic knowledge of French for research purposes. The course presents vocabulary and the principal structures of French grammar in a systematic and coherent order. The course begins with simple texts and advertisements, then moves to academic texts with more complex structures, and ends with the translation and analysis of literary works and philosophical texts. The assignments are discipline-specific to accommodate students' research needs.

Course Notes:

Conducted in English. Not open to students with a score of 500 or above on the Harvard Placement Test or the SAT II French test, to those with more than one year of undergraduate French, or to auditors. May not be used to fulfill the language requirement and may not be taken Pass/Fail, but may be taken Sat/Unsat by graduate students with permission from the course head. This course is taught by members of the Department.

Recommended Prep:

Some previous study of a Romance language helpful but not necessary. Fluency in English required.

Intermediate French: Francophone Culture in Local Communities (126938)

Karen Turman

2024 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In this intermediate-level language course we will explore cultural topics such as music, dance, and cuisine in French-speaking countries around the world. We will in turn expand our discovery of Francophone cultures through conversations with online language partners, interactive discussions with French-speaking guests, and exploration of local Francophone communities. Themes such as family life in West Africa, sustainability in the French-speaking Pacific, and First Nation dancers in Quebec will be broached through communicative activities in order to build on oral, written, and intercultural competences. Using various texts, films, and multimedia resources as a basis for discussion, we will also build vocabulary and review and refine various grammatical structures. This course will also include online partner conversations through the Boomalang platform.

Course Notes:

Conducted in French. May count toward the language requirement. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department. To engage with online Francophone partners through the Boomalang platform, students will be required to purchase an access code for (\$40-50) as part of the course materials. **Students must complete the online information survey on Canvas before registering for the course.

Recommended Prep:

Prerequisite: Either a score between 451 and 600 on the SAT II exam or the Harvard Placement Test, or 3 years of French in high school, or completion of French 11 or 15.

Additional Course Attributes:

Attribute	Value(s)

Instructor Permissions: None**Enrollment Cap:**

n/a

This course explores the theme of identity and representation in francophone media through various types of media, from the written press to social media, while revisiting French grammatical structures and refining speaking and writing skills. Through spontaneous exchange, collaboration, and presentational discourse, this course will examine current events in the Francophone world as represented in newspaper articles, music, images, film, and advertisements from places as diverse as Montreal, Port-au-Prince, Djibouti, Brussels, Kinshasa, and Paris. Course materials will include links to digital news, films, websites, podcasts, literary texts, and visual media, among other resources. Course themes include an analysis of stereotypes and identity markers of Francophones, social life through social media, diverse francophone perspectives in trending media, and questions of truth and justice as represented through digital media. Course assignments include journalistic writing and the development of podcast episodes that will contribute to Harvard University's French-language podcast. You will engage in various interactive communicative activities throughout the course, concluding with a live journalistic panel and debate with an invited panel of Francophone journalists and podcasters.

Course Notes:

Conducted in French. May not be taken Pass/Fail, but may be taken Sat/Unsat by graduate students. Not open to auditors. This course is taught by members of the Department.

Recommended Prep:

A score no lower than 601 and no higher than 680 on the SAT II test or the Harvard Placement test; French 20; or permission of course head.

Additional Course Attributes:

Claire-Marie Brisson

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

In this advanced French language and culture course, you will explore Francophone cultures through contemporary films to build interpretive, interpersonal, and presentational modes of communication while activating analytical and creative thinking. Course materials include French-language films and corresponding literary texts, images, and supporting authentic materials such as posters and advertisements that will help you develop oral and written communication skills through close readings and cultural analysis. Course themes investigate contemporary issues at the heart of Francophone societies today, including deportation and (non)belonging, policing, ableism, education, Blackness, sexuality and transgender identity, as well as the role of the family. The structure of class will promote spontaneous exchange about films and topics studied, real-and real-time collaboration with classmates. Creative

assignments include interactive writing assignments, short compositions, scripts, and a short film. No previous familiarity with film study is necessary.

Course Notes:

Conducted in French. May not be taken Pass/Fail, but may be taken Sat/Unsat by graduate students. Not open to auditors. This course is taught by members of the Department.

Advanced French II: Justice, Equity, Rights, and Language (126998)

Karen Turman

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Through the lens of social justice issues in France and the Francophone world, this class will focus on language and civic engagement. We will interrogate topics such as colonialism, islamophobia, immigration, and sexism by studying a range of creative, analytical, and polemical texts and images. This course builds on the interpersonal, interpretive, and communicative skills acquired in French 40, with a particular emphasis on developing oral and written proficiency. In addition to creative and analytical projects ranging from a written portrait to a manifesto, you will also engage in volunteer work with local francophone communities* and intercultural conversation exchanges with students at the Kedge Business school in France.

*The community engagement project will vary depending on availability during the semester.

Course Notes:

Conducted in French. Students must complete online information survey on Canvas before registering for the course. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors.

Recommended Prep:

Prerequisite: French 40; a score of 721-750 on the SAT II test or the Harvard Placement test.

Additional Course Attributes:

Attribute	Value(s)

Exploring Sustainable Practices in French Industry: Fashion, Cuisine, and Music (217619)

Karen Turman

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this advanced French language and culture course we will explore iconic French industries through the lens of sustainability. Beginning in the Industrial Revolution, we will interrogate themes such as class, space, labor, and cultural appropriation in France and subsequently focus on the evolution of the sustainable practices of each industry today. By contextualizing examples ranging from thrifting in department stores on Boulevard Haussmann to French hip-hop and cabaret culture in Montmartre, we will evaluate the cultural legacy of fashion, cuisine, and music in France today. To this end, we will analyze videos, articles, literary texts, and images as well as engage with guest speakers from

France. In addition to participating in a conversation exchange with university students in France studying Business English, course work will include daily readings and exercises, in-class and online written assessments, a video presentation, and a final written project evaluating the sustainable and ethical practices of a French company of your choice.

Course Notes:

Conducted in French. Students must complete online information survey on Canvas before registering for the course. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

Recommended Prep:

Prerequisite: SAT/Placement score between 751 and 780.

Exploring French Language in North America through Text, Image, and Culture (220528)

Claire-Marie Brisson

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In this advanced French language and culture course, students will refine their French language skills as they learn about and discuss the cultural landscape of Francophone North America. Students will journey through Québec, Ontario, across the Great Lakes, down the Mississippi to Louisiana, and circle back to New England as we investigate themes such as identity, visibility, and cultural hybridity, past and present. Through fiction, poetry, art, historic and modern images, films, and music, students will master complex grammatical structures and learn specialized vocabulary through supported opinion, argumentation, and hypothesis based on their interactions with authentic materials. The course includes guest speakers from around French-speaking North America and creating episodes for a student-produced podcast, *Le Cramoisi*, "The Crimson."

Course Notes:

Conducted in French. May not be taken Pass/Fail, but may be taken Sat/Unsat by graduate students. Not open to auditors. This course is taught by members of the Department.

Recommended Prep:

French 50; SAT/Placement score of 751-780 or permission from the Course Head. Please note that departmental policy states that students may only take one 60-level course. If you have already taken a 60-level course, we encourage you to enroll in a 70-100 level course.

Photography and Literature (218540)

Matthew Rodriguez

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The history of modern and contemporary French literature is intertwined with the history of photography, and French writers have significantly influenced how we think and write about the medium today. Writers have approached photography since its invention in the nineteenth century with curiosity, disdain, fear, and wonder. They have thought about photography variously as aesthetic object, evidentiary document, index of reality, and source of potential fictions. In this course, as we work to understand these different ways of thinking and writing about photography, we will focus in particular on how photography has served modern and contemporary writers as an important point of reference in their investigations of memory, history, self, and identity. We will study a variety of genres, including the novel, the essay, and the memoir, as well as works that blur the boundaries between traditional generic classifications. In addition to discussing these works in class and writing essays about them, we will put the insights we gain from our readings into practice in visits to the museum to view works from the university's photography collections. Readings may include works by Roland Barthes, Charles Baudelaire, Sophie Calle, Annie Ernaux, Georges Perec, Hervé Guibert, Marcel Proust, Félix Nadar, and Marie NDiaye.

Course Notes:

Conducted in French.

Recommended Prep:

Completion of a 60-level course in French or the equivalent.

Mother Dearest: French and Francophone Writers Confront the Maternal (205161)

Annabel Kim

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The trope of mommy issues speaks to the outsized influence our mothers have on who we are and become, and, by extension, the culture that we belong to and are shaped by. This course examines maternity in twentieth- and twenty-first-century French and Francophone literature. We will discuss the representation of mothers and the maternal in the works of writers such as Simone de Beauvoir, Nina Bouraoui, Maryse Condé, Linda Lê, and Édouard Louis, while looking at films by Céline Sciamma and Agnès Varda as visual foils to these textual representations of maternity, to see how, through writing, these writers confront their complex, fraught relationships to the maternal. In grappling with these texts, we will be able to see how maternity, as a site of memory, trauma, desire, and identity, is a driving force of some of the most compelling works in modern French and Francophone literature, as well as a key to self-understanding.

The Politics and Aesthetics of Mourning (218542)

Matthew Rodriguez

2024 Fall (4 Credits)

Schedule: W 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

In this course, we will study literary responses to and representations of loss, both public and private, in twentieth- and twenty-first-century literature. We will investigate how mourning intersects with various theoretical and historical topics including gender and sexuality, the memory of war, and the AIDS epidemic. We will discuss how the particular intellectual contexts and historical events of the twentieth century brought about shifts in the way that individuals and communities experienced loss and worked through grief. We will consider how the work of mourning generates political as well as aesthetic questions, and we will ask how literature helps us to think about loss and to propose alternative models of mourning. Readings may include literary works by Marcel Proust, Annie Ernaux, Hervé Guibert, Patrick Modiano, and Brigitte Giraud. We will also look at theoretical writings on loss from a variety of perspectives, from psychoanalysis to deconstruction and queer theory.

Course Notes:

Readings will be in French, class discussions will be held in English or French depending on students' interest.

Horror in Modern French Fiction (222857)

Matthew Rodriguez

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course looks at examples of the strange, frightening, eerie, violent, and uncanny in modern literature in French, from the nineteenth century to the present. We will consider the following questions: How did writers make use of horror, its motifs, and strategies, as a way to respond to changes brought about by modernization, including new forms of social relation and the promises of scientific progress? How do more recent writers make use of horror to explore and expose the psychic and symbolic violence of racism, classism, and sexism? What historical, social, and individual fears – both conscious and unconscious – do writers address through the aesthetics of horror? Why does horror enthrall its readers, and how might these readings reframe our relation to the horrors of the present? Readings may include works by Gautier, Villiers de l'Isle-Adam, Barbey D'Aurevilly, Maupassant, Level, Renard, de Lorde, and NDiaye, supplemented by films by Clouzot, Franju, and Ducournau.

French 160

The Laboratory Island (222823)

Usha Rungoo

2025 Spring (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Islands, because of their size, boundedness by the sea and supposed isolation, have served and continue to serve as laboratories for experiments including military, nuclear, touristic, scientific and ecological ones, as well as for forms of forced labor and migrations. Colonial writers also used islands as the intellectual test sites for utopias, dystopias and other such social and philosophical experiments. This has all been to the detriment of islanders, many of whom propose a radical alternative to colonial narratives. Students will be invited to reflect on the instrumentalization of the Global South island through novels, graphic novels, plays, short stories and films by Césaire, Perec, Hergé, Coetzee, Kincaid, Verne, Chamoiseau, Spitz, Jemisin, and the writers of the X-men series.

Course Notes:

This class will be offered in English or French depending on class composition.

Reading Proust, In Search of Lost Time (222856)

Matthew Rodriguez

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this seminar, we will work our way through Marcel Proust's multi-volume novel, *A la recherche du temps perdu*, published between 1913 and 1927, reading some volumes in their entirety and selections of others as we study a variety of themes upon which Proust touches including love, art, death, time, memory, modernity, sexuality, and class. In addition to reading the *Recherche*, we will also consider examples of Proust as a reader, including his essays on John Ruskin, and examples of other writers reading Proust. Our goal is threefold: first, to gain a critical understanding of Proust's novel through our own readings and analyses; second, to engage with some of the writers, theorists, critics, and filmmakers for whom Proust's work has served as a key interlocutor and object of thought; and, third, to think about the ways in which creative work and critical work feed off of each other and the ways in which creative work performs critical thinking. Secondary readings and films may include works by Chantal Akerman, Roland Barthes, Walter Benjamin, Anne Carson, Gilles Deleuze, Julia Kristeva, Raúl Ruiz, and Eve Sedgwick.

Course Notes:

Primary readings (Proust) will be in French and class discussions in English. Students seeking credit for a concentration, secondary, or citation will complete all assignments in French.

Recommended Prep:

Strong reading knowledge of French.

Against Difference: Monique Wittig's Trojan Horse Writing and Theory (216060)

Annabel Kim

2025 Spring (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

French feminism, as it is studied and taught in the Anglo-American academy, is most often associated with the three names that constitute the "Holy Trinity" of Hélène Cixous, Luce Irigaray, and Julia Kristeva—thinkers whose various theorizations of sexual difference permitted the convergence of an emergent feminist literary criticism with high theory and all its cachet. The dominance of this differentialist vein of what is described as French feminism has effaced or obscured the rich but understudied tradition of anti-difference French feminism, which unequivocally rejects the notion of any kind of essential sexual difference.

This graduate seminar, which is open to advanced undergraduates, will explore the anti-differentialist strand of French feminism, taking Monique Wittig as our primary author and an exemplary figure of both feminist thought and literature—a figure for whom the literary is political and the political, literary. We will explore Wittig's entire corpus, reading it alongside the major anti-differentialist French feminist thinkers with whom Wittig was in conversation—Nicole-Claude Mathieu, Christine Delphy, Colette Guillaumin, Paola Tabet—to chart out a different account of French feminism than we get with the more familiar history and poetics of differentialist French feminism. In doing so, we will explore how the story we tell of feminist theory is as essential to feminist projects as the theory itself.

Course Notes:

Readings in French, discussions and written work conducted in English. Wittig's fiction is available in inferior/questionable English translations. Students are welcome to read the English translations if they wish, and we can discuss how Wittig gets (mis)translated and what a difference translation makes.

Urban Cannibals: Les Mystères de Paris (205163)

Janet Beizer

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Les Mystères de Paris, Eugène Sue's serialized novel of 1842-43, was one of the earliest French novels to focus on the working classes, and became an instant cross-cultural and international hit. It has not ceased to generate debate: around its project (simple potboiler or serious social reform?), its narrative aesthetics (crazy criss-crossed plotlines or proto-modernist collage?) and its ambiguous discursive strategies (populist and elitist, reformist and nationalist, abolitionist and racist, progressive and eugenic). We'll explore both the internal microcosm of the novel and the radiating external worlds it pulls into its pages

from France in the world, circa 1840. Each student will choose a research project spinning out from the novel (prisons, markets, hunger, cannibalism, social services, journalism, poverty, criminality, crowds, slavery, reform, revolution, class conflict, imperialism, charity, urban/pastoral, etc.)

Selected readings from Saint-Simon, Fourier, Le Bon, Nordau, Charcot, Lombroso, Marx, and Sue's own maritime tales, from the nineteenth century, and the more recent work of Louis Chevalier, Dominic Kalifa, Kaja Silverman, Alex Woloch, and others.

Course Notes:

Graduate Seminar: advanced undergraduates admitted with instructor's consent.

Subject: Spanish

Spanish 10

Introduction to the Spanish-speaking World I: Histories, Cultures, and Traditions. (124982)

Maria Parra-Velasco

2024 Fall (4 Credits)

Schedule: MTWR 0900 AM - 1015 AM**Instructor Permissions:** None**Enrollment Cap:** n/a

Spanish 10 is the first course in the Beginning Spanish sequence (SPAN 10-SPAN 11). This course is designed for students with little or no previous experience in Spanish. Through interactions with peers, instructors, and native Spanish-speakers around the world, students in this class discuss and analyze authentic multimodal texts (e.g., written, audio, audiovisual, visual) from various sources (e.g., social media, newspapers, museums). Through these interactions and analyses, students learn frequent vocabulary and develop a wide array of linguistic functions, such as the ability to make basic descriptions or to narrate in the present tense. By the end of the semester, students: a) will have developed basic linguistic competence in Spanish, and b) will have gained some understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Notes:

Conducted in Spanish. Open to students who have not previously studied Spanish or who have scored below 300 on the Harvard placement test. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students who have studied Spanish for two years or more in secondary school must begin at Spanish 11 or higher.

This course is taught by members of the Department.

Additional Course Attributes:

Spanish 10 is the first course in the Beginning Spanish sequence (SPAN 10-SPAN 11). This course is designed for students with little or no previous experience in Spanish. Through interactions with peers, instructors, and native Spanish-speakers around the world, students in this class discuss and analyze authentic multimodal texts (e.g., written, audio, audiovisual, visual) from various sources (e.g., social media, newspapers, museums). Through these interactions and analyses, students learn frequent vocabulary and develop a wide array of linguistic functions, such as the ability to make basic descriptions or to narrate in the present tense. By the end of the semester, students: a) will have developed basic linguistic competence in Spanish, and b) will have gained some understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Notes:

Conducted in Spanish. Open to students who have not previously studied Spanish or who have scored below 300 on the Harvard placement test. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students who have studied Spanish for two years or more in secondary school must begin at Spanish 11 or higher.

This course is taught by members of the Department.

Spanish 11 is the second course in the Beginning Spanish sequence (SPAN 10-SPAN 11). In this course, students explore a host of social, cultural, and environmental sustainability issues that have historically impacted the lives and livelihoods of local and foreign Spanish-speaking communities. Throughout the semester, students interact constantly with instructors, peers, and native Spanish speakers around the world as they explore culturally and linguistically rich content. Through discussions and critical analyses of authentic multimodal texts (e.g., written, audiovisual, visual) from many different sources (e.g., social media, newspapers), students develop a wide array of linguistic functions, such as the ability to make detailed descriptions or to narrate in different time frames. By the end of this class, students a) will have further advanced their linguistic competence, and b) will have deepened their understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Notes:

Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students who have studied Spanish for two years or more in secondary school must begin at Spanish 11 or higher. Upon the recommendation of the course head, students who have performed at a superior level in this course may enroll in any course for which they are linguistically prepared. This course is taught by members of the Department.

Recommended Prep:

A score between 301-450 on the SAT II test or on the Harvard Placement Test, Spanish 10, or permission of course head.

By the end of this class, students a) will have further advanced their linguistic competence, and b) will have deepened their understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Notes:

Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students who have studied Spanish for two years or more in secondary school must begin at Spanish 11 or higher. Upon the recommendation of the course head, students who have performed at a superior level in this course may enroll in any course for which they are linguistically prepared. This course is taught by members of the Department.

Recommended Prep:

A score between 301-450 on the SAT II test or on the Harvard Placement Test, Spanish 10, or permission of course head.

Spanish 11 is the second course in the Beginning Spanish sequence (SPAN 10-SPAN 11). In this course, students explore a host of social, cultural, and environmental sustainability issues that have historically impacted the lives and livelihoods of local and foreign Spanish-speaking communities. Throughout the semester, students interact constantly with instructors, peers, and native Spanish speakers around the world as they explore culturally and linguistically rich content. Through discussions and critical analyses of authentic multimodal texts (e.g., written, audiovisual, visual) from many different sources (e.g., social media, newspapers), students develop a wide array of linguistic functions, such as the ability to make detailed descriptions or to narrate in different time frames. By the end of this class, students a) will have further advanced their linguistic competence, and b) will have deepened their understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Notes:

Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Spanish 20 Section: 005

Intermediate Spanish: Language and Culture in the Hispanic World (125011)

Adriana Gutierrez

2025 Spring (4 Credits)

Schedule: MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

An intermediate language and culture class that aims to consolidate and expand the skills of listening comprehension, speaking, reading and writing in Spanish. Includes a comprehensive review of the grammar and reinforces linguistic acquisition through texts, movies, art and multi-media projects to acquaint students with cultural issues relevant to the Spanish-speaking world.

Course Notes:

Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Upon the recommendation of the course head, students who have performed at a superior level in this course may enroll in any course for which they are linguistically prepared. This course is taught by members of the Department.

Recommended Prep:

Spanish Ab, Acd, 451-600 on the SAT II test or on the Harvard Placement Test, or permission of course head.

n/a

An advanced language and culture class that further develops linguistic competence using a region or regions of the Hispanic world as a focus for class discussion, grammar review, and an introduction to Hispanic social contexts and texts. Course materials may also include films, interviews, paintings, photography, music, selections from the press, as well as literary or historical readings. Frequent written and oral assignments, and a thorough review of grammar. Consult course website for current semester topics.

Course Notes:

Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Upon the recommendation of the course head, students who have performed at a superior level in this course may enroll in any course for which they are linguistically prepared. This course is taught by members of the Department.

Recommended Prep:

A score between 681-720 on the SAT II test or on the Harvard Placement Test, AP 5, Spanish 30, or permission of course head.

Additional Course Attributes:

Attribute	Value(s)

Languaging and the Latinx identities (109820)

Maria Parra-Velasco

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course builds on students' knowledge of Spanish to explore the relationship between their languaging practices and their Latinx identities. Understanding languages as a way of knowing and meaning making, we use a variety of texts, genres, music, videos, films and visual arts to engage in discussions about family heritage, migration, and Latinx cultural and linguistic traditions and innovations. Students will strengthen their oral and written abilities, expand their interpersonal, interpretive and performative resources for languaging in informal and academic contexts.

Course Notes:

Spanish 49h was formerly Spanish 35; therefore, students cannot take 49h if they've already taken 35. Spanish 49h should be a prerequisite for 59h (or permission of the instructor).

Additional Course Attributes:

Advanced Spanish II: Creative Writing and Performance (115920)

Adriana Gutierrez

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An advanced language course designed to strengthen and develop competence in written expression. Close reading of texts in literary and non-literary genres will help students refine personal style. The performance of short excerpts of plays, combined with advanced work on oral expression and phonetics, will help students increase their fluency and ease of expression.

Course Notes:

Conducted in Spanish. Recommended for concentrators. May not be

taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Recommended Prep:

A score between 721-750 on the SAT II test or on the Harvard Placement Test, Spanish 40, or permission of course head.

Spanish for Latino Students II: Connecting with Communities (159938)

Maria Parra-Velasco

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

An advanced language course for Spanish heritage learners that aims to strengthen students' Spanish oral and written capabilities through civic engagement with Latinx communities; and to further develop students' critical language and social awareness around important issues for Latinos in our globalized era: U.S-Latin American relations, migration, bilingualism and education, ethnic studies and social justice and health disparities. Students explore these topics through various genres (newspapers and academic articles, debates, literary essays, short novels, poetry, visual art, film and music) and through three hours a week of community service.

Course Notes:

Not open to auditors. Submitting the course application form on time is required to enroll.

Barcelona's Cultural Mosaic: Unveiling the Voices that shape the Catalan City (224026)

Adriana Gutierrez

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This is an advanced language and culture class that aims to expand student's knowledge of Barcelona, one of the most vibrant European cities, and the Catalan culture, examining different topics related to history, literature, cinema, music, art and architecture, and traditions, and important personalities such as Mercè Rodoreda, Salvador Dalí, Joan Miró or Antoni Gaudí. The course will in particular explore how the conflict emerges and intertwines in different layouts of the Catalan society whose identity is currently facing (modernity, immigration, social and economic crisis, sociolinguistics, gender and national identity, tourism, rural/urban development, among others). Students will acquire a linguistic proficiency through the thematic and discursive discussion of the topics of the course, and a close look at the vocabulary used in the diversity of discourse genres from the most influential contemporary authors included in it.

Course Notes:

The course will be conducted in Spanish. The readings will be in Spanish, with some contextual readings in English. The writing

assignments can be in Spanish or Catalan. This course is eligible for Romance Languages and Literatures concentration credit (Romance Studies track or Spanish, Latin American and Latino Studies track), Secondary Field in Spanish, and Spanish Citation.

Recommended Prep:

Prerequisite: A score between 751 and 780 on the SAT II test or Harvard Placement test, a Spanish 50-level course, or permission of course head. Students are allowed to take a maximum of two courses at the 60-level in Spanish.

Additional Course Attributes:

Introduction to Modern Latin American Literature: Gender, Genre, and Canon (126853)

Alejandra Vela Martinez

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

In August 2000, the Peruvian writer Mario Vargas Llosa published in the magazine *Letras Libres* an article titled "Crazy for Lana Turner," which was his review of Suzanne Jill Levine's biography of the Argentine

author Manuel Puig. In this review, the Nobel laureate dedicates the final lines of the text to question the supposed importance that the biographer assigns to Puig's work by articulating her position regarding what kind of literature Manuel Puig, originally from General Villegas, wrote: "A lightweight, easygoing, cheerful literature that renounces any purpose other than to entertain. It disdains, as boastful and foolish, the pretension of those polygraphers who believed that by writing, they could change the world, revolutionize life, overturn values, teach how to feel or how to live." (2000, p. 28) Vargas Llosa believed that the literature written by Puig (a lover of Hollywood glamour, sequined dresses, and feminine frivolities) does not in any way represent revolutionary literature. In this assertion, there is a presupposition (a prejudice in the sense of Gadamer as a preceding evaluation) about what themes should be addressed and what forms should be used to create literature that "overturns the values" of the reader. Vargas Llosa's judgment is not only about what Puig writes but also about how he writes it and the idea of literature that underlies it. In other words, for the acclaimed Peruvian writer, the idea that lightweight literature can simultaneously teach how to feel or live seems to be an oxymoron, and this is precisely the symptom that gives rise to the course proposed here.

The course will explore Latin American literature of the 19th, 20th, and 21st centuries through a critical reading of literary genres that have been created in the region and their relationship with gender beyond the sexed bodies to which they are ascribed. The texts cover a wide Latin American geography, including works from countries such as Argentina, Brazil, Colombia, Venezuela, Chile, Puerto Rico, the Dominican Republic, Cuba, and Mexico. To accomplish this, we will read canonical texts (Sarmiento, Avellaneda, Darío, Castellanos, Neruda), as well as lesser-known yet respected texts (Lange, Gorriti, Benedetti, Puig), and texts that have been considered deserving of obscurity despite receiving significant attention at the time of their original publication (Sansores, Allende, Naty Menstrual). This approach, which involves engaging with various types of literary productions, aims to question the assumptions that form the foundation of the literary field and the rationale behind the canonization of certain authors. Furthermore, it aims to familiarize students with aspects of Latin American literature that are not readily accessible or are often overlooked. Thus, the course aims to provide students with a panoramic view of canonical Latin American literary creation while questioning the very way in which this canon has come to be constituted.

Course Notes:

Conducted in Spanish.

Recommended Prep:

A score above 780 on the SAT II or on the Harvard Placement test; a 50-, or 60-level course in Spanish; or permission of course head.

Table Talk and Food Writing (205164)

Johanna Damgaard Liander

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

From classroom to kitchen, picnic or café, this advanced language and food culture course will examine the Spanish table, its history and origins, expansions and innovations, from medieval times to present-day molecular gastronomy. Frequent reading, viewing and writing assignments and classroom discussion are all designed to reinforce language skills and academic literacy in the target language. The course, along with all materials and assignments, is entirely in Spanish, primarily focusing on literary, historical, linguistic and sociological texts and topics from Spain –selections ranging from Harvard's vast culinary collection to the most current media- with reference to Latin America and the Latino community in the United States, as well.

Course Notes:

This course is taught in Spanish.

Recommended Prep:

A score of 750 or beyond on SAT II or Harvard Placement; previous enrollment in Spanish 50 or higher; or permission of the instructor.

Revolution and Counter-Revolution in Contemporary Latin America (223031)

Alejandro Quintero Machler

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The modern concepts of 'Revolution' and 'Counter-Revolution' are usually studied with the French and the American Revolutions in mind. But what if we focus on Latin America instead? What have they meant in such an immense and varied continent? How have they been thought, contested, and enacted in it? This course offers an introduction to 'Revolution' and 'Counter-Revolution' in 19th and 20th Century Latin America. From Juan Pablo Viscardo y Guzmán's call for independence in the 1780's to Hugo Chávez's Bolivarian Revolution in the 2000's, the controversial meaning of these antagonistic and dialectically-related notions endured manifold transformations. While examining them closely, students will familiarize themselves as well with a series of long-lasting Latin American issues, such as the difficult construction of a national identity; fraught gender and race relationships; entrenched social inequalities; the colonial legacy in terms of language and religion; and the recurrence of extractive capitalism. Assigned readings will be a combination of textual and visual primary sources (both canonical and non-canonical), on the one hand, and theoretical perspectives on Revolution/Counter-Revolution, on the other.

