Auto is undergoing a technological revolution with the shift to electric vehicles (EVs) and the development of autonomous vehicles. Decarbonizing private transportation is essential to achieving climate goals, with transportation overall representing 28% of U.S. greenhouse gas emissions. EV sales are now growing rapidly: in 2022, battery electric vehicles (EVs) represented about 22% of new vehicle sales in China, 15% in the EU and 5% in the U.S. Forecasts suggest EVs will represent close to 50% of new vehicle sales in the U. S. by 2030 and higher in China and Europe. The EV transition has far-reaching repercussions from emissions to macroeconomic impacts to national security and poses substantial challenges in the rapid development of new supply chains. In this seminar, we will study the intersection of EVs, the energy transition, environmental science, policy, and economics. The current pace of change is dramatic but has roots going back 50 years to early U.S. environmental regulation and efforts to reduce dependency on Middle East oil; auto has been a critical element in trade policy back to the 1994 North American Free Trade Agreement (NAFTA). Policy is pivotal today, in the U.S. and overseas, in terms of determining the pace of EV adoption, how supply chains develop, and how fast they evolve. The Inflation Reduction Act of 2022 (IRA) enables faster EV adoption through tax credits for EV production and purchases. Technological progress, especially in battery technology, will be critical in the path forward. We will analyze a range of EV issues including those highlighted above as well as charging, health impacts, equity, and international market differences.

The Law and Policy of Climate Change: Influencing Decision Makers (208113)

Aladdine Joroff

2024 Fall (4 Credits)

Schedule:

W 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Empirical data demonstrate that the climate is changing and that these changes could produce increasingly serious consequences over the course of this century. Governments and private actors around the world are strategizing, debating, lobbying, implementing, and defending mechanisms to both mitigate and adapt to the impacts of climate change. This course will explore (i) the legal framework in which climate change action occurs in the United States, (ii) policy tools available to regulators, (iii) impacts on regulated entities and individuals and (iv) opportunities for private stakeholders to participate in and influence climate change decisions.

Addressing the Global Climate Crisis: Challenges for Both Developed and Developing Economies (123858)

Michael McElroy

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

The seminar will discuss the nature of the climate challenge and the implications it poses for different communities and different parts of the world. Mitigating negative impacts of human induced climate change will require an urgent transition from the current global fossil fuel-based energy economy to one based on renewable alternatives. Possibilities include wind, solar, hydro, biomass and potentially nuclear. The seminar will review options with specific attention to differences in the challenges faced by developed economies such as the US and Europe and large developing economies such as China, India and parts of Africa. Can we chart a feasible path to net zero global carbon emissions by 2050?

Climate Responsibility and Climate Action (220481)

Peter Frumhoff

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Who bears responsibility for climate change? Confronting this question is central to establishing equitable policies to reduce greenhouse gas emissions and limit the adverse impacts of now unavoidable climate disruption. International climate policy frameworks focus on the "common but differentiated responsibilities" of nations. But climate responsibilities also extend to non-state actors, including individuals, utilities and fossil-fuel companies at the base of the carbon supply chain whose responsibilities are increasingly the focus of attention by civil society, policymakers and the courts. This course examines the nature of climate responsibility from ethical, historical, scientific and policy perspectives and the efficacy of approaches to accelerate responsible climate action by both state and non-state actors.

The Technology, Economics, and Public Policy of Renewable Energy (127572)

George Baker

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Energy is the lifeblood of economic activity, indeed of human society. However, the planet's stores of easily accessed fossil fuels are limited, and the climatological cost of continuing to rely on fossil fuels is high. This course examines the long run and short run prospects for renewable energy. We start by understanding the technology of various renewables, including hydro, solar, wind, biomass, etc. We then examine the economics of these technologies, and how policies (subsidies, taxes, regulations) affect their viability. Special attention will be paid to the interaction of technology, economics, and public policy.

Global Wetlands: Boundary-spanning ecosystems for science, social justice, and public policy (222801)

Jaclyn Matthes

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Wetlands are critical, boundary-spanning ecosystems. Wetlands can sequester carbon from the atmosphere on millennial timescales, host extreme amounts of biodiversity, act as crucial components of climate change resilience and adaptation policies, and serve as sites of social justice and cultural heritage. Yet at a global scale, many wetlands have been lost or are imperiled from forces of global change. This course will examine global wetlands as systems at the intersection of natural and physical sciences, social values, and public policy, including examples where these intersections are in tension with each other.

Students in this seminar will develop skills in cross-disciplinary analysis of environmental outcomes through cases of ecosystem carbon sequestration and storage, wetland "reclamation" and restoration, and coastal planning for climate resilience.

US Environmental Policy and Policymaking: The Role of Congress, EPA, Stakeholders, and Courts (224030)

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to environmental policy in the US with a focus on the Environmental Protection Agency. We will explore how policy is made at the federal and state levels and consider the actors who design policies, including legislators, agencies, advocates, regulated companies, and the courts. Through specific case studies, we will evaluate the policy options for environmental regulations and consider ways to measure whether a policy is successful. We will focus on a variety of environmental regulations including air quality, climate change, and clean water policies. We will also hear from policymakers and stakeholders to understand the challenges and opportunities for progress.

Solid Waste In Developing Countries (220761)

Ken Thomas

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will examine major issues of solid waste (i.e. production, management, storage, treatment, disposal, infrastructure costs and financing, policy) in the developing world at various geographic locations and scales across municipal, industrial, electronic, biological/medical, and radioactive waste. Specific solid waste issues will be highlighted through in-depth case studies from Africa, Asia, Central and South America, Middle East, and Small Island Developing States. Analysis of the environmental commitment and regulations, appropriate technology availability and reliability, and key geopolitical factors that affect the amount of solid waste to be handled and how it is disposed of will be explored in all cases. To understand fundamentals in the developing world context, the course will compare how solid waste is managed in the developed and developing world at the local, state, and federal levels. Fundamentals cut across solid waste-related policies, transport, sources, collection, disposal/treatment, recycling, and material recovery. The course will emphasize – both quantitatively and qualitatively – the real-world challenges and systemic issues of the developing world that make solid waste planning and management complicated.

Global Warming Science 101 (214500)

Eli Tziperman

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the science of global warming/ climate change meant to assist students in understanding issues that often appear in the news and public debates. The course is meant for any student with basic math preparation, not assuming prior science courses. Topics include the greenhouse effect and the consequences of the rise of greenhouse gasses, including sea level rise, ocean acidification, heat waves, droughts, glacier melting, hurricanes, forest fires, and more. An ability to critically evaluate observations, predictions, and risks will be emphasized throughout. The students will be involved in in-class quantitative analysis of climate observations, feedbacks, and models via Python Jupyter notebooks that will be provided.

Course Notes:

This course fulfills the E-PSCI sub-discipline requirement of Atmosphere(s) and Oceans. E-PSCI 101 is also offered as ESE 101. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 101. AB students may enroll in either E-PSCI 101 or ESE 101 to meet their concentration requirements.

Recommended Prep:

Basic calculus and ordinary differential equations, as covered, for example, by Math 19a or Math 21b. A minimal previous exposure to programming in any language is assumed; Python will be introduced as a part of the course.

State-of-the-Art Harvard Climate Observatory and Associated Instrumentation (161263)

James Anderson

2025 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

ESE/EPS 166 engages the new Harvard Climate Observatory that will fundamentally herald a new era in the quantitative dissection of the physics controlling critical climate systems. The central objective of the New Climate Observatory is to address this problem by introducing, for the first time, the development of a new generation of advanced technology that takes explicit advantage of recent major advances in laser systems, lidars, radars, nanoelectronics, photonics and optical designs in combination with advanced solar powered stratospheric aeronautical design. Together these enable a combination of long duration solar powered observing systems, each targeted at the highest priority risk factors that threaten global societal stability. The resulting observations will, for the first time, provide the irrefutable evidence needed for quantitative forecasts of the dominant risk factors stemming from the global use of fossil fuels.

While satellites have for years dominated the federal climate programs, for the purpose of developing tested and trusted quantitative forecasts of risk, satellites engender significant disadvantages. In sharp contrast to satellite systems, the new Harvard Climate Observatory provides, for the first time, orders of magnitude improvement in spatial and temporal resolution observations. ESE/EPS 166 will focus explicitly on this new generation of climate observations and forecasting.

Course Notes:

ESE 166 is also offered as EPS 166. Students may not take both for credit.

Recommended Prep:

Math 1a, b; PS 11 or equivalent; PS 12a, b (or Physics 15a, b or AP 50a, b).

Requirements:

Prerequisite: Math 1b; Physical Sciences 1 or 11; and Physical Sciences 12a and 12b (or equivalents)

Human Environmental Data Science: Agriculture, Conflict, and Health (216460)

Peter Huybers

2024 Fall (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The purpose of this course is to develop understanding and guide student research of human and environmental systems. In class we will explore agriculture, conflict, and transmissible disease. Study of each topic will involve introduction data, mathematical models, and analysis techniques that build toward addressing a major question at each interface: Have agricultural systems been adapted to climate change? Has drought caused conflict? And does the environment influence the spread of COVID-19? These questions are diverse, but are addressed using common analytical frameworks. Analytical approaches include simple mathematical models of feedback systems, crop development, and population disease dynamics; frequentist statistical techniques including linear, multiple linear, and panel regression models; and Bayesian methods including empirical, full, and hierarchical approaches. You will be provided with sufficient data, example code, and context to come to your own informed conclusions regarding each of these questions. Furthermore, topics covered in class will provide a template for undertaking independent research projects in small teams. Research will either extend on topics presented in class or address other human-environmental questions. Historically, such student projects have sometimes led to senior theses or publication in professional journals.

Course Notes:

ESE 168 is also offered as E-PSCI 168. Students may not take both for credit. Undergraduate Engineering Students should enroll in ESE 168. Enrollment is by instructor permission.

Recommended Prep:

There are no specific prerequisites but a background in environmental, physical or life sciences; experience in coding or statistical analysis; and/or facility with differential equations is useful.

Seminar on Global Pollution Issues (109341)

Elsie Sunderland

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course provides a cross-disciplinary overview of environmental science and how research contributes to public policy and human health risk assessment through a case study of a global pollution issue. The case study for the Fall of 2023 will be eutrophication and mercury cycling. The course this year will focus on exposing students to a combination of field, lab and modeling techniques used in environmental sciences through an intensive study of nutrient cycling and mercury bioaccumulation on Cape Cod, MA. The class will include field visits, lab work, and interactive group research aimed at synthesizing research findings. Experience conducting multidisciplinary environmental research and data analysis will be provided. Course Activities: Lectures, discussions, presentations, field/lab research, environmental modeling.

Recommended Prep:

Two semesters of undergraduate chemistry including Physical Sciences 1 or Physical Sciences 11; Mathematics 1a & 1b. Knowledge of basic statistics is also helpful.

Requirements:

Prerequisite: Physical Sciences 1 or 11; and Math 1b

Native Americans in the 21st Century: Nation Building II (160752)

Eric Henson

2025 Spring (4 Credits)

Schedule:

F 0130 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

This community based research course focuses on some of the major issues Native American Indian tribes and nations face in the 21st century. It provides in-depth, hands-on exposure to native development issues, including: sovereignty, economic development, constitutional reform, leadership, health and social welfare, tribal finances, land and water rights, culture and language, religious freedom, and education. In particular, the course emphasizes problem definition, client relationships, and designing and completing a research project for a tribe, tribal department, or those active in Indian Country. The course is devoted primarily to preparation and presentation of a comprehensive research paper based on work with a tribal community. In addition to faculty presentations on topics such as field research methods and problem definition, students will make presentations on their work in progress and ultimate findings.

Power, Knowledge, Identity: Critical Approaches to Race and Ethnicity (208114)

Eleanor Craig

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

This is a "Theories and Methods" course meant to provide groundwork for relational and critical approaches to ethnic studies. It understands race and ethnicity as ongoingly formed in dynamic socio-cultural, economic, and political processes and as inextricable from gender, sexuality, class, and Indigeneity. Sylvia Wynter calls academics "grammarians of the social order" and argues that universities bear particular responsibility for the existence and power of racial concepts. We will analyze how race and ethnicity operate in academic disciplines to shape the questions we ask, the data we use to construct knowledge, and the genres of work that count as 'academic.' We will strive to understand why and how ethnic studies scholars engage, critique, and transform received methodologies. This course will provide frameworks for identifying power-based assumptions underlying academic norms and disciplinary formations, and equip students with rigorous tools for interdisciplinary inquiry.

Course Notes:

Weekly lectures and a one hour section to be arranged.

Synchronous attendance is expected. The class will not be recorded.

Coloniality, Race, Catastrophe (213559)

Mayra Rivera

2025 Spring (4 Credits)

Schedule:

W 0100 PM - 0300 PM

Instructor Permissions: Instructor**Enrollment Cap:**

18

This course explores the relationship between coloniality, race and ecology through the lens of "catastrophe." We will examine a variety of theoretical and literary sources that deploy or refute tropes of the "end of the world." We will study different uses of "catastrophe" to denounce the destruction of a particular world, re-imagine the past, or proclaim the impossibilities of the present. Through the readings and discussions, we will analyze the aims, effectiveness and limitations of talk of catastrophe in the contemporary context. Jointly offered as HDS 2432.

Quechua, Indigenous language revitalization and Global Indigeneity (220110)

Americo Mendoza-Mori

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Are Indigenous languages and cultures a thing of the past? Although Indigenous peoples make up less than 6% of the global population, they speak more than 4,000 of the world's approximately 6,700 languages. At the same time, the United Nations Permanent Forum on Indigenous Issues indicates that two Indigenous languages die every two months. Indigenous Language reclamation is crucial to the identity and resistance efforts of many communities: additionally, this process contributes to the preservation of Indigenous knowledge systems (IKS), a series of practices and wisdoms developed within Indigenous societies from across the world. Nowadays, IKS engage in global conversations on social and environmental justice, climate change, decolonization, human rights, education, etc.

This seminar will explore the state of Indigenous language and culture revitalization, official and Indigenous grassroots language planning and policy initiatives at global and local platforms, and the particular study of Quechua language. The language-learning component of this course aims to provide a more holistic and practical approach of the course's theme. Quechua is the most spoken Indigenous language family in the Americas, with almost 10 million speakers in Latin America and with important diasporic populations in the United States, Spain and Italy.

Community testimonies, guest speakers (scholars, language activists and teachers), multimedia content, interdisciplinary readings, and class debates will be part of the dynamics of this course. This is a speaking

seminar, open to all students, that will promote oral communication and critical thinking skills through discussions, projects, and prepared presentations. No previous knowledge of Quechua is required.

Techno-Orientalism: Asia, Technology, Futurity (222802)

Leslie Fernandez

2024 Fall (4 Credits)

Schedule:

R 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Contemporary understandings of Asia often cast it as a site of global futurity which relies on ambivalent understandings of Asians as both technologically adept and 'machines' themselves. This association of Asians with technology and futurity has been called techno-Orientalism, and this course serves as an introduction to discourses that observe and critique this phenomenon. We will consider techno-Orientalism's correspondences and departures from earlier Orientalism and look at its development from early 'Yellow Peril' narratives to the Cyberpunk era, to its contemporary formulations. We will consider how techno-Orientalism functions within both the US national context and within global relations. How does techno-Orientalism motivate understandings of Asian Americans as partial to STEM fields and industries which play into Model Minority myth? How do techno-Orientalist fears of Asian competition on the international level manifest in violence in the US such as in the recent spate of anti-Asian violence in the wake of COVID? Aside from theoretical readings, the course will include literature, film, and media that situate Asia as a site of global futurity, as well as texts from Asian American authors that subvert and complicate techno- Orientalist tropes and stereotypes.

The study of North America, at its root, is the study of Native America and African America. Typically, scholarship on the first Americans and Africans and their descendants are studied in isolation. Dominant trends in scholarship, journals, academic disciplines, and university departments tend to reinforce these boundaries. And yet, from the dawn of European colonization to the present day, the worlds of Black and Indigenous peoples have collided in ways that have shaped not only the history of each group, but also, European empires and the United States. The legacy of this past is one that lingers.

In this seminar we will develop an understanding of this vital relationship between peoples of Indigenous

Throughout centuries, Indigenous communities have developed knowledge systems and practices that allow them to foster meaningful connections with natural environments and the earth. By conveying tradition with innovation, Indigenous societies from across the world engage with pressing topics such as social and environmental justice, climate change, decolonization, human rights, education, etc. For instance, while Indigenous peoples make up only 6% of the world's total population, they protect 80% of the planet's biodiversity. This is a powerful statement of their resistance, resilience, and community-building capacity. This seminar will include fundamental principles, introductory frameworks on Indigenous knowledge systems (IKS), a series of practices and wisdoms developed within Indigenous societies from across the world. It will also explore case studies and examples of how Indigenous communities navigate and contribute to the issues of climate change, food security, social disparities, healthcare and spirituality, public policy, and human rights. Community testimonies, guest speakers, multimedia content, interdisciplinary readings, and class debates will be part of the dynamics of this course. This is a speaking seminar, open to all students, that will promote oral communication and critical thinking skills through discussions, projects, and prepared presentations.

n/a

Cities are key hubs of U.S. economic activity, innovation, and social imagination, and therefore they generate environments with large amounts of people living and working in them. According to the 2020 U.S. Census, about 80% percent of the country lives in cities. The course offers an exploration of the largest ethnic minority in the United States, Hispanic and Latinx communities, in urban areas: from iconic neighborhoods like Pilsen in Chicago, East Los Angeles, Washington Heights in New York City or Little Havana in Miami; transnational regions of the US-México border like the Rio Grande Valley; the U.S. territory of Puerto Rico, to states with the biggest growth in the share of the Latino populations such as South Dakota, Louisiana or Vermont. For this interdisciplinary introductory-level course students will be able to get a general sense of the state and growth of the Latino population, and what this means for the present and future of the United States. In connection with the course's topics, students will examine the topics of urban demographics, economics, culture, education, festivities, gentrification, immigration, democracy, and public policy. Readings, cultural products, and discussions for this class will include literature, media, and a bibliography on ethnicity, urban studies, and cultural policy. This is a broad-based course open and accessible to all students.

Interdisciplinary Perspectives on Race and Artificial Intelligence (223127)

Leslie Fernandez

2025 Spring (4 Credits)

Schedule:

WF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Contemporary discourse around Artificial Intelligence often centers the supposed existential risks AI may pose for all of humanity. AI ethicists have critiqued this framing for eliding the specific ways contemporary AI technologies have affected different populations, particularly the way AI technologies risk exacerbating bias and discrimination against people of color. The existential fear of AI has a long history in science fiction that has itself been influenced by historical racial discourse, and which has prompted comparisons with racialized populations. This course takes a broad view of the AI imaginary and its intersections with race, by considering both the influence of popular media and fiction and contemporary issues in AI ethics and development. We will consider how AI narratives have long relied on analogies to enslaved and oppressed populations. We will analyze how antiblackness and techno-Orientalist discourse have shaped and been shaped by technological developments in the field. We will consider how contemporary AI technologies deployed in war, policing and immigration, disproportionately harm people of color both in the US and globally. Our course readings will cover fiction and non-fictional sources to think about how our broader societal understandings of AI are influenced by a variety of contexts.

Asian American Graphic Narratives (223128)

Leslie Fernandez

2025 Spring (4 Credits)

Schedule:

R 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course is an introduction to Asian American graphic narratives. The course will cover both fiction and non-fiction texts. We will begin by familiarizing ourselves with the genre, paying attention to the specificities which distinguish graphic narratives from other types of media. We will consider how the interplay of text and image affects our reading of the narratives. We will also analyze how Asian American authors leverage the genre for representation. What themes reoccur in Asian American graphic narratives? What are the differences between fictional and non-fictional graphic narratives? What types of aesthetic, political, or representational goal are productively enabled by the graphic form? The course will include supplementary readings on comic studies, as well as a historical and contemporary Asian American scholarship to analyze alongside our primary texts.

Feminist Security Studies (224024)

Jacinda Tran

2025 Spring (4 Credits)	Schedule:	W 1245 PM - 0245 PM
Instructor Permissions: Instructor	Enrollment Cap:	15

Feminist security studies originated as critical analyses of and responses to the patriarchal imperatives of national and global security efforts. This course will examine empire, war, and militarism as gendered processes, as well as their multiple intersections with capitalism, colonialism, debilitation/disablement, the environment, race, and sexuality. We will consider feminist security studies as both an interdisciplinary field of knowledge (in the first half of the class) as well as a practice with political and intellectual commitments (addressed in the second). With a focus on U.S. military developments in media and technology, we will explore how the perception, registration, and weaponization of bodily difference constitute more quotidian modes of governance and securitization across local and global geographies. Through feminist theorizations of politics, we will chart and interrogate the racist formulations and colonial foundations of "human security" to challenge the epistemological tenants of violence and safety. Students will not only learn to ask critical questions about the politics of securitization, but will also learn to explore the relationships between gender, race, sex, space, and power more broadly. Using core theories and approaches from feminist security studies, students will complete an original research project on how these ideas apply to your own lives.

Topics in Latinx Studies: Imagining Latinidad (218600)

Americo Mendoza-Mori

2024 Fall (4 Credits)	Schedule:	MW 1030 AM - 1145 AM
Instructor Permissions: Instructor	Enrollment Cap:	35

This course is intended to provide hands-on practice toward doing research on Latinx issues, with an approach grounded in the understanding that terms 'Hispanic' and 'Latinidad' are not static concepts and, at the same time, not a homogeneous mix. We will examine culture, intellectual production, languages, economics, and political thought, as well as the dynamics of Latino/a/e people in the United States. Throughout the class, students will become familiar with a wide range of thinkers, currents, concepts, topics, and they will be exposed to frameworks of decolonial history and knowledge. The class will also facilitate conversations about the current place of Latinx cultures within the U.S. imaginary, including the immigrant groups from Mexico, Central and South America, the Caribbean, as well Indigenous and Afro-diasporic communities.

Readings, cultural products and discussions for this class will include literature, music, traditional and social media, and bibliography on history, linguistics, ethnic and social studies. Special attention will be paid to issues of race, ethnicity, gender, class. This is a broad-based course open and accessible to all students.

This introductory and interdisciplinary course emphasizes the tensions, solidarities, and possibilities that attend studies of Asian America and Oceania. Its starting points are based in Pacific Islander and Asian American knowledge formations, histories, and experiences. We will study the vast differences and complexities contained under both headings and the frequently used grouping of "AAPI," while also learning about convergences related to migration, colonialism, militarism, and imperialism. The primary goal of this course is to understand Asian American and Pacific Islander visions for identity, justice, community, and coalition. Key topics include anticolonial and antiracist solidarities, artistic contributions to political imagination, and issues of climate and ecology.

Topics in Native American and Indigenous Studies: Native North America (223120)

Mandy Izadi

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The first Americans met Europeans on their shores over five hundred years ago. They made the continent theirs millennia prior. And yet, Indigenous Americans are often missing, or misrepresented—in traditional, even contemporary portraits of North America. In this course, Indigenous peoples and perspectives anchor our study of the past and present.

An introduction to Native North America—and Native American and Indigenous Studies—this course will offer a sweeping portrait of the histories and legacies of settler colonialism, war, dispossession, and slavery in the continent; it will also reckon with contemporary issues, like reparations and the LandBack movement. Whenever possible, a global perspective will illuminate aspects of settler colonial states in places such as Australia, Finland, and Japan. More than anything, this sort of perspective will bring into

view the magnitude of Indigenous power, resilience, and solidarity.

Specific subjects of study include: land loss; Native culture and spirituality; inter-cultural and inter-ethnic relations; human-nature interactions; U.S. land management practices, including resource extraction; Indian law and legal violence; sovereignty and self-determination; decolonization and reparations; gender equity and human rights.

This interdisciplinary course draws from academic literature as well as the arts; this includes historical scholarship, the law, literature, film, settler colonial studies, and global history. Over the course of the term we will explore the ways in which these disciplines offer discrete approaches to the study of Native North America.

In Expos Studio 10, students practice analyzing sources, developing and organizing their ideas, and making arguments as they become familiar with the expectations of college writing. In small classes taking a hands-on approach, students work closely with instructors to learn strategies for drafting and revising clear, engaging essays. Students meet frequently in individual conferences with instructors to discuss their work, and the class also emphasizes collaborative work among students. In a small community of writers, students participate in workshops to discuss each other's work, thereby becoming more skillful at reading and revising their own writing. Assignments are based on sources from a range of disciplines and genres, and build in complexity so that students can master essential skills at each step. Expos Studio 10 focuses on academic essays as well as the personal statement required for fellowship or internship applications. Following Expos Studio 10, students take either Expos Studio 20 or an Expos 20 course to meet the writing requirement. All students meet with an Expos faculty member to discuss their course placement before enrolling.

Topic: Expos Studio 10: Introduction

Course Notes: After taking Expos Studio 10, a student must pass Expository Writing 20 or Expos Studio 20 to meet the College's Expository Writing requirement.

In [Expos Studio 10](#), students practice analyzing sources, developing and organizing their ideas, and making arguments as they become familiar with the expectations of college writing. In small classes taking a hands-on approach, [students work closely with instructors](#) to learn strategies for drafting and revising clear, engaging essays. Students meet frequently in individual conferences with instructors to discuss their work, and the class also emphasizes collaborative work among students. In a small community of writers, students participate in workshops to discuss each other's work, thereby becoming more skillful at reading and revising their own writing. Assignments are based on sources from a range of disciplines and genres, and build in complexity so that students can master essential skills at each step. Expos Studio 10 focuses

on academic essays as well as the personal statement required for fellowship or internship applications. Following Expos Studio 10, students take either [Expos Studio 20](#) or an Expos 20 course to meet the writing requirement. All students [meet with an Expos faculty member](#) to discuss their course placement before enrolling.

Topic: Expos Studio 10: Introduction

Course Notes:

After taking Expos Studio 10, a student must pass Expository Writing 20 or Expos Studio 20 to meet the College's Expository Writing requirement.

An intensive seminar that aims to improve each student's ability to discover and reason about evidence through the medium of essays. Each section focuses on a particular theme or topic, described on the [Expos Website](#). All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. Each section focuses on a particular theme or topic, described on the [Expos Website](#). All sections give students practice in formulating questions, analyzing both primary and secondary sources and properly acknowledging them, supporting arguments with strong and detailed evidence, and shaping clear, lively essays. All sections emphasize revision.

Topic:

Expos Studio 20: The Successfu

Course Notes:

Students must pass one term of Expository Writing 20 to meet the College's Expository Writing requirement.

First Year Seminar Program

Subject: First Year Seminar

First Year Seminar 21G

Genesis of Stars and Life in the Universe (108389)

Abraham Loeb

2025 Spring (4 Credits)

Schedule:

M 1200 PM - 0230 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Since the Universe is expanding, it must have been denser in the past. But even before we get all the way back to the Big Bang, there must have been a time when stars like our Sun did not exist because the Universe was denser than they are. Since stars are needed to keep us warm, we face the important question about our origins: how and when did the first stars form? Primitive versions of this question were considered by humans in religious and philosophical texts for thousands of years. The seminar will summarize the fundamental principles and scientific ideas that are being used to address this question in modern cosmology. Eventually, the formation of stars like the Sun was accompanied by planets like the Earth on which life has emerged. When did life start in the cosmos and when will it all end? The seminar will describe current plans to search for extraterrestrial life, including project "Starshot" which aims to visit the nearest stars within our lifetime and send close-up photos of their planets.

Requirements:

Course open to First-Year Students Only

First Year Seminar 21V

Black Holes, String Theory and the Fundamental Laws of Nature (109627)

Andrew Strominger

2024 Fall (4 Credits)

Schedule:

W 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The quest to understand the fundamental laws of nature has been ongoing for centuries. This seminar will assess the current status of this quest. In the first five weeks we will cover the basic pillars of our understanding: Einstein's theory of general relativity, quantum mechanics and the Standard Model of particle physics. We will then examine the inadequacies and inconsistencies in our current picture, including for example the problem of quantum gravity, the lack of a unified theory of forces, Dirac's large numbers problem, the cosmological constant problem, Hawking's black hole information paradox, and the absence of a theory for the origin of the universe. Attempts to address these issues and move beyond our current understanding involve a network of intertwined investigations in string theory, M theory, inflation and non-abelian gauge theories and have drawn inspiration from the study and observation of black holes, gravitational waves and developments in modern mathematics. These forays beyond the edge of our current knowledge will be reviewed and assessed.

Recommended Prep:

Prerequisites: High school level calculus and physics. The seminar welcomes all curious students and is not restricted to those with a scientific background.

Requirements: Course open to First-Year Students Only

First Year Seminar 21W

Research at the Harvard Forest—Global Change Ecology: Forests, Ecosystem Function, the Future (112349)

David Orwig

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

11

by students. Learning will cover genetic inheritance of cancer; cancer evolutionary theories; conceptual and technical notions of probability and risk; and their use in personalized medicine. Debates will emerge from the student's interest. Examples may include: should we test all children at birth? Should we research methods for editing genetic susceptibility to cancer out of embryos? Should race be part of the construction of personalized cancer risk? NASA is both an employer and a health care provider for astronauts: space missions increase astronauts' risk of cancer; should Nasa test astronauts for inherited susceptibility to cancer, and how should they use the information?

Recommended Prep:

There are no strict prerequisites, though some familiarity with the basic concepts of probability and genetics will be very helpful.

Requirements:

Course open to First-Year Students Only

Enrollment Cap:

12

Explores the application of simple physics to various natural phenomena associated with sailing. Topics addressed range from hydrostatics (e.g. why do boats float?) to meteorology (e.g. why do sea breezes veer during the afternoon?). Explores in depth the generation of lift and drag by the flow of air over sails and the flow of water over keels and rudders, examining critically the numerous incorrect explanations in the popular literature.

Recommended Prep:

Participants in this seminar should have a good high school physics background and have some knowledge of sailing.

First Year Seminar 22T

Why We Animals Sing (108564)

Brian Farrell

2025 Spring (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

We do not sing alone. On land, four kinds of animals produce songs or calls: birds, frogs, mammals, and insects. Some of these (and fish) also do so underwater. The principal sounds such animal species make are signaling behaviors directly related to mating success. They are of individuals, usually males, marking territories, and wooing mates. However, in any one location, species may also compete with one another for occupation of acoustic space (that is, for bandwidth) and otherwise optimize their sound signals to features of their environment. We will explore these topics and others as we listen to and read about each of the various kinds of singers on earth, the biology of their sound production and reception, and the ways they attract mates while avoiding becoming meals for eavesdropping predators. We will listen to many different kinds of acoustic signalers across a wide array of acoustic communities in tropical and temperate settings, both terrestrial and aquatic, and we will examine sound spectra on a large screen as we listen and slow down and isolate sounds to help distinguish their parts. Finally, we will consider the biology and evolution of music in humans, considering evidence from brain studies, archaeology and anthropology, and the music of indigenous peoples. We will look at music parallels in different kinds in animals of other species. There will be field trips to listen to and record assemblages of local species. The overall objective is to awaken the students' sense, understanding, and appreciation of the acoustic environment from which we come, and the role of this environment in shaping human biology and culture. There is a fair bit of reading required in preparation for weekly discussions. Accordingly, participation will be expected for discussion of the readings and listening experiences.

Medicine in Nazi Germany and the Holocaust—Anatomy as Example for Changes in Medical Science (160215)

Sabine Hildebrandt

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Medicine in Nazi Germany and the Holocaust—Anatomy as Example for Changes in Medical Science from Routine to Murder

This seminar introduces students to the history of Nazi Germany and the Holocaust as an extreme example of antisemitism and racism, and of crimes against humanity and genocide. These included medical crimes, which, thus far, are the most thoroughly documented examples of ethical transgressions of health care professionals. They include forced sterilizations, the "euthanasia" systematic murder program, and forced brutal medical experiments on the living and the dead. However, under conditions of oppression by the same political system, some health care professionals chose to retain the healing powers of medicine.

Anatomy in Nazi Germany is a model for ethical transgressions in the medical sciences that reveals the complex relationships between scientists and the Nazi regime. Changes of the traditional anatomical body procurement manifested in the use of many bodies of Nazi victims in teaching and scientific investigations.

Research gradually moved from routine studies to murder, from the anatomy lab to the Nazi prison system and then to the concentration camps. Ultimately, anatomists were complicit with the government through their role in the complete destruction of the perceived "enemies" of the Nazi regime.

This history of medicine can thus serve as a model for the recognition of patterns and common roots with other histories of discrimination, oppression, and atrocities. Also, there are continuities and legacies from this history that reach into the present and have relevance for today's education and practice in the health professions.

First Year Seminar 23I

Earth Science Goes to the Movies: Math and Physics of Natural (?) Disasters (160219)

Miaki Ishii

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Natural disasters such as earthquakes, tsunamis, tornadoes, hurricanes, and volcanic eruptions can have devastating effects on society, but are often over-exaggerated for the silver screen. How can we tell what is believable and what is not? Participants in this seminar will watch one Earth-science related movie each week, will learn background about the science behind the natural disasters portrayed on film, and then will apply math and physics concepts and equations to develop "back-of-the-envelope" calculations that assess realism. Students will be exposed to a wide variety of Earth-science topics and should walk away not only with the ability to point out flaws on-screen, but also the ability to explain natural phenomena in the world around them.

Course Notes:

Students are expected to attend Tuesday evening movie viewing sessions (time TBD). This seminar is highly participatory and collaborative, and students should be ready to engage not only with the material, but also with one another.

Recommended Prep:

Students must be comfortable with high-school level math and science.

First Year Seminar 23K

Insights from Narratives of Illness (117969)

Jerome Groopman

2025 Spring (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

A physician occupies a unique perch, regularly witnessing life's great mysteries: the miracle of birth, the perplexing moment of death, and the struggle to find meaning in suffering. It is no wonder that narratives of illness have been of interest to both physician and non-physician writers. This seminar will examine and interrogate both literary and journalistic dimensions of medical writing. The investigation will be chronological, beginning with "classic" narratives by Tolstoy, Chekhov, and Kafka, and then moving on to more contemporary authors such as William Carlos Williams, Richard Selzer, Oliver Sacks, Susan Sontag, and Philip Roth. Controversial and contentious subjects are sought in these writings: the imbalance of power between physician and patient; how different religions frame the genesis and outcome of disease; the role of quackery, avarice, and ego in molding doctors' behavior; whether character changes for better or worse when people face their mortality; what is normal and what is abnormal behavior based on culture, neuroscience, and individual versus group norms. The presentation of illness in journalism will be studied in selected readings from the *New York Times*' and *Boston Globe*'s Science sections, as well as periodicals like the *New Yorker*, *The New York Review of Books*, *Harper's*, and the *Atlantic Monthly*. The members of the seminar will analyze how the media accurately present the science of medicine or play to "pop culture." The seminar will study not only mainstream medical journalists, but so called alternative medical writers such as Andrew Weil and celebrity health voices like Gwyneth Paltrow. Patients with different diseases will be invited to speak to the members of the seminar about their experiences. Students will try their hands at different forms of medical writing, such as an editorial on physician-assisted suicide that would appear in a newspaper and a short story that describes a personal or family experience with illness and the medical system.

First Year Seminar 23S

The Seven Sins of Memory (117972)

Daniel Schacter

2025 Spring (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

How do we remember and why do we forget? Can we trust our memories? How is memory affected by misinformation such as "fake news"? Do smartphones and the Internet help our memories or hurt them? Are traumatic experiences especially well remembered or are they poorly remembered? What are the best ways to study for exams? This seminar will address these and other questions related to the fallibility of memory by considering evidence from studies of healthy people with normal memories, brain-damaged patients who show dramatic forgetting or striking memory distortions, and neuroimaging studies that reveal brain regions and networks that are linked to memory. The framework for the seminar is provided by

the idea that the misdeeds of memory can be classified into seven basic "sins". Three of the memory sins refer to different kinds of forgetting (transience, absent-mindedness, and blocking), three refer to different kinds of distortions or false memories (misattribution, suggestibility, and bias) and the final sin refers to intrusive recollections (persistence). We will consider how the memory sins impact everyday life and discuss the possibility that they can be conceptualized as by-products of adaptive features of memory, rather than as flaws in the system or blunders made by Mother Nature during evolution. Relatedly, we will also discuss the interplay between remembering past experiences and imagining future experiences, which provides clues regarding the nature and fallibility of memory.

First Year Seminar 23Y

All Physics in 13 Days (127972)

John Doyle

2024 Fall (4 Credits)

Schedule:

M 0645 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

8

Some claim that there are 13 ideas or principles that can form the bedrock for a pretty good understanding of our physical and technological world. These are: 1) Boltzmann factor and thermal equilibrium, 2) Turbulence, 3) Reaction rates, 4) Indistinguishable particles, 5) Quantum waves, 6) Linearity, 7) Entropy and information, 8) Discharges, ionization, 9) Relativity, 10) Nuclear binding energies, 11) Photon modes, 12) Diffraction, 13) Resonance. Each week we will discuss one of these principles and see how they explain certain things about the physical world. We will discuss these and connections with other principles, as well as how the principle shows up in technology and, more broadly, in our technological society.

Course Notes:

The course will run for 2 hours within the time block.

Recommended Prep:

Please note that this seminar will be geared to students very likely to go on in physics.

The introduction to certain principles is done with the expectation that students will return to a more formal course on the subject in the future. This course acts as a kind of road map for further studies in physics. Topics may change.

Requirements: Course open to First-Year Students Only

First Year Seminar 24G

A Brief History of Surgery (127976)

Frederick Millham

2024 Fall (4 Credits)

Schedule:

R 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Was Surgery practiced in the Stone Age? Twenty six hundred years ago at the dawn of recorded history, Egyptian surgeons operated on patients by the shores of the Nile. What diagnoses were they making? What treatments did they offer? How did they understand human anatomy and physiology? A millennium later, the Hippocratic physicians emerged on the Aegean Island of Cos. These physicians left us carefully stated surgical principles based, at least partly, on observation and measurement. Why did they record their wisdom in the form of aphorisms? At around the same time, Shushruta, in what is now India, appears to have offered surprisingly modern surgical care to his patients. Who was he? In the second century CE Galen of Pergamum bursts on to the scene, intending to restore Hippocratic orthodoxy. Why was surgical thinking for nearly two millennia dominated by this his, often erroneous, teaching? The Islamic Golden Age, an explosion of scientific and medical discovery, is a key to our understanding of all that follows in surgical history. Why is this period overlooked today? How did the exposure of Galen's anatomical imprecision by Vesalius in 1543 and his absurd physiology by Harvey in 1628 begin a Medical Enlightenment? Why did it take until the 19th century for surgeons solve the riddles of anesthesia and antisepsis? What were the roles of surgeons in the Eugenics movement and the Holocaust? Is the advice of the Hippocratic physicians that "To understand surgery one must go to war" true in the 21st Century?

Our study will examine these questions and many more. We will visit the site of the first use of ether anesthesia and explore the human body in the anatomy lab at Harvard Medical School. We will admire rare first additions of the great works of surgical history at the Countway Medical Library. From time to time we will be joined by doctors with expertise in specific areas such as anesthesiology, combat surgery, and anatomy.

First Year Seminar 24K

The Surprising Science of Happiness (128118)

Nancy Etcoff

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

After a century of studying how to cure mental illness, scientists have started to explore what makes us happy. What have they discovered? In this course, we will critically examine the findings from the new science of happiness, including research in cognitive science, evolutionary biology, psychology, and neuroscience and reveal how this work alters our understanding of what happiness is, the optimal ways to achieve and increase it, the role of circumstance in its occurrence, its effect on our physical health, and its

place in human nature. We will consider the notion of a biologically determined "hedonic set point," and question whether there are people who "have started in life with a bottle or two of champagne inscribed to their credit; whilst others seem to have been born close to the pain threshold," as William James noted over a century ago. We will examine how the brain's reward circuitry generates feelings of pleasure, desire, comfort and craving, and the ways it propels us to achieve biologically significant goals. Among the questions we will consider are: What is happiness for? Can one make oneself happier by conscious effort? What are some of the myths about happiness? Finally, is happiness a worthy goal for one's life? Highlighting the most rigorous and promising work in this field, we will attempt to construct a "happiness toolkit." The course will be didactic, interactive and experiential and provide an introduction to a burgeoning field of scientific inquiry.

Microbial Symbioses: From the Deep-Sea to the Human Microbiome (110305)

Colleen Cavanaugh

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This seminar examines the remarkable diversity of microbial symbioses, ranging from giant tubeworms and lichens to the human microbiome, exploring their ecology, evolution, and roles in human health and disease, agriculture, and biotechnology. Microbial associations with animals (including humans), plants, fungi, and protists will be discussed, complemented by microscopy and field trips to local environs including Harvard Yard, the New England Aquarium, and your own microbiome.

First Year Seminar 24U

"How Did I Get Here?"—Appreciating "Normal" Child Development (128122)

Laura Prager

2025 Spring (4 Credits)

Schedule:

T 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Understanding "normal" growth and development may seem like a relatively easy task at first. We take the nuances of developmental differences for granted because we're so accustomed to experiencing them. Nevertheless, defining normal (versus abnormal) development is a complex and controversial task. Development involves a tricky intermingling of environmental stimuli, cultural and social expectations, rapid and not always intuitive changes in brain development, temperamental differences, genetic inheritance, and mind-boggling brain plasticity. The course will start with a consideration of general themes and then move to a chronologic perspective. First, we approach child development as a dynamic force, one which simultaneously engages multiple domains: social/relational, cognitive, physical, moral. We will then switch to examine stages of development in sequence, using our understanding of neurobiological, physical, cultural, and psychological factors to inform our assessment of how children change over time. Readings will include classic papers on development, textbook chapters that provide overviews of specific developmental stages, recently published research articles on genetic inheritance, selected contemporary children's and young adult literature, personal memoirs, and short stories written about childhood.

Requirements: Course open to First-Year Students Only

First Year Seminar 25N

Finding Connections: Perspectives on Psychological Development and Mental Illness (122458)

Nancy Rappaport

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The seminar's challenge will be to deepen our understanding of human development and how individuals cope with serious emotional or social difficulties (neglect, bipolar disorder, autism, depression, schizophrenia). We will use multiple perspectives: medical observations and texts that provide practical knowledge (e.g. The New England Journal of Medicine review articles), narrative readings to understand how patients experience the meaning of illness from the inside out (e.g. The Center Cannot Hold), visitors who will discuss their experience with mental illness, and how development-related mental illness is portrayed in the press (e.g. The New Yorker articles). We will start with the mental life of babies and how scientists interpret infants' nonverbal ways of finding safety and security. This begins the journey of our understanding fundamental needs for tenderness, holding, and making meaning. Understanding how conditions such as autism, depression, and schizophrenia are described in clinical research and literature will help us to appreciate the biological vulnerabilities and relational patterns that may disrupt the human connection. We will examine the resourcefulness required for both fragility and resiliency. Throughout the seminar, the instructor, as a practicing child and adolescent psychiatrist, will bridge the gap between research findings, clinical applications, and everyday insight.

Requirements: Course open to First-Year Students Only

First Year Seminar 26E

Beautiful Physics (121520)

Howard Georgi

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

We are fortunate to live in a world with beauty all around us (and we need to do a much better job of preserving it). Physics describes the underlying laws that both produce much of the beauty in the world and also enable us to experience it. My hope in this seminar is to help students heighten their appreciation of our beautiful world by deepening their understanding of the physical principles of waves.

Waves are central. We experience the beauty of the world primarily through light waves and sound waves. This seminar will explore some of the most fun topics in wave phenomena. There is no text, but I will be working to make topics from my book, "The Physics of Waves" (available free on my web site) accessible and will put materials on the Canvas site as needed.

There will be considerable overlap with Physics 15c. I expect that students who do well in the seminar will be able to test out of the Physics 15c requirement for the Physics or ChemPhys concentration (although concentrators will still have to take the 15c PSI lab).

There will be a few very short problem sets and I will expect the students to show that they are following the class discussion by answering questions. We will visit the Science Center to see some amazing demonstrations. New this year, we will visit the Straus Center for Conservation and Technical Studies in the Harvard Art Museum (see below for details).

Recommended Prep:

Students will get the most out of this seminar if they have a good feel for single-variable calculus. It may also help to have seen a little linear algebra, although we can work on that as we go along.

Transformative Ideas in Brain Science: War, technology, and disease pioneered discovery (156450)

Jeffrey Macklis

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

This seminar will offer an integrated historical-neurobiological-neurological introduction to foundational and transformative ideas in the ~3,700 year history of brain science, neuroscience, and "lay" neurology—all accessible to freshmen with interests from neuroscience and (molecular, developmental, organismic, evolutionary, or regenerative) biology to history and philosophy of science to neuroeconomics and medicine. No background will be assumed. Rather, a series of historical vignettes and sources will be tied to modern understanding of core elements of the nervous system, its organization, function, and modes of investigation and manipulation. Selected historical contexts, often involving war, disease, serendipity, and technology advancement, will be highlighted as advancing knowledge in surprising ways. An interdisciplinary approach will benefit from each student bringing insights from their own reading of primary source and history of science texts, to be added to in-session discussion, with moderation and direction from me (JDM). We will visit a number of the Harvard Collections and museums, including the Museum of Comparative Zoology, Harvard Herbaria, Houghton Rare Books Library, History of Science Collections, the HMS Warren Anatomical Museum collection (Phineas Gage's skull and railroad tamping rod, among much more), the Harvard collection of historical scientific instruments (advances in microscopy, electrical measurement, e.g.), and the state-of-the-art Center for Brain Science human functional brain imaging facility, with each visit providing context for the week.

Recommended Prep:

No background will be assumed.

First Year Seminar 30G Section: 01

Digging Egypt's Past: Harvard and Egyptian Archaeology (108261)

Peter Manuelian

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Mysterious pyramids, colossal royal statues, tiny gold jewelry, decorated tomb chapels, temples, settlements, fortresses, and hieroglyphic inscriptions. This was the excavation legacy in Egypt and Sudan of the Harvard University–Boston Museum of Fine Arts (MFA) Expedition. Led by Egyptologist George Reisner (1867–1942; new biography just published), this expedition revolutionized archaeological method, and put Harvard Egyptology on the world stage, all during British control of the Egyptian government, French control of Egyptian antiquities, and Egyptian yearning for independence. This course explores 20th century and modern archaeology and Egyptology, racism and decolonization in cultural heritage, Harvard and MFA history, museology and artifact repatriation. Students will access unpublished archival documents at Harvard and elsewhere, and will research important expedition sites, staff members and momentous discoveries.

Course Notes:

Circumstances permitting, field trips to the Peabody Museum, the MFA, Harvard's Visualization Center (Giza Pyramids in 3D), and the Harvard Museum of the Ancient Near East, will bring the HU–MFA Expedition to life.

First Year Seminar 30Q

Death and Immortality (110425)

Cheryl Chen

2024 Fall (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

In this seminar, we will discuss philosophical questions about death and immortality. What is death? Is there a moral difference between "brain death" and the irreversible loss of consciousness? Is the classification of a person as dead a moral judgment, or is it an entirely scientific matter? Is death a misfortune to the person who dies? How can death be a misfortune if you are no longer around to experience that misfortune? Is it possible to survive after death? What does it mean for you to survive after your death? Is there such a thing as an immaterial soul distinct from your body? Is immortality something you should want in the first place? Even if you do not live forever, is it nevertheless important that humanity continues to exist after your death? By discussing these questions about death, we will hopefully

gain insight about the importance and meaning of life.

First Year Seminar 31D Section: 01

Nietzsche (159736)

Mathias Risse

2024 Fall (4 Credits)

Schedule: M 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Friedrich Nietzsche addresses some of the big questions of human existence in a profoundly searching but often disturbing manner that continues to resonate with many. Hardly any philosopher (except Karl Marx) has exercised such a far-reaching and penetrating impact on intellectual life in the last 150 years or so. He has influenced thinkers and activists across the political spectrum. Nietzsche has always been of special interest to young people who have often appreciated the irreverence and freshness of his thought, as well as the often very high literary quality of his writing. In this course, we explore Nietzsche's moral and political philosophy with emphasis on the themes he develops in his best-known and most accessible work, *The Genealogy of Morality*. The best-known themes from this book include the slave rebellion in morality, resentment, bad conscience, and ascetic ideals. However, we also read several other of Nietzsche's works, and do so chronologically (except that we begin with his auto-biography, *Ecce Homo*, which Nietzsche wrote briefly before his mental collapse in 1889). The others works include *The Birth of Tragedy*, *The Gay Science*, *Beyond Good and Evil*, and *The Antichrist*. We do not read any secondary literature, though the instructor will recommend such literature as appropriate. The point is to become familiar with Nietzsche's writings themselves and to engage with his thought.

Course Notes:

The seminar will meet for 2 hours within the time block.

Requirements: Course open to First-Year Students Only

Skepticism and Knowledge (121901)

Catherine Elgin

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Descartes wrote his *Meditations* because he realized that, although he had received the best education in the world, much of what he had learned was false or unfounded. This led him to embark on a systematic investigation to discover whether knowledge is possible. Harvard freshmen face a similar predicament. Having dutifully learned what they were taught, and evidently learned it well, some find themselves questioning its cognitive adequacy. Much that they learned in school seems superficial, incomplete, oversimplified, or incorrect. Is it possible to know the way the world is? Can I know that I am not a brain in a vat being manipulated into thinking that I am an embodied human being? Can I know that the Louisiana Purchase occurred in 1803, that electrons have negative charge, that *Hamlet* is a masterpiece, that the sun will rise tomorrow? How can I tell whether a report is 'fake news'? Are there 'alternative facts'? Is uncertainty regrettable or valuable or both?

First Year Seminar 33C

Borges, García Márquez, Bolaño and Other Classics of Modern Latin American Fiction and Poetry (159836)

Mariano Siskind

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course introduces students to some of the most important Latin American literary works produced during the twentieth century. We will explore the ways in which these novels, short-stories, essays and poems interrogate the historical traumas, political contexts and aesthetic potential of the region between 1920s and 1980s. We will shed light on their place in the historical and cultural formation of the literary canon, as well as on the concept of 'classic'. The goal of this seminar is two-fold. On the one hand, it introduces students to the Latin American literary and critical tradition through some of the best and most interesting literary and critical works (each novel or grouping of short stories and poems are paired with an important critical essay that situates them historically and aesthetically). On the other, it provides them with the fundamental skills of literary analysis (close reading, conceptual and historical framing, continuities and discontinuities with the aesthetic tradition), and that is why I have selected a relatively small number of readings, in order to have time to work through them, discuss them and have some flexibility to extend the classes we dedicate to a given author when our discussions merit it.

First Year Seminar 33R

The Chinese Language, Present and Past (160197)

C.-T. James Huang

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0444 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This seminar offers an opportunity to learn about the Chinese language, by observing and analyzing its linguistic structure, history, cultural tradition and social relevance. With a partially hands-on approach, we shall look at the fundamental principles that make up the sound system and govern the grammar of Mandarin, with particular attention to those features that distinguish Chinese from English and other languages, including its system of tones, its writing system, its word-order and syntactic patterns, and how the language has developed in over 2000 years of its recorded history. Looking deeper, we see how the study of Chinese may contribute to our understanding of language as a central component of human cognition. The seminar is designed for students with some experience of the Chinese language (e. g., with some prior formal instruction or as heritage speakers of Mandarin or any other Chinese dialect). The analytical skills acquired will be of use as an aid to improve on one's proficiency, or in preparing for study in linguistics, translation, East Asian study, and/or artificial intelligence.