Vessels of Ideas: Mediums, Formats and Genres in Latin America (223919)

Alejandro Quintero Machler

2025 Spring (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

How do ideas materialize, circulate, and travel? What does a constitution do? What sort of artifact is a map? Why publish an 'hoja suelta' instead of a pamphlet, a libel instead of a political essay, a catechism instead of a sermon, a magazine instead of a manifesto? What sort of ideas lie behind a poem, a movie, an internet blog? Is it possible to separate the container from its contents? How are they interrelated? And

which determines which? The objective of this course is to explore these and many other similar questions by examining and contextualizing the variegated mediums, formats, and genres used by Latin American artists and intellectuals from the end of the 18th century to the 21st century. The course offers, in this sense, a panoramic introduction to how ideas have been produced, packaged, and transmitted in Latin America, unveiling, at the same time, all those recurrent topics and leitmotifs that have never ceased to preoccupy the region.

Women Writers in Greater Mexico (222840)

Alejandra Vela Martinez

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Is there such a thing as "women's writing"? How can it be defined, and analyzed? And what does being "Mexican" mean? Is Mexicanness a specific quality, a geography, an identity? Or does it take multiple forms? This course proposes a re-reading of the Mexican literary canon, by questioning two of its main guiding principles: gender and nation. Problematizing these two notions –what is a woman, how does she write; what Mexico is and how it is defined– we will read and analyze novels, short stories, poetry, and essays written by female authors, in parallel to texts inserted in less canonical material spaces such as newspapers, magazines, and comics. Redrawing the borders of what Américo Paredes called Greater Mexico, this approach will present a panoramic view of Mexican literary genealogies, while questioning the very way in which these cultural traditions have come to be constituted, providing the students with tools and skills for textual analysis and interpretation.

Revolutionizing Archives: Re-viewing Latin American Culture (222841)

Alejandra Vela Martinez

2025 Spring (4 Credits)

Schedule:

F 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

In her paradigmatic essay *A Room of One's Own* (1931), Virginia Woolf narrates her unsuccessful bibliographical research process in preparing a conference on women and literature. As she asks herself what History is, it becomes clear that the realm of the feminine is not part of that narrative. Thus, since the 1930s, the work of feminist intellectuals in diverse geographies raised the question, not only about women's writing, but about how the mechanisms of historical preservation, and the creation of cultural genealogies, reproduce logics that marginalize the feminine as an epistemological category.

This course proposes a "revolutionized" reading of the Modern and Contemporary Latin American literary tradition based on the interrelation between the literary canon and the materials that lie in less explored

archival spaces. The aim is to rethink the role of less studied cultural artifacts, associated with traditional notions of femininity, in order to question the institutions and regulations that authorize and legitimize a canon. In addition, the students will study the epistemological problem of the archive as an enclave and the origin of our understanding of power and identity.

The course will cover Latin American literature of the 19th, 20th and 21st centuries through a critical reading of diverse literary genres (autobiographies, letters, diaries, chronicles, newspapers and magazines), their relationship with sexual identity, beyond the gendered bodies to which they are ascribed, as well as the presence or absence they represent on the shelves of bookstores, libraries, and archives. Covering a wide Latin American geography, we will read works from countries such as Argentina, Colombia, Venezuela, Chile, Puerto Rico, Dominican Republic, Cuba and Mexico. Thus, the course seeks to bring the student closer to a panoramic view of Latin American literary creation considered canonical, while questioning, through the archive, the very way in which these genealogies have come to be constituted.

The Borges Machine (108752)

Mariano Siskind

2025 Spring (4 Credits)

Schedule:

F 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Between 1923 and 1970, Jorge Luis Borges wrote some of the most original poems, short stories, essays and film scripts in Latin America and anywhere in the world, and he redefined the meaning and scope of literature. In this course, we will examine the signifying power of Borges' short stories, essays and poems, and we will consider his work as a literary machine whose output radically transforms aesthetic formations

and imaginaries beyond Argentina and Latin America. Rather than thinking about what his literature means, we will concentrate on what it produces as a fictional-poetic machine: cities and worlds, love and treason, popular and high culture, politics and death, institutions of knowledge and traditions, and new ways of reading and thinking about aesthetic and social relations.

The Dangers of Femininity: Queering Latin American Literature, Film, Music, Art (222839)

Alejandra Vela Martinez

2024 Fall (4 Credits)

Schedule:

F 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Fabián Chairéz's painting "La Revolución" caused a public commotion when it was first shown at Mexico City's Palacio de Bellas Artes in 2019. The reason? It dared to present the Mexican hero Emiliano Zapata in a very suggestive position: naked, riding a horse while wearing heels, against a pink backdrop. The public backlash the painter received revealed two fundamental aspects of gender dynamics in Latin America: first, it evidenced how any symbol that alludes to the feminization of national paradigms still constitutes a threat. Second, it showed that femininity is still linked to specific things: heels, seduction, nakedness, and pink.

In this course, we will problematize this supposed dangerousness of the feminine both when it is inscribed in women's bodies and when it is placed in spaces not considered "appropriate" for femininity. We will work with aesthetics and forms of performance present in novels, songs, television series, films, and art while problematizing the very category of woman that these aesthetics presuppose. Some of the materials include authors like Soledad Acosta de Samper, José Asunción Silva, Jorge Isaacs, Manuel Puig, Norah Lange, Rosario Castellanos, Gabriela Mistral, Luiz Zapata, Miyó Vestrini; filmmakers like Felipe Cazals, María José Cuevas, Nestor Almendros; and performers, like Juan Gabriel, Chavela Vargas, Naty Menstrual or Rita Indiana, among others. The arc of the course will trace the appearance of "prostheses of femininity" and how they acquire different layers of legibility according to the "speaking body," as Preciado calls them, in which they are inscribed. Thus, we will go from the most "apparent" prostheses (getting breast implants or using a particular type of makeup) to the most "hidden" prostheses (the division between reason and feeling, the ascription of specific disciplines to the masculine or the feminine). In this sense, the course seeks to return to the cycle begun by Preciado's manifesto, aiming to collectively rethink how we conceive and analyze sexual difference and its relation to cultural production.

Rhetorics of travel, mobility and displacement in Latin American culture (1845-2019) (222858)

Mariano Siskind

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

Colonial expansion, scientific and military explorations, exile, tourism, desires for global wandering, journalistic demands, the need to escape political and economic hardship, persecution, and climate disasters: travel literature and writings of displacement are crucial entry points to reflect on processes of cultural modernization in Latin America. When seen through the production and circulation of rhetorical formations of travel and displacement, Latin American culture becomes an unstable and uncertain site of global relations. In this course, we will study travelogues, novels, and crónicas that recount, think through, and witness the experience of being a stranger away from home or of having lost a place of origin in order to interrogate questions of genre and gender, cultural modernity and modernization, the gaze and desire of the (displaced) other, homeliness and homecoming, normative and fictional tropes, and the ethical witnessing of migration and displacement. We will read texts by Domingo Faustino Sarmiento, Rubén Darío, Amado Nervo, Manuel Ugarte, Enrique Gómez Carrillo, Victoria Ocampo, Sylvia Molloy, José Carlos Mariátegui, Beatriz Sarlo, Roberto Bolaño, Martín Caparrós, Lina Meruane and Valeria Luiselli, among others.

Course Notes:

Texts will be in Spanish and English, so reading knowledge of Spanish is required.

Subject: Italian

Italian 10

Beginning Italian I - Parliamo Italiano! Pathways to Italy (113814)

*Chiara Trebaiocchi**Elisa Tragni Maloney*

2024 Fall (4 Credits)

Schedule: MTWR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

This is a first semester beginning course designed for students with little or no knowledge of Italian. Through the explorations of six targeted urban areas and various aspects of Italian daily life (the university, home environments, currency, shopping habits, pop songs, and regional cuisines), this course will give you the language you need to communicate simply, but effectively in Italian and to get ready for future adventures in il bel paese. You will learn to talk about personal preferences and daily life; handle basic social exchanges; plan events; and engage in pleasantries, information-sharing, and personal storytelling (about present and past events). Assignments include the exploration of cultural texts (poems, songs, commercials, graffiti), visual tasks (both online and at the Harvard Art Museum), short creative writing assignments (postcards, brief personal essays) and oral projects.

Course Notes:

Conducted in Italian. Students whose placement score does not entitle them to enter a more advanced course are assigned to Italian 10. Students who have studied Italian for two years or more in secondary school must begin at Italian 11 or higher. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS: Meets Foreign Lang Req	Italian
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

This second semester beginning-level Italian course will engage you in interactive communicative activities that provide rich exposure to the Italian language and culture(s). In this class, you will continue to develop and strengthen oral and written competence, as well as reading and comprehension skills, building your vocabulary and learning the grammar points necessary for more analytical conversations (using hypotheticals, the conditional, the subjunctive, and indirect discourse). Specifically, you will be able to: describe and narrate simple events in the past and in the future, make comparisons, express opinions and possibilities, and engage in discussions. You will explore six targeted urban areas in Italy while discussing cultural topics, telling stories about travel, and engaging with Italian literature, cinema, music, and pop culture. In the second half of the semester, you will watch an award-winning movie, *La meglio gioventù*, that will provide ample opportunities to discuss the history of modern Italy and to learn more about Italian politics and contemporary issues. Course work will include individual and in group presentations and short creative writing and oral assignments, based on authentic texts and artifacts. In-class assignments will be supplemented with individualized conversations with native speakers of Italian to further enhance your understanding of the diversity of cultural perspectives within Italian communities.

Course Notes:

May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Recommended Prep:

Italian 10, or a score of 301-450 on the SAT II test or the Harvard Placement test, or a score below 3 on the Italian AP exam, or two years of high school Italian, or permission of course head.

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is an intensive and complete first-year course in one term for students with no knowledge of Italian, focused on developing all four communicative skills. You will learn how to talk about personal topics, likes and dislikes, and your immediate environment (such as family, school, friends, daily routine); handle basic social exchanges (such as eating out or planning events); describe and narrate simple events in the present, past, and future; make comparisons; express possibility; present your point of view; and engage in discussions. By the end of this course, you will have the linguistic and cultural foundations necessary for your adventures all'italiana. You will be introduced to contemporary Italian culture through a variety of topics from everyday life (family, shopping, food, fashion) to the arts (music, literature, cinema). Materials include films such as *La meglio gioventù* and cultural readings that explore the history of modern Italy (i.e., 1968, Italian Terrorism, the mafia, etc.). Assignments include short creative writing and oral projects, cooking activities, and multimedia presentations. In-class assignments will be supplemented with individualized conversations with native speakers of Italian to further enhance your understanding of the diversity of cultural perspectives within Italian communities.

Course Notes:

Not open to auditors. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

Recommended Prep:

An advanced knowledge of at least one foreign language, preferably a modern Romance language, but no previous study of Italian.

Reading, Understanding and Translating Written Italian for Research (113582)

Chiara Trebaiocchi

Elisa Tragni Maloney

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This beginning level Italian course, for undergraduate and graduate students, will prepare you to read, understand, and translate academic and literary Italian texts for research. Materials will be selected in accordance with the needs and interests of enrolled students. You will develop individualized reading/research goals in your academic field of interest, such as translating a 16th-century Italian treatise on architecture or reading a novel in Italian by Elena Ferrante. Group discussion sessions will facilitate discussion of targeted reading strategies and individualized meetings will be regularly scheduled to respond to your personal translation needs.

Course Notes:

Taught in English. Not open to auditors. May not be used to fulfill the language requirement. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

Recommended Prep:

Some previous study of a Romance language helpful but not necessary. Fluency in English required.

Intermediate Italian: The Colors of Italian Pop Lit (128265)

Chiara Trebaiocchi

Elisa Tragni Maloney

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this intermediate Italian course, inspired by the "colors" of Italian pop literature and culture, you will strengthen previously learned grammatical structures and master more challenging ones that will allow you to handle various communicative tasks, both in writing and in spontaneous conversation, such as: expressing and comparing preferences and experiences on various topics; narrating stories; presenting opinions and debating the opinions of others; formulating hypotheses; comparing situations. Through the exploration of a variety of authentic Italian materials (from romance to crime stories to graphic novels and even the Spaghetti Westerns movies) and a structured review of grammar, you will increase your language proficiency and broaden your vocabulary in a communicative and meaningful context. Targeted assignments throughout the semester will give you ample opportunities to practice your written Italian (letters, short essays, brief film reviews, summaries) as well your oral competence (recordings, in group discussions). In-class assignments will be supplemented with individualized conversations with native speakers of Italian to further expand your cultural awareness of *il bel paese* and to explore the diversity of cultural perspectives within Italian communities.

Course Notes:

Conducted in Italian. May count toward the language requirement. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Recommended Prep:

A score of 451-600 on the SAT II test or the Harvard Placement test, or

a score of 3 on the Italian AP Exam; Italian 11 or 15; or permission of course head.

Upper-Level Italian: Italiano in Verde: Sustainability Issues in the Italian Classroom (128266)

Chiara Trebaiocchi

Elisa Tragni Maloney

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course revisits structures, refines speaking and writing skills, and advances critical linguistic exchanges through the discussion of environmental, cultural, economic, and social issues of sustainability. Through the interpretation of films, novels, short stories, newspaper articles, podcasts, maps, and comics, you will be empowered to discuss such topics, relevant both for the Italian discourse and on a global scale, while revisiting and expanding vocabulary and reviewing grammar in context. Class discussions will encourage the interpretation, analysis, and discussion of current media (advertisements, documentaries, social media, and articles) on climate change, the slow food movement, environmental justice, sustainable tourism, migration and activism. Assignments (oral presentations, weekly written essays, short video recordings) are designed to advance discussions of Italian culture, introduce you to contemporary spoken and written Italian language (i.e., colloquial language), and refine fluency and pronunciation.

Course Notes:

Conducted in Italian. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Recommended Prep:

Italian 20; a score of 601-680 on the SAT II test or the Harvard Placement test, or a score of 4 on the Italian AP exam; or permission of course head.

Advanced Italian I: Italian Through Cinema: Oral Expression and Performance (116233)

Chiara Trebaiocchi

Elisa Tragni Maloney

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Through the exploration of both old and contemporary Italian movies in comparison, you will explore themes such as: immigration, family and stereotypes, regional difference between the North and the South, and the cinematic representation of mafie, among others. Course work – which include analysis of scripts excerpts and film reviews, creative writing assignments, presentations, and a group final project – is designed to advance language proficiency, explore different dialects and registers of language (formal and colloquial expressions), and review advanced grammatical structures in context. You will gain confidence expressing opinions on a variety of topics and in different registers; and deepen your understanding of the multifaceted nature of Italian culture(s). No previous knowledge of Italian movies or film studies is required.

Course Notes:

Conducted in Italian. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Appropriate for concentrators electing the Italian Studies or Romance Studies track. Not open to auditors. This course is taught by members of the Department.

Recommended Prep:

A score of 681-720 on the SAT II or the Harvard Placement Test, or a score of 5 on the Italian AP exam; Italian 30; equivalent preparation; or permission of course head.

Italian 50 will focus on writing as a form of civic engagement through the lens of social justice in Italy. This

theme-based course is designed to develop advanced competence in written expression through guided examination of stylistics and pragmatics. It will revisit grammatical structures, refine speaking and writing skills, and advance critical and meaningful exchanges through the discussion of social justice themes in Italy. The course will include the exploration of both literary and non-literary genres and authentic texts (films, novels, newspaper articles, podcasts, etc.) that will help students perfect their personal style in Italian. Students will investigate themes such as LGBTQ+ activism and civil right movements in Italy, prison education, sexism and gender in Italian literature, culture, and society, among others, by analyzing a wide range of authentic texts, films, documents, and materials. By the end of the course, students will be able to: recognize and produce different genres of written and spoken Italian; identify features of language including differences in register; and write more confidently in academic Italian. Students will enhance their writing proficiency and develop their academic language by practicing different types of creative and analytical writing assignments (movie and book reviews, social media posts, subjective and objective descriptions, argumentative essays, among others).

Course Notes:

Conducted in Italian. Appropriate for concentrators electing the Italian Studies or Romance Studies track. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors.

Recommended Prep:

A score between 721-750 on the SAT II or on the Harvard Placement Test; Italian 40; or permission of course head.

Safeguarding Intangible Heritages : from Petrarch to Unesco (222855)

Ambrogio Camozzi Pistoja

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

With 59 sites, Italy holds the record for the highest number of UNESCO World Heritage Sites, serving as a living laboratory for understanding the politics of cultural preservation. This course introduces students to the concept of heritage in its varied forms - tangible and intangible, ancient and contemporary, natural and man-made, permanent and ephemeral, visible and invisible.

Students will focus on eight case studies during the semester, engaging with different theories, methodologies and challenges that have historically and currently shaped efforts to preserve and interpret culture. The case studies adopted by the students as course work will help explore management issues raised by climate change, multiple ownership, collective memories, conflicting values and the relationship of immoveable cultural heritage to surrounding communities and society as a whole. Guest lecturers will play an important role in the course, presenting the challenges faced by professionals in the field and offering personalized feedback on student's submissions. One external visit to a local heritage place, including contact with the organizations and communities involved in their management, will allow a first-hand understanding of how they work behind the scenes.

Dante's *Commedia* is the story of a journey back from personal and societal Hell, through self-knowledge and friendship. The book itself is an act of friendship. It never disappoints. It teaches itself. It has been engineered to improve design thinking and emotional intelligence in its readers in proportion to their commitment. It prompts readers to experience knowledge as a communal and continual endeavor. Its metaphors are accessible irrespective of time, linguistic or socio-cultural barriers. Its characters and their voices brought solace into the darkest corners of modern history. The book is human craft and ingenuity at their best. The ways in which notions and ideas are encoded in Dante's *Commedia* are testimony to the capabilities of the human mind at investigating and preserving the diversity of the world, and the interconnectedness of all matter.

This introductory course has been designed to make Dante's masterpiece accessible and relevant to students interested in a variety of disciplines and bodies of knowledge. The readings and lectures are intended to provoke free inquiry and critical thinking into a highly complex linguistic object, and the information contained therein.

The course has two principal aims. First, through guided and independent 'reverse engineering' - by exploring the text piece by piece - and by working closely with the professor, students will gain an understanding of the mechanisms and potentialities of verbal language and of poetry in particular, as the conjunction of verbal language and music. This will help you to become a better writer and a better reader: more sophisticated, less credulous, more perceptive. Second, the course will introduce you to a key period of world's history, the European Middle Ages, its practical realities and its key spiritual, scientific, political, and artistic dilemmas. This is the time that saw the emergence and flourishing of new languages over Latin; of academic communities; that established the separation of religious and secular power; that saw the first monastic rule written by a woman.

Boccaccio's Other Works (223908)

Ambrogio Camozzi Pistoja

2024 Fall (4 Credits)

Schedule:

MF 0300 PM - 0415 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This graduate seminar in Italian is dedicated to an in-depth study of Giovanni Boccaccio's works, excluding the Decameron. Participants will explore the complete oeuvre of Boccaccio, with a focus on a curated bibliography of secondary studies addressing themes such as law and literature, sexuality and gender, material culture, and hermeneutics. Meetings will occur weekly, featuring concise lectures from the instructor, followed by student presentations, and class discussion. Final assignment consists in a draft of a research paper suitable for publication or for presentation at the 2024 summer school of the Ente Nazionale Giovanni Boccaccio (Certaldo, Italy).

Course Notes:

Course Structure: Each week, participants will be required to complete readings from Boccaccio's works and selected secondary studies. The weekly meetings will begin with a short presentation by the instructor, offering insights and analysis on the assigned readings. Students will then present their own findings and interpretations, which will serve as a catalyst for a group discussion. This structure will foster a collaborative learning environment, encouraging participants to share their perspectives and engage in constructive debates.

Writing and Urban Life (223973)

Bruno Carvalho

2025 Spring (4 Credits)

Schedule:

R 0915 AM - 1200 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

In this seminar we will study representations of urban experience, and how the evolution of cities has been shaped by writing. Each week will pair literary and planning texts from the 1860s onward. We will discuss shared aspirations and tense relations among various urban dwellers, focusing on literature, urban planning, and everyday life. Topics include the impact of technology on cities as lived and imagined spaces; interfaces between literacy, orality, and visual cultures; intersections between fiction, poetry, and social history; porous boundaries between built and natural environments; relationships between modernity, writing, and urban planning. Focus will be placed on major cities where Romance languages are spoken, such as Paris, Rome, Buenos Aires, Rio de Janeiro, and Luanda.

Course Notes:

Readings will be in translation, and discussions will be in English.
There are no requirements for enrollment.

Additional Course Attributes:

Futurisms (A comparative history) (222917)

Jeffrey Schnapp

2024 Fall (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

From its foundation in Feb. 1909 through WWII, futurism developed into the first international cultural-political avant-garde. Its aim was a revolutionary transformation of all spheres of life and its influence

extended to the whole of Europe, parts of Asia, and the Americas. Combating the traditionalism of turn-of-the-century European culture, the movement sought to found a cosmopolitan (but nationalist) counterculture based on the exaltation of youth, speed, violent revolt, innovation, and experimentation. Hence the movement's name: the label "Future-ism" denoting at once adoration of the new and struggle against the prevalence of "past-ism" or passatismo (the idolatry of the past). In its first decade of existence Futurism became the first full-fledged cultural/political avant-garde of our century, gathering together painters, musicians, architects, political revolutionaries, and poets from several European nations. A key progenitor of later movements such as Dada-, Vorticism, and Surrealism, Futurism had a powerful formative influence not only on the cultural atmosphere of Italy during the Fascist era (1922-1945), but also on 20th century culture as a whole.

Course Notes:

Computing Fantasy: Imagination, Invention, Radical Pedagogy (Munari / Rodari / Calvino) (222918)

Jeffrey Schnapp

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Though built around three seminal figures from the 2nd half of the 20th century -the artist-designer Bruno Munari, the radical writer-educator Gianni Rodari, the novelist Italo Calvino- the course is broadly concerned with the formal logics and generative structures that inform imaginative work, from artistic practice and industrial design to stories and fables. Readings will include Propp's *Morphology of the Folktale* as well as later instances of formalism and structuralism. The course will be held in English with all writings available in English translation.

Course Notes:

Also offered as COMPLIT 200.

Questions of Theory (205260)

Doris Sommer

Nicole Suetterlin

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

To explore key literary, cultural and critical theories, we pose questions through readings of classic and contemporary theorists, from Aristotle to Kant, Schiller, Arendt, Barthes, Foucault, Glissant, Ortiz, Kittler,

and Butler, among others. Their approaches include aesthetics, (post)structuralism, (post)colonialism, media theory, gender theory, ecocriticism. Each seminar addresses a core reading and a cluster of variations. Weekly writing assignments will formulate a question that addresses the core texts to prepare for in-class discussions and interpretive activities.

Course Notes:

Conducted in English. This course is also offered as Romance Studies 201 and German 291. Credit may be earned for Romance Studies 201 or German 291, but not both.

Catalan is the language spoken in a large area in the east of Spain, including the cities of Barcelona, Valencia, and Mallorca (in the Balearic Islands). It is also the national and official language of Andorra and it is spoken in the Italian island of Sardinia and the historic Roussillon, a region of southern France. Catalan 10 is for beginners as well as for those who already know some Catalan expressions and phrases. Through a set of units that introduce critical topics of contemporary social, political, territorial, and artistic debates, this course teaches the basics of Catalan language and culture. The class activities will focus on listening, speaking and the exploration of culture and will work with grammar and vocabulary from different authentic oral and written texts. Students will engage in interactive and communicative activities and practice their interpretive and presentational skills. By the end of the course students will be able to interact in daily situations with native speakers, read and write messages about themselves and other topics, and interpret cultural expressions and products.

Course Notes:

Conducted in Catalan. Knowledge of another Romance language is useful but not essential. Not open to auditors. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. This course is taught by members of the Department.

Catalan Language and Culture: a Multimedia Approach (122352)

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0200 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This intermediate-level language course aims to consolidate and further develop proficiency in listening comprehension, speaking, reading, and writing in Catalan by exploring cultural topics related to history, art, music, dance, literature, and sociolinguistics in Catalan-speaking communities. The class activities include a comprehensive review of the grammar and vocabulary, the learning of new specific structures, and reinforces linguistic acquisition through texts, movies, art, and multi-media projects to acquaint students with cultural issues relevant to the Catalan-speaking world. Students will discover the Catalan cultures and their relations with the American continent through conversations with online language partners abroad and guest visitors in order to increase their ease of expression. The course will continue to promote cross-cultural understanding by introducing learners to different textual genres such as debates, critical review as well as a selection of literary work.

Course Notes:

Conducted in Catalan. Not open to auditors. May not be taken Pass/Fail by undergraduates, but may be taken Sat/Unsat by GSAS students.

Requirements:**Prerequisite:** Catalan 10

Language Pedagogy: Theories, Approaches, and Practices (136717)

Nicole Mills

2024 Fall (4 Credits)	Schedule:	W 0300 PM - 0500 PM
Instructor Permissions: Instructor	Enrollment Cap:	n/a

This course is designed for TFs and TAs in the department of Romance Languages and Literatures who are teaching a Romance language at Harvard for the first time, or those who are interested in foreign language learning and teaching. It introduces TAs and TFs to theories of second language acquisition (SLA) and explores their implications for the teaching of foreign language, culture, and literature. The course provides opportunities for students to learn to enact the specific pedagogical practices deemed essential to foreign language teaching. The intensive week before the start of classes includes reports on and discussion of general SLA theories and demonstrations and analysis of varied instructional approaches.

Course Notes:

Students are required to attend the pre-service seminar before classes begin. Students who do not attend the pre-service seminar will not be permitted to enroll in the course. For details and further information, please contact the Course Heads. May be taken SAT/UNS. Permission of Course Head required.

Teaching Languages, Cultures and Literatures (216381)

Maria Parra-Velasco

2025 Spring (4 Credits)	Schedule:	M 0300 PM - 0500 PM
Instructor Permissions: None	Enrollment Cap:	n/a

This course is addressed to experienced TFs and TAs who are currently teaching foreign languages, literatures and cultures at Harvard. It will present and use theories coming from the disciplines of language pedagogy, relevant applied linguistic research, socio-linguistics, anthropology, and literary criticism, applied to classroom experience whether online or in situ.

The course is conceived as a space of open and structured discussion among humanists and social scientists specializing in different fields, teachers at different stages of their careers, and individuals coming from diverse linguistic, cultural and social backgrounds. We will learn from each other through comparing theories, practices, and stories.

Course Notes:

This course fulfills one of the requirements of the Bok Certificate in Teaching Language and Culture (in collaboration with the Bok Center for Teaching and Learning).

Article Publication Workshop (212926)

Annabel Kim

2024 Fall (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

A reading and writing intensive workshop aimed at doctoral students done with coursework, and postdocs affiliated with the department. Through workshoping (both as a class and in smaller groups), participants will go through two intensive rounds of revision to produce an article ready to submit to peer-reviewed journals at the end of the semester. We will begin with preliminary discussions of the nuts and bolts of writing and publication: reading essays and articles on how to write well; identifying journals that are a good fit for publication; reading sample abstracts and writing and revising one's own; analyzing sample readers' reports (from the generous and intelligent to the brutish and mean) to think through how to respond to feedback; etc.

Slavic Languages and Literatures

Subject: Czech

Czech AA

Elementary Czech I (111301)

Veronika Tuckerova

2024 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Part one of a two part introductory course in modern Czech language and culture, designed for students without previous knowledge who would like to speak Czech or use the language for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed. Students are exposed to Czech culture through work with film and literature and gain some familiarity with the major differences between literary and spoken Czech as they learn to use the language both as a means of communication and as a tool for reading and research.

Czech AA: Elementary Czech I (in the fall) and Czech AB: Elementary Czech II (in the spring) satisfy the foreign language requirement and prepare students for continued study of Czech in intermediate-level courses and for study or travel abroad in the Czech Republic.

Course Notes:

This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. For information on meetings during the first week of classes, please see <https://slavic.fas.harvard.edu/language-courses>. - - -

Part one of a two-part series. Students are strongly encouraged to enroll in Czech AA in the fall and Czech AB in the spring within the same academic year. - - -

Part one of a two part intermediate course in modern Czech language and culture for students with previous study of the language. Further development of vocabulary and oral expression within a comprehensive review of Czech grammar. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed as students learn to use the language both as a means of

communication and as a tool for reading and research. Systematic study of word formation and other strategies are taught to help free students from excessive dependence on the dictionary and develop confidence in reading. Increased exposure to the differing registers of Czech in its literary and spoken forms.

The two part course prepares students for continued study of Czech in advanced-level courses and for study or travel abroad in the Czech Republic.

Course Notes:

This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. Polish AA

Elementary Polish I (123076)

Iryna Kovalchuk

2024 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Part one of a two part introductory course in modern Polish language, culture, and art designed for students without previous knowledge who would like to speak Polish or use the language for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed. Students are exposed to Polish culture through reading of prose and poetry as they learn to use the language both as a means of communication and as a tool for reading and research.

Polish AA: Elementary Polish I together with Polish AB: Elementary Polish II satisfy the foreign language requirement and prepare students for continued study of Polish in intermediate-level courses and for study or travel abroad in Poland.

Course Notes:

This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. For information on meetings during the first week of classes, please see <https://slavic.fas.harvard.edu/language-courses>. - - -

Part one of a two-part series. Students are strongly encouraged to enroll in Polish AA in the fall and Polish AB in the spring within the same academic year. - - -

See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

Enrollment Cap:

n/a

Part one of a two part intermediate course in modern Polish language, culture, and art for students with previous study of the language. Further development of vocabulary and oral expression within a comprehensive review of Polish grammar. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed as students learn to use the language both as a means of communication and as a tool for reading and research. Introduction to Polish literature through fiction and poetry, history and contemporary events, including readings from literary masterpieces from Polish literature from the era of the Renaissance to contemporary times including Jan Kochanowski, Wisława Szymborska, Zbigniew Herbert, Czesław Miłosz and others. Film clips and newspaper articles will introduce students to a variety of styles of contemporary Polish. Systematic study of word formation and other strategies are taught to help free students from excessive dependence on the dictionary and develop confidence in reading.

Intermediate Polish I and Intermediate Polish II together prepare students for continued study of Polish in advanced-level courses and for study or travel abroad in Poland.

Course Notes:

This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. Part one of a two part introductory course in modern Russian language and culture, designed for students

without previous knowledge of Russian who would like to speak Russian or use the language for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed. Students are introduced to Russian culture and the etiquette of social exchanges, and expand their knowledge of grammar and vocabulary through readings (including stories, biography, and poetry), videos, and class discussions.

Course Notes:

Part one of a two-part series. Students are strongly encouraged to enroll in Russian AA in the fall and Russian AB in the spring within the same academic year.

This course will also meet for two additional hours of speaking practice on Tuesdays and Thursdays. Meeting times for the TuTh small-group conversation and practice sessions will be scheduled after the semester begins, based on the availability of students and instructors. See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

Russian AA together with Russian AB or Russian ATB (Elementary Russian through Authentic Texts II) satisfy the foreign language requirement. Any of the elementary (A-level) level Russian courses (A, AAB, and AT) prepare students for continued study of Russian in intermediate (B-level) courses (B, BAB, or BTA) and for study or travel abroad in Russian-speaking countries.

Recommended Prep:

No prior knowledge of Russian is required.

Intermediate Russian I (112823)

Steven Clancy

2024 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1130 AM

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Part one of a two part intermediate course in modern Russian language and culture for students with previous study of the language. Further development of vocabulary and oral expression within a comprehensive review of Russian grammar. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed as students learn to use the language both as a means of communication and as a tool for reading and research. Systematic study of word formation and other strategies are taught to help free students from excessive dependence on the dictionary and develop confidence in reading. Vocabulary is thematically organized to include such topics as self and family, education, work, human relationships, politics, and national attitudes and is reinforced through film and the reading of classical and contemporary fiction and history. Practice in the etiquette of common social situations (sociolinguistic competence). Computer exercises on selected topics.

Course Notes:

Interested students should contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions regarding scheduling conflicts.

Part one of a two-part series. Students are strongly encouraged to enroll in Russian BA in the fall and Russian BB in the spring within the same academic year. - - -

This course will also meet for two additional hours of speaking practice on Tuesdays and Thursdays. Meeting times for the TuTh small-group conversation and practice sessions will be scheduled after the semester begins, based on the availability of students and instructors. See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>. - - -

Any full course in Russian at the B-level (Russian Ba-Bb, Russian BTA-BTB, or Intensive Russian BAB) will prepare students for continued study of Russian at the advanced level (Russian 101) and for study or travel abroad in Russian-speaking countries. Russian Ba and Bb count as two of the four required semesters of study for a citation in Russian.

Recommended Prep:

Russian AA-AB, AAB, ATA-ATB, AH, or placement at the B-level. Familiarity with fundamentals of Russian grammar, particularly case endings, verb conjugation, and elementary competence in spoken Russian.

Additional Course Attributes:

An intensive version of Russian Ba and Russian Bb, covering the same material in a single semester. Class meets five days per week with five hours of the main section and three hours of small group speaking practice each week. Readings may vary.

Course Notes:

This course will meet five days a week from 9:00am to 10:00am on MTuWThF. In addition, students will be required to attend three additional one-hour speaking practice sections each week on Mondays, Wednesdays, and Fridays. Meeting times for the small group sections will be determined at the start of term based on students' availability.

Any full course in Russian at the B-level (Russian Ba-Bb, Russian BTA-BTB, or Intensive Russian BAB) will prepare students for continued study of Russian at the advanced level (Russian 101) and for study or travel abroad in Russian-speaking countries.

Fourth-Year Russian: Russian for STEM (223914)

Veronika Egorova

2025 Spring (4 Credits)

Schedule:

MWF 1200 PM - 0100 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

In this fourth-year advanced-level Russian language course, you will explore some of the most innovative areas of scientific study, while expanding your vocabulary in STEM domains and the language skills needed to share scientific information within your community. Focuses on developing advanced-level reading, speaking, listening, and writing skills through discussing STEM-related topics in technology and society, such as education, math and physics, development of internet technologies, and environmental issues. Students participate in class debates and discussions and create a final presentation on a topic of their professional interest. Course materials combine articles, book excerpts, films, interviews, and project-based tasks. Taught in Russian. The course meets 3 days/week without additional small-group speaking sections.

Recommended Prep:

Prerequisites – Russian 103 or permission of the instructor.

This fourth-year advanced-level Russian language course emphasizes viewing/listening, reading, analysis, and discussion of authentic Russian materials from media, social media, and popular culture to better understand their impact on Russian society. Through working with documentaries, popular YouTube and Telegram channels, TV shows, video games, graphic novels, and memes among other materials, students will explore everyday life and attitudes in Russia from the early days of the Russian Federation to the present day (1991-2023). Students will develop the critical skills needed to better understand, analyze, and discuss modern media (both state-run and independent) and develop their intercultural sensitivity, while developing a broad range of vocabulary and reviewing complex grammatical structures. The course meets 3 days/week without additional small-group speaking sections.

Recommended Prep:

Russian 102r and an additional course at the level of Russian 101 or above, or Russian 111 with permission of the instructor.

Jenya Mironava

2024 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1130 AM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This fourth-year advanced-level Russian language course emphasizes reading, analysis, and discussion of Russian literary works in their linguistic and cultural contexts. The course is designed to help students improve proficiency in the language and to develop increased fluency and confidence of expression while deepening their understanding of Russian culture. Discussions of relevant cultural, social, and historical issues along with the study of the nuances of Russian grammar, syntax, register, and style will be grounded in authentic Russian literary texts. The course meets 3 days/week without additional small-group speaking sections.

Course Notes:

The fourth-year Russian courses are independent semester-long courses that may be taken in any order by students at the appropriate

language level.

Recommended Prep:

Prerequisites: RUSS 101-103, placement test, or permission of the instructor.

Fourth-Year Russian: Language, Ethnicity, and Diversity in Russia (122814)

Liya Zalaltdinova

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1000 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This fourth-year advanced-level Russian language course provides a theoretical and historical background of the diversity of Russia and takes students on a virtual tour of some of its remarkable corners, including the Urals and Siberia. While strengthening their communicative competence, reviewing high-level Russian grammar and expanding their vocabulary, students broaden their cultural competency, getting a better sense of Russian geography, literature, film, the fine arts, everyday concerns, and much more. Through a variety of sources including short stories, articles from periodicals, interviews, lectures, art exhibits, as well as documentary and feature films, students explore different cultures, lifestyles, religious beliefs, traditions, and artistic expressions in a journey that brings them far from the Moscow region and from stereotypical ideas of Russian identity. The course meets 3 days/week without additional small-group speaking sections.

Course Notes:

The fourth-year Russian courses are independent semester-long courses that may be taken in any order by students at the appropriate language level.

Reading Tolstoy's War and Peace (218532)

Julie A. Buckler

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Leo Tolstoy's *War and Peace* (1865-69) is a magnificent work of art by a world-class writer tackling life's "big questions" and it is also a pleasure to read. We will go through *War and Peace* closely together, savoring the details, while exploring Tolstoy's artistic biography and the larger cultural and historical contexts for classic Russian novels. We will also consider the significance of the Napoleonic Wars (1803-1815) in Russian history. How many different ways are there to interpret Tolstoy's work? What issues arise in translation? How does the pacing of the novel relate to nineteenth-century conceptions of time, space, narrative, and genre? What are the problematic distinctions between history and literature that the novel raises?

Course Notes:

No knowledge of Russian required.

Nariman Skakov

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The course explores the role of technology in constructing the social and ideological fabric, as well as the

material reality, of Soviet and Russian society. From the early Soviet period, when technological progress was linked to humanistic utopia, through dystopian critiques of a totalitarian machine of conformity and constraint, we proceed along the assembly line of communist production, avant-garde and constructivist artistic utopia, socialist realism, the space race, and information technology, using examples from Russian literature, film, art, visual arts, performance, and current events. With the media's concern for fake news and Russian hacking today, it is our course's goal to "hack Russia": to understand the politics and technology shaping Russia, and the creative responses that have made its society a site of both dreamlike promise and nightmarish threat, through its history and today.

Russia's Golden Age: Literature, Arts, and Culture (207566)

Julie A. Buckler

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Explores major works of imperial Russian culture (1703-1917), including literature, drama, opera, ballet, music, visual arts, and architecture. At the center of this course stand the works themselves, their original historical and cultural contexts, the intentions of their creators, and the responses of their initial audiences. What mythologies of national identity did these works propose and why were they so compelling to their first audiences? In what ways were these works radical: formally, aesthetically, ideologically? How have these masterworks been variously renewed and reinterpreted since their initial reception, up to the present day? Includes works by Pushkin, Gogol, Dostoevsky, Tolstoy, Turgenev, Chekhov, Musorgsky, Tchaikovsky, and others.

Course Notes:

All readings in English. Students who wish to read Russian texts in the original may arrange for a special weekly section with the instructor.

Apocalypse Then! Forging the Culture of Medieval Rus' (213422)

Michael Flier

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

When the natives of Medieval Rus' (later Russians, Ukrainians, and Belarusians) accepted Orthodox Christianity in the 10th century, their nature-based paganism gave way to a powerfully sensual belief system that made good use of the visual and the verbal to prepare these newest Christians for the coming Apocalypse and Last Judgment. We investigate this transformation from the conversion of Saint Vladimir and the excesses of Ivan the Terrible through the Time of Troubles and the modern turn of Peter the Great. The class features close analysis of architecture, icons and frescoes, ritual, folklore, literature, and history to understand this shift in worldview, including the role of women. Special attention is devoted to the ways in which Medieval Rus' is portrayed in film, opera, and ballet.

Course Notes:

All readings in English.

This course will include a field trip to the Museum of Russian Icons in Clinton, Massachusetts.

Nabokov (205527)

Justin Weir

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course on the major fiction of Vladimir Nabokov begins with his major Russian novels in English translation, including *The Defense*, *Laughter in the Dark* (*Camera Obscura*), *Invitation to a Beheading*, and *Despair*, and concludes with classic English works, *Speak*, *Memory*, *Lolita*, and *Pnin*. Topics in the course include emigration and cross-cultural translation, literary modernism, metafiction, nostalgia and stories of childhood, as well as the literary representations of tyranny, violence, and abuse. We will pay additional attention to Nabokov's interest in film and film aesthetics, and we will consider four screen versions of his novels (*Luzhin's Defense*, *Laughter in the Dark*, *Despair*, and *Lolita*).

Course Notes:

No knowledge of Russian in required

Slavic 175

Between East and West: A Critical Mapping of Polish Culture (205086)

Aleksandra Kremer

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course will introduce you to the history of Polish literature and Polish cultural imagination, focusing on several questions that remain resonant to this day, such as Poland's entangled relations with Ukrainian, Lithuanian, Belarusian, Jewish, German, and Russian cultures. Critical discussions of Polish literature and film (including readings of Polish Nobel Prize winners: Tokarczuk, Szymborska, Milosz, and Sienkiewicz) will be confronted with Ukrainian, Lithuanian, and Yiddish texts. Polish culture offers examples of both the colonized and colonizing voices, offering unique insights into the study of racialization, forced displacement, dual identity, complicity, resistance, and genocide. We will discuss why Poland's national epic poem begins with the words "Lithuania! My homeland!" and was written in France by a poet born in the area of today's Belarus. We will consider East-Central Europe's often-changing borders, contested memories, and the ways in which the region's complicated past is reworked and discussed today, in the context of the Russo-Ukrainian war.

Note: All readings in English. It is an introductory course – no background in Polish literature is required. Students who take this course are eligible to apply for the Slavic Department's Jurzykowski grants for the summer language study in Poland.

Course Notes:

No prior knowledge of Poland required. All readings will be in English.

Fugitives from Utopia: Polish Poets Across the Iron Curtain (205084)

Aleksandra Kremer

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Immigrants and travelers, dissidents and eccentrics—there were many ways Polish poets created spaces of personal freedom from the communist regime and the languages of newspeak and propaganda. In poetry, they contrasted utopian slogans with reality, but they also questioned more generally the idea of any human-made collective paradise, choosing instead irony, distrust, and singularity. In this course, we will study Polish poetry as embedded in the lived experiences of home meetings and experiments with tape recording, censorship and internal exile, Polish and Western radio stations, struggles with emigration and translations into English, as well as dramatic decisions whether to stay abroad or come back from one's journeys. We will watch documentary films and listen to audio recordings; we will read essays, biographies, and criticism; and we will study poems by Czesław Miłosz, Wisława Szymborska, and Zbigniew Herbert, alongside many other authors.

Course Notes:

All readings in English. Students who wish to read Polish texts in the

original may arrange a special section with the instructor.

The Political Novel (205018)

Jonathan Bolton

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

No novel can be reduced to a set of political beliefs, and yet we often feel that novels speak to our political theories and practices. What makes a novel "political"? Can the novel make a contribution to political theory? How does our understanding of political power change when we imagine detailed and dramatic confrontations between individuals and the state, individuals and empire, or individuals and global ideologies? How does narrative form reinforce or undermine ideology? What archetypal dramas—protest against authority, the loss of political innocence, the battle between tolerance and conviction—have shaped the political novel in its various traditions from the nineteenth century to the present?

For spring 2021, our readings will include works by Pushkin, Dostoevsky, Ivan Olbracht, Koestler, Kundera, Le Guin, Gordimer, and Colson Whitehead.

Course Notes:

All readings in English.

The Other Russia: Twenty-First Century Films, Fictions, States of Mind (205015)

Stephanie Sandler

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Russia is in the news these days for its aggression in Ukraine, its repressions of free speech, and its election interference in the US. But what about the daily lives of its people? Nothing gets at that daily reality in all its struggle and grandeur better than literature and cinema. The stories, poems, plays, movies, memoirs, and documentaries of the last thirty years are the subject of this course. We will trace the chaotic transitions of the 1990s, the disparities of wealth and polarized politics of the 2000s, the rise of religious thinking (Orthodox, Islam, Jewish), and the several conflicts at Russia's borders. Travel, diaspora, and the internet broke down old walls that once isolated the USSR, but the COVID pandemic, the fresh wave of repression, and sanctions against Russia have reinstated many barriers. The different fates of former Soviet republics will be compared, with examples from Ukraine, the Caucasus, and Kazakhstan, and we will consider the fates of Russians living outside Russia, in those former Soviet republics, in North America, and elsewhere.

Writings by Svetlana Aleksievich, Joseph Brodsky, Ketj Chukhrov, Elena Fanailova, Linor Goralik, Alisa Ganieva, Boris Khersonsky, Maxim Osipov, Vladimir Sorokin, Maria Stepanova, Lida Yusupova, and others. Films include *Leviathan*, *Four*, *Alexandra*, *My Joy*, and *Pussy Riot: A Punk Prayer*. Students will also have the opportunity to conduct online oral history interviews with current college students in the region to gain an understanding of how they think about contemporary Russian literature and culture, and how they understand the society in which they are living. Likely conversation partners will be in Kazakhstan and Georgia. These conversations will be the basis for the course's final project.

Course Notes:

All readings in English, with added section for those able to read in Russian

Subject: Bosnian, Croatian & Serbian

Bosnian, Croatian & Serbian AA

Elementary Bosnian, Croatian, and Serbian I (110073)

Tatiana Kuzmic

2024 Fall (4 Credits)

Schedule: MWF 1200 PM - 0115 PM**Instructor Permissions:** None**Enrollment Cap:** n/a

Part one of a two-part introductory course in modern Bosnian, Croatian, and Serbian (BCS), designed for students without previous knowledge of the language who would like to speak BCS or use it for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed in these languages that are as mutually intelligible as British and American English, if not even more so. Students are also exposed to BCS culture through excerpts from poetry, prose, and newspaper headlines, as well as video and popular music clips.

Course Notes:

This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. For information on meetings during the first week of classes, please see <https://slavic.fas.harvard.edu/language-courses>. - - -

Part one of a two-part series. Students are strongly encouraged to enroll in BCS AA in the fall and BCS AB in the spring within the same academic year. - - -

See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

Introduction to Social Studies (115470)

David Armitage

2024 Fall (4 Credits) Schedule: T 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

This course offers an introduction to the foundations of modern social theory from the seventeenth to the nineteenth century. Our focus will be on the rise of democratic, capitalist societies and the concomitant development of modern moral, political, and economic ideas, with special emphasis on empire, race, and inequality. Authors we will examine include, among others, Thomas Hobbes, Jean-Jacques Rousseau, Ottobah Cugano, Mary Wollstonecraft, Adam Smith, Karl Marx, and Frederick Douglass.

Course Notes: This course is limited to sophomores and Social Studies concentrators. This course is a prerequisite for sophomores applying to Social Studies. Students planning to take this class must attend the first lecture to be admitted.

Additional Course Attributes:

Table with 2 columns: Attribute, Value(s). Rows include FAS: Course Level (Primarily for Undergraduate Students), FAS Divisional Distribution (Social Sciences), and All: Cross Reg Availability (Not Available for Cross Registration).

Foundations of Social Science Research (213384)

Matthew Reichert

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 35

This course introduces students to the diversity of methods that social scientists use to answer questions about the social and political world. We survey both qualitative and quantitative approaches, and consider how to make the most of each at all stages of the research process, from exploring ideas, to collecting data, to communicating findings. Students learn about case study design, the logic of experiments and causal inference, and how to use archives and primary sources creatively. Students also learn how to conduct interviews and focus groups, run surveys, and conduct in-depth ethnographic observation. We consider how deeper epistemological commitments shape our methodological choices, and how politics and power shape the scientific communities in which we work. Course assignments prepare thesis-writers to immediately conduct productive original research.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Social Studies 60

Making Sense of Methods for Theoretical and Historical Research (213383)

Charles Clavey

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

This course has three interrelated aims. First, it will introduce students to the foundational questions of the philosophy of social science. How do social scientists and theorists interpret and explain the world around them? How are models and concepts created and applied? What does it mean to argue that one event causes another one? Second, the class will familiarize students with the range of theoretical and historical methods that could be used in a senior thesis. What are the established and cutting-edge paradigms of social-science research? Where do these disciplines converge and diverge? What topics and questions are best suited to each method? Third, the course will prepare juniors and first-semester seniors to undertake thesis research. Through a range of exercises and activities, students will shape their interests into precise questions and feasible projects. In deciding which approach might be the most apt for their theses, they will confront the stakes—practical, philosophical, and political—of methodological choices.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

AI Theory in Action: Agency and Resistance in the Age of Surveillance Capitalism (224346)

Lowry Pressly

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 12

This course takes students' concern with the challenges of the digital age beyond the classroom and into the practical world of technological, political, and artistic creation. In doing so, we will take on a pair of common challenges concerning the ethical and political status of new technologies. First, although it is common to feel that something is wrong with at least some aspect of technology in our society, many of us have trouble articulating these concerns in coherent theoretical terms. Second, we often feel not only

Students will be exposed to a range of theoretical perspectives for understanding the challenges of the digital age, as well as a range of responses to these challenges drawn from computer science, engaged scholarship and journalism, law and politics, and the arts. For their final projects, students will create their own intervention into a challenge of the digital age (accompanied by a written theoretical justification). Students will develop these projects over the course of the semester in concert with the professor and their classmates. Final projects may take the form of: (1) technical responses (e.g., apps, algorithms, or websites); (2) academic or journalistic writing (e.g., data-science exposés or long-form investigation); (3) law and politics (e.g., white papers, draft legislation, or political organization); and (4) the arts (e.g., documentary film, critical digital arts, or wearable obfuscation technology). We will study many examples of practical interventions from each of these categories, as well as the theoretical analysis and justifications that motivate them.

Leading Change in City Schools: Urban Education Reform in Action (223110)

Nicole Simon

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 12

Public education has long strived to be society's "great equalizer." Yet, throughout its history, the American education system has failed to deliver on this promise. In this course, we will examine specific high-profile and popular system-level reform initiatives aimed at improving urban public schools. For example, we will investigate New York City's efforts to improve high schools and develop a "college for all" culture, Boston's focus on teacher quality, and Denver's school choice initiative. We will meet key leaders of these reforms: district level policy makers, principals, teachers, non-profit leaders and funders who collectively developed theories of action, negotiated new policies, and implemented the reforms with students. We will dive deep into their work to understand how political, economic, and cultural systems have enabled and constrained it, and we will review the growing body of research on these reforms. Through course assignments, students will have opportunities to further investigate initiatives that interest them by visiting schools, interviewing education leaders, synthesizing research, and reflecting on whether and how recent reforms have influenced their own educational experiences.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Law and American Society (121345)

Terry Aladjem

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 10

At a time when the rule of law is imperiled, our democracy and equal rights of every kind under assault by multiple forces, the importance of understanding our constitutional system of rights and laws as essential to the fabric of the nation cannot be overstated. The course will examine law as a vehicle of political conflict and a defining force in American society in four dimensions: 1.) as it establishes individual rights, liberties, and the limits of toleration; 2.) as it attempts to resolve differences among competing constituencies; 3.) as it sets out terms of punishment and social control having effects on race and class, and 4.) as a source of informing images and ideological meaning. We will examine these themes with close attention to their historical roots and their constitutional and theoretical origins, to their manifestations in our current political discourse. We will take up issues at the level of jurisprudence or political theory, but also as they arise in public controversies, or are settled in legal cases by the courts—cases in which racial or gender equality are at stake, religious or sexual freedom, cases in which the nature and content of political speech are questioned, cases in which the imperatives of religious communities seem irreconcilable with public institutions, cases in which the nature and extent of punishment have been debated and the question of who deserves to be punished decided, and notorious public trials in which the national self-understanding has been shaped. Our aim is to bring theory to bear, and down to earth, in each consideration (we will read Foucault's *Discipline and Punish*, and also examine prisons and mass incarceration). This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Art, Political Culture, and Civic Life (116288)

Kiku Adatto

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 10

The seminar explores the interplay of the arts, political culture, and civic life. It will draw on studies in art, history, political philosophy, literature, sociology, and photography. Among the questions we will address are: How is historical memory constructed, and what are the competing forces that shape it? What is the significance of public apologies, and does solidarity create moral responsibilities for historical injustices? How is cultural domination exerted, and how is it resisted? In what ways does rhetoric shape politics, and what role does it play in national narratives? Why does the contest to control images loom so large in politics, the media, and in our everyday lives? This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Social Studies 98LF

Globalization and the Nation State (125982)

Nicolas Prevelakis

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 10

Despite globalization, the nation is still a major actor in today's world. This course tries to understand why this is so by examining the role that nationalism plays in peoples' identities and the effects of globalization on nations and nation-states. It includes theoretical texts, but also case studies from the recent pandemic, the rise of populism and authoritarianism, the challenges of supranational entities such as the European Union, and the urgency of global issues such as climate change, inequality, and migration. Examples from the United States, Europe, Latin America, China, and the Middle East. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Social Studies 98ND

Justice and Reconciliation after Mass Violence (128057)

Jonathan Hansen

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

10

This seminar examines the problem of justice and reconciliation after mass violence: How does a nation sundered by genocide, civil war, or gross human rights violations reestablish the social trust and civic consciousness required of individual and collective flourishing? What is the proper balance between individual and collective responsibility? What is the role of trials, truth commissions, and apology in civil reconciliation? How do specific types of mass violence influence outcomes? What makes some reconciliations successful, others less so? The course engages these and other questions from historical and contemporary perspectives, exploring the legacy of mass violence going back centuries, while examining reconciliation projects across cultures, countries, and continents.

This course comprises three units: 1) a typology of mass violence (civil war, genocide, state repression, for instance) and historical responses; 2) case studies of the U.S. Civil War (and its continuing legacy), the Spanish Civil War, and the Rwandan genocide; and 3) a research and writing workshop emphasizing students own work. The goal of the course is to introduce students to the literature of mass violence from an interdisciplinary perspective (including but not limited to historical, sociological, and anthropological approaches), ultimately launching students on their own research projects. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

The Critical Theory of the Frankfurt School (156263)

Charles Clavey

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

10

This course examines the distinctive critical theory created by members of the Institute for Social Research—better known as the Frankfurt School—from its origins in the interwar era to the present day. Over these decades, critical theory has used tools from philosophy, psychology, and sociology to grasp the pathologies of the present and to chart a path towards emancipation in the future. We will reconstruct the Frankfurt School's evolving theory through its connections to the most important themes of twentieth-century thought: capitalism, authoritarianism, individuality, bureaucracy, and alienation. Our goal is not only to gain a deep understanding of critical theory but also to assess its continued relevance to modern social and political thought. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Social Studies 98SE

Race, Ethnicity, and Inequality (213256)

Christina Ciocca Eller

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 10

The United States is more racially and ethnically diverse than at any point in its history. Yet racial and ethnic social categories remain persistent sources of inequality in American society. This tutorial will interrogate the relationships between race, ethnicity, and inequality, examining theoretical and empirical approaches across multiple social domains. Part I of the course focuses on the historical development and contemporary meanings of both "race" and "ethnicity" in the United States. Part II discusses the reproduction of social categories and the consequences of reproduction for inequality. Part III examines the relationship between race, ethnicity, and inequality in particular social domains, including neighborhoods, youth experiences, policing and mass incarceration, higher education, and the labor market. And Part IV dives deep into the issue of within-group inequalities by race and ethnicity, while also introducing global comparative approaches. We will discuss the implications for public policy through each of these case studies, focusing on strategies for reducing racial and ethnic inequality. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Social Studies 98UD

Critical Theory of Knowledge, Technology and Power (218523)

Bo-Mi Choi

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 10

This tutorial explores the role and impact of science and technology on society, culture, and politics from the perspective of critical theory. Building on the foundations of Marxian philosophy and the works of 20th-century critical theorists such as Lukács, Benjamin, Heidegger, Marcuse, and Foucault, we will explore more recent contributions in the philosophy and post-phenomenology --of technology as well as in science and technology studies (STS). While the tutorial is largely designed as a theory course, we will take a closer look at machine learning and artificial general intelligence, automation and robotics, surveillance capitalism, data feminism, Afrofuturism, and digital culture. Questions we will address along the way include: how do science and technology transform and mediate human experience and knowledge of the

world? co-produce our political and social order? shape concepts of human subjectivity and regulate human behavior? And what kinds of political, ethical, and aesthetic consequences do we need to consider as we adopt new technology? Rather than conceptualizing science and technology in Promethean terms as "tools" of progress, we will closely examine how they are intrinsically constitutive of the ways we experience, order and govern the world. The aim is to collaboratively articulate, over the course of the semester, an amplified social theoretic framework that enables us to critically engage the existential challenges and potential dangers of new technology and normatively evaluate scientific and technological innovations from the standpoint of human flourishing. This is a junior tutorial.