Recommended Prep:

Some experience of the Chinese language is required as a pre-requisite for taking the seminar (e.g., a minimum of one semester of prior formal instruction, or as a heritage speaker of Mandarin or any Chinese dialect). To fully satisfy this seminar, you must (a) complete each reading assignment and have questions ready before class, (b) actively engage in class discussion. In addition, students will complete a term project (individual or collaborative) on a topic in consultation with the instructor.

First Year Seminar 33X

Complexity in Works of Art: Ulysses and Hamlet (116807)

Philip Fisher

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Is the complexity, the imperfection, the difficulty of interpretation, the unresolved meaning found in certain great and lasting works of literary art a result of technical experimentation? Or is the source extreme complexity—psychological, metaphysical, or spiritual? Does it result from limits within language, or from language's fit to thought and perception? Do the inherited forms found in literature permit only certain variations within experience to reach lucidity? Is there a distinction in literature between what can be said and what can be read? The members of the seminar will investigate the limits literature faces in giving an

account of mind, everyday experience, thought, memory, full character, and situation in time. The seminar will make use of a classic case of difficulty, Shakespeare's Hamlet, and a modern work of unusual complexity and resistance to both interpretation and to simple comfortable reading, Joyce's Ulysses. Reading in exhaustive depth these two works will suggest the range of meanings for terms like complexity, resistance, openness of meaning, and experimentation within form.

First Year Seminar 34V

Broadway Musicals: History , Race, and Performance (156241)

Carol Oja

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

This seminar will explore a core group of Broadway musicals. Historical, musical, and theatrical discussions will be paired with student performances and staging of individual scenes; stagings will be done under the guidance of Allegra Libonati from the A.R.T. Institute. There will be a consistent emphasis on race. The seminar will touch on signal moments over the course of the "Golden Age" of the musical, stretching up to the present day: Oklahoma! (1943), South Pacific (1949), West Side Story (1957), A Chorus Line (1975), Wicked (2003), and In the Heights (2008). Blending historical study and hands-on practice, this seminar aims to offer a wide range of perspectives on the interpretation and performance of Broadway musicals.

Course Notes:

This is a Radcliffe First-Year Seminar and will include optional co-curricular activities related to the seminar topic. The seminar will be held at the Radcliffe Institute, room TBD.

Recommended Prep:

Student musicians and actors are welcome in the course, as are students who love to watch shows but not necessarily perform in them. Ability to read music is desirable but not required.

First Year Seminar 35N

The Art and Craft of Acting (126838)

Remo Airdi

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

We've all watched a great performance and wondered, "How did that actor do that?" Acting is undoubtedly the most popular, most widely experienced of the performing arts, and yet, in many ways, it remains a mystery. This seminar will give students an opportunity to demystify the art of acting by introducing them to the basic tools of the trade—they will learn about the craft of acting by actually "doing" it. It will provide an introduction to acting by combining elements of a discussion seminar with exercises, improvisations and performance activities. Improvisation will be used to improve group/ensemble dynamics, to minimize habitual behaviors, and to develop characters. Students will explore a range of acting techniques designed to give students greater access to their creativity, imagination and emotional life. The aim will be to improve skills that are essential to the acting process, like concentration, focus, relaxation, observation, listening, collaboration and so on. Students will attend and critique theatrical productions at the Loeb Drama Center and in the Boston area. Material from these productions will be used by students in in-class performance activities.

Course Notes:

Students will be required to attend or watch theater performances during the course of the term. There will be no charge to the student.

Requirements:

Course open to First-Year Students Only

First Year Seminar 36G Section: 01

The Creative Work of Translating (128124)

Stephanie Sandler

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

Translation makes culture possible. Individual writers and thinkers draw sustenance and stimulation from works created outside their own cultures, and artists working in one format get ideas from those working in entirely different media. Translation between languages and between art forms will center our seminar's work. Taking a broad view of translation as a mental activity, we will study poems, fiction, film, photography, film, and music. We will stretch our own imaginative capacities by transposing material across media and genres, creating homophonic translations, and translating between languages. We will work individually as well as collaboratively. We will read a small amount of translation theory, and some reflections by working translators. We will invite into our classroom practicing poets and translators, attend readings and lectures at Harvard, visit the Isabella Stewart Gardner Museum and Houghton Library.

The only requirement is some knowledge of a language besides English – and a readiness to play with languages, art forms, and texts. Readings likely from Walter Benjamin, Jorge Luis Borges, Anne Carson, Emily Dickinson, Forrest Gander, Susan Howe, Yi Lei, Vladimir Nabokov, Eugene Ostashevsky, Sappho, and Wang Wei; music by John Adams and David Grubbs. Films to include *Despair*, *Drive My Car* and *The*

Golem.

Recommended Prep:

Muslim Voices in Contemporary World Literatures (119569)

Ali Asani

2025 Spring (4 Credits)

Schedule:

T 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

What do Muslims think of acts of terrorism committed in the name of Islam, the mixing of religion with politics, the rights of women, the "West"? This seminar investigates the viewpoints of prominent Muslim writers on these and other "hot button" issues as reflected in novels, short stories and poetry from different parts of the world. Explores a range of issues facing Muslim communities in various parts of the world by examining the impact of colonialism, nationalism, globalization and politicization of Islam on the search for a modern Islamic identity. Readings of Muslim authors from the Middle East, sub-Saharan Africa, South Asia, Europe and America.

Course Notes:

The seminar will meet for only 2 hours within the time block. No prior knowledge of Islam required. Assignments include compiling a portfolio of creative responses to the weekly readings using different media.

The Transformation of Marketing (160713)

Elie Ofek

2024 Fall (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Marketing, as you will find in this seminar, refers to the set of activities needed to form and sustain a healthy business by fostering meaningful exchanges between the organization and its chosen customers. Marketing helps create value for consumers and extract a share of that value for the organization. We will spend time understanding the fundamentals of marketing management and examine how recent economic, technological, cultural, and societal developments have affected the marketing field. We will first cover the central themes of customer behavior, strategic marketing analysis, innovation forecasting, and brand management. Then we will explore how marketing has dramatically evolved in recent years due to: the digital and social-media revolution; the increasing shift from human-based to technology-based interactions with customers; firms' desire to globalize; societal trends affecting consumer preferences; and the call for companies to exhibit greater social responsibility. In examining these themes, we will also draw upon research from the domains of psychology, sociology and economics. Each session will have assigned pre-readings that may include case studies, book chapters, and articles. The discussion and material covered in class will rely upon these readings. During the term each student will identify a marketing phenomenon they find intriguing and that reflects concepts covered in class. Students will prepare a one-page summary of this business phenomenon and communicate it in a short presentation. The final paper for the seminar requires students to analyze a case study and turn in a short write up.

First Year Seminar 40P

Appraising and Reimagining Middle and High School Math Education (109469)

Robin Gottlieb

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

What are the goals of mathematics education at the middle and high school level, and how do these goals impact our evaluation of the success or failure of math education in America? Why does math education at these levels matter? What societal structures (historic, economic, political, cultural) impact mathematics education? How does math education in turn impact societal structures? We will also investigate differences in math education across different venues, both in the U.S. and internationally. As the world changes, how do the goals of mathematics education change, and in what ways? Readings in preparation for weekly discussions will include a combination of newspaper articles, articles by experts in the field and findings of large-scale national and international studies. This will help us make sense of the debate in the press, inside the mathematics and math education communities, and amongst policymakers about the state of mathematics education and what should be done about it. All students are expected to be active participants in seminar discussions. In pairs or small clusters, students will take ownership of class discussions.

Course Notes:

This seminar has no prerequisites. An invitation is extended to all students whether or not they are thinking about studying mathematics.

First Year Seminar 41E Section: 01

The American Death Penalty: Morality, Law, and Politics (109475)

Carol Steiker

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

14

This seminar will address the controversies that swirl around the American death penalty in the distinct but related contexts of morality, law, and politics. At the level of moral theory, we will consider whether the death penalty is ever justified as a state practice, both in the abstract and in application, given concerns about its fairness and efficacy in deterring crime. We will explore the U.S. Supreme Court's "constitutionalization" of capital punishment starting with its landmark decision in 1972 in the case of *Furman v. Georgia*. We will trace the Court's attempt to deal with issues of fair process, proportionality, cruelty, reliability, and racial discrimination. Close readings of key opinions will show how the Court's interpretations of the majestic generalities of the Constitution—the guarantees of "due process", "equal protection," and protection from "cruel and unusual punishments"—have been informed by moral theory. Finally, we will consider the American death penalty in political context, both nationally and internationally. We will assess explanations for the anomaly of American retention of capital punishment, alone among Western democracies. We will consider how moral philosophy and legal regulation have affected the course of the American death penalty in the political sphere and contemplate the legal and political future of the institution. Will (or can) the death penalty be reformed? What are the prospects for nationwide abolition (or large-scale resurgence)? Will (or should) the death penalty's future lie in the hands of the courts or the political branches of government?

Course Notes:

This seminar will begin at 3:30 and meet until 5:30pm.

Human Rights, Law and Advocacy (121017)

Susan Farbstein

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0230 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Human rights practitioners confront numerous ethical, strategic, and legal dilemmas in their struggles for social justice. This freshman seminar explores the underlying legal frameworks in which human rights advocates operate, and then uses specific case studies to consider the various challenges they must grapple with in their work. The seminar is designed to encourage students to critically evaluate the human rights movement while offering an introduction to some of the essential tools and strategies used by human rights advocates, including advocacy, litigation, documentation, and report writing. Students will consider tough questions, such as: How can human rights be harnessed to successfully influence and change behavior? What does responsible, effective human rights advocacy look like? How do we engage without perpetuating power differentials along geopolitical, class, race, gender, and other lines? How do we find ways to work in collaboration with directly affected communities? What does it mean to be a human rights advocate working on abuses affecting individuals and communities remote from yourself? How do you balance broader advocacy goals with the needs of individual survivors or clients? How do you determine when to intervene and devote limited resources to a given issue? Finally, the seminar considers the limits of the human rights paradigm and established methodologies, such as litigation and "naming and shaming," and explores alternative sources and forms of advocacy, including the role of community lawyering in the human rights context.

First Year Seminar 41U

Museums in the Aftermath of Covid (156182)

James Hanken

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The recent Covid-19 pandemic extracted a huge toll on museums, on the one hand causing great harm and on the other hand forcing long-overdue changes that capitalize on new opportunities. This seminar will trace the history of museums from their beginnings centuries ago as personal collections maintained by private (wealthy) individuals to the modern institutions of today. What are museums? Where did they come from? What exactly do they do, and why? Do they have a future? We will consider not only the objects maintained in museums and their conservation, but also the role of museums in contemporary society, financial considerations associated with their successful operation, their dual—and sometimes conflicting—functions of scholarly research and public display, the mechanics and psychology of exhibit design, and legal and ethical issues of collecting and acquisition. The seminar's focus will range from large art, archaeological and natural history museums to smaller and more specialized institutions that feature particular cultural, scientific, artistic and engineering artifacts.

Weekly class meetings will include both discussion sessions and field trips to museums and libraries at

Harvard. During these trips we will view public exhibits and gain access to "behind-the-scenes" collections and scholar/staff work areas that the public rarely sees. One weekend-day optional field trip to a museum outside Boston may be scheduled, depending on student interest.

The Role of Government (160196)

Oliver Hart

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Economists have a very positive view of the role of markets. The intellectual foundations of this are the first and second theorems of welfare economics. The purpose of the seminar is to introduce the students to these results but also to their limitations. Most economists think that market outcomes will fail to be efficient in the presence of large-scale externalities/public goods, and government intervention is then justified. Examples are national defense, clean air, and the mother/father of them all: global warming resulting from carbon emissions. Another very topical issue is inequality. There is no particular reason to think that a market economy will yield an equitable distribution of income, and given this what is the appropriate government response? Throughout the seminar the analysis of ideas and concepts will be interspersed with policy issues such as whether and what limitations should be placed on the right to smoke or consume drugs, the right to marry, and the right to buy and sell organs. We will also consider the pros and cons of affirmative action, the Affordable Care Act (Obamacare) and the role of government nudges.

First Year Seminar 42H

U.S. Climate Change Policy and the Energy Transition (160203)

James H. Stock

2024 Fall (4 Credits)

Schedule:

M 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Burning fossil fuels powered 150 years of unprecedented economic growth but left a legacy of ever-increasing concentrations of carbon dioxide and other greenhouse gases. Those gases are changing our climate and thereby endangering human welfare and the earth's ecosystems. To avoid the worst of those consequences requires rapidly decarbonizing the US economy, but that task is massive. In the United States, there is increasing public support for strong action on climate change – thanks in large part to the youth climate movement of the last few years – and the Inflation Reduction Act of 2022 provided a big boost to wind and solar generation and to the adoption of electric vehicles. Yet the United States is still not on a path to achieve its 2030 Paris target of an emission reduction of 50%, relative to 2005. Moreover, the war in Ukraine, fluctuating gasoline prices, and resistance to the energy transition in fossil fuel-producing communities create a complicated political landscape. This seminar examines U.S. climate and energy policy from both economic and technological perspectives. The seminar starts with a review of the U.S. energy sector, climate science, and climate economics and policy tools. The seminar then dives into current policy issues, including power sector decarbonization policies, expediting the transition to electric vehicles, the movement by businesses to set net zero targets, the impact of climate change and the energy transition on marginalized communities, the politics of the energy transition, and the role of personal actions. The target audience is students who are committed to making a difference in how the US and the world tackles the challenge of climate change: through policy, through effecting social and political change around climate change, or through inventing or bringing to market the technological breakthroughs that will facilitate the necessary green energy transition.

The Economist's View of the World (108562)

N. Mankiw

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

This seminar's goal is to probe how economists of various perspectives view human behavior and the proper role of government in society. Over the semester, seminar participants will read several brief, nontechnical, policy-oriented books by prominent economists. The participants will discuss each work's strengths and weaknesses, exploring the positive scientific judgments and normative value systems that underlie the author's policy prescriptions. To prepare for each book discussion, seminar participants are expected to send the instructor a brief email describing their views of the reading. In addition, each participant will have the opportunity to write his or her own essay addressing an economic policy issue. The essay will be read and discussed by all seminar participants.

Course Notes:

There will be two sections for this seminar in the fall term:
Section 1 will meet Tuesday, 9-11:45am and Section 2 will meet on
Thursday, 9-11:45am.

Recommended Prep:

Students are expected to have had some background in economics,

such as an AP economics course in high school or simultaneous enrollment in Economics 10a.

Requirements: Course open to First-Year Students Only

First Year Seminar 44J

Clash of Titans, Seats of Empire: The Aztecs, Toltecs, and Race of Giants in Ancient Mexico (116506)

Bill Fash

2025 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

The film "Clash of Titans" was a British extravaganza dedicated to exploring the ancient Greeks' concepts of the interactions between humans and their gods. In Ancient Mexico, the tale of Topiltzin Quetzalcóatl, Toltec Prince of Tula is the best-known example of the intervention of rival gods in the affairs of kingdoms and empires. His tale and what was made of it by the Aztecs, and Spaniards, serves as the point of departure for our seminar. Just as the Greeks countenanced sacrifices and political assassinations, in Ancient Mexico the three great empires practiced human sacrifice, regicide, and warfare which was vital in their statecraft and economy. We will explore how these central components were explained and justified in their mythology, why reciprocity with the gods was so vital, and how and why each empire came to a violent end. A particular focus this year will be on the legend of Topiltzin Quetzalcoatl ("Our Prince, the Feathered Serpent") because the Feathered Serpent loomed very large in later Aztec mythology, and in the very founding of the earliest megalopolis of Teotihuacan. To do so we begin with the riveting first-person descriptions of the Aztec Empire and its violent conquest penned by a foot soldier in Hernán Cortés's army, Bernal Díaz del Castillo. In the following weeks we will explore the environmental basis, religious dimensions, and social and political development of civilization, cities, at the three seats of empire in ancient Mexico: the Aztecs, Toltecs, and Teotihuacanos. You will be engaged in answering the age-old (but never fully resolved) question as to why the Cult of the Feathered Serpent resulted in empires in Highland Mexico, but the Maya of Chichen Itza (who made more images of the deity than any other kingdom in Mexico) chose--or were unable--to create an empire on the scale of the Aztecs, Toltecs, or Teotihuacanos. We will make use of 3D models of Peabody Museum collections, archaeological studies, historical accounts, and recent films and other media to critically examine ancient practices and current perceptions of the Aztec empire (1428-1519 CE); its predecessor the legendary Toltec empire of Tula (850-1100 CE); and the foundational Teotihuacan empire (100-550 CE), known as "The City of the Gods" since it was built. The Aztecs and Toltecs went to Teotihuacan on pilgrimage every 20 days to make offerings because the scale of that ancient city was so massive, the architecture so impressive, and the religious art and historical lore so compelling, that the Aztecs had a legend that it was built in an earlier creation, by a race of giants. Seminar participants will use critical thinking to explore how the biases of the observer play a role in describing and explaining "the Other." Students will analyze the ways that religion and the quest for power fueled the genesis, expansion and demise of all three empires and the great Maya kingdoms as well. First-years in this seminar will also explore the ways the living descendants of the Aztecs are reviving their traditional culture and how the Pre-Columbian civilizations are integral to the national identity of Mexico and Latinx people in this country, vs. the way they are portrayed in Hollywood and U.S. popular culture, through films and other media in the U.S. and Mexico.

Course Notes:

No background or previous experience, on or in Mexico is required, only an open mind.

First Year Seminar 49N

Measurements of the Mind: The Creation and Critique of the Psychological Test (121907)

Marla Eby

2024 Fall (4 Credits)

Schedule: M 0900 AM - 1100 AM

Instructor Permissions: Instructor

Enrollment Cap: 12

For well over a century, psychologists have worked with schools, corporations, immigration officers, the military, and psychiatrists to sort the American population into groups in order to make a number of key judgments. Special tests – designed to measure everything from intelligence to vocational aptitudes to personality – have been at the center of that effort. In this course, we will explore the at times controversial story of psychological testing, and its larger implications. We will pay attention to the creativity within psychology in the making of such tests, and examine their potential benefits, as well as the drawbacks and dangers of the misuses of these instruments – particularly as tools of social control. Topics covered will include the use of tests in the eugenics movement, testing of immigrants at Ellis Island, academic and military sorting through cognitive tests, the use of personality tests in psychiatric and forensic settings, and the cross-cultural use of personality tests by anthropologists. Since Harvard psychologists have made significant contributions to the history of psychological testing, we will use materials uniquely available on this campus in the course of our work together.

Science in the Age of Artificial Intelligence (207514)

Brendan Meade

2024 Fall (4 Credits)

Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Science is focused on discovering and explaining the world around and within us. This has been its goal

for hundreds of years and has produced astonishing breakthroughs from population genetics, to general relativity, to plate tectonics. Artificial intelligence is touted as a tool for learning about a complex system in ways that humans can't and has seen exceptional progress in natural language processing and image identification. In this class we explore the emerging linkages between scientific inquiry and artificial intelligence. The central goal of this class is to question the classical role of the scientist as a creator of theories and consider how scientists may become interpreters of theories developed by AI. We do this by developing an understanding of how AI systems actually work (they're astonishingly simple), explain recent success cases, and then consider how we may (or may not) rebuild science in an AI-first manner. Examples will be drawn from the earth and planetary sciences as well as the life sciences.

Recommended Prep:

High school calculus and/or computer programming would be extremely useful.

10

Skin provides a protective barrier that is vital to survival of all multicellular organisms. Its physical properties have been exploited for centuries, from clothing to footballs, and yet skin is a vibrant and dynamic organ that responds to environmental signals in myriad ways. Skin protects humans from toxic exposures, but can also be an intrinsic source of dangerous diseases. While its defects only rarely kill humans, its imperfections can cause misery and discomfort, ranging from subtle annoyances to depression and loss of self-esteem. It is a source of immense pleasure or excruciating pain. This seminar will provide a series of exposures at an introductory level, to distinct topics in skin biology. They will exemplify the diverse and vibrant nature of cutaneous networks and signals, through the lens of commonly recognized topics such as tanning, hair, sweat, cancer, cosmetics, cancer, and infections.

Recommended Prep:

None. Prior AP-Biology may be helpful but not required.

Requirements:

Course open to First-Year Students Only

First Year Seminar 51X

Changing Perspectives: the Science of Optics in the Visual Arts (215849)

Aravinthan Samuel

2025 Spring (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

8

Renaissance artists began to create stunningly realistic representations of their world. Paintings started to resemble photographs, suggesting that artists had solved technical problems that escaped their forebears. Our brains effortlessly deduce three-dimensional scenes from two-dimensional images. But faithfully transferring spatial information to a flat canvas -- a sense of depth, surface and shadow, geometrical accuracy -- is hard to do. We will discuss how artists from van Eyck to Vermeer to Ingres to modern artists might have used science to make art. We will ask how devices like pinhole cameras, mirrors, and lenses might help artists see more deeply and create images more faithfully. We will perform science experiments with our own hands to appreciate how optical devices might be useful to artists. We will try to use devices to create our own artwork. We will use online platforms to look closely at masterpieces around the world, using Zoom to virtually travel to distant museums and meet with their curators. We will meet artists and scientists, in person and virtually, who think about art and optics from different perspectives. Our seminar is a synthesis of art history, art making, and science.

Course Notes:

No prior training in art or science. We will learn how to draw in our own workshop. We will learn the science of optics by trial and error, not with math or physics.

Recommended Prep:

No prior training in art or optics. We will learn how to draw in our own workshop with provided tools. We will learn optics with practical exercises, not with math or physics.

Requirements:

Course open to First-Year Students Only

First Year Seminar 52C

Tree (216102)

William Friedman

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0630 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Have you hugged a tree lately? How about grown one? Photographed one? Drawn one? Written about one? Imagine a semester devoted to connecting two organisms: a person (you) and a tree (not you). Interacting with a single tree, you will explore its individual history, evolutionary history, life cycle, leaves, bark, roots, flowers, cones, and architecture.

In an age of environmental destruction and outright murder of our biological brethren, there is something

deeply troubling about humanity's relationship with nature. Technology has left us with mere facsimiles of nature - pixilated abstractions of biodiversity through satellite imagery, decoded strings of DNA – and we, as a species, have become fundamentally disconnected from actual nature and the magnificent organisms with which we share the earth. In this seminar, we will work to understand and give agency to trees as individual organisms, literally rooted in the ground, and evolutionarily rooted in deep time. Topics to be covered include the evolutionary origin of arborescence, human relationships with non-sentient organisms, the case for legal rights for natural objects, reading a twig, the unseen world of roots, and finding human meaning in the longevity in trees. Each student will also work with an individual tree in the living collections of the Arnold Arboretum of Harvard University and observe (see) this organism throughout the entire semester through the creation of images (photography, drawing), journaling, and other forms of representation. The goal of this freshman seminar will be to initiate a personal and lifelong connection with the "other," the vast and variant organisms with which we share the planet.

Course Notes:

NOTE: The first class on Sept 11 will be held at the Univ Herbaria on campus. Most classes will meet at the Arnold Arboretum of Harvard University. The class will meet from 3-6:30pm to allow for travel time.

First Year Seminar 52D Section: 01

Quantum Entanglement and the Second Quantum Revolution (216103)

Ashvin Vishwanath

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

In this course we will delve into intriguing world of quantum mechanics, tracing its profound influence on modern technology, and the extraordinary and paradigm-shifting view of reality that it mandates.

We will talk about revolutionary advances that emerged in the early years of quantum mechanics including semiconductors that enabled the computer age, and superconductors, which remain a global focal point of interest and excitement.

As we exert greater control over quantum systems, a second quantum revolution is dawning. The essential ingredient here is 'entanglement', a feature of quantum mechanics that is so unusual that Albert Einstein termed it "spooky". Countless experiments have nevertheless shown that Nature behaves in exactly the strange way predicted by quantum mechanics. Quantum entanglement is a powerful but highly fragile resource with important applications, ranging from secure quantum communication and cryptography to the holy grail—an all-purpose quantum computer. Evaluating the true potential and timescale for these technologies has been especially hard.

In this seminar we will approach fundamental concepts in quantum mechanics, using only simple mathematics and demonstrations to convey its unfamiliar logic. We will then survey the "first quantum revolution" which led to the transistor and superconductors. Next, we will survey modern quantum technologies, with guest speakers from both academia and industry. Finally, we will have an open-ended conversation on the captivating question of quantum reality and possible connections to age old debates such as that of free will.

The seminar deliverables will be a mid-course presentation on practical applications derived from quantum mechanics and a final essay on a quantum topic of your choice, which will allow you to use your newfound understanding to delve into an area that resonates most with you.

Course Notes:

There will be a required trip to MIT with no cost to the student.

Recommended Prep:

This seminar has a moderate background knowledge requirement—some familiarity with probability concepts and a basic grasp of linear algebra at the level of vectors and matrices. Target audience: the course is open to all concentrators who are deeply curious about the quantum realm and its impact on our lives through new technologies or through shaping our view of reality.

First Year Seminar 52E

Science and Technology Primer for Future Leaders (216105)

Hongkun Park

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

We live in a world that is shaped by science and technology. As modern citizens who will lead the U.S. and the world in the coming generation, we should be aware of the rapidly changing landscape of science and technology and be ready to participate in the decision-making processes for deploying these life-changing developments to the masses. In this seminar, we will learn and debate contemporary topics we encounter every day and use them as motivating examples to explore the underlying science, math, and engineering principles. Some of the issues that we will discuss include, but are not limited to, the COVID-19 pandemic, the prosecutor's fallacy, climate change, information technology, quantum technology, artificial intelligence, genomics revolution, and brain-machine interfaces. These discussions will teach basic concepts in statistics, thermodynamics, quantum mechanics, information science, biomedical engineering, and nano-bio interfaces. In this seminar, the students will give presentations and participate in discussions and debates. The seminar is intended for first-year students who plan to concentrate on humanities and social sciences.

Course Notes:

The seminar is intended for first-year students who plan to concentrate on humanities and social sciences.

First Year Seminar 52G Section: 01

Nuclear Dilemmas (seminar has been cancelled) (216114)

Benjamin Wilson

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

This first-year seminar explores major issues in nuclear weapons history and policy. Did the use of atomic bombs by the United States against Japan end the Second World War? Have nuclear arsenals prevented a direct conflict between nuclear powers since 1945? Why have some countries pursued nuclear arsenals while others have not? Could society survive a nuclear war in any meaningful sense, and should we prepare for that possibility? What harms has the pursuit of nuclear weapons caused to natural environments and human bodies? How have fictional portrayals shaped our understanding of the nuclear age? Is there any hope of eliminating nuclear weapons? Our discussions will take up classic historical controversies about the role of nuclear weapons in war and international relations, as well as major debates about the theories of nuclear deterrence and proliferation. We will study the arguments of pacifists, feminists, and other critics of nuclear weapons, and we will use films and works of imaginative fiction to consider the place of nuclear weapons in modern culture. In a final project, students will have the option of writing a "white paper" or "op-ed" on a current nuclear policy question or pursuing a historical or creative project in consultation with the instructor.

First Year Seminar 52K Section: 01

Knots, Braids and Colorings (218493)

Peter Kronheimer

2024 Fall (4 Credits)

Schedule:

R 0345 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

Beyond their practical use in fastening ropes, knots have appeared frequently in the decorative arts and (somewhat less frequently) in the physical and life sciences. This freshman seminar will explore the world of knots in all its aspects, but our focus will be on a non-technical introduction to knots from the viewpoint of the mathematician, for whom knot theory is an active and ever-expanding field of research.

The basic mathematical questions about knots center around classification. What does it mean to classify knots? How can we understand that an overhand knot and a figure-eight knot are really different?

Alongside these questions, we will touch on other topics in the mathematical sciences that have connections to particular scientists and mathematicians who have made important contributions to knot theory. In particular, we will be motivated by the work of Peter Guthrie Tait, Max Dehn, and Joan Birman, and through their work we will be led to examine colorings of maps, dissections of polyhedra, and the knots that arise from the chaotic dynamics of the atmosphere.

Course Notes:

No background in mathematics is expected or required, and enrollees who are not intending to concentrate in mathematics will be particularly welcome.

First Year Seminar 52L Section: 01

Life and Death Lessons from the Fossil Record (218480)

Javier Ortega-Hernandez

2024 Fall (4 Credits)

Schedule:

R 0900 AM - 1100 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

The fossil record offers a unique perspective on the history of Life on Earth. Although *palaeontology* might remind us of grotesque bones, dusty museum cabinets, and quirky scientists who relish both of those things—or God forbid, Ross Geller from *Friends*—the knowledge derived from the fossil record affects our daily lives in ways that are not immediately apparent. From its natural history origins during the 19th century, paleontology has become a cornerstone of neo-Darwinian evolutionary thought, produced a detailed log of climate change, and sits at the center of a multi-billion-dollar business consumed by millions of people around the world, most likely yourself included. This seminar will explore the rich world of paleontology and its bearing on human activities. You will learn how cutting-edge scientific research informs our understanding of the main processes that have influenced the evolution of Life on Earth for approximately four billion years, including episodes of global warming/cooling and mass extinction events. You will also gain insights into the socioeconomic impact of fossils, ranging from the seamless integration of charismatic extinct animals into culture and entertainment, to ethical and political quandaries resulting from the unregulated exploitation of these natural resources in conflict zones. Finally, we will explore how technological advances blur the lines between science fiction and reality, allowing us to visualize diminutive, fossilized animal-like embryos from 600 million years ago, to the potential (and controversial) applications of gene editing to resuscitate extinct species such as the woolly mammoth and Tasmanian tiger.

Course Notes:

This seminar will run for 2 hours only within the time block.

First Year Seminar 52N

Misinformation, Disinformation, and BS in Science Communication (219762)

Daniel Hartl

2025 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

12

It's a jungle out there. The world is awash in hucksters, tricksters, frauds, scammers, grifters, and thieves. And there's no shortage of easy marks, suckers, dupes, and fools. Classic cons like the pigeon drop and three-card monte aimed to heist a bundle from a few. The internet and cable TV have changed the game. Now the goal is to nick a bit from a crowd. You're one of the suckers, so are your friends, so am I, so is everybody. We don't notice we're being scammed because what is being stolen is not our money. What's being stolen is our attention and our time. We're all suckers for clickbait. What's wrong with clickbait is that it leads you down a rabbit hole of misinformation, disinformation, and conspiracy theories that have created and sustained widespread skepticism and mistrust of science and scientists resulting in covid-19 conspiracy theories, vaccine hesitancy, bogus drug treatments, climate change denial, anti-evolution, and so forth. Even the most educated and savvy consumer of information is easily misled in today's complex information ecosystem. This seminar is clickbait vaccine to boost your critical thinking. It is designed to help you identify and refute misinformation, disinformation, and BS rampant on the internet. It will help you recognize sensationalism when science is communicated in the press. It will familiarize you with the main logical fallacies that students and scientists themselves are prone to. As a framework for discussion, we use Bergstrom and West's book "Calling Bullshit" along with supplemental readings.

First Year Seminar 52P Section: 01

Mathematical Proofs from "the Book" (222110)

Lauren Williams

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0530 PM

Instructor Permissions: Instructor**Enrollment Cap:**

13

The Hungarian mathematician Paul Erdos used to talk about "The Book," in which God keeps the most beautiful proofs for mathematical theorems. Erdos' highest praise, upon learning from someone a new proof of a theorem, was "That's one from the book." In this seminar we will survey a collection of elegant results and proofs in mathematics, ranging in topic from number theory to geometry to combinatorics and graph theory, and including some of Erdos' favorite results. We will also discuss some of the history of the results and the mathematicians involved. A main text for the seminar will be "Proofs from the Book," by Aigner and Ziegler. Students will be expected to do short readings or problem sets each week, and to give a final presentation at the end of the course.

While some exposure to proofs may be helpful, this seminar aims to be accessible to students without a sophisticated math background.

First Year Seminar 52Q Section: 01

Roots & Routes: The Biogeochemistry of Food, From Soil to Plate (222508)

Ann Pearson

2024 Fall (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

How do we acquire food? As consumers, we depend on the Earth and its biological and chemical networks to generate our food, which in turn influences our cultures and societies. The various routes that transform sunlight and nutrients into the food on our plates take many forms, including industrial agriculture and hyperlocal production, but these food systems impact people and the environment differently at each stage of the journey. This first-year seminar course offers an introduction to the fundamental scientific concepts of biogeochemistry through the lens of food systems. Using a diverse range of readings from farmers, chefs, indigenous leaders, and academic scientists, we will explore the common knowledge base shared by these communities, including soil science, hydrology, geochemistry, microbiology, plant biology, and ecology. The course will also introduce concepts of ecosystem services and conservation ecology. Each reading module will be accompanied by a brief essay or small project, allowing students to synthesize and apply their knowledge. Additionally, students will work in small groups (2-3 students) to design a polyculture or permaculture farm, culminating in a final presentation.

First Year Seminar 52R

The Quantum Revolution: from Computing to Time Crystals (222111)

Norman Yao

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

12

Quantum mechanics is one of the most precisely tested theories in the history of science. Advances in the laboratory are ushering in a so-called "second quantum revolution", making it possible to assemble complex, quantum systems from individual atoms, ions, molecules and photons. But what are such systems actually good for?

Participants will explore this question along three axes. In the first four weeks, we will examine whether entanglement – Einstein's famous "spooky action at a distance" – can enable more precise measurements than would normally be allowed in our classical world. In the next five weeks, we will cover the basic pillars of quantum computing; our focus will be on understanding the physical systems from which a quantum computer can be built, as well as the algorithms that it can run. Finally, in the last three weeks, we will investigate what happens when quantum systems are taken far away from thermal equilibrium. We will discover that this opens the door to entirely new phases of matter, including time crystals.

Recommended Prep:

High school level preparation in physics and mathematics at the level

of the advanced placement curriculum; or having taken Physics 15a, 16, or 19 in the Fall.

Requirements: Course open to First-Year Students Only

Additional Course Attributes:

First Year Seminar 52S Section: 01

Reading the Book of Nature (222511)

Benton Taylor

2024 Fall (4 Credits)

Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Nature is made up of a dizzying variety of organisms, environments, and their interactions, but amidst this chaos, patterns exist that provide the viewer knowledge of their surroundings...if they know how to see the patterns staring them in the face. In this seminar, students will learn ways to see patterns in rocks, water, plants, air, stars and animals, and begin to discern what those patterns can tell us about how nature works.

Moss on a tree trunk can tell you which direction to walk. The speed of cricket chirping can be a remarkably accurate thermometer. The color of water can indicate which tree species are growing uphill. You can keep your calendar from the position of the stars or the birds singing in the trees. Students will learn many of these patterns that have been collected by different cultures throughout human history and will come to understand the mechanisms creating those patterns. But just as important, students will learn and practice skills for observing nature's patterns on their own and discerning what those patterns can tell them about their local surroundings.

Because one must be in nature to observe it, class sessions will be held exclusively outdoors (rain or shine) where we will learn common patterns in the natural world and practice identifying new patterns and their meanings. Supplemental readings will come from texts by ecologists, survivalists, and indigenous peoples, but the primary text for this seminar will be the bark, mosses, dirt, and bird songs (among others) of the natural world.

First Year Seminar 52T

Learning How to Think Like a Scientist: An Introduction to Scientific Research (222554)

Sien Verschave

2025 Spring (4 Credits)

Schedule: W 0300 PM - 0545 PM

Science courses are typically structured to teach core concepts about the physical world and the living systems in it. The concepts taught result from decades of scientific research. Research is a process of inquiry that seeks knowledge about important problems that are not understood. Experiencing the intellectual excitement and challenges of performing research can support your long-term career goals regardless of what those are, but how does someone go about creating new knowledge through research?

Lab courses teach the mechanics of performing specific techniques, keeping a notebook, and interpreting data, yet they rarely address how new knowledge is generated. How does a scientist know what questions to ask? What makes a question worth spending time and resources on? How do scientists come up with strategies to address these impactful questions? All scientists start by critically evaluating a field, but what does that mean? How do you read a scientific article and analyze their methods and conclusions? How can primary literature effectively help frame the questions in need of answers? This seminar guides students into the world of scientific research and prepares them for a real-world research experience. Through different assignments students learn how scientists think and perform science, while developing critical thinking and reading skills that are especially useful in research. In addition, students get the opportunity to interact with several scientists about their research. Students who successfully complete the seminar will be offered the opportunity to participate in a summer research project overseen by a group of Harvard faculty.

Recommended Prep:

The prerequisite for this seminar is enrollment in LS1A or LPSA or LS50 in the fall term.

Requirements:

Course open to First-Year Students Only

First Year Seminar 52U

Machine Muse: The Intersection of AI and Human Creation (222512)

Philippe Cluzel

2025 Spring (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

How might AI be used in the future to enable creative work in the arts and sciences? Our goal will be to evaluate the power and the limitation of AI in creating what we call "original" work. During the first weeks, each student will identify and propose a creative project whose development will rely essentially on the use of a current AI platform. To cite a few examples, students may propose a new musical piece, a set of drawings, a fictional monograph, or a computer modeling of physical and mathematical systems; they may design plans for engineering artefacts or use AI to assist discoveries in medical sciences.

The organization of the seminar will alternate between tutorials and hands-on experimentation. Short tutorials aimed at a general audience will introduce the key underlying technology behind AI. We will watch recorded lectures and read articles before class and then engage in discussion during class (sometimes outside experts will join that discussion). Through this hands-on process, students should experience and reflect on the power, the limitations, and the future of AI in domains that touch upon human creativity.

Collective reflection, external consultations, and collaboration between students across disciplines are strongly encouraged, and should be reported in the final writeup documenting the computer-aided creative process. During the semester, students will introduce their projects to the rest of the class to receive feedback and answer questions; they will also document in an online notebook the different technical steps that constitute the development of their projects.

Course Notes:

PLEASE NOTE: Class will be held in NW 430.30, the professor's office.

First Year Seminar 52Y Section: 01

Phases of Matter: Remarkable Changes of Properties By Varying Temperature and Pressure (222509)

Isaac Silvera

2024 Fall (4 Credits)

Schedule:

R 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

A gas of atoms or molecules will usually condense into a liquid phase, followed by a solid phase as temperature is lowered. Consider water: vapor, liquid, solid! The solid phase will generally have a crystalline structure (liquid is amorphous or has no long-range order). It can be an insulator, semiconductor, or metal; it can be magnetic or non-magnetic. In this seminar we shall discuss a number of remarkable phases of matter. Below a certain temperature a metal can become superconducting, flow of electrical current without resistance; helium liquifies and at lower temperature becomes a superfluid, fluid flow without dissipation. As temperature is lowered, magnetic moments on atoms in a solid align and one observes a ferromagnetic or antiferromagnetic phase. Not all materials have a solid phase: helium remains a liquid as temperature approaches absolute zero. But, applying pressure causes liquid helium to solidify. We shall discuss not only the materials but the techniques to create high and low temperature, high pressure, and high magnetic fields that affect the phases of matter and how they are studied. We will not carry out rigorous arguments for the behavior of matter, but rather rely on so-called "hand-waving" arguments.

First Year Seminar 52Z

Attention Deficit Hyperactivity Disorder (ADHD): Myths, Media and Meaning (224001)

Anne Arnett

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This first-year seminar will dive into the science and fiction of attention deficit hyperactivity disorder (ADHD) through engagement with multiple sources, including research articles and reports, social media, news media, psychology guidelines, and clinical cases. We will use these multiple sources of information to explore the controversies about how and when ADHD is diagnosed, differences between males and females, biological and environmental causes of ADHD, rising rates of ADHD, and traditional and alternative treatments. We will approach these issues through a variety of student-led presentations, mock clinical interviews, written critiques, and class debates.

Early in the semester, the class will take a trip to Dr. Arnett's laboratory at Boston Children's Hospital to see a demonstration of how electroencephalography (EEG) is used to measure brain activity in children with ADHD. Altogether, the goal of the seminar is to use the topic of ADHD, broadly, to practice reading and understanding scientific articles, think critically about media, work collaboratively with student peers, and learn how to generate scientific hypotheses.

First Year Seminar 60H

Faith and Fiction in American History (203005)

David Holland

2025 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

This seminar uses key literary works to explore some of the most difficult and demanding questions in the religious history of the United States: Does God have a special relationship with the United States? Is sin an individual responsibility or a social flaw? Why has American religion been so frequently concerned with sexuality? How has religion shaped racial identities and tensions? How does it inform domestic relationships? How do non-Christian immigrants find a place and a voice in a nation with deeply entrenched Christian traditions? To explore these and other areas of concern, we bore into the faith-inflected cultures of American history through the imagined narratives of some of its most celebrated writers, including the likes of Catharine Sedgwick, Harriet Wilson, Flannery O'Connor, James Baldwin, Rudolfo Anaya, Pearl Abraham, Ayad Akhtar, and Marilynne Robinson. I will offer mini-lectures to contextualize these works in their historical moment. We will read some scholarly work to sharpen our tools of analysis, but mostly we will read and talk about the novels themselves. The seminar aims to be both analytically rigorous and aesthetically rewarding.

First Year Seminar 60R

The Beginnings Of Business (203501)

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Business as a way of life has existed for thousands of years. In *The Beginnings of Business* we explore where many of the practices that we tend to take for granted today come from. What are the origins of money? What causes trade to occur and thrive? How has trust been built, and what are the ways in which people have sought to cheat (and avoid being cheated)? We'll investigate these questions through the lens of multiple disciplines—archaeological and textual evidence from the ancient world, economics, history, and anthropology. By understanding what was needed to create businesses in the past, we'll be able to understand modern limitations that exist in the world today.

Course Notes:

PLEASE NOTE: This seminar will be held in HMANE (Harvard Museum of the Ancient Near East) seminar room. You will meet with the instructor in the lobby.

Zombies and Spirits, Ghosts and Ghouls: Interactions between the Living and the Dead (212697)

Shaye Cohen

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

Virtually all the cultures and religions of the world, from ancient to contemporary times, have teachings and rituals about death. In this seminar we will deal with a subset of this very large topic, namely, the relationship of the living and the dead. The dead are often depicted as still-living in some way and still in communication with us and our world. Are they friendly or hostile? Beneficent or malevolent? Think "undead" and "zombie" versus "saint" and "angel." In this course we will look at some of the myriad ways that religions and cultures conceive of the relationship of the living with the dead. We the living care for the dying and the dead, and hope that the dead will care for us, but how this works exactly is the subject of much speculation. American secular culture, at least in its cinematic expression, has a vigorous belief in the afterlife, especially in having denizens of the afterlife, in the form of zombies, ghosts, and poltergeists, intrude on the world of the living. In our seminar we will survey this rich set of themes as expressed in literature, art, music, cinema, and philosophy.

First Year Seminar 62Y Section: 01

Back to the Future: The Cities of Tomorrow Throughout History (213247)

Bruno Carvalho

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0530 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

What will the cities of tomorrow be like? How did people in the past imagine our cities would be like? Our ability to foretell the future has a mixed record at best. Urban transformations often elude expectations, and the history of cities shows that the unforeseen happens frequently. And yet, predictions and expectations can teach us a lot about how people make sense of the world. Since the 1800s we have seen a boom in urbanization, as well as in utopian and dystopian imaginations. In fact, we can think of modernity in terms of competing visions for the future. Throughout the 20th century, for example, many envisioned flying vehicles. Some vied for segregated cities, others for diverse communities. The expectation that the future will be radically different from the past emerged as a defining urban trait. Today, as climate change sets in, it might seem as if the future, not the past, is already fixed. Catastrophic visions abound. But is a dire destiny inevitable? Can cities be our best hope to reduce emissions and ecological footprints? In this course we will explore multiple takes on the future, including in urban planning, design, literature and film. We will ask questions like: How do expectations about the future shape the present? How did unrealized projects impact urban developments? Can fiction and the arts stretch the limits of the thinkable? How might futures imagined in the past help to address our urban and environmental challenges?

First Year Seminar 62Z

Buddhist Enlightenment: Visions, Words, and Practice (212769)

Ryuichi Abe

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

How do you get enlightened? Is the Buddha a god or human? How many Buddhas are there in the world? How many celebrated enlightened women do we find in Buddhism? How do you know if someone is enlightened? And why does Enlightenment matter? These are basic questions that even most recondite books

of Buddhism often fail to answer. This seminar looks at famous visual images of Buddhist enlightenment—not only iconographies of Buddhist divinities, but also architecture, gardens, ritual instruments, and maps of the world—and using them as our gateways, studies narratives, parables, metaphors, and theories that explain what enlightenment is, how to attain enlightenment, and how to retain it in one's everyday life. The seminar encourages students to apply their understanding of Buddhist enlightenment as a way to better appreciate their own religious traditions and/or spiritual identities for the sake of enriching their inner selves as well as their social interactions.

Course Notes:

There will be two required visits to the Harvard Art Museums related to the final student project.

First Year Seminar 63C

The Symphonies of Dmitri Shostakovich (212779)

Anne Shreffler

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

The symphonies of Dmitri Shostakovich (1906-75) are just as relevant and controversial today as they were during the composer's lifetime. Shostakovich's fifteen symphonies span his entire creative life; starting with his First Symphony, which made the 19-year old composer famous overnight, and ending with his Fifteenth, completed four years before his death. As a public genre, the symphony was the perfect vehicle for Shostakovich to react to his tumultuous times and explore the human psyche. The ups and downs of Soviet politics and culture indelibly shaped Shostakovich's career: the innovative fervor after the Russian Revolution, Stalinism ("Socialist Realism" and the Terror), the Second World War, the post-Stalin "Thaw" after 1956, all the way to the height of the Cold War. Shostakovich was at times encouraged and supported by the Soviet regime, and at other times, reprimanded and punished severely. But Soviet audiences always treasured his work because they heard in it deeply felt emotions that could not be publicly acknowledged. Today's audiences react just as strongly, for different reasons. In the seminar, we will listen closely to all fifteen of Shostakovich's symphonies, learning about their musical features and the political contexts in which they were born and received. We will focus on three main themes: 1) composing in a totalitarian state, 2) how music can be said to "narrate," and 3) the orchestra as sound world. We will work from scores and selected recordings, and will attend a live performance of the Boston Symphony Orchestra.

Course Notes:

There will be a required concert trip. There will be no cost to the student.

First Year Seminar 63E

Religion, Neuroscience, and the Human Mind (212784)

David Lamberth

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

More than 150 years after Darwin's epochal account of evolution, over 85% of the world's 7 billion people are still religious, and the percentage is growing. What does religion do for human beings? What does an evolutionary and biologically informed understanding of the mind and brain lead us to think about where religion fits in human life? Harvard's first psychologist, William James, engaged these questions in the late nineteenth century, bringing the cutting edge of empirical psychology to the philosophy of religion. Today these same questions animate the field of neuroscience, where researchers are showing how affectivity, emotions, and our evolutionary past come together to form the "self" philosophers have long thought to be primarily "rational." This seminar brings together the thought of James, writing at the turn of the twentieth century, with the work of contemporary neuroscientist Antonio Damasio to ask what kinds of beings we are, how our minds function, and what religion contributes to human individual and societal experience? The seminar takes up the philosophy of belief, affect, and emotion, and touches on the biology of the brain and homeostasis. We conclude by assessing contemporary views of religion from evolutionary psychology (Boyer, Atran) and cultural anthropology (Geertz, Luhmann, Asad) in light of James's and Damasio's models of the human mind.

Memory Wars: Cultural Trauma and the Power of Literature (215850)

Nicole Suetterlin

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

How do we respond to a traumatic event? Denial, acceptance, blame, reconciliation... there are many stances we can take toward a harmful act we have experienced or committed in the past. When entire populations have suffered or perpetrated crimes against humanity, the question of how to deal with this

traumatic past can spark a full-blown memory war – such as the one currently raging in the U.S. over Confederate monuments. In this seminar, we explore how the catastrophic events of the Holocaust, slavery, and apartheid affect the way we think and act as individuals, groups and citizens today. What power do literature and the arts have in bringing peace to a society at war with its past? Materials include acclaimed American, German, and South African writers such as Toni Morrison, Paul Celan, and Sindiwe Magona; human rights philosopher Hannah Arendt; comedian Trevor Noah; and civil rights lawyer and Harvard Law School graduate Bryan Stevenson, who has been fighting racial bias in the U.S. criminal justice system for the past three decades. Topics include literature about the Holocaust, slavery, and apartheid; Germany's and South Africa's recent "ethical turn" in memory culture; reconciliation and reparation; mass incarceration; punitive vs. restorative justice; social justice.

Course Notes:

This seminar includes a movie night and a visit to the Harvard Art Museums.

Narrative Negotiations: How do Readers and Writers Decide (216104)

Homi Bhabha

2024 Fall (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Narrative Negotiations: How do Readers and Writers Decide on What are the Most Important Voices and Values Represented in a Narrative?

Narrative Negotiations explores narrative "voice" in a wide range of literary and cultural texts. Narrative voice is a lively dialogue between the author and the reader as they engage in the experience of determining the value and veracity of the narrative: whose story is it anyway? The writer creates the imaginative universe of character, plot, emotions and ideas—she seems to be holding all the cards; but it is the reader who rolls the dice as she draws on her human experience and moral values to question the principles and priorities of the storyteller. The game of narrative becomes deadly serious when storytelling confronts issues of colonialism, slavery, racial profiling and gender discrimination. Is the right to narrative restricted to those who have suffered the injustices of exclusion? What is my responsibility as a storyteller—or a reader—if I am a witness to violence, or an advocate against injustice, but my life-story is one of privilege, protection and security? What is the role of the politics of identity or cultural appropriation in determining whose story is it anyway? Throughout the seminar students will be encouraged to draw on their own histories, memories and literary experiences as they enter into the world of the prescribed readings. For the final assessment I hope students will choose critical and creative ways of telling their own stories, or the stories of others who have captured their imaginations. Seminar participants will be required to come to each class with two questions that pose issues or problems based on the texts that are important for them, and may prove to be significant for their colleagues. I will invite members of the group to pose their questions and start a discussion.

First Year Seminar 63R

What is a Classic? (216124)

Rachel Love

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

15

The question of what makes certain works 'classics' has plagued readers ever since they had more than one book to choose from. When faced with more works of literature and art than one could consume in a single lifetime, the label 'classic' provides readers with a narrowed selection that is guaranteed to be worth the time and effort to engage with, that is vital to participation within an intellectual community. Classical literature, classical art, classical music—all suggest art forms that are fundamental, elevated, perhaps even elite... but why? And who gets to decide what qualifies as 'classical', especially when those who constitute today's intellectual communities are increasingly heterogenous and have greater access to an impossibly vast, impossibly diverse trove of global artistic production? In this seminar, we are going to read 'The Classics'—defined within universities as the study of literature from ancient Greece and Rome—in order to open up larger questions about the nature, purpose, and consequence of labelling certain works, aesthetics, and ideas 'classical'. We will read selections from a broad sampling of written works that survive from antiquity, learning firsthand what it means to read a classic. At the same time, we will be reading, watching, and listening to a diverse array of media that explain, criticize, and reimagine the role of classical literature and ideas in today's world.

Recommended Prep:

There are no prerequisites for this class. All readings are in English, and no knowledge of Latin or Greek is expected.

First Year Seminar 63T Section: 01

What Is Avant-Garde? (216112)

Nariman Skakov

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

Avant-garde art sometimes seems to make a complete break from the art that precedes it. The very name, 'avant-garde' (from French, literally 'advance guard') carries military connotations that suggest a total, violent break with the past. Our seminar will look at another side of this radical change, asking whether the

avant-garde might also be playful, rather than violent, making possible an interplay between invention and convention? And what is the afterlife of the avant-garde? How did its legacy inform aesthetic innovation in a later period? We will try to answer these questions by studying a small set of textual and visual artifacts from the long twentieth century, cutting across different continents and political formations. We will begin with conceptual experiments of the Dada and Suprematist groups and Italian and Russian Futurism and their convoluted relationship with Fascist and Communist ideologies. We contrast these historical examples with later work, like that of Andy Warhol, Nam June Paik, and Joseph Beuys. We will consider cinematic experiments of Dziga Vertov and Jean-Luc Godard, ending with David Lynch's radical displacement of the reigning ideology of Hollywood in his 2001 masterpiece *Mulholland Drive*. This nearly century-long framework will allow us to investigate a range of artistic, social, and political mobilizations of the term 'avant-garde'. We will be doing short readings and working through them together in class, helping students learn how to read theoretical texts as well as read novellas and watch films in the light of theory.

Course Notes:

There will be two required trips to the Bauhaus-related collection at the Harvard Art Museums and to the ICA, Boston.

Vegetal Humanities: Paying Attention to Plants in Contemporary Art and Culture (216106)

Carrie Lambert-Beatty

2025 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This class invites you to practice a new kind of plant-consciousness. Our guides will be contemporary artists and thinkers who are encouraging new relationships between human and vegetal life, or recalling very old ones. Suddenly, we have plant protagonists, gardens in galleries, and botany-based forms of philosophy, architecture, music and more. Following the lead of these culture-makers and their work, we will draw on the new science of plant communication and learning in this class; uncover plant-based histories and renew ancient understandings of human-plant relations. But plants themselves will also be primary sources, as each student follows a sequence of exercises to deepen understanding of a plant "interviewee"—one they'll grow at home from an unidentified seed. At the same time, we will ask critical questions: with climate crisis upon us, in a time of social inequity, poisonous politics, and mass dislocations, why this attraction to plants? Is the vegetal turn a diversion from tough human problems? Or is there reason to think a cultural change could, even now, change the fate of nature?

Recommended Prep:

No prior art or botanical knowledge is expected. However students with backgrounds in agriculture, ecology, horticulture, or botany are especially welcome.

First Year Seminar 64P

Introduction to Lyric Poetry (218481)

Gordon Teskey

2024 Fall (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This is a seminar for first-year students that introduces lyric poetry from Asia, Europe, and North America. The seminar covers a wide range of time as well as place. We travel from ancient Greece and Rome to medieval Italy and France, from classical China, Japan, and Persia to Renaissance Europe, from the Romantic period in England, Germany, and France to contemporary America.

All poems not in English—in Greek, Latin, Chinese, Japanese, Arabic, Hebrew, Persian, Anglo Saxon, Italian, German, and French—will be studied in translation. Students with knowledge of any of these languages are encouraged to bring the originals into discussion and to use them for translation assignments.

The first purpose of the seminar is to provide knowledge of poetry from the past and from around the world. The second purpose of the seminar is to provide students with a grounding to write poetry themselves. Weekly exercises include posted comments, translations, and poems.

Lyric Poetry in Six Acts

Act I Graeco-Roman and Medieval: Poetry of Violence, Fame, and Love

Act II Middle East: Poetry of Love and of Faith. Meditations on Death

Act III China and Japanese: Poetry of Passion. Poetry of Reflection

Act IV The Renaissance: Poetry as Art and about Art

Act V The Romantics: Poetry as Expression

Act VI The Modern Age: Poetry in a Dying World

Fun With Writing... or, Writing for Weirdos (218680)

Phillip Howze

2025 Spring (4 Credits)

Schedule:

M 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Writing can be fun. Writing can be weird. By "writing", we don't only mean the act of putting pen to paper,

or fingers to computer keys to type. Writing is the conscious act of choosing words or texts or images and composing them in such a way to create an intended effect. Yes, writing is a deliberate and emotional process... but not one which has to be necessarily painstaking. What if, first and foremost, writing was fun? This is the question we'll explore and enact while getting to know our fellow classmates in this generative, art-oriented freshman seminar. We'll read obscure yet celebrated writers whose work is distinctly wild, unconventional, compassionate, and opaque. In addition, each week we'll create both individually and together, engaging methods of writing across a variety of forms – from gaming and poetry to food and stage plays – to reacquaint ourselves with the weird joys of what it might mean to craft ourselves creatively, personally, politically, and collaboratively with one another. Come prepared to break the rules.

First Year Seminar 64U

Stories of Gender and Justice (220253)

Karen Thornber

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

With gender inequities and biases pervasive within and across cultures worldwide, and the global pandemics of gender-based violence and structural violence further intensified by the Covid-19 pandemic, how have individuals, groups, communities, and nations globally fought for (and against) gender justice? How have struggles against gender injustice intersected and conflicted with struggles against racial, ethnic, environmental, health, LGBTQIA+ and other forms of injustice?

Gender justice, as is true of justice more broadly, is often discussed in the abstract, or as a matter of law, political history, protest movements, enfranchisement, and similar phenomena. Yet at its core, justice involves individuals and their experiences - both their suffering and their triumphs - experiences most directly accessed through stories. In this seminar we'll explore a range of stories and different forms of storytelling on gender justice, from novels and films to memoirs/personal histories, histories, and creative nonfiction. Some narratives with which we will engage are Margaret Atwood's *The Handmaid's Tale*, Ito Shiori's *Black Box: The Memoir that Sparked Japan's #MeToo Movement*, Audre Lorde's *The Cancer Journals*, Cho Nam-joo's *Kim Jiyoung*, and Cherrie Moraga and Gloria Anzaldua's *This Bridge Called My Back: Writings by Radical Women of Color*. Students will be encouraged to write their own stories on gender and justice.

"Ignorant Schoolmasters" and Experts (220189)

Doris Sommer

2025 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

What is the best way to teach, by guiding students guide toward discovery or by explaining what teachers know to students who should learn? The alternative answers have fueled millennial debates. One side defends facilitators who may or may not be experts in the target subject. They provide enough instruction to ignite curiosity, but no more since heavier hands can crush student initiative and instill resentment for school. The other side endorses the transfer of knowledge from teachers who master a subject, set standards, and evaluate progress. Today's proposals innovate insofar as they recover, recombine, and rename sometimes forgotten pedagogies developed over a long durée. From a humanist perspective, the current and renewable debates about how to teach raise questions about forgetfulness, gaslighting, and about the dynamics of professionalization in education. Our seminar will consider the trail of controversies, the effects on teaching and learning, as well as opportunities to enhance current practices. Readings include both standard and neglected texts with a standing invitation to "go off on a tangent" and supplement assigned readings with student-researched materials. We start with a contemporary political philosopher who considers what is at stake for democracy in these educational debates.

First Year Seminar 64Z

Recent Experimental Architecture: From AutoCAD to Ziggurat (220197)

Andrew Holder

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

There is a paradox in contemporary architecture. It is designed using tools of astounding digital sophistication by architects grappling with a world of social inequities and impending environmental catastrophe. And yet, surveying the work of these architects, you would be forgiven for thinking it looks, well, ancient: ziggurats, stacks, rock piles, and even dirt mounds. What explains this phenomenon? Why is it that digital tools and progressive cultural ambitions have sponsored the creation of seemingly anachronistic forms? To answer this question, the seminar will explore contemporary design in both the format of seminar and as design studio. We'll critically analyze the work of contemporary practices, then design our own speculative buildings using digital modeling software, physics simulation engines, and 3D printing.

Course Notes:

No prior design experience is necessary; students will learn everything they need to know in a series of in-class tutorials.

The Good, the Bad, and the Beautiful: The Ethics of Art (220405)

Patrick White

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

What, if anything, is the relationship between art and morality? Can art be *immoral*? Or is it a mistake to evaluate a work of art in such terms? Can the moral of a content of a work bear on its *aesthetic value*, that is, whether it is *good art*? What of the moral status of artists—does the (im)morality of an artist bear on the success of her work? Should art serve as an instrument of moral education? A force for liberation? A method of unifying people? How do the arts shape who and what is seen? And how should we think of the representation (or appropriation) of race, gender, and culture in the arts? This seminar will challenge students to grapple with questions of art, ethics, and the human condition alongside contemporary and historical thinkers alike—from Plato to Confucius to Tolstoy. In addition to philosophical texts, we will engage with a wide variety of art, including poetry, film, theater, painting, sketch comedy, classical music, rock and roll, and games. And maybe most importantly, we will engage with one another—this is a class in which all of us will be *doing philosophy together*, working through what we think about fundamental questions of art and ethics. The seminar will meet in the Harvard Art Museums and include a trip to the MFA, providing opportunities to see many of the seminar's central artworks in person and consider questions about the ethically and politically significant work of art collection and exhibition.

The Greatest Love Story of All Time? Heloise and Abelard (222112)

Jan Ziolkowski

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Ever yearn to travel back in time? Heloise and Peter Abelard, woman and man, student and teacher, nun and monk, embody much that is fascinating about the twelfth century and what subsequent ones, including ours, have made of it. The seminar adventures into letters written by the two, together with adaptations of their lives, from the Middle Ages to the present, into poems, novels, plays, films, and artworks. Along the way, we delve into similarities and differences between handwritten manuscripts on parchment and books

printed on paper as well as between spoken and written words.

As the title announces, the seminar emphasizes the loves of two extraordinary individuals. The theme encompasses the immense and mystifying spectrum of this feeling, including intense affections within a romantic couple, deep but differing bonds between individual believers and their God, passions that folks feel for vocations and avocations, and other types of pleasure also. It probes central issues of individuality and the power of institutions. We will explore who Abelard and Heloise were as persons and as a couple (before and after his castration), what they reveal about their now-distant days, and what they can help us to perceive about our own selves and moment in history. They taught each other much and can teach us nowadays too. Does human nature change? Are human beings today unique? Should we be as open to the inspiration of people from the past as from other cultures today?

The Modern City and its People: South Asia and Beyond (222522)

Vishal Khandelwal

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

A city is a strange organism in which many kinds of realities exist alongside each other. In addition to containing the buildings and infrastructures of everyday life, a city suggests numerous meanings to the people who comprise and navigate it. This seminar will consider some of these meanings by analyzing architecture and urban development; artworks that represent everyday life; and films that showcase the modern city. How do people build cities in relation to their needs? How and why do specific urban spaces cater to entertainment and excitement? Where do emotions such as love, longing, or fear make themselves apparent within the textures of cities? How does urban life give rise to inclusions and exclusions? In what ways do artworks and everyday objects register urban and rural realities, fantasies, and memories? And how do we study and talk about the built and unbuilt infrastructures that shape and enable cities and subjectivities? Our core examples will draw from South Asian cities and diasporic South Asian lives, and our readings will come from disciplines including architectural history, art history, urban studies, and anthropology. At stake will be a variety of terms and concepts that we will use to think, write, and reflect about cities, the kinds of activities that take place within them, and the types of transactions that structure our urban experiences as well as the experiences of those we study. We will strive to move beyond conceptions of urban life that privilege the ideals and aspirations of only a few, and will question what has historically constituted the urban itself in relation to the non-urban. A mandatory field trip to the Rose Art Museum at Brandeis University (Waltham, MA) is included as part of this seminar.

Who Do You Think You Are?: The Ethics of Identity (222523)

Jay Harris

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

Personal identity is, to say the least, a slippery concept. Yet insofar it constitutes who and what we are—whether it is explicitly acknowledged or not—identity has deep ethical and political implications, and "identity politics" is one of the most significant contemporary dimensions in political and social thought. This class, which is structured around Anthony Appiah's 2005 book *The Ethics of Identity*, delves into the ethical, social, and political questions around identity. Each section of the book will be complemented by readings that put the issue in a larger context. These texts include a few of the foundational philosophical works for contemporary debates around identity, contemporary philosophical analyses of the underlying issues, and critiques of the discussion of identity as understood by philosophers like Appiah. The purpose of the seminar is not to try to answer the questions, but to have a rich and open discussion of the issues, and help shape a richer and more nuanced private and public deliberation on identity and ethics beyond the classroom.

First Year Seminar 65L Section: 01

Wood(s): An Ecology of Asian Art (222636)

Rachel Saunders

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor**Enrollment Cap:**

12

What good is art history in the face of environmental destruction and climate change? How can the close investigation of works of art, produced in times and places far removed from our own, address the vast "failure of collective imagination" that novelist Amitav Ghosh has identified as the core obstacle to our ability to respond ethically and effectively to our non-human co-habitants on earth? This intra-disciplinary seminar intentionally entangles scientific and art historical approaches to real objects in both the art collections of the Harvard Art Museums and the living collections of the Arnold Arboretum. We will focus on how one special class of especially long-lived earthly beings—namely trees—provide living links to distant pasts and futures that no single human can experience, what their persistence can reveal about relationships between other humans and other environments, and what individual case studies can show us about our role as members of a vast embodied network of living beings. During the semester students will have the opportunity to meet with a number of faculty and professionals, including museum curators, conservators, and exhibition designers, as well as the Director of the Arnold Arboretum, its Keeper of Living Collections, and the editor of *Arnoldia*, the Arboretum's journal.

First Year Seminar 65M Section: 01

Reading Buildings. Understanding Our Built Environment (222524)

Patricio del Real

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

Architecture is the backdrop of our lives. Although we routinely encounter buildings—we live in them, use them, visit them—we often ignore them. This Freshman Seminar brings buildings to the foreground of your lives and asks: How does architecture live among us? We begin from the premise that, fundamentally, to be able to "read" architecture and the built environment, is to be equipped with the skills to better understand the world we live in. In this seminar, we will visit select case studies in the Boston area. We will examine architectural works from different periods and in different mediums. We will visit built works and analyze unbuilt projects; read manifestos and historical descriptions; look at archival drawings and period photos, all to reveal the disciplinary, cultural, and social forces embodied in architecture. This class will help you understand how architecture lives among us.

First Year Seminar 65N Section: 01

Fashion in the Ancient Mediterranean World (222633)

Irene Soto Marin

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

The aim of this seminar is to explore the manufacture, trade, and social function of objects of fashion in the Ancient Mediterranean World. More than a tool for aesthetic purposes, clothing, cosmetics, and hair performed significant functions as markers of status and class, as well as social identity. Furthermore, the manufacture of jewelry, perfumes, and makeup in antiquity represented some of the most highly skilled ancient industries, and textiles and garments were the most widely traded and highly valued goods in

antiquity. We will encounter how men, as well as women, were subject to fashion in personal adornment.

While this seminar has a particular focus on material from Pharaonic and Graeco-Roman Egypt, we will also engage with objects coming from the rest of the Eastern Mediterranean basin, as well as Central Asia and Britain. We will cover topics such as the production and trade of textiles, dyes, and make-up, and explore the ways in which they were utilized as signs of wealth, financial investment, and other symbols of power and identity. The types of objects we will encounter in the seminar are archaeological (such as textiles, wigs, and beauty implements), as well as sculptural. Papyrological and literary texts will further illuminate our discussion of the daily use, manufacture, and purchase of textiles in antiquity.

Over the course of the term, we will furthermore encounter the influence that ancient textiles retrieved from archaeological excavations exert on modern and contemporary fashion designers like Fortuny, Matisse, Versace, and Dior.

First Year Seminar 650

Reading Native Nations (222909)

Christopher Pexa

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

What are Native American and Indigenous literatures, and how might we best understand their/our relationship to U.S. and Canadian national literatures? How may we read Native American and Indigenous literatures as asserting both critiques of the United States, Canada, and other settler colonial nations, as well as asserting longstanding forms of Indigenous peoplehood, nationhood, and sovereignty? This seminar attempts to answer such questions by examining Native American and Indigenous writers' imaginings of resistance, survival, and political and cultural resurgence over roughly 250 years, from the early American colonial period to the present. We will approach all of our readings from the perspectives of Indigeneity, nationhood, kinship, sovereignty, settler colonialism, and decolonization, among others, in a constant endeavor to refine and apply these terms. Note: that while we will take a mostly chronological approach, our inquiry will hardly be exhaustive but instead will concentrate heavily on recent authors and texts.

Morality, Leadership, and Gray-Area Decisions (203014)

Joseph Badaracco

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

Everyone with serious responsibilities, at work and throughout their lives, faces gray area decisions. In organizations, these highly uncertain, high-stakes decisions are delegated upward, to men and women in leadership positions. They have to make final decisions on these problems, despite the gray, and these decisions test their competence and their humanity. This seminar offers a variety of important perspectives on gray-area problems and on ways to resolve them, responsibly and effectively. The seminar begins by examining gray area problems in various professions and lines of work. Subsequent sessions focus on three different ways of resolving gray area problems – in terms of accountability, character, and action. A typical session of the seminar will draw upon classic works of fiction, basic ideas in moral philosophy, and contemporary situations. These situations are typically described in short case studies involving men and women early in their careers, and they give students in the seminar the opportunity to grapple with these problems in personal terms – by discussing what they would do in these situations. From time to time, students will write short papers, which will be discussed in the seminar.

First Year Seminar 70Z Section: 01

Regulating Online Conduct: Speech, Privacy, and the Use and Sharing of Content (205179)

Christopher Bavitz

2024 Fall (4 Credits)

Schedule:

R 0900 AM - 1100 AM

Instructor Permissions: Instructor**Enrollment Cap:**

15

In the course of a few short decades, the Internet has become integral to significant swaths of human experience. It has radically altered modes of interpersonal engagement, democratized access to tools of mass communication, and changed the role of gatekeepers that traditionally controlled access to music, video, and other media. Given the breadth of its impact, it is not surprising that the Internet has pushed the bounds of legal doctrines that govern speech, privacy, and the creation and exploitation of content. Mass-scale online distribution of copyrighted works tests the limits of legal doctrines developed in an era of physical copies. Age-old tensions between privacy and the right to free expression have been exacerbated in cases where one's right to speak bumps up against the desire of another to keep information private. And, the ability to share—and, thus, to consume—extraordinary amounts of personal data has impacted government (which collects and uses data for purposes of law enforcement) and private companies (which collect and use data for purposes of advertising and monetization). This seminar will provide an overview of legal doctrines that govern the online conduct of individuals and institutional actors. It will address the rights and responsibilities of the intermediaries that mediate many of our online activities – social networks, cloud-based storage services, email providers, and the like. Students will consider old and new

legal frameworks and the ways in which the law informs strategic decisions for those that operate online. The seminar will address some of the most important and complex policy debates of our day—regarding the proper scope of intellectual property protection; the balance between a robust environment for online free expression and a desire to protect against harmful speech; and the ways in which the law addresses privacy vis-à-vis both government and private actors. Readings and in-class conversations will cover legal cases and case studies, offering students a high-level view of the technical, legal, and business landscape and allowing them to delve deeply into particularly difficult sets of problems concerning the regulation of online conduct.

First Year Seminar 71C Section: 01

Law and Social Change: How Reform Movements Leverage the Law (205180)

Tomiko Brown-Nagin

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Legal realists and critical theorists have long argued that the law is a byproduct of society. "The life of the law has not been logic; it has been experience," Justice Oliver Wendell Holmes famously wrote. Focusing on the prospect of achieving racial justice through law, political science warned that law would never hover like a "protecting angel" over oppressed racial minorities. For it would always reflect the dominant social order and sympathy for outsiders should never be assumed. On the other hand, proponents of a Dynamic View of the U.S. Supreme Court argue that it has repeatedly been a catalyst of social change in the United States. Still others, asserting that the law is "everywhere," decenter the Court and focus on the myriad ways, direct and indirect, that law, broadly defined, can be a tool of change.

This seminar defines law broadly; and it considers the idea of experience—including events and people external to the legal system—affecting the law and creating social change. It discusses how social movements—groups of citizens mobilized in support of a cause—deploy the Constitution and other types of rights talk to "frame" disputes and move forward their agendas. Seminar participants will discuss how movements crystallize grievances, mobilize supporters, demobilize antagonists, and attract bystander support by referencing constitutional rights and other ideas about law. It also considers the effectiveness of movements' legal strategies. The seminar considers these questions in relation to several well-known social reform movements—including abolitionism, the civil rights movement, the women's liberation movement, 20th century populism, MeToo, and Black Lives Matter—as points of departure for discussion.

Course Notes:

This is a Radcliffe First-Year Seminar and will include optional co-curricular activities related to the seminar topic. The seminar will be held at the Radcliffe Institute, Radcliffe Institute, Knafel Center 104, 18 Mason St

Zen and the Art of Living: Making the Ordinary Extraordinary (205217)

James Robson

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

This seminar explores the rich history, philosophy and practices of Zen Buddhism as it developed in China, Korea, and Japan. We will first consider the emergence of the Zen tradition out of the Buddhist tradition and then explore the full range of its most distinctive features (Zen monastic meditation), cultural practices (painting, calligraphy, and poetry), and radical—even iconoclastic—innovations (such as the use of kōans, which are seemingly nonsensical sayings that defy rationality). We will also critically evaluate some less well-known facets of the Zen tradition, such as gender issues, the veneration of mummified masters, and the question of how Zen was implicated in modern nationalistic movements in Japan during World War II. During the mid-20th century, Zen became a global phenomenon as Zen masters began to move around the world and introduce the practice of Zen meditation to those in search of religious alternatives to Western organized religions, rationalism, and materialism. Zen attracted the attention of writers, musicians, artists, and athletes. Why did Zen develop such a trans-cultural appeal at that moment in history? Why are there so many books with the title: "Zen and the Art of...."? Why do so many computer and tech companies have Zen in their names? How has Zen meditation fed into the current "meditation/mindfulness" boom? These are some of the questions we will explore in this seminar through readings, film screenings, museum viewings, and a visit to a Zen meditation center.

Course Notes:

This seminar will also include required film screenings, visits to the Harvard Art Museums and Boston's Museum of Fine Arts, and to the Cambridge Zen Center.

First Year Seminar 71G

Americans at Work in the Age of Robots and Artificial Intelligence (207507)

Benjamin Friedman

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Where will the coming generation of Americans (say, today's 18-year-olds) find jobs? And will the jobs be worth having? People have worried about losing their jobs to technology at least since the Luddites 200 years ago. In the aggregate, they have been wrong. The automobile put lots of stable boys and saddle makers out of work, but it created vastly more jobs making cars, and fueling them and repairing them, and it opened the way for whole new industries like roadside motels and restaurants. With robots increasingly performing the tasks once done by blue-collar labor, however, and computers and artificial intelligence now eliminating the need for many workers once thought to be immune because of their cognitive skills, today's technological threat seems different. It is no longer just the unskilled and undereducated whose jobs are at risk. Moreover, the challenge may be especially acute in America, where wages are far higher than in many other countries and an ever greater share of what we consume and invest not only can be provided from overseas but often is. Does the next generation of Americans, then, face a genuine threat from advancing workplace technology? If so, what are the dangers – not just economic, but social, political, even moral – to the country as a whole? Most important, what can we do about it?

Economists on Building a Better Society (207815)

Jason Furman

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0215 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This seminar will provide you with a broad perspective on the views that economists and economic thinkers have had on how to build a better society. We will discuss foundational questions including: (i) the role of individual freedom to make choices vs. the importance of public policy in helping people fully realize their potential, (ii) the ways that markets and governments succeed and fail, (iii) the downsides and upsides of economic inequality, and (iv) the degree to which we should think of people as behaving rationally or not. Each week we read a different book by an economist, often with contrasting perspectives on these issues, and discuss and debate the relevance of its arguments and how they shape our thinking about both economics and a broader set of questions we all confront in society.

First Year Seminar 71O

Patients and Physicians and Experience of Serious Illness, Death and Dying (207777)

Susan Block

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Sickness and death are universal human experiences. The COVID-19 pandemic has brought this reality home, in many difficult ways, to all of us over the past 4 years, but we all deal with loss and vulnerability, in ourselves and those we love, throughout life. Engaging with this human problem is often uncomfortable. Confronting loss and vulnerability creates many opportunities for us to grow, as individuals and as a society. Building on our collective experiences, we will examine our own perspectives and experiences with serious illness and death; examine the vulnerabilities in our health system and our society that also contribute to the challenges in dealing with serious illness and death; and seek to process these perspectives and experiences as a way of learning to live a more meaningful life, strengthening relationships, helping us be better caretakers of people we love, and of people whom we serve in a professional role. We will use our experiences and observations during the COVID-19 pandemic as one source of data to inform a larger understanding of how humans deal with loss and vulnerability by examining, from multiple perspectives, the social, cultural, psychological, economic, and spiritual factors that influence the experience of serious illness. The seminar will draw on core readings from the humanities, social sciences, and medicine, including numerous readings related to COVID-19 to deepen understandings of how people experience and live and die with a serious illness. Opportunities for discussion, reflection, live interviews, case analysis, and experiential exercises will take place in class.

Course Notes:

If circumstances permit, additional field learning opportunities (e.g., participation in hospital-based teaching rounds) will also be available outside of class.

Dilemmas in the World's Economy (212698)

Elhanan Helpman

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Standards of living vary greatly across countries, they rise fast in some and slowly in other. Economic growth has historically been related to the expansion of international commerce as well as industrialization and institutional reforms. How does a country's well-being and growth depend on its trade partners? Is globalization in the form of international integration desirable? Do all income classes benefit from globalization? What role do trade policies play in shaping the benefits and costs of globalization? We will discuss the historical evidence on economic growth, the expansion of commerce, and the evolution of

trade policies. We will also discuss the nature of these processes and the interdependence between them. Using this knowledge, we shall discuss the pros and cons of globalization and the tradeoffs faced by policy makers. These tradeoffs will be illustrated with contemporary policy debates concerning tariffs and free trade agreements. Finally, we will discuss the impact of globalization on inequality within countries and in the world economy.

Course Notes:

This seminar will meet for only 2 hours within the time block.

Rituals and Living the Good Life (212785)

Michael Norton

2024 Fall (4 Credits)

Schedule:

R 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

Why do we knock on wood for good luck? Why do we put birthday candles on cakes? Why do some cultures use black at funerals while others use only white? Why do teams perform team cheers before games? This class will explore the psychology of rituals – those odd, seemingly meaningless behaviors that research shows influence our psychology in profound ways, making the mundane meaningful: dull morning routines can instead get us "ready for our day" and rote work meetings can instead improve team cohesion and performance. We will explore rituals in domains ranging from performance anxiety to team effectiveness, from enhancing consumption to improving health—in our daily lives, our work lives, and even when trying to cope with family during the holidays.

First Year Seminar 72D

Democracy and Education in America (216285)

Rob Willison

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Cheerful illusions and wish fulfillment have dominated both popular and scholarly thought about democracy for two centuries. Democratic theory has sailed along as if no iceberg had struck and the engine room were not taking on water...Our view is that conventional thinking about democracy has collapsed in the face of modern social-scientific research.

(Achen and Bartels, *Democracy for Realists*, 2010)

Democracy is in crisis. The problems we face—pandemic, environmental destruction, economic and technological upheaval, global migration—are far too complex for the average citizen to grasp in detail. Meanwhile, the tools of disinformation and manipulation are more powerful than ever. Set aside, for a moment, any default faith in democracy you've grown up with: do you really believe you can trust your fellow citizens to make wise decisions about how to approach these issues? In this seminar, we'll put to the test the most powerful answer to such worries that democracy's defenders can offer: education. If we are not now the well-informed, open-minded, scientifically literate, engaged citizens that a healthy democracy requires, can our educational institutions be designed to bring us sufficiently close to that ideal? Or, as so often seems to be the case in contemporary America, are our schools doomed to reproduce the divisions and inequalities that they inherit? To address these guiding questions, we'll attack philosophical questions about the very nature of democracy and human cognition, and draw on the best research contemporary social science has to offer. Our companions in inquiry will be some of history's greatest theorists of education—Plato, Dewey, Freire—but also leading thinkers of today (many of whom are members of Harvard's faculty): Susan Carey, Danielle Allen, Daniel Koretz. By the seminar's end you'll make your own original contribution to this collective intellectual effort by completing, in collaboration with your classmates, a project of your own design.

First Year Seminar 72I Section: 01

Everyday I'm Hustlin': Pop Culture, Youth, and the African City (217842)

Daniel Agbibo

2025 Spring (4 Credits)

Schedule:

R 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Cities today face broad challenges ranging from public health emergencies (e.g. Covid-19), to anti-police brutality protests (e.g. #ICan'tBreathe), and unemployment. Stuck in a frustrating period of "waithood" or waiting for adulthood, urban youths in Africa are increasingly devising enterprising ways to improvise their livelihoods and assert their right to the city. One creative way in which youths are responding to everyday uncertainty and frustrations is through the power of pop culture, which includes creating new artistic, musical, performance, and fashion forms that extend across and beyond African cities. Consider, for example, the cross-cultural power and global appeal of Afrobeats. Notable American musicians, from Beyoncé to Pharrell Williams and Chris Brown, are fast integrating African pop music into their sounds as part of the upward trend of the "Afro-Cool" in the United States. This, of course, raises important questions about the boundaries between what is cultural appreciation and what is cultural appropriation.

In this seminar, we ask: In the face of the contradictions of modern city life in Africa, in which people's opportunities and expectations are simultaneously broadened and constrained, how do young people fashion new ways of being and interacting with society? In what ways can crisis become opportunity? To address these questions, we will watch films, listen critically to music, analyze written texts, take virtual tours, and visualize fashion and popular art forms that shed new light on the "hustle economy" in urban Africa, its relationship with pop culture in American cities, and the innovative ways in which young people are making their voices heard in the city.

First Year Seminar 720

Political Violence and Power (218503)

William Whitham

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

You were likely born after September 11th, 2001, the day of one of the deadliest terrorist attacks in world history. Since then, publics have often perceived terrorists as shadowy jihadis striking across state borders, armed with high-tech weapons and encrypted messaging apps. Yet political violence, practiced by the Zealots in the Holy Land two millennia ago as well as by white nationalists in contemporary America, is neither new nor foreign. What is political violence or "terrorism"? Why do people choose to use violence in pursuit of political change—and when, if ever, is that choice rational or justifiable? How do practitioners of political violence maintain organizations, forge transnational networks, exploit media attention, and (in some cases) come to power? And how can states prevent political violence, rather than foster it or even participate in it? In this seminar, we'll explore the ethics, psychology, and sociology of political violence over the past 150 years. We'll examine fin-de-siècle anarchists, communist regimes across Eurasia, German Nazism and Italian fascism, anti-colonial struggles in Algeria and Palestine, and the rise of jihadi networks and far-right "lone wolves." Students will read original historical documents, watch *The Battle of Algiers*, and familiarize themselves with social-scientific analysis. They'll debate contentious topics, cultivate empathy, and, in a final project, analyze a terrorist network, group, or regime of their choosing. Above all, they'll learn about the nature of power.

Corporate Power & Human Rights—Community Resistance and Social Movements (218514)

2024 Fall (4 Credits)

Schedule:

R 0900 AM - 1130 AM

Instructor Permissions: Instructor**Enrollment Cap:**

12

How do the seemingly most marginalized take on the most powerful corporations in the world and win? In this seminar, we will delve into this question and what drives community resistance and social movements in the face of frequently daunting odds. We will zero in on community resistance in its many forms when confronting abusive corporations and authoritarian governments often supporting them. Through case studies involving natural gas in Myanmar, gold mining in Papua New Guinea, and chocolate in West Africa, we will discuss both the harms communities experience and how communities can have a seat at the table to demand their rights and take on oppressive systems. We will also look at how North America is implicated in these cases and consider the power dynamics between communities, advocates, businesses, and states that span borders and different cultures. We will also look at ways that communities can build their own power through the solidarity economy and how advocates cannot only combat economic injustice but build their visions of economic justice for the future.

First Year Seminar 72U

#Adulthood: Social Science Perspectives on the Transition to Adulthood (220196)

Nancy Hill

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

Debates about when adolescence ends and adulthood begins often lead to judgements about how long youth today are taking to reach adulthood and uncertainties about what it means to become an adult. The transition from adolescence to adulthood is often fraught with anxieties about realizing one's dreams, getting into college, succeeding in the job market, and finding a life partner. Have the definitions and markers of adulthood changed across generations? Should these conceptualizations change or adapt to the times? Are young people today trapped in an extended adolescence? Some experts and the popular press contend that young people today are coddled and more resistant to growing up than were those who came of age a generation or more ago. Conversely, other experts and many young adults today find that growing up is harder—harder to launch a career, burdened by student loan debt, harder to find a compatible life partner—in general, harder to achieve the life their parents have. Amid these debates, it is unclear what is meant by adulthood and whether it can or should be defined by the same markers as have been used in the past. Today's young adults are charting their own path...or are they?

In this seminar, students will define and redefine adulthood based in multiple contexts, considering catalysts and impediments on the pathway to adulthood. Using a historical lens, we will examine and understand the contexts that elicit longer and shorter pathways to adulthood, including the role of the economic context, educational and occupational opportunities, gender, and the need to co-construct adulthood with others. Whereas societal factors are often considered contextual, this seminar focuses on societies as active agents in shaping adolescents' beliefs about adulthood and struggling with and sometimes against adolescents as they navigate their place as adults. This seminar takes a global lens and focuses on the ways in which the transition to adulthood is a dynamic and co-constructed concept and will

aid students in developing an integrative understanding on societal needs and pressures and young adults' tools in navigating the path to adulthood.

First Year Seminar 72W

Is Privacy Dead? Privacy, Surveillance, and Freedom in the Digital Age (220244)

Lowry Pressly

2024 Fall (4 Credits)

Schedule:

T 0300 PM - 0515 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Suppose that someone is listening to your phone calls and reading your emails, but you never find out and your life is never affected. What reason do you have to complain? Does it make a difference if it's a neighbor, a lover, the state, or an algorithm listening in? What if you are the one posting the information on Facebook? Do we have a right not to be tracked, photographed, or surveilled in public? In this seminar, students will examine these questions and many more having to do with the value of privacy in the digital age. They will have the opportunity to develop their own answers by drawing on a field of theories about privacy, anonymity, and surveillance, and they can expect to leave the seminar with a better view of the ethical and political problems facing their own era of technological change.

This seminar will serve as an introduction to the wide range of ethical and political questions concerning privacy and technology, as well as an introduction to the practice of philosophy. We will take an interdisciplinary approach to questions of privacy, surveillance, and freedom in the digital age, with readings drawn from moral and political philosophy, computer science, sociology, law, media studies, and the arts. Assessing what others have said and thought about privacy (writ large) will be important in developing our own views. Just as important, however, we will refract these arguments and observations through our own experiences with concealment and exposure, letting the theory inform our lives and vice versa. This is what I mean when I say this seminar will offer an introduction to the practice of philosophy. Students can expect to see improvement in their skills of critical reasoning and argumentative writing, and to take away from the seminar a sharpened faculty of moral vision.

Course Notes:

This seminar will begin at 3:15pm.

First Year Seminar 72Z

Oil and Empire (222106)

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

What is the relationship between oil and empire? How has control over oil—the single most important commodity in the world—shaped the nature of power, politics, and environmental and social life in the twentieth century? How have different disciplines contributed to and at times undermined a critical understanding of oil politics? This interactive seminar will address these and other questions by examining the political, social, material and cultural history of oil. Given the centrality of oil to modern life, control over this prized resource has resulted in a complex and often violent history. We will thus look at the ways in which the political economy of oil has shaped the rise and fall of empires, the fate of nation-states, the making of the economy, the nature of class, gender, and racial discrimination, and the production of historical knowledge and the built urban environment. By moving between primary source documents and films, novels, multi-disciplinary scholarly analyses, in-class discussions, and written assignments, students will learn to be principal investigators and thereby sharpen their own critical interpretive abilities. While this seminar will address global trends and processes, the primary focus will be on the Middle East.

First Year Seminar 73C

Race Science: A History (222107)

Alejandro de la Fuente

2024 Fall (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

12

"Race," most social scientists and well-informed people agree, is a social construction with no basis in biology. It is an invention, a political instrument of power and subordination, deployed to naturalize social hierarchies. Yet "race" and racially based understandings of human difference continue to shape how we identify, classify, and group individuals. Scientific studies in various fields, from medicine to psychometric assessments of intelligence, continue to gather racial information for research purposes. Claiming strict adherence to data and the truth, some of these studies conclude that because of evolutionary and environmental influences, human groups are in fact different and that those differences are grounded in biology.

In order to engage this body of knowledge critically, it is indispensable to examine the central claims of this "science," how such claims have evolved over time, and their policy implications. To start, should scientists even study "possible links between race, gender, and intelligence," as a top scientific journal, *Nature*, asked in 2009?

Our seminar studies the development of "race science" from the 18th century to the present. Using a variety of primary and secondary sources, we examine the research questions pursued by these scientists, their possible merits, and policy implications. We will devote special attention to the emergence of eugenics, the science of "racial improvement," in Europe and the United States, and its tragic development in Nazi Germany. The final segment of the seminar looks at scientific racism after World War II and to the possible connections between race and recent genomic research.

First Year Seminar 73D Section: 01

The Wedding Complex: Race, Gender, and Sexuality in Love and Marriage (222109)

Caroline Light

2024 Fall (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

Getting married demands a significant investment of cash, time, and energy. Couples buy engagement rings (expected to cost one month's salary), dresses (that can range from \$1,000 to tens of thousands) and hire planners (often ranging \$1,000-2,000) to create their "dream wedding," an occasion for celebration and Instagram-ready spectacle. But what does this magnificent pageant of consumption and revelry conceal, and what histories and power structures lurk just beneath the surface of hand-crafted floral arrangements, lavish buffets, and frothy textiles?

This seminar peeks behind the silk chiffon and taffeta to explore the less-romantic underside of a national obsession with weddings, to see the complexities of an estimated \$43 billion industry in which the average cost of a wedding is over \$27,000. We will explore the history of American marriage as an institution that consolidates power, from the laws of coverture that rendered married women the property of their husbands, to anti-miscegenation laws that prohibited "race mixing," to contemporary debates over marriage equality. We will unpack the obsession with "plantation weddings," where rituals of romantic love and Southern nostalgia take place on grounds where enslaved people experienced relentless violence and for whom marriage was an elusive and tenuous privilege. We will also explore whiteness as a symbol of feminine chastity; the proliferation of reality TV shows featuring brides transforming their bodies to fit the "perfect dress"; and the multiple layers of commodity fetishism that influence what we envision as the "perfect wedding."

First Year Seminar 73E

Ancient East Asia: Contested Archaeologies of China, Korea and Japan in the Media (222108)

Rowan Flad

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

How is our understanding of the past, and of scientific discovery in general, determined or framed by the concerns of the present? How does popular media cover scientific research about the past? How do

ingrained social biases affect this media coverage? This seminar considers these questions through a focus on Ancient East Asia. In the process, we learn about the origins of the people, cultures, and civilizations of this region, but our primary focus is not historic details, but instead examining how the varied and complicated histories and relationships among people and societies in the modern Nation-States of China, Korea, Japan and other nearby countries are understood through archaeological practice in the present. In particular, we will focus on the media coverage of archaeological finds and investigate how well popular media coverage aligns with the scientific results that are discussed by researchers.

Course Notes:

There will be required trips to museums during the course of the term.

First Year Seminar 73F Section: 01

Socialism (222542)

Stephen Marglin

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Does socialism have a future?

After the collapse of the Soviet Union, the embrace of the market by China, and the definitive turn of the Western European Left towards accommodation with the existing capitalist order, socialism was consigned to the dustbin of history. Only to rise from the dead: according to a 2022 Pew Research poll, more young Americans have a favorable view of socialism (44 percent) than of capitalism (40 percent).

This seminar will address the future of socialism by interrogating its past. What is socialism? How has its meaning changed over time? Why did the reality of socialism, particularly in the Soviet Union, turn out so differently from its promise of abundance, harmony, and freedom? How does Marx's vision of history figure into the socialist project? What assumptions about human beings underlie the conviction that socialism would constitute progress? What are the assumptions that suggest that socialism would be destructive? Are smaller scale cooperative enterprises feasible alternatives to capitalism?

First Year Seminar 73G Section: 01

The Emotions—How do they arise? How can (and should) we manage them? (222555)

Susanna Rinard

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Emotions are central to our lives as human beings. Strong emotions (both our own, and other people's) are often involved in both the best and the worst times of our lives. In this seminar we will ask questions like the following: Where do emotions come from? How do they arise, and to what extent is it possible for us to exercise agency over the existence and expression of our emotions? Are emotion categories like anger universal, or culturally relative? Is there something that all instances of anger (for example) have in common, or does "anger" encompass a diverse range of states and experiences? Is there a single basis for anger in the brain? Is it possible that we can create an emotion in ourselves by ascribing that emotion to ourselves?

For help answering these and other related questions, we will turn to three sources, considered in rotation, to help us construct a dialogue between these authors as they develop their ideas. Brene Brown, in "Atlas of the Heart," surveys the incredible complexity of human emotion and offers advice on managing these emotions. Lisa Feldman Barrett, in "How Emotions Are Made," describes surprising results from neuroscience that contradict folk common sense about the nature of emotions and how they come about. Jean Briggs, in "Never in Anger," describes a way of life in which the categorization and expression of emotion is very different from certain other cultures.

First Year Seminar 73H

From Gods to Satire: Artistic Engagements With Political Power (222634)

Shai Dromi

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0530 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

In this seminar, we will explore the fascinating ways in which art has been used to express, critique, and reflect upon political power. From depicting rulers as gods to using comedy to criticize leaders, we will delve into the visually striking ways societies have grappled with their political systems through art.

We will meet at the Harvard Art Museums' Art Study Center, where we will take advantage of the Museums' vast collections. Each week, we will explore different artworks and analyze them in their national and political contexts. We will also read sociological literature that will help us make sense of these works and dive into the Harvard Art Museums' archives to gain a deeper understanding of their social and political contexts. We will see how the engagement between art and politics brings to light core aspects of national identity, belonging, memory, and resistance. The seminar will include visits to the Harvard Memorial Church and the Ethelbert Cooper Gallery of African & African American Art, which will help us gain a broader understanding of the cultural and political context of art.

Through this seminar, students will discover the power of art in civic dynamics and gain a new perspective on the complex relationship between art, society, and politics.

First Year Seminar 73I

On Anarchism and Prison Abolition (223850)

Walter Johnson

2025 Spring (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

12

This seminar will introduce students to some classic texts in the history of anarchist political philosophy (Garrison, Tolstoy, Kropotkin, Bakunin) and then follow those threads of thought forward to the history of the prison abolition movement in the United States. Doing so will involve attending to both the influence of late nineteenth- and early twentieth-century anarchists (especially Emma Goldman and Lucy Parsons) and the ways that their thought and practice – even when not explicitly identified as "anarchist"—has shaped recent movements such as Occupy and especially Prison Abolition.

First Year Seminar 73J

Islands and Experiments (222834)

Usha Rungoo

2025 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

PLEASE NOTE: THIS SEMINAR HAS BEEN CANCELLED.

Writers like Shakespeare and Daniel Defoe and philosophers like Denis Diderot imagined alternatives to their society via social experiments on islands. Science fiction writer H.G. Wells, in his *Island of Doctor Moreau*, described a "mad scientist" experimenting on human-animal hybrids in a closed-off island far from the eyes of the world. Outside of the fictional and philosophical realm, islands were and are positioned as sites of experimentation. Eighteenth-century scientists circumnavigated the world to observe the transit of Venus from the island of Tahiti and Charles Darwin's research on the Galapagos contributed to his theories on evolution. More sinister is the history of forced migration experiments to islands. In 1940, the Nazi government in Germany proposed to relocate the Jewish community of Europe to Madagascar. About a century before, when slavery was abolished, the British empire found a replacement for labor in Asian indenture, and designated Mauritius to be the first test site for what it called Britain's "mighty experiment".

The Transatlantic slave trade itself had its first iteration in Hispaniola (now Haiti and the Dominican Republic). To this day, islands continue to be used as natural laboratories. Islands are considered small, naturally delimited by the sea, and isolated; for these reasons, experiments and events are thought to be easily observed and controlled, without consequences on "civilization". For years, the US and France conducted nuclear tests on Bikini and French Polynesia respectively; islanders and island ecologies are still bearing the heavy consequences of irradiation and radioactivity.

Students will reflect on how islands came to be viewed as spaces of "anything-goes" experimentation, by considering various texts, graphic novels, children's tales, short stories, novels, films and television series, advertisements, brochures, maps, paintings, even diplomatic and military cables. Activities will include visits to archives and collections at Harvard libraries and museums, a trip to Harvard's Arnold Arboretum, and a visit from Shenaz Patel, the author of Silence of the Chagos, an assigned novel for the seminar.

Students will be exposed to a variety of materials around the topic "islands and experiments", and will be asked to reflect on the ethics of experimentation on and of islands and the consequences on human life and the environment. They will further be invited to consider "islands and experiments" from a personal perspective. Are universities an island? Are campuses and residential houses? Can other spaces be considered islands? What are the parameters of these islands and the consequences on its community and the broader community?

Folklore & Mythology 97

Fieldwork and Ethnography in Folklore: A Tutorial in Cultural Documentation and Community Engagement (134893)

Sarah Craycraft

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 10

This tutorial introduces students to the study of cultural traditions, beliefs, and artistic expressions—their performance, collection, representation and interpretation—through the practice of ethnography. Both ethnographic and theoretical readings serve as the material for class discussion and the foundation for ethnographic fieldwork.

At once a crash course in ethnographic theory and ethics, and a practicum in qualitative methods, FM97 weds scholarly inquiry and academic study to practical experience in cultural documentation and personal involvement with local tradition bearers and folk communities. Guided by an interdisciplinary collection of texts, students will have the opportunity to study folklore from the ground up, not only through an academic lens, but through personal relationships, cultural participation, and inquisitive explorations of local communities. Throughout the semester you will be invited to develop skills in qualitative research, cultural documentation, proposal design, interviewing, and the arts of interpretation as you try your hand at fieldwork and ethnography. By examining folkways, expressive culture, traditions, and performances, and interrogating their import in the daily lives of individual and groups, we will aim to bridge the divide between grand theories and everyday practices, between intellectual debates and lived experiences, between the academic institution and the vernacular world. Ultimately, this course aims to bring "the folks" themselves into the center of the academic study, discussion, and debate. And it aims to give you the tools to help amplify and illuminate their voices, traditions, practices, and lore.

Course Notes:

Required of all concentrators, but open to all.

Folklore & Mythology 98A

History and Theory of Folklore and Mythology (115032)

Stephen Mitchell

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Are the myths of a society comparable to the dreams of an individual? Do all of a region's fairytales derive from a single plotline? Why do UFO abduction accounts sometimes show similarities to earlier elf and fairy lore? Can we reconstruct any of the narratives our ancestors told before the last ice age?

Folklore, mythology, and oral literature are mysterious areas of study; some of the most pressing questions these topics pose remain as open today as when they first began to be researched. In this course, we equip ourselves to explore such questions anew by tracing the development of major theoretical orientations in our field. While the course will focus primarily on contributions dating from between the late-19th and late-20th centuries, some attention will also be devoted to theoretical approaches currently in the process of being born.

Folklore & Mythology 100

Introduction to Folklore & Mythology (141676)

Sarah Craycraft

Stephen Mitchell

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0130 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces both the discipline and "stuff" of folklore (traditional, expressive culture), examining the ways in which traditions are performed and made meaningful in everyday life. Our readings, lectures, and class discussions will explore a range of questions, such as what is folklore? Who has folklore? Is folklore old? Who are the folk? Who do cultural traditions belong to? Etc. Students will leave this course with a keen eye toward the different folklore forms, or genres, through which we build community and express group identity(s); a robust understanding of interactions between everyday/unofficial/vernacular culture and official/institutional culture; a firm grasp on the role of cultural heritage in local, regional, and national identity building; and a hearty set of interdisciplinary tools for documenting and studying folk groups and their traditions.

Folklore and Appalachia (222850)

Sarah Craycraft

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

From moonshine and bluegrass to Lil Bubby Child memes, Latine music, and Affrilachian folk reporting: This course explores Appalachia through the region's folklore as well as the ways that folklore has constituted Appalachia as an imagined American region. Designated a federally recognized region as recently as 1965, Appalachia has long been romanticized as America's authentic "other." We will explore the many genres that make up Appalachian folklife as well as consider folklore's role in shaping portrayals

of Appalachia. We'll also think about the ways that insider-outsider relations impact representations of the region. Discussions will explore issues such as cultural staging in Dolly Parton's Dollyworld, the commodification of Mothman, and the use of folklore as a form of "back talk" in response to outsider portrayals of the region as backward, homogenous, and unchanging. Our course will also consider the ways Appalachian folklore links the region transnationally, engaging with comparative cases like the Carpathian Mountain communities, the Czech bluegrass scene, and Welsh coal communities.

Quilts and Quiltmaking (127859)

Felicity Lufkin

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Are quilts the great American (folk) art? From intricately stitched whole-cloth quilts, to the improvisational patchworks of Gee's Bend; from the graphic simplicity of Amish quilts to the cozy pastels of depression-era quilts; from the Aids Quilt to art quilts; quilts have taken on extraordinary significance in American culture. This class surveys the evolution of quilt-making as a social practice, considering the role of quilts in articulations of gender, ethnic, class and religious identities, and their positions within discourses of domesticity, technology, consumerism, and cultural hierarchy.

Tattooing has been practiced in many different social and cultural settings, in many different time periods, to different ends. In the United States, tattooing was long associated with marginalized and stigmatized groups, but since the 1970s, has become increasingly popular and even mainstream. This seminar style class will explore distinct regional histories of tattoo, the development of tattooing in the US, and the different ways that contemporary tattoo practitioners situate themselves historically and negotiate boundaries of race, class and gender. We will also consider tattoo as an art form that both invites and resists aesthetic judgments.

Stories from the End of the World (212765)

2025 Spring (4 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

How can and should we live at the end of the world as we know it?

Humans seem to have always imagined the end of their world order. It appears that, without the "sense of an ending," not only artistic production, but also individual and social lives cannot be made coherent and effective. Fantasizing about the apocalypse is something that many people in the US and almost everywhere else in the world used to do on a daily basis either by watching their favorite shows on TV, by playing videogames, or by listening to political speeches. Of course, in 2020 all this has become not only fictional anymore due to the tragedies and disruptions brought about in our daily life by the Covid-19 pandemic: we truly live in a post-apocalyptic world. But it is worth remembering that many experienced such a condition even before 2020 and we can learn from their reflections and imaginations how to live the apocalypse.

This course will start from these observations to ask why imagining the end is so pervasive in contemporary cultures, what ethical choices are put in front of us "at the end of the world as we know it", and how we can analyze critically where apocalyptic images are coming from and how they are used in contemporary conversations.