Difference and Democracy (220263)

Vatsal Naresh

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 10

How do some groups acquire the label 'minority'? What prevents different oppressed groups from collaborating in the pursuit of political power? Why do identities linger when they mark and connote deprivation, oppression, and violence? How do different forms of difference figure in hierarchical relationships to each other and preponderant groups and political institutions? How do oppressed groups innovate in resisting oppression and creating alternative political projects?

This tutorial will explore interconnected forms of social difference like race, caste, indigeneity, gender, and class in the United States and South Asia (and other contexts based on student interest) by studying the formation of identities before and during democratic rule, and the interaction of groups and institutions of political power. We will read texts in social and political theory, history, and the empirical social sciences.

The tutorial will empower students to analyze identity in historically specific contexts, as well as the underlying abstract concepts. The tutorial will focus on, and train students in theoretical, archival, and ethnographic methods. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Solidarity: Group, Self, Identity (220477)

Rosemarie Wagner

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 10

People are fighting for themselves and they're fighting for one another, but how do you figure out whom to stand with, and when and how? People with different experiences, beliefs, and commitments, are struggling, fighting, and organizing to get free from oppression and empower themselves. This course examines how agency, solidarity, and coalition can be possible in our post-foundational world, and how we bridge the gap between social theory and social action. Can we theorize a self or a group identity without relying on on essentialist and perhaps harmful beliefs? We will learn from theoretical debates in feminist, queer, Black, democratic, radical, postcolonial, and disability studies on questions of agency, solidarity, and liberation, and will also analyze real-world case studies of coalitions. This course focuses on theoretical and historical methodology. This is a junior tutorial.

Course Notes:

This course will be lotteried, but sophomore, junior, and senior non-concentrators are welcome to take it if space permits.

To Remake the World? Revolutionaries, Regimes, and Paradoxes of Power (220265)

William Whitham

2024 Fall (4 Credits)

Schedule: T 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 10

"Who says organization, says oligarchy," wrote Robert Michels in 1915. In his view, collective revolutionary endeavors tend to empower a small few and disappoint true believers. Was he right – and why? Drawing on political theory and sociology, this course examines major attempts to remake politics and societies in global history, focusing on modern Eurasia. We will read classic theories of elite rule and mass society, then consider case studies on social democracy, fascism, communism, decolonization, and more. Rather than idealize resistance or theorize liberation, students will explore how the critics and opponents of power may, too, be its agents and subjects – and what, if anything, can or should be done about this. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Crime, Punishment, and Policing in an Unequal America (222691)

Adaner Usmani

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

The United States imprisons more people per capita than any comparable society, past or present. It is alone among developed countries in annually killing hundreds of its citizens in police encounters. And it is also, by some distance, the most violent country in the developed world. These facts raise a range of difficult questions about what should be done about crime, incarceration and policing in today's United States. The aim of this course is to introduce students to the empirical premises and normative principles at stake in these debates. Throughout, we will be using reasoning and methods from both the empirical social sciences and from analytic moral and political philosophy. Students will be pushed to develop the strongest possible arguments for positions they may not endorse, and to argue against the perspective of the instructor at every opportunity. They will be guided through the process of writing a research paper which combines empirical and normative argumentation, ideally on the topic of the course material and in preparation for their senior thesis. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Inequality Under Capitalism (222692)

Adaner Usmani

2025 Spring (4 Credits)

Schedule:

W 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

All capitalist societies are characterized by significant forms of inequality. Some people and some groups have more of the things that we think make for a good life, while other people and other groups have less. But inequality is not static; not all societies are equally unequal. Social and political movements have transformed the distribution of well-being in numerous ways. This class ponders the empirical and normative questions raised by these facts. First, what explains inequality? Why do some people have more than others? Second, what should be done about these facts? What kinds of inequalities do we care about? What does justice require? And, given that only some of what justice requires is feasible, what should we demand?

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

The Politics of Health and Medicine in the United States (222714)

Matthew Reichert

2024 Fall (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

How does politics shape health in America? In this multidisciplinary class, students explore the historical origins of institutions like Medicare and Medicaid, the FDA, the CDC and the NIH. We seek to explain the politics of why American healthcare policy differs so dramatically from its peers, with narrowly targeted public programs and a dominant private insurance sector. Students learn how epidemiologists and clinicians today think about social determinants of health, especially racial disparities in care and outcomes. We conduct deep dives into topics like the Affordable Care Act, Covid-19, and the medical ecosystem here in Boston. Finally, students also observe how public health researchers make use of social science methods, from the clinical trial to the ethnographic case study. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Encounters: Dimensions of the Travel Narrative (222768)

John Harpham

2025 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course will consider the dimensions of the travel narrative. It will proceed in chronological order, with each week devoted to one of the classics of this troublesome genre. The focus in time will be the period that came to be known as the Age of Discovery, which lasted from around the middle of the fifteenth century to around the end of the seventeenth century, although a number of works from before and after this period will be considered as well. The focus in space will be the Atlantic world. Particular attention will be devoted to works that describe (or at least purport to describe) Africa and America and to accounts that were the work of indigenous American and African authors. The interests and the contexts that frame the construction of such accounts will be central objects of inquiry, but so will be the contents of the texts themselves. We will examine the ideas about the common structure of human life that shape these texts. In turn, we will work to understand the complex manner in which travel narratives at once resisted and disrupted and contributed to the invention of the modern concept of race. This is a junior tutorial.

In addition to rigorous in-class discussion, this course will include visits to the Houghton Library, the Tozzer Library, and the Harvard Map Collection. Books will include:

Herodotus, *The Histories* (Penguin, 2003); Ibn Khaldûn, *The Muqaddimah* (Princeton, 2015); Marco Polo, *The Travels* (Penguin, 2015); Christopher Columbus, *The Four Voyages* (Penguin, 1992); Leo Africanus, *A Geographical Historie of Africa* (Cambridge, 2010); Bartolomé de las Casas, *A Short Account of the Destruction of the Indies* (Penguin, 1992); José de Acosta, *Natural and Moral History of the Indies* (Duke, 2002); Jean de Léry, *History of a Voyage to the Land of Brazil* (University of California, 1993); Aphra Behn, *Oroonoko* (Penguin, 2004); and Olaudah Equiano, *The Interesting Narrative* (Penguin, 2013).

Political and Ethical Challenges of the Digital Age (222775)

Lowry Pressly

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 10

This course examines the range of political and ethical challenges posed by new technologies such as artificial intelligence, facial recognition, ubiquitous connectivity, the data economy, and more. Our approach to these topics and technologies will be largely theoretical but also deeply interdisciplinary, drawing from philosophy, sociology, science and technology studies, computer science, and the arts. This theoretical foundation will prepare students to understand and critique the hazards and opportunities that the digital era poses to democratic life and human flourishing. Students will have the opportunity to propose themes and technologies to explore both in class and through independent research. This is a junior tutorial.

Course Notes:

This course will be lotteried and is open to non-concentrators if space permits.

Climate Justice: The Politics of Decarbonization (222894)

Jonathan Masin-Peters

2025 Spring (4 Credits)

Schedule: T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 10

Given the urgent need to shift societies away from carbon-based energy, how can such transitions occur

so as not to reproduce existing injustices? Answering this question requires an interdisciplinary approach. Texts from historians and anthropologists will provide insight into how societies across time and space have made large-scale energy transitions. Political science scholarship will contribute knowledge about political transitions, which were widespread in the twentieth century, from socialist transitions in the early twentieth century to democratic transitions in the post-Cold War era. Texts by political theorists and philosophers will enable conceptual analysis of ideas like democracy, injustice, and nature. At the same time, work by sociologists will attune students to the forms of stratification and inequality energy transitions are likely to foster. Finally, literary and cultural criticism will provide insights into the interpersonal tensions, nuances, and lived experiences of people undergoing large-scale changes. Students will build their conceptual vocabulary, learn the strengths and limits of each disciplinary approach, and understand how to formulate compelling research questions and problems. This is a junior tutorial.

Tutorial in Sociological Theory (115130)

Shai Dromi

2025 Spring (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to the complicated, conflictual, and often contradictory theoretical origins of sociology as a discipline. We begin by reading the standard sociological "canon"—Marx, Weber, and Durkheim—and interrogating why their ideas were canonized over others. We then read scholars who have been historically "written out" of the social sciences to evaluate their important, yet historically underappreciated, contributions. By the end of the course, students should (1) master key concepts in classical sociological thought, (2) understand what it means to theorize, and what makes for good theory, and (3) learn to critically interrogate the relationship between power, standpoint, and the production of knowledge.

Course Notes:

Required of concentrators, ordinarily sophomores, and secondary concentrators.

Junior Tutorial: Climate Sociology (222185)

Jason Beckfield

2025 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

What are the social causes and effects of climate change? Why do societies around the world differ so much in their contributions to climate change, and why do human efforts to mitigate and adapt to climate change take on the social structures of nationhood, class, race, and gender? Why has the United States been so slow to transition from traditional energy resources like coal, oil, and gas, to renewable ones like solar, wind, and hydro? How will the costs of climate mitigation and adaptation be distributed at a time of growing inequalities? This course addresses these and other questions by (1) engaging sociological theories about how humans relate to our natural environment, (2) reviewing some of the qualitative, quantitative, and mixed-method approaches, and (3) developing ideas about what roles social scientists can play in creating climate solutions. We read in the areas of environmental justice, environmental sociology, climate demography, and the sociology of disasters, including contemporary classics like Arlie Hochschild's *Strangers in Their Own Land*, and Colin Jerolmack's *Up to Heaven and Down to Hell*. As we build this foundation, students will design and complete their own semester-long research project on climate sociology.

Junior Tutorial: Sociology of Health and Illness (223105)

Caitlin Daniel

2024 Fall (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

Why do non-Hispanic Black babies represent one-third of all US births, but three-fourths of infant deaths? Why do we see body fat, but not social isolation, as a public health crisis? How can the pursuit of health be used to perpetuate social inequalities—and to contest them?

Addressing questions such as these, this junior tutorial introduces students to a sociological approach to health and illness. We will focus on four areas: 1) the social determinants and social distribution of health—how social conditions and positions produce disease for some and wellness for others; 2) the social construction of health and illness; 3) the social experience of illness, including how our responses to illness are structured by social factors, and 4) health as a meaningful social practice that shapes social action and organization far beyond the individual body. Posing a research question of their choosing, students will conduct an original research project using qualitative methods such as interviews, observations, or content analysis.

Junior Tutorial: Morality, Meaning, and Markets (222198)

Isabel Jijon

2024 Fall (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

This tutorial introduces students to the intersection of culture, morality, and markets. Students will take a close look at the way moral meanings and social relationships affect production, consumption, money, and work. We will ask questions like: Why do people buy what they buy? How do people derive meaning from work? Are there things that should not be bought or sold? How do people put a price on life, organs, sex, nature, heritage, art, pregnancy, or children? Drawing on cultural and economic sociology, students will learn how socially and historically specific moral ideas shape economic practices. We will also discuss how these meanings perpetuate or challenge inequalities of class, race, gender, geography, and more. Topics will include money, work, consumption, taboo markets, credit and debt, bribery and corruption, gift economies, and pricing. During the semester, students will also conduct their own research projects using qualitative methods. Students will receive individualized support throughout this process, producing a unique research project that advances current understandings in the field.

Cat O'Donnell

2024 Fall (4 Credits)

Schedule:

R 0900 AM - 1100 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

This junior tutorial will explore the intersections of politics and culture, focusing on discourse, ideology, and identity. Students will read classical scholarship and emerging research on social movements, political communication, collective identity, polarization, social media, and more. We will explore questions such as: Where do political narratives come from? How do political actors use discourse to accomplish their goals? Why do some narratives spread faster and farther than others? (How) has political discourse become polarized? Students in this course will develop an original research project on a political-cultural topic of interest. The methodological focus will be on text-as-data, with students learning how to acquire and analyze text data through both qualitative and quantitative/computational means (although they may focus on just one approach for their individual research project). Examples of data that students may explore include social media posts, newspaper articles, and political speeches. emailed

What is society? What is the role of the individual in society? How does the way society is organized affect the behaviors and beliefs of people who live in it? How can we change our societies? This course introduces students to the field of sociology. By surveying social theory as well as empirical studies, students acquire what C. Wright Mills calls the "sociological imagination": the ability to think beyond our personal lives and to connect the experiences of individuals with large social structures. Readings include prominent empirical investigations into family dynamics, class inequalities, gender roles, organizations, religions, the nation-state, capitalism, democracy, and globalization. We examine common-sense assumptions about culture, politics, history, and psychology, and empower students to replace them with evidence-based reasoning. By emphasizing reading, writing, and critical thinking skills, this course helps students build the foundation for a deeper understanding of theory and methods in the social sciences.

Additional Course Attributes:

Sociology 1024

Social Inequality (117584)

Christina Cross

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction into the sociological study of Social Inequality. Students will learn about sociological theories and read empirical research describing how social inequality is produced and reproduced in various institutions (e.g. the family, neighborhood and labor market) and through different mechanisms (e.g. socialization, segregation, discrimination). We will explore what it would take to address these different sources of social inequality in America, and learn from comparisons with other countries and historical moments.

Course Notes:

May be counted for introductory concentration requirement, if letter-graded.

Life and Death by Design (212727)

Jason Beckfield

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course, we will study health differences between social groups. We will begin by examining the extent to which health is unevenly distributed across groups defined by nationality, neighborhood, race, gender, and class - differences highlighted in stark terms by the COVID-19 pandemic. We will then seek to pinpoint the reasons for these disparities with a detailed analysis of the pathways through which these factors are linked to health status. Finally, we will discuss new research on the sociology of population health that shows how health disparities depend on meso- and macro-scale causes like neighborhoods, social policy arrangements, global organizations, and climate change.

Course Notes:

May be used as an introductory course when taken for letter grade, or elective.

Sex, Gender, Sexuality (110507)

Jocelyn Viterna

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

72

Male/Female, Man/Woman, Masculine/Feminine, Straight/Gay. Where do these consequential categories come from? How do they generate inequalities? Why are they so easily reproduced? And what, if anything, should we do about it? Combining real-world applications with academic analyses, this course encourages you to think about how sexuality and gender have shaped the social world, as well as our own place within it.

Instructor Permissions: None

Enrollment Cap:

n/a

A central concern of sociology is the distribution of human well-being, or inequality. Why do some people have a lot but others so little? How has this distribution varied across time and place? And why has it varied in these ways? This course surveys what social scientists have argued in answer to these questions. The course spans three broad eras of human history: the pre-agrarian era (ca. 200,000 years ago to 5-10,000 years ago), the agrarian era (ca. 5-10,000 years ago to 200 years ago), and the modern world (ca. 200 years ago to the present). We will also consider some of the normative challenges that lie behind these empirical

questions. What kinds of inequalities should we care about? And what should we do, in light of the facts regarding these kinds of inequalities, about the way in which well-being is distributed today? Topics covered include: the nature of early human societies, the origins of agriculture, the rise of the state, the determinants of gender inequality, the birth of capitalism, the causes of racial inequality, the origins and consequences of imperialism, and the transformation of capitalism by social and political movements.

Environmental Sociology (222199)

Monique Ouimette

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Environmental sociology provides many perspectives on interactions between the social and material aspects of life. This course will explore a variety of these perspectives as we examine issues including: pollution, climate change, resource use, and access to environmental amenities. Throughout the course, students will have the opportunity to apply concepts from environmental sociology to contemporary events. Some questions that we will consider over the course of the semester include:

- What factors contribute to disparities in access to environmental benefits and exposure to environmental costs?
- How can we assess tradeoffs between economic and environmental priorities?
- How does conceptualizing the environment as "other" impact processes and outcomes?
- How do cultural values, norms, and practices contribute to environmental degradation and also make it more challenging to improve environmental problems?
- How do various social science methods help us to measure, conceptualize, and intervene in environmental challenges?

Contemporary Ethnography (220194)

Thomas Wooten

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This class is an introduction to ethnographic methods in sociology. Ethnographers learn about the social world by doing immersive firsthand research, spending time alongside people and watching events unfold in their lives. In this class, each student will conduct their own semester-long ethnographic research project. We will also read recent ethnographic books about topics like a freshman college dorm, "drill" rappers in Chicago, an Orthodox Jewish neighborhood in Los Angeles, sex workers in Vietnam, and more. By reading these books and doing ethnographic research ourselves, we will learn about unique ways that ethnographers gather and present sociological evidence. We will also discuss the ethical questions that ethnographers must grapple with and consider how ethnographies can teach lessons about the social world that apply beyond the narrow cases they examine. The course will be a lot of work, but it requires no special knowledge or training. Freshmen and non-concentrators are welcome!

There is strong evidence that exposure to environmental pollution contributes to the onset and severity of illness in humans, yet many medical and public health approaches to health and illness ignore environmental factors. The lack of focus on environmental contributors to illness helps to reinforce existing disparities associated with living in contaminated communities. Students in this class will explore the connections between environmental exposures and human health outcomes. Students will learn about the environmental factors that contribute to the onset of common non-communicable diseases, including asthma, cancer, and diabetes, as well as exacerbate the severity of infectious diseases. Students will examine cultural, economic, regulatory, medical, and scientific factors that contribute to health disparities and environmental injustice. Students will also explore efforts to incorporate environmental justice considerations into health care and public policy reforms.

The Internet, Social Media, and Society (109705)

Gregory Narr

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This class considers how the internet and social media alter social life in ways that perpetuate or disrupt longstanding forms of power. Seminal theoretical approaches to understand the connection between media and social forces – from Donna Haraway's *Cyborg Manifesto* to Kara Keeling's *Queer Times*, *Black Futures* – will be covered, as well as empirical studies – from Nick Couldry and Ulises Mejias's data colonialism

argument to Andre Brock's Distributed Blackness. Through these readings we will hone conceptual tools for uncovering powerful ideologies embedded in material hardware, interface design, and algorithmic bias. Key frameworks used in this class include queer theory, intersectionality, and critical race theory. We also hone methodological tools for interrogating, disrupting, and harnessing social media to effect social change through assignments – from collaborative interventions to short interpretations of media artifacts (tweets, Tik Tok videos, etc.). Classes will incorporate student contributions into lectures, discussions, and group exercises.

Leadership, Social Change, and its Challenges: Boston as a Case Study (212901)

Ira Jackson

Christopher Winship

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

36

Over the last half century Boston has faced a multitude of issues and crises. Despite its stunning economic turnaround and success, reoccurring themes have been the problems inequality, race and ethnicity, class, and social justice. Their resolution as successes or failures has been dependent on the actions taken by leaders - individuals and groups. The role of leadership will be analyzed in part through major milestones events such as: the school busing crisis, the Catholic Church sex scandal, the Boston Harbor cleanup (once the dirtiest in the Nation), the Boston Miracle and community policing, the Domestic Worker's Rights campaign, Cambridge's guaranteed income experiment, gun laws, banks as instruments for good, and the Marriage Equality Act. Key protagonists from each case will visit the class. Students will be required to interview and shadow a leader of their choice for a day. For their final project students will be required to create a case of their own.

This course introduces students to core methodological concepts and strategies used in social science research including: research design, sampling and measurement, experiments, survey analysis, content analysis, network analysis, ethnography, and interviewing. Throughout the course we will develop the analytical skills necessary to interrogate epistemological assumptions in published social science research specifically and truth-claims generally. In addition to critically evaluating previous research, students will collect and analyze data using the different methods discussed in class. By the end of the course, students should have acquired valuable research skills widely applicable in academic and professional settings.

War, Revolution, and Mafias: in Theory, in Film, and in Reality (159926)

Danilo Mandić

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course explores war, revolution and organized crime as interrelated social phenomena. Students will read sociologists, historians, political scientists and philosophers addressing the nature, causes and consequences of these phenomena in different national and historical contexts. The course will combine influential theoretical frameworks (by Karl Marx, Max Weber, Sigmund Freud, Hannah Arendt), middle-range social scientific approaches (by Anthony Giddens, Charles Tilly, Michael Mann, Theda Skocpol), and empirical and historical analyses (by Eric Hobsbawm, Benedict Anderson, James C. Scott, Eugen Weber). The three phenomena will further be scrutinized through their (mis)representation in movies by Mike Nichols, Milos Forman, Bernardo Bertolucci and others.

Contemporary Chinese Society (116219)

Ya-Wen Lei

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

72

This course will equip you with the basic literacy required to comprehend contemporary Chinese society, which is an increasingly essential skill for informed citizens in our present global context. No prior

knowledge or language proficiency is necessary to enroll in this class. We will delve into the profound transformations that have occurred during the post-1978 reform period, including China's shift to a market economy, the emergence of the digital economy, the implementation of population policy by the government, urbanization, rising inequality, and contentious politics. The course will analyze how these changes have influenced social relations and how they have been experienced and understood by individuals. From a sociological perspective, this course will address topics related to the state, development, market, population, migration, urbanization, inequality, gender, labor and work, civil society, the public sphere, and social movements. Although the course is listed in the sociology catalog, readings and topics covered in the course are situated at the intersection of sociology, political science, law, anthropology, and history.

Economic Sociology (204172)

Leah Muse-Orlinoff

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

72

What do supply chains, influencers, MLMs, Theranos, alumni networking, and college admissions scandals have in common? They're cases in economic sociology -- the study of how societies shape economies and how economic forces affect people's life chances.

In this course we explore economic practices with a sociological lens. We'll cover the meanings of money and the role it plays in practical and symbolic exchange processes; delve into value, trust, and reciprocity, and learn why grifters and fraudsters are so compelling to observe; and emphasize the way economic and social dynamics create, perpetuate, and (sometimes) mitigate inequality.

You do not need any background in economics or in sociology to succeed in this course. You only need to be a person who has bought something or made a decision about what to do with a limited resource. I welcome students who are curious to know more about the complicated relationships individuals, families, and communities have with money due to racism, immigration, xenophobia, poverty, and climate change. I especially encourage and welcome first generation college students into this class.

Children's Rights and Youth Participation (220596)

Isabel Jijon

2024 Fall (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course examines the origins, evolution, implementation, backlash, and transformation of children's rights. We will discuss rights violations like child labor or child marriage, as well as positive rights, like the right to education and free expression. Students will learn about the complex social, political, economic, and cultural structures underpinning children's rights, as well as the ways children's rights have transformed these structures around the world. And we will consider how children themselves respond to children's rights. Looking at the cases of Greta Thunberg, Malala Yousafzai, and the children who defend child labor, we will discuss the opportunities and challenges of child and youth participation.

Qualitative Methods in Sociology (205205)

Michele Lamont

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

What is a good research question, and how can you go about answering it? How do you go from "I wonder" to creating a research design? How do you find people to interview or observe? What do we do about reflexivity and "bias" in our research? This seminar offers an introductory overview of qualitative research methods in sociology. Through a series of hands-on, applied exercises and practical case-studies, students will learn what qualitative research looks like in the real world. You will receive training in the basic instruments, sampling strategies, data collections, practical dilemmas, and common problems of

different methodological approaches. You will learn about the advantages and limitations of interview-based, ethnographic and archival research. You will learn how to use coding programs, such as Nvivo, and how to interpret and present findings for different purposes. Once you complete this cord, you will have developed skills that are likely to be useful in your studies, as well as in your worklife.

Recommended Prep:

Sociology concentrators must have completed Sociology 1128: Models of Social Science Research (formerly Soc 128).

Students from other concentrators should have completed their concentration's required research methodology coursework.

Pursuing Truth and Justice through Action for Health Equity (218199)

Flavia Perea

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course will explore the principles and methodologies of liberatory inquiry in the context of research and action to advance health equity. We will examine community-based, participatory, action, and decolonizing approaches to inquiry, and engage with various perspectives on the process, practice, and applications of engaged inquiry to advance health justice. We will discuss epistemology and research paradigms; explore a variety of approaches and methodologies, including Participatory Action Research (PAR), Community Based Participatory Research (CBPR), and indigenous research frameworks; and consider the ethics of engaging with historically and systemically oppressed people and communities. Engaging with voices, perspectives, sources, and materials from beyond the academy will be central to our work to understand how inequity gets under the skin, operates on the body, and how racism, oppression, and systemic injustice are structured and perpetuate injustice in health. Emphasizing health as multidimensional, contextual, and socially determined, we will focus on strategies to advance health justice in urban settings with particular attention to root-cause strategies. We will explore how to apply course concepts to build power for health through community development, capacity building, and community mobilization. Ultimately, we will critically examine how inquiry and action to advance health justice that emphasizes equity, collaboration, participatory processes, and reciprocity can be a strategy for responding to oppression, colonization, and systems of domination through the pursuit of truth and justice.

Online Dating and the Transformation of Intimacy (122318)

Gregory Narr

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Over the past twenty years, online dating has become the go-to way for people to seek intimacy. This has exacerbated problematic social forces such as sexism and racism. But many forms of attraction have also found expression as online dating has risen to prominence – with dozens of genders, sexualities, and relationship styles offered on OkCupid; platforms for threesomes, S&M enthusiasts, and gay men that like beards; and connections formed by many forms of mediation, from swiping to mutual disclosure of intimate questions to webcamming. This class considers these simultaneously problematic and liberatory possibilities that exist within the rapidly evolving ecology of dating platforms. Critical frameworks for interpreting the material hardware, interface design, and algorithmic governance of dating platforms will be discussed, including queer theory, intersectionality, and critical race theory. Methodological tools for interrogating social forces on dating platforms will also be honed during class and through semester-long projects.

Over the four hundred years that have encompassed the experience of Africans and their offspring in the United States they have encountered pervasive oppression and hardship to which they have responded with unrelenting struggle. While enormous progress has been made, African Americans still encounter very substantial barriers in many areas of life. This course integrates video and other media, along with in-class discussion, to explore the sociological impact of oppression and struggle in numerous aspects of life in the black community, examining affirmative action, educational inequality, reparations and other issues. Concepts such as white supremacy, residential segregation, the achievement gap, and the racial wealth gap are studied.

Popular Culture and Social Theory: Critiquing Society through Television, Literature, and Comedy (220159)

Shai Dromi

2025 Spring (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Popular culture is one of the strongest tools we have for thinking through social phenomena outside of the conventions of academic writing. Television series such as *Black Mirror* can provoke our thinking on topics like alienation and racism; popular novels by authors like Stephen King can unpack issues like social isolation and role conflict; and stand-up comedy can deliver some of the fiercest critiques of economic and social inequality. In this course, we will use the insights that popular culture provides to gain proficiency in key current sociological theories. Each week, we will pair reading items from one contemporary theorist with one piece of popular culture, such as a movie, a sitcom, a short story, or a stand-up comedy routine. Course assignments will move from analyzing popular culture items to applying current sociological theory to real-world phenomena. Through these activities, students will familiarize themselves with theoretical frameworks such as field analysis, critical race theory, economic sociology, feminist sociology, and others.

Social Change in Modern Korea (109680)

Paul Chang

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the incredible transformation of Korean society in the modern period. We begin with the demise of the Choson Dynasty at the end of the 19th century before covering the Japanese colonial period (1910-1945), the emergence of two Korean nation-states (1945-1948), the Korean War (1950-53), and the contemporary period (1960-present). The course is divided into two sections: in the first part of the course we will discuss Korea's political and economic transformation, and in the second part we will cover social and cultural change. Upon completion of the course students should have a thorough grasp of the vast social changes Korea underwent in the 20th century.

Law and Society (203485)

Ya-Wen Lei

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Justice Oliver Wendell Holmes wrote: "The life of the law is not logic, but experience." While the law school curriculum focuses on legal doctrine, the application of law often deviates from what is written in legal texts. For example, civil rights laws prohibit workplace discrimination, but such laws are not always effectively enforced. This disparity between law-on-the-books and law-in-action has prompted social-legal scholars to closely examine the latter.

This course adopts a law-in-action approach to explore the intricate relationship between law and society. We will explore major theoretical perspectives and empirical studies that analyze the dynamics between law, legal institutions, and their social, political, economic, and cultural contexts. Topics covered include, but are not limited to: (1) concepts and theories of law and society; (2) the experiences of various actors in the legal system, particularly lawyers, judges, jurors, and litigants; (3) the dispute resolution process and its intersection with culture, social class, race, and gender; (4) the impact of law on social change; (5) law, surveillance, and technology.

To foster a global perspective, the course will not be confined to the US context but will include examples from other societies as well. Students are encouraged to actively participate in class discussions and learn from one another to cultivate a deeper understanding of the subject matter.

Refugees in Global Perspective (203272)

Danilo Mandic

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The recent arrival of refugees at the U.S.'s southern border and into Europe has caught citizens and policy-makers off guard. Yet such forced migration will continue to rock our globalized world in coming decades. Why are there so many refugees? How are they displaced? Where do they travel, and why? This course will inquire into the nature, causes and consequences of contemporary refugee waves. Students will survey regional dynamics in the Middle East, Africa, Southeast Asia, Eastern Europe and North America. We will examine the particularities of refugees (compared to other migrants) and the changing nature of forced migration since the Second World War. Students will explore historical precedents to contemporary waves, learn about different host society approaches to asylum, compare government and criminal mechanisms of forced migration, and examine the reasons refugees are the object of increasing suspicion and hostility around the world. Particular attention will be paid to Central American migration into the U.S., the recent EU crisis, the role of refugee camps in the 21st century, and alternative strategies for global asylum management by bridge and destination countries.

The United States is more racially and ethnically diverse than at any point in its history. Yet racial and ethnic social categories remain persistent sources of inequality in American society. This course will interrogate the relationships between race, ethnicity, and inequality, examining theoretical and empirical approaches across multiple social domains. Part 1 of the course will focus on the historical development of racial categories and theoretical frameworks used to make sense of these categories. Part 2 will examine empirical cases in the context of education, housing, and workforce, among other domains. Part 3 will review the current state of U.S public policy on the topics of race and ethnicity and consider implications for the future.

Sociology 1195

Immigration and Citizenship in Comparative Perspective (222172)

Emily Fairchild

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

International migration patterns have shaped and reshaped individual and collective identities throughout history and across the world. In the present time of globalization, these dynamics have raised particular political and social challenges to democratic states. In both sides of the Atlantic the question concerns the border control, process of integration and the very concept of citizenship along with questions on national unity, rights and identity.

The seminar will emphasize changes and continuity, convergences and divergences among policies, rhetoric and approaches with regard to immigration, incorporation and citizenship in Western democracies. New developments with regard to migration policies and their effect on identity politics, institutional arrangements, multiculturalism, secularism and religion, as well as on the modes of organization, mobilizations and claims of immigrants or minorities will be analyzed. These developments require also the invention or reconsideration of old concepts in new contexts their adaptation to globalization and its challenges, with regard to national identities, populist discourses, to new dynamics of inclusion and exclusions.

Based on empirical researches of different case studies and contexts, on theoretical reflections and normative considerations, the seminar will question the contested terms on migration on principles of citizenship, membership and allegiance, and the changing relationship between citizenship, rights, and belonging.

Poverty in the United States (220192)

Thomas Wooten

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Nearly one in three residents of the United States lives close to the poverty line, and a growing number of us live in deep poverty, subsisting on less than \$2 per day. This course examines the social world of poverty in the United States today. It pays particular attention to the lived experiences of low-income people. It also examines the parallel set of institutions low-income people must navigate—institutions that often perpetuate poverty: low-wage jobs, systems of policing and surveillance, substandard schools and colleges, exploitative housing, and predatory financial services. The course places a heavy emphasis on firsthand experience and learning. We will have guest lectures from people whose work or life experiences relate to the course subject matter. Students will also complete four fieldwork assignments, doing things like observing eviction court, applying for food stamps, or interviewing someone making ends meet at a low-wage job.

Sociology 1199

Transnationalism: Theories and Experiences (222173)

Emily Fairchild

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

15

Transnationalism as a concept, theory and experiences has nourished an important literature in social sciences since the 1990s. In practice transnationalism refers to increasing transborder relations of individuals, groups, firms and to mobilizations beyond state boundaries. Individuals, groups, institutions and states interact with each other in a new global space where cultural and political characteristic of national societies are combined with emerging multilevel and multinational activities. Transnationalism is a part of the process of globalization. For some it is "globalization".

Transnationalism as theory and experiences raise normative questions on nation states, its singular power and action, the sense of belonging and citizenship. It creates competition between states and communities – ethno-national-religious communities and states. It raises institutional and cultural questions with regard to mobilization of actors and institutions NGOs Human Rights etc. It also raises juridical questions mainly on how transnationalism gives new strength to the national question and becomes a stake of legitimacy in the international system.

This course will take the following themes into consideration:

- Methods to study transnationalism;
- The organizational aspect of transnationalism; the construction of world-wide networks;
- The institutional aspect of NGOs and Human Rights;
- The emergence of a new space of participation beyond the territorially bound nation-state along with new identifications produced by transnationalism;
- The emergence of a civil society beyond national borders and not bounded public sphere.
- The new social movements and new power relationships with states which are concurrently engaging with the process of globalization through economy and culture, and most important through diaspora politics.

Sociology 1202

Incarceration and Inequality in the United States (223947)

Christopher Muller

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

18

Starting in the early 1970s, the incarceration rate in the United States increased dramatically. Today, the United States incarcerates its residents at five times the rate at which it incarcerated them for the first three quarters of the twentieth century. Racial inequality in incarceration has been large since the end of the Civil War, and class inequality in incarceration is rapidly increasing.

This course asks three questions: First, how did we get here? What led to the huge increase in incarceration? How did racial and class inequality in incarceration become so stark? Second, what are the consequences of the high rate and dense social concentration of incarceration in the United States? Finally, what can we do about it? We will try to answer these questions by surveying writing on crime and incarceration covering the period from Reconstruction to the present.

Sociology 1271

Crime and Justice in a Changing Society (222474)

Robert Sampson

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

36

This course examines the changing landscape of crime and justice in America over the last half-century. We will give special attention to racial and class inequalities; the nexus of crime and its control; social change and life-course inequalities; the perils of prediction; and sociological strategies to mitigate inequalities in both crime and criminal legal processing.

Intermediate Quantitative Research Methods (119985)

Xiang Zhou

2024 Fall (4 Credits)

Schedule:

TR 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

20

Descriptive and inferential techniques used in quantitative sociological research. Emphasis is on the fundamentals of the linear regression model for continuous response variables, focusing on assumptions and interpretation. Motivation, application, and presentation are stressed; topics include categorical covariates, interactions, and diagnostics. Because the linear regression model is the foundation for more specialized models that are often applied in sociological research, the aim of this course is to develop the skills necessary to (a) understand quantitative sociological research, (b) produce convincing analysis, (c)

evaluate quantitative analysis, and (d) learn more specialized techniques as needed.

Recommended Prep:

This course is required of and limited to first-year students in Sociology or in the joint Ph.D. programs between Sociology and other departments

W 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course examines the dimensions and magnitude of inequality in industrial societies, with a heavy emphasis on the United States since the mid-20th century. The readings and class discussion are designed to expose students to a broad range of influential pieces in the social stratification literature. In particular, we will study inequality through: pay for work, race, neighborhoods, gender, family, mobility, education, social capital, and rising income inequality since 1980.

Ethnographic Research Methods (222476)

David Showalter

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Ethnographic methods use direct observation and participation to understand and explain social action, interaction, inequality, meaning-making, and other phenomena. This course introduces conceptual and practical considerations for designing, conducting, and analyzing ethnographic research. Topics include formulating research questions; site selection and recruitment; techniques for observing, participating, and documenting; ethical questions before, during, and after fieldwork; connections between theory and evidence; and approaches to interpreting and reporting ethnographic data. Readings include methodological and empirical works. Students will conduct observations to produce a final paper, and are

encouraged to consider potential research questions and sites before the course begins.

Teaching Practicum (111781)

Emily Fairchild

2024 Fall (4 Credits)

Schedule:

F 0900 AM - 1100 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course is intended to enhance the teaching skills of graduate students in the Sociology Department. Through a combination of classroom discussions and teaching simulations, the seminar challenges students to discover and hone their teaching styles, to develop a personal philosophy about teaching and learning, to develop self-confidence leading and facilitating small and large group discussions, to learn about the teaching resources that are available to them throughout the university, to experiment with designing engaging courses of study, and to discover that teaching can be a rewarding and stimulating element of an academic career.

Course Notes:

Required of and limited to graduate students in Sociology. Attendance at first meeting is required. Not repeatable for credit.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Sociology 3307

Proseminar on Inequality and Social Policy III (112355)

Deirdre Bloome

2024 Fall (4 Credits)

Schedule:

M 0130 PM - 0330 PM

Instructor Permissions: Instructor **Enrollment Cap:** 18

Students develop previously completed papers from Proseminar I and II into professional presentations and publishable articles, critique peer papers across disciplines, and discuss presentations of national experts.

Course Notes:
Offered jointly with the Kennedy School as SUP-923.

Recommended Prep:
Open to doctoral students in the Multidisciplinary Program in Inequality and Social Policy or the joint PhD Program in Social Policy.
Prerequisites: Sociology 296a/Gov 2340a and Government 2340b/Soc 296b (or SUP-921 and SUP-922 at the Kennedy School).

Sociology 3310

Qualifying Paper (108137)

Paul Chang

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This seminar provides doctoral students in the Department of Sociology an opportunity to workshop drafts of their qualifying paper (QP). Submission of a satisfactory QP is required in order to progress to the dissertation project. The department expects the QP to be an original piece of research that is of publishable quality. Participants will receive different types of feedback on their projects throughout the semester: first, from the entire class when introducing the project; second, from the instructor in one on one meetings; and third, from two dedicated peer-reviewers who will comment on a full draft of the QP.

Course Notes:

Required of, and ordinarily limited to, third-year graduate students while writing the qualifying paper. Not repeatable for credit.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO

Urban Theory and Data Lab (203599)

Joscha Legewie

Robert Sampson

2024 Fall (4 Credits)

Schedule:

R 0400 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Professors Joscha Legewie and Robert Sampson are organizing the "Urban Data Lab" (UDL) to support research by students and postdocs examining the urban condition in the 21st century. The emphasis is on the active discussion of theoretical and empirical research that is in progress, in addition to occasional discussion sessions on selected readings to be determined by the group.

Course Notes:

Meets sporadically.

Politics and Social Change (203921)

*Jocelyn Viterna**Paul Chang*

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

The Politics and Social Change Workshop promotes the development of a community of scholars interested in how power relations shape social patterns in societies around the world. We define 'politics' broadly to include everything from gender politics within the household to state politics within a transnational system. Our participants' interests span a wide range of topics including political sociology, political economy, political violence, political behavior, governance, democracy, state welfare, education, social movements, civil society, NGOs, protest, race, ethnicity, gender, sexuality, class, the media, the environment, and development, among others. We meet twice a week. During most meetings, group participants take turns discussing their works in progress. Once or twice a semester, we also bring in outside speakers to discuss topics of interest to our members.

Culture, History and Society (128274)

Ya-Wen Lei

Orlando Patterson

2025 Spring (4 Credits)

Schedule:

F 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

40

The Workshop in History, Culture, and Society is a forum for the exploration of new developments in historical social science, especially in the fields of Anthropology, Economics, History, Political Science, Psychology, and Sociology. The workshop's primary methodological goal is to initiate a discussion of what constitutes acceptable historical evidence in each of the social sciences. Its main substantive goal is to understand how the past influences the present.

Ellis Monk

2024 Fall (4 Credits)

Schedule:

F 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The Contemporary Studies of Race & Ethnicity (CSRE) workshop's purpose is to provide a forum to disseminate knowledge and facilitate dialogue among graduate students, faculty, and visiting scholars working on or interested in research about contemporary studies related to race & ethnicity. Though the Sociology department hosts the workshop, we seek to bring scholars together across disciplines to explore topics such as ethno-racial hierarchies, racial attitudes, and intergroup relations, as well as the role of race in institutions, politics, and everyday life. The workshop will foster both a learning and collaborative space in which participants can circulate and garner feedback on works in progress, including dissertation chapters, proposals, journal article submissions, conference papers, and practice job talks.

Translating India: History, Theory, Craft (220589)

Martha Selby

2024 Fall (4 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: 20

This seminar will introduce students to the art of literary translation through a wide variety of approaches. Over the course of the semester, we will read various tracts, articles, and books on the theory and craft of translation from a wide range of Euro-

American and South Asian stances and viewpoints. We will analyze editions of various classics from India that have been translated into English repeatedly, paying particular attention to the political nature of the act and art of translation in its colonial and post-colonial contexts. This seminar will also have a practical component, and one session each week will allow students to present translations-in-progress to their peers for comment and critique.

Course Notes:

No auditors will be permitted. Enrolled students must take the course for a letter grade.

South Asian Studies 171

Constructions of Gender, Sexuality, and the Family in South Asian Cultures (220720)

Martha Selby

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will provide you with a comprehensive historical overview of gender issues as they are represented in the great textual traditions of South Asia (these categories include Vedic materials, medical literature, treatises on law and sexual behavior, and texts that outline the great debates over questions of gender identity and salvation preserved for us in certain Jaina and Buddhist materials). To make these classical texts more relevant, readings in recent anthropological studies of religion, performance, and kinship will also be included to enable you to trace recurring themes, images, and symbols. You will thereby gain a sense of continuity of traditions and attitudes as well as generative innovations and contemporary variants and divergences within them.

Course Notes:

No auditors will be permitted. Enrolled students must take the course for a letter grade.

Subject: Nepali

Nepali 101A

Introductory Nepali (118665)

Parimal Patil

2024 Fall (4 Credits)

Schedule: T 0430 PM - 0715 PM**Instructor Permissions:** Department**Enrollment Cap:** n/a

This course introduces the basic grammatical structures of modern Nepali, enabling students to read and produce simple, standard prose as well as engage in basic conversation by the end of the first year. Nepali is taught with a concern for the cultural context in which this language is spoken and written.

Course Notes:

Not open to auditors.

Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the department to learn more.

First Meeting times will be posted on the Department of South Asian Studies' website in shortly before the term begins: sas.fas.harvard.edu

Patrick Cummins

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Students learn fundamental skills in classical Sanskrit, the language that was, for many hundreds of years, the most prestigious and broadly-deployed medium of intellectual and literary expression across South Asia. In the first year of study, students develop capabilities in analytical reading (and, secondarily, in writing, speaking, and listening) that will enable them to interpret Sanskrit texts on a foundational level. Participation in this course lays a solid groundwork for students to engage with Sanskrit texts in a wide array of styles and genres—poetic, narrative, philosophical, scholastic—as their studies progress. Most lessons involve collaborative work among students.

Please note that students learn a set of more advanced skills in grammar and reading comprehension (including recognition and formation of the perfect, the futures, the aorists, causatives, and desideratives, and analysis of kṛt and taddhita suffixes) in the Intermediate year.

No auditors will be permitted. Enrolled students must take the course for a letter grade.

This course includes a required weekly review session with the Teaching Fellow at a time to be determined within the first two weeks of the semester.

Course Notes:

No auditors will be permitted. Enrolled students must take the course for a letter grade.

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In the first two months of intermediate-level Sanskrit, students continue to develop foundational skills in reading comprehension and grammar analysis (alongside the supporting skills of writing, speaking, and listening). These include the recognition and formation of perfects, futures, gerundives, causatives, desideratives, and aorists. In addition to completing short assignments that refine these discrete skills, students interpret longer reading passages, including selections from the Rāmāyaṇa. The final month of the semester looks more like a traditional reading course. Using a dictionary to look up unfamiliar words, students read, analyze, and discuss the story of the encounter between Arjuna and Śiva in book 3 of the Sanskrit epic Mahābhārata. Students continue to read this story (and one of its poetic retellings, with commentary) in the spring semester. Overall, the intermediate-level Sanskrit course enables students to interpret Sanskrit texts in three major genres: epic, poetry, and scholarly prose. Students expand and strengthen the skills in reading comprehension, grammatical analysis, and vocabulary retention that they developed during the first year of study. Students will be able to dissect and describe nominal compounds, verbal forms, poetic meters, and morphological and syntactical features of Sanskrit words, sentences, and verses in greater detail. As a whole, the course prepares students to participate in Sanskrit language and reading courses at the advanced level. Most lessons involve collaborative work among students. No auditors will be permitted. Enrolled students must take the course for a letter grade. Please note that this course includes a required weekly review session with the Teaching Fellow at a time to be determined within the first two weeks of the semester.

Course Notes:

No auditors will be permitted. Enrolled students must take the course for a letter grade.

Continuation of Sanskrit 102AR. In the spring semester of the Intermediate course, students learn advanced skills in syntax, morphology, compound analysis, and metrics. Students learn how to analyze *kṛt* and *taddhita* suffixes, recognize a variety of poetic meters, categorize and take apart compounds in greater detail, and determine the various senses in which *kāraṅkas* and *vibhaktis* are being used. In the final month of the course, students learn how to interpret commentarial and expository prose (*śāstra*). In addition to developing the discrete skills above, students read and discuss three different Sanskrit texts. We continue the story that we began in the fall semester—that of the encounter between Arjuna and Śiva in book 3 of the Sanskrit epic *Mahābhārata*. Then we study Bhāravi's *Kirātārjunīya*, a sixth-century *kāvya* (poetic) composition based on that epic story. Finally, students practice their commentary-reading skills by interpreting select portions of Mallinātha's *Ghaṇṭāpatha*, a fourteenth-century commentary on the *Kirātārjunīya*. Overall, the intermediate-level Sanskrit course enables students to interpret Sanskrit texts in three major genres: epic, poetry, and scholarly prose. Students expand and strengthen the skills in reading comprehension, grammatical analysis, and vocabulary retention that they developed during the first year of study. Students will be able to dissect and describe nominal compounds, verbal forms, poetic meters, and morphological and syntactical features of Sanskrit words, sentences, and verses in greater detail. As a whole, the course prepares students to participate in Sanskrit language and reading courses at the advanced level. Most lessons involve collaborative work among students. No auditors will be permitted. Enrolled students must take the course for a letter grade. Please note that this course includes a required weekly review session with the Teaching Fellow at a time to be determined within the first two weeks of the semester.

Enrollment Cap:

n/a

The central objective of this course is to enable students to analyze and interpret poetry (kāvyā) in classical Sanskrit. Whether this is your first encounter with kāvyā or the most recent of many, this course is here to help you practice and grow your skills as a reader. Most lessons involve students collaborating with their peers. What does it mean to "read" Sanskrit poetry? Depending on your experience with the language and the genre, these skills may involve: determining the grammatical and syntactic structures of a given verse; identifying the meter; noticing ambiguities in the text; registering new vocabulary; discussing themes and imagery; and considering technical aspects of literary ornamentation such as similes, metaphors, and other figures of speech. The course may involve some (limited, and supported) engagement with commentaries. Just as important, students will practice literary appreciation and criticism. We will discuss what makes a given composition beautiful, effective, insightful, and/or resonant. No auditors will be permitted. Enrolled students must take the course for a letter grade.

Advanced Philosophical Sanskrit (121484)

Patrick Cummins

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The central objective of this course is to enable students to analyze and interpret scholarly prose (śāstra) in commentarial and expository styles.

On a sentence- or paragraph level, students will explain the basic syntactical constructions and grammatical features of the (quite challenging!) texts they read. Along the way, students will develop the ability to recognize many of the conventions of scholastic Sanskrit. No matter which texts we decide to read, it's safe to say that students will have a good deal of practice working with abstract noun constructions. Students will strengthen their scholastic vocabularies in general; in addition to that, students will develop technical vocabularies related to the texts they read and the specific intellectual discipline(s) in which those texts are situated. On the level of the longer passage or indeed the text as a whole, students will be able to (at different points) summarize, describe in detail, and critique the ideas that are being communicated in the text.

Many lessons will involve students collaborating with their peers. No auditors will be permitted. Enrolled students must take the course for a letter grade.

Hindi-Urdu 101A

Introductory Hindi-Urdu (113639)

Richard Delacy

2024 Fall (4 Credits)

Schedule: MTWR 0300 PM - 0415 PM**Instructor Permissions:** Instructor**Enrollment Cap:** 20

An Introduction to the modern standard form of the most widely spoken language in South Asia, Hindi-Urdu. Students are introduced to both writing systems: the Devanagari script of Hindi and the Nastaliq script of Urdu. The basic grammatical structures are presented and reinforced, and students are also exposed to the cultural and historical context in which Hindi-Urdu has existed over several centuries. The course also draws from the modern medium of film, in particular recent Bollywood songs, to reinforce structures and vocabulary. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Hindi-Urdu 107

Readings in Urdu Prose Literature (207017)

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Hindi-Urdu 107 is a reading-intensive course, focusing on 19th-early 20th century Urdu prose. In this semester we explore the theme of the loss of and nostalgia for the refined courtly culture of the Mughals or the nawabs of Lucknow in the wake of the 1857 Mutiny and the establishment of the British Raj. Readings include selections from works such as Munshi Faizuddin's *Bazm-e akhir*, Muhammad Husain Azad's (1830–1910) *Darbar-e Akbari*, Abdulhalim Sharar (1860-1926)'s *Guzashtah Lakhnau*, Ghalib's (1797-1869) letters, Nasir Naziruddin Firaq's (1865-1933) *Lal Qile ki ek jhalak*, Rashidulkhairi's (1868-1936) *Dilli ki akhiri bahar*, Khvajah Hasan Nizami's (1879-1955) *1857*.

Course Notes:

No auditors. Must take for a letter grade.

Hindi-Urdu 109

Ghalib's Urdu Poetry (222482)

Hajnalka Kovacs

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Hindi-Urdu 109 is a comprehensive introduction to Mirza Asadullah Khan Ghalib's (1797-1868) Urdu poetry. Along with a close reading of selected poems from Ghalib's *divān*, we will discuss the grammatical, stylistic, and poetic features of his language as well the philosophical and mystical ideas expressed in his poems. The primary texts will be supplemented, whenever possible, with secondary readings in Urdu and English and relevant audio-visual material. Students will be expected to possess a high degree of reading and writing proficiency in Urdu. Students who possess a similar degree of proficiency in Hindi but cannot read and write Urdu should contact the instructor.

Course Notes:

No auditors will be permitted. Enrolled students must take the course for a letter grade.

Hindi-Urdu 123

Bollywood and Beyond: Commercial Cinema, Language and Culture in South Asia (123790)

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course examines concepts of personhood, community and culture in South Asia as expressed in contemporary film and literature. Works in Hindi-Urdu and in translation will be examined with emphasis on language as an index of cultural difference and of broad social shifts, notably the transformation of audiences from citizens to culture-consumers. Knowledge of Hindi-Urdu is not required. However, there will be a section for students with intermediate proficiency utilizing language materials.

Course Notes:

**Students who enroll in the language section of this course may count it towards a citation in Hindi-Urdu.
No auditors will be permitted. Enrolled students must take the course for a letter grade.**

This course is designed to equip learners of the basic skills in listening, reading, writing and speaking in Filipino, the national language of the Philippines. Along with vocabulary and basic grammar to facilitate language learning, this beginner's course will also include introduction to some concepts relevant to Philippine culture adding context to the linguistic inputs in the discussion. Utilizing a combination of communicative, functional-situational, and task-based instruction, this course will capacitate learners to express themselves in the target language and understand basic texts in familiar settings of family, school, and community. It will also help them participate in conversations relevant to daily lives or simple transactions.

No auditors will be permitted. Enrolled students must take the course for a letter grade.

This course is designed to increase the communicative competency of the learners in Filipino, the national language of the Philippines. This aims to further develop the understanding of the students on the more complex sentence structures along with a range of texts relevant to Philippine culture, traditions, history, and other contemporary topics in the Filipino society. Building up on some basic skills acquired in the previous Filipino language courses or through exposure and experience as in the case of heritage learners, this course equips students in addressing daily needs with the use of the target language through a mix of communicative, content-based, task-based, and other relevant approaches. It also capacitates the students in participating in social transactions and in a variety of communicative situations ensuring that the language skills learned will be used for practical purposes. If an interested student has not yet taken a year of introductory Filipino class, a placement test administered by the instructor is needed before enrolling to ensure that the student meets the qualifications for the intermediate class.

No auditors will be permitted. Enrolled students must take the course for a letter grade.

This course is designed to enhance the communicative competence of the students in the advanced level. Aside from being equipped to understand longer texts in the target language, this course will also help students to sustain conversations in Filipino and demonstrate ability to write reports and reviews on topics in various formats. They will be guided in making formal and informal presentations using appropriate language that is considered culturally acceptable in the target culture. At the end of the course, the students are expected to be able to not only perform communicative tasks with fluency but also to express opinions on a variety of social issues relevant to Philippine context and the global Filipino perspective. If a student has not yet taken Filipino language classes in the previous semesters but is exposed and has knowledge of the language as in the case of heritage learners, a placement test administered by the instructor is needed before enrolling to ensure that the student meets the qualifications for the advanced class.

No auditors will be permitted. Enrolled students must take the course for a letter grade.

Tamil 101A

Elementary Tamil (127491)

Jonathan Ripley

2024 Fall (4 Credits)

Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

An interactive introduction to Tamil, the oldest of the Dravidian languages of South India with a literary tradition that spans millennia. It is designed for students with no previous background in Tamil and progressively introduces speaking, listening, reading and writing using textual and audio-visual materials. After taking the TAM 101 series, students will have a working knowledge of the fundamental grammatical structures necessary to

navigate colloquial and literary modern Tamil and to begin reading older Tamil literature as well.

No auditors will be permitted. Enrolled students must take the course for a letter grade.

Course Notes:

Not open to auditors.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

Subject: Indo-Persian

Indo-Persian 101

Readings in Indo-Persian Literature I (207944)

Hajnalka Kovacs

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The course introduces students to Persian literature composed in the Indian Subcontinent from the 11th through the 20th century. We will combine close reading of texts in the original Persian with a discussion of grammar and prosody as well as secondary readings in English. Texts include excerpts from chronicles, discourses and letters of Sufis, hagiographies, biographical dictionaries, travelogues, collections of tales, as well as epic, lyric, and panegyric poetry.

Course Notes:

No auditors will be permitted. Enrolled students must take the course for a letter grade.

Recommended Prep:

Two years of Persian or equivalent; one year experience with Classical Persian preferred.

Statistics 100

Introduction to Statistics and Data Science (113431)

Kelly McConville

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An application-oriented introduction to statistics and data science where students develop their data acumen and learn exploratory and inferential techniques for analyzing and modeling data. The course covers the entire data analysis process and includes topics such as data collection, data wrangling, exploratory data analysis, visualization, simple/multiple linear regression, sampling distributions, hypothesis testing, confidence intervals, data ethics, statistical communication, and reproducibility. Students develop a reproducible workflow for analyzing data in R and learn several tidyverse R packages. No prior statistics or computing knowledge is expected.

Course Notes:

Only one of the following courses may be taken for credit: Statistics 100, 101, 102, 104.

Requirements:

Anti-Req: may not be taken for credit if STAT 139 or 244 already complete.

Additional Course Attributes:

Attribute	Value(s)

Introduction to Quantitative Methods for Economics (114027)

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In a world where data is growing larger and more complex, it can be a challenge to turn an abundance of information into the knowledge from which sound decisions can be made. As a discipline, statistics aims to bridge the gap between knowledge and information. This course will motivate statistical methods through data analysis and visualization, in addition to discussing the underlying theory. We will discuss topics such as study design, descriptive statistics, probability, sampling distributions, hypothesis testing, linear regression, and Bayesian inference. A wide variety of applications from the economic and social sciences will be highlighted along with examples from biology, sports, politics, and more. Students with prior exposure to introductory statistics will find some overlap of material but be exposed to new applications and learn more advanced modeling techniques. This course makes use of the statistical programming language R, but no prior knowledge of computer science is required.