Imaginations of the end have their roots in a literary genre that is often called "apocalyptic" and has been alive and productive since antiquity. The course will look at this historical trajectory, but most of the work will be focused on contemporary cultural products, such as movies, short stories, songs, art, comic books, videogames, and so on. The products of writers, filmmakers, and artists will be analyzed and observed as thought experiments and "revelations" about the incoming end and its aftermath. Much of this work will be carried out in collaboration with the Harvard Art Museum and through the participation of writers and artists as guest lecturers and interviewees.

Thus, students will be asked to observe how thinking about a catastrophic future is actually a means to reflect about the present, by identifying whether humans are doing something wrong, whether they have any chance to correct their mistakes, or what strategies can be deployed to face with resilience the aftermath of the end. In this perspective, for instance, God, aliens, or meteorites are metaphors representing our powerlessness, while sins, zombies, or climate change are wake up calls for humankind. "Prophets of doom" can be channels of liberating and progressive energy, but can also become instruments to set up for destruction people who look and act differently. Apocalyptic scenarios almost always distinguish humankind in the two opposed camps of those who are saved and those who are condemned, but in more modern apocalypses the Enemy (like the biblical Antichrist) looks more and more undistinguishable from our own selves.

Ultimately, the course will ask you to reflect about your own fantasy of the end and write (or photograph, or sing) it.

Contemporary Developing Countries: Entrepreneurial Solutions to Intractable Problems (107464)

Tarun Khanna

Satchit Balsari

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How do you successfully design and implement solutions to intractable social and economic problems in the developing world?

What problems do developing countries face, and how can individuals contribute to solutions rather than awaiting the largesse of the state or other actors? Intractable problems – such as lack of access to education and healthcare, forced reliance on contaminated food, deep-seated corruption – are part of the quotidian existence of the vast majority of six of the world's eight billion people. Developing societies suffer from what we refer to as 'institutional voids' that make organized activities of all sorts difficult; think of the mundane but important physical infrastructure that allows us to get to work or school in the developed world, as well as our access to higher-order institutions such as the availability of information at our fingertips or the security of the rule of law. The course demonstrates that reflecting upon the nature of the developing world's intractable problems through different lenses helps characterize candidate interventions to address them. The scientist's hypothesis-driven and iterative experimentation, the artist's imagined counterfactuals through putting oneself in others' shoes literally and theatrically, and the planner's top-down articulation of boundary conditions, all tailor the ultimate solution.

What are individuals, scientists, businesses, and governments morally required to do to prevent catastrophic climate change?

How should governments respond to the problem of climate change? What should happen to the level of greenhouse gas emissions and how quickly? How much can the present generation be expected to sacrifice to improve conditions for future generations? How should the costs of mitigation and adaptation be apportioned between countries? Should significant funds be allocated to the study of geo-engineering? We will consider these and other questions in an effort to understand our responsibilities in respect of climate change, with a special focus on the structure of the analytical frameworks that have been dominant among policymakers.

The relationship between human beings and Earth is the central problem of our time; can an understanding of Earth's history reveal a place for us in a process of planetary evolution that might influence our behavior?

The aim of this course is to place human beings in a universal and planetary context. You will learn where we come from beginning with the Big Bang and ending with modern human civilization and our relationship to the planet from which we have evolved and on which we depend. You will understand the factual evidence for the Big Bang, the origin of the elements, plate tectonics, evolution and climate change. From this story a process of planetary evolution emerges and we will consider whether this process is likely to be common or a unique accident. Earth history has been punctuated by a series of revolutions where the planet molts to a new level of functioning. Viewed in this context, human civilization is the latest molting of the planet, giving Earth the possibility of a conscious presence to itself and in the galaxy. Are we as human beings an agent of planetary evolution, or instead a parasite or cancer to planetary systems? This question provides a novel perspective on current environmental problems and how we might deal with them, and moves the question from technology to personal philosophy and behavior. It also casts a different light on the likelihood of alien civilizations and whether we need to fear them. Climate change is seen in a much broader perspective of the relationship between people and Earth, and how our personal behavior is not trivial, but central. Readings include the book *How to Build a Habitable Planet*, short recorded lectures to deliver the scientific content, and discussion sessions each week to address any difficulties and explore the broader implications for human beings of what we are learning. At the end of this course, you will have a greater understanding of the past, present, and future of the planet we call home, and the planetary consequences of your life decisions.

The Caribbean Crucible: Colonialism, Capitalism and Post-Colonial Misdevelopment In The Region (118290)

Orlando Patterson

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

109

How does the growing inequality between and within nations—which is the major global issue of our times—impact the Caribbean region and, in turn, its U.S. neighbor?

This course explores the complex, formative role of the Caribbean in the development of Western colonialism and capitalism and the consequences for the peoples of the region. Four major themes will be examined. First, the importance of the region in the origin and early development of Western imperialism and capitalism: Why did both Western Europe and America begin their imperial and colonial expansion in this region and to what degree did the region's slave-based economies influence the nature and development of Western capitalism? Second, what were the consequences of imperialism for the demographic and socio-cultural fate of indigenous and African populations? Is genocide a proper designation of the fate of exploited peoples of the region up to the end of the period of slavery? Third, we examine the post-colonial consequences of this history for the socio-political, economic and cultural development of the region. What have been the main paths toward sustainable development in the modern Caribbean? Why in spite of its long history of engagement with Western capitalism, has the region largely faltered in its efforts to develop? We examine the different paths to development through five case studies—neo-colonial dependency in Puerto Rico, communist dependency in Cuba, democratic socialism in Jamaica, Barbados' neo-liberal strategy, and aid-dependency in Haiti. We also study the common problem of migration and transnationalism and the degree to which this process undermines national sovereignty. Fourth, we explore the distinctive features of racial classification and cultural representations in the Caribbean. What do we learn about race as a social construction from the Caribbean experience? How do Caribbean racism and colorism unsettle American notions of race and ethnic identities? Why has globalization not led to cultural homogenization? How do we account for the unusual influence of Caribbean music, especially that of Jamaica, on popular global culture?

Security (108398)

2025 Spring (4 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap: n/a

The term "security" has enjoyed a complex and ambivalent career. Broadly defined as a "removal of care," security leaves its subjects either carefree or careless. Pursuing an itinerary from the Stoics to psychoanalysis, from international relations to feminist theory, the course draws out the ethical implications of the persistent concern to be free of concern. Does "security" make us vigilant or negligent, confident or complacent? Does it promote more fear than it assuages? Is a security purchased with freedom or human rights morally viable? Such questions broach a more informed, nuanced, and critical engagement concerning our civic, professional and personal lives.

Vision and Justice: The Art of Race and American Citizenship (203077)

Sarah Lewis

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

60

How does culture—from images of racial violence to Confederate monuments—determine who counts and who belongs in the United States?

This course is organized around a guiding question: How has visual representation both limited and liberated our definition of American citizenship and belonging? Today, as we are awash with images, and as social media has allowed us to witness racially motivated injustices with a speed unimaginable until recently, we have had to call upon skills of visual literacy to remain engaged global citizens. This course will allow us to understand the understudied historic roots and contemporary outgrowth of this crucial function of visual literacy for justice in American civic life.

Sequenced chronologically, the lectures are organized into three parts, examining the role of visual representation as Civic Evidence, as Civic Critique, and as Civic Engagement (i.e. movement building and solidarity). Exploring these three categories in turn, topics include: the role of aesthetics for the invention of race, narratives supporting and critiquing Native American "removal," the abolition of transatlantic slavery, immigration, the creation of and destabilization of U.S. segregation, the New Negro Movement, Japanese Internment, and the long Civil Rights movement. Each lecture centers on case studies to show the historic roots of the contemporary interplay between visual representation and justice at these inflection points in the contestation for citizenship in America.

We are fortunate to have invaluable holdings at the Harvard Art Museums and at the Peabody Museum and via Cooper Gallery exhibitions that vividly showcase this contested relationship between art, justice, race, and culture over the course of the nineteenth, twentieth, and twenty-first centuries. Lectures will incorporate material from these holdings and sections will meet at these locations to facilitate object-based study. This course will also include guest lectures from architect Michael Murphy and artist Theaster Gates. Students will leave the course having developed rigorous skills of visual literacy and critical analysis foundational to be engaged global citizens regardless of their concentration or future field of study.

Fake news, echo chambers, conspiracies, propaganda, information pollution--what are these and other features of the post truth era and how can we successfully navigate them?

Is truth dead? Time Magazine posed this question in bold red print on its April 3, 2017 cover. It's a surprising concern, given that information of every sort imaginable is merely a click away on our phones, access to educational resources is robust for both traditional students and online learners, and direct interaction with public figures is more unencumbered than ever before with the help of social networks. Yet we nevertheless find that "alternative" facts regularly compete on equal footing with actual facts, fake news beats out mainstream news, and expert knowledge is sidelined for gut hunches and whatever feels correct. Such is the so-called post-truth age. Can our democracy survive it? Contrary to what many of you may think, it's not obvious that it can. Perhaps even more surprising, if it can survive, it may only be by way of the much-maligned practice of politics. In this course, you'll interrogate the post-truth age, primarily within the American context, through an interdisciplinary engagement with epistemology, political philosophy, media studies, and the behavioral and social sciences.

How and why did humans evolve to be the way we are, and what are the implications of our evolved

anatomy and physiology for human health today? How can we use principles of evolution to promote health and prevent disease?

To address these questions, this course reviews the major transitions that occurred in human evolution, from the divergence of the ape and human lineages some 8 million years ago to the origins of *Homo sapiens* about 300,000 years ago. We also consider the many health effects of the recent cultural and technological transitions from hunting and gathering to farming and then to industrialization.

Finding Our Way (126603)

John Huth

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

How do you navigate our increasingly automated culture? In this course, we will use the theme of primitive navigation to open our eyes to the physical world in a direct and palpable manner. Basic principles include human cognition of physical and mental maps, dead reckoning, direction finding from nature. The course includes the basics of astronomy, including planetary orbits, meteorology, thermodynamics, bird behavior, electromagnetic radiation, optics, waves, tides, ocean currents, and fluid dynamics. Navigational practices of Pacific Islanders, Norse, medieval Arabs, and early western Europeans provide a focus. Main themes of the course will include automation bias, spatial cognition as a template for other forms of cognition, and reasoning when there is no 'right' answer. Some facility with algebra and trigonometry is useful. A series of hands-on projects are employed to understand navigational practices discussed in lecture.

What makes some texts long-lived while others are ephemeral, today and in the past?

Description: We live in a moment of "crisis" around regimes of preservation and loss. As our

communication becomes ever more digital— and, therefore, simultaneously more ephemeral and more durable—the attitudes and tools we have for preserving our culture have come to seem less apt than they may have seemed as recently as a generation ago. This course examines how texts have been transmitted from the past to the present, and how we can plan for their survival into the future. We will examine what makes texts durable by considering especially the media by which they are transmitted, the changing cultural attitudes toward their content, and the institutions by which they are preserved. The European Renaissance will provide a central case study. During this period scholars became aware of the loss of ancient texts and strove to recover and restore them insofar as possible. These interests prompted new developments in scholarly conservation techniques which we still value today (philology, libraries, and museums) but also the creation and transmission of new errors, ranging from well-intentioned but overzealous corrections and "improvements" to outright forgeries. What can the Renaissance teach us about how to engage productively with these problems, both as the source of our current attitudes toward preservation and loss, and as a case study of another culture dealing with anxiety over preservation and loss? Ultimately, we hope that students will be able to think productively about preservation in the past and in the future, while recognizing that all preservation inherently involves some kind of transformation.

Great Experiments that Changed Our World (212854)

Philip Sadler

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

50

In what ways does reliving 10 groundbreaking scientific experiments teach us how our own efforts can remake the world?

Facing the edifice of preexisting knowledge, how are breakthrough scientific discoveries made that contradict the existing canon? Ten great experiments that have transformed our understanding of nature will guide us, first through immersion in the scholarship and popular beliefs of the time. Next, how did the discoverer prepare? What were the motivations, prior experiences, and training that led to the threshold of a fruitful advance? Then, to the degree possible, we will carry out the exact same investigations, building our own simple equipment from scratch, duplicating the challenges of wresting patterns from noisy and incomplete data. Students will compare their results to both private and published versions of the original research. The course will examine the magnitude of the cognitive shifts experienced and the often uphill battle to acceptance. We will build an understanding of the nature of scientific progress, examining how the mastery of natural phenomena leads to new technologies and how these can contribute to further scientific discovery.

Experiments are drawn from the natural sciences, ancient to modern, from Eratosthenes measuring the earth's size to Rosalind Franklin determining the structure of DNA. We will consider how these discoveries continue to impact society, as well as the many ethical questions raised. The course will examine the difficulty of accepting new experimental evidence falsifying accepted scientific paradigms and how this remains an issue that plays out in current society. By unpacking these 10 experiments, students will be able to better prepare for their own future discoveries and contributions.

60

Who are we, how did we get here... and how far back in time do we have to go to start asking the question?

When does history begin? To judge by the typical history textbook, the answer is straightforward: six thousand years ago. So what about the tens of thousands of years of human existence described by archaeology and related disciplines? Is that history too? This introduction to human history offers a framework for joining the entirety of the human past, from the long ago to the present day, in a single narrative that stretches across many disciplines. We will explore a series of interrelated themes each of which invites questions that travel across time and space. The material presented through lectures, discussions, and activities will not only guide students through a collaborative exploration of human experience, but will also encourage them to contemplate how such experiences mirror and contrast with

their own. To help anchor ourselves in the timeline of past and present, we will engage with the world-class collection of artifacts in Harvard's museums, giving students a unique, hands-on opportunity to experience human history through material remains. Course notes: No prior college-level course in archaeology, history, or a related field is required or assumed, and First-year students are welcome. Because the course touches on ideas in many disciplines beyond history and archaeology, including art, economics, human evolutionary biology, psychology, and religion, we welcome a range of students who can bring unique perspectives and expertise to class discussion.

Evolving Morality: From Primordial Soup to Superintelligent Machines (203129)

Joshua Greene

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How can we understand the evolution of morality—from primordial soup to superintelligent machines—and how might the science of morality equip us to meet our most pressing moral challenges?

In this course we'll examine the evolution of morality on Earth, from its origins in the biology of unthinking organisms, through the psychology of intelligent primates, and into a future inhabited by machines that may be more intelligent and better organized than humans. First, we ask: What is morality? Many people believe that morality descends from above, as divine commands or as abstract, timeless principles akin to mathematical truths. Here we take an empirical approach to morality, viewing it as a natural phenomenon that rises up from below—born of the strategic interactions among lifeforms and societies struggling to exist. Next, we take a scientifically informed look at the foundational questions of moral and political philosophy. Many people believe that the "is" of scientific knowledge has nothing to do with the fundamental "oughts" of morality, that science and morality exist in separate realms (and belong in separate courses). Here we challenge this assumption, asking whether our scientific self-knowledge can, and should, change our views about what's right and wrong and how a society should be organized. Finally, we consider the distinctive moral challenges posed by what may be the next stage in Earth's evolutionary history: the rise of artificial intelligence. Many people believe that there is and always will be a fundamental division between human minds and machines. Here we challenge this assumption, going beyond the tropes of science fiction and drawing instead on the latest advances in cognitive neuroscience and neurally inspired artificial intelligence. Our conclusions will have implications for moral challenges of the near and more distant future: Can self-driving cars, military drones, and life-like robots be programmed to behave morally? Will artificial intelligence displace human labor? If so, how can our societies adapt? Could machines displace humans entirely? If so, how can we stay in control? If machines do take over, will they be our conquerors or our children? Across diverse topics, this course explores the implications of a single idea: that the wonder we see around us, and ahead of us, is the product of competition and cooperation at increasing levels of complexity.

The Global Heart Disease Epidemic: Stopping What We Started (215875)

Richard Lee

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

90

What are you willing to do for the health of others?

Heart diseases have killed occasional humans since ancient times, but only in the past century have heart diseases become epidemic throughout the world. In fact, the first description of a heart attack in a human was not until 1912. In the current century, heart diseases will be the leading global cause of death, and the majority of those heart disease deaths will actually occur in the developing world. The epidemic of heart disease has been driven by many social, economic and technological events. Some of these events have been dramatically detrimental to human health, such as the accidental invention of the American cigarette by a slave in North Carolina in the 19th Century—an invention that is projected to kill one billion people between 2000 and 2100. Other events, such as advances in public health and safety, have been beneficial by extending lifespan and preventing early death, but they have also allowed age-related heart diseases to explode. Technological advances have improved our economic productivity but also led to changes in our lifestyles that promote heart diseases. In this course, we will consider the complex relationship of health and society by examining the epidemic in common heart diseases. We will explore how major lifestyle factors such as tobacco, alcohol, exercise and diet affect health, and we will also consider how economics and politics powerfully influence health. We will also discuss the role of government and our obligations to each other, and to future generations.

World Health: Challenges and Opportunities (126193)

Sue J. Goldie

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

How do we analyze the health of global populations in a time of unprecedented crisis, and create new policies that address the social, political, economic, and environmental dimensions of health in an increasingly interdependent world?

Extraordinary changes in the world present both risks and opportunities to health—global interconnections, shifting demographics, and changing patterns of disease. This course will challenge your assumptions about the world's populations as you discover surprising similarities and unexpected differences between and within countries. By first positioning the concept of health as a prerequisite for strong societies, we explore its connection to human rights, sustainable development, and climate change. Drawing on examples from infectious diseases, maternal and child health, chronic diseases, and injuries, we pay equal attention to the influence of the social, political, and environmental "conditions for health." We consider solutions from within and outside the health sector and interventions at the local, national, and global levels. Throughout the course, you'll be asked to link classroom concepts to contemporary events, applying your analytical skills to design "problem-inspired" products that respond to and motivate action on global health challenges you care about.

Faith and Authenticity: Religion, Existentialism and the Human Condition (109861)

Courtney Lamberth

David Lamberth

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 75

This course engages some of the most fundamental questions of human existence through the philosophical, theological and literary works of 19th and 20th century authors many of whom are associated with the movement called "existentialism." What is an authentic individual life? How does one find meaning in light of modern challenges to claims about the nature of God, revelation and the soul? Is religious faith compatible with an understanding of historicity and the threat of nihilism? With a life of integrity and freedom? Of what use are philosophical and theological reasoning in establishing meaning? This course introduces central questions in Western philosophy of religion through close reading of fundamental texts in existentialism with attention to selected philosophical and theological sources. The course focuses especially on the themes of authenticity and absurdity, finitude and death, faith and ambiguity, and the quest for freedom and responsibility.

Is there alien life beyond Earth?

What is it about Earth that enables life to thrive? This question was reinvigorated with the 2016 ground-breaking discovery of a habitable planet around the nearest star, Proxima Centauri. A decade of exploration confirmed that such planets are common in our galaxy, and the commonality of habitable planets has raised anew some age-old questions: Where do we come from? What is it to be human? Where are we going? Are we alone in the universe? And last, but not least, what are the dangers of becoming a multi-planet species? Life and planets are intricately linked through geological processes, chemistry, and ultimately, biology, all of which you will explore in this course as we endeavor to answer questions about our place on this planet and beyond. You will gain knowledge of some natural sciences fundamentals while exploring current issues in biotechnology and space exploration technology. This course aims to equip you with both a conceptual understanding of Earth and its place in the universe as well as the quantitative reasoning to think critically about it. Hands-on experiences are central to accomplishing these objectives.

Guns in the U.S.: A Love Story (212845)

Caroline Light

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

60

The U.S. comprises 5% of the world's population but holds approximately 40% of the world's guns. We also experience more gun-related deaths than any economically comparable nation. How did the nation become a "gun culture," and whose rights and interests does widespread armament serve? Who is included in the Second Amendment's appeal to "the right of the people to have and bear arms," and how have notions of race, gender, class, and sexuality framed popular understandings of "good guys" and "good women" whose armed citizenship is required for the nation's security? We'll read analyses from public health, history, literary/cultural studies, political science, and gender/ethnic studies to help unpack collective assumptions and historical blindspots about the purposes and effects of contemporary gun ownership.

The Ancient Greek Hero (113501)

Gregory Nagy

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How did ancient Greek heroes, both male and female, learn about life by facing what all of us have to face, our human condition?

How to face death? Concentrating on this central human question, we will explore some of the greatest works of ancient Greek literature in English translation. For the Greeks, a special way to address the problem of death was to think long and hard about what they called heroes in their myths. Our purpose in this course is to extend that kind of thinking to the present. Assignments invite you to engage in personal reflections on the meaning of life and death in the light of what we read in Greek literature about the ordeals of becoming a hero.

How Music Works: Engineering the Acoustical World (205412)

Robert Wood

2024 Fall (4 Credits)

Schedule:

MW 1115 AM - 1230 PM

Instructor Permissions: Instructor

Enrollment Cap:

90

Music and technology are two dimensions of humanity that have been interdependent for tens of thousands of years; what can this intersection teach us about our past and our future?

How does Shazam know what song is playing? Why do some rooms have better acoustics than others? How and why do singers harmonize? Do high-end musical instruments sound better than cheap ones? How do electronic synthesizers work? What processes are common in designing a device and composing a piece of music? How is music stored and manipulated in a digital form? This class explores these and related themes in an accessible way for all concentrators, regardless of technical background. The class is driven by hands-on projects to enhance your technical literacy, a critical skill for anyone designing solutions to today's most pressing and complex issues. The projects are designed so that the creativity of students in all fields will have a role to play. Lectures, demonstrations, and guest lecturers/performers are integrated into the class to build foundational knowledge and to inspire. We will also explore wider social and historical themes related to music and acoustics. The class is approached from an engineering perspective, using music and musical instruments as the framework to introduce a broad array of concepts in physics, mathematics, and engineering. Requires no previous exposure to physics or calculus beyond the high school level.

The Border: Race, Politics, and Health in Modern Mexico (204416)

Gabriela Soto Laveaga

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

What can histories of tension and cooperation at the U.S.-Mexico border tell us about our own nation's public health programs and national racism?

Why does the Mexico-U.S. border continue to be a space for debate and controversy? This course examines how the creation of the U.S.-Mexico border in 1848 shaped modern Mexican society from the nineteenth century to our present. For many, the border served (and serves) as a protective barrier from poverty, violence, and, especially, disease. By the early twentieth century many Mexican bodies were perceived as "alien," "illegal," and in need of patrolling. Yet these descriptions were also used by Mexican politicians to describe and isolate groups such as Indigenous and Chinese within Mexico. By examining, for example, Mexican public health campaigns, response to epidemics, and how Mexican ideas of race and health played out within Mexico we can better understand the U.S.-Mexico border today.

Classical Chinese Ethical and Political Theory (121778)

Michael J. Puett

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

What if many of our assumptions about the self and about how to live fully are limiting and even dangerous, and what other possibilities might we be able to find in classical Chinese philosophy?

What is the best way to live a fuller and more ethical life? Concretely what should we do to begin to live in a more flourishing and inspiring way? Questions such as these were at the heart of philosophical debates in China. The answers that classical Chinese thinkers developed in response to these questions are among the most powerful in human history. Regardless of whether one agrees with them or not, they should be studied and taken seriously by anyone who cares about ethics, politics, and the ways to live life more fully.

How do patterns of American economic, political, and social inequality shape our policy responses to working families, immigration, and poverty?

In a period of contentious politics, Americans are debating fundamental issues about economic wellbeing, social justice, and the state of our democracy. How can the nation expand opportunity and security for workers and families following years of rising socioeconomic inequalities and shifts in the relationship of families to work? What is the relationship between rising economic inequality and rising political partisanship? How has ongoing partisan polarization and the design of our political institutions affected U.S. responses to social issues? How do we regulate immigration and citizenship and cope with surges in refugees and asylum seekers? Controversies in these areas are bitter and persistent, and this course will introduce students to the ways the United States has dealt with each set of challenges.

Confronting Climate Change: A Foundation in Science, Technology and Policy (126633)

Daniel Schrag

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How can we address the issue of climate change, reducing the damages by preparing for impacts already underway and fixing the problem by transforming our energy system?

This course will consider the challenge of climate change and what to do about it. Students will be introduced to the basic science of climate change, including the radiation budget of the Earth, the carbon cycle, and the physics and chemistry of the oceans and atmosphere. We will look at reconstructions of climate change through Earth history to provide a context for thinking about present and future changes. We will take a critical look at climate models used to predict climate change in the future, and discuss their strengths and weaknesses, evaluating which forecasts of climate change impacts are robust, and which are more speculative. We will spend particular time discussing sea level rise and extreme weather (including hurricanes, heat waves, and floods). We will look at the complex interactions between climate and human

society, including climate impacts on agriculture and the relationship between climate change, migration and conflict. We will also discuss strategies for adapting to climate change impacts, and the implications of those strategies for sub-national and international equity.

The last half of the class will consider what to do about climate change. First, we will review the recent history of greenhouse gas emissions, as well as various national and international efforts to limit them in the future. We will discuss reducing carbon emissions using forestry, agriculture and land use, and then focus on how to transform the world's energy system to eliminate CO2 emissions. We will conclude by examining different strategies for accelerating changes in our energy systems to limit greenhouse gas emissions.

The course is intended as a foundational course on climate change for students from around the university, preparing them for more specialized courses in their individual concentrations or degree programs. No prerequisites are required; students will be encouraged to apply their different preparations and interests to the various individual and group assignments. The course emphasizes the scientific and technological aspects of climate change (including the clean energy transition), but in the context of current issues in public policy, business, design and public health.

Natural Disasters (112430)

Brendan Meade

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 60

What makes our planet so dangerous?

From Mexico to India, San Francisco to Tokyo, natural disasters have shaped both the surface of our planet and the development of civilizations. These catastrophes claim thousands of lives and cause tens of billions of dollars in damage each year, and the impact of natural disasters is only increasing as a result of human population growth and urbanization. This course uses the methods and skills associated with earth science to help you to develop an understanding of both the causes and impacts of these events. Readings will be assigned from the textbook *Natural Disasters* by Patrick Abbott (11th edition), to deliver the scientific content - recorded lectures will be available throughout the course, and live lectures and discussion sessions will be held each week to address any difficulties with the material, to facilitate discussion, and to provide an opportunity for interacting with fellow students and the teaching staff. By the end of this course, you will be able to understand the ways in which societies can systematically anticipate and prepare for the kinds of natural disasters which many people have come to assume are inevitable.

Enrollment Cap:

300

How does social change happen?

How does change happen? When, why, and how do people, and whole nations, come to together to influence large-scale policies and actions on issues like the environment, equality, criminal justice? Why do revolutions occur? This course will try to answer these questions, and do so by exploring a diversity of efforts related to societal change. In an effort to draw general lessons for those interested in making change, we will assess a range of political and legal approaches; examine mass movements and the leadership by organizations, governments, and individuals; and attempt to gauge outcomes. Using research from psychology, political science, and economics, and focusing on case studies, the course will explore the ideas behind several arguments: 1) big problems are rarely resolved with comparably big solutions, but instead are better met with small acts of reform; 2) coalition-building among strange bedfellows is usually indispensable; 3) agents of change fare best when they look to measure their impact and never lose sight of the real world results they seek, rather than the expressive highs along the way; 4) informational "cascades" are possible and critical, as people follow one another; and 5) group polarization can be both desirable and dangerous, as groups become more heated and more extreme.

Living in an Urban Planet (215916)

Bruno Carvalho

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

105

It has become a cliché to say that more than half of the world's population now lives in cities. The speed and scale of urbanization over the past century has been stunning, and we tend to underestimate the extent to which built environments and natural landscapes have become entangled. As both lived and imagined spaces, cities will continue to shape life on our planet. In fact, if we consider the flow of resources (and refuse), energy systems, the circulation of people and cultures, where do our cities actually end? This

class starts from the premise that the urban today represents a worldwide condition in which nearly all political, economic, cultural, and socio-environmental relations are enmeshed.

We will focus on multiple aspects of urbanization, including debates around housing, transportation, and the production of inequalities. We will cover the history of urban planning, and how processes of the past converge in the present. We will discuss the aspirations of individuals and groups that have made cities, often seeking to escape roles assigned to them based on gender, race, ethnicity, nationality, and social class. We will reflect on metropolitan and regional asymmetries, as well as ideas about global cities or megacities. And we will consider the ecological dimensions of urbanization, including research on compact cities as more environmentally sustainable than sprawling settlements.

Urbanization has been an expression of the notion that humans can reshape the built environment, as well as their own destinies. Throughout modernity, people have experienced and imagined cities as places of possibility and frustration. Our aim is to engage a wide range of perspectives on the contemporary global-urban condition and on how we got here, with the hope of opening up alternative possibilities for the future.

How can we use scientific principles to make better food, for ourselves and for the world?

Food and cooking are part of your everyday life. Whether you are a skilled chef or a home-cook, what you do in the kitchen is deeply rooted in science. This class brings together top chefs and Harvard scientists to explore how everyday cooking and haute cuisine can illuminate basic principles in physics and chemistry. Throughout the semester you will watch as chefs reveal the secrets behind some of their most famous culinary creations. Inspired by such cooking mastery, we will then explore the science behind the recipes. Students will gain a solid understanding of the properties and fundamental behaviors of soft matter materials. All food is made of soft materials, and cooking relies on many of their fundamental properties. Topics will include: emulsions, illustrated by aioli; elasticity, exemplified by the done-ness of a steak; and diffusion, revealed by the phenomenon of spherification, the culinary technique pioneered by Ferran Adria. The course includes laboratory work where students develop their skills as experimental scientists. Other assignments include weekly homeworks, in-class exercises, and a final project where students explore the science of a culinary topic of their choosing.

Course Notes:

Occasionally there will be an optional 15-30 minute question and answer session with visiting chefs.

Can We Know Our Past? (112378)

Rowan Flad

Jason Ur

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

120

In a time when histories are being contested, monuments removed, and alternative facts compete with established orthodoxy, how do we evaluate competing narratives about what really happened in the past?

What happened in the past? How do you know? Even though today we take great pains to document every major event that occurs, more than 99% of human history is not written down. How, then, can we determine with any certainty what people did, let alone thought about, hundreds, thousands, and even millions of years ago? This course addresses these and other fundamental questions: Can we ever really know what happened in the past? If the past is "dead and gone," how do we know what we (think we) know about it? And what is our degree of certainty about the past societies and cultures that historians, archaeologists and others study today? Through hands-on interaction with artifacts, experiments and other analytical methods you will consider how these approaches relate to different "stakeholders" – groups of people whose understanding of themselves is rooted in a connection to history. By the end of this course, you will have a sense of how your knowledge of the seemingly-distant past is, in fact, intimately tied to your experiences in the contemporary world.

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How and why do humans try to divine their own futures?

Human beings are the only creatures in the animal kingdom properly defined as worriers. We are the only ones who expend tremendous amounts of time, energy, and resources trying (sometimes obsessively) to understand our futures before they happen. While the innate ability of individual people to predict has not changed much in the past few millennia, developments in mathematical and conceptual models have inordinately improved predictive systems. These systems have integrated comparisons to past results and quantified how "certain" we can be about various aspects of the future -- processes that were, in many cases, inconceivable at one point in the past. This course is a coordinated investigation of the history and future of prediction, beginning with Ancient Mesopotamians reading signs in sheep entrails and ending with modern computer simulations for climate, health, wealth, and the fate of our Universe. In this class, you will design your own predictive systems to critically engage with assumptions about how the world works and situate your explorations in a study of how motivations and techniques for divining the future have changed--and not changed--throughout human history.

Human Trafficking, Slavery and Abolition in the Modern World (214486)

Orlando Patterson

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

300

Why do slavery, human trafficking and other forms of servitude thrive today globally, including in the USA, and what can we do about it?

We often think of slavery as being a dark chapter in our past, but this is a tragic oversimplification. What defines slavery in the modern world, and what are the moral, political and social implications of its continued existence? As we explore its underpinnings, we discover that all of us may be in some way complicit in its survival. This course surveys the nature, types and extent of modern servitude such as transnational and domestic prostitution, forced marriage, labor trafficking and forced domestic labor, child soldiering and other forms of enslavement of children, organ trafficking and other health aspects of

trafficking, debt-bondage, and the forced exploitation of other vulnerable groups such as refugees and stateless persons. Throughout the course, but especially in the final part, we examine anti-trafficking and anti-slavery measures and movements and ways in which you can increase awareness or become involved. You will, by the end of our exploration, be able to trace the moral and ethical arguments surrounding human slavery in its various forms, understand the ways in which this problem still affects so many people, and what can and should be done about it.

The Social Responsibilities of Universities (212853)

Julie Reuben

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

What do universities owe society? Since their origins, universities have been granted special privileges because they have been understood to contribute to social welfare. Do these privileges incur corresponding obligations on universities? Should they influence how universities educate their students or create, share and preserve knowledge or conduct their internal affairs? Given that universities have a significant impact on society, what principles should guide their activities to ensure that they serve the public good? While universities have been expected to serve society, they also espouse values, such as academic freedom, institutional autonomy, and neutrality, that some see as antithetical to social engagement. The image of the ivory tower, remote and removed from society, captures this vision of the university. As a result, there has been tension about how universities can both serve society and remain true to these core values. Together we will explore how universities' social responsibilities are debated and enacted in the context of American higher education.

Islam and Politics in the Modern Middle East (126908)

Malika Zeghal

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Today's news headlines consistently point to the role that religion plays in the political life of Middle Eastern societies. But do these headlines tell the whole story? This course will challenge simplistic

explanations of the dominant role of Islam in Middle Eastern politics by putting it in historical perspective. You will explore the genealogy of some of the most important debates about the role of religion in politics: the extent of Middle Eastern states' involvement in religion, the place of religious minorities, whether religious norms should infringe on individual freedoms, and the various political theologies at play in Islamist opposition movements, in liberal conceptions of religion, and in state religious interpretations. At the crux of these vigorous debates is the issue of the meaning of a "Muslim state," an issue that has shaped vibrant discussions and deep political disagreements that you will discover through textual and historical analysis of primary sources. Understanding who were the men and women who participated in these debates over the modern history of the Middle East, what they argued for and against, and the context in which they made their claims will provide you with the historical and textual perspective to make sense of the news headlines about religion and politics in the Middle East.

60

What does China's past mean for its and your future as China once again becomes the most powerful nation on earth?

A century ago, the world was dominated by great empires—multinational, multicultural entities that spanned ethnic and geographic divides. But of all those empires—the Austro-Hungarian, the Russian, the Ottoman, the British and French colonial empires, and the Great Qing Empire of the Manchus—only the Great Qing survives, now reincarnated as the Chinese national state.

In China today we see a new country built on the bedrock of an ancient civilization. It is in the midst of the most extraordinary economic transformation the world has seen. This development comes on top of the political, social, and cultural revolutions of the 20th century. All these changes occur against a deep historical background still much in evidence.

This course explores how the world's largest and oldest bureaucratic state has dealt with enduring problems of economic and political organization. It will show how even modern answers to these challenges bear the imprint of China's history. We will explore intellectual and religious trends, material and political culture, the tension between local society and the center, art and literature, and China's multiple economic and political transformations.

The consequences of the ancient Chinese political ideal of a single, civilized world empire is a central theme of the course, both from the comparative perspective of other multi-ethnic empires and in terms of the ever-broadening scope and intensity of China's global connections. We will draw comparisons with Rome between the 2nd century BCE to the 2nd century CE; with Romanov and Soviet realms in the 17th century and 20th centuries, respectively; and with Western global empires of the age of high imperialism in 19th and 20th centuries. All these empires have come and gone, while a unitary, multi-national, Chinese

empire has endured.

On one hand, this has been a history of conflict, in which Chinese empires used military force to control the peoples on their borders. When they failed, border peoples incorporated China into their own inland empires: the Mongols in the 13th century and Manchus in the 17th. On the other hand, it has been a history of economic and cultural relations, in which China absorbed foreign models (Buddhism from India in the 3rd century; the sovereign nation-state system from the West in the 19th century; and both industrial capitalism and Stalinist socialism in the 20th century), defended trade by land along the Eurasian silk routes and by sea with South and Southeast Asia, and put itself forward as a model state for others in East Asia and beyond.

The course will enable students to debate how the choices China has made in the past bear on the challenges it faces today, when a modern "China model," with ancient roots, competes with the United States for global leadership.

The course is taught with multiple pedagogies. By shifting lecture to on-line modules that include "field trips" to sites in China, class time is focused on active, participant-centered learning around major texts, works of art, and contemporary case studies. Class preparation and attendance are mandatory. Assignments include responses to online modules, weekly sections, a midterm examination, and a final group project.

The Challenge of Human Induced Climate Change: Transitioning to a Post Fossil Fuel Future (120031)

Michael McElroy

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What can we do now to avoid the most serious consequences of climate change, which poses an immediate problem for global society?

Human induced climate change has the potential to alter the function of natural ecosystems and the lives of people on a global scale. The prospect lies not in the distant future but is imminent. Our choice is either to act immediately to change the nature of our global energy system (abandon our dependence on fossil fuels) or accept the consequences (included among which are increased incidence of violent storms, fires, floods and droughts, changes in the spatial distribution and properties of critical ecosystems, and rising sea level). The course will be designed to provide students with an understanding of relevant physical, technical and social factors including an historical perspective. In the latter half of the course, the plan will be to engage students in an interactive dialogue on possible responses recognizing explicitly differences in motivations for different constituencies - for developed as distinct from developing economies for example. We plan to explore options for a zero carbon future energy system including the challenges involved in implementing the necessary transition. If we fail to abandon our dependence on fossil fuels - and the time scale over which we must do so to realize even the minimal objectives outlined in the recent Paris climate accord is as brief as a couple of decades or even less - might we need to explore possibilities for geoengineering, for purposeful intervention in the global climate system? Arguments for and against such options will be discussed and debated. We will expect students to be actively involved in exploring, researching and debating responses to any and all of these interrelated issues.

Course Notes:

Students who have taken Science A-52 may not take this course for credit.

Recommended Prep:

Students are expected to have a background of high school algebra and trigonometry.

Borders (215894)

Mary Lewis

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 60

How have borders been formed historically, and what are the ethics of border construction, defense, expansion or transgression?

As a society, we pay particular attention to borders when incidents such as children separated from their asylum-seeking parents or tear-gas being used to deter entry throw the legal divide between two nation states into sharp relief. But seldom do we stop to think about what a border is, or when and why some borders are defended more aggressively than others.

This course looks at the modern history of borders, broadly construed, from national boundaries between sovereign countries, to supranational agreements such as the European Union. It considers how borders are erected and dissolved, both legally and materially. And it queries the legal, diplomatic, social, and ethical considerations that ensue from drawing a line between one side and another, and defending that line. We will also consider how actors within societies create internal (often racialized) boundary lines such as "gated communities" or "redlined zones," that are sometimes extra-legal or even illegal, but have profound effects on the everyday lives of individuals and groups.

Mental Health and Mental Illness Through Literature and the Arts (220118)

Karen Thornber

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 75

Mental health experts believe that globally, more than 1 billion people have a mental illness. And yet the biases and misperceptions surrounding mental illness, not to mention the dehumanization and abuse in many communities of individuals with a mental illness, remains acute. This course uses literature and the arts to help students learn more about some of the prevalent biases/misperceptions/myths/stigmas against individuals with mental illness and how these biases can be (or in the past have been) ameliorated.

Weekly assignments combine readings of literature/film screenings, etc. with a range of secondary sources. For the final project, students have the option of a traditional paper or a creative project. Writing assignments give students the option of traditional papers or creative assignments. The course will include visits to the Harvard Art Museums and other local resources.

Global Japanese Cinema (159550)

Alexander Zahlten

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

60

What can film from Japan tell us about the strange pair of intensifying global interconnections and rising nationalism in the world today?

Global Japanese Cinema introduces some of the masterworks from the rich history of Japanese cinema as a way of exploring the global language of film. Participants will learn how to analyze moving images and the ways they influence us – a basic media literacy that we all need for life in a media- saturated society. Additionally we will learn how culture, in this case moving images, flows across the globe and transforms its meaning in site-specific ways. We will see how Japanese cinema's use of slow motion entered the American gangster film, or how samurai films helped create the Italian "Spaghetti Westerns", and many other examples. How do moving images constantly nudge us into a specific worldview, and how does the global circulation of these media subtly shift those nudges in unexpected ways? What does it mean that we nonetheless share a common media memory despite living in very different parts of the world? Join the course and explore how moving image culture functions in a networked, media saturated world!

Course Notes:

Japanese language skills are not required.

How does Mexico's rich cultural past shape contemporary Mexico and the US in the face of today's pandemics, protests and other challenges of the borderlands?

This course provides students with the opportunity to explore how the study of pre-Hispanic and Colonial Mexican and Latina/o cultures provide vital context for understanding today's changing world. The emphasis is on the mythical and social origins, glory days and political collapse of the Aztec Empire and Maya civilizations as a pivot to the study of the sexual, religious and racial interactions of the Great Encounter between Mesoamerica, Africa, Europe, and the independent nations of Mexico and the United States. The study of the archaeology, artistic media, cosmovision, capital cities, human sacrifice and the religious devotions of ancient Mesoamerica illuminate the Day of the Dead and Virgin of Guadalupe phenomena today. Hands-on work with objects at the Peabody Museum aids in examining new concepts of race, nation and the persistence of Moctezuma's Mexico in Latino identities in the Mexico-US Borderlands. One of the biggest student/museum events at Harvard is the Day of the Dead celebrations at the Peabody Museum, which provides the opportunity for students to work directly with the materiality of the longue duree of Mexico's storied history and evocative worldview. The museum objects and sections exercises provide the students with ways to integrate their classroom work to the collections and public program of the museum, plus experience community both locally and across cultural boundaries and physical borders. This course empowers our students to evaluate the ways the U.S. is changing and struggling to define itself in relation to Latin America and especially the migration of peoples, ideas, arts, music, food from and through Mexico.

What role do artistic practices play in the formation of modern culture and society, and how does art foster critical reflection and debate?

How has modernity—understood as a socio-economic reality, technological condition, cultural discourse, and set of aesthetic practices—redefined the purpose and function of art over the past three hundred years or so? What role has modern art played in the constitution of the modern experience of subjectivity? Beginning in the early 18thC and concluding in the early 21stC, the course traces art's

transformation from a tool of power elites into an instrument also of broad public instruction and civic debate on controversial topics. By learning about the diversity of ways in which modern artists have contributed to the production and critique of cultural and social life you will acquire the skills to make the most of your experience of art exhibitions and museums. This knowledge of the long history of modern art will help you better navigate a cultural present characterized by the ever-greater importance in everyday life of the production and consumption of images. It will also enable you to gain a deeper awareness of how art participates in critical dissent and aesthetic speculation in today's troubled world.

How does the water cycle change us, and how do we change it?

What do landslides in Brazil, droughts in California, mass migration in Syria and the collapse of Mayan civilization all have in common? Water. This course introduces students to the terrestrial water cycle: how it works, how humans manipulate it, and how it manipulates us. Students will learn about the major components of the terrestrial water cycle, including precipitation, evapotranspiration, runoff and streamflow, and saturated and unsaturated subsurface flow. We will also learn about the causes and consequences of natural hazards associated with the water cycle -- including floods, landslides and droughts -- and examine several case studies, with a focus on human impacts. The course will consider how the water cycle has contributed to the demise of past civilizations, and explore implications for modern society in a warming world.

Climate Crossroads (215873)

James Anderson

James Engell

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Irreversible climate change poses an unprecedented challenge to the stability of all societies: what are

the scientifically viable pathways to a future that is sustainable and just?

What one thing is changing everything in your lifetime—and for generations to come? It's changing what you eat; it's changing buildings you live in; and it's changing politics, the arts, and finance. The change is accelerating. This course reveals fundamental alterations that climate disruption is bringing to multiple human activities and natural phenomena.

The course represents a crossroads in two senses. First, it's a crossroads of disciplines. Climate change affects science, society, culture, government policy, biodiversity, and environmental justice. To understand it is inherently interdisciplinary and requires standing at the crossroads of several approaches. Second, humanity itself is at a new crossroads. Because global climate is shifting rapidly, this prompts new views of humans in geologic time, as well as new thinking in economics, law, finance, and science.

Climate change isn't just "global warming." It's an alteration of conditions on Earth to which all creatures and societies are adjusting. What is the science of climate change? Why can't understanding and dealing with climate change be confined to science?

Through materials and assignments that address quantitative understanding and qualitative judgment, you'll learn why it's unwise to seal the interrelated issues of climate change in separate disciplines; conversely, why it's necessary to use separate disciplines to acquire the knowledge and applications needed to formulate policy and actions. You'll learn about climate adaptation (adjusting to changing climate), mitigation (reducing the speed and severity of climate change), and resilience (e.g., recovering from extremeweather events). You'll discover how careers in many different areas increasingly involve thinking about climate.

Life and Death in the Anthropocene (218234)

Naomi Oreskes

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

What does it mean for us --both as a society and as individuals -- to live in a world radically remade by the human hand?

In 2019, geologists voted to make the Anthropocene a time unit in the Geological Time scale. For scientists, this means that future geologists will be able to see the effects of human activities in the stratigraphic record and thereby distinguish this epoch from the ones that came before. But what does this mean for us, as humans living at a time where millions of species are threatened with extinction, where lead pollution reaches every corner of the globe, where endocrine-disrupting chemicals threaten our sexual identity, and climate change potentially threatens the end of the world as we know it? How will we live in a world where--as the United Church of Christ Minister James Antal has put it--nature appears to have turned against us and it may feel as if we are truly alone? Is it ethical to be happy while the world around us is falling apart? Is it possible? This course will explore the diverse meanings of the Anthropocene, from scientific, technological, literary, philosophical, cultural, theological and personal perspectives, in an attempt to answer the question: What will it mean to live and die in the Anthropocene?

What does the food we eat tell us about ourselves—as individuals, communities, and countries—and how has humanity's relationship with food changed over time?

We all need to eat and drink each day to nourish our bodies. Yet how often do you pause to think deeply about why you eat what you eat? Your food habits are likely influenced by family traditions, but also by a range of other factors like income, age, ethnicity, religion, politics, and the environment. What does the food we eat tell us about ourselves—as individuals, communities, and countries—and how has humanity's relationship with food changed over time? This course focuses on Mexico and its diversity of food, drink, and cultures across time and space to explore these questions. You will examine evidence from archaeology, anthropology, climatology, botany, genetics, history, and more, to investigate how, when, where, and why various changes in Mexican cuisine took place. The origins of menu items like tacos, burritos, guacamole, and margaritas reveal critical changes in global foodways—not just in Mexico—that continue to shape our everyday lives and the world as we know it today. You will leave this course with a better understanding of where your own food comes from, and how you have been impacted by changes in food and food culture, both in the distant past and more recently.

Psychotherapy and the Modern Self (219657)

2024 Fall (4 Credits)

Schedule:

Instructor Permissions: None

Enrollment Cap:

n/a

How can we understand the appeal of psychotherapy, widely recognized as the preferred antidote to human unhappiness and misery, and what does it offer that friends, family, self-help, and psychopharmacological remedies do not?

The demand for therapy is currently at an all-time high, bolstering its century-long dominance as the preferred antidote to human unhappiness and misery, even as it is under sustained attack from critics characterizing it as self-indulgent as well as from platforms that would replace human therapists with chatbots and analysts with algorithms. This course explores the conflicts and controversies that

characterize today's psychotherapeutic landscape, addressing questions concerning its present condition and future prospects. We will look at the development, methods, aims, efficacy, and limitations of a range of psychotherapeutic modalities—among them psychoanalytic, psychodynamic, cognitive, behavioral, manualized, evidence-based, and AI-informed treatments as well as family, sex, and group therapies—and explore how each took shape, who it is intended to treat, and how clinicians evaluate its effectiveness. We will examine therapy's long-overdue, on-going reckoning with racial issues, gendered identities, and access to treatment. We will explore the various modern selves envisioned by psychotherapy, from the highly relational to the independently sovereign. You will leave the course prepared to recognize and evaluate claims regarding therapy's rationale and impact in a range of sites, from the clinician's office to the modern workplace to the media, as well as to assess the ways in which happiness, contentment, and satisfaction in life are subject—or not—to therapeutic intervention. Does psychotherapy work, and, if so, how? Do we suffer less and enjoy greater self-knowledge one hundred years after the invention of the talking cures?

The Power and Beauty of Being In Between: The Story of Armenia (222072)

Christina Maranci

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

How can one small, remote country change the way we think about the culture of the world?

Being wedged between superpowers might seem like a recipe for ethnic assimilation and cultural conformity. Yet what if it made you stronger? In the case of Armenia, being "in-between" led to a vibrant, diverse, and resilient culture, a distinctive religious and national identity, and a dynamic diaspora. Travelling from antiquity to modernity, we will explore how Armenia and Armenians survived and thrived despite invasion, oppression, statelessness, and planned annihilation. We will explore the connections between Armenian culture and diverse traditions, including classical antiquity, the Ancient Near East, Sasanian and Islamic Iran, and the Byzantine empire, East Asia, and Europe, and the relations between Armenia and neighboring cultures of the Caucasus. We will follow the Armenian experience into the early modern period, when Armenians established a trade network reaching from the Indian subcontinent to Amsterdam, absorbing and informing a kaleidoscope of cultures along the way. We will wrap up with the survival of Armenian traditions in contemporary culture, the role of the Armenian genocide in shaping Armenian identity, including in neighboring Watertown. Finally, we will discuss the meaning of cultural heritage for Armenians today, and explore its role at the intersection of politics, diplomacy, law, scholarship, human rights, and activism.

The Age of Anxiety: Histories, Theories, Remedies (222661)

Beth Blum

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

75

How have authors throughout history channeled anxiety into meaningful and imaginative works of art?

The poet WH Auden described the 1940s as "the age of anxiety," but he could have been describing our own stress-ridden times: anxiety is today the most common class of contemporary mental health condition. This course pursues two guiding questions: how has anxiety changed throughout history and how has it stayed the same? And how have authors throughout history productively channeled anxiety into creating beautiful and meaningful works of art? Through a combination of readings and fieldwork, we'll investigate anxiety's potential causes, from the universal fear of death to the more historical contexts of urbanization and self-optimization, for instance, as well as its various treatments, such as stoicism, self-help, and psychopharmacology. The course combines practical and theoretical perspectives to examine the relation between anxiety and creativity and to engage with various aesthetic responses—from comedy to literature and film—to the troubles of being that anxiety designates. Smaller weekly assignments will include slow reading, technological unplugging, and proposing one improvement to the mental health culture on campus. Final project may be scholarly, creative, or a hybrid of both. Students will emerge from class readings and discussions with an understanding of anxiety as a social formation, literary preoccupation, and, when harnessed, a spur to aesthetic invention and political intervention.

If we're living through the emergence of a highly disruptive technology, namely Chat-GPT and similar generative AI tools, what should we do about it?

Generative artificial intelligence (GAI) systems such as Chat-GPT have caught the entire world off-guard. They are evolving at a pace that is overwhelming the ability of individuals, organizations, and societies to understand, adjust to, and regulate them. Current-generation GAI tools can write narrative and music, can generate original art, and can write computer programs, all from natural language requests. This class will help you understand the basics of how these generative AI systems work under the hood, and will teach you how to (guardedly) bring them to bear on problems that interest you. We will explore a range of AI applications across the domain of liberal arts and science, and will illustrate ways in which we can harness GAI to enhance learning. We will pay particular attention to the limitations and pitfalls of these tools, both technical and ethical. We will also explore the likely impact this disruptive technology will have on the economy and the challenges it poses to sustaining a participatory democracy.

What if schools were for learning instead of education?

You will be involved in education your whole life. As a taxpayer, voter, or parent, you will be connected with formal schooling. You will almost certainly be in the role of teacher at various points in your life, whether in a classroom, in another professional setting, or guiding someone in something you love to do. Leaders in any field are teachers and coaches--they develop the people around them to bring their full potential to some shared ambition. You will also be in the role of learner throughout your life in a variety of forms and contexts. Precisely because we are all learners and teachers and we've all had some direct experience with K-12 schools, everyone has interests and opinions about schools. Yet, U.S. K-12 schools are consistently failing to serve all children well. This course will prepare you to recognize the assumptions, binaries, and controversies that drive much of the sound and substance of U.S. K-12 education, and replace those with a different ABCs: awareness, both-and thinking, and context. Learning can get lost in all the noise of education. What would it look like to make schools less about achievement and attainment and more about learning--and what can be your contribution, no matter your future pathways?

Making Things (Breaking Things) (224340)

2024 Fall (4 Credits)

Schedule:**Instructor Permissions:** None**Enrollment Cap:**

n/a

How do we know ourselves through things and what does it mean to think with our hands, to innovate and to productively fail as a tool of self knowledge?

How do we know ourselves through things?

This course fosters a hands-on, studio-art-based approach to thinking about our lives with objects—the things we make, the things we buy, the things we break.

You will develop technical skills and material curiosities in sculpture as we explore different ways of making and working with objects in a studio art classroom. Reflecting on the conceptual and ontological implications of "stuff" in a world of new materials and material obsolescence, we will engage innovation along with failure as motors for experimental practice and self-knowledge.

The course touches on a variety of foundational skills in three-dimensional art and design. It provides time and guidance to build a deeper hands-on understanding of materials and construction, using found

materials, paper, cardboard, wood, plaster, clay and a variety of other mold-making, casting and sculpting materials. Work will grow and disintegrate. We will build and take apart.

We will reflect on the implications of programmed obsolescence present in everyday life and how breakage, recycling and adaptive reuse may be counterpoints to expectations of infinite growth and we will crack open objects to think about technology and manufacturing processes. We'll explore our potential as makers and our agency as consumers.

Finally, from the vantage of artists, this course asks you to challenge presumptions concerning success and failure. Expectations, flipped on their heads, can become the basis for rich and thorough artistic pursuit. We learn to embrace the experience of making with curiosity, uncertain of our trajectory, and discover surprises, strange, awkward and compelling.

Scandinavian 160 Section: 1

Intro to Old Norse: Folklore, Philology, and Performance (118050)

Stephen Mitchell

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course introduces participants to the languages of medieval Scandinavia, focusing on the West Norse dialects of Iceland and Norway, with additional attention to the East Norse vernaculars of Sweden and Denmark, as well as the use of runes. The early part of the semester emphasizes grammar and vocabulary; after the midterm, students examine theories and texts connected with performance in the Old Norse world (e.g., Egill's charm against King Eiríkr Blood-Ax and Queen Gunnhildr; the wedding at Reykjahólar).

Course Notes:

Limited to 12. Preference given to those in GLL and F&M.

Voices of Diversity in German Literature & Culture (222191)

Nicole Suetterlin

2025 Spring (4 Credits)

Schedule: W 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course offers an introduction to German-language literature and society through the lens of women writers, writers of color, non-binary writers, writers belonging to ethnic and/or religious minorities, and writers with a migration background. From the proto-feminist Enlightenment author Sophie von La Roche to the award-winning Afrofuturist Sharon Dodua Otoo, we will explore the indispensable contributions that

traditionally marginalized groups have made to the rich cultures of Germany, Switzerland, and Austria. How do these writers' experiences of oppression, displacement, and migration inspire creative acts of resistance? How do their writings challenge our understanding of identity? Topics include women's rights, LGBTQ+ rights, immigration politics, Black diaspora, decolonization, neo-Nazism, memory culture, and others. Readings include canonical figures such as Rosa Luxemburg, Hannah Arendt, W. E. B. Du Bois, May Ayim, Emine Sevgi Özdamar, Sasha Marianna Salzmann, and Yoko Tawada, as well as emergent voices such as Sinthujan Varatharajah and Kim de l'Horizon. Audio-visual materials include hip-hopper Nura, rapper Leila Akinyi, performance artists Gabriele Stötzer and Marc Brandenburg, among others.

Course Notes:

Readings and discussions in English. All texts available in German.
Additional meetings in German available upon request.

Additional Course Attributes:

The Magic World of Fairy Tales (223004)

Ekaterina Pirozhenko

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course, we will get to know Jacob and Wilhelm Grimm and their methods to collect, edit, and publish fairy tales and we will reflect on their legacy. We will read and discuss fairy tales written by E.T.A. Hoffmann, Wilhelm Hauff, Ludwig Tieck, Adelbert von Chamisso as well as by contemporary authors such as Elfriede Jelinek, Yoko Tawada, and Kim De L'Horizon who incorporate fairy tales into their writings. We will engage with scholarship on fairy tales' oral and written transmissions, structures, meanings, and functions (Maria Tatar, Jack Zipes, Max Lüthi, Wladimir Propp, etc.) and analyze cinematic adaptations within the German speaking realm and beyond. In sum, we anticipate having fun while immersing ourselves in the magic world of fairy tales.

Course Notes:

Readings and Discussions in German (except for some scholarly work written in English) .

Effi Briest and Madame Bovary: The Meaning of Adultery (223941)

2025 Spring (4 Credits)

Schedule:

W 0400 PM - 0600 PM

Instructor Permissions: None

Enrollment Cap:

n/a

During the 19th century, marriage and family were promoted as the new religion; a woman's fulfillment was that of a wife and a mother. With Madame Bovary, Flaubert created the icon of the adulteress. The novel was denounced as morally offensive: a paean to adultery. Madame Bovary influenced Effi Briest, Fontane's most successful novel, as well as Tolstoy's Anna Karenina. Even today, we continue to write, dance, and film this tragic story, in works by Rainer Werner Fassbinder, Claude Chabrol, Vincente Minelli, Jean Renoir, Mike Baal, and Posy Simmonds. What do Fontane and Flaubert tell us when writing about adultery? Do they praise adultery as a liberation of the female libido, or condemn it as a force of destruction? Or do they condemn their contemporary societies for their self-righteous bigotry?

Course Notes:

Taught by Visiting Professor Barbara Vinken.

German 145 Section: 1

German and Austrian Modernism: Architecture, Art, Literature (222663)

Peter Burgard

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Explores the radical break with traditions of thinking, building, seeing, and representing that occurred at the end of the 19th-century in Germany and Austria, and the new forms of architecture, painting, and literature to which this break led over the following 40 years (1890–1930). Topics include, among others, the loss or destruction of coherence in general, more specifically the loss of a sense of a unified self, alienation in the industrial and urban world, the rejection of unified forms, and a turn from systematic thinking and representation to new aesthetics and means of perception. The Modernist aesthetic rebirth we will witness — with its desire, search, and push for new ways of seeing, understanding, and interacting with the self and the world — still informs our daily lives a hundred years later and looms large in our immediate surroundings at Harvard.

Course Notes:

Section meets Thursdays 1:30 -- 2:45.

Under Surveillance: Media, Security, and the Loss of Privacy (216322)

Eric Rentschler

2025 Spring (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

20

With a camera positioned at the entrance to the director's factory, Louis Lumière's famous early film of 1895, *La Sortie de l'usine Lumière à Lyon*, captured workers as they left for the day. Today, surveillance practices have infiltrated daily lives around the globe, from the ubiquitous cameras on city streets and public spaces to tracking systems that monitor, store, and monetize even our most intimate activities. In this class we will probe and problematize the modern history of surveillance technologies and monitoring practices, from the first manifestations of police photography to CCTV, drones, racial profiling, GPS technology, and user security on social media and digital platforms. To this end we will look at exemplary features such as *The Conversation* (1974), *Strange Days* (1995), *Caché* (2005), *Red Road* (2006), *The Lives of Others* (2006), and *Snowden* (2016), documentaries like *13th* (2016), *The Creepy Line* (2018), and *The Great Hack* (2019) as well as selected videos and tv programs. We will also consider the analytical and theoretical perspectives of, among others, Michel Foucault, Jean Baudrillard, Wolfgang Ernst, Gilles Deleuze, Harun Farocki, Shoshana Zuboff, Catherine Zimmer, Lev Manovich, Mark Andrejevic, Thomas Levin, Patricia Pisters, and Christian Parenti.

Course Notes:

This course is equivalent to AFVS 184E. Credit may be earned for German 150 or for AFVS 184E, but not both.

The Frankfurt School on Film and Mass Culture (203378)

Eric Rentschler

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This seminar considers the Frankfurt School's deliberations on film, radio, television, and mass culture. We will devote the majority of the course to three seminal figures: Siegfried Kracauer, Walter Benjamin, and T. W. Adorno. More generally, we will focus on the debates catalyzed by the emergence of modern mass media and an industrialized visual culture; we will also reflect on the pertinence of these debates for our own contemporary culture of media convergence.

Course Notes:

This course is also offered through the Department of Art, Film, and Visual Studies as AFVS 189G. Credit may be earned for either AFVS 189G or German 154, but not both.

Requirements:

Anti-Req: may not be taken for credit if AFVS 189G already complete.

Public Urban Media (223074)

Christian Struck

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The public is where we see and meet others or avoid them—on squares, in the subway, in cafés... But how are these places constructed that we necessarily inhabit? What do they allow for, and what do they prevent? What about the public in social media? How do politics relate to or happen within them? In this course, we will be exploring the public sphere and how we have come to narrate and theorize it—particularly in relation to social spheres. While reading crucial texts on the matter (by Hannah Arendt, Walter Benjamin, Alfred Döblin, Jürgen Habermas...), we will experience Boston by creating audio and written portraits of the places around us, and reflect on narratives and theories through our practice as well

as contemporary readings and artworks (by Zach Blas, Harun Farocki, Arthur Jafa, Hito Steyerl, Eyal Weizman...). While the course centers on German culture, the seminar will be taught in English; all texts will be available in their original language and (if not already) in English.

Freedom: A Transatlantic Affair (220187)

Daniel Carranza

2024 Fall (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The brilliantly witty German physicist and satirical author Georg Christoph Lichtenberg once remarked that "The American who first discovered Columbus made a horrible discovery" ("Der Amerikaner, der den Kolumbus zuerst entdeckte, machte eine böse Entdeckung."). Taking inspiration from the insightfully eccentric perspectives that another culture might have on our own (and our own on it), this course interrogates the dynamics of transnational cultural transfer by examining case studies of bidirectional German-American intellectual exchange with an eye in particular to how the concept of freedom migrates across literature, philosophy, and political thought. Such cases span a broad historical range, from Alexander von Humboldt's exploration of the New World and Hegel or Kleist's fascination with the Haitian revolution to the origins of Transcendentalism in New England and the writings of wartime German-Jewish émigrés in Californian exile. Throughout this series of exemplary cases, we will continually return to the question of how the practice of quotation refigures conceptions of freedom, actualizing otherwise unrealized potentials of meaning by situating source texts in new contexts. What does it mean, for example, for Margaret Fuller, in arguably the first American essay on women's rights, or for W.E.B. Du Bois, who studied Hegel in Germany, to quote Schiller (in German) at key moments in their arguments? After examining key moments in this history of transatlantic exchange, students will develop a case of their own devising for their final research projects.

The Controversy of Heinrich von Kleist's *Die Hermannschlacht*. (223961)

2025 Spring (4 Credits)

Schedule:

R 0900 AM - 1100 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Herrmann, chieftain of the Germanic Cherusci tribe, had for ages been seen as the incarnation of the heroic liberator from Roman Imperial colonialism and the arch-founder of an authentic German nation. Heinrich von Kleist's drama *Die Hermannschlacht* (The Battle of Hermann), depicts the battle between the Romans and Germanic tribes that took place in the Teutoburg forest in 9 CE. The play, poorly received at first, was later seen as a rallying cry for the nation's liberation from Napoleon I. The jurist Carl Schmitt interpreted the play as an exemplary instance of partisan war, in which the end justifies the means. Indeed, during the Third Reich, *Die Hermannsschlacht* was staged all over Germany. More recent interpretations of the play suggest that the Germans as depicted by Kleist are no nobler than their Roman colonizers. The suspicion has grown that Kleist, far from glorifying national liberation, has told a cruel, indeed heart-breaking story of civil war in the Roman tradition.

Course Notes:

This course will be taught by Visiting Professor Barbara Vinken. The Coop's copies of Kleist's *Battle of Hermann* – ISBN 978-38260-3523-4 -- are limited. Used copies are available on Amazon.

Deceit, Desire & Bildung: Goethe's Novels (222664)

Daniel Carranza

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar will be centered on a close reading of Wilhelm Meisters *Lehrjahre* with glimpses at select excerpts from the sequel, *Wilhelm Meisters Wanderjahre*. We will also take the opportunity of this engagement with two very different narratives to review the fundamental principles of narratological analysis. Some attention will be paid to the centrality of these works (especially the *Lehrjahre*) in the modern theory of the novel from Moritz and Fr. Schlegel to Lukacs and Blumenberg. Paradigmatic

contributions to the scholarship produced during the past four decades (e.g., psychoanalysis, discourse analysis, rhetorical-deconstructive readings) will be discussed in each session. In this regard, the seminar offers a compact introduction to recent theoretical trends.

Writing the Body in the Posthuman Age (216389)

Nicole Suetterlin

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What does it mean to be human in the 21st century? This question lies at the heart of the transdisciplinary approach known as posthumanism. In this time of increasing social and environmental injustices, the fast-growing field of the posthumanities challenges the patriarchal, colonialist, and anthropocentric paradigms underlying the Western tradition. This course focuses on a key player in posthuman ethics: the body. How does the literary imagination envision multispecies, multiracial, and gender-fluid bodies, selves, and societies that are inclusive of marginalized communities, be they human or other-than-human? This course explores how contemporary German literature helps us develop ethical frameworks for our fragile 21st-century ecologies. Topics include: Anthropocene, multispecies justice, gender and sexuality, Afrofuturism, algorithmic justice, diaspora and migration, ecofeminism, eco-materialism. Readings include German-language authors such as Dietmar Dath, Olga Flor, Sharon Dodua Otoo, Sasha Marianna Salzmann, and Ilija Trojanow, American authors such as Nnedi Okorafor and Richard Powers, and cultural theorists such as Donna Haraway, Saidiya Hartman, Bruno Latour, and Paul Preciado.

Course Notes:

Discussions in English, readings in English and German. Proficiency in German is not required for this course: most texts have been translated into English, and English-language alternatives will be provided for texts where English translations are not available. Undergraduates welcome.

Questions of Theory (203281)

Nicole Suetterlin

Doris Sommer

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

17

To explore key literary, cultural and critical theories, we pose questions through readings of classic and contemporary theorists, from Aristotle to Kant, Schiller, Arendt, Barthes, Foucault, Glissant, Ortiz, Kittler, and Butler, among others. Their approaches include aesthetics, (post)structuralism, (post)colonialism, media theory, gender theory, ecocriticism. Each seminar addresses a core reading and a cluster of variations. Weekly writing assignments will formulate a question that addresses the core texts to prepare for in-class discussions and interpretive activities.

Course Notes:

Conducted in English. This course is also offered as Romance Studies 201. Credit may be earned for German 291 or Romance Studies 201, but not both. Cross-listed with Comparative Literature.

Intermediate Swedish: Childhood in Swedish Literature and Culture (112472)

Agnes Broome

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Sweden and Swedish Finland have produced some of the most translated and beloved works of children's fiction in the world. In this intermediate Swedish language course, we will review the essentials of Swedish grammar and vocabulary as we explore some of these classic works of children's fiction, film, and comic books and the aspects of Swedish culture they illuminate. The final project for this class involves producing your own work of children's fiction or film.

Course Notes:

Conducted in Swedish. Not open to auditors.

Prerequisite: Swedish Ab or equivalent.

Recommended Prep:

Swedish Ab or equivalent.

Maternal & Reproductive Health and Health Policy (223975)

Jessica Cohen

2025 Spring (4 Credits) Schedule: M 0300 PM - 0530 PM
Instructor Permissions: Instructor Enrollment Cap: 20

Maternal & Reproductive Health and Health Policy: What Do We Know? How Do We Know It? What Are We Doing About It?

This course will introduce students to the dominant issues in reproductive, maternal, and newborn health—including determinants of health care access, equity, quality, and outcomes—while exploring how evidence is generated and the complex translation of evidence into policy. We will consider a range of policy approaches to improving maternal and reproductive health and unpack why some have worked and some have not. We will read and discuss research from a range of settings, including high-income countries and low- and middle-income countries. A primary goal of the course will be to introduce students to different approaches to causal inference, with discussion focusing on how evidence is produced, disseminated, and adopted. Throughout the course we will discuss the implications of health policy choices, health system designs, and clinical guidelines for maternal-reproductive health equity, both within and across countries. A few sessions will include guest speakers, who are experts in the field of maternal health, including clinicians, policy-makers, and advocates.

Course Notes: Lotteried course; enrollment limited to 20.

Recommended Prep: Some familiarity with statistics is beneficial, but not required

The Quality of Health Care in America (114957)

Anupam Jena

2024 Fall (4 Credits) Schedule: TR 0300 PM - 0415 PM
Instructor Permissions: Instructor Enrollment Cap: 42

Offers information and experiences regarding the most important issues and challenges in health care quality. Overview of the dimensions of quality of care, including outcomes, overuse, underuse, variation in practice patterns, errors and threats to patient safety, service flaws, and forms of waste. Each session focuses on one specific issue, exploring patterns of performance, data sources, costs, causes, and remedies. Explores desirable properties of health care systems that perform at high levels in many dimensions of quality.

Course Notes:

Lotteried course, enrollment limited to 42.

Stephanie Kayden

Michael VanRooyen

2025 Spring (4 Credits)

Schedule:

F 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Climate change, urbanization, and conflict mean that global disasters are on the rise. How should the world respond when disasters force people from their homes? How can we better help the world's refugees? We will examine the past, present, and future of the international humanitarian response system. We will explore how Doctors Without Borders, the United Nations, the Red Cross, and other aid agencies came to be and how global response standards, international humanitarian law, and new technologies are shaping worldwide disaster relief.

Through interactive discussions and case studies, students will learn how aid workers interact with governments, militaries, and civil society to provide refugee aid. At the end of the course on April 26-27, 2024, students can opt to participate as a 'refugee' as part of a large, outdoor humanitarian response training exercise with students and professional aid workers from around the world.

Course Notes:

Lotteried course with waitlist, enrollment limited to 30. No auditors or cross-registrants. Enter lottery here: <https://bit.ly/2024ghhp70>.

Research in Global Health and Health Policy (123102)

David Cutler

2025 Spring (4 Credits)

Schedule: W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Global health and health policy are interdisciplinary fields that apply the theories and methods of statistics, sociology, political science, economics, management, decision science, and philosophy to the study of population health and health care. Research from these fields influences policymaking in a variety of settings. For example, the Patient Protection and Affordable Care Act (ACA) drew upon health policy research to develop programs for improving access and quality of care in the United States. Similarly, global health research guides international institutions, such as the World Health Organization, in determining health guidelines for all countries. Global health and health policy research can also inform practices inside hospitals, initiate programs for diseases like HIV, and regulate the food and drug industries. This course introduces the fundamentals of research design and methods in global health and health policy and assists students in developing research projects and crafting policy recommendations

that can impact health care systems and public health.

Course Notes:

This course fulfills the research requirement of the Secondary Field in Global Health and Health Policy, and enrollment is ordinarily limited to seniors in the GHHP Secondary Field. Underclass GHHP students may petition to take the course if all other Secondary Field requirements have been met. GHHP 99 is primarily taught by graduate students in the PhD in Health Policy program. It may not be taken pass/fail.

American Government: A New Perspective (111813)

Paul Peterson

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Provides an overview of contemporary American politics. It analyses the way in which recent changes in elections and media coverage have helped shape key aspects of American government, including the courts, Congress, and the Presidency, the workings of interest groups and political parties, and, also, the making of public policy. Permanent political campaigns have altered governmental institutions and processes. The course explains how and why.

Data Science for the Social Sciences (115859)

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Data is a fundamental part of studying the social, political, and economic world. How can we measure racial discrimination in job hiring? What is the best way to predict election outcomes? What factors drive the onset of civil wars? Is it possible to determine what members of Congress are more or less liberal given their voting record? These are just a few of the numerous questions that social scientists in academia and industry are tackling with quantitative data. In this course, you will learn the fundamentals of data science as applied to the social sciences: visualization, wangling, causal inference, prediction, and inference. All the while you will learn how to communicate your findings to a broad audience and how to use the professional tools of the trade such as R, tidyverse, and GitHub. Each student will complete a final project to showcase their acquired skills. No previous experience with statistics or statistical computing required.

How can we measure racial discrimination in job hiring? What is the best way to predict election outcomes? What factors drive the onset of civil wars? The goal of this course is to give you the ability to understand, explain, and perform research on the most pressing social and political issues with a special focus on data analysis and causal reasoning. You will be able to read and understand the methodology of most academic articles in the social sciences while also learning the core ideas and tools of data science used across many industries.

Course Notes:

This course must be taken for a letter grade.

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

To prepare students to write senior theses within American politics, comparative politics, or international relations, this course introduces the principles of empirical research in political science. Students will learn how to frame a project, review literature, articulate theories, test arguments, and collect evidence. Engaging both quantitative and qualitative research traditions, the course covers topics including the logic of causal inference, measurement and conceptualization, and case selection. It also introduces analytic techniques in qualitative methods such as archival research, interviewing, and process tracing. Assignments in the course build towards a final prospectus for an empirical research project.

Topics and Resources in Political Theory (108285)

Michael Rosen

2025 Spring (4 Credits)

Schedule:

F 0945 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course introduces students to the most important debates in contemporary English-language political theory, centered on questions of justice, equality and rights. We then turn to topics that reflect the individual interests of students who enroll. The course is designed to help participants to make the transition from being critical readers of political thought to being independent contributors to debate. It will be especially useful for those considering writing a thesis in political theory.

Technology Science Practicum (207920)

Latanya Sweeney

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This practicum is a capstone to the Technology Science Program, designed to give students the opportunity to conduct original research and write a publication-ready research paper. In consultation with the instructor, students select a concrete technology-society conflict to address, produce autonomous research to analyze it, and provide a set of actionable recommendations or produce appropriate technology to solve it. Throughout the semester, students receive feedback both from their peers and the instructor to aid the development of their projects. Class meetings include the development of writing schedules, discussions focused on framing, analysis, methodology, and peer-review of student projects. Emphasis is placed on issue spotting, academic story-telling and research framing for maximum impact. The course culminates with a formal presentation of the students' projects and papers.

16

This course examines the countries of Africa in comparative perspective. Instead of merely focusing on the various problems facing the continent, this course looks at examples of both the successes and failures of African states in addressing the challenges they face. Through a combination of case studies, academic scholarship and journalism, the course analyzes the independent and colonial histories of African nations; explores the development of modern African states, societies and economies; and examines the impacts of current international influences on African states.

The Politics and Ethics of Health Care (109731)

Gabriel Katsh

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course looks at contemporary debates about health care, with a focus on the ways in which political theory can inform our understanding of its moral and political dimensions. Using case studies as a launching point, we will explore ideas about autonomy, paternalism, beneficence, and distributive justice, and their application to issues such as informed consent, medical privacy, and the right to refuse care. The Fall 2023 iteration of the course will focus in particular on ethical and policy dilemmas that have arisen in the context of the coronavirus pandemic, including questions about the distribution of scarce resources, the health effects of inequality, and balancing the needs of public health with concerns about individual freedom. Readings include classics of moral and political philosophy, writings by contemporary medical ethicists, Supreme Court decisions, and some empirical and historical studies.

Global Cities in East Asia (216184)

Nara Dillon

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This seminar examines urbanization and globalization in East Asia. We will first focus on the history and geography of globalization. The second part of the course turns to theoretical debates about contemporary globalization and a range of controversies surrounding global cities. Why are some cities more "global" than others? Is globalization increasing inequality in urban society? Is globalization making cities more similar to each other in urban planning and architecture? We will focus on several East Asian global cities, including Tokyo, Shanghai, Hong Kong, and Manila, among others.

Law and Politics in Multicultural Democracies (128009)

Ofrit Liviatan

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0345 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Examines the role of law in the governance of cultural diversity drawing on examples from the USA, Western Europe, Canada, Northern Ireland, and Israel. Central themes at the intersection of law and politics will be explored, including: the impact of courts on rights protections, law's function as a venue of conflict resolution, and courts' relationship with other political institutions. Specific attention will be given to contemporary controversies such as religious symbols and abortion.

Race in Comparative Perspective (218734)

Christopher Rhodes

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

16

The predominant western conception of race is a relatively recent idea formed in the context of European imperialism, trade, exploration and slave trading and developed by many of the most important Enlightenment figures of the 17th and 18th centuries. This course explores various analogues to "race" that developed in other civilizations; focuses on the context and thinkers that were key to the European development of race and racism in the modern era; and examines the variations in "race" that developed in contexts including the United States, Brazil, South Africa and the colonial empires of Spain, Britain and France.

The Politics of Urban Inequality in the United States (220169)

Shanna Weitz

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 16

This course is an introduction to the political causes and outcomes of urban inequality in the United States. This includes examination of governing structures, racial and socioeconomic segregation, and political participation in urban America. In addition, this course will investigate the relationship between public policies (including housing, policing, and education) and urban inequality. Finally, we will use the concepts and arguments learned in this course to analyze contemporary political events in cities in the United States.

The course is designed as an in-depth study of the place of Central Asia in Eurasian and global politics, and the policies of key external actors, such as Russia, the United States, China, the European Union, Turkey, Iran, Japan, South Korea and India, toward the region. Students are familiarized with the ways Central Asia has been contextualized both in scholarly sources and media. We will dwell on the changing geopolitical dynamics of the region and analyze how developments there are intertwined with bigger contexts and stories, including nuclear non-proliferation and state-building, political Islam and democracy promotion, energy markets and climate change, the war in Ukraine and diversification of licit and illicit trade flows. We will define similarities and differences in the foreign policies of Central Asian states and discuss the future prospects of the region.

Substantive questions in empirical scientific and policy research are often causal. Does voter outreach increase turnout? Are job training programs effective? Can a universal health insurance program improve people's health? This class will introduce students to both theory and applications of causal inference. As theoretical frameworks, we will discuss potential outcomes, causal graphs, randomization and model-based inference, sensitivity analysis, and partial identification. We will also cover various methodological tools including randomized experiments, regression discontinuity designs, matching, regression, instrumental variables, difference-in-differences, and dynamic causal models. The course will draw upon examples from political science, economics, education, public health, and other disciplines.

Pre-requisite: Basics of probability, statistics, and linear models at the level of Gov 2002

Government 2002

Quantitative Social Science Methods II (111530)

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a rigorous foundation necessary for quantitative research in the social sciences. After reviewing the basic probability theory, we offer a systematic introduction to the linear model and its variants -- the workhorse models for social scientists. We cover the classic linear regression model, least squares estimation and projection, fixed and random effects models, principal components analysis, instrumental variables, flexible regression models, and regularization for high dimensional data. In covering these topics, we deepen our knowledge of fundamental concepts in statistical inference while also demonstrating how these methods are applied in political science.

Recommended Prep:

Basic probability and statistical inference, familiarity with R.

Requirements:

Prerequisite: Gov 2001 or the permission of the instructor.

This graduate seminar provides an overview of the research frontier on political accountability and governance in developing countries, including democracies, electoral autocracies, and authoritarian regimes. Topics include democratization and democratic erosion, voting behavior, clientelism, accountability, the bureaucracy, and the role of foreign aid. While including some foundational readings, the syllabus puts emphasis on recent work. Readings primarily draw from comparative politics, political economy, and development economics. In addition to theory and empirics, the course focusses on the nuts and bolts of collecting qualitative and quantitative primary data. Parts of this seminar are hands-on, and students are expected to have a background in causal inference and statistical programming. Students will replicate and extend the data analysis of a recent study, write a peer review of an academic article, and write a research proposal or pre-analysis plan.

Instructor Permissions: Instructor

Enrollment Cap: 12

What was life like for women who stood at a major crossroads of history? What was required, in tumultuous times, to think and act boldly? This course focuses on women from diverse racial and regional backgrounds who labored to abolish slavery in the United States and then enlarged their political visions to include a range of progressive causes: racial equality, temperance, black suffrage, and women's suffrage. We will explore the texture of women's experiences in the 19th century, the conditions that gave rise to multifaceted societal change, and the ways in which that change unfolded. Finally, our course will consider how these women's stories are remembered in present-day public culture and whether knowledge of this era can play a role in the urgent societal issues of our own time.

The History of American Conservatism from William F. Buckley, Jr., to Donald Trump (218587)

Aaron Bekemeyer

2025 Spring (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

What is conservatism: a commitment to tradition or the defense of privilege? How does conservatism relate to other forms of right-wing politics? In this course, you will take up these questions through the study of American conservatism. You will explore its anti-New Deal origins in the 1940s and 1950s and explain how conservatives captured of the Republican Party in the following decades. You will interrogate the relationship between mainstream conservatism and "far-right" groups like the John Birch Society and Q-Anon. And you will decide what, if anything, Trumpism has to do with the history of this influential political movement.

2024 Fall (4 Credits)

Schedule:

R 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

We live in a world of post-truth politics. Words appear to have lost the prestige of referring to facts or interpretations presented in good faith and based on discourses of proof which, however contested, meant

the recognition of a certain shared terrain of disputation. History as a form of knowledge has been affected by the current situation, with historians often accused of embracing political causes rather than rendering objective knowledge. This seminar is an attempt to interpret the history of thinking about history from the Enlightenment to the present, through the reading of some key texts and authors. Reflecting upon the history and the complexity of historical knowledge is important to understand the present epistemological and political crisis.

Writing Histories of Climate Change (220075)

Arunabh Ghosh

Emma Rothschild

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Explores different ways of writing about the history of climate change. The course will emphasise connections between large-scale data and local or micro-histories. It will consider the causes of human-induced climate change in particular places and times, and ways of averting them. Students will write short texts drawing on economic history, literature, environmental history, the history of science, and opinion writing.

Course Notes:

The course is open to all undergraduate students, 1st and 2nd-year students as well as juniors and seniors.

This course offers student to put their social scientific research and writing skills to work on actual asylum cases. Working in teams, students will collaborate with law students and professors at the Immigration and Asylum Clinic at Harvard Law School to draft documents helping to document conditions in the home countries of asylum applicants. Students will also have opportunities to build their understanding of

asylum law, hone their historical and legal research skills, and reflect critically on the asylum system, the ethical practice of legal advocacy, and responsible depictions of violence and injustice in foreign cultures. History *** Immigration Law is a prerequisite for participation in the Lab.

Course Notes:

The fall 2023 course, History 1016: "Immigration Law: A History of the Present," is a prerequisite for enrolling in this course. Students will not be able to enroll without History 1016 appearing on their transcript.

Japanese Imperialism and the East Asian Modern (224250)

Ian J. Miller

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course examines how one of the most important but least studied empires of the modern world reshaped the culture and politics of East Asia. By the early 1940s the Japanese empire encompassed some 200 million subjects, stretching from the cold northern woods of Sakhalin Island to the tropical rain forests of the Indonesian Archipelago. Rather than treating the Japanese empire as exceptional, we will use it to explore the nature of modern imperialism, asking how its study might reshape broader understandings of empire and its consequences. Limited primary source readings, ranging from manifestos and conference transcripts to fiction and woodblock prints, will be paired with classic and cutting-edge scholarly writings.

"What is Intellectual History?" (109927)

Ann Blair

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Intellectual historians study almost every period, place, and theme in human history: from classical times to the present, from Asia to the Americas, by examining philosophy and religion, social and political thought, literature and art, and other expressions of human agency and intention that range from ancient epics to graphic novels. This section will draw examples from a wide range of moments and regions to ask how intellectual history has developed as a field, what methods it uses, and how it can be distinguished from other forms of history even as it informs debates of interest to all historians.

Course Notes:

Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students. This course may not be audited or taken Pass/Fail. It enrolls prior to shopping period through the History concentration. Please contact the ADUS in History if you wish to enroll without being a concentrator in History.

Empires are the oldest, most durable, and enduring form of government in world history. We live in a world shaped by empires past, and, though no polity in 2022 describes itself as an empire, many people argue that imperial power persists. This section will introduce students to the various ways historians define empires and write about the experiences of those who inhabited them. On what scale can one best approach such varied and sprawling entities? From whose perspectives? Using what sources? What can historians of empire contribute to understanding power in the world today?

Course Notes:

"What is Military History?" (218153)

Derek Penslar

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Military history studies the context, instruments, causes, course, and outcome of armed conflict. Its blending of discrete events such as battles and wars with the broad socio-political environment in which those events take place makes the study of military history an ideal means for initiating students into historical thinking, research methodology, and writing. This course approaches military history through not only traditional categories such as state power and interest but also perspectives of race, gender, and culture. We demonstrate the capaciousness of the historical discipline through the adoption for the study of war and the military of concepts from international relations and psychology and the use of sources ranging from military theory to the life-writing of ordinary soldiers and their families.

Course Notes:

Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students. This course may not be audited or taken Pass/Fail. Derek Penslar

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course addresses controversies surrounding the history of Zionism and the state of Israel. Central to these controversies are questions of comparison. Is Zionism a movement for collective liberation, like national movements of stateless or colonized peoples, or a variety of western colonialism? Does Israeli statecraft operate within a normal geopolitical spectrum, or is it unusually expansionist and aggressive? This course seeks to answer such questions through a broad and deep analysis that spans the 19th and 20th centuries, pays close attention to Israel's social and cultural history as well as high politics and military affairs, and imbeds modern Israel into multiple global contexts.

How was the region of North Africa and West Asia between the Atlantic and Central Asia constructed, physically and discursively, as "the Middle East"? In what ways have Orientalist tropes and imperial politics shaped the very study of the diverse region from the mid-eighteenth century until the present? What were the major local, regional, and global events and processes that have most profoundly affected the political, social, cultural, economic, environmental, and intellectual realities, past and present, of the modern Middle East? Throughout the semester, we will draw on readings from various disciplinary areas, including history, anthropology, architecture, politics, and literature, in order to think critically about these and related questions. The diverse themes we will include but are not limited to: challenges in the study of the modern Middle East, the politics of modernity, Ottoman and Persian reform and revolution, the formation of modern nation states, colonialism and imperialism—past and present—social and intellectual movements, gender politics, petro-states in global perspective, and Islam and politics.

Course Notes:

Examines Japan's rise from the ashes of wartime defeat to global economic power and subsequent stagnation, with primary focus on society and economy. Considers the value and the limits of a narrative of "rise and fall" as the framework for understanding the 75 years since World War II, with focus on trends in gender roles, social (in)equality, and human impact on the environment. Asks how have people in postwar Japan, and the government, explained to themselves and the world the previous embrace of empire and war.

Course Notes:

This course traces the continuum of socio-political and cultural developments in the Near East that led, over the course of three millennia, from stateless societies to the emergence of Assyria as the first empire in history. The class focuses on the long-term history of power centralisation, and the role of ideology and propaganda in overcoming resistance to this concentration of authority. The course material covers a broad evidentiary and chronological range. We will employ textual, visual, and archaeological sources to explore the evolution of the political and cultural landscape in the Near East and the Mediterranean, from the emergence of the first city-states in the late fourth millennium BCE to the early development of Roman imperial ideology around the start of the Common Era.

In this course, you will explore the history of the United States since it became the world's preeminent economic and military power. Since 1945, the country moved from a "Golden Age" of capitalism to the neoliberal era of inequality and erratic growth; from immigration restriction to attracting people from across the world; from the hegemony of liberalism to the ascendance of conservatism; and from the Cold War to the War on Terror. You will analyze the causes and consequences of this dynamic history by studying the social movements, political parties, and international forces that propelled an ever-changing nation.

Germany, 1848-1949 (110285)

Alison Frank Johnson

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

German History loomed like a specter over the twentieth century. In the twenty-first century, Americans have been debating the relevance and legitimacy of comparisons between German history and our contemporary world. How useful is German history for understanding our current moment? How might our present-day concerns distort what we see in the past? This course will examine the history of Germans in Europe and elsewhere, starting with the revolutions of 1848 and ending with the separation of Austria, West Germany, and East Germany following the Second World War. Themes will be war, insurrection, and terrorism, revolution and counter-revolution, gender and sexuality, reform, violence, anti-Semitism, racial thinking and racism, and migration.

Course Notes:

No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and first-years are welcome.

The End of Communism (109418)

Terry Martin

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Examines how and why communism collapsed in the Soviet Union and Eastern Europe. Places the events of 1989/1991, usually considered sudden and shocking, within the political, economic, social, and cultural context of the surrounding decades (1970-2000). Considers both international and domestic factors, including the Cold War and the arms race; ideology and dissent; consumption and culture; oil, economics and the environment; nationalism and civil war; gender and health. Investigates the role of structural conditions and contingency in history.

Course Notes:

No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement, first-years, and others are welcome.

Austrian History in Literature (212656)

Alison Frank Johnson

2024 Fall (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course uses Austrian literature to think through some of the most pressing questions of modern European (and, specifically, Austrian) history. We will read some of the greatest novels and novellas in modern German-speaking literature as learn about the Habsburg monarchy, turn-of-the-century Vienna, the First and Second World Wars, the expulsion of Austrian Jewry, and postwar mythmaking. Important themes include: women's role in society and in the family; the rise of nationalism as a social and political force and the viability of multinational empires; sex and sexuality; justice, mercy, and retribution; what Austria is and what it means to be Austrian; anti-Semitism, Zionism, and European Jewry; cultural, political, and violent forms of social protest; the transformative power of war. Open to undergraduate and graduate students, with the permission of the instructor.

Course Notes:

This course is equivalent to German 179. Credit may be earned for History 1919 or German 179, but not both.

The Rights of Nature (224205)

Jill Lepore

2024 Fall (4 Credits)

Schedule:

M 0600 PM - 0800 PM

Instructor Permissions: Instructor**Enrollment Cap:**

20

Can law save the planet? This course, offered jointly at HLS and FAS/GSAS, investigates a legal movement known as the Rights of Nature. Beginning from the premise that existing environmental law is inadequate to the problems of climate change, mass extinction, and habitat loss, this movement proposes strategies that include granting rights to nature through legal personhood and assigning property rights to wildlife. The course explores both the promise and problems with this mode of thought while also excavating the field's origins, which lie in many places, including, importantly, in Indigenous Law.

Course Notes:

This course is capped at 40 students. It will admit 20 students from FAS/College and 20 from HLS. For FAS/College students, consent of the instructor is required

Social Revolutions in Latin America (159555)

Alejandro de la Fuente

2024 Fall (4 Credits)

Schedule:

W 0345 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

10

This course seeks to explain why social revolutions have taken place in Latin America and analyzes their impact on the region. The objective is for students to gain a critical understanding of the origins, development, and impact of revolutionary movements in Latin America during the twentieth century. The course examines several case studies, which may include Mexico, Cuba, Chile, Nicaragua, the Zapatista uprising in Chiapas, and the so-called "Bolivarian revolution" of Venezuela. Our goal is to identify similarities and differences among these cases.

Course Notes:

This course is also offered through the African and African American Studies Department as AFRAMER 199X. Credit may be earned for either History 1937 or AFRAMER 199X, but not both.

Migration, Belonging, and the Law in Europe and the Americas (224261)

Tamar Herzog

Jesse Hoffnung-Garskof

2024 Fall (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

The aim of this course is to trace discussions, practices, and regulations concerning the identification of persons, controlling their movement, and the right (and/or duty) to change their group belonging in both Europe and the Americas from approximately the 1500s to the present. We will observe different individuals and groups as they move in space, and as those around them encourage them, allow them, or prohibit them from doing so. We will also ask how attitudes towards movement and migration affects the host society and define who members are.

Healthcare and the Welfare State (222240)

2025 Spring (4 Credits)

Schedule:

Instructor Permissions: Instructor

Enrollment Cap:

15

This conference course examines state-based guarantees to healthcare through an initial comparative analysis of different welfare states, largely focused on the United States' experience. It asks why the United States has not guaranteed a right to healthcare, unlike most other advanced, industrialized, and wealthy countries. Within the United States' federated system, the place of healthcare varies widely amidst other demands for social insurance, which includes unemployment benefits, parental leave, childcare, and pensions. From comparative to national perspective, this course engages American political economy's public-private mix; anti-immigration sentiment's and segregation's limits on national health insurance; the Civil Rights Movement's healthcare reforms; the persistent reproduction of health inequality despite de jure desegregation; resistance to and breakthroughs for Medicaid expansion in the contemporary era; and prospects for future reform.

History 1963 Section: 01

The Black Press in Latin America (224262)

Paulina Alberto

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0200 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Latin America's Black press constitutes perhaps the richest archive of Afro-Latin American lives and thought. A counterpart of, and frequently in conversation with, the African American press of the United States, these newspapers and magazines flourished in different parts of the Spanish- and Portuguese-speaking Americas from the nineteenth century to the present. Yet until recently, the Afro-Latin American press and the social universes it contains were largely inaccessible to English-speaking audiences.

This course draws on new English-language translations of extensive selections from the Black presses of Brazil, Cuba, Uruguay, and Argentina from the nineteenth and twentieth centuries, examining these sources both as a part of a historically specific genre and as a window into the diverse experiences of Afro-Latin American individuals and communities. We'll explore how the Afro-Latin American thinkers, activists, and journalists who wrote for these publications, as well as the many members of Afro-Latin American communities who regularly appeared in their pages, understood and engaged with key facets of their societies: racism and anti-racism, citizenship and politics, family and education, gender, Africa and African cultures, and Afro-diasporic ties. Throughout the course, we will analyze historical shifts in the form and content of the Black press, considering differences and convergences across various national cases and historical moments. Students will have an opportunity to work with original Black press documents, whether producing translation and analyses of Portuguese- or Spanish-language materials or analyzing how writers in the (Anglophone) African American press dialogued with their Latin American peers, implicitly and explicitly translating racial ideologies, terminologies, and histories of racial formation in the process.

Class Notes:

Reading knowledge of Spanish or Portuguese useful, but not required.

Asian American History (120542)

Erika Lee

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

This course will introduce students to the key issues, theoretical frameworks, research, and methodologies of Asian American history. It is designed for graduate students and advanced undergraduate students. We will analyze primary sources and examine seminal texts that defined the field as well as recent scholarship that has reconceptualized our understandings of the Asian American past and present. We will consider how the production of Asian American historical scholarship relates to ethnic studies and immigration history, as well as to Asian history, public history, histories of settler colonialism, empire, and slavery, gender & sexuality studies, and critical refugee studies. Course readings will include monographs and articles. Coursework will include weekly response papers, leading and participating in class discussion,

one book review, and a final historiographical or research paper.

Re-Wilding Harvard (216271)

Joyce Chaplin

2025 Spring (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This class uses history to make a difference in the natural world. Rewilding returns a habitat to an earlier form to promote biodiversity; urban rewilding does this within urban spaces. In this class, we will research historical and cultural definitions of wilderness and landscape, identify what precolonialist habitats were like in New England, survey how such places might be restored, and then contribute to a ten-year urban rewilding plan for Harvard, including an outdoor exhibit for the Harvard Museums of Science and Culture and a GIS reconstruction of Harvard's landscape history. The class is open to both graduate students and undergraduates in a broad and relevant range of disciplines and will fulfill conference course credit in the History Department.

Readings in Native American and Indigenous Studies: Seminar (206979)

Philip Deloria

2025 Spring (4 Credits)

Schedule:

M 0945 AM - 1230 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

This course offers a survey of the historiography of Native American and Indigenous Studies. Centered on six themes—Power and the Middle Ground, Borderlands, Settler Colonialism and Sovereignty, Race and Slavery, Modernity and Futurity, and Global and Comparative Indigeneity—the course is designed to allow explorations into additional terrain, including gender and sexuality, law and policy, and comparative ethnic studies, among others. Core readings will focus on recently published scholarship. To explore field trajectories, scholarly exchange, and indigenous politics, members of the class will research and write historiographical essays that will be shared collectively, and form the basis for seminar discussion.

Warren Center Seminar: Alternative Ecologies (224283)

Tiya Miles

Walter Johnson

2024 Fall (2 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This seminar will convene scholars, public-facing intellectuals, writers, and practitioners whose work falls under the broad umbrella of ecological study and care rooted in Black, and/or Indigenous, and/or feminist, and/or community-minded thought, culture, and history. This flexible thematic has been chosen to inspire new questions, highlight key issues, structure constructive dialogue, spark fresh ideas, and support works in progress in the academic arenas loosely deemed "black ecologies" and "racial ecologies."

Alternative Ecologies grows out of the ecological turn in African American and Afro-diasporic studies, as well as ethnic studies, critical geography, Black and Indigenous feminist studies, and American studies, while recognizing that the field of Indigenous and Native American studies has always centered relationship with land, water, and multiple beings. The intellectual and political roots of the seminar stem from the notion of "Black Ecology," a phrase introduced by the sociologist and founding editor of *The Black Scholar*, Nathan Hare, in 1970. In recent years, scholars in Black studies have revived the term and applied it to an exploration of Black experience, Black environmental history, and Black thought that proposes a long and radical relationship to "nature" in the context of environmental racism and struggles for environmental (inclusive of climate) justice. The currency and urgency of "Black ecologies" is evidenced by a burst of scholarship across institutions and platforms, and here at Harvard, by the keynote address given by the Columbia humanities scholar Farah Jasmine Griffin at the African American and African Studies Department's 40th Anniversary Conference in February 2020. In her lecture, Professor Griffin highlighted "Black ecologies" as a future direction in Black studies writ large. A related and equally useful emergent term, "racial ecologies," entwines our inquiries with ethnic studies and the histories of marginalized, racialized, and colonized populations studied in relation to place and environment. The

seminar will open outward from a "Black ecologies" starting point to broader engagement with the histories of various peoples and the landscapes they have inhabited and shaped.

Students must complete both terms of this course (Part A & B) in the same academic year to receive credit.

Class Notes: This course meets every other week for the full academic year.

Latin American history seminar and workshop is a yearlong research seminar and workshop that meets every other week to discuss the most recent scholarship regarding the administration of differences in Latin American history, when possible, in the presence and with the participation of the authors. During the academic year 2024-2025 we will concentrate on the newest literature regarding both indigenous and Afro Latin and Asian Americans, mostly during the colonial period, and the nineteenth century. We will discuss how differences were defined, negotiated, represented, and challenged, creating both inclusion and exclusion.

Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

History 2639 Section: 01

Histories of the People's Republic of China: Research Seminar (202996)

Arunabh Ghosh

2024 Fall (4 Credits)

Schedule:

M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

For long, 1949 marked a boundary that historians of China did not transgress. The post-1949 years were almost exclusively the domain of political scientists, sociologists, economists, and anthropologists. But over the last twenty years, spurred by the increasing accessibility of materials inside and outside the archive and by methods such as oral history, historians have offered new and compelling perspectives on the early years of the People's Republic of China. In this research seminar students will explore this history by reading some of the most innovative work in the field and developing and presenting research that will culminate in a 25-35 page research paper. Each week we shall also have the opportunity to discuss a particular kind of source. This will help prepare students for research in China by giving them practical experience of dealing with a variety of materials, textual and non-textual.

Democracy: Theory, History, Practice (224264)

Sugata Bose

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

A theoretically informed and historically grounded enquiry into the relationship between democracy and authoritarianism in colonial and postcolonial South Asia within a global comparative context. Close attention will be paid to ideas and institutions of racially defined governance structures and racially segregated spaces of colonial despotism, constitution-making processes and the quest for democratic norms, definitions of majority and minority, federalism in culturally diverse polities, elections in India, Pakistan, Bangladesh, the United Kingdom, and the United States, and historical as well as contemporary crises in democratic practice.

History 2725 Section: 01

History and Anthropology: Seminar (110313)

Vincent Brown

2025 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Explores exchanges between the disciplines of History and Anthropology, emphasizing overlaps and distinctions in the treatment of mutual concerns such as the representation of time and space, the conceptualization of power, and the making of the subject.

Course Notes:

This course is equivalent to Anthropology 2725 . Credit may be earned

for either History 2725 or Anthropology 2725, but not both.

Narrative History: Art and Argument (207531)

Maya Jasanoff

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Who, what, where, when, how, and why? The elements of history are the elements of a story, and the art of writing history is the art of how to tell it. This course offers an intensive workshop on the art and craft of historical narrative. Through reading (from T. B. Macaulay to Hilary Mantel) and in-class writing exercises we will develop a repertoire of techniques to address issues central to historical story-telling, such as establishing scene and character, handling evidence, and embedding argument. Open to any advanced undergraduates and graduate students interested in writing as a craft.

History 2955A Section: 01

History of Global Capitalism: Seminar (212679)

Sven Beckert

Lorenzo Bondioli

2024 Fall (2 Credits)

Schedule:

M 0300 AM - 0545 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The history of capitalism is one of the most important topics in the study of the past, as the expansion of capitalism has revolutionized almost all aspects of human life in almost all areas of the world during the past 500 years. The seminar will introduce students to a lively debate among social scientists on what this capitalist revolution has been about and how best to explain it. We will read canonical texts in the field, debate current research and guide student research in the field. We will study capitalism from a global and historical perspective. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

The Academic Job Market for Historians: Skills and Strategies (220190)

Philip Deloria

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The academic job search can be a harrowing experience in the best of times. In this workshop-like seminar, students currently on the academic job market will assemble a full dossier for the job market, take mock zoom interviews with faculty with recent experience either as job candidates or on job search committees, and learn about applying to different kinds of institutions. Class participants are expected to attend mock job talks organized for their peers who are preparing for campus visits.

God Save the Queen! Ruling Women from Rome to the Renaissance (127654)

Sean Gilsdorf

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

This seminar will explore female rulership in Europe from the late Roman empire to the age of Elizabeth I. Discussion of varied texts and images (most of them primary sources in translation) will reveal the role of queens within their societies, their relationship to broader social and cultural institutions such as the Christian Church, and the ways in which queens were celebrated, criticized, and imagined by writers and artists of their time.