Course Notes:

Only one of the following courses may be taken for credit: Statistics 100, 101, 102, 104.

Requirements:

Anti-Req: may not be taken for credit if STAT 111, STAT 139, STAT 211, or STAT 244 already complete.

Data Science 1: Introduction to Data Science (203101)

Pavlos Protopapas

Kevin A. Rader

2024 Fall (4 Credits)

Schedule:

MWF 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Only one of the following can be taken for credit: Stat 109a, Stat 121a, CS 109a, AC 209a.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements: Not to be taken in addition to Computer Science 109 or Computer Science 109A, or Applied Computation 209, or Applied Computation 209A.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
Quantitative Reasoning with Data	Yes

Data Science 2: Advanced Topics in Data Science (203102)

Pavlos Protopoulos

Alex Young

2025 Spring (4 Credits)

Schedule: MWF 0945 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap: n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for statistical modeling, representation, and prediction. Topics include multiple deep learning architectures such as CNNs, RNNs, transformers, language models, autoencoders, and generative models as well as basic Bayesian methods, and unsupervised learning. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two-part series.

Course Notes:

Only one of the following can be taken for credit: Stat 109b, Stat 121b, CS 109b, AC 209b.

Recommended Prep:

CS 109a, AC 209a, Stat 109a, or Stat 121a required.

Requirements:

Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking STAT 121B) AND (Cannot take STAT 121B, if already taken STAT 121 OR CS 109 OR CS 109B OR APCOMP 209 OR APCOMP 209B)

Statistics 110

Introduction to Probability (110766)

Joseph Blitzstein

2024 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

A comprehensive introduction to probability. Basics: sample spaces and events, conditional probability, and Bayes' Theorem. Univariate distributions: density functions, expectation and variance, Normal, t, Binomial, Negative Binomial, Poisson, Beta, and Gamma distributions. Multivariate distributions: joint and conditional distributions, independence, transformations, and Multivariate Normal. Limit laws: law of large numbers, central limit theorem. Markov chains: transition probabilities, stationary distributions, convergence.

Recommended Prep:

Math 1b or equivalent or above

Additional Course Attributes:

Statistics 111

Introduction to Statistical Inference (111036)

Joseph Blitzstein

Neil Shephard

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to the principles and methods of statistical inference, as a framework for achieving the three main goals of statistics: describing data and a phenomenon of interest, predicting one variable using another variable, and drawing causal conclusions about the effect of one variable on another. Frequentist and Bayesian perspectives on model building, learning from data, and making decisions under uncertainty. A three-pronged approach is emphasized, combining theory, simulation, and data.

Recommended Prep:

STAT 110

Statistics 115 Section: 1

Introduction to Computational Biology and Bioinformatics (122304)

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap: n/a

The course will cover basic technology platforms, data analysis problems and algorithms in computational biology. Topics include sequence alignment and search, high throughput experiments for gene expression, transcription factor binding and epigenetic profiling, motif finding, RNA/protein structure prediction,

proteomics and genome-wide association studies. Computational algorithms covered include hidden Markov model, Gibbs sampler, clustering and classification methods.

Recommended Prep:

Good quantitative skills, strong interest in biology, willingness and diligence to learn programming.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Statistics 117

Data Analysis in Modern Biostatistics (203104)

Giovanni Parmigiani

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

An Introduction to applied biostatistics via case studies. The course is based on four practical problems, and methodology relevant for each. Students will apply the concepts from the methodology to the data analysis or modeling task, and carry out four mini projects, with ample opportunities for peer-to-peer discussion.

Course Notes:

There is a cap of 30 students for this course. Preference is given to Statistics concentrators; all other students wishing to take the course must send a request along with a list of statistics/computer science courses already completed to the professor at gp@jimmy.harvard.edu. Please put Stat 117 in the subject line of the email.

Recommended Prep:

Prerequisites: Stat 110 and (AP Stat or 102 or 104) and 111 and 139.
Recommended: 115

Additional Course Attributes:

Statistics 131

Introduction to Time Series & Prediction (117131)

Zheng Ke

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to time series models and forecasting. Introduction to classical time series model:

autoregressive, moving average, ARIMA models. Some concepts from stochastic processes: martingales, stationarity, Gaussian processes, Brownian motions, ergodic theorems. Some aspects of advanced time series: hidden Markov models, state space models, filtering, smoothing, Kalman filters, sequential Monte Carlo methods.

Recommended Prep:

Statistics 111 and 139 or equivalent.

Statistics 139

Introduction to Linear Models (110751)

James Xenakis

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An in-depth introduction to statistical methods with linear models and related methods. Topics include group comparisons (t-based methods, non-parametric methods, bootstrapping, analysis of variance), linear regression models and their extensions (ordinary least squares, ridge, LASSO, weighted least squares, multi-level models), model checking and refinement, model selection, cross-validation. The probabilistic basis of all methods will be emphasized.

Recommended Prep:

Statistics 110 and Math 21a and 21b or equivalent. Statistics 111 is recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Statistics 143

Sports Analytics (217523)

Mark Glickman

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to statistical approaches and methods for analyzing sports data. Students will be exposed to a variety of topics in sports analytics, including probability modeling of game outcomes for prediction and measuring ability, rating systems, valuing game states via Markovian analyses, optimal decision-making, tournament and league scheduling, streaks and the hot hand, and analysis of player tracking data.

Emphasis will be on analyzing data and obtaining practical and interpretable results.

Recommended Prep:

Prerequisites: Statistics 110, 111 and 139. Experience using R is required.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Statistics 149

Introduction to Generalized Linear Models (118974)

Mark Glickman

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Sequel to Statistics 139, emphasizing common methods for analyzing continuous non-normal and categorical data. Topics include logistic regression, log-linear models, multinomial logit models, proportional odds models for ordinal data, Gamma and inverse-Gaussian models, over-dispersion, analysis of deviance, model selection and criticism, model diagnostics, and an introduction to non-parametric regression methods.

Course Notes:

Examples will be drawn from several fields, particularly from biology and social sciences.

Recommended Prep:

Statistics 139 or with permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
All: Cross Reg Availability	Available for Harvard Cross Registration

Statistics 151

Multilevel and Longitudinal Models (160736)

Luke Miratrix

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Data often have structure that needs to be modeled explicitly. For example, when investigating students' outcomes we need to account for the fact that students are nested inside classes that are in turn nested inside schools. If we are watching students develop over time, we need to account for the dependence of

measurements across time. If we do not, our inferences will tend to be overly optimistic and wrong. The course provides an overall framework, the multilevel and generalized multilevel (hierarchical) model, for thinking about and analyzing these forms of data. We will focus on specific versions of these tools for the most common forms of longitudinal and clustered data. This course will focus on applied work, using real data sets and the statistical software R. R will be specifically taught and supported. While the primary focus will be on the linear model with continuous outcomes (i.e., the classic regression framework) we will also discuss binary, categorical, and ordinal outcomes. We will emphasize how to think about the applicability of these methods, how they might fail, and what one might do to protect oneself in such circumstances. Applications of hierarchical (multi-level) models will include the canonical specific cases of random-slope, random-intercept, mixed effect, crossed effect, marginal, and growth-curve models.

Recommended Prep:

Permission of instructor required. Prerequisite: S-052, Stat 139, or an equivalent. Jointly-offered in the Graduate School of Education.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Quantitative Reasoning with Data	Yes

Introduction to Survey Sampling and Estimation (112121)

Kelly McConville

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Provides students with the tools to engage with complex survey data and survey weights. The course will cover various probability sampling techniques, such as clustering and stratification, and the impacts of these designs and survey weights on estimation. Students will gain experience with common survey estimators and variance estimation techniques. Additional topics will include methods for handling nonresponse, small area estimation, and nonprobability samples. Students will learn the methods presented through engagement with real-world, complex survey data.

Recommended Prep:

Stat 110, Stat 111 (may be taken concurrently); Math 21A or equivalent, Math 21B or equivalent; basics of R programming

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes

Statistics 184

Introduction to Reinforcement Learning (220120)

Lucas Janson

Sham Kakade

2024 Fall (4 Credits)

Schedule:

MW 1115 AM - 1230 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Modern AI systems often need the ability to make sequential decisions in an unknown, uncertain, possibly hostile environment, by actively interacting with the environment to collect relevant data. Reinforcement Learning (RL) is a general framework that can capture the interactive learning setting and has been used to design intelligent agents that achieve high-level performance in challenging applications such as Go, computer games, robotic manipulation, health care, and education.

This course provides an introduction to reinforcement learning covering a range of problem formulations, algorithms, and theory. The four main themes of the course are (1) Markov decision processes (Bellman equations/optimality, planning, UCB, unknown environments, linear quadratic control, exploration, imitation learning), (2) bandits (epsilon-greedy, UCB, Thompson sampling, contextual bandits, linear bandits, exploration in MDPs), and (3) methods for large-scale systems (policy gradient methods, deep RL, Monte Carlo tree search, Q-learning). There will also be an Embedded Ethics lecture on ethical issues arising in reinforcement learning. The assignments will focus on a mix of algorithmic and statistical principles, along with their programming implementations.

Course Notes:

Stats 184 is also offered as CS 184. Students may not take both for credit.

Recommended Prep:

Required: calculus / linear algebra (e.g., AM22a, Math 21b), probability theory (e.g., Stat 110), programming in Python. Recommended: linear regression, supervised learning, algorithms.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Statistics 185

Introduction to Unsupervised Learning (213478)

Alex Young

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introductory course in unsupervised learning with an emphasis on dimensionality reduction and clustering. Topics include principal component analysis, nonnegative matrix factorization, and spectral clustering. In this course we will study these techniques and others with a focus on high-dimensional geometry and insights provided by linear algebra. Numerous data example will be included throughout the course.

Recommended Prep:

Required courses: STAT110; MATH 21a and 21b or equivalent. Basics of R programming and LaTeX are recommended

Requirements:

Prerequisite: STAT 110 AND MATH 21A AND MATH 21B

Additional Course Attributes:

Attribute	Value(s)

Statistics 186

Introduction to Causal Inference (110022)

Susan Murphy

2025 Spring (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Causal inference concerns the very difficult, challenging problem of addressing questions such as, "Would vaccinating children 16 and younger against COVID 19 lead to fewer deaths among public school teachers?" and "Would providing Harvard students access to a mobile health application designed to help them manage school stress, lead to improved school performance?" This class will include 4 modules. The first module introduces the nuanced world of causal inference along with a fundamental tool: the language of potential outcomes. The second module covers randomized experiments and how data from randomized experiments can be used to make causal statements. The third module introduces the rather tricky problem of using observational (non-randomized) data to attempt to make causal statements. The final module introduces a new and challenging area in which the goal is to make causal inference about the effect of sequences of treatments.

Recommended Prep:

NOTE: the ONLY prerequisites are Stat 110 AND Stat 111 AND Stat 139. Gov 2000 and 2001 are no longer prerequisites.

Probability and statistical inference is needed extensively, and statistical linear models are needed occasionally.

Requirements:

Prerequisite: STAT 110 AND STAT 111 AND STAT 139 or Gov 2000 AND Gov 2001

Statistics 188

Variations, Information and Privacy (222723)

Xiao-Li Meng

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This course delves into the fascinating realm of variations, information, and privacy, with a specific focus on three interconnected yet distinct concepts: differential privacy, statistical disclosure limitation, and machine unlearning. The primary objective of this course is to explore these notions through a statistical lens and to reimagine the very nature of statistical inference by emphasizing the limitation rather than the creation of information.

We begin by examining differential privacy, a powerful framework designed to safeguard data privacy. Statistical disclosure limitation is then investigated, aiming to ensure the confidentiality of individuals. Additionally, we delve into the essential concept of machine unlearning, which plays a critical role in preserving the right to be forgotten. These three topics are explored in depth, highlighting their unique characteristics, and exploring their interplay.

A key aspect of this course is the introduction of the unifying role of variations, which serves as the common thread linking information (revelatory variations) and uncertainty (obfuscatory variations). By embracing the world of variations, we recognize that any endeavor to restrict information follows the same principles as those employed to generate it. This duality prompts us to strike a delicate balance between descriptive, ascriptive, and prescriptive variations, guided by our objectives.

To facilitate a comprehensive understanding, we present a multi-resolution framework that offers a structured approach to navigate these complex trade-offs in both theory and practice. Moreover, we explore how the concept of resolution provides a conceptual foundation to mathematically define individuality. When combined with the notion of variations, it enables us to qualify and quantify unique individual information and privacy.

By the end of this course, students will have gained a profound appreciation for the intricate relationship between variations, information, and privacy. They will learn the basic analytical tools and build statistical insights necessary to navigate the challenges and dilemmas that arise when curtailing and preserving information in data, learning, and inference.

Recommended Prep:

Have statistical and probabilistic preparation no less than Stat 110 and 111. Broad interest in foundational and philosophical thinking or deep appreciation of mathematical framing and its limitations is very desirable.

Introduction to Supervised Learning (207703)

Pragya Sur

2025 Spring (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is designed to follow CS 181 and will dive deeper into the statistical properties of various machine learning methods. The goal of the course is to introduce and prepare students for theoretical and methodological research in statistical machine learning. Topics we will discuss include nearest neighbors, no free lunch theorems, curse of dimensionality, structured learning, subset selection, shrinkage methods, principal components regression, optimism, effective number of parameters, cross validation, ensembling, implicit regularization and interpolation, transfer learning, algorithmic fairness, conformal inference, robustness, causal inference using machine learning. In addition to problem sets but instead of exams, students will work in groups to synthesize and give short presentations on recent applied and theoretical machine learning papers. Building upon these presentations, students will conduct individual course projects, based on which they will submit a final report at the end of the semester.

Course Notes:

Textbook Information: Elements of Statistical Learning by Hastie, Tibshirani, and Friedman is a required text and is available for free at https://web.stanford.edu/~hastie/ElemStatLearn/printings/ESLII_print12.pdf

Recommended Prep:

Required: CS 181, STAT 110. Recommended: STAT 111.

Topics in high-dimensional statistics: methods from statistical physics (221646)

Subhabrata Sen

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Methods from statistical physics have been extremely successful in predicting sharp information theoretic and algorithmic thresholds for high-dimensional statistical models. These methods are non-rigorous, but the initial predictions have then been a posteriori justified using rigorous tools. This course will introduce these non-rigorous methods, and discuss some instances where the associated predictions have been established rigorously. No physics background will be necessary.

Course Notes:

Successful students:

1. will be familiar with recent progress at the interface of high-dimensional statistics and statistical physics.
2. will be able to apply physics tools (replica/cavity method) to new problems.
3. will master recent rigorous techniques (interpolation method, cavity method, gaussian com-parison) used to formalize these ideas.

Recommended Prep:

Probability at the level of STAT 210 and real analysis at the level of MATH 112 are required. STAT 212 is encouraged, but not required.

Statistics 234

Sequential Decision Making (205213)

Susan Murphy

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

25

This graduate course will focus on reinforcement learning algorithms and sequential decision making methods with special attention to how these methods can be used in mobile health. Reinforcement learning is the area of machine learning which is concerned with sequential decision making. We will focus on the areas of sequential decision making that concern both how to select optimal actions as well as how to evaluate the impact of these actions. The choice of action is operationalized via a policy. A policy is a (stochastic) deterministic mapping from the available data at each time t into (a probability space over) the set of actions. We will consider both off-line and on-line methods for learning good policies.

Mobile health is an area that lies within multiple scientific disciplines including: statistical science, computer science, behavioral science and cognitive neuroscience. This makes for very exciting interdisciplinary science! Smartphones and wearable devices have remarkable sensing capabilities allowing us to understand the context in which a person is at a given moment. These devices also have the ability to deliver treatment actions tailored to the specific needs of users in a given location at a given time. Figuring out when and in which context, which treatment actions to deliver can assist people in achieving their longer term health goals. In the last 15-20 minutes of many of the classes we will brainstorm about

how the methods we discussed during that class might be useful in mobile health.

This course will cover the following topics: Markov Decision Processes, on-policy and off-policy RL, least squares methods in RL and Bayesian RL, namely posterior sampling. Most of the course will focus on Bayesian RL via posterior sampling. This is particularly useful in mobile health as posterior sampling facilitates off-policy and continual learning. Also the Bayesian paradigm facilitates use of prior data in initializing an RL algorithm. Other topics from statistics, machine learning and RL that I think are potentially important in mobile health but that we won't cover are (you could consider in your class project) include: 1) transfer learning (using data on other similar users to enable faster learning); 2) non-stationarity (dealing with slowly changing or abrupt changes in user behavior); 3) interpretability of policies (enabling communication with behavioral scientists by making connections to behavioral theories); 4) using approximate system dynamic models to speed up learning, 5) hierarchical RL, 6) experience replay and 7) multi-task learning.

Recommended Prep:

Recommended prerequisites are the equivalent of Stat 210, Stat 211, and Compsci 181

Sparse Inference, and Network and Text Analysis (211175)

Zheng Ke

2024 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

High dimensional data analysis is a recent interdisciplinary research area of Statistics, Genetics and Genomics, Engineering, and several other scientific areas. It addresses an array of challenging problems that of contemporary interest, and research in this area has been very active in the past decade.

This course aims to provide a systematic introduction to various topics in high dimensional data analysis, focusing on large-scale sparse learning, and network and text data analysis. Large-scale sparse learning: Sparsity is a universal phenomenon in modern high dimensional data. Sparse structures are observed in many application settings and have many different forms, such as parameter sparsity, graph sparsity, eigenvalue sparsity, and so on. Exploring sparsity has become a common strategy in data analysis and has largely reshaped classical multivariate statistics problems. This course will investigate classical problems such as multiple testing, linear regression, classification and clustering, under the modern sparse settings. For each problem, the course discusses recent statistical methods for taking advantage of sparsity, and introduces the theoretical framework for analyzing these methods.

Network and text data analysis: Social networks and text documents are unconventional data types. This course introduces statistical models and methods for analyzing such type of data. Topics for network data analysis include community detection, mixed membership estimation, link prediction, and dynamic network modeling. Topics for text data analysis include topic modeling, word embedding, information retrieval, and sentiment analysis.

Recommended Prep:

This course is mainly designed for graduate students in Statistics. The prerequisites are Statistical Inference 1&2 (students can take the prerequisites simultaneously with this course). Graduate students from other departments (CS, Biostatistics, Economics, etc.) can also take this course, if they have taken statistics-related courses which have a significant amount of content in mathematical statistics. Undergraduate students please consult the instructor before enrolling.

Time Series (108573)

Neil Shephard

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Time series centers around three main goals: describing data (e.g. seasonal adjustment, detrending), predicting future variables given the past data, and drawing causal conclusions about the effect of changing one variable on the future path of another. We will delve into principles and methods for all three of these goals. Due to the complexity of these problems, a three-pronged approach is often needed, combining theory, simulation, and data. Throughout problems from Economics and Finance will be used to illustrate time series methods. Likely topics covered include: martingales, theory of prediction, linear models and projection, control, reinforcement learning, causality (e.g. SVAR, local projection), hidden Markov models, stationarity and non-stationarity, spectral and wavelet methods.

Recommended Prep:

Probability theory, Linear algebra, Multivariate Calculus, Statistical Inference.

Causal Inference with Applications (156925)

Kosuke Imai

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Substantive questions in empirical scientific and policy research are often causal. Does voter outreach increase turnout? Are job training programs effective? Can a universal health insurance program improve

people's health? This class will introduce students to both statistical theory and applications of causal inference. As theoretical frameworks, we will discuss potential outcomes, causal graphs, randomization and model-based inference, sensitivity analysis, and partial identification. We will also cover various methodological tools including randomized experiments, regression discontinuity designs, matching, regression, instrumental variables, difference-in-differences, and dynamic causal models. The course will draw upon examples from political science, economics, education, public health, and other disciplines.

Recommended Prep:

Stat 110, 111, and 139 or equivalent (probability, statistical theory, and linear models). Students who took Stat 186 in 2018 Fall and 2019 Fall should not enroll in this course.

Statistics 288

Deep Statistics: AI and Earth Observations for Sustainable Development (219700)

Xiao-Li Meng

2025 Spring (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Course Description: Deep statistics refers to statistical endeavors that go deeper than developing methods and applying them to solve problems in data science. It explores and develops statistical theory and insights to contribute to the building of foundations for data science. The course provides a deep dive into statistical foundations and insights for multi-source, multi-phase, and multi-resolution learning, interwoven with case studies on using AI and Earth Observations (EO) for sustainable developments (e.g., global poverty). Foundational issues are framed as inevitable trade-offs for data science: between data quality and quantity, between statistical and computational efficiencies, and between robustness and relevance of learning methods and findings. Practical questions examined include handling messy and private data, drawing causal conclusions from AI-EO data, and translating scientific insights into policies.

Recommended Prep:

A student should preferably have at least one of the following background:

- Foundational and theoretical proficiency: at the level of STATS 210, 211. (Strong interest in statistical theory and foundational issues.)
- Data analytical and computational skills: basic data science skills and being able use image data. (Strong skills in working with real data, data management, and computational. Preferably having skills in Python.)

Random High-Dimensional Optimization: Landscapes and Algorithmic Barriers (222772)

Mark Sellke

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will focus on paradigmatic optimization problems with random objective functions. We will develop the tools needed to understand the geometric behavior of these complex random landscapes, and investigate how these behaviors are linked to the success and failure of efficient algorithms. Possible topics will include constraint satisfaction problems and spin glasses, the overlap gap property, critical point complexity, and implications for Markov chain sampling.

Recommended Prep:

Required: STAT 210, STAT 212.

Scalable Statistical and Machine Learning Methods for Big Data with Applications (214539)

Xihong Lin

2025 Spring (4 Credits)

Schedule:

M 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Unprecedented advances in digital technology have produced a revolution that is transforming science and society. Big data have been rapidly generated in many disciplines, such as genomics, health, physical and social sciences. The value of big data lies in effective analysis using statistical and machine learning methods that are computationally scalable and efficient. This seminar course is offered in response to these needs. Discussions will be co-led by several faculty members in the Departments of Statistics and Biostatistics at Harvard with active participation by students, postdoctoral fellows and faculty, with the goal of stimulating and discussing several cutting-edge ongoing research areas on scalable statistical and machine learning methods for big data. Students and postdoctoral fellows will work with faculty on group class presentations. The class is expected to have a lot of active discussions of current ongoing methodological research of faculty participants.

The discussions include current research activities, challenges and open problems. Examples include feature selection, distributed and federated learning, ensemble learning, high-dimensional prediction and testing, dense and sparse signal detection, sparse and low-rank covariance matrix estimation, network analysis, penalized likelihood and post selection inference, causal inference, topic modeling, random projection and sketching, and generative AI. Applications of these methods in various areas will be discussed.

2025 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

120

Through a series of lectures, application exercises and laboratory experiments, we will explore how the human body develops on a molecular level from gene to cell to organ. Ever wonder how you can make heart cells beat in a dish? Why can axolotls regenerate their limbs but humans cannot? How do neurites grow? Can we grow a brain in a cell culture dish? Come join us to discover the answers to these questions and more.

Recommended Prep:

LS1a/LPSA is required; SCRB 10 is recommended

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

All: Cross Reg Availability	Available for Harvard Cross Registration

Stem Cell & Regenerative Biol 91R

Introduction to Research (125804)

Amie Holmes

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Laboratory research in topics related to the Human Developmental and Regenerative Biology Concentration under the direction of, or approved by, members of the Department of Stem Cell and Regenerative Biology, Principal Faculty of the Harvard Stem Cell Institute, or others with permission. A paper must be submitted to the laboratory sponsor and to the HDRB Concentration Office for review by the Course Director and Head Tutors.

Course Notes:

Students must have joined a laboratory by the course registration deadline (i.e., "study card day") to be able to enroll in SCRB 91.

Limited to Human Developmental and Regenerative Biology Concentrators; written permission of the laboratory sponsor must be submitted to the HDRB Concentration Office prior to enrolling in the course. This introductory research course is intended to prepare students for SCRB 99 and may ordinarily be repeated no more than once. Ordinarily may not be taken as a fifth course. Laboratory safety session required.

Additional Course Attributes:

Stem Cell & Regenerative Biol 111

Regeneration: Phenomena to Mechanisms (212688)

Jessica Whited

2024 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

How can some animals regenerate large pieces of their bodies following injury? This course will use both classical and current primary literature to explore the fascinating process of regeneration across phyla, covering both invertebrates and vertebrates. Through a combination of minimalist lectures, robust discussion, and student-led presentations, students will learn to distill questions into specific, key experiments; to design experiments with meaningful controls; and to use data to refine, reformulate, and develop new hypotheses.

Course Notes:

Students will be engaged in group work throughout the semester. As a final project, they will write and produce short videos centered on student-selected topics, and the course will culminate with a class-wide viewing event.

Recommended Prep:

SCRБ 10 or equivalent.

Biotech Ethics (220057)

Sergio Imparato

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course explores moral issues related to business practices in the fields of healthcare, medicine, genetics, and biotechnology. The class is divided into four parts. The first part of the course draws on foundational concepts of ethics and applies them to biotech entrepreneurship. In the second and third part, we delve into a series of case studies and analyze common moral quandaries faced by well-known biomedical companies. In the fourth part, students develop ad-hoc ethical frameworks that apply to real-life business ideas.

Course Notes:

Previous experience in biology and economics is helpful but not necessary.

Stem Cell & Regenerative Biol 135 Section: 01

Reproductive Biology (218928)

Kara McKinley

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor**Enrollment Cap:**

24

This course focuses on the molecular and cellular basis for reproduction. We will learn about how the reproductive tracts develop and change over the lifespan and the processes that initiate and sustain the development of offspring. Topics include: the development of gametes; sex chromosomes; menstruation, pregnancy, and menopause; early development in natural and synthetic embryo systems; ethical considerations surrounding reproduction.

Recommended Prep:

LS1a or LPSA, LS1b, SCRB 10, and SCRB 50 or MCB 60

Stem Cell & Regenerative Biol 140

Biology of Human Growth and Cancer (126744)

Fernando Camargo

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will focus on the biology of tissue growth from a developmental perspective. We will first learn about the genetics, biochemistry, and function of basic developmental pathways that are involved in normal growth. We will then understand how dysregulation of these pathways contributes to diverse malignancies. By exploring the cellular origins of cancer, the nature of mutations driving tumor progression, and the interactions of cancer cells with their niche, we will gain valuable insights into the complexities of this disease. Moreover, we will examine the current challenges faced in the clinic regarding cancer therapies. One crucial aspect we will address is how to identify and develop specific targets for cancer treatment without adversely affecting normal adult tissues. We will also dive into the advancements made in the genomics era and explore how they have revolutionized cancer treatment approaches.

Recommended Prep:

Life and Physical Sciences A or Life Sciences 1a; Life Sciences 1b;
SCRB 10 or permission of the instructor.

Additional Course Attributes:

Stem Cell & Regenerative Biol 145

From Cells to Tissues, in Sickness and in Health (161207)

Ya-chieh Hsu

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Every cell is a part of a larger "community", working together to enable tissue function. This course will explore the principles of building complex tissues from cells. How do cells know what tissues to make and when to make them? How do cells communicate with one another? What diseases can arise when these principles go awry? How can we build tissues in the lab? In addition to lectures, students will engage deeply in primary literature.

Recommended Prep:

One year of life sciences introductory sequence - either [LIFESCI 1A / LPS A and LIFESCI 1B] or LIFESCI 50; SCRB 10, SCRB 50 or MCB 60, or permission of the instructor.

Additional Course Attributes:

Stem Cell & Regenerative Biol 155

Epigenetics and Gene Regulation of Human Development and Disease (126154)

Jason Buenrostro

2025 Spring (4 Credits)

Schedule:

MWF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Are we destined to be our parents? In this course we will study topics in epigenetics and gene regulation to challenge some of Mendel's ideas on genetic inheritance. To do this, we will learn about the biochemical processes that control the expression of genes as cells change across human development, aging and disease. Together with genetics, we'll use science to discuss whether "nature or nurture" defines who we are. Finally, the human genome is huge, employing diverse mechanisms of epigenetic regulation, we'll learn about data rich experimental tools and work together to use computational methods to study epigenetic processes within cells

Recommended Prep:

Life and Physical Sciences A or Life Sciences 1a; Life Sciences 1b;
MCB 52; SCRB 10 or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)

Stem Cell & Regenerative Biol 164 Section: 01

Frontiers in Experimentation and Imaging (220056)

Fei Chen

2024 Fall (4 Credits)

Schedule:

WF 0130 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap: 16

Frontiers in Experimental and Imaging is an interdisciplinary, laboratory-based course which seeks to explore the organization of cells and tissues using microscopy. Through a series of lectures, laboratory experiments, and student-designed research projects, students will learn experimental design, cutting edge methods (such as expansion microscopy), and data analysis. With microscopes in hand, we will venture from the fertilization of the zygote, to complex architecture of the brain, and to reversing the subcellular defects of aging. Join us for discovery and experimentation.

Stem Cell & Regenerative Biol 167 Section: 01

Stem Cell Therapeutics: Exploring the Science and the Patient Experience (125200)

Leonard Zon

David Breault

2025 Spring (4 Credits)

Schedule:

W 0900 AM - 1130 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Stem cells are the basis for tissue maintenance and repair, thus, are essential elements of normal organ and tissue physiology. Stem cells are also targets for disease processes and through transplantation are important therapeutic agents. This course will allow advanced undergraduates to explore how stem cells and tissue regeneration impact human disease pathogenesis and how stem cells might be exploited to advance new therapies for disease.

Recommended Prep:

Life and Physical Sciences A or Life Sciences 1a; Life Sciences 1b;
SCRB 10.

Stem Cell & Regenerative Biol 177 Section: 01

Demystifying the Immune System (217489)

Ruth Franklin

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

25

What happens during an infection? This course will follow the progression of an immune response while exploring the following questions: What is inflammation? How can it both protect us and contribute to disease? Which physiologic processes are regulated by immune cells? In addition to participation in lectures, discussions, and analysis of primary literature, each student will create an original piece of

science communication to engage with the general public.

Course Notes:

Weekly section to be held during Friday lecture time.

Recommended Prep:

SCRB 50 or MCB 60 or equivalent

Stem Cell & Regenerative Biol 185

Brain Development, Risk of Mental Illness, and New Approaches to Treatment Development (222147)

Paola Arlotta

Steven Hyman

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What is mental illness? How well can we distinguish illness from normal variation in cognition and behavior? Why in most cases do patients present with symptoms by age twenty? This course will explore mechanisms underlying neuropsychiatric disorders through the lens of autism spectrum disorder, which begins in early childhood, and schizophrenia, which begins during adolescence. In exploring vulnerability and pathogenesis, the course will weave together material that spans human genetics and environmental exposures, human brain development and neural circuit formation, and remodeling of brain circuits by experience. Given the complexity of the brain and its disorders and the limited access to living human brains, the course will also explore and evaluate our sources of knowledge, our model systems such as human brain organoid models, and our technologies such as brain-computer interfaces. The course will highlight experimental approaches poised to elucidate disease mechanisms and deliver much needed therapeutics for some of the most devastating pathologies of our time.

Recommended Prep:

LS1a/LPSA; LS1b

The Translational Science of Stem Cells: Present and Future (204006)

Lee Rubin

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Information about the biology of stem cells and their uses in understanding and treating diseases -- particularly those that cannot be studied adequately in non-human model systems -- has increased enormously in the last decade. In this seminar/lecture course, students will learn about transplanting functional human cells (such as pancreatic beta cells or dopaminergic neurons) derived from pluripotent cells to treat disease. They will also discover how to use these cells to model diseases, such as neurodegenerative and cardiovascular diseases, with the goal of identifying more effective, possibly patient-specific, therapeutics. Students will hear about treatments, including small molecules (conventional medicines), whose therapeutic actions can be attributed to the regulation of tissue-specific stem cells that reside in key adult tissues including the bone marrow and brain, but, interestingly, not including the heart or pancreas. Finally, they will be exposed to relatively new work that demonstrates the possibility of creating new cells from old by using genetic methods to swap cell identities. A typical type of question that we will debate is: When should Parkinson's disease patients be treated with a drug to slow the death of neurons, with transplanted neurons made from pluripotent cells or with a viral vector that produces new neurons from existing glial cells in the brain?

This course will highlight the theoretical, as well as the practical, aspects of drug development. How are therapies progressed from conception to patient (bench to bedside)? How can academic investigators commercialize research? Importantly, while this is a science course, not a health economics course, we intend to discuss ways of reducing drug costs. At the same time, we will introduce the new trend of treating rare (even N=1) genetic diseases and how this is or isn't accommodated within our existing healthcare framework.

We believe that students with different backgrounds (biology, chemistry, engineering, business) and at different levels (undergraduate, graduate) can benefit from taking the course and will help enrich the discussions by providing different perspectives on topics that we'll cover. However, basic knowledge of cell and molecular biology will be needed to understand the course fully.

Course Notes:

Permission of the instructor is required to enroll for students who have not taken the courses below. Ability to work in a less structured environment will be essential, as will the ability to work with other students.

Recommended Prep:

Life Sciences 1a or Life and Physical Sciences A, Life Sciences 1b, and preferably SCRB 10.

New medical therapies promise to change not only quality of life and life expectancy, but even what it means to be human. And yet huge gaps remain between fundamental sciences and translation to the clinic. We will explore traditional and cutting-edge themes in therapeutics and their applicability to medical needs. Discussions range from understanding the mechanism of action of today's drugs to the possibilities for changing the very nature of our brains and genomes, along with the ethical dilemmas these opportunities bring with them. By engaging in active discussions with leading scientists and biotechnologists, students will garner insight into how advances in fundamental science can be translated into new therapeutics, along with the limitations faced.

Subject: Systems Biology

Systems Biology 214

Science Communication & Ideation (220564)

Galit Lahav

Ashwini Jambhekar

Jennifer Oyler-Yaniv

2024 Fall (4 Credits)

Schedule:

W 0930 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

The goals of this class are to teach students the skills essential for coming up with new scientific ideas, and communicating those ideas effectively with others through both writing and presentation. Skills necessary for ideation include scientific topic exploration and refinement, generating testable hypotheses, and developing aims. In parallel, students will learn how to communicate those ideas by finding the essential story, giving and receiving critical feedback, and preparing effective slides and proposals.

Specifically, this class is designed to:

- Teach scientific ideation and communication as systematic processes
- Provide practice in writing and presenting science
- Find each individual's on-stage persona through improve exercises
- Cultivate a culture that embraces and nurtures diverse voices, styles and backgrounds.
- Increase comfort with controlling conversations & presentations while addressing interruptions and questions

Approach ideation with confidence and a positive attitude

Systems Biology 220 Section: 1

Analytical foundations for quantitative biologists (204480)

Allon Klein

Alon Oyler-Yaniv

2024 Fall (4 Credits)

Schedule:

TF 1030 AM - 1200 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course provides a framework for thinking quantitatively, logically, statistically, thermodynamically, and kinetically about biological processes and biological assays. Our goal is to enable students to conceive and execute graduate-level research projects in systems biology. The course (1) introducing basic ideas in chemical kinetics, thermodynamics, and dynamical systems; and (2) a practical introduction to problems in statistics and probability in biology and biological measurement.

The course will give students skills to design experiments and associated analyses, and it will test their ability to apply these skills to through problem sets, literature reviews, and in developing their PQE1 project proposal for the end of the first academic year of the SSQBio program. The course is a core requirement for the SSQBio Graduate Program. Recognizing the diversity of students in our program, the principle of this course is that "foundations matter": we will introduce challenges to quantitative thinking in technically-accessible topics.

Students not in the SSQBio program are welcome to apply, and will accepted based on available space and on demonstrating and appropriate quantitative background.

Recommended Prep:

This course is required for all Systems, Synthetic, and Quantitative Biology students. Knowledge of programming, statistics, physics and chemistry.

Systems Biology 350 Section: 019

Systems Biology Research (121507)

Jesse Gray

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Systems Biology 350 Section: 019

Systems Biology Research (121507)

Jesse Gray

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Systems Biology 350 Section: 020

Systems Biology Research (121507)

Jeremy Gunawardena

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Systems Biology 350 Section: 020

Systems Biology Research (121507)

Jeremy Gunawardena

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Systems Biology 350 Section: 021

Systems Biology Research (121507)

John Higgins

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Systems Biology 350 Section: 021

Systems Biology Research (121507)

John Higgins

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Systems Biology 350 Section: 022

Systems Biology Research (121507)

Curtis Huttenhower

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Systems Biology 350 Section: 022

Systems Biology Research (121507)

Curtis Huttenhower

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Systems Biology 350 Section: 023

Systems Biology Research (121507)

Marc Kirschner

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Upper level Systems Biology students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Systems Biology 350 Section: 023

The Lemann Program on Creativity and Entrepreneurs

Subject: Creativity and Entrepreneurshi

Creativity and Entrepreneurshi 10 Section: LEC

StudioLab on Creativity and Entrepreneurship (220632)

2024 Fall (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

Note: Formerly offered in Fall 2021 as "LPCE 101"

Will our new normal be a diminished or unimproved version of reality that simply happens to us, or can we enact change to create a "better normal"?

CE 10 pursues the creation of a "better normal." Using an interdisciplinary exploration of the liberal arts, you will develop and apply transformative ideas to tackle today's societal challenges, such as racial injustice, climate change, and strained health and wellbeing. You will work to develop actionable solutions to pressing issues, using the starting framework of the UN Sustainable Development Goals. You will learn to identify and properly analyze a problem, work collaboratively to ideate and create an actionable approach, build an organizational strategy and business plan, network with experts to pressure-test your ideas, and persuasively communicate your ideas to build the requisite human capital and funding relationships to launch a venture.

This class will take advantage of activity-based learning, digital assets on LabXchange, guest speakers, and an active council of expert mentors to guide you through the design of your venture.

The term will culminate in an End of Semester Celebration, where individuals and teams will have opportunities to seek support to move their projects along. Through your efforts, you will imagine a better normal for society and take meaningful action to make it a reality.

Additional Course Attributes:

Creativity and Entrepreneurshi 11

StudioLab on Creativity and Entrepreneurship (220705)

2025 Spring (4 Credits)

Schedule:

W 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

Note: Formerly offered in Spring 2022 as "LPCE 102"

CE 11 is a 4 credit StudioLab designed for students with existing ventures in the early stages of development with the goal of launching the venture by term's end. The target student will have conceived and prototyped a solution to an intractable problem in an effort to create a "better normal."

Using an interdisciplinary exploration of the liberal arts, you will develop and apply transformative ideas to tackle today's societal challenges such as racial injustice, climate change, and strained health and wellbeing. You will work to execute your actionable solutions to pressing issues. You will learn to properly analyze your identified problem; work to collaboratively ideate and create an actionable plan of execution; build a scaling strategy and marketing plan; network with experts for fundraising advice; and persuasively communicate your venture to build the requisite human capital and funding relationships to launch your venture.

This class will take advantage of activity-based learning, guest speakers, and an active council of expert mentors to guide you through the launch of your venture. The term will culminate in a Festival of Ideas at the end of the semester where individuals and teams will have opportunities to seek support to move their projects along.

In addition to the weekly 3-hour studio workshop sessions, we will have screenings and talks from visitors who are working in the intersection of art and entrepreneurship. These may be synchronous or asynchronous, in-person or virtual. You will also need to allocate at least 3 hours a week to complete the assignments.

CE 11 will help you imagine a better normal for society and take meaningful action to make it a reality.

FAS Divisional Distribution	Arts and Humanities

Being a theater artist often involves moving in several directions in time simultaneously. We think about our past, our lives, our work, our moment, our vision. How do we find inspiration? How do we make work? How do our creations for the stage live in relation to 'the rest of our lives'. Our use of objects and our memory of those objects can help respond to these questions in writing and acting. This class will seek to have students examine object memory in performance and writing. They will go through a production process for *Cells*, a new play by Sam Marks directed by Morgan Green, inspired by this process. The play is inspired by the artist Louise Bourgeois' work as well as Marks' own grandmother's paintings, and asks the question of what it means to have a life in the arts. In addition to putting on a full production of the play, students will do writing and acting exercises inspired by visual artists and other playwrights such as Samuel Beckett, Marie Irene Fornes, Louise Bourgeois, Felix Gonzalez Torres, and Cyndi Sherman to see how they extrapolate theater making from the object-memory process. Through rehearsals, performance, writing and discussion, we will investigate ways of being a theater maker. The class will help build student's new play development process toolkit, as they move through the stages of inspiration and execution, from memory to idea to text to performance to image to production. We ask how, as artists, our

perspective on the world gets translated into the work we create. The preponderance of time for this course will be dedicated to the rehearsal process and performances, where the integration of theory and practice, and theater, dance, and media take place. Students will meet with the course head for seminar discussions and studio work at designated times to examine the entire performance process through a creative lens.

TDM production studios (TDM 90AR/BR/CR/DR) frame and involve participation in Theater, Dance & Media's twice yearly professionally directed and designed productions. The preponderance of time for this course will be dedicated to the rehearsal process and performances, where the integration of theory and practice, and theater, dance, and media take place. Students will meet with the course head for seminar discussions and studio work at designated times to examine the entire performance process through a creative lens.

Staging Fierce Comedy (205031)

Stevie Walker-Webb

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course centers on the rehearsal and full production of the play, *The Barbarians* by Jerry Leiblich. We will begin by looking at the traditions that this play is born out of: searing political satire and language poetry/playwriting. The class will quickly launch into the joyful rigor of bringing our version of *The Barbarians* to life.

The Barbarians is whip-smart, unconventional, wildly funny and most importantly, it is a fierce interrogation of the relationship of language and state sponsored violence. In the spirit of the great political comedies—Chaplain's *The Great Dictator*, Kubrick's *Doctor Strangelove*, Brecht's *The Good Soldier Schweik*—the play focuses on how words shape the world.

The playwright describes *The Barbarians* as "a loggorheic encyclopedic rambunctious gollywompus of a play concerning speech acts, political power, fractal geometry, eusociality, theater, and some other stuff too, in which a witness at a trial describes to us a play in which a team of scientists attempts to use real speeches from real US Presidents to nullify the language-power of the fake US President (but also maybe the real US President) while the rest of us bozos try to go on living lives of picturesque American normalcy."

Yet, the rollicking, anarchic style and energy of the play is cannily deceptive; in fact *The Barbarians* is a finely crafted, searing political satire that presents a myriad of rich challenges for young actors. The text slides between various rhetorical modes: from political language, to scientific argot, to narrative yarns, to nonsense, to poetry. As such, actors will learn to inhabit these different registers of language physically, challenging themselves to find specificity and embodiment in the stylized, slippery language. And yet, the language is not pure style — the play is full of narrative and character, and so actors will have the chance to move back and forth between more "stylized" modes of performance and more "naturalistic" techniques.

In addition, *The Barbarians* will include some interaction with the playwright. The play is in final draft form but still may undergo textual changes. This opens the possibility that students will have the chance to work with the playwright as Leiblich dynamically continues to refine the text.

Course work outside of the room will include a small, strategic amount of reading for the purpose of gaining a sense of the thinking that undergirds the play and the theatrical traditions that this kind of work has emerged from. Below is a list of potential reading and viewing material.

Related readings might include selections from J.L. Austin's *How to Do Things with Words*, James C. Scott's *Seeing Like a State*, Marjorie Perloff's *Wittgenstein's Ladder*, and the rhetoric-focused work of LANGUAGE poets such as Lyn Hejinian, Charles Bernstein, Rae Armantrout, Mac Wellman, and David Antin.

Viewing: Films: Charlie Chaplain's *The Great Dictator*, Stanley Kubrick's *Doctor Strangelove*, and The Marx Brother's *Duck Soup*.

Course Notes:

TDM production studios (TDM 90AR/BR/CR/DR) frame and involve participation in Theater, Dance & Media's professionally directed and designed productions. For rehearsal schedule and performance dates, please visit the Canvas course page.

TDM 90BR is required of concentrators and open to other students involved in the TDM spring production (as actors or apprentices on the production team). Participation is limited to students involved with the production, either as performers or as members of the production team. Students who wish to be part of the production team should contact Artistic Producer James Stanley, jamesstanley@fas.harvard.edu

Harvard Dance Project (160653)

L ROD

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 12

The Harvard Dance Project is a production-based course focusing on professional movement exploration, choreography, and process. For Spring 2024, we will be in a choreographic residence with the enrolled ensemble, Sidra Bell, and LROD. The Harvard Dance Project offers the enrolled ensemble an in-depth experience working closely with professional choreographers' diverse methods and practices in the dance production universe while examining the intersections of dance and performance studies, choreographic processes, and intermedia. The Harvard Dance Project culminates in an end-of-term durational hour-long production experience. In addition, each enrolled company member will be working with professional sound and lighting designers, costume designers, and media designers who make up our co-creative team with Sidra Bell, LROD, and Sam Tirrell. LROD will facilitate the course using co-creative, adaptive, and liberatory methods with a post-colonial approach.

Ensemble members will be working with Sidra and LROD collectively. Please be sure you can commit to the rehearsal schedule before enrolling, as curricular courses take priority. ALL are welcome.

[Sidra Bell](#)

Theater, Dance & Media 91R

Supervised Reading and Research (160980)

2024 Fall (4 Credits)

Schedule:

Instructor Permissions: Instructor

Enrollment Cap: n/a

Supervised Reading and Research is a student-driven independent study advised by a faculty member on subjects of special interest that cannot be studied in courses currently offered by Harvard College. Students must submit a [cover sheet](#) (available on the TDM website) with a signature from the proposed faculty advisor along with a syllabus that includes an overview of the course, a schedule of materials covered at each meeting, and a description of assignments to be graded. The cover sheet and documents must be submitted to the DUS one week before the course registration deadline for the semester in which the student will take 91R. Thus, given prior term enrollment, the proposal must be submitted in the term before the student takes the course.

Course Notes:

Letter-graded only. TDM 91R is supervised by a member of TDM faculty member; however, the permission of the Director of Studies is required for these courses. May not be taken more than twice and only once for concentration credit.

Foundational Concepts in Theater, Dance & Media (160648)

Derek Miller

2025 Spring (4 Credits)

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course will introduce students to the fundamental issues in and methods of theatre and dance studies. We will engage a number of plays, essays, videos, and live performances to explore the potential of expressive forms, and ask, what can be experienced and known through performance and performing? In doing so, we will address key questions:

What constitutes a theatrical event? What are its component parts? What is the relationship between written dramas, scripts, scores, and embodied performance on the stage and in everyday life? What responsibilities do the actors, dancers, directors, choreographers, designers and other members of the production team have to previous incarnation or to an author's expressed intentions? How does the spectator co-create the meaning of a given production? How does one situate performance historically and from a theoretical perspective? And how can performance become a critical tool to engage cultural, political, and philosophical issues?

You will be encouraged to develop your ability to think about performance from many different perspectives and to defend your individual ideas with strong critical skills. Additionally, throughout the course of the semester we will define and demystify the complex terms that operate within this field. This course aims to give students a solid foundation to see, experience and think as performers, as artists, and

as scholars of expressive behavior.

Course Notes:

Required of all, and limited to, concentrators.

Junior Tutorial (160647)

James Stanley

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course serves as a transition between the survey nature of the sophomore tutorial and the independent senior thesis in Theater, Dance & Media at Harvard. We engage with methods and forms of theater, dance and media which may provide inspiration for your future artistic and scholarly work. Our strategy is to identify a number of contemporary and historical performances and performance archives and critically consider how they might influence your evolving identity as an artist working in live media, dance, and performance. We will delve deeply into genres of arts practices that could help you to imagine a way forward in your own work. In doing so, the goal is to advance your transition into a professional life in theater, dance, and media, and the identify your key concerns (both artistic and pragmatic) regarding a professional practice. Throughout the semester we will discuss how your personal goals and concerns intersect with political, social, and individual contemporary preoccupations in those fields.

This junior tutorial is designed to organize participants into a community of singular artist interlocutors who can also supportively engage with one another's projects. You will develop methods to articulate your own intentions and impulses with great specificity, offer appropriate feedback for the stage of development for your peer's projects, and acquire facility with terms of art in theater, dance & media.

Our semester is oriented to gaining autonomy and independence in relation to your interests. For the first seven weeks of the semester, we will read and explore a number of topics and ideas regarding the development of a sustainable arts practice, all the while, developing a specific set of questions pertinent to each class member's interests in the concentration. At the end of the seven weeks, students will present (both in person and online) on a company or artist whose work you have been researching in depth (the options are outlined in week 7 of the syllabus). We then pivot to your topics brought up during the first half of the semester – in essence the class will be building and completing the syllabus for the last half of October and November and December, while discussing and workshopping the development of their thesis ideas.

Theater, Dance & Media 105

Introduction to Dramaturgy (118876)

Ryan McKittrick

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course introduces students to the fundamentals of dramaturgy and the role of a dramaturg in the theater, with a focus on programming and work in development at the American Repertory Theater (A.R.T.). Students will analyze a range of plays and musicals; meet with artists premiering and developing work at the A.R.T.; and attend A.R.T. productions at the Loeb Drama Center. They will create a pitch for their own adaptations for the stage and study the production history of a play, musical, or opera using resources at the Harvard Theatre Collection. Students will also have the opportunity to engage in dramaturgical research for upcoming A.R.T. projects.

Beginning Acting Through Scene Study and Monologue Work (207571)

Marcus Stern

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

This is a beginning acting class designed both for students who have no previous acting, performance, or arts class experience, as well as for students who have had a fair amount of acting experience and are interested in honing their work in pursuit of a career in acting. The focus is on scene and monologue work using contemporary texts from theater, television and film. Core components of the class include the idea of simply working from yourself, "action-based acting" (how one person is trying to change/affect another person in a scene), and how to read a scene or monologue to figure out what your character might want from that situation. We've designed the class around very tangible and concrete ideas and techniques, so that those who might be intimidated by the idea of an acting class, or an arts class in general, will feel exceedingly comfortable. We always have students in the class who have had no previous art class experience. It is important to note that while the class is intentionally designed to be as un-intimidating and accessible as possible, the class does require a great deal of outside work. Students should expect to spend 4-6 hours per week on class work, including time for analyzing texts and rehearsal time for the scenes and monologues.

Theater, Dance & Media 112R

Advanced Acting: Contemporary Texts (122906)

Marcus Stern

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This is an acting class designed to help students with no acting or arts class experience at all, as well as students who have a fair amount of experience, enjoy the process of rehearsing and performing as an actor. Core components of the class include the idea of "simply working from yourself". This includes "action-based acting" (how one person is trying to change/affect another person in a scene or monologue), how to read a scene or monologue to figure out what your character might want from that situation, how your character goes about getting what they want, how to find a personal connection to that character, and how to choose material that best suits the individual actor for auditions and scene work. The focus is on scene and monologue work as well as learning how to audition. We've designed the class around very tangible and concrete ideas and techniques, so that those who might initially be intimidated by the idea of an acting class, or an arts class in general, will feel exceedingly comfortable. We always have several

students in the class who have had no previous acting or arts class experience, and they have found the process quick and easy to learn. It is important to note that while the class is intentionally designed to be as un-intimidating and accessible as possible, the class does require a great deal of work outside of class. Students should expect to spend 4-6 hours per week on class work, including rehearsal time for the scenes and monologues.

Acting Shakespeare (119020)

Remo Airaldi

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course is an intensive study of Shakespeare's dramatic works from the point of view of the actor. It is important to remember that Shakespeare's verse dramas were written to be performed and that only when they are approached this way - as playable, theatrical texts - that they have their maximum impact. Through text analysis, scene study, vocal work, and acting exercises we attempt to find not only the meaning, but the music and theatrical power of Shakespeare's words.

Introduction to Voice and Speech (118497)

Erika Bailey

2024 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 15

Whether one is performing in a play, pitching an idea, presenting research, or leading a group, the ability to use one's voice effectively is vital to the success of the performance. A resonant and varied voice enriches communication in any medium. Using several major techniques of voice training from the field of acting, students will learn the possibilities, nuances, and power of the human voice. We will explore how different modes of breathing and resonance impact effective communication. We will also explore voice and identity through discussion of regionalisms, gender and voice, and code shifting. Preference is given to Theater, Dance, and Media concentrators, but students with no previous voice or theater experience are welcome in this class.

Course Notes:

Admission to the course will be based on a short interviews. Please visit the class Canvas site for more details.

Voice, Text, and the Performer (205358)

Erika Bailey

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

For students interested in working in theater, film, and television, this course applies advanced voice and speech skills to plays written in heightened text. Building on foundational skills of breath release, resonance, and articulation, this class will introduce support for vocal extremes, and integrate breath, voice, imagination and language. We will investigate poetry and monologues by Clare Barron, Langston Hughes, Dylan Thomas, William Shakespeare, and other dramatists writing in verse and poetry. With flexible, responsive, and powerful voices, performers can bring complex texts to vivid life.

Course Notes:

TDM 119 or the equivalent is a suggested pre-requisite.
Enrollment will be determined by short interviews during pre-term registration. Please visit the class Canvas site for more details.

Theater, Dance & Media 120

What's so Funny?: Introduction to Improvisational Comedy (160654)

Remo Airaldi

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Comedy has often been thought of as the poor relation to Drama but, as Lenny Bruce said, "the only honest art form is comedy because you can't fake it." We will attempt to take comedy seriously by engaging in committed, creative and collaborative "play" that will tap into each student's personal, individual sense of humor. The class will focus on the basics of improvisation: group games, narrative skills, object work, offers, spontaneity, agreement, using the space around you, building on-stage relationships and, eventually, scene work.

Course Notes:

Enrollment to be determined by audition/interview during Course

Preview Period or the first class meeting. Please check Canvas course page for more info.

Theater, Dance & Media 130R

Directing (123080)

Marcus Stern

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This is a directing class for students with no directing or art class experience, as well as students who have a fair amount of directing experience and are interested in a career of directing in theater, or for television and film. It's a class about the enjoyable process of creating and presenting stories. The emphasis is on telling stories that the student has some kind of personal connection to. The course helps students define for themselves what story they're trying to tell, helps them to figure out what the important story points are, and how to give the story some impact. Over the course of the semester each student directs 5 very short pieces (1-3 minutes) and then 3 longer pieces (5-8 minutes). Each student will make at least one of the five very short pieces a recorded and edited video and one a live theater event. After that, for the rest of the semester, students can either choose to do all video work, or all live work, or switch back and forth. Students may direct any type of material that is of interest to them, including writing their own stories if they'd like (so the stories more closely reflect their lives). The students create these stories outside of class (shooting and editing video or rehearsing with friends to create a story performed live). We watch all the stories together, and then offer our thoughts based on what kind of story the student is trying to tell. No previous live theater or video experience is needed for this course. Students will use free video editing software to create their video work, and we provide links that help each student get a quick handle on basic video editing techniques. While we'll look at some ways that the camera and editing are used in the storytelling, this is not a technical filmmaking class – no instructions on how to use a camera is offered. Most students use their phones to record their videos. While a safe and warm environment, the class does require a great deal of work outside of class. Students should expect to spend 4-6 hours per week on their story making. Students' grades are only based on their individual effort and not in comparison to the work of other students in the class.

Theater, Dance & Media 131

Directing Lab (126812)

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Directing Lab is open to students of all levels and ranges of directing experience (including zero experience.) The class is designed for anyone interested in expanding and exploding their understanding of theater and theater-making. The only pre-requisite is curiosity.

As a laboratory, this course aims to create a space for hypothesis, experimentation, and practice. Over the course of American theater history thus far, who have been the great experimenters? Which directors have broken the rules and re-defined the game? Does innovation come from a single auteur, a tightly woven ensemble, a well-funded institution, or a band of rogue outsiders? This class will tackle these and other questions, exploring artists and ensembles of the past and then directly applying those lessons to students' own projects.