Espionage: A Cultural History (216232)

Duncan White

2024 Fall (4 Credits)

Schedule: T 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

Over the course of the twentieth century the spy thriller became a central part of our culture, changing the way people imagined how the state operates in secret. Why are we attracted to stories of paranoia and conspiracy? What is the history of this genre, and how is it intertwined with the history of espionage? Does espionage fiction glamorize the work of spy agencies? Or help challenge it? The course is divided into four units. The first will consider the origins of the spy thriller and how the obsession with espionage fiction was connected to empire. The second unit shifts its focus to how the spy genre developed from the Second World War into the Cold War and will explore the different visions of espionage offered by the glamor of James Bond and the "insider" fiction of John le Carré. The third unit focuses on the way the CIA has been represented on page and screen, and the relationship of these fictions to the actual operations of the agency, including political subversion, covert action, and targeted assassinations. In doing so we will also consider how writers like Graham Greene, Lauren Wilkinson, and Mohsin Hamid have challenged the

conventions of the spy thriller genre. In the final unit we will explore the role of espionage in the "War on Terror," and consider the way espionage fiction, including *Homeland* and *Zero Dark Thirty* grappled with ethical questions surrounding spying, terrorism, and torture.

The Gilded Age (216240)

Morgan Day Frank

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

This course examines a grand and tumultuous period in American history, the Gilded Age. Over the semester we will read about the rise of robber barons and the consolidation of a genteel leisure class, the birth of the department store and the invention of the mass market magazine. We will discuss the battle between labor and capital and the brutal closure of the Western frontier, the rise of Jim Crow in the South and America's imperial ventures in the Pacific and Caribbean. We will also pay attention to the shifting meaning of art and literature under these turbulent conditions. What role did culture play in the United States as it rapidly industrialized? Did culture serve simply to reinforce social hierarchies, or could it transform them? Why produce art or literature at all when the world appeared pointless and manifestly unjust? Readings will include fiction by Henry James, Edith Wharton, Charles Chesnutt, Sutton Griggs, Frank Norris, and Sarah Orne Jewett; essays by W.E.B. Du Bois, Henry Adams, Jane Addams, Thorstein Veblen, and William James; paintings by Howard Pyle and John Singer Sargent; political cartoons; and a dime novel.

Race and Empire in the Americas (220439)

Hannah Waits

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

This course explores the culture and politics of imperialism in the Americas from the early 19th century to the present, with particular attention to race and ethnicity. We ask how formal and informal imperial relationships developed by looking at French, British, and especially United States imperialism across the Caribbean, Central America, and South America. Focusing on topics like revolution, migration, military occupation, tourism, climate change, and humanitarianism, we examine how empire functioned on the ground for those who imposed it and those who resisted, appropriated, or accommodated it. Course texts include theory from Frantz Fanon and Gloria Anzaldúa, fiction by Jamaica Kincaid, documentaries like *No Más Bebés* and *Aftershocks of Disaster*, and primary sources like imperial maps from the Pusey library collection, Central American political cartoons about the US, and oral history accounts by Bracero workers.

History & Literature 90FU

British Soft Power from Shakespeare to Dua Lipa (220451)

Laura Quinton

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

Today, the United Kingdom is considered one of the world's "soft power superpowers." How did this small island come to wield such outsize global influence? From Voltaire's rhapsodizing about eighteenth-century England to present-day infatuations with James Bond, Harry Potter, and the Royal Family, this course explores how British art and culture have historically produced alluring national images. What "British" qualities have captured the world's imagination, and to what extent are they a fantasy that overlooks dynamics of class and multiculturalism? What countries, leaders, and popular audiences around the world have latched on to these images, and to what end? Have they launched revolutions or upheld hierarchies? Considering these questions, we will examine British performing and visual arts, literature, sports, education, and fashion as channels of power - deployed at times by British elites and politicians - and chart the relationship between this nation's creative ascendance and its imperial decline.

Class Notes:

History & Literature 90FZ

The South: Histories of a U.S. Region (222483)

Rachel Kirby

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

The South is a physical place with debated boundaries, populated by a diverse set of people who navigate and enliven the region. Simultaneously, "the South" is a layered cultural category that has been imagined and evoked over time in ways that are dynamic, evolving, and contradictory. Taking an interdisciplinary approach to our study of moments, ideas, places, and events that illuminate various aspects of the region, we will question what types of social and political work are carried out by the category of "southern" as employed by people both in and outside of the region. Each week, the class will explore a different cultural or historical manifestation of "the South" – plantation South, migrating South, and Disney South, for example. In so doing, we will attend to the ways that race, class, and gender are intertwined with histories and imaginings of the region. Bringing together art, popular culture, and politics, our conversations will resist efforts to define a singular South, instead challenging our own existing conceptions of the region to develop frameworks for understanding the rich complexity of the South(s). Recognizing that this course is not encyclopedic, your final projects will ask you to identify and examine a South that is not included on the syllabus. Course readings and topics include Joel Chandler Harris's *Uncle Remus, His Songs and His Sayings*, Ida B. Wells's *Southern Horrors*, William Faulkner's "A Rose for Emily," artworks by Romare Bearden, cultural icon Dolly Parton, and Outkast's *Southernplayisticadillacmuzik*.

American Education Reforms (222485)

Emily Gowen

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

Education is often understood as a lever for social change, but ideas about what constitutes a good education have long been hotly contested. What is more, the seeds of today's most urgent educational controversies—such as debates about equity, educational purpose, censorship, etc.—can be found in archives related to America's earliest schools. In this course, we will trace various American education reform movements from the early colonial period through the turn of the 20th century, and explore the philosophical, practical, and social conflicts that animated them. We will move thematically and chronologically through the histories of Indian schools, common schools, freedpeople's schools, and women's colleges, and end with post-reconstruction regimes of school segregation. Readings will include essays by thinkers like Horace Mann, Emma Willard, and W.E.B. DuBois, as well as educational materials like the *New England Primer*, the *American Spelling Book*, *The Brownies' Book*, and a range of novels, poems, tracts, and stories spanning the long nineteenth century. Students will have the chance to conduct hands-on research at archives related to various local educational institutions and will be encouraged to explore the legacies of early American reforms in today's educational landscape.

Screen Cultures from Cinema to TikTok (222488)

Emmet von Stackelberg

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

The way we see the world is growing inseparable from the way our screens show that world to us. It would be almost impossible to avoid screens for even a single day. This course follows the 125-year history of screen cultures in the United States—from motion pictures, to television, to personal computers, Gameboys, and, of course, smartphones. How have people engaged with screens, and how have these responses changed along with the technology? How did those in power try to use screens or limit them in response to larger political events and concerns? How have U.S. and transnational screen cultures shaped or troubled racial boundaries and gender binaries? What is the relationship between culture, media, and technology? In this course, students will interact with screens in material form and assume the role of viewer for a range of different screen products: films, animation, television shows, video games, websites, and tiktok videos. Additionally, we will also read newspaper and magazine accounts, fiction, and poetry to explore the cultural reception of screens, while engaging with the work of critics and artists including Stuart Hall, Marlon Riggs, Hito Steyerl and Walter Benjamin.

Marx at the Mall: Consumer Culture & Its Critics (222489)

Briana Smith

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

In response to climate change, some experts suggest the key to our survival is curbing mass consumption and working toward a "no-growth" economic model. Yet consumption levels continue to rise globally. We can't stop ourselves from buying more stuff. To help us better understand why, this course traces the rise of mass consumer culture in modern Europe from the 19th century industrial revolution to the late twentieth century. Over the semester we will seek to answer the following questions: How has the meaning of buying and possessing stuff changed over the last two hundred years? How were modern urban spaces shaped around the twin delights of consumption and leisure? How did consumer culture become a source of class distinction, identity formation, gendered stereotypes, and creative expression? What role did consumer culture play in promoting European imperial and colonial projects and resisting empire? In the postwar era, how did modernization and Americanization change European consumer habits? How did groups like the Situationist International, Dutch Provos, and West Berlin's Kommune 1 levy political critiques against mass consumption as a source of alienation? How did these critiques evolve into larger anti-globalization movements in the 1990s? We will encounter this history through a variety of primary sources including novels (Zola's *Ladies Paradise*), films (Fassbinder's *Lola*; Tati's *Mon Oncle*), popular theorists (Barthes; Marcuse; Veblen), political manifestos, and visual art & design (Bauhaus; pop art; fashion). Course assignments will be focused on the development of writing skills through a series of short essays, a midterm essay, and a final paper.

Race & Ethnicity in Twentieth-Century American Thought (224364)

Nicholas Bloom

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

In his 1903 book *The Souls of Black Folk*, W.E.B. Du Bois famously wrote that "the problem of the twentieth century is the problem of the color line." This course is a survey of the work of intellectuals, artists, and activists in the late-nineteenth and twentieth centuries who took this "problem" seriously, and who sought to understand its origins, its functions, and how it ought to be addressed. It will expose students to certain foundational ideas, problems, and debates in the study of race and ethnicity in twentieth century America. Readings may include works by C.L.R. James, Zora Neale Hurston, Leslie Marmon Silko, Gloria Anzaldua, James Baldwin, Cedric Robinson, bell hooks, William Faulkner, and Toni Morrison, among others. Most importantly, the course aims to provide students the opportunity to develop their own critical and historical acumen to study those aspects of race and ethnicity that they find most urgent or fascinating.

Class Notes:

Interested students should [petition to enroll](#) on my.harvard. History & Literature 90GR

Indigenous Genders and Sexualities in North America (224367)

Morgan Ridgway

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

How do gender and sexuality shape Indigenous life? What does it mean for the body to be a site for both colonial violence and imaginative futures? How have constructions, ideas, and aesthetics of gender and sexuality morphed across time and to what consequences for Native people? This course grapples with these questions through an examination of literature and cultural production by Indigenous peoples in North America. Students will be introduced to some of the foundations of settler colonialism, what it is and how it functions. The class will engage with poetry, memoir, speculative fiction, paintings, and media to develop an awareness of how and why the genders and sexualities of Native people are central in understanding the work of settler colonialism and resistance to it. Through this class, students will critically engage works by poets such as M. Carmen Lane and Jake Skeets, fiction by Joshua Whitehead and Billy-Ray Belcourt, essays by Alan Pelaez Lopez and Erica Violet Lee, and more. Students will interrogate these works in conjunction with legal, performance, and cultural sources produced by settler states across time to understand the anxieties, joys, and power that arise when Indigenous people embrace their bodies. In the process, students will become more familiar with gender, sexuality, settler colonialism, and embodiment as key terms and develop skills and methodological approaches with which to engage

ideas of power. Ultimately, this course is an opportunity engage ideas of gender and sexuality as processes and witness the vibrancy and urgency of Indigenous literatures and cultural production.

History & Literature 90GS

The Cuban Revolution from Havana to Miami (224368)

Hannah Cole

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

This course will examine political, literary, and cultural representations of the 1959 Cuban Revolution from Havana to Miami. Beginning with an overview of Cuba's colonial history and its relationship with the U.S., we will examine Fidel Castro's rise to power, the events of 1959, and the aftermath of the Revolution, including waves of immigration to America. The course will emphasize Cuba's significance within Cold War politics, including its relationship with the U.S.S.R and perceptions of the 1961 Bay of Pigs invasion. We will also consider how the Revolution transformed understandings of race, gender, and sexuality from the vantage points of Cubans and Cuban Americans alike.

History & Literature 90GT

World War II in Image, Text, and Sound (224366)

Jules Riegel

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

Almost eighty years after the end of World War II, its legacies are alive as ever. The conflict was fought across much of the globe, ravaging landscapes and ecosystems and wiping villages, towns, and even cities from the face of the earth. Estimates of combined civilian and military deaths typically range between 50,000,000 and 85,000,000, an almost unimaginably devastating toll. Yet how does our understanding of World War II change when we return to literature, art, music, and other cultural works of the time? This course examines civilians' and soldiers' everyday experience of the war through sources such as diaries, photographs, films, songs, and visual art. We will focus on the war in Europe, while considering sources from the war's other theaters, including the Pacific. Topics will include life and death under occupation; the impact of strategic bombing; documentation of wartime atrocities, especially through photography; partisan warfare and resistance fighters; children's and teenagers' lives during the war; and gendered experiences of war. In the final weeks of the course, we will turn to examine collective memory of World War II as expressed in monuments, film, and song to consider its ongoing resonance in our world today.

Class Notes:

History & Literature 93AB

Oral Histories (222495)

Lilly Havstad

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

15

Oral histories engage with sources that offer perspectives, life experiences, and ways of knowing that official written records can overlook or actively seek to erase from the historical record. This research seminar will explore the methods, theories, practices, and controversies that have shaped oral history as an academic field, while paying close attention to the contributions and critiques from activist oral history practitioners. In weekly readings and discussions, students will gain an appreciation for this (at times fraught) history, while also gaining a foundation in current best practices for doing oral history. Students will also have multiple opportunities for putting their oral history training into practice. The first half of the course will be focused on student engagement with oral history theory and scholarship alongside existing oral history collections (as primary sources) towards developing an understanding of the field and studying various models for doing oral history. In the second half of the course, students will develop and execute an oral history project that will involve: background research, research design, interviewing (with digital recording), transcription, and presentation of research findings in both oral and written formats. Over the semester, students will learn how to incorporate oral histories into their research, with attention to research ethics and an understanding that oral history research cannot be conducted independently of other methods of historical research. Students will practice oral history methods, engaging with oral sources to learn ways of "close reading" oral histories.

Genghis Khan and his Successors: Art in the Wake of the Mongol Conquests (114627)

David Roxburgh

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Is Genghis Khan's characterization "as terrifying as genocide and as dreadful as the plague" (Time, Dec. 31, 1999) sufficient? His legacy entailed the destruction of social and cultural order, but paradoxically, his empire also forged a dynamic relationship between nomadic and sedentary societies. Genghis Khan's successors fostered a climate of intense cultural activity in art and architecture, producing complex fusions of artistic traditions between the Middle East and China. These are the major concerns of the course, which focuses on the art and architecture produced from the thirteenth century on under Genghis Khan and his successors. Genghis Khan and his Mongol horde traversed Eurasia to create a world empire, their most enduring legacy stamped on the lands of Iran and Central Asia through their successors, the Ilkhanid and Timurid dynasties. This imperial order established a new relationship between nomadic and sedentary societies, an ongoing symbiosis of "steppe" and "sown." To bolster their claim to rule, successive leaders exploited the knowledge of indigenous bureaucrats and craftsmen to execute their cultural program. Regional artistic traditions were manipulated and transformed into new hybrids that could demonstrate the ruler's power to the nomadic elite and to the multi-cultural urban populations under their control. These works reveal an evolving political structure and social order. The course examines how meanings are encoded through language, forms, and aesthetic features, how they are made legible, and how they may function as propaganda.

The environments from which the Mongols emerged and into which they journeyed are initially considered in terms of the heritage, culture, and ecology of the Mongols and the peoples of the lands they conquered. How did the Mongols remember their nomadic past as the balance of their lives shifted, when they became

increasingly sedentarized? Which symbolic elements could be easily translated through the available forms of sedentary art and architecture? In subsequent lectures, key monuments of Ilkhanid and Timurid art and architecture will provide a framework for analyzing different facets of the process of cultural assimilation, the changing Mongol response—at first hostile and then receptive—to the sedentarized cultures that they encountered and then ruled.

Key readings are extracted from a wealth of recent literature in addition to primary sources available in English translation. No previous classes in Islamic art and architecture or in Middle Eastern history and culture are required.

History of Art & Architecture 15

Introduction to Italian Renaissance Art (222078)

Shawon Kinew

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What is known as the Renaissance was a period of intense cultural transformation, and it is a history whose legacy we have inherited. From the construction of the liberal arts to the Doctrine of Discovery (only rejected by the Vatican in 2023), we live with the traditions of this period and its repercussions. Artists reached an unprecedented stature creating some of the most powerful works of art in Europe. This course traces an artistic narrative that moves from Giotto to Caravaggio as it coincided with Columbus' disastrous voyages, the Sack of Rome and the Catholic Reformation. We will look closely at the art of Masaccio, Donatello, Botticelli, Leonardo da Vinci, Michelangelo, Titian and Raphael and their contemporaries. We will be attentive to meaning and interpretation, both the ways artists made meaning and the ways we find it the Italian Renaissance, in its beauty and in its power.

Spanish Golden Age Painting: Truth and Deceit (205401)

Felipe Pereda

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The art of the Spanish Golden Age is well known for its radical naturalism, on the one hand, and its intense religious imagery, on the other. This course will be an introduction to the major artists of this period – Murillo, Velázquez, Zurbarán and others— from the point of view of painting's power to produce visual illusions and deceive their spectators. Consequently, the course will consider artistic tropes of illusion and disillusionment in relation to early modern debates on belief and skepticism.

Money Matters (216165)

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Money is everywhere. As both an abstract construct and a material entity, money makes the world go around. Since before the invention of writing, money has been a common facet of everyday life, informing how we think and act. The course explores how societies across human history have made, used, and valued money in divergent ways. We will consider money as an object of aesthetic appreciation, an ethical problem, an architect of social relations, an environmental disruptor, a tool of political resistance, and much more. How has coinage design functioned as a political, religious, and cultural symbol? Is money a measure of value, and how does it align with other potential values, such as religious, moral, and aesthetic ones? Is it ethically neutral or an instrument of moral vice or virtue? What were the debates surrounding the rise of paper money? How has money been used as a tool of revolutionary movements and political resistance? Does money get recycled, and what is the environmental cost of different money forms today? What are the links between art, literature, theater, cinema, and money? Be part of a thrilling journey of exploration that will take us from the economic systems of Ancient Mesopotamia to 21st-century digital currencies. Weekly sections in the Harvard Art Museums, the Peabody Museum of Archaeology and Ethnology, and the Baker Library of Historical Collections at the Harvard Business School will offer us the chance to handle and discuss Harvard's world-class numismatic holdings.

History of Art & Architecture 82G

Introduction to Buddhist Arts of Space and Place (224354)

2025 Spring (4 Credits)

Schedule:**Instructor Permissions:** Instructor**Enrollment Cap:**

n/a

How do Buddhists understand the world around them? From vast cosmic mountains to humble domestic altars, Buddhists use places and spaces to define everything from the loftiest goals of the religion to the routine methods of daily practice. Understanding Buddhism, therefore, requires understanding the visual worlds in which Buddhists see themselves to live. This course introduces Buddhist art and architecture that defines concepts of space and place, including depictions of cosmology, geography, and landscape as well as constructions of monuments, mandalas, and altars. Using visual and material culture as a primary source, it is possible to draw deep connections between imagination and reality, showing complex interactions among philosophy, literature, history, ritual, art, and architecture.

The course begins with an introduction to the Buddha's life and his impact on landscape and architecture, explores early Buddhist cosmological diagramming, and proceeds to the impacts on art and material culture of the various transmissions of Buddhism across Asia. Along the way, it also addresses major innovations in Buddhist doctrine and practice, such as Mahayana and Vajrayana, and major transnational interactions, such as between Buddhism and science.

Design Speculations: Senior Design Tutorial (207690)

Lisa Haber-Thomson

2024 Fall (4 Credits)

Schedule: R 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 10

This seminar will serve as a design platform for inquiry, documentation and analysis in relation either to the thesis topic or capstone project of interest to each student. Thesis students will be responsible for

selecting a Thesis Advisor (or Advisors) with whom they will meet regularly to develop specific intention, substance and methodology of the thesis research and paper. This seminar is a support of independent thesis and/or independent project research, extending methodological inquiry of the project topic to design where students may convene to collectively discuss and experiment with design speculations – design tests that explore research through the visual and spatial language of architecture. The course will cover topics general to design research with discussions, assignments, and readings focused on three main themes in relation to architectural design: Discourse, the development of a proposition for the role and significance of architecture relative to the project topic of interest; Method, the design steps/process of working through a design application/inquiry of those ideas; and Context, the relationship of the project topic of study to broader surroundings which include but are not limited to the discipline of architecture, cultural contexts, technical developments and/or typologies. The seminar will emphasize and support the translation of ideas emerging from independent research into visual forms of representation including, but not limited to, drawings, diagrams, images, study models, and short animations. The techniques of representation reviewed will be catered to the project topics of individual students, but will also form a part of the general discussion of the course. HAA 96A Transformations or HAA 96B Connections design studios is a pre-requisite to the Design Speculations course.

HAA 92R is open exclusively to HAA architecture-track concentrators.

Architecture Studio I: Transformations (109375)

Megan Panzano

2025 Spring (4 Credits)

Schedule: MW 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 10

Architecture assembles multiple models, surfaces, and materials; it is not a single monolithic thing, rather it is comprised of disparate parts and organizational systems operating at different scales. Design, the bringing together of these elements, requires sensitivity, registers scale, and renders perceptual effect. This course is an introductory architectural design studio focused on building foundational architectural concepts and design methodologies studied through a process of making. A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site.

The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

Architecture Studio II: Connections (110362)

Megan Panzano

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

The practice of architecture fundamentally asks us to continuously engage with, and re-conceptualize, the world for which we are designing. As such, architecture as a discipline is not only about designing buildings, but also about challenging us to imagine new ways of seeing the world. This studio takes on the challenge through a series of design exercises focused on understanding, engaging with, and reimagining the urban condition. Throughout the course, we will approach architectural design as both a method of producing urban environments, and also as an avenue through which to understand our cities. We will be directly confronting the social, political, and environmental contexts that are necessarily implicated in any design process.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges towards a similar end. This studio originates at the scale of the urban site, and begins with a set of design research assignments that ask students to imagine the city from the perspective of a non-human agent. Extrapolating abstract principles from these agents, we will be mobilizing the possibilities of architectural representation to reimagine the city through mapping, diagraming, and collage.

The studio culminates in a design proposal for a site in Harvard Square. Students will be given an architectural brief, and will produce projects that address existing site conditions, programmatic space requirements, and projected users of the site. Technical workshops will provide all the necessary skills required for the course, and will allow students to develop aptitude in architectural drawing, mapping, rendering, and simple animation. No existing expertise or technical proficiency is necessary for this course. Students from all backgrounds are welcome; we will be encouraging interdisciplinary thinking throughout the design research process.

Medieval Architecture in Greater Iran and Central Asia (207669)

David Roxburgh

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The seminar examines cities and monuments built in Greater Iran and Central Asia from the 11th through 15th centuries spanning three principal dynastic periods (Seljuqs, Mongols, and Timurids). Various functional types—mosques, madrasas, minarets, tombs—, urban systems, and spatial organization are studied including the cities of Baghdad, Bukhara, Herat, Isfahan, Mashhad, Nishapur, Rayy, and Samarqand. We will

examine the materials, construction and design processes of buildings, their typologies and morphologies, as well as their relationships to law, religion, climate, social and political life. A variety of primary sources are also considered ranging from geographies to histories and travel narratives.

Harvard Square has a rich history; under its earlier name of Newtowne (founded in 1630), it was once the site of the Massachusetts capital. Much has changed. This class looks back on the many changes Harvard Square has undergone, recent challenges it has faced, and asks class members to think forward about how it might be re-envisioned. This class will combine work in local archives on issues related to history and policy, meetings on local Cambridge political issues, and an array of local design and drawing assignments. Learn how Harvard fits in; Be part of the change.

Color in the Era of the Colony (222235)

Ewa Lajer-Burcharth

2025 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course explores the historical functions and cultural meanings of color in the period of early modernity (18th and early 19th centuries). Focusing on France and England, we will examine specifically the role color played in the processes of colonization and conquest linked to the emergence of modern European empires. On the one hand, we will consider the colonial origins of many pigments (e.g., cochineal red; indigo blue) and their impact on the European artistic production and decorative arts. On the other hand, we will discuss the ways in which the aesthetic uses of color helped sustain a political system and social and cultural hierarchies in the era of colonization. What were the new meanings and effects of color as the physical product and sign of growing global trade networks, colonial and slave economies, and expanding empires? How were the artistic debates centered around color affected by, and in turn, how they affected what may be called the colonial economy of pigments? What role did the new pigments and colored materials play in the construction of the emergent conceptions of race and gender?

Our discussion will be based on readings drawn from the most recent scholarship and in analysis and

hands-on experience of art objects in the Harvard Art Museums. Moreover, students will be involved in a pigment workshop based in the material resources of the museum. An excursion to the Metropolitan Museum of Art in New York is also planned.

Evridiki Georganteli

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The crusading movement that started with Pope Urban II's call to arms in 1095 redrew the political, socioeconomic, and cultural map of Europe and the Middle East. The course explores the materiality of the Crusades in the late Middle Ages and their imprint on early modern and modern culture.

Some of the themes we will explore:

*The impact of the Crusades on cities and the countryside in Europe and the Middle East; communities, markets, money, and the archaeology of destruction.

*Art and cross-cultural encounters in the Eastern Mediterranean: patrons, artists, works of art, and their intended audiences.

*Religious and secular architecture and new religious topographies in Western Europe and the Holy Land.

*From Constantinople to Venice: relics, treasures, and the Renaissance.

*Commemoration, remembrance and the Crusades as a metaphor; representations of the East through the lyric lens; antiquarianism and the archaeology of the Crusades; Sir Walter Scott, 19th-century crusading literature, and the Pre-Raphaelites; the Crusades in modern visual culture.

Art and Science of the Moon (222081)

Jennifer L. Roberts

2024 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Centering on the response of photographers and conceptual artists in the 1970s to the Apollo program, but ranging throughout the world history of artistic engagement with the moon, this experimental course will explore what it might mean to adopt a cosmological (or at least off-world) purview for art history. We are at an urgent crossroads in our relationship to the spaces beyond Earth: the moon is about to be mined and colonized, Mars is not far behind, and it is quite possible that microbial life will soon be found on another body in the Solar System. Why should students of the humanities care about this? How does thinking seriously about the moon as both a subject of and a platform for thought change the way we understand our own planetary identity and our critical commitments on Earth? Topics will include Afrofuturism, exobiology, environmentalism, feminism, and themes such as "dust," "the dark side," "gravity," "gray," "the frontier," and "the overview effect." The reading will include significant scientific content.

Vision and Justice (224362)

Sarah Lewis

2025 Spring (4 Credits)

Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

How has visual representation—from videos and photographs to sculptures and memorials—both limited and liberated our definition of American citizenship and belonging? Art is often considered a respite from life or a reflection of the times, but this class examines how art actually has created the times in which we live.

The distribution of rights is central to justice. The rights of citizenship are many, but central to them all is the right, even the responsibility, to engage and participate in collective society—to be recognized as a member of the body politic. The course will wrestle with the question of how the foundational right of representation in a democracy, the right to be recognized justly, is indelibly tied to the work of visual representation in the public realm.

Social media has changed how we ingest images. Racially motivated injustices, protests, collective grief

and glory now play out in photos and videos with a speed unimaginable even a few decades ago, allowing—and compelling—us to call upon skills of visual literacy to remain engaged global citizens every day. But images have always played an important part in civic life. Over the course of the semester, we will consider visual representation as a form of "civic evidence," "civic critique," and "civic engagement" in American history. Together we will consider the role of art and aesthetics for the invention of race, the creation of and destabilization of U.S. segregation, narratives supporting and critiquing Native American "removal," Japanese Internment, immigration, New Negro Movement, and the long Civil Rights movement.

When has art served as propaganda? How did nineteenth- and twentieth-century Americans frame arguments over racism with images—literally? How have images played a role in shaping how we envision the borders between the U.S. and other nations? By the end of the course you should be able to argue how images have persuasive efficacy in the context of citizenship, critique the comments posted under images online, and problematize the foundational right of representation in a democracy like the United States.

Art and Embodiment in Buddhism (224353)

2024 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

What is a sacred image? Does it embody a presence or merely serve as a visual reminder? Does it need to look like its subject? How is it manufactured, used, repaired, and discarded? How do sacred images differ from tourist art or works in a museum?

This course investigates answers to such questions for Asian Buddhist traditions, foregrounding an interdisciplinary examination of visual art, material culture, literary text, and ritual performance. At the intersection of these realms, visual representations take on complex significance as both results of and tools for specific practices and goals. Understanding the central role of art objects in daily Buddhist life, conceptions of "art" and "object" are fundamentally transformed. These items are not passive representations but active mechanisms in the complex world of lived religion.

Organized thematically, this course highlights embodiment, resemblance, replication, substitution, artistic technique, materiality, ephemerality, ritual language, consecration and deconsecration, performance, and spatial and temporal context. The course addresses regions from across Buddhist Asia, highlighting India, Nepal, and Tibet but also featuring Sri Lanka, Thailand, China, Korea, and Japan.

Architecture, Urbanism, and Design in a Global South Asia: 18th century to the present (221679)

Vishal Khandelwal

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course explores architecture, urbanism, and design in colonial and postcolonial South Asia through the region's interactions and exchanges with other parts of the world. Extending from early European presence in the subcontinent to the formalization of the British empire and its subsequent end that eventually led to the formation of current-day South Asian nation-states, the course analyzes urban, rural, and architectural spaces including the bungalow, the single-family apartment, and the village dwelling alongside other buildings and environments of residence, education, governance, and entertainment. It also probes how pedagogical developments affected the perception and reception of buildings and designed objects in ways that tested the operation of authority or influence during moments of production or collaboration. And it emphasizes multiple artistic and architectural media employed within diverse approaches to writing architectural and urban histories of the region. With a keen eye informed by recent methodologies in global art and architectural history, the course encourages the questioning of a global approach towards refining the same for students' specific sub-fields or research and learning interests.

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course explores a vital cluster of themes around museums and the relation between objects, knowledge, culture and society. The focus is at once contemporary practice, historical, and theoretical. A key aim is to move beyond Euro- American geographies to think about constructions of the universal and the global, and the relationship between works of art, museum displays, and the construction of meaning. Since the early twentieth century, scholars, artists, and activists have closely questioned the movements of objects and the role of museums, particularly in relation to socio-political developments. Why do individuals and societies collect, conserve, and display objects? How has this practice changed over time and space? What role do culture and taste play? These are some of the questions we will be addressing alongside practical experience designing programs for exhibitions.

The Body and Embodiment in Greek Art (224255)

Seth Estrin

2024 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Whether naked or clothed, male or female, mortal or divine, the body takes pride of place in the visual worlds constructed by ancient Greek artists. Yet this proliferation of representations of the body begs the question: What is a body that exists as an image? What, in other words, is a body that is not embodied? Taking this problem as our starting point, we will investigate how works of art served in ancient Greece to both reflect and define the experience of embodiment. We will examine the various ways in which Greek artists represented the body, and consider how forms of identity, especially gender difference, were imagined and articulated through artistic practices. But we will also interrogate the ways in which works of art themselves — statues, paintings, vessels — could function like bodies or in place of bodies, expanding the notion of what it meant to be a living person. In addition to scholarship on Greek art, readings will include ancient literature in translation, theoretical writing on embodiment and gender, and a selection of comparative writings from other subfields of art history.

American Racial Ground (216085)

Sarah Lewis

2025 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

How are artists, and how are disciplines in the arts and humanities, responding to the hyper-visibility of racial injustices on American ground? This course explores how visual artists including Mark Bradford, Theaster Gates, Amy Sherald, Xaviera Simmons, Hank Willis Thomas, and Kehinde Wiley, and new landmarks—such as the Equal Justice Initiative's National Memorial to Peace and Justice and the creation of Black Lives Matter Plaza—have initiated a new set of "groundwork" tactics in the Stand Your Ground Era in the United States. Stand Your Ground laws, first established in 2005 and now in over thirty-three states, define the right to self-defense, to claim the ground on which one stands if there is a perception of "reasonable threat." The law disproportionately affects black and brown lives today. These artworks prompt the question, What does it mean to not be able to "Stand Your Ground"? What are the representational tools available to show the frequent challenge to this upright position as a statement of sovereignty over one's own life? How has the manifold meaning of the term "ground"—as both reason, fact, but also soil itself, opened up a mode of critical inquiry to address the injustices wrought at our feet? Just as the field of environment studies has begun to consider its nexus with racial inequity; this course will approach these representations of the "ground" with a critical race art history perspective. It will give students the chance to consider the "groundwork" that artists have created as both practical labor for civic society, and as a prompt for new, critical methodological inquiry in the arts and humanities at large. Enrollment is limited to graduate students and a few undergraduates by application.

The Art of Refuge (159916)

Robin Kelsey

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course explores art history through the idea of refuge, with particular emphasis on imaginative or contemplative means of freeing oneself temporarily from unhappy circumstances. Two related doubts inform the course: that the refuge today is an endangered resource, and that our electronic devices are more refuge-seeming than refuge-serving. The course will aim at developing a stronger theorization of the refuge than presently exists and putting that theorization into dialogue with the history of art. Cognate concepts such as sanctuary, retreat, haven, escape, and heterotopia will figure prominently.

On Line: Drawing Then and Now (207740)

Ewa Lajer-Burcharth

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar seeks to reassess the role of drawing in modern artistic culture. We will follow the trope of line, the most basic drawing mark, not to construct a linear history of the medium, but to provide a selective account of its uses, purposes, and functions as an instrument of modernity--or, as the case may be, of anti-modernity. Focusing on the period spanning the eighteenth century to the present, we will approach drawing not as a monolithic entity, but as a heterogenous phenomenon. We will consider it as a medium, a practice, an object, and a concept, and explore its interaction with, and cross-pollination by, other mediums and practices, (e.g., prints, photography; dance). We will discuss diverse approaches to draftsmanship--e.g., chronometric, kinetic, embodied, sculptural, automatic, blinded, black--and different modes of practice, (studio vs. urban drawing), and acquaint ourselves with procedures, techniques and materials by using them ourselves. We will also participate in a life drawing class in order to get a better sense of what the practice entails and what it makes possible.

Convened in the Harvard Art Museums study room, the seminars will offer students a hands-on experience of the works of art combined with the discussion of the assigned readings. In an effort to assess as well as reimagine the role of drawing, students will be encouraged to experiment with the format of their final project: aside from the classic research paper, annotated drawing series, an exhibition project, a film, a podcast and other inventive modes of presenting an argument will be welcome. (Enrollment limited.)

Art After Nature: Animal, Vegetable, Mineral, Process (218045)

Carrie Lambert-Beatty

2025 Spring (4 Credits)

Schedule:

R 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Without starting from pre-determined categories (e.g. eco-art), how might we map artists' multiple, conflicting, and changing engagements with the more-than-human world? By thinking through a range of critical approaches, could we reframe art as a natural-cultural process? And, by researching specific practices of art-making, institution-building, or exhibition-creation, past, present, or even future, can we make tangible what it would mean to reframe art this way? The syllabus will focus on the period from the 1960s to the present, but students' individual research projects may take up cases from any place or period.

The Object in the Art Museum (211197)

Joachim Homann

Kate Smith

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Practicing art history in today's increasingly mobile art world—whether as a field curator, academic researcher, critic, or other professional specialization—requires museum literacy, intellectual empathy, and the ability to work in multiple voices and mediums, in addition to art historical expertise. This object-centered seminar will introduce students to the central competencies required of art historians working in or with museums today, ranging from skills for assessing the quality and authenticity of objects on the market, to tools for working with living artists and presenting works of art to non-expert audiences. Through practical and written assignments accompanied by key readings, as well as site visits and behind-the-scenes introductions, students will gain an understanding of how the practice of art history in the gallery both differs from and relates to its practice on the page. The course will consider the key issues, debates, and interpretative strategies driving museum practice, and tackle existential questions about the role and responsibility of the 21st-century museum. Throughout the semester, students will work towards public-facing outcomes. They will identify potential acquisitions, and produce and present a temporary installation at the end of the semester. The course will meet at the Harvard Art Museums, a uniquely rich university museum environment endowed with deep collections and state of the art curatorial and

conservation facilities.

Tutorial - Sophomore Year (115419)

Rebecca Lemov

Alex Csiszar

2025 Spring (4 Credits)

Schedule: M 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 60

Sophomore tutorial is a hands-on course that introduces students to some of the most exciting and productive questions in the history of science, technology and medicine, while developing critical reading,

presentation and discussion skills. Small groups of students will tackle different aspects of a larger theme each week and share discoveries in sessions led by the faculty instructor. The course will be further enhanced by a series of supervised individual projects.

Course Notes:

Required for undergraduate concentration in History and Science. Students must register for a plenary class session that meets on Mondays from 12:45-2:45pm OR 3:00-5:00pm, a weekly section to be arranged.

Additional Course Attributes:

Knowing the World: An Introduction to the History of Science (123398)

Hannah Marcus

Benjamin Wilson

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

What are the origins of modern science and of the scientific method? Have the ways of knowing the world of different cultures and societies changed over time? How has scientific knowledge been related to other enterprises such as art, religion, literature, and commerce? We will ask these questions and more through a broad survey of many of the crucial moments in the development of science from the Middle Ages to the present day. Topics and figures will include Ibn Sina, Li Shizhen, Galileo, evolution, eugenics, the atomic bomb, and the human genome project.

The History and Culture of Stigma (110099)

Allan Brandt

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course will investigate the history of a number of stigmatized conditions and diseases including, for example, cancer, mental illness, addiction, obesity, AIDS, and disability. A central goal will be to understand the stigmatization of disease and its effects in diverse historical and cultural contexts. The course will evaluate both the impact of stigmatization on health disparities and outcomes, as well as attempts to de-stigmatize conditions that are subject to discrimination, prejudice, and isolation.

Course Notes:

Enrollment limited to 20.

Foreign Bodies: On Health and Migration (212935)

Eram Alam

2025 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

During the twentieth century, unprecedented human mobility has raised significant questions regarding migration and health. Whether coerced or voluntary, these migratory flows reverberate through individuals, communities, populations, environments, and the body politic in unexpected ways. This course will focus on the relationship between health and migration and ask the following questions: How are moving bodies named and managed? What are the political, economic, juridical, and medical implications of movement? How is risk defined and constructed in relation to migration? Readings will include case studies from around the world, supplemented with theoretical and literary texts.

Course Notes:

Enrollment limited to 20.

Medicine and Health in America (213244)

Eram Alam

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course surveys major historical developments in medicine and health in the United States during the modern period. We will analyze medicine and health within social, cultural, and political contexts to better understand the relationship between medicine and power. Topics will include: citizenship, nationalism, and imperialism; race, gender, and the body; capitalism and the medical marketplace; professionalization, expertise, and authority; crises and epidemics; technology and therapeutics; and questions of care.

Race, War, and Medicine (223101)

Leslie-William Robinson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 15

This course explores the historical and contemporary relationship between three prominent pillars of our daily lives: race, war, and medicine. How did each influence the development of the other, and through this process construct modern societies? We will examine the role played by medical practitioners and military personnel in the creation of social and racial hierarchies that in turn abetted the appropriation of land and the extraction of labor. We will begin in the seventeenth century and predominantly track the history of the triumvirate within modern Western imperialist powers, especially the US. Nonetheless, an important priority of the course is to de-center imperial and top-down narratives, and the scholarship we engage with reflects that goal.

2024 Fall (4 Credits)

Schedule: T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

This course traces the arc of scientific thinking about human nature since 1945. In this period, the anchoring of human origins in the "modern synthesis" of genetics and evolutionary biology promised a new biological approach that would finally get at the root of the human, while generating utopian aspirations for remaking humanity altogether. The course is structured thematically, looking at scientific and social debates about genes, race, minds, sex, blood, primates, and other key topics in the postwar human sciences, including genetics, evolutionary biology, primatology, medicine, psychology, neuroscience, and physical anthropology.

Broken Brains: A Patient-Centered History (160496)

Anne Harrington

2025 Spring (4 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 30

An exploration of the complex relationship between doctors and scientists who study and treat different kinds of "broken brains," the patients they study and treat, and larger public conversations about being human in today's neurological society. Topics include iconic cases of brain damage that catalyze new scientific understandings (like the case of H.M.), the study of brain damage in war, the emergence of writings (including memoirs and novels) that attempt to describe "what it is like" to suffer from disorders like autism and Alzheimer's, and controversies over recent efforts to see psychiatric disorders like depression as simple products of a chemically "broken brain."

History of Science 1820

An American Way of War: Technology and Warfare (203128)

Matthew Hersch

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

American society has, from its founding, been transformed by the experience of warfare. This lecture course explores two interconnected ideas: the development of military technologies from the earliest settlement of North America to the present day, and the profound impact of these technologies on people, including veterans and the societies to which they returned. Beginning with an examination of bladed weapons and the psychology of killing, we will look at how supposedly revolutionary weapon systems—the gun, the tank, the airplane, the atomic bomb, the drone—came to define a distinctly American mode of warfare, and created new problems for those exposed to their lethality.

The World We Made: Technology and Society (203610)

Matthew Hersch

2025 Spring (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

For as long as people have lived on Earth, they have shaped their world and have, in turn, been shaped by it. This lecture course surveys humans' relationships with the built world, beginning with the origins of civilization and extending through the present day. During the semester, we will track the development of transformative technologies—from fire-making to the Internet—throughout human history and across the globe, and place them in their social contexts. In so doing, we will learn how humanity chooses which technologies to exploit, and how human society is transformed by those choices.

From Steam Engines to Silicon Valley: Science and Capitalism in History (223137)

Simon Torracinta

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This undergraduate lecture course examines the interrelated histories of science and capitalism, from the steam engine to Silicon Valley. The course begins with the dramatic and intertwined transformations of the "scientific revolution," the transition to capitalism, and the global "great divergence," and continues to the present day. Topics covered include global science and empire; energy, work, and fossil capitalism; the technics of the industrial revolution; the science of racial capitalism; the rise of corporate science and R&D; techniques of quantification and economic calculation; biotechnology and pharmaceuticals; and the origins of "Big Tech."

Technologies of Empire: An American History (223100)

Leslie-William Robinson

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

36

This course surveys the historical interplay between technological development and the ascendancy of the US as a global power. We examine how American socio-political dynamics and expansionist ambitions have shaped and been shaped by technological development. We examine technological artifacts that critically bolstered US global influence from the seventeenth century to the present day. As we trace the increasing speed and reach of US imperialism across the long-twentieth century, we will closely observe the emergence of techno-scientific industries that made an outsize contribution to both national income and to supporting US power. Military, medical, finance, and information workers and technologies will feature prominently, among others. A critical engagement with theories of technology and empire, their co-production and interconnected narratives, and debates surrounding the nature of US empire will provide an intellectual framework for the course.

History of Science 1910

Prison Science (223095)

Spencer Weinreich

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course follows the history of science into the prison, from the Athenian prisons where Socrates philosophized in his last days to the technologies that have built and sustained contemporary mass incarceration. Since antiquity, the prison has offered a space of experimentation for medicine, psychology, and the social sciences, as well as fashioning punishment itself into a science. Students will explore the importance of spaces and institutions in the history of science, the relationship of violence and knowledge, and the ethics of knowledge-making, as we grapple with science and technology's contribution to our carceral crisis.

Science in Popular Culture (220651)

Erik Baker

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Very few people are scientists, but almost everyone knows something about science -- about what "the science says" about the world, who scientists are, and the role of science as an institution in society. In this course, we'll think together about where these beliefs come from and why they matter, with a focus on the twentieth-century United States. Topics include the history of science education, including recurrent debates about teaching evolution; the popular science publishing industry and celebrity popularizers like Bill Nye; the "mad scientist," the "troubled genius," and other tropes in film and literature; and the history of "pseudoscience."

Science in the Cold War (205382)

Benjamin Wilson

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap: 25

This seminar examines the broad and multifaceted interaction between science and the Cold War. In the years between 1945 and the collapse of the Soviet Union, science was enrolled in a remarkable range of ideological, cultural, political, and technological projects. In what ways did Cold War priorities and institutions shape the development of modern science? How did modern science make the Cold War? Readings will include classic and recent works that have explored and critiqued the notion of "Cold War science."

Sources and Methods in the History of Technology (160503)

Matthew Hersch

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Intended for graduate students, this seminar provides a comprehensive introduction to the field of history of technology and surveys its canonical works. Readings by authors like Thomas Hughes, Jennifer Light, and Fred Turner will explore the evolving histories of industrialization, computing, military and aerospace technologies, gender and technology, and other areas of student interest. Students will also gain experience working with primary sources, including archival documents, oral histories, popular media, memoirs, and material culture. At the conclusion of the term, each student will prepare a research prospectus suitable for a grant application or future work in the field.

Science, Power and Politics (122718)

Sheila Jasanoff

2024 Fall (4 Credits)

Schedule:

W 0200 PM - 0400 PM

Instructor Permissions: Instructor

Enrollment Cap:

23

This seminar introduces students to the major contributions of the field of science and technology studies (STS) to the analysis of politics and policymaking in democratic societies. The objective is to expand students' understanding of the ways in which science and technology participate in the creation of social and political order. The seminar is devoted to reading and analyzing works by scholars in STS and related fields who have addressed such topics as the relationship between scientific and political authority, science's relations with the state, science and democracy, scientific and technical controversies, and citizenship in technological societies.

Course Notes:

**Undergraduates may enroll only by permission of the instructor.
Offered jointly with the Kennedy School as IGA 513.**

Theorizing the Anthropocene: Writing Across Disciplines in Our Epoch (220402)

Naomi Oreskes

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 25

Since its introduction just a few decades ago, the "Anthropocene" has become one of the defining concepts of our age, capaciously used to understand everything from stratigraphic markers to humankind's understanding of our relationship with the world around us. This course offers students the opportunity to think through diverse theoretical approaches to the Anthropocene, and to workshop a paper for publication on the Anthropocene theme. Open to graduate students, and to advanced undergraduate with permission of the instructor.

Course Notes:

Open to advanced undergraduates with permission of instructor.

Human Evolutionary Biology 1210

Research in Human Biomechanics and Physiology (127206)

Andrew Yegian

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

8

Introduces students to experimental techniques used to investigate the musculoskeletal structure and physiology of humans. Students undertake a supervised research project in the Skeletal Biology and Biomechanics Laboratory. Students meet to introduce their project, discuss their work and progress, and to present their final results, as well as for several lectures on writing and presenting research findings. An extensive commitment of time in the laboratory is required. Grades are based on the work completed, the oral presentation, and a short research paper.

Course Notes:

This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Recommended Prep:

Recommended: Life Sciences 2 or Human Evolutionary Biology 1420

Human Evolutionary Biology 1230

Humans and Climate: How Did We Get Here and Where Are We Going? (224020)

Kevin Uno

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

How did we get here? Climate influenced human evolution over the past ~6 million years. In this course, students will learn the basics of how the Earth's climate system works and how past climate and ecosystem fluctuations posed challenges to early humans. Moving forward to more recent times, we will look at how climate influenced the rise and fall of early civilizations. Since the Industrial Revolution, humans have exerted a strong influence on climate, which raises the question, where are we going? The course will end with a focus on the impacts of current and future climate change on humans and other species on earth.

Course Notes:

This course counts as a research seminar.

Human Evolutionary Biology 1245

Technology, Behavior, and Human Evolution (220758)

Abigail Desmond

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

When does human history begin? We now know that some of the first *Homo sapiens* appeared over 315,000 years ago. Looking back to even earlier human species, around 2-3 million years ago, we would perhaps be surprised to encounter familiar behaviors: people walking upright, cooperating and socializing, hunting, and using technology. Everything that exists as written history represents less than 2% of what has happened since we emerged as a species, and less than 0.3% of what has happened since archaic humans first emerged. If we want to understand who we are, and why we do the things we do, we need to take a closer look at our relatives in the Paleolithic.

Technology, Behavior, and Human Evolution is an introductory course which offers primatological, fossil, environmental, genetic, and archaeological perspectives on human evolution. Starting with the earliest hominins, each week we will examine central themes and developments in human evolution over the last 6 million years. Students will consider how the emergence and spread of new technologies, biological capacities, changing social dynamics, symbolic behaviors, and cultural complexity shaped human evolutionary trajectories. The behavioral repertoire of modern humans at the end of the last ice age will form the final part of the lecture course.

Course Notes:

Class visit to the Peabody Museum collections, details to be announced.

Human Evolutionary Biology 1270

Primate Playtime (224018)

Kristin Sabbi

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

6

Play is a major feature of our young lives- and that is a trait that we share with our closest primate cousins, chimpanzees. Even though play is an obvious (and delightful) behavior, there are still many open questions about how and why it evolved. In this research course, we will work toward answering some of those questions. What is the function of playing for chimpanzees and how does it change across their life course? In addition to learning the ins and outs of famous hypotheses that explain play and how they have been tested in the primate literature, through this course you will learn important skills for independent research from shaping your questions and hypotheses to testing those ideas by analyzing real behavior from wild chimpanzees. These skills can be applied across behavioral studies with primates and other animals, but they are also valuable tools with transferrable benefits across industries.

Course Notes:

This course counts as a junior research seminar.

Human Evolutionary Biology 1290

Genes, Mind, and Culture (159565)

Joseph Henrich

2025 Spring (4 Credits)

Schedule:

T 0900 AM - 1200 PM

Instructor Permissions: Instructor

Enrollment Cap:

36

Humans are a cultural species. Unlike other species, we are heavily reliant on learning from others to acquire many important aspects of our behavior, and this capacity for cultural transmission has given rise to a second system of inheritance that not only explains much of our contemporary behavior but has driven our species' genetic evolution over hundreds of thousands or even millions of years. Humans are products of culture-gene coevolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for tackling basic problems and questions in psychology, economics and anthropology. In this class, we will focus on the origins and evolution of human culture using evidence from archaeology, human evolutionary biology, physical anthropology, and related fields. We will investigate how our hominin ancestors acquired and passed down a wealth of accumulated knowledge, such as technologies for hunting and collecting foodstuffs, the medicinal uses of plants, the control and manipulation of fire, and how to identify a distant group member. How did the accumulation of such information change over time and within different hominin groups (such as Neanderthals)? And how can we use the archaeological record and inferences made from human evolutionary biology to answer these questions?

Recommended Prep:

Human Evolutionary Biology 1304

The Human Face: How evolution, growth, and behavior has shaped the way we look (218851)

Julie Lawrence

2024 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Our faces are the means by which we perceive the world and the world perceives us. The size and shape of the face has changed dramatically across human evolution. Some of our prehistoric relatives had huge teeth and enormous cheek bones, others had massive brow ridges, and modern humans have unique features such as our chins and our unusually big, globular brains. This course will explore how our social interactions and facial expressions, changes in what we eat and how we eat it, and evolutionary adaptations (sexual selection and cultural/environment influences) have molded the face and led to the variety of facial forms we see within and between populations today. We will examine the origins of human facial variation from our early primate origins, across the hominin fossil record, to the impact of modern soft diets and dentistry. What do we think the last common ancestor of humans and chimpanzees looked like? What were the earliest changes to the face and what can they tell us about the lives of our ancestors? What can our own faces tell us about our ancestry, development, and health?

Human Evolutionary Biology 1305

The Evolution of Friendship (222906)

Jennifer Devereaux

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Voluntary associations occur in many animals, and friendships are one of the most striking of such associations. Many mammals appear to form bonds with one another that are distinct from mating partnerships or temporary status-seeking coalitions. Voluntary associations take extraordinarily diverse forms in humans, from lifelong friendships and pairbonds on the one hand to relatively anonymous social affiliations on the other. All of these voluntary associations can exert profound effects on numerous aspects of our lives, from our molecular signaling systems to our physical and mental health to our political identities and societal values. Why are the choices we make about whom to associate with so important? How do they affect our health? How have the stakes changed over time? How important are limited membership, competition, and solidarity to the establishment and perpetuation of group identities? What purposes do such identities serve? What makes them helpful or harmful? How do national or global disasters (such as the COVID-19 pandemic) interact with our evolved capacities for close social affiliation? These are a few of the broad questions that we will explore in this course, in which students will gain an understanding of voluntary associations from primarily evolutionary, but also historical, sociological, and philosophical, perspectives. Discussion sections will emphasize further psychological, physiological, and evolutionary aspects of pairbonds, friendships, and social groups.