You will be asked to identify your own burning artistic questions. As the semester progresses, you will engage in these questions by reading history and creating and directing your own work, inspired by the artists and productions studied. At the end of the term, students will leave with a bank of historical knowledge, a set of practical directing tools, and a sense of their own vision and how to translate that vision into a compelling work of theater magic.

Theater, Dance & Media 135B

Puppet Theater (218607)

Kate Brehm

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Contemporary puppet theater approaches design and devising from a wholistic perspective. All objects onstage contribute to a total performing world. Characters, scenery, and even the stage itself may all be manipulated by hand to become animate, performing beings. Through the lens of puppetry, students are invited to consider how all theater might use visual design elements as active storytellers.

Students are guided through the creation and performance of two puppet shows, each in a different style. The first project examines the possibilities of toy theater. Originally a nineteenth century European tradition, it includes a focus on the design of the theater itself (in miniature), and historically, all scenery and characters are flat. In contemporary toy theater, size and dimensionality vary, but a focus on performing scenery and stage effects is retained. The second project explores shadow puppetry. With ancient Asian roots, shadow puppetry exists across the world today in a multitude of forms. This class utilizes a combination of overhead projectors, paper cut outs, printed images, live drawing, mobile projection screens, and handheld light sources.

Projects are informed by examples of contemporary puppet theater as well as theories of art and visual perception, theater scenography, cinema and comics. Classes are divided into varied length segments of discussion, puppet theater construction, play and performance. The class explores devising theater with music, text, or image as core inspiration and alternative models of story structure. Projects investigate different modes of collaboration and varied approaches to the performing puppeteer.

After completing this course students will have gained valuable skills for devising theater and performance without a script, incorporating the storytelling capacity of inanimate objects and scenery, utilizing the metaphors inherent to the actor-puppeteer character, and generating strong visual imagery that truly performs onstage.

Koteba: Bamana Performative Traditions (217582)

Jeffrey Page

2025 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

32

The origin of blues music—and therefore gospel, jazz, and hip-hop—has been traced directly to Mali, West Africa. Within Malian ideology, dance is a culture and there is no separation between dance and theatrical practice. Koteba is a masquerade performance tradition that utilizes the theatrical elements of satire to comment on and confront civic injustices within the Bamana ethnic society. Koteba is a word that means "big snail" in the Bamana language, and like the snail, it carries the ideologies and cosmologies of the Bamana people on its back. There are nearly 20 rhythm and movement stylings situated within Koteba. In a multiday festival, these dances are traditionally performed in succession, and often executed with the dancers forming concentric circles, which gives this theater tradition its snail-like name. Traces of this masquerade tradition can be found throughout the Caribbean and the United States in the form of Carnival and Mardi Gras.

This class will focus on unpacking four of the dance and rhythm stylings over the course of 12 weeks: (1) Forokotoba, (2) Tansole, and (3) Bara/Baradong. The traditions of Noh drama, Sanskrit theater, and Greek tragedy have informed the development of American dance and theatrical forms, and similarly, a deep investigation of Koteba masquerade performance traditions will offer students of theater and dance informative tools as theorists, practitioners and historians.

Directorial Concepts and Set Design of the 20th and 21st Centuries (110319)

Julia Smeliansky

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

What are the similarities between Las Vegas pop diva concert design and performances at the Theater of Dionysus in 5th Century BCE Athens? How do theater architecture and design reflect changes in society? What is the process of designing an opera or a musical? This course will introduce students to some of the most influential 20th and 21st-century directors, designers, and performance artists. We will explore a range of artistic movements that cross-pollinated the visual arts and theater over the past century, and trace the artistic heritage of current theatrical experiments to their avant-garde roots. Examining how

meaning in the theater is derived not only from text but also from spatial composition, light, and overall design concept, we will study a variety of approaches to storytelling in theater, dance, and opera. Working with primary sources in the Harvard Theatre Collection, students will develop and present short creative projects based on a wide range of theatrical texts. Students will also meet with guest artists to engage in a dialogue about contemporary design practices.

Designing with Light (220841)

Jeff Adelberg

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This hands-on course serves as a foundation in the art and craft of creative lighting design. Students will explore the medium of light itself and its possibilities in storytelling and world-creation. Introductory exercises in perception and psychology will lead to intensive experimentation with various sources of light to create 2D images or 3D environments. Composition, form, color, time and movement will be explored, as well as the basics of lighting technology. Lighting Design has numerous applications and dimensions, and developing a degree of mastery with light as a medium is useful across many fields. While theatrical lighting equipment will be used in the course, and there will be some emphasis on lighting design for performance, our focus will not be exclusively centered around design for the stage.

Course Notes:

This course will be taught by Jeff Adelberg, Lecturer in Lighting Design.

Stage Lighting Studio (221682)

Jeff Adelberg

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Intended as a follow-up to TDM 154 Designing With Light, this course will teach a standardized process for creating and executing a lighting design for live performance, from concept through completion, with an emphasis on artistic and technical collaboration. Fixture photometrics and drafting section analysis will provide a framework for light plot construction. Students will learn to use industry-standard Vectorworks and Lightwright software to generate design documents. Other topics may include theatrical venues and

their interconnected systems, lighting system design, design considerations for unusual spaces, intermediate programming on the ETC EOS console family, and the role of the design assistant. Visits to theatrical venues and productions outside of Harvard will be required.

Course Notes:

While prior enrollment of Designing with Light (TDM 154) is not required in order to take this class, it is encouraged. If you have not taken that course, please contact the instructor and share any relevant interest or experience.

Theater, Dance & Media 158A

Introduction to Costume Design (214575)

Dede Ayite

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

An Introduction to Costume Design that embraces a global view. All levels are welcome to take this course. This class explores the design of clothing for the stage. How it can amplify, interpret and extend the message of the production to the viewer through delight, astonishment and provocation. Together we will explore how costume design can even assist in changing a cultural narrative.

The instructor will first demonstrate the design process that a costume designer undertakes, from start to finish. Students will learn how to read and research existing dramatic text as a designer and how to manifest their vision through visual terms acting as director and designer. After carefully following the steps of a professional costume designer preparing for theatrical work, students in the class undertake an individual design project, from start to finish, under the supervision of the instructor.

Students with prior experience will be challenged to further their character and conceptual development using critical thought, color, silhouettes, proportions and fabric.

James Stanley

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

How can vinyl records, legal transcripts, classic movies, home recordings, 19th century burlesque routines,

or old photographs become the raw materials for some of today's most compelling theater? And how do these works ask audiences to reconsider our inheritance of the past, creating a dialogue between the past and the present? This course focuses on theater-makers and processes of production that turn objects, archives and cultural data from the past into vibrant forms of contemporary performance. In the first half of the course, we will explore works by Tina Satter, Alison S. M. Kobayashi, Normandy Raven Sherwood, and Object Collection (among others), meet with these artists to discuss their processes, and take a deep dive into our own archives at the Harvard Libraries. Moving from theory to practice, we will then devise our own solo and collaborative works based on objects and artifacts of our choosing. This course is for writers, directors, designers and performers willing to work across disciplines.

Playwriting: Ritual Practice and Curious Worlds (207819)

Phillip Howze

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

A play is a new world in and of itself. What sorts of strange, curious worlds are theater makers crafting today? What approaches are they taking to create these worlds?

In this new playwriting course we will explore both text and non-texts, the wild (as well as the conventional) to discover what drives contemporary plays, devised works, and performance today.

We will discuss the practices employed by various playwrights and directors—particularly women and artists of color—and try our own hand at some of these approaches. In addition, we will see live performances in realtime; engage special guest/visiting artists; collaborate with fellow classmates; and expand our curiosities.

Most importantly, we will write. This is an exploratory writing workshop with a focus on generating new material. By the end of the semester, you will have created a portfolio of new works, ideas, processes and rituals.

Singer + Song = Story (215988)

Stew Stewart

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

13

In *Singer + Song = Story* I am inviting you to experiment with a fresh approach to musical theater making which, first and foremost, seeks to cast off the debilitating self-criticism that takes the fun out of creating.

Singer/Song/Story casts aside the pressures of proficiency, perfection and "how it's usually done", as it welcomes you to carve creative paths to destinations that are all your own.

My course injects personally-political, free-spirited, DIY, Punk practices into the process of musical theater making, with an aim to shake up the show-tune.

You will learn how to build "mini-musicals" using a technique called "autobiographical myth-making" and will be encouraged, not only to tell your own stories, but to "autobiographically mythologize" your personal narratives into Tales worthy of your Truths.

Auto-Bio-Myth-Making seeks to sidestep the potentially cringey pitfalls of confessional narratives, while encouraging playfulness, idiosyncrasy, whimsy and wrongness.

Auto-Bio-Myth-Making invites you to take control of your story, rather than having your story take control of you.

If you have a desire to explore the fire of self-discovery, via the creation of song and dialogue, you should take this class.

Auto-Bio-Myth-Making has been the process behind all of my music-theater pieces, including the Tony Award winning *Passing Strange* for which I won Best Book of a Musical.

Course Notes:

No musical experience is required for this course, however, even if you've never written a song or scene before, you will have written several by the end of this class.

Performing Outside the Theater (221689)

Tania Bruguera

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Artists can de-naturalize things that were always there. They can transform a modest action into an unforgettable experience. Discreet performances can liberate forgotten feelings. But, are we trained to "see" outside the theater? Could a bench on a park be the perfect place to experience a dramatic plot? Would your kitchen table be the best set for a scene?

In this class, we are going to experience the displacement of theatrical constructions. We are taking the "frame" of theater and situate it in diverse environments and situations (from your living room to the street to a phone call to a post on social media). We'll experiment with duration (from a minute performance to a semester long performance) to understand the potential of our scripts.

Theater, Dance & Media 181B

Street Dance Activism: Co-choreographic Praxis as Activism (217409)

Shamell Bell

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

In this participatory hybrid course, we explore the creation and implementation of [Street Dance Activism](#) as a Co-choreographic somatic^[1] healing modality, and form of spiritual transcendence, through participating in the [Global Dance Meditation for Black Liberation](#) and deeply engaging with [The Ritual of Breath is the Rite to Resist](#)^[2]. Street Dance Activism's [28 Day Global Dance Meditation](#) features embodied meditation & movement sessions led by Black, Indigenous, People of Color + Queer guides from multiple wisdom traditions and healing practices. It takes 28 days to change a habit, so imagine if we took 28 days to focus on our liberation. Liberation not only as a single entity, but as a global, collective consciousness. Black liberation is your liberation, and your liberation is Black liberation.

This interdisciplinary course uses somatic practices to engage with the historical context and legacy of public rituals of extreme violence against Black people as both sites of anti-Black state, and non-state sanctioned disciplinary projects, as well as time-spaces of radical resistance. At the center of these forms of violence are the control of *breath* as life force, and as a sign of freedom. We discuss the past, present, and future all occurring in the now as we examine the murder of George Floyd in May 2020 as an officer pressed his knee against Floyd's neck for nearly eight minutes as Floyd repeatedly lamented that he could not *breathe*.

We explore theories of ritual and performance to understand how artists and communities come together as collectives to contextualize and re-present impossible terrors. Artists and grassroots organizers use aesthetics and collective action to transform the horror of being subject to violence at any moment into rituals of *breath* and potential social transformation. This course then teaches students theories of ritual

and performance as ways that communities have historically engaged and confronted histories of anti-Black violence in order to conceive of new future possibilities to embody liberation in the face of disciplinary actions meant to contain and choke Black people. It is my intent for us to become guides to bring social activists into the classroom and the pedagogy out into the streets.

Black Arts Movement to #blacklivesmatter (217585)

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course situates the "Black Arts Movement"(1965-1975) in its historical context, but also places our explorations in this present moment where artists continue to light the torch of art reflecting the times, as our ancestor Nina Simone so eloquently asserts as "our duty". Scholar Larry Neal writes in his seminal piece:

" The Black Arts Movement is radically opposed to any concept of the artist that alienates him from his community. This movement is the aesthetic and spiritual sister of the Black Power concept. As such, it envisions an art that speaks directly to the needs and aspirations of Black America."

As this course begins during the celebration of Dr. Martin Luther King Jr.'s birthday, let's place MLK in the context of the material conditions in Black communities during the Black Arts Movement, which Larry Neal [coined](#) as the "aesthetic and spiritual sister of Black Power." This act is often seen as the starting point of the Black Arts Movement. In a Time article, ["A Riot Started in Newark 50 Years Ago. It Shouldn't Have Been a Surprise,"](#) Arica L. Coleman writes, "Martin Luther King Jr. aptly predicted just such a riot in a speech titled ["The Other America,"](#) which he delivered at Stanford University on April 14, 1967, three months prior to the unrest. "All of our cities are potentially powder kegs," he said. While King maintained his commitment to nonviolent civil disobedience, he also [recognized](#) the psychology of oppression.

In this course, we will explore the legacy of the Black Arts Movement and its manifestations in today's Black liberation movement. In addition to required and suggested readings, we will supplement course lectures with selected films and musical selections. This course takes an ethnographic and interdisciplinary approach to mapping the historical, geographical, and socio-political trajectory of the Black Arts Movement to #blacklivesmatter by highlighting the motivations, strategies, and experiences of community organizers on the ground. The narratives of grassroots organizers from groups such as Justice 4 Trayvon Martin and those organizing for #blacklivesmatter across the United States, will provide nuance to our understanding of an international movement that we now know as Black Lives Matter. Students will be encouraged to explore their own foundations and personal stories connecting them to the Black liberation struggle past, present, and future. The course culminates with a "Community Gathering" that will feature short student documentaries of their group projects. The gathering will include a collaboration with Dartmouth Students, activists on the ground, and community members to continue to move the work of the people on the ground forward, and the work of the students outside of the classroom, and into the community.

Collective Freedom Dreaming: Engaged Pedagogy and Radical Love as Praxis (221684)

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

"Collective Freedom Dreaming: Engaged Pedagogy and Radical Love as Praxis," inspired by Historian Robin DG Kelley's *"Freedom Dreams: The Black Radical Imagination,"* and Black feminist scholar bell hooks' *"Teaching to Transgress: Education as the Practice of Freedom"* and *"All About Love: New Visions"* activates students in a multimedia, project-based course exploring the practice of "engaged pedagogy" based on the classroom and community-based workshops I co-choreograph with my students and the Street Dance Activism collective. Kelley advises, "without new visions, we don't know what to build, only what to knock down. We not only end up confused, rudderless, and cynical, but we forget that making a revolution is not a series of clever maneuvers and tactics, but a process that can and must transform us." Throughout this semester-long exploration, we will build with the Harvard community, extending to local community members, where we will then document our experience for those that are interested in contributing to the culminating digital project showcased during our Community Gathering.

As bell hooks articulates in "Teaching to Transgress," engaged pedagogy is the practice of cultivating a classroom that shifts the professor-student hierarchy, which assumes the professor is the ultimate expert who bestows knowledge upon their students. Engaged pedagogy instead insists that both students and

professor can learn from each other, acknowledging the lived experiences and embodied knowledge every person carries. Building on the idea of engaged pedagogy, Collective Freedom Dreaming demonstrates the actual practice of engaged pedagogy by examining how my students and I create a "healthy classroom" and build community together, which I will reference as "our classroom" instead of "my classroom" because the ownership implied by "my classroom" contradicts the inherent communalism of engaged pedagogy. Our engaged pedagogy pushes students and community members to imagine the world they want to live in, and become the shift needed to create this world. In addition to honing their academic skills by classroom assignments, I encourage students to break the confines of the ivory tower and grow as community organizers by producing individual and group projects for professional advancement and for the community, putting theory into action mainly through community organizing and creative projects. In doing so, students actively construct their imagined new world grounded in their academic studies, which provides the theoretical framework to analyze the world. With inspiration from the vocabulary of Kelley, and their "collective freedom dreams," through artistic expression, meditation, and collective action, we lead community members in a process of alchemy, transcendence and transformation that shifts us toward a new vision of liberation. Finally, this course, and digital project, will honor the legacy of bell hooks as we choose to love and grow together in a process that will transform us by embodying our [collective] freedom dreams.

Instructor Permissions: Instructor

Enrollment Cap:

12

Socially Engaged Art is a practice coming from performance, installation, theater, and social theory. In it, one can find an environment where different interests coincide, from art to activism, from public policy to urban planning, from political agendas to healing activities, from institutional critique to community art, from identity politics to social architecture. While the community working on this practice has agreed over the years on several ethical guidelines, each case needs to be analyzed in relationship with the cultural and political context where it is developed. Its creation is shaped by its reception.

Does Socially Engaged Art propose new systems of cooperation? The generation of an alternative social production? A scored collective performance? Is it created by working about, with or for a specific constituency? Are audiences transformed into participants, members, or active citizens? Does this practice seek to change reality or show it? What is the right scale for such a project? Are these projects taken from or given to the communities? How are they started and how do they come to an end? What is their appropriate duration? Can a project mutate, be replicated, or appropriated by others?

This genre not only puts into question several assertions overlooked in the conventional practice of Art but also puts the role of the artist into question. What is assumed as proprietary in art, theater and social science in Socially Engaged Art is owned by all. Often, the artist's presence, even when it may create the first intervention, weakens over time in a direct relationship with the growth of the new community that the project enhances. Coauthored aesthetic experiences help us rethink the idea of collective creativity and what is the pertinence of the performative. It is also conceptually important to consider what channels are going to be built to collaborate with institutions. While Socially Engaged Art is created in the public sphere it is not necessarily Public Art as monuments and cultural entertainment are. The allies in each project are

not defined by automatic assumptions but by building mutual trust whether at an institutional or personal level.

Course Notes:

Students will meet once a week for visiting artist presentations and to discuss readings. The second half of the semester will be focused on developing a project that engages with the theories discussed in the seminar and any of the social spaces that we as faculty, student body, institution, and community engage with.

In Junior Tutorial, students develop key research and writing skills necessary to write a junior research paper. We will read a range of texts that engage diverse methods in the fields of women's, gender, and sexuality studies. Together, we will learn about methods and questions that form feminist engagements with archival research, literary and cultural studies, ethnography, quantitative and survey-based social science, and the sciences. Students will learn and engage with key methods across the humanities and social sciences through readings and engage practice in the classroom. Students will meet in small groups with their designated tutor who will guide them through research and writing on the particular topic of their interest. Over the course the semester, students will develop a research project in a focused area based in a clear and concise research question. Students will develop research projects, produce an annotated bibliography with primary and secondary sources, and will produce a final polished research paper by the end of the semester. This course is required of all Honors concentrators in WGS in their junior year.

Debates about women's and sexual rights define almost every public debate today—from reproductive justice to healthcare for queer, trans, and gender nonconforming people, public protest, war and state violence, environmental crisis, economic development, sexual harassment, censorship, and human rights. This course critically engages the possibilities and limits of liberation through the global history of feminist ideas of freedom. It traces the complicated relationship between colonialism, slavery, racism, and feminist liberatory projects in case studies from America, Europe, Asia, Africa, and the Middle East from the nineteenth century until today. Over the course of the semester, we will explore key questions: How has feminist thought shaped ideas of liberation in our contemporary world? What is the relationship between empire and feminism? And what is the place of decolonization, antiracism, and decarceration in global feminist thought? We will immerse ourselves in rare materials on global, Third World, and women of color feminisms through the close reading of the archives and writings of women and LGBTQ communities from around the world. Over the course of the semester, you will build a toolkit of critical thinking and writing skills by engaging diverse primary sources, ranging from political texts, short stories, posters, movies, to human rights reports. You will come away from the course having a deeper understanding of ideas of protest, justice, and liberation that animate our past, present, and future.

Dangerous Words: Feminist Debates on Speech, Harm, and Representation (218527)

Clarisse Wells

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

What does it mean to strike a balance between the democratic foundations of freedom of speech and rights of marginalized peoples to resist the subordinating words of the privileged? This course examines key debates in feminism, speech, and representation. Topics include pornography, cancel culture, trigger warnings, hate speech, slurs, and cultural appropriation. We will begin by orienting ourselves to the legal frameworks in the North America and Europe context around freedom of speech before turning to intersectional feminist, philosophical and critical theories analyzing the impacts of linguistic violence on our democratic ideals and political discourse. Our goal is to use an interdisciplinary feminist lens to unpack the civic foundations of our democracy and interrogate the ethical obligations we have to resist the subordinating normative forces producing inequality in our society. No philosophical or legal background is assumed prior to enrollment.

Women, Gender & Sexuality 1210FT

Black Feminist Theory (142819)

Imani Perry

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course traces the development of Black feminist theory and thought, from 19th-century thinkers such as Anna Julia Cooper, Maria Stewart, Ida B. Wells through 20th-century movements including identity politics, standpoint theory, matrices of domination, intersectionality, as well as Marxian and liberation feminism. Students will be expected to develop critical fluency with the movements and concepts covered and apply them to social, cultural, and political issues.

Course Notes:

Synchronous attendance is required; class meetings will not be recorded.

This course fulfills the theory requirement for the undergraduate concentration in Studies of Women, Gender, and Sexuality.

Women, Gender & Sexuality 1216

Women's Voices in Asian and Asian American Literature (220298)

Jung Choi

2025 Spring (4 Credits)

Schedule:

F 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course introduces students to the writings of both canonical and lesser-known Asian and Asian American women writers. The course especially examines the works by Chinese/ Chinese American, Japanese/ Japanese American, Korean/ Korean American women writers. Moving from the pre-modern to contemporary era, the course will explore a range of women's voices and experiences as reflected through poetry, fiction, diaries, and epistles. Authors will include Murasaki Shikibu, Ban Zhao, Ono no Komachi, Lady Hyegyōng, Qui Jin, Higuchi Ichiyo, Kim Wŏn-ju, Han Kang, Yoshimoto Banana, Maxine Hong Kingston, Julie Otsuka, and Min Jin Lee. Topics will include family, marriage, loyalty, motherhood, women's rights, sexual violence, same- sex desire, censorship, and gender and race politics.

Psychology of the Gendered Body (205489)

Nicole Noll

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

14

Our perceptions of gender—our own and others'— shape our embodied experiences and behaviors. This course examines the embodiment of gender via the lens of psychological science. We will begin by exploring recent research related to gender and the body, and then study the underlying psychological mechanisms that influence our self-perceptions about gender. Our disciplinary foundation in psychological science will allow us to complicate current understandings of gender and embodiment by considering factors such as sex, race, sexuality, experience, intention, and awareness.

Course Notes:

Synchronous attendance required. Class meetings will not be recorded.

Leaning In, Hooking Up: Visions of Feminism and Femininity in the 21st Century (159887)

Phyllis Thompson

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

60

What does it mean to "do" feminism, or to "be" a feminist in the 21st-century United States? What can we make of the dominant social expectations for a woman's life? This course explores contemporary ideals of feminine success, including their physical, familial, professional, and political manifestations. We will engage with highly-contested topics—including sexual violence and Title 9; work-life balance; the imperatives of self-care and presentation; and new models for sexuality, reproduction, family, motherhood, and domestic life—using the tools of theory and cultural studies to interrogate their framing within popular discourse. Throughout, we will critique ideological formations of gender, particularly as bounded by race, class, and sexuality.

Course Notes:

Weekly lecture plus an additional one hour section to be arranged.

Synchronous attendance required. Class meetings will not be recorded.

A Voice of One's Own: Creative Writing in Women, Gender, and Sexuality (108569)

Linda Schlossberg

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

How does one balance the demands of "politics" with the subtleties of "artistry?" In this course, we'll write and analyze short stories, paying close attention to key writing concepts such as characterization, voice, point of view, dialogue, and setting, while also investigating thematic issues related to women, gender, and sexuality studies. In addition, we'll read secondary readings by authors such as Audre Lorde, Dorothy Allison, and Adrienne Rich that illuminate the ways in which issues of power, agency, and voice have emerged as key themes in feminist writing. Frequent writing assignments, including written evaluations of

peers' stories.

Course Notes:

Synchronous attendance required. Class meetings will not be recorded.

Queer Lives in the Global South (222920)

Moises Lino e Silva

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course approaches Queer politics, histories, and ethnographies from a Global South perspective. We will learn about queer lives from multiple critical lenses, introducing students to Queer lived experiences and activism in Latin American, Caribbean, African, and South Asian contexts. As we consider how issues of gender and sexuality are inseparable from post/neo-colonial power relations (in terms of racism, immigration, and imperialism), we will also interrogate what the Global North can learn from LGBTQ experiences in the Global South.

Women, Gender & Sexuality 1283 Section: 1

Love's Labors Found: Uncovering Histories of Emotional Labor (207804)

Caroline Light

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

How do love, care, and desire influence the value of work, and why is emotional labor – which is vital to child or elder care, domestic labor, nursing, teaching, and sex work – often considered to be something other than work? How and why do the racial and gender identities of workers affect the economic, social, and emotional value of their labor? How do political and social arrangements of labor help produce and reinforce racial categories while solidifying the boundaries separating masculinity and femininity? Through a mix of primary and secondary sources, this seminar explores histories of emotional labor and the power structures that give meaning to often taken-for-granted categories of work. These sometimes hidden histories are key to untangling the gender, sexual, and racial implications of the "intimate industries" that populate today's transnational labor economies.

Course Notes:

This course, when taken for a letter grade, counts as a portal course for the secondary field in Ethnicity, Migration, Rights (EMR).

Synchronous attendance required. Class meetings will not be recorded.

Trans Genres (222921)

C. Riley Snorton

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar focuses on writing and cultural productions that reimagine and intervene in the classification of gender. Students will engage with genre theory, as they read across works of fiction, poetry, memoir, and other forms of trans expressivity. This course poses questions about the contours and limits of classification with regards to gender, literature, and politics.

Queer Ethnographies (222922)

Moises Lino e Silva

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course starts with the foundations of ethnographic research, before exploring ethnographic contributions to the understanding of queer forms of life. We will uncover the ethnographic basis for what later became known as "queer theory" and LGBTQ studies, while interrogating the impacts of "queer theory" on contemporary ethnographic practice. Our discussions will focus on ethnographic theory and methods in relation to ethics, asymmetries of power, and participation; scientificism and humanism; the relation between description and prescription; positionality and auto-ethnography. In doing so, we will engage with theoretical/methodological texts, while also reading full-length queer ethnographies. Students will engage in practical ethnographic exercises that will help scaffold their final research projects.

Bodies of Transformation (222923)

C. Riley Snorton

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Engaging trans studies, disability studies, histories of science, ecocriticism, posthumanism, queer and postcolonial theory, this class contends with how bodies and bodies of knowledge change over time. Bodies of Transformation takes a historiographic approach to the social, political, and cultural underpinnings of corporeal meaning, practice and performance in the 19th and 20th centuries. Animating questions include: what is the corporeal real? how does bodily transformation map the complex relationships between coercion and choice? how might one approach nonhuman interiority?

Course Notes:

Open to undergraduates who have taken WOMGEN 1210 or an equivalent theory course.

Gender and Technology, Gender as Technology (222928)

Kendra Albert

2025 Spring (4 Credits)

Schedule:

M 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

How does gender interact with technology? How does technology shape our embodiment? This course draws on a variety of disciplinary sources, including transgender studies, science and technology studies, human-computer interaction, and legal theory, to explore how technologies are gendered and shape gender. Potential topics include TSA body scanners, facial recognition and facial surveillance, microwaves and other home appliances, plastic surgery, and contemporary algorithmic decision-making tools, including "AI." Students will be expected to engage rigorously with questions of how technologies produce particular visions of behavior, including through a final research project that critiques a particular technology with which they interact. No technical background is required, but prior coursework in WGS is strongly recommended.

Sarah Richardson

2024 Fall (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar supports graduate students in becoming feminist scholars. The focus is twofold: research methodology and professional development. Readings, discussions, and assignments are designed to help students identify research strategies suited to the questions they wish to pursue in their dissertation research and develop a scholarly, teaching, and public intellectual profile in WGS studies. Topics and central themes include: feminist epistemologies; qualitative, quantitative, and humanistic research methods; research ethics; disciplinarity and interdisciplinarity; feminist scholarship in policy and public discourse; critical perspectives on the institutionalization of WGS studies; feminist pedagogy; and, journals and publishing.

Course Notes:

Open to advanced undergraduates and to graduate students from all schools and disciplines.

Is required for the WGS graduate secondary field.

Synchronous attendance is required. This course will not be recorded.