Course Notes:

This course will count for the Science and Engineering and Applied Science divisional requirement for undergraduates. There are no prerequisites.

Human Evolutionary Biology 1306

Wearable sensors: measuring activity, health, and performance (220757)

Ali Yawar

2024 Fall (4 Credits)

Schedule:

W 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

Have you ever used a wearable sensor to measure your step count, heart rate, or blood sugar levels? Wearable sensors like FitBit and the Apple Watch are increasingly popular and important in research, sports, and healthcare, with the potential to transform people's habits, health and performance. This course will examine how these sensors work, and explore their limitations and potential. Following an introduction to basic electronics and signal acquisition, we will explore the biology, physics, and engineering of a wide range of sensors that measure physiologically relevant variables like body accelerations, electrocardiography, heart rate, and body temperature. Then students will get hands-on programming and circuit design experience by building their own activity monitoring devices using an open-source Arduino programming board and an accelerometer. No prior programming or electronics experience is required. The flexibility and low cost of the Arduino hardware interface will allow students to develop their own novel experiments and measurement devices and potentially help guide the future of human performance measurement.

Human Evolutionary Biology 1310

Hormones and Behavior (112219)

Kristin Sabbi

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Why do we act the way we do? This course will introduce you to the role of hormones in human and nonhuman primate behavior. After some grounding in the endocrine system and how its axes operate, we will explore the ways that behavior and hormones interact with one another across the life course from development through adulthood. We will focus on human reproduction, energy metabolism, mating and sexuality, parental behavior, learning and memory, stress, and dominance interactions. Throughout the

course we will examine these relationships at multiple levels of analysis, emphasizing evolutionary perspectives.

Human Evolutionary Biology 1311

Walking & Running (213579)

Andrew Yegian

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores two of the most essential questions in human evolution: how and why did our unique bipedal walking and running gaits evolve? The course combines the fields of quantitative locomotion biomechanics and paleoanthropology to address these questions. Students will learn about the common mechanical models used to describe human walking and running, with an eye towards defining what "human bipedalism" is in comparison to ape bipedalism. They will also learn about the key fossils that provide evidence of locomotion evolution, and will assess the fossils using the lens of locomotion biomechanics to understand when the key aspects of our gaits evolved. Finally, we will weave these two fields together to understand the big picture of hominin locomotion ecology, and how locomotion related to the lifestyle of our ancestors and our modern selves.

Recommended Prep:

Life Sciences 2 and/or HEB 1420 recommended but not required.

Mammalian Business (221986)

Joyce Benenson

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

Mammalian species solve problems in remarkably different ways. This course will begin by reviewing evolutionary theories regarding natural and sexual selection, with an emphasis on social species and cooperative competition. The course will continue by reviewing select mammalian species' approaches to structuring communities, selecting mates, dispersing at adolescence for a new community, and cooperating and competing with same-sex and other-sex individuals. Principles underlying common solutions to universal problems of survival and reproductive success will be highlighted. The course will focus on commonalities between humans and specific non-human mammalian solutions to similar problems.

Course Notes:

This course will include a field trip to the Franklin Park Zoo.

Human Evolutionary Biology 1326

Ancient DNA as a Window Into the Human Past (216425)

David Reich

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Over the last decade, ancient DNA technology has made it possible to ask and answer questions that were impossible to address before, and the findings that have emerged are challenging and enriching previous understandings of the past. This course will provide students with the tools they need to critically evaluate and perform research on ancient DNA. The centerpiece of the course is analyzing unpublished data produced by the instructor's lab under the mentorship of members of the instructor's laboratory, leading to a final project in which students will write an original research paper based on their analysis of data. The course will include lectures aimed at providing students with an understanding of major issues in this field, seminar-style discussions critically assessing papers and student research projects, and four homework assignments that will provide students with the core computational skills they need to analyze data.

Course Notes:

This course will be of interest for students in Human Evolutionary Biology, Computer Science, Statistics, Organismic and Evolutionary Biology, Anthropology, Molecular and Cellular Biology, and History. This course is aimed at providing deep disciplinary knowledge in Ancient DNA research and as such could be a jumping-off point for students who wish to do an Honors Senior Thesis in this area or carry out Ph.D. thesis research in Ancient DNA.

Recommended Prep:

Computer programming background (AP Computer Science or equivalent). Statistics background (AP Statistics or equivalent). Students who do not have computer or statistics background but are highly motivated to take the course should write to the instructor to have a discussion about whether they might have the background needed to take the course.

Human Evolutionary Biology 1328

Clinical Comparative Medicine: Evolutionary Perspectives on Mental and Physical Health (205490)

Barbara Natterson-Horowitz

2025 Spring (4 Credits) **Schedule:** W 0300 PM - 0500 PM
Instructor Permissions: Instructor **Enrollment Cap:** 12

Why are human beings so vulnerable to mental and physical illness? Insights into the causes of human diseases and disorders can be found by studying similar health challenges in other species. In HEB 1328 students will explore physical illnesses and behavioral disorders in non-human animals—from wild animals to beloved family pets. While heart disease, cancer and other significant medical challenges will be explored, this year special emphasis will be placed on mental health. Comparative psychopathology—studying mental illness and abnormal behavior in fish, reptiles, birds, and non-human mammals—will be introduced as a framework strengthening our understanding of human depression, eating disorders, social anxiety, OCD, self-injury, addiction and other emotional and biobehavioral challenges. Taught by a physician and evolutionary biologist, this course uses a 'mini-medical school' approach to explore the evolutionary origins of disease. Each lecture takes on a specific common and challenging human health issue beginning with a brief overview of what modern medicine currently does and does not understand. Lectures then quickly move into the wild (literally—through the use of curated wildlife video) and into our evolutionary past that has shaped modern vulnerabilities. Students will explore Harvard Museum of Natural History collection and learn to build phylogenetic models to develop an expanded understanding of the nature and origin of mental and physical illness.

No prior medical or advanced scientific knowledge is assumed. Both physical and mental illnesses will be covered. As noted above, this year mental health will receive special focus. This year course lectures and other content will be presented in an interactive seminar style. Students will be expected to deeply engage with weekly readings and assignments and to contribute to a collective research project.

Human Evolutionary Biology 1330

Primate Social Behavior (113837)

Martin Surbeck

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course provides an overview of primate social behavior and will cover topics such as kinship, social structure, friendship, competition, cooperation, dominance, development, mating systems, parental care, inter-group relationships, social learning, and applications to humans. Over the course of the semester we will attempt to address fundamental questions about the Primate order from three perspectives:

1. An evolutionary perspective. How do primate species differ from one another? What are the selection pressures that account for such differences? How to explain seemingly maladaptive behaviors such as infanticide within an evolutionary framework?
2. A developmental perspective. How do primates survive? What are the stages of development and their goals? How do social relationships affect survival? What is the nature of their relationships?
3. A human perspective. What are the continuities and discontinuities between human and non-human primates? What is it that sets humans apart from other primate species?

Course Notes:

This course fulfills the behavior concentration requirement for Human Evolutionary Biology.

R 0100 PM - 0400 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This seminar explores the behavioral variation in our closest living relatives, bonobos and chimpanzees, to develop referential models of human evolution. Weekly readings and discussions will be used to explore how variation in behavioural aspects linked to warfare, peace, sexual coercion, dominance between the sexes, food sharing and cooperation within groups of bonobos and chimpanzees can inform us on the evolution of similar traits in humans. In doing so, we challenge the traditional understanding of the contribution of these species to our understanding of human traits.

Recommended Prep:

HEB 1330 - Primate social behaviour, or GenEd 1056- Human Nature

Additional Course Attributes:

Attribute	Value(s)

Human Evolutionary Biology 1339

The Human Brain in the Animal Kingdom (214351)

Erin Hecht

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Our brains make us what we are. How did they get that way? How are they different from other animals', and how are they similar? This course will explore the structure and function of the modern human brain and examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition. Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of Homo sapiens within the context of the broader animal kingdom. Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of specializations for communication, tool use, and culture; social cognition and theory of mind; individual variation and experience-dependent plasticity in the brain; and domestication and self-domestication.

Recommended Prep:

Recommended prep/prerequisite: HEB 1280 Human Nature

Human Evolutionary Biology 1350

Investigating the Human Genome (222982)

Éadaoin Harney

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

Since the first human genome was sequenced over 20 years ago, millions of people, both living and ancient, have had their genomes sequenced. While many genetic studies examine the genomes of hundreds or thousands of individuals to make population-level insights, a huge amount of information can be gleaned through the study of just a single human genome. In this research course, each student will investigate the genome of an unknown individual using a variety of population genetic tools to learn about their ancestry, health, and other phenotypes. The course will culminate in a written report and presentation on the biological identity of their chosen individual.

Recommended Prep:

Life Sciences 1b or equivalent genetics/genomics course. Familiarity with computer programming will be helpful but is not required.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	FAS small class override
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Evolutionary Biology 1353

Dogs: Behavior, evolution, and domestication (220650)

Erin Hecht

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

What makes dogs behave the way they do, and what can this teach us about our own species? In this course, we will explore the evolution of canine behavior through the lens of ethology. We will discuss current research on the evolutionary history of dogs, and consider whether this might parallel some aspects of human evolution. We will also examine communication, cooperation, attachment, and other aspects of behavior in dogs, humans, and other species. Students will learn to understand behavior as an adaptive, evolved trait and consider artificial selection as a window on mechanisms of behavior evolution. In the weekly 3-hour lab, students will also receive hands-on training in the collection and analysis of dog behavior data through a semester-long group research project.

Course Notes:

Dog behavior data will be collected on campus in the Canine Brains Project dog behavior lab space.

Human Evolutionary Biology 1367

African Climate: Earth's history, humanity's future (222984)

Daniel Green

2024 Fall (4 Credits)

Schedule:

M 0900 AM - 1100 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

Anthropogenic climate change has exacerbated extreme weather, habitat loss, and human health challenges globally. The impacts of climate change are felt disproportionately in Africa, due to its tropical setting, and history of colonialism and development. In this class, we'll take a long view of climate in Africa, from the origin of the Earth, through the present, and into the future. First, we'll learn some of the physical principles that govern climate, and trace the broad arc of history of climate and life on the continent. Next, we'll focus on human history, learning about how climate changes influenced human origins and behavior, up until the present. Lastly, we'll learn about how climate is projected to change in the coming centuries, and how this will likely impact human health, political fortunes, and conservation.

Course Notes:

The class will meet once per week, and will include a lecture, followed by seminar-style discussion. Students will have weekly readings from textbooks and/or scientific journal articles, and be assigned a limited number of problem sets. Students will be expected to give presentations on readings of their choice, and will develop a research project in the second half of the course. Some familiarity with evolutionary biology is advantageous but not required for enrollment. Preference will be given to juniors and seniors.

Additional Course Attributes:

Attribute	Value(s)

Human Evolutionary Biology 1370 Section: LEC

Puzzles of Humanity: Human Life History and How it Evolved (223125)

Kristin Sabbi

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

25

As humans, the combination of characteristics that make up our life history—the timing and pace of our growth, reproduction, and aging—make us unique among other animals including our closest cousins, the great apes. In this course you will learn about humans' puzzling combinations of fast and slow life history and how these patterns evolved. We will apply evolutionary theory to better understand human behavior and biology, especially through comparing ourselves to our great ape cousins and other animals. Throughout the semester we will tackle questions like: why do we take so long to grow up? And since we do take so long to mature- how do we reproduce so much faster? How do evolutionary forces shape mating decisions across cultures and time? Why do we outlive our ability to reproduce?

Additional Course Attributes:

Human Evolutionary Biology 1378

Professional Writing for Human Evolutionary Biologists (220759)

Bridget Alex

2024 Fall (4 Credits)

Schedule:

M 0600 PM - 0800 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Great research isn't enough. Scientists need to effectively communicate their work to diverse audiences. This course will explore written communication in human evolutionary biology and related disciplines. Students will become better writers and produce publishable writing samples. We will survey major genres in academia and beyond, including research papers, grant proposals, job/school/fellowship applications, and pop-science writing for non-specialists. By analyzing exemplary models from these genres, we will distill elements that make scientific writing successful and sometimes beautiful. In this way, we'll approach science writing as a technical and creative endeavor. We'll also discuss strategies to make writing easier, which consider the writer's emotional, social, and environmental conditions. For the major course assignment, students will choose a specific writing project (e.g. grant proposal, op-ed) and work on it throughout the term in order to produce a document that's ready to publish or submit. Course intended for upper-level undergraduates or graduate students.

Human Evolutionary Biology 1381

The Arrogant Ape: Rethinking our Relationships to Others (213580)

Christine Webb

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Darwin's theory of evolution offered a powerful counternarrative to the *scala naturæ*, thus redefining the place of *Homo sapiens* in the natural world. But a great irony presents itself when a species so-named for its wisdom is currently causing the sixth mass extinction of life on earth. In this seminar, we will explore this apparent contradiction, assess why it has come to be part of our evolutionary legacy, and discuss theory and research that counteracts its profound negative potential.

Human Evolutionary Biology 1384

Thinking Through Human Cognition (222987)

Abigail Desmond

2025 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

What does it mean to inhabit a human mind? This course will investigate the origins of - and selective advantages provided by - key human cognitive traits. We will examine how these traits appear and develop in human evolutionary timescales, with a special focus on the origins of symbolic communication, language, exosomatic information storage, and the exponential nature of human technology. We will also examine how cultural norms are shaped by human cognition, with an eye to concepts such as fairness, collaboration, sharing, nurturance, reciprocity, spite, violence, social exclusion, and a concern for curating our reputation. This course will use a multidisciplinary approach, drawing on recent developments in fields such as evolutionary psychology, cognitive science, philosophy, linguistics, archaeology, anthropology, developmental biology, neuroscience, genetics, and primatology.

Additional Course Attributes:

Human Evolutionary Biology 1410

Gut Microbiome and Human Health (204010)

Rachel Carmody

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Microorganisms residing in the human gastrointestinal tract are as numerous as our own cells and together encode at least 150 times as many unique genes. In this research seminar, we explore gut microbial contributions to human physiology in states of health and disease. We consider how the human gut is colonized, the factors shaping the structure and function of the gut microbiome, and the pivotal roles of the gut microbiome in digestion, energy regulation, immunity, development, drug metabolism, and behavior. We evaluate fast-growing evidence for the gut microbial modulation of metabolic syndrome, cardiovascular disease, cancer, and neurodevelopmental and neurodegenerative disorders, and discuss prospective microbiome-targeted approaches for the prevention and treatment of human disease. The weekly three-hour lab will introduce students to experimental, bench and computational techniques used to investigate the gut microbiome, enabling students to collaborate on a novel research project that dovetails with topics discussed in seminar.

Course Notes:

This course fulfills the research seminar requirement for Human Evolutionary Biology. Preference will be given to students fulfilling a research seminar or thesis requirement.

Recommended Prep:

Life Sciences 2 or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Evolutionary Biology 1420

Human Evolutionary Anatomy (116069)

Joanne Clark Matott

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

HEB 1420 takes a deep dive into the anatomy of the human body. We explore the structure, function, and evolution of the muscular, skeletal, nervous, circulatory, digestive, and reproductive systems using a combination of lectures and small-group teaching. Students also have the option to study anatomy in the traditional way by viewing human cadaver prosections at Harvard Medical School. HEB 1420 fulfills the anatomy/physiology requirement for Human Evolutionary Biology and is an excellent foundation for students pursuing research in the department, those who plan to attend medical school, or students who are simply curious about the human body and want to know what the different parts are named and how they came to be.

Course Notes:

This course fulfills the anatomy/physiology concentration requirement for Human Evolutionary Biology

Recommended Prep:

Life Sciences 2 recommended, but not required

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Human Evolutionary Biology 1480

Building the Human Body (156174)

Terence Capellini

2024 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 20

Humans and our primate relatives are incredibly variable. This variation results from natural selection operating on the developmental mechanisms that control anatomy and physiology. While these mechanisms remain mostly undiscovered, we are beginning to understand these complex processes due to major advances in technology that have pushed the fields of genetics, genomics and developmental biology rapidly forward. This research-centered course explores these relationships in the context of the human paleontological record. We focus on the evolution and development of the musculoskeletal system, which includes the cranium, axial skeleton and limbs, and present studies that cast light on the developmental genetic mechanisms that underlie major transitions in human evolution.

Course Notes:

This course fulfills the research seminar requirement for Human Evolutionary Biology and includes a mandatory laboratory section.

Recommended Prep:

LS1b (Genetics, Genomics, and Evolution). Introductory courses in paleoanthropology, anatomy helpful but not required.

Human Evolutionary Biology 3001 Section: 003

Reading for General Examination (126280)

Daniel Lieberman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Individual reading in preparation for the general examination for the doctoral degree.

Course Notes:

Restricted to candidates for the doctoral degree and ordinarily to those who have completed at least one year in residence.

Requirements: Course open to Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Human Evolutionary Biology 3001 Section: 004

Reading for General Examination (126280)

Daniel Lieberman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Individual reading in preparation for the general examination for the doctoral degree.

Course Notes:

Restricted to candidates for the doctoral degree and ordinarily to those who have completed at least one year in residence.

Requirements: Course open to Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Human Evolutionary Biology 3001 Section: 004

Reading for General Examination (126280)

Erin Hecht

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Individual reading in preparation for the general examination for the doctoral degree.

Course Notes:

Restricted to candidates for the doctoral degree and ordinarily to those who have completed at least one year in residence.

Requirements: Course open to Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3200

Graduate Seminar in Human Evolutionary Biology (126919)

Rachel Carmody

2025 Spring (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Proseminar for Human Evolutionary Biology graduate students. Discussion of adaptations and the process of adaptation using examples from various areas of human evolutionary biology.

Course Notes:

Required for first year graduate students in Human Evolutionary Biology.

Requirements:

Course open to Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Human Evolutionary Biology 3300

Teaching Fellowship (212556)

Daniel Lieberman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course reflects time that a graduate student affiliated with Human Evolutionary Biology spends on teaching effort when the student serves as Teaching Fellow for a Faculty of Arts and Sciences course.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Human Evolutionary Biology 3300

Subject: Humanities

2025 Spring (4 Credits)

Schedule:

T 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

90

2,500 years of essential works, taught by six professors. Humanities 10b will likely include works by Homer, Sappho, Sophocles, Virgil, Dante, Boccaccio, Montaigne, Austen, Du Bois and Joyce, along with the Book of Genesis. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes:

The course is open only to first-year students who have completed Humanities 10a. Students who complete Humanities 10a meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail.

Seth Estrin

2024 Fall (4 Credits)

Schedule:

M 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

84

HUMAN 20 is an introduction to the study of the humanities through major works of art and architecture from around the world, taught by five members of the Harvard faculty. The course was specially created for students focusing on the humanities or interested in a wide-ranging introduction to works of art and architecture and the many issues they embody.

Each week immerses students in the cultural and imaginary world of an artwork, whether it be a Japanese woodblock print by Katsushika Hokusai, Diego Velázquez's *Las Meninas*, Maya Lin's design for the Vietnam Veterans Memorial, the portrait sculptures of the Ife Empire, the scientific illustrations of Robert Hooke's *Micrographia*, Adélaïde Labille-Guiard's *Self-Portrait*, or the animal locomotion photography of Eadweard Muybridge. Each week, an artwork is introduced during a 75-minute lecture. Then, students attend a weekly looking lab, where they develop skills of visual observation, analysis, and description. The looking lab is followed by a discussion section where ideas from the lecture, looking lab, and selected readings will be explored further.

Humanities 20 teaches students what it means to engage deeply with an artwork, and how to think through

that artwork about large questions. The course will consider: the relationship between race, visibility, and social justice; modernism; monuments and cultural memory; encounters between cultures; the relationship between art and science and time; artworks and the expression of religious beliefs; and how different cultures have thought about life, death, and the beginning of the world. The readings emphasize engagement with primary source texts which include artists' statements, manifestoes, art criticism, religious narratives, and history.

Course Notes:

Note: The course is open to all undergraduate students. Students who complete Humanities 20 meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 72.

Lauren Kaminsky

2024 Fall (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Mahindra Scholars Seminar is a course for sophomores, regardless of intended Concentration, who wish to deepen their engagement in the humanities. Each week in the seminar, guided by a distinguished guest, we will focus on a particular creative form – the novel, for example – with the aim of refining our powers of observation, interpretation, and articulation. In this way, we will learn new ways to approach the meaning of poems, speeches, paintings, sculptures, plays, arguments, and songs. The course will not only give us insight into these creative forms; it will also enhance our relationship to the world.

Linguistics 73C

Beginning ASL III (205111)

Andrew Bottoms

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:** n/a

ASL III is designed for students who have completed ASL levels I and II. Students come to ASL III with an understanding of the fundamentals of ASL comprehension and production. These foundational courses (ASL I and II) introduce students to the language using a natural acquisition approach without explicit focus on grammatical rules. ASL III has an increased focus on the appropriate ways to converse with members the Deaf community. In this class, students will learn how to tell stories that adhere to the pragmatic and linguistic standards of the Deaf community with a focus on stylistically appropriate production. In this class, students will learn how to engage with members of the Deaf community in respectful and culturally appropriate ways. In addition to fostering language development, we will discuss the history and culture of the Deaf community.

Course Notes:

This course is limited to 15 students.

Additional Course Attributes:

Attribute	Value(s)
FAS: Meets Foreign Lang Req	American Sign Language
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Linguistics 73D

Beginning ASL IV (205124)

Andrew Bottoms

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

ASL IV course will build on the foundation set in the first three levels of ASL and will focus on expressive language at a more advanced level. Students will have an opportunity to play with the language and explore different literary genres including: classifier stories, narratives of personal experience, visual vernacular and ASL poetry. Given that language learning doesn't happen in isolation, we will continue our exploration of Deaf culture and norms in order to develop a deeper understanding of the Deaf community. Growing out of this discussion, students will learn what it means to work as an ally to the Deaf community and avoid oppressive behavior. Other issues to be discussed include recognizing audism in oneself and others and how to appropriately respond.

Course Notes:

This course is limited to 15 students.

Additional Course Attributes:

Attribute	Value(s)
FAS: Meets Foreign Lang Req	American Sign Language
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Language, Structure, and Cognition (122514)

Kathryn Davidson

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

120

What do the world's almost 7,000 languages have in common? Why do they show recurrent commonalities and principled differences? What do they reveal about the human ability for speaking and thinking? How do languages develop? How do they die? This course addresses these and related questions while introducing the languages of the world; their distribution, recurrent structural properties, and genetic classification; processes of language contact; and the relationship between language and the brain.

Sentence Structure (121089)

C.-T. James Huang

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What determines how the words in a sentence are put together in a given language? This course introduces the field of syntax, and the study of order and structure among words. Students will learn to construct and evaluate syntactic analyses and argumentation and will be exposed to variation and universals in the syntactic patterns found in natural languages. The course will also provide an introductory survey of syntactic phenomena, including question formation, the passive, anaphora, and agreement.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration

Linguistics 103

Language and Society (140523)

Kathryn Franich

2024 Fall (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Every language is characterized by a great deal of variation, much of it systematic and structured by sociological, individual, and environmental factors. Our speech patterns serve both as a historical record and as a tool for constructing and communicating our identities as speakers. In this course, we will use methods in sociolinguistics to investigate patterns of variation and the social factors that shape them. We will also explore how sociolinguistic variation is linked with language change. Students will read and respond to a variety of articles, blog posts, and academic publications, and learn to conduct qualitative and quantitative analysis of linguistic variation based on two class projects.

Ling 83-or-Ling 101 as a prerequisite for undergraduates

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Arts and Humanities

Linguistics 104

Word Structure (125790)

Jonathan Bobaljik

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course investigates the nature and structure of words through the lens of contemporary morphological theory. What's in a word? Topics include the place of word formation in relation to phonological and syntactic phenomena, morphological processes, and the nature of the lexicon. Emphasis on the analysis of morphological phenomena in a range of typologically diverse languages.

course requirement: LING 83 or LING 101

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration

Linguistics 105 Section: 01

Sounds of Language (111954)

Kathryn Franich

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

What are the sounds of the world languages, and how are they organized to make words and sentences? Why are some sounds hard to hear or make? Is there a 'universal inventory' of sounds? This class introduces students to the sounds of the world's languages, and provides tools for studying them systematically. We will study the setup to transfer thoughts from one brain to another.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Arts and Humanities
Quantitative Reasoning with Data	Yes
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Linguistics 106

Knowledge of Meaning (117788)

Yagmur Sag-Parvardeh

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction to the field of natural language semantics, which is a branch of linguistics concerned with meaning. What does it mean to know the meaning of a sentence? How do different parts of a sentence compose to form a sentence meaning? We will start by looking at sentence-level meanings and relations between them. Then, we will investigate how the meanings of sentence-internal elements (like verbs, subjects, and adjectives) are composed to form sentence meanings. During the process, we will cover some formal tools that allow us to talk about language in a precise way: set theory, propositional logic, predicate logic, and lambda notation. We will consider how the formal tools apply (and not apply) to natural languages and discuss how we can achieve a more comprehensive understanding of meaning.

prerequisite Linguistic courses such as Ling 83 or Ling 101

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	For Undergraduate and Graduate Students

Linguistics 108

Introduction to Historical Linguistics (123850)

Jeremy Rau

2024 Fall (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Methods and goals of linguistic reconstruction. Topics include the regularity of sound change, types of linguistic change, the relationship between linguistic reconstruction and synchronic analysis, language contact and borrowing, and mechanisms of linguistic change, including recent theories.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Linguistics 112

Syntactic Theory I (114153)

C.-T. James Huang

2024 Fall (4 Credits)

Schedule: W 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course provides an intensive introduction to generative syntactic theory. Emphasis on syntactic argumentation. Topics center on foundational problems in the theory of syntax, including phrase structure of nominals and clauses, varieties of movement, locality, argument structure, ellipsis case agreement, and the syntax-semantics interface.

Recommended Prep:

Linguistics 102, equivalent, or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Arts and Humanities

Linguistics 114

Morphological Theory (111957)

Jonathan Bobaljik

2025 Spring (4 Credits)

Schedule:

R 1245 PM - 0300 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an intensive introduction to morphological theory. Students will be introduced to current research and areas of debate in morphology proper, in morpho-syntax, and in morpho-phonology.

Recommended Prep:

course requirement : Ling 102,104, and 105, equivalent, or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Arts and Humanities
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Linguistics 115

Phonological Theory I (123439)

Kathryn Franich

2024 Fall (4 Credits)

Schedule:

W 0900 AM - 1115 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an intensive introduction to phonological theory and experimental work in phonology. This includes rule-based and constraint-based approaches, the typology of phonological processes (vowel and consonant harmony, assimilation and dissimilation, lenition and fortition, etc.), and phonological acquisition. Experimental approaches will deal with gradience, exceptionality, and productivity with an introduction to the quantitative methodologies that these phenomena require.

Recommended Prep:

Linguistics 105, equivalent, or permission of the instructor

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Linguistics 116

Semantic Theory I (122515)

Kathryn Davidson

2024 Fall (4 Credits)

Schedule:

M 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introductory course on semantics in generative grammar. This course provides the formal tools to investigate the truth-conditional meanings of sentences. Topics covered include: compositionality, type theory and the fundamentals of clause structure, quantifier scope, and variable-binding.

Recommended Prep:

Linguistics 106, equivalent, or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Arts and Humanities
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Linguistics 117R Section: 01

Linguistic Field Methods (123611)

Tanya Bondarenko

2024 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

In our study of human language we rely on data from different, sometimes underdescribed, languages. But how do we obtain reliable data? This course provides tools for the elicitation of phonological, morphological, syntactic, and semantic information, working with a native speaker of an unfamiliar language. We focus on the practical methodology and discuss problems of data collection and grammatical description in the field, with the aim to prepare students for their own potential fieldwork.

for undergraduates, courses in either 83 or 101; 102: Sentence Structure; 105: Sounds of Language and, if possible, 104: Word Structure as well should be taken.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Arts and Humanities

Linguistics 123

Intermediate Indo-European (123440)

Jay Jasanoff

2024 Fall (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Designed as a sequel to Linguistics 107. A detailed overview of Indo-European comparative grammar, with emphasis on recent developments and discoveries.

note: " prerequisite Ling 107 or consent of instructor."

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Arts and Humanities
FAS: Course Level	For Undergraduate and Graduate Students

Linguistics 187

Structure of Turkish (218824)

Yagmur Sag-Parvardeh

2025 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Turkish, a member of the Altaic family of languages, has a lot of potential to inform research in morpho-syntax and semantics. It has a plethora of intriguing empirical phenomena such as nominalized clausal complementation, differential object marking, agreement, incorporation, scope rigidity, among others. This course aims to familiarize you with some of these phenomena within a formal framework that helps us appreciate their significance from a cross-linguistic perspective.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration

Linguistics 190

Quantitative Methods in Linguistics (212923)

Kevin Ryan

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to statistical methods for the analysis of experimental and corpus data in linguistics. Emphasis is on case studies from sociolinguistics, phonology, semantics, and historical linguistics and on current approaches to data modeling and visualization in R, a software environment for statistical computing.

Recommended Prep:

Prerequisites include a 100-level course in linguistics and the ability to procure some quantitative linguistic data for a final project; prior exposure to programming is helpful but not required.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Arts and Humanities
FAS: Course Level	For Undergraduate and Graduate Students

Linguistics 195

Metrics (000195)

Kevin Ryan

2024 Fall (4 Credits)

Schedule:

R 0200 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

We examine the phonological structure of verse in a variety of the world's poetic traditions, both ancient and modern. We do so as linguists, aiming not only to describe diverse systems of meter, text-setting, rhyme, and alliteration, but also to seek generalizations and explanations that are grounded in linguistic theory and cognitive science. While modern metrics is informed by linguistic theory, the converse is also true: Poetry, being a kind of natural laboratory in which composers exploit, explore, and play with prosody, often sheds light on questions of phonological theory. Case studies will treat both quantitative and

accentual (or hybrid) meters. We will highlight relevant current issues in phonology as well as corpus methodologies for drawing data-driven inferences from metrical texts.

No prerequisites for graduate students. Prerequisites for undergraduates: either an introductory linguistics course, a course on a classical language, or permission of the instructor. Cross-listed with 26.964 at MIT; Donca Steriade

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
Quantitative Reasoning with Data	Yes
FAS: Course Level	Primarily for Undergraduate Students

Continued investigation of functions and differential calculus through modeling; an introduction to integration with applications; an introduction to differential equations. Solid preparation for Mathematics 1b.

There will be required workshops Tuesdays.

Course Notes:

This is a lecture course taught in small sections. Please see the course site for section times and instructions on how to submit your time preferences.

This course, when taken together with Mathematics Ma, can be followed by Mathematics 1b. Mathematics Ma and Mathematics Mb together cover all the material in Mathematics 1a (and more).

Requirements: Prerequisite: Mathematics MA

Mathematics 1A

Introduction to Calculus (123680)

Oliver Knill

2025 Spring (4 Credits) Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

The development of calculus by Newton and Leibniz ranks among the greatest achievements of the past millennium. This course will help you see why by introducing: how differential calculus treats rates of change; how integral calculus treats accumulation; and how the fundamental theorem of calculus links the two. These ideas will be applied to problems from many other disciplines.

Course Notes:

In the fall, Math 1a is taught in small sections. Please see the course site for section times and instructions on how to submit your time preferences.

In the spring, Math 1a is taught in a larger lecture format. Mathematics Ma and Mb together cover all of the material in Mathematics 1a (and more).

Recommended Prep:

A solid background in precalculus.

Requirements: Anti-requisite: cannot be taken for credit if MATH S-1AB already complete

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
Quantitative Reasoning with Data	Yes

Integration, Series and Differential Equations (111010)

*Amadeus Martin**Hannah Constantin*

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Speaking the language of modern mathematics requires fluency with the topics of this course: infinite series, integration, and differential equations. Model practical situations using integrals and differential equations. Learn how to represent interesting functions using series and find qualitative, numerical, and analytic ways of studying differential equations. Develop both conceptual understanding and the ability to apply it.

Course Notes:

This course is taught in small sections. Please see the course site for section times and instructions on how to submit your time preferences.

Recommended Prep:

Mathematics 1a or Ma and Mb; or 5 on the AB advanced placement test; or an equivalent background in mathematics.

Requirements:

Anti-requisite: cannot be taken for credit if MATH S-1AB already complete

Mathematics 18A

Multivariable Calculus for Social Sciences (125396)

Roderic Guigo Corominas

2024 Fall (4 Credits)

Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Focus on concepts and techniques of multivariable calculus most useful to those studying the social sciences, particularly economics: functions of several variables; partial derivatives; linear approximation; multiple integrals; directional derivatives and the gradient; constrained and unconstrained optimization, including the method of Lagrange multipliers. Covers topics from Mathematics 21a most useful to social sciences.

Course Notes:

Mathematics 21b can be taken before or after Mathematics 18. Examples draw primarily from economics and the social sciences, though Mathematics 18 may be useful to students in certain natural sciences. Students whose main interests lie in the physical sciences, mathematics, or engineering should consider Math 21a or Applied Math 22a.

Recommended Prep:

Mathematics 1b or equivalent, or a 5 on the BC Advanced Placement Examination in Mathematics.

Requirements: Anti-Requisite: Not to be taken in addition to Mathematics 21a or Applied Mathematics 22a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Quantitative Reasoning with Data	Yes

Mathematics 19A

Modeling and Differential Equations for the Life Sciences (110596)

John Cain

2024 Fall (4 Credits)

Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Considers the construction and analysis of mathematical models that arise in the life sciences, ecology and environmental life science. Introduces mathematics that include multivariable calculus, differential equations in one or more variables, vectors, matrices, and linear and non-linear dynamical systems. Taught via examples from current literature (both good and bad).

Course Notes:

This course is recommended over Math 21a for those planning to concentrate in the life sciences and ESPP. Can be taken with or without Mathematics 21a,b. Students with interests in the social sciences and economics might consider Mathematics 18. This course can be taken before or after Mathematics 18.

Recommended Prep:

A course in one variable calculus preferably at the level of Mathematics 1b.

Additional Course Attributes:

Attribute	Value(s)

Fanhui Xu

Eva Politou

Max Weinreich

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

To see how calculus applies in practical situations described by more than one variable, we study integration over curves, surfaces, and solid regions using different coordinate systems; parameterization of curves and surfaces; vectors, lines, and planes; partial derivatives and the gradient; constrained and unconstrained optimization; divergence and curl of vector fields; and the Green's, Stokes's, and Divergence Theorems.

There will be required workshops Tuesdays.

Course Notes:

This course is taught in small sections. Please see the course site for section times and instructions on how to submit your time preferences.

May not be taken for credit by students who have passed Applied Mathematics 22b.

Recommended Prep:

Mathematics 1b or an equivalent background in mathematics.

Requirements: Anti-requisite: Not to be taken in addition to AM 22b

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
Quantitative Reasoning with Data	Yes

Mathematics 21A Section: LEC

Multivariable Calculus (119196)

Linear Algebra and Differential Equations (110989)

2024 Fall (4 Credits)

Schedule: MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Matrices provide the algebraic structure for solving myriad problems across the sciences. We study matrices and related topics such as linear transformations and linear spaces, determinants, eigenvalues, and eigenvectors. Applications include dynamical systems, ordinary and partial differential equations, and an introduction to Fourier series.

Course Notes:

This is a lecture taught in small sections. Please see the course site for section times and instructions on how to submit your time preferences.

May not be taken by students who have passed Applied Mathematics 21b.

Recommended Prep:

Mathematics 1b or an equivalent background in mathematics. Mathematics 21a is commonly taken before Mathematics 21b, but is not a prerequisite, although familiarity with partial derivatives is useful.

Requirements:

Anti-requisite: Not to be taken in addition to AM 22a

Vector Calculus and Linear Algebra I (207485)

Philip Wood

2024 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Mathematics 22 covers multivariable calculus and linear algebra for students interested in mathematical sciences. It covers the same topics as Mathematics 21, but does so with more rigor. Students are taught techniques of proof and mathematical reasoning. The workload and content is comparable with the Mathematics 21 sequence. But unlike the latter, the linear algebra and calculus are more interlinked. The content of Math 22a is mostly aligned with Math 21b (linear algebra), and the content of Math 22b is mostly aligned with Math 21a (multivariable calculus).

Additional Course Attributes:

FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 25A

Theoretical Linear Algebra and Real Analysis I (110808)

John Cain

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

A rigorous treatment of linear algebra. Topics include: Construction of number systems; fields, vector spaces and linear transformations; eigenvalues and eigenvectors, determinants and inner products. Metric spaces, compactness and connectedness.

Course Notes:

Expect to spend a lot of time doing mathematics.

Recommended Prep:

5 on the Calculus BC Advanced Placement Examination and some familiarity with writing proofs, or the equivalent as determined by the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 25B

Theoretical Linear Algebra and Real Analysis II (110855)

John Cain

2025 Spring (4 Credits)

Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

A rigorous treatment of basic analysis. Topics include: convergence, continuity, differentiation, the Riemann integral, uniform convergence, the Stone-Weierstrass theorem, Fourier series, differentiation in several variables. Additional topics, including the classical results of vector calculus in two and three dimensions, as time allows.

Course Notes:

Expect to spend a lot time doing mathematics.

Requirements:

Prerequisite: Mathematics 25A OR Mathematics 55A

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students

Mathematics 55A

Studies in Algebra and Group Theory (113627)

Denis Auroux

2024 Fall (4 Credits)

Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

A rigorous introduction to abstract algebra, including group theory and linear algebra. This course covers the equivalent of Mathematics 25a and Mathematics 122, and prepares students for Mathematics 123 and other advanced courses in number theory and algebra. (A course in analysis such as Mathematics 25b or 55b is recommended for Spring semester.)

Course Notes:

Mathematics 55a is an intensive course for students who are comfortable with abstract mathematics. (Students without this background will gain it and learn the material from Math 55a,b in other courses by continuing into the Mathematics Concentration as sophomores.) Students can switch between Mathematics 55a and either Mathematics 25a, 23a, 22a, 21a during the first three weeks without penalty.

Recommended Prep:

Familiarity with proofs and abstract reasoning; and commitment to a fast moving course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students

Mathematics 55B

Studies in Real and Complex analysis (112871)

Denis Auroux

2025 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

A rigorous introduction to real and complex analysis. This course covers the equivalent of Mathematics 25b and Mathematics 113, and prepares students for Mathematics 114 and other advanced courses in analysis.

Course Notes:

Mathematics 55b is an intensive course for students having significant experience with abstract mathematics.

Requirements:

Prerequisite: Mathematics 55A

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students

Mathematics 60R

Reading Course for Senior Honors Candidates (216307)

Laura DeMarco

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Mathematics concentrators in their final two undergraduate semesters can take this course to work individually on their senior thesis.

Course Notes:

Limited to candidates in Mathematics who obtain the permission of both the faculty member under whom they want to work and the Director of Undergraduate Studies. May not count for concentration in Mathematics without special permission from the Director of Undergraduate Studies. Graded sat/ unsat only.

Additional Course Attributes:

Attribute	Value(s)

Mathematics 101

Sets, Groups and Real Analysis (122943)

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to conceptual and axiomatic mathematics, the writing of proofs, and mathematical culture, with sets, groups and real analysis as the main topics.

Course Notes:

Students who have already taken Mathematics 25a,b or 55a,b should not take this course for credit. Ordinarily, students who have already taken Mathematics 22a,b or 23a,b should not take this course for credit, but they may do so with the instructor's permission. This course is given fall term and repeated spring term.

Anti-Req: Not to be taken in addition to Mathematics 25a,b or 55a,b.

Related Sections:

Problem sessions (optional but encouraged) Fridays 12 - 1 pm

Recommended Prep:

An interest in mathematical reasoning. Acquaintance with algebra, geometry and/or calculus is desirable.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Mathematics 110

Vector Space Methods for Differential Equations (126610)

Paul Bamberg (he)

2024 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Develops the theory of inner product spaces, both finite-dimensional and infinite-dimensional, and applies it to a variety of ordinary and partial differential equations. Topics: existence and uniqueness theorems, Sturm-Liouville systems, orthogonal polynomials, Fourier series, Fourier and Laplace transforms, eigenvalue problems, and solutions of Laplace's equation and the wave equation in the various coordinate systems.

Recommended Prep:

Mathematics 22a,b, 23a,b or 25a,b or Mathematics 19a,b or 21a,b plus any Mathematics course at the 100 level; or an equivalent background in Mathematics.

Additional Course Attributes:

Mathematics 112

Introductory Real Analysis (109817)

Sunghyuk Park

2025 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to mathematical analysis and the theory behind calculus. An emphasis on learning to understand and construct proofs. Covers limits and continuity in metric spaces, uniform convergence and spaces of functions, the Riemann integral.

Recommended Prep:

Mathematics 19a,b or 21a,b and either an ability to write proofs or concurrent enrollment in Mathematics 101; or an equivalent background in mathematics.

Requirements:

Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 113

Complex Analysis (113608)

Joseph D. Harris

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Analytic functions of one complex variable: power series expansions, contour integrals, Cauchy's theorem, Laurent series and the residue theorem. Some applications to real analysis, including the evaluation of indefinite integrals. An introduction to some special functions.

Recommended Prep:

Not recommended for most students who took Mathematics 55a and/or Mathematics 55b. Talk to the Director of Undergraduate Studies in Mathematics if you took Mathematics 55a and/or 55b and wish to take this course.

Additional Course Attributes:

Mathematics 114

Analysis of Function Spaces, Measure and Integration (123227)

Kevin Yang

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Lebesgue measure and integration; general topology; introduction to L^p spaces, Banach and Hilbert spaces, and duality.

Recommended Prep:

Mathematics 22a,b, 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 116

Real Analysis, Convexity, and Optimization (118302)

Paul Bamberg (he)

2024 Fall (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Develops the theory of convex sets, normed infinite-dimensional vector spaces, and convex functionals and applies it as a unifying principle to a variety of optimization problems such as resource allocation, production planning, and optimal control. Topics include Hilbert space, dual spaces, the Hahn-Banach theorem, the Riesz representation theorem, calculus of variations, and Fenchel duality. Students will be

expected to understand and come up with proofs of theorems in real and functional analysis.

Recommended Prep:

Mathematics 22a,b, 23a,b or 25a,b or 55a,b; or Mathematics 21a,b plus at least one other more advanced course in mathematics; or an equivalent background in mathematics.

Additional Course Attributes:

Attribute	Value(s)

Mathematics 117

Probability and Random Processes with Economic Applications (127947)

Paul Bamberg (he)

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A self-contained treatment of the theory of probability and random processes with specific application to the theory of option pricing. Topics: axioms for probability, calculation of expectation by means of Lebesgue integration, conditional probability and conditional expectation, martingales, random walks and Wiener processes, and the Black-Scholes formula for option pricing. Students will work in small groups to investigate applications of the theory and to prove key results.

Additional Course Attributes:

Mathematics 121

Linear Algebra (120228)

Gage Martin

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a second course in linear algebra, with an emphasis on understanding linear algebra at a more abstract level and learning to read and write proofs. Topics include real and complex vector spaces, linear transformations, and eigenvalues and eigenvectors.

Recommended Prep:

Mathematics 19b or 21b or an equivalent background in mathematics.

Requirements:

Anti-req: Not to be taken in addition to Mathematics 22a, 23a or 25a or 55a.

Additional Course Attributes:

Mathematics 124

Number Theory (111533)

Mark Kisin

2024 Fall (4 Credits)

Schedule:

MF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Factorization and the primes; congruences; quadratic residues and reciprocity; continued fractions and approximations; Pell's equation; selected Diophantine equations; theory of integral quadratic forms. Also, selected applications to coding, introduction to elliptic curves and introduction to zeta functions if time permits.

Recommended Prep:

Mathematics 22a or 23a or 25a or 101 or 122; or 55a which can be taken

concurrently; or an equivalent experience and comfort level with abstract mathematics.

Additional Course Attributes:

Attribute	Value(s)

FAS: Course Level	For Undergraduate and Graduate Students

Mathematics 129

Number Fields (115734)

Mark Kisin

2025 Spring (4 Credits)

Schedule:

MF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This class is an advanced undergraduate course and it is an introduction to algebraic number theory. Number fields are fundamental objects of study in number theory and algebraic geometry. They are ubiquitous in several areas of mathematics.

We will first start by studying unique factorization of ideals in number fields, we will define the Picard group of the ring of integers of a number field and prove that it is a finite group. Our next object of study will be the structure of the units group, the structure of the Galois group, the Frobenius elements, and ramification theory. The final topic will be an introduction to analytic number theory: after introducing the Dedekind Zeta function, we will prove the class number formula. If time permits, we will introduce the adeles and the ideles.

Recommended Prep:

Knowledge of the material in Mathematics 123.

Requirements:

Prerequisite: Mathematics 123

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 130

Classical Geometry (123211)

Alex Kapiamba

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Presents several classical geometries, these being the affine, projective, Euclidean, spherical and hyperbolic geometries. They are viewed from many different perspectives, some historical and some very topical. Emphasis on reading and writing proofs.

Recommended Prep:

Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a which may be taken concurrently; or an equivalent background in mathematics.

Additional Course Attributes:

Attribute	Value(s)

Topological Spaces and Fundamental Group (111458)

Andrew Senger

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

First, an introduction to abstract topological spaces, their properties (compactness, connectedness, metrizable) and their corresponding continuous functions and mappings. Then, an introduction to algebraic topology including homotopy theory, fundamental groups and covering spaces.

Recommended Prep:

Some acquaintance with metric space topology as taught in Mathematics 22a,b, 23a,b, 25a,b, 55a,b, 101, 102, or 112; and with groups as taught in Mathematics 101, 122 or 55a.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Mathematics 132

Differential Topology (123212)

William Ballinger

2025 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Differential manifolds, smooth maps and transversality. Winding numbers, vector fields, index and degree. Differential forms, Stokes' theorem, introduction to cohomology.

Recommended Prep:

Mathematics 22a,b, 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Mathematics 136

Differential Geometry (111133)

Puskar Mondal

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The course is an introduction to Riemannian geometry with the focus (for the most part) being the Riemannian geometry of curves and surfaces in space where the fundamental notions can be visualized.

Recommended Prep:

Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a (may be taken concurrently); or an equivalent background in mathematics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Mathematics 137

Algebraic Geometry (116452)

Mihnea Popa

2025 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Affine and projective spaces, plane curves, Bezout's theorem, singularities and genus of a plane curve, Riemann-Roch theorem.

Recommended Prep:

Knowledge of the material in Mathematics 123.

Requirements:

Prerequisite: Mathematics 123

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Mathematics 152

Discrete Mathematics (116191)

Paul Bamberg (he)

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to finite groups, finite fields, quaternions, finite geometry, finite topology, combinatorics,

and graph theory. A recurring theme of the course is the symmetry group of the regular icosahedron. Taught in a seminar format: students will gain experience in presenting proofs at the blackboard.

Course Notes:

Covers material used in Computer Science 121 and Computer Science 124.

Recommended Prep:

Mathematics 19b, 21b, 22a, 23a, or 25a. Previous experience with proofs is recommended but not required.

Requirements:

Not to be taken in addition to Computer Science 20, Mathematics 55a/b or Mathematics 122.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Mathematics 154

Probability Theory (113811)

Kevin Yang

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to probability theory. Discrete and continuous random variables; distribution and density functions for one and two random variables; conditional probability. Generating functions, weak and strong laws of large numbers, and the central limit theorem. Geometrical probability, random walks, and Markov processes.

Recommended Prep:

A previous mathematics course at the level of Mathematics 19ab, 21ab, or a higher number. For students from 19ab or 21ab, previous or concurrent enrollment in Math 101 or 102 or 112 may be helpful. Freshmen who did well in Math 22a, 23a, 25a or 55a fall term are also welcome to take the course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 155R

Combinatorics (116196)

2024 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to counting techniques and other methods in finite mathematics. Possible topics include: the inclusion-exclusion principle and Mobius inversion, graph theory, generating functions, Ramsey's theorem and its variants, probabilistic methods.

Recommended Prep:

Prerequisites: familiarity with proofs. A previous mathematics course at the level of Mathematics 23ab, 25ab, 55ab, 101, 102, or 112 would be enough.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 212

Advanced Real Analysis (116137)

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Functional analysis and applications. Topics may include the spectral theory of self-adjoint operators, evolution equations and the theorem of Hille-Yosida, distributions, Sobolev spaces and elliptic boundary value problems, calculus of variations with applications to non-linear PDE.

Recommended Prep:

Mathematics 114 or similar courses

Requirements:

Prerequisite: Mathematics 114

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Mathematics 213A

Advanced Complex Analysis (110880)

Yum-Tong Siu

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Fundamentals of complex analysis, and further topics such as conformal mapping, hyperbolic geometry, canonical products, elliptic functions and modular forms.

Prerequisites: Basic complex analysis, topology of covering spaces, differential forms.

Recommended Prep:

Basic complex analysis, topology of covering spaces, differential forms.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 213BR

Riemann Surfaces (111824)

Yum-Tong Siu

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Fundamentals of algebraic curves as complex manifolds of dimension one. Topics may include branched coverings, sheaves and cohomology, potential theory, uniformization and moduli.

Recommended Prep:**Knowledge of the material in Mathematics 213a.****Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Mathematics 221

Commutative Algebra (123232)

Yuriy Drozd

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Commutative Algebra lies at the foundations of Number Theory and Algebraic Geometry. It plays an important role in Algebraic Topology, Geometry and other fields. We will cover the main topics of Commutative Algebra and give a taste of its applications. Starting from generalities on rings, modules and ideals, localization and primary decomposition in Noetherian rings and modules, we then move to integral extensions, going-up and going-down, Noether normalization and Hilbert's Nullstellensatz, dimension theory. The final part of the class will cover graded rings, Hilbert polynomials and homological methods (if time permits, including regular local rings).

Recommended Prep:**Math 122 and Math 123.****Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 222

Lie Groups and Lie Algebras (123238)

Dan Freed

2025 Spring (4 Credits)

Schedule:

MWS 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Lie theory, including the classification of semi-simple Lie algebras and/or compact Lie groups and their representations.

Recommended Prep:

Knowledge of the material in Mathematics 114, 123 and 132.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 223A

Algebraic Number Theory (123239)

Noam D. Elkies

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A graduate introduction to algebraic number theory. Topics: the structure of ideal class groups, groups of units, a study of zeta functions and L-functions, local fields, Galois cohomology, local class field theory, and local duality.

Recommended Prep:

Knowledge of the material in Mathematics 129.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Mathematics 223B

Algebraic Number Theory (123240)

Ashvin Swaminathan

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Continuation of Mathematics 223a. Topics: adeles, global class field theory, duality, cyclotomic fields. Other topics may include: Tate's thesis or Euler systems.

Recommended Prep:**Knowledge of the material in Mathematics 223a.****Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 229

Introduction to Analytic Number Theory (123242)

Yuriy Drozd

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Fundamental methods, results, and problems of analytic number theory. Riemann zeta function and the Prime Number Theorem; Dirichlet's theorem on primes in arithmetic progressions; lower bounds on discriminants from functional equations; sieve methods, analytic estimates on exponential sums, and their applications.

Recommended Prep:**Knowledge of the material in Mathematics 113 and 123.****Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 230A

Differential Geometry (113369)

Dan Freed

2024 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Basic properties and examples of smooth manifolds, Lie groups, and vector bundles; Riemannian geometry (metrics, geodesics, Levi-Civita connections, and Riemann curvature tensors); principal bundles and associated vector bundles with their connections and characteristic classes.

Recommended Prep:**Knowledge of the material in Mathematics 132 and 136.****Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Mathematics 231A

Algebraic Topology (123243)

Fan Ye

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Covering spaces and fibrations. Simplicial and CW complexes, Homology and cohomology, universal coefficients and Künneth formulas. Hurewicz theorem. Manifolds and Poincaré duality.

Recommended Prep:

Knowledge of the material in Mathematics 131 and 132.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 231BR

Advanced Algebraic Topology (123433)

Andrew Senger

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Continuation of Mathematics 231a. Topics will be chosen from: Cohomology products, homotopy theory, bundles, obstruction theory, characteristic classes, spectral sequences, Postnikov towers, and topological applications.

Recommended Prep:

Knowledge of the material in Mathematics 231a.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 232AR

Introduction to Algebraic Geometry I (123441)

Ming Hao Quek

2024 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to complex algebraic curves, surfaces, and varieties.

Recommended Prep:

Knowledge of the material in Mathematics 123 and 132 and 137.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 232BR

Introduction to Algebraic Geometry II (123444)

Mihnea Popa

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a continuation of the material covered in the first semester, namely a complex analytic introduction to algebraic geometry. Among other things, we will discuss: higher dimensional manifolds, Hodge structures, polarizations, complex tori and abelian varieties, deformations of complex structures.

Recommended Prep:

Knowledge of the material in Mathematics 232a.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 243

Evolutionary Dynamics (119511)

Martin Nowak

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Research seminar on evolutionary dynamics, spanning mathematical and computational models of evolution in biological and social systems. Students attend a weekly lecture and conduct an original research project.

Recommended Prep:

Experience with mathematical biology at the level of Mathematics 153.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 256X

Recent advances in Chromatic Homotopy theory (110108)

Michael Hopkins

2025 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will cover the recent work of Burklund-Hahn-Levy-Schlank giving a counterexample to the Ravenel's famous Telescope Conjecture.

An understanding of chromatic homotopy theory will be assumed.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Mathematics 261

Algebraic vector bundles and motivic homotopy theory (112204)

Michael Hopkins

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This will be a course on recent progress on constructing algebraic vector bundles on smooth affine varieties. I hope to get through a proof that on a general class (called "cellular") of smooth affine varieties over $\mathbb{C}$, every topological vector bundle has an algebraic structure. The proof exploits recent advances on the unstable motivic Steenrod and the unstable motivic Adams-Novikov spectral sequence.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Mathematics 262B

Quantum theory from the geometric viewpoint II (222629)

Dan Freed

2025 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is the second semester of a year-long course centered around concepts in quantum mechanics and quantum field theory. We treat the subject from a mathematical perspective that emphasizes structural aspects and applications to mathematics. Some lectures will be devoted to background mathematics. Topics include: quantum mechanics, relativistic quantum field theory, Segal's axioms for Wick-rotated theories, topological field theories, invertible field theories,

supersymmetry, supersymmetric field theories.

Recommended Prep:

The course assumes mathematical knowledge at the level of basic graduate courses; no physics is assumed.

Additional Course Attributes:

Attribute	Value(s)

Mathematics 264R

Quantum Topology (222974)

Sunghyuk Park

2025 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will be an introduction to quantum topology, a branch of low-dimensional topology informed by Chern-Simons theory and its generalizations. Tentative topics include: quantum groups and their representation theory, semisimple and non-semisimple quantum link and 3-manifold invariants, skein modules, and knot homologies.

Additional Course Attributes:

Attribute	Value(s)

Mathematics 265

Singularities and Hodge theory (110474)

Mihnea Popa

2024 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Hodge theory for smooth projective varieties over the complex numbers is a classical subject. It has been extended over the years in various ways to the setting of singular varieties. This course will (roughly) be devoted to one such extension, namely the theory of the Deligne-Du Bois complex, also known as the filtered De Rham complex. The emphasis will be on applications to birational geometry and to the theory of singularities. In particular it will discuss rational and Du Bois singularities, and recently introduced refinements of these notions.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students

Mathematics 266

Motivic homotopy theory (122233)

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will provide a friendly overview to some of the main ideas and constructions in motivic homotopy theory. We will cover some of the major theorems in the field (purity, localization, representability of algebraic K-theory, affine representability), and work towards the development of obstruction theory in the motivic setting.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 267Z

Posets (110504)

Colin Defant

2024 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Posets (partially ordered sets) are fundamental objects in algebraic combinatorics. On the one hand, this course will cover important partial orders on objects of interest in algebra, combinatorics, and geometry; such objects include permutations, integer partitions, set partitions, lattice paths, rooted plane trees, elements of Coxeter groups, faces of polytopes, and regions of hyperplane arrangements. On the other hand, we will discuss posets in their own right in topological, dynamical, and algebraic contexts. Particular topics we will discuss include order complexes, shellability, poset dynamics, combinatorial billiards, lattice theory, Garside theory, and polytopality.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students

Mathematics 268A

Categorical Langlands and Shimura Varieties (110215)

David Linus Hamann

2024 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Recently, Fargues and Scholze attached a semi-simple L-parameter to any representation of a p-adic reductive group, showing that the local Langlands correspondence could be realized in terms of a geometric Langlands correspondence over the Fargues-Fontaine curve. This implies that the cohomology of certain p-adic shtukas is related to the L-parameter they construct. These p-adic shtukas can be related to global Shimura varieties via p-adic Hodge theory, and this builds a bridge between the classical and geometric Langlands correspondences. The goal of this course will be to explain some of the basic geometry and technical tools behind the Fargues-Scholze construction, as well as to illustrate the connection to the classical story of Shimura varieties in some particular examples.

Mathematics 275

Riemann surfaces, dynamics and hyperbolic geometry (222086)

Curtis McMullen

2025 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A survey of fundamental results and current research in several interacting areas. Topics may include: hyperbolic manifolds in dimensions 2 and 3; arithmetic, ergodic theory and rigidity; moduli spaces of Riemann surfaces and 1-forms; conformal dynamical systems.

Additional Course Attributes:

Attribute	Value(s)

Mathematics 285Z

Sutured 3-manifolds and Floer homology (222089)

Fan Ye

2025 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to 3-manifolds with some sutured structures on their boundaries and various constructions of the Floer homology for sutured manifolds using Heegaard Floer theory, monopole (Seiberg-Witten) theory, and instanton (Donaldson-Floer) theory.

Additional Course Attributes:

Attribute	Value(s)

Mathematics 287Z

Geometric and topological combinatorics (222665)

Lauren Williams

2025 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This class will be an introduction to topological and geometric combinatorics at the graduate level, covering several general areas:

(1) Posets

(2) Simplicial complexes

(3) Matroids

(4) Polytopes

One of the main themes of the class will be the question "To what extent do combinatorial properties of an object determine its topology or geometry?" For example, to what extent does the face lattice of a simplicial or cell complex determine its homotopy type? To what extent does the graph of a polytope determine the polytope? And what kinds of combinatorial techniques can we use to then understand the topology of the object in question? Along the way we will discuss interesting examples coming from posets, polytopes, matroids, Coxeter groups, the Grassmannian and flag varieties, etc.

Mathematics 288Z

Entropy (222088)

Max Weinreich

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is an introduction to higher-dimensional algebraic dynamics through the lens of entropy, the most fundamental dynamical invariant. We will introduce three flavors of entropy – algebraic, arithmetic, and topological – and prove the powerful comparison theorems of Gromov-Yomdin and Kawaguchi-Silverman that relate them. Along the way, we will compute the algebraic entropy, or dynamical degree, for some guiding examples: self-maps of algebraic tori, abelian varieties, the projective plane, and Markoff surfaces.

Additional Course Attributes:

Attribute	Value(s)

Mathematics 295X

Arithmetic Statistics (222851)

Ashvin Swaminathan

2025 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course, we will discuss methods for studying the distributions of arithmetic objects, such as polynomials, solutions to Diophantine equations, class groups of number fields, and more. We will focus on the parametrize-and-count approach developed in the work of Bhargava and his collaborators. This approach consists of two steps — an algebraic parametrization step in which one describes the desired arithmetic objects in terms of orbits of a representation — and an analytic counting step in which one determines asymptotic counts of these orbits. Thus, the course will feature techniques from diverse subfields of mathematics.

Mihnea Popa

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 309

Graduate Reading in Algebraic Geometry (216140)

Mihnea Popa

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Mathematics 311

Graduate Reading in Stochastic Analysis (115753)

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Mathematics 311

Graduate Reading in Stochastic Analysis (115753)

Kevin Yang

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 318

Graduate Reading in Number Theory (121353)

Barry Mazur

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Requirements: **Prerequisite: Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 318

Graduate Reading in Number Theory (121353)

Barry Mazur

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Requirements: **Prerequisite: Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 324

Graduate Reading in Low-dimensional topology (117033)

Gage Martin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Mathematics 324

Graduate Reading in Low-dimensional topology (117033)

Gage Martin

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 327

Graduate Reading in Several Complex Variables (113647)

Yum-Tong Siu

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Requirements: **Prerequisite: Graduate Students Only**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 327

Graduate Reading in Several Complex Variables (113647)

Yum-Tong Siu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Requirements:

Prerequisite: Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Mathematics 329

Graduate Reading in Geometry and Physics (216152)

Benjamin Gammage

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Mathematics 329

Graduate Reading in Geometry and Physics (216152)

Benjamin Gammage

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Mathematics 333

Graduate Reading in Complex Analysis, Dynamics and Geometry (126825)

Curtis McMullen

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Requirements:

Prerequisite: Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Mathematics 333

Graduate Reading in Complex Analysis, Dynamics and Geometry (126825)

Curtis McMullen

2025 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Requirements:

Prerequisite: Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Mathematics 335

Graduating Reading in Differential Geometry and Analysis (116319)

Cliff Taubes

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Requirements:

Prerequisite: Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Mathematics 335

Graduating Reading in Differential Geometry and Analysis (116319)

Cliff Taubes

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Requirements:

Prerequisite: Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 338

Graduate Reading in Stable Homotopy Theory (117608)

Hana Jia Kong

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Mathematics 338

Graduate Reading in Stable Homotopy Theory (117608)

Hana Jia Kong

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Medical Sciences

Subject: Speech & Hearing Sciences

Speech & Hearing Sciences 201

From Sound to Neuron (108213)

Sunil Puria

2024 Fall (4 Credits)

Schedule:

TR 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Acoustics, anatomy, normal biology, biophysics, physiology and morphology of the middle ear and inner ear, its sensory innervation and efferent control systems, and the mechanisms underlying sensorineural hearing loss and medical devices used to treat pathology. Material is presented through lectures, laboratory exercises, discussions of the primary literature, and textbooks.

Course Notes:

Lecture notes will be available online

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Speech & Hearing Sciences 202

Clinical Aspects of Speech and Hearing (108217)

Ramon Franco

David Jung

2025 Spring (4 Credits)

Schedule:

MW 0500 PM - 0659 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

Clinical approach to speech and hearing disorders as practiced by physicians, audiologists, speech clinicians, and rehabilitation specialists. Includes virtual observation of patient care in clinic and operating rooms, as well as lectures, discussion groups, and laboratory experience in audiological and vestibular testing.

Course Notes:

Classes to be held in person at Mass Eye and Ear unless otherwise indicated. Class meeting times may change according to physician, OR, and clinic schedules.

Recommended Prep:

Anatomy of Speech and Hearing, Acoustics of Speech and Hearing, or permission of the course director

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Speech & Hearing Sciences 203

Anatomy of Speech and Hearing (108218)

Barbara Fullerton

James Heaton

2025 Spring (4 Credits)

Schedule:

MTWRF 0900 AM - 1259 PM

Instructor Permissions: Instructor

Enrollment Cap:

14

This is now an elective course for graduate students in the SHBT speech and hearing program. It is based on anatomical dissection of the head, neck, and thorax in human cadavers with an emphasis on structures that are important in speech and hearing. Lectures cover basic brain anatomy and neuroscience, including some information on head and neck imaging, surgery, and head and neck cancer

Course Notes:

This an intensive January course and is 4 credits. Students should be comfortable with basic biology. Students not enrolled in the SHBT program must get permission from the course director to register for the course.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Speech & Hearing Sciences 205

Audition: Neural Mechanisms, Perception and Cognition (108224)

Anne Takesian

Satrajit Ghosh

James Heaton

Kristina Simonyan

Joshua McDermott

Daniel Polley

Bertrand Delgutte

Lisa Goodrich

Julie Arenberg

Robert Richardson

John Gabrieli

2025 Spring (4 Credits)

Schedule:

MWF 0930 AM - 1129 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Neural structures and mechanisms mediating the detection, localization and recognition of sounds. General principles are conveyed by theme discussions of auditory masking, sound localization, musical pitch, cochlear implants, cortical plasticity and auditory scene analysis.

Course Notes:

Offered jointly with MIT HST.723 and MIT 9.285

Recommended Prep:

Neurobiology 200 or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Speech & Hearing Sciences 300

Auditory neural coding laboratory (109006)

Bertrand Delgutte

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Research projects on the neural coding of sound and the neural basis of auditory perception, with emphasis on the mechanisms for listening in adverse environments comprising reverberation and competing sound sources.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Speech & Hearing Sciences 300

Auditory neural coding laboratory (109006)

Bertrand Delgutte

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Research projects on the neural coding of sound and the neural basis of auditory perception, with emphasis on the mechanisms for listening in adverse environments comprising reverberation and competing sound sources.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Speech & Hearing Sciences 301QC

Introduction to Speech & Hearing Laboratories (109015)

Gwenaëlle Geleoc

2024 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Short research presentations by faculty in the Speech and Hearing Bioscience and Technology to help students select a laboratory for research rotations. Some meetings include an on-site laboratory visit.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Speech & Hearing Sciences 303

Sensory Coding and Feedback Control, in the Mammalian Cochlea; Mechanisms of Sensorineural Hearing (109009)

M. Liberman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Speech & Hearing Sciences 303

Sensory Coding and Feedback Control, in the Mammalian Cochlea; Mechanisms of Sensorineural Hearing (109009)

M. Liberman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Speech & Hearing Sciences 305

Degeneration and regeneration of the auditory nerve; biomarkers of sensorineural hearing loss (109018)

Konstantina Stankovic

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Artificial Intelligence in Medicine (223974)

Mengyu Wang

Tobias Elze

2025 Spring (4 Credits)

Schedule: T 0100 PM - 0359 PM

Instructor Permissions: None

Enrollment Cap: 100

This course offered at Schepens Eye Research Institute will serve as an introduction to artificial intelligence (AI) with an emphasis on its applications in medicine. The course will start from classical linear and non-linear regression models and then move to classical machine learning models including matrix decomposition methods, random forest, support vector machine, and traditional neural networks based on multilayer perceptron and finally dive into the latest deep neural networks such as convolutional neural networks and transformers. The class will be taught with homework in the form of two mini-projects and one final project mainly using medical imaging data along with other medical tests and diagnostic information. We will have three special sessions as the last three classes to overview the latest developments on common medical AI modeling topics including segmentation, few-shot learning, anomaly detection, and large language models' utilities in medicine.

Course Notes:

Students should be familiar with at least one programming language such as MATLAB, R or Python.

The structure of this course also includes a discussion component. Any additional details about this component will be provided by the course faculty.

Johannes Walter

2024 Fall (4 Credits)

Schedule:

MWF 1100 AM - 1200 PM

Instructor Permissions: Instructor

Enrollment Cap:

72

Principles of Molecular Biology is a course organized around the Central Dogma of Biology with presentations covering fundamental aspects of DNA and RNA structure, their function, and their interactions with proteins. The course opens with a discussion of the physical and chemical properties that drive the interactions of proteins with nucleic acids. This is used as a basis for understanding the material presented in the subsequent six modules, which cover DNA replication, DNA repair, gene regulation, transcription, RNA processing, and translation. Throughout this course, an emphasis will be

placed on how the structure of small molecular machines (proteins) define their function in the processes and pathways that are introduced.

Course Notes:

This course includes a discussion component. Any additional details about this component will be provided by the course faculty

Class Notes:

This course includes a discussion component. Any additional details about this component will be provided by the course faculty

Recommended Prep:

Intended primarily for graduate students familiar with basic molecular biology or with strong biology/chemistry background.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biolog Chem & Molecular Pharm 213 Section: 0001

Behavioral Pharmacology (141859)

Brian Kangas

2025 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

This course serves as an introduction to the behavioral pharmacology of psychoactive drugs (e.g., stimulants, cannabinoids, opioids, psychedelics, anxiolytics, antipsychotics). It is organized in a seminar format with emphasis on behavioral methodology (i.e., model and assay development) and pharmacological analysis (i.e., receptor selectivity and efficacy). Special attention is paid to the behavioral processes involved in tolerance, drug dependence, addiction, and treatment.

Course Notes:

Offered jointly with the Medical School as BP 719.0.

Recommended Prep:

One year of neuroscience, psychology, or biology recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Principles and Practice of Drug Development (114740)

Stan Finkelstein

Peter Sorger

2024 Fall (4 Credits)

Schedule:

W 0300 PM - 0600 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Critical assessment of the major issues and stages of developing a pharmaceutical or biopharmaceutical. Drug discovery, preclinical development, clinical investigation, manufacturing and regulatory issues considered for small and large molecules. Economic considerations of the drug development process.

Course Notes:

Suitable for individuals with a wide variety of backgrounds and interests from biology to engineering, business and medicine (undergraduate, graduates in MBA, MD and PhD programs). Taught by MIT and HMS faculty and by industry experts. Emphasizes a high level of student engagement via weekly news updates and projects involving collaboration across interdisciplinary teams.
Course Website: <https://www.principlespracticedrugdevelopment.org/>

Class Notes:

Location: MIT Building 4, Room 237

Recommended Prep:

No particular course is required. Knowledge of basic biology, biomedicine or bioengineering, and familiarity with basic economic principles will be helpful but not necessary for the course.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Cellular and organismal metabolism, with focus on interrelationships between key metabolic pathways and human disease states. Genetic and acquired metabolic diseases and functional consequences interactive lectures and critical reading conferences are integrated with clinical encounters.

Course Notes:

Enrollment is open to all HILS graduate students with adequate preparation in cell biology and biochemistry.

Recommended Prep:

Prerequisites for undergraduate students only. For undergraduates interested in this course, a knowledge of introductory biochemistry, genetics, and cell biology is required (MCB 63 or MCB 60 or LIFESCI50, and MCB 64 or equivalent); plus one year of organic chemistry (Chem 17/27 or 20/30). Please petition the course instructor for an exemption.

This course will discuss principles of drug discovery drug modalities and drug pharmacology. In the first part of the course, fundamental aspects of receptor and enzyme targeting agents, drug mechanism, drug metabolism, pharmacokinetics and pharmacodynamics, small molecules, proteins, and nucleic acid drugs will be described. In the second part of the course, pharmacology of therapeutics that act on the cardiovascular, immunologic, and central nervous systems will be covered. The course will include frontier lectures on antiviral agents, cardiac drugs, and treatments for brain diseases and a journal club on specialized topics in drug discovery. A range of knowledgeable instructors enlisted from the Harvard Medical School faculty and pharmaceutical scientists will participate in teaching this course.

Biophysical and Biochemical Mechanisms of Protein Function focuses on the molecular mechanisms that underlie essential biochemical processes such as signal transduction. Major topics include biochemical thermodynamics and conformational equilibria, protein structure and folding, receptor pharmacology, allostery, and enzymatic mechanisms of signaling. The course includes both content lectures and research frontiers seminars focused on current research in biochemistry with an emphasis on signal transduction in therapeutically relevant pathways.

Recommended Prep:

A foundational biochemistry course is recommended as a prerequisite (we expect students to have a solid understanding of the core concepts in biochemistry and molecular biology, including knowledge of the amino acids and their properties as well as the central dogma).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students

Translational Pharmacology: The Science of Therapeutic Discovery and Development (127474)

David Golan

Catherine Dubreuil

Mark Namchuk

Nuru Stracey

2025 Spring (2 Credits)

Schedule:

MTWRF 0900 AM - 1200 PM

Instructor Permissions: Instructor

Enrollment Cap:

56

This intensive course, held during three weeks in January (13 class days), covers principles of pharmacology and their translation into new drug discovery and development. Students participate in project groups, composed primarily of graduate students, to propose a drug development strategy from target choice through clinical trials. Most sessions include lectures, panel discussions, and/or case studies presented by Harvard faculty and faculty experts from the pharmaceutical and biotechnology industries; several sessions provide scheduled time to work on the group project with expert facilitators from industry. Evaluation is based on written and oral presentations of the group project and on class participation. Enrollment may be limited.

Course Notes:

Attendance at all sessions is mandatory, and students are expected to spend most afternoons preparing for the following day's sessions and working on the group project. Schedule runs outside the J-Term semester dates.

Subject: Neurobiology - Graduate

Neurobiology - Graduate 209 Section: 0001

The Neurobiology of Disease (116455)

Edward Kravitz

Susanna Mierau
Patricia Musolino
Beth Stevens

2025 Spring (4 Credits)

Schedule:

M 0530 PM - 0759 PM
W 0300 PM - 0459 PM

Instructor Permissions: Instructor

Enrollment Cap: 40

This highly rated course covers a major disease or disorder of the nervous system each week, including Alzheimer's disease, Parkinson's disease, stroke, autism spectrum disorder and others. Monday sessions involve patient presentations and "core" lectures describing clinical progression, pathology, and basic science underlying a major disease or disorder. On Wednesdays, students present material from original literature sources, and there is general discussion.

Course Notes:

Given in alternate years. For graduate students, MD and MD/PhD students, and advanced undergraduate students (juniors & seniors only).

Recommended Prep:

Introductory neurobiology, biochemistry, and genetics/molecular biology recommended.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Neurobiology - Graduate 212

Mathematical Tools for Neuroscience (216813)

Eleanor Batty

2024 Fall (4 Credits)

Schedule:

MW 0900 AM - 1030 AM

Instructor Permissions: Instructor

Enrollment Cap: 25

This course aims to equip graduate students with the fundamental quantitative skills necessary for neuroscience research and to serve as a solid foundation for further computational neuroscience classes. The course is aimed at first-, second- or third-year students in the Neuroscience PhD program, and is open to other graduate students in the biosciences. This course will cover the basics of linear algebra, differential equations, probability/statistics, and machine learning (focusing on areas applicable to neuroscience). You will not need any math experience beyond high school calculus. Some amount of coding in Python is necessary for this class. This course will be a flipped classroom course with prerecorded lectures and students working together on problem sets & programming exercises during class time.

Recommended Prep:

There will be some programming exercises in Python so some coding experience will be necessary (email instructor for advice on how to prepare).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Neurobiology - Graduate 215A

The Discipline of Neuroscience (205295)

Richard Born

2024 Fall (4 Credits)

Schedule:

TR 0900 AM - 1159 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of asynchronous instructional materials and synchronous in-class activities, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester, students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course builds upon this foundation to focus on broadly defined "networks of neural function"; as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing an experimental proposal. Part one of a two-part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement. Non-PiN students may enroll in just the fall semester with the instructor's approval. Students must complete the fall semester (NB215A) to enroll in the spring semester (NB215B).

Requirements:

Only students with a concentration in Neurobiology may register for this course. Students not in Neurobiology must petition to join.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

Biological and Artificial Intelligence (213361)

Gabriel Kreiman

2025 Spring (4 Credits)

Schedule:

T 0300 PM - 0500 PM

W 0600 PM - 0715 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others. Lectures will be taught by leading Harvard experts in the field.

Course Notes:

Jointly offered with the Faculty of Arts & Sciences as NEURO 140.

Recommended Prep:

Basic knowledge of multivariate calculus, differential equations, linear algebra, elementary probability theory, basic computer programming skills

Quantitative Methods for Biologists (107877)

Michael Springer

Richard Born

Eleanor Batty

2024 Fall (2 Credits)

Schedule: MWF 1000 AM - 0400 PM
TR 0200 PM - 0359 PM

Instructor Permissions: Instructor

Enrollment Cap: 80

The goal of this camp is to introduce you to programming in the PYTHON environment and to show you the power this provides for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations. Some of you, upon encountering in the previous sentence words like "programming" and "numerical simulations," will feel the cold hand of fear grip your stomach, because you have never done any programming and, in fact, have tried to avoid math as much as possible. If so, YOU ARE PRECISELY THE PERSON WE HAD IN MIND as we were planning the course. We are aiming to help you break through this barrier of darkness and fear into the radiant sunshine of quantitative enlightenment. The true beauty of PYTHON, as we will personally demonstrate, is that it allows people who are not mathematically adept (e.g. some of the instructors of this course) to use powerful numerical methods and visualization tools to gain an understanding of concepts that are very difficult to grasp analytically.

Course Notes:

The camp is primarily designed for those of you with no prior programming experience. If you fit this description, you should definitely plan to take the course. It is critical to be familiar with a scientific programming language with which to improve your quantitative literacy throughout graduate school.

Please put this course on your fall term study card if you wish to receive credit for it. Email Kelsey_Luckenbill@hms.harvard.edu with enquiries.

The Molecular Pathology and Current Therapies for Eye Diseases (109255)

Dong Chen

Petr Baranov

Kin-Sang Cho

Shelley Fried

Daniel Sun

Mengyu Wang

Menglu Yang

2024 Fall (2 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

The eye, as a window to the brain, presents an excellent model system to the study, diagnosis and evaluation of treatment strategies for neurodegenerative disorders in the central nervous system. A surge of progress resulting from studies in the disease mechanisms and the development of new imaging technology have led to a huge step forward in the therapies for diagnosing and treating retinal diseases and preventing blindness. This course will offer students an in-depth examination of current knowledge regarding ocular imaging, diagnosis, molecular pathology, and therapy, with an emphasis on recent breakthroughs and discussion of key literature in the field. The class consists of lectures and group discussions that focus on seminal papers selected from both the basic science and clinical ophthalmology, which will serve as a basis for teaching students basic concepts of ophthalmology and becoming familiar with advanced imaging tools and animal models of retinal diseases. Each session will review the landmark publications on a particular topic or disease. The class will foster discussion on the implications of studies in eye and other disease mechanisms and therapies.

Course Notes:

Offered in alternate years.

Recommended Prep:

Basic understanding for the anatomy of the eye

Instructor Permissions: Instructor

Enrollment Cap: 25

Neuroscientists employ diverse model systems and experimental approaches to study nervous system structure and function. Through a combination of lectures, hands-on activities and paper discussions, this quarter course will introduce students to principles of nervous system organization and will provide a conceptual understanding of the spatial and functional relationships among components of the nervous system. Modern experimental methods and online resources to study neural circuit structure and function across model organisms will also be highlighted.

Course Notes:

The structure of this course also includes a discussion component. Any additional details about this component will be provided by the course faculty.

Joshua Buckholtz

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 325

Synaptic Transmissions and Dendritic Processing (111229)

Wade Regehr

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 325

Synaptic Transmissions and Dendritic Processing (111229)

Wade Regehr

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Neurobiology - Graduate 325L

Genetic Dissection of Inhibitory Modulation in the Central Nervous System (109103)

Uwe Rudolph

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 325L

Genetic Dissection of Inhibitory Modulation in the Central Nervous System (109103)

Uwe Rudolph

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 326

Age-Dependent Mechanisms of Perinatal Brain Injury (119610)

Frances Jensen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 326

Age-Dependent Mechanisms of Perinatal Brain Injury (119610)

Frances Jensen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 326L

Extracellular Matrix/neuron/glia Interactions in Pathophysiology of Schizophrenia & Bipolar Disorder (109104)

Sabina Berretta

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 326L

Extracellular Matrix/neuron/glia Interactions in Pathophysiology of Schizophrenia & Bipolar Disorder (109104)

Sabina Berretta

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 327R

Lab Rotations in Neurosciences (109330)

John Assad

Chinfei Chen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 327R

Lab Rotations in Neurosciences (109330)

John Assad

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 328

Mechanisms of Cell Death in Stroke and Trauma (112849)

Eng Lo

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 328

Mechanisms of Cell Death in Stroke and Trauma (112849)

Eng Lo

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 328DR Section: 0001

Grad. Research - Venkatesh Lab (220879)

Humsa Venkatesh

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 328DR Section: 0001

Grad. Research - Venkatesh Lab (220879)

Humsa Venkatesh

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Neurobiology - Graduate 329

Molecular Mechanisms of Neurodegeneration in Alzheimer's and Parkinsons Diseases (124384)

Dennis Selkoe

2024 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 329

Molecular Mechanisms of Neurodegeneration in Alzheimer's and Parkinsons Diseases (124384)

Dennis Selkoe

2025 Spring (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 329L

The Genetic and Neural Basis of Sleep in Drosophila (109254)

Dragana Rogulja

2024 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 329L

The Genetic and Neural Basis of Sleep in Drosophila (109254)

Dragana Rogulja

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 330

Effects of stress and other experiences on motivated behavior (115975)

William Carlezon

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 330

Effects of stress and other experiences on motivated behavior (115975)

William Carlezon

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 330DR

Graduate Research-Whipple Lab (218506)

Amanda Whipple

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Neurobiology - Graduate 330L

Translational Genomics of Parkinsons Disease: Cause, Cures, Diagnostics (109252)

Clemens Scherzer

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 330L

Translational Genomics of Parkinsons Disease: Cause, Cures, Diagnostics (109252)

Clemens Scherzer

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 331

Neural Differentiation, Regeneration and Stem Cell Regulation in the Brain and Eye (115976)

Dong Chen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 331

Neural Differentiation, Regeneration and Stem Cell Regulation in the Brain and Eye (115976)

Dong Chen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 331DR

Graduate Research – Koehler (219524)

Karl Koehler

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Not Available for Cross Registration

Neurobiology - Graduate 331DR

Graduate Research – Koehler (219524)

Karl Koehler

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 331L

Motivational Influences on Cortical Networks Underlying Attention, Learning and Memory of Sensory Cu (109256)

Mark Andermann

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Neurobiology - Graduate 331L

Motivational Influences on Cortical Networks Underlying Attention, Learning and Memory of Sensory Cu (109256)

Mark Andermann

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 332

Ligand-Gated Ion Channels: Structure and Function (110882)

Jonathan Cohen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 332

Ligand-Gated Ion Channels: Structure and Function (110882)

Jonathan Cohen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 332DR Section: 0001

Graduate Research – Prerau Lab (223055)

Michael Prerau

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 332DR Section: 0001

Graduate Research – Prerau Lab (223055)

Michael Prerau

2024 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: Instructor **Enrollment Cap:** n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 332L

Biological and Computational Underpinnings of Visual Processing (109257)

David Cox

2024 Fall (4 Credits) **Schedule:** TBD

Instructor Permissions: None **Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 332L

Biological and Computational Underpinnings of Visual Processing (109257)

David Cox

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 333

Intercellular Communication (111693)

David Paul

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 333

Intercellular Communication (111693)

David Paul

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 333DR Section: 0001

Graduate Research – Del Marmol Lab (223862)

Josefina del Marmol

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 333DR Section: 0001

Graduate Research – Del Marmol Lab (223862)

Josefina del Marmol

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 333L

Behavioral and synaptic plasticity in neuropsychiatric disorders; mechanisms of axon guidance and sy (109293)

Christopher Cowan

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 333L

Behavioral and synaptic plasticity in neuropsychiatric disorders; mechanisms of axon guidance and sy (109293)

Christopher Cowan

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 334

Hair Cells and Afferent Neurons of the Inner Ear (123141)

Ruth Anne Eatock

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 334

Hair Cells and Afferent Neurons of the Inner Ear (123141)

Ruth Anne Eatock

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 334DR Section: 0001

Graduate Research – Horvitz Lab (224061)

H Robert Horvitz

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Class Notes: Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 334L

Cellular and Molecular Mechanisms of Cortical Circuit Assembly (109369)

Corey Harwell

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 334L

Cellular and Molecular Mechanisms of Cortical Circuit Assembly (109369)

Corey Harwell

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 335

Physiological Function and the Pathogenetic Actions of Genes Implicated in Neurodegenerative Disease (109376)

Mark Albers

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 335

Physiological Function and the Pathogenetic Actions of Genes Implicated in Neurodegenerative Disease (109376)

Mark Albers

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 336

Developmental Cognitive Neuroscience, Focusing Primarily on Memory and Face Processing (121800)

Charles Nelson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 336

Developmental Cognitive Neuroscience, Focusing Primarily on Memory and Face Processing (121800)

Charles Nelson

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 336L

Synapse formation and refinement in the mammalian brain (156926)

Hisashi Umemori

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 336L

Synapse formation and refinement in the mammalian brain (156926)

Hisashi Umemori

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 337

Neurobiology of the Human Circadian Pacemaker (115515)

Charles Czeisler

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 337

Neurobiology of the Human Circadian Pacemaker (115515)

Charles Czeisler

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 337L

Human and primate social decision making, executing functioning and memory (160771)

Ziv Williams

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 337L

Human and primate social decision making, executing functioning and memory (160771)

Ziv Williams

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 338

Neural Circuitry of Primate Visual Cortex (116539)

Richard Born

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 338

Neural Circuitry of Primate Visual Cortex (116539)

Richard Born

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 338L

Molecular Biology, Genetics, & Neural Circuitry of Fear in Animals & Human Fear-Related Disorders (160775)

Kerry Ressler

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 338L

Molecular Biology, Genetics, & Neural Circuitry of Fear in Animals & Human Fear-Related Disorders (160775)

Kerry Ressler

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 339

Synaptic and Neuronal Network Mechanisms of Learned and Innate Fear (119841)

Vadim Bolshakov

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 339

Synaptic and Neuronal Network Mechanisms of Learned and Innate Fear (119841)

Vadim Bolshakov

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 339L

Cell-extracellular matrix interaction in brain development and malformation (203215)

Xianhua Piao

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 30

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 339L

Cell-extracellular matrix interaction in brain development and malformation (203215)

Xianhua Piao

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 341

Cognition and Cognitive Disorders; the Role of Translational Regulation (123142)

Raymond Kelleher

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 341

Cognition and Cognitive Disorders; the Role of Translational Regulation (123142)

Raymond Kelleher

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 342

Neurophysiology of Visual Cortex and LGN (111946)

R. Reid

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 342

Neurophysiology of Visual Cortex and LGN (111946)

R. Reid

2025 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 343

Neuronal Metabolism and Excitability; Molecular Physiology of Ion Channels (111077)

Gary Yellen

2024 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 343

Neuronal Metabolism and Excitability; Molecular Physiology of Ion Channels (111077)

Gary Yellen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 344

Neurobiology and Protein Biochemistry Underlying Parkinson's Disease (107634)

Matthew LaVoie

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 344

Neurobiology and Protein Biochemistry Underlying Parkinson's Disease (107634)

Matthew LaVoie

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course

FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 345

Molecular Basis of Neuron Glia Interactions (114397)

Gabriel Corfas

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 345

Molecular Basis of Neuron Glia Interactions (114397)

Gabriel Corfas

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 346

Visual Processing in Primates (111038)

John Assad

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 346

Visual Processing in Primates (111038)

John Assad

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Neurobiology - Graduate 347

Alzheimer's Disease Research (118956)

Bradley Hyman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 347

Alzheimer's Disease Research (118956)

Bradley Hyman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 347L

Computational cognitive neuroscience of learning and memory (205911)

Samuel Gershman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Neurobiology - Graduate 347L

Computational cognitive neuroscience of learning and memory (205911)

Samuel Gershman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 348

Neural stem cells and cerebrospinal fluid (108355)

Maria Lehtinen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 348

Neural stem cells and cerebrospinal fluid (108355)

Maria Lehtinen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 349

Olfactory and Vomeronasal Systems Molecular and Developmental Neurobiology (115980)

Catherine Dulac

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 349

Olfactory and Vomeronasal Systems Molecular and Developmental Neurobiology (115980)

Catherine Dulac

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 350

Development, degeneration, and circuitry of the vertebrate retina (146731)

Connie Cepko

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 350

Development, degeneration, and circuitry of the vertebrate retina (146731)

Connie Cepko

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 351

Neurogenetics of Disease (112135)

Louis Kunkel

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 351

Neurogenetics of Disease (112135)

Louis Kunkel

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 352L

Neural circuitry of sleep and sleep disorders (203807)

Thomas Scammell

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 352L

Neural circuitry of sleep and sleep disorders (203807)

Thomas Scammell

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Neurobiology - Graduate 353

Physiology, with an Emphasis on Ion Channels, Signal Transduction, and Imaging (134189)

David Clapham

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 353

Physiology, with an Emphasis on Ion Channels, Signal Transduction, and Imaging (134189)

David Clapham

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 354

Structural Biology of Signaling and Transport Through Biological Membranes (123145)

Rachelle Gaudet

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 354

Structural Biology of Signaling and Transport Through Biological Membranes (123145)

Rachelle Gaudet

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 355

A Biophysical Approach to System Function (107746)

Michael Do

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 355

A Biophysical Approach to System Function (107746)

Michael Do

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 356

Ion Channels in Neural Cell Membranes (144968)

David Corey

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 356

Ion Channels in Neural Cell Membranes (144968)

David Corey

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 357

Experience-Dependent Neuronal Circuit Maturation and Plasticity (123610)

Michela Fagiolini

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 357

Experience-Dependent Neuronal Circuit Maturation and Plasticity (123610)

Michela Fagiolini

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 358

Neurogenetics of Human Disease (121701)

Xandra Breakefield

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 358

Neurogenetics of Human Disease (121701)

Xandra Breakefield

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 358L

Genomic analyses of brain cell function and dysfunction (205912)

Evan Macosko

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 358L

Genomic analyses of brain cell function and dysfunction (205912)

Evan Macosko

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 359

Functional and Behavioral Interrogation of Neural Circuits in the Mammalian Olfactory System (126396)

Sandeep Datta

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 359

Functional and Behavioral Interrogation of Neural Circuits in the Mammalian Olfactory System (126396)

Sandeep Datta

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 360

Neural Signal Processing and Mechanisms of General Anesthesia (119842)

Emery Brown

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Neurobiology - Graduate 360

Neural Signal Processing and Mechanisms of General Anesthesia (119842)

Emery Brown

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 361

Immunobiology of the Nervous System and its Tumors (116018)

Lois Lampson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 361

Immunobiology of the Nervous System and its Tumors (116018)

Lois Lampson

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 362

Optical Imaging in Alzheimer's Disease (125535)

Brian Bacskai

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 362

Optical Imaging in Alzheimer's Disease (125535)

Brian Bacskai

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 363

Axonal Development and Reorganization (120337)

Larry Benowitz

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 363

Axonal Development and Reorganization (120337)

Larry Benowitz

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 363L

The genetics, biochemistry and physiology of forebrain inhibition (205895)

Gord Fishell

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Using genetic, physiological and molecular methods to understand how inhibitory interneuron subtypes are generated and subsequently integrated into neural circuits in both normal and pathophysiological conditions.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 363L

The genetics, biochemistry and physiology of forebrain inhibition (205895)

Gord Fishell

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Using genetic, physiological and molecular methods to understand how inhibitory interneuron subtypes are generated and subsequently integrated into neural circuits in both normal and pathophysiological conditions.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Neurobiology - Graduate 364

hypothalamic circuitry controlling sleep and circadian rhythms (131279)

Clifford Saper

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 364

hypothalamic circuitry controlling sleep and circadian rhythms (131279)

Clifford Saper

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 365

Behavioral Pharmacology of Stimulant Drugs and Brain Dopamine Systems (121799)

Barak Caine

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 365

Behavioral Pharmacology of Stimulant Drugs and Brain Dopamine Systems (121799)

Barak Caine

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 367

Neocortical Development and Regeneration (113770)

Jeffrey Macklis

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Neurobiology - Graduate 367

Neocortical Development and Regeneration (113770)

Jeffrey Macklis

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 369L

Statistical neuronal computations underlying complex decisions and behavior under uncertainty (203815)

Jan Drugowitsch

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 369L

Statistical neuronal computations underlying complex decisions and behavior under uncertainty (203815)

Jan Drugowitsch

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 370

Genetic and Molecular Studies of Neurodegenerative Diseases (118843)

Rudolph Tanzi

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 370

Genetic and Molecular Studies of Neurodegenerative Diseases (118843)

Rudolph Tanzi

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 371

Sensory Neuron Development and Sleep Using Genetics and Live Imaging in Zebrafish (123147)

Alexander Schier

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 371

Sensory Neuron Development and Sleep Using Genetics and Live Imaging in Zebrafish (123147)

Alexander Schier

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 372

Neurotransmitter Control of Ion Channels (112805)

Bruce Bean

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 372

Neurotransmitter Control of Ion Channels (112805)

Bruce Bean

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 373

Developmental Studies of the Murine Trigeminal Sensory System (112846)

Qiufu Ma

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 373

Developmental Studies of the Murine Trigeminal Sensory System (112846)

Qiufu Ma

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 374

Molecular Basis of Alzheimer's Disease & Parkinson's Disease (112852)

Jie Shen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 374

Molecular Basis of Alzheimer's Disease & Parkinson's Disease (112852)

Jie Shen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 375

Graduate Research – Murthy Lab (112850)

Venkatesh Murthy

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 375

Graduate Research – Murthy Lab (112850)

Venkatesh Murthy

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Graduate students register for this course when they permanently join a lab. Students should register under the supervising PI.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 375L

Deep phenotyping in mental illness (208292)

Justin Baker

2025 Spring (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 375L

Deep phenotyping in mental illness (208292)

Justin Baker

2024 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 376

Genetics of Neuronal Cell Biology (115462)

Thomas Schwarz

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 376

Genetics of Neuronal Cell Biology (115462)

Thomas Schwarz

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	None

Neurobiology - Graduate 377

Physiological Studies of Phototransduction and Light Adaptation (116020)

Clint Makino

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 377

Physiological Studies of Phototransduction and Light Adaptation (116020)

Clint Makino

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 377L

Structure, function, and development of neuronal networks (205935)

Wei-Chung Lee

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Neurobiology - Graduate 377L

Structure, function, and development of neuronal networks (205935)

Wei-Chung Lee

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 378

Neuronal Mechanisms and Animal Behavior (123148)

Naoshige Uchida

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 378

Neuronal Mechanisms and Animal Behavior (123148)

Naoshige Uchida

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 379

Growth Factor Regulation of Neural Development and Oncogenesis (116022)

Scott Pomeroy

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 379

Growth Factor Regulation of Neural Development and Oncogenesis (116022)

Scott Pomeroy

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 380

Functional Wiring of the Rabbit Retina, Control of Postnatal Development (116024)

Elio Raviola

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 380

Functional Wiring of the Rabbit Retina, Control of Postnatal Development (116024)

Elio Raviola

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 381

Glutamate Transporters, Cell Death, Sleep/Wake Regulation (116025)

Paul Rosenberg

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 381

Glutamate Transporters, Cell Death, Sleep/Wake Regulation (116025)

Paul Rosenberg

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 382

Hypothalamus and Melanin Concentrating Hormone in the Regulation of Energy Homeostasis (117277)

Eleftheria Maratos-Flier

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 382

Hypothalamus and Melanin Concentrating Hormone in the Regulation of Energy Homeostasis (117277)

Eleftheria Maratos-Flier

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 383

Role of the Basal Ganglia in Learning and Motivation (125277)

Emad Eskandar

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 383

Role of the Basal Ganglia in Learning and Motivation (125277)

Emad Eskandar

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 385

Mammalian Gap Junctions, Inhibitory Neuronal Networks, and Corticothalamic Processing (124147)

Carole Landisman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Neurobiology - Graduate 385

Mammalian Gap Junctions, Inhibitory Neuronal Networks, and Corticothalamic Processing (124147)

Carole Landisman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 386

Changes in Sensory Neurons that Contribute to Pain (116029)

Clifford Woolf

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 386

Changes in Sensory Neurons that Contribute to Pain (116029)

Clifford Woolf

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 387

Modulation and Plasticity of Auditory Processing (127406)

Daniel Polley

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 387

Modulation and Plasticity of Auditory Processing (127406)

Daniel Polley

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 388L

Therapeutic and diagnostic stem cells for neurological disorders (203796)

Khalid Shah

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 388L

Therapeutic and diagnostic stem cells for neurological disorders (203796)

Khalid Shah

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Neurobiology - Graduate 389L

Enteric nervous system regulation of gastrointestinal and metabolic homeostasis (213724)

Meenakshi Rao

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 389L

Enteric nervous system regulation of gastrointestinal and metabolic homeostasis (213724)

Meenakshi Rao

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Neurobiology - Graduate 390

Mechanisms of Synapse Regulation (117279)

Bernardo Sabatini

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 390

Mechanisms of Synapse Regulation (117279)

Bernardo Sabatini

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 390L

Mechanisms of spinal plasticity and motor control in humans (213725)

Randy Trumbower

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 390L

Mechanisms of spinal plasticity and motor control in humans (213725)

Randy Trumbower

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 391

The Biology and Experimental Therapeutics of Malignant Brain Tumors (110231)

E. Chiocca

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 391

The Biology and Experimental Therapeutics of Malignant Brain Tumors (110231)

E. Chiocca

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 391L

Sensory Biology and Cell Physiology (214425)

Nicholas Bellono

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 391L

Sensory Biology and Cell Physiology (214425)

Nicholas Bellono

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 392

Synaptic Plasticity in the CNS (117281)

Chinfei Chen

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 392

Synaptic Plasticity in the CNS (117281)

Chinfei Chen

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 392L

Development, Function and Dysfunction of the Somatosensory System (214428)

Lauren Orefice

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 392L

Development, Function and Dysfunction of the Somatosensory System (214428)

Lauren Orefice

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 393

Cranial axon growth and guidance (117282)

Elizabeth Engle

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 393

Cranial axon growth and guidance (117282)

Elizabeth Engle

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 394

Human Memory Processing and Brain State (126787)

Edwin Robertson

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 394

Human Memory Processing and Brain State (126787)

Edwin Robertson

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course

Neurobiology - Graduate 394L

Circadian rhythms and translational control in neurological diseases of the developing brain (215783)

Jonathan Lipton

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 394L

Circadian rhythms and translational control in neurological diseases of the developing brain (215783)

Jonathan Lipton

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 395

Neuron-Glia Interactions During Development & Disease; Synapse Development & Plasticity; Neuro-Immun (125468)

Beth Stevens

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Neurobiology - Graduate 395

Neuron-Glia Interactions During Development & Disease; Synapse Development & Plasticity; Neuro-Immun (125468)

Beth Stevens

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Neurobiology - Graduate 395L

Human neurodevelopmental disorders: genetics and neurobiology (215787)

Tim Yu

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 395L

Human neurodevelopmental disorders: genetics and neurobiology (215787)

Tim Yu

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 396

Critical Period Mechanisms of Experience-Dependent Brain Development (124248)

Takao Hensch

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Neurobiology - Graduate 396

Critical Period Mechanisms of Experience-Dependent Brain Development (124248)

Takao Hensch

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Neurobiology - Graduate 397

Nervous System Construction and Function (118841)

Sam Kunes

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Neurobiology - Graduate 397

Nervous System Construction and Function (118841)

Sam Kunes

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 398

HSV Vectors for Cancer Therapy (118842)

Samuel Rabkin

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Neurobiology - Graduate 399

Neurocircuits Thought to Regulate Metabolism and Behavior (123143)

Bradford Lowell

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Neurobiology - Graduate 399

Neurocircuits Thought to Regulate Metabolism and Behavior (123143)

Bradford Lowell

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)

Jessica Lehoczky

Sean Megason

Olivier Pourquie

2025 Spring (4 Credits)

Schedule: MW 0200 PM - 0400 PM

Instructor Permissions: Instructor

Enrollment Cap: 16

This class is evenly divided between lectures and conference sessions which cover the principals that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional

specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signaling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, skeletal patterning and development, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, the goals of this course are for students to both learn about the molecular tool-kit that evolution has endowed to vertebrates (and other multicellular animals) AND to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes:

This course is offered as CELLBIO207 and also as DRB207. Includes lectures and conference sessions in which original literature is discussed in depth. A short research proposal is required in lieu of exams. Offered jointly with the Medical School as CB 710.0

Recommended Prep:

Introductory graduate-level courses in both Cell and Molecular Biology.

Enrollment Cap:

15

This laboratory and lecture-based course is designed to provide a survey of model systems and technical approaches utilized in developmental, stem cell, and regenerative biology. Students will complete a series of in-person mini-rotations with laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and trainees to gain experience with a variety of models, experimental techniques, and research areas. Each day of the course will consist of an overview lecture followed by lab tours, protocol observations or activities, and interactive discussions and/or case study sessions or hands-on laboratory activities and interactive discussions, designed to facilitate student, lab member, and PI interactions. The course will culminate in a social event with the larger DRB community and short, informal student-led (five minutes, five slides) brainstorming sessions inspired by a lab session of their choosing.

Course Notes:

This is an intensive January course. Open to first-year and second-year BBS students. Not repeatable for credit.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Subject: Cell Biology

Cell Biology 201

Principles of Cell Biology (108339)

Susan Shao

2025 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1159 AM

Instructor Permissions: Instructor

Enrollment Cap:

100

CB201 is a graduate level course in which students examine fundamental concepts and methodologies in cell biology with faculty from the field. Through content lectures, methods lectures, student presentations, and discussion sections, students will explore a broad range of topics including: the cytoskeleton, protein folding and quality control, the ubiquitin-proteasome system, autophagy, protein translocation across membranes, vesicular trafficking, organelle biology, chromosome organization, epigenetics, cell cycle regulation, and signal transduction.

By the end of this course, students should be able to:

- Evaluate primary scientific literature from a broad range of topics in cell biology
- Identify current questions in cell biology and the evolving approaches used to address those questions
- Design appropriate experimental approaches to address hypotheses related to cell biology
- Analyze and effectively present experimental datasets produced from modern instrumentation

Course Notes:

Focus on current paradigms and approaches in cell biology. Offered jointly with the Medical School as CB 713.0.

The structure of this course also includes a discussion component. Any additional details about this component will be provided by the course faculty.

Recommended Prep:

Introductory knowledge in biochemistry, genetics, and cell biology.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None

2025 Spring (4 Credits)

Schedule:

MW 0100 PM - 0230 PM

Instructor Permissions: Instructor

Enrollment Cap:

32

This semester long course will explore molecular basis of cancer formation through introduction of a wide range of topics that highlight foundational research and concepts, current major findings, and future directions. You will learn how cancer cells reprogram metabolism to feed their own needs, and that in over 50% of human cancers mutations are present in genes encoding chromatin-associated proteins and protein complexes. To understand the impact of cancer genomes on individual proteins, biochemical complexes, or signaling networks, you'll interrogate the functional proteome, and you'll take a step back to understand how the properties of cellular systems might be perturbed in cancer. Deep dive into cancer cells will reveal that even within the same tumor, cells can display startling differences for many features making intratumor heterogeneity a major obstacle toward understanding and treatment of cancers. You will learn

about small molecule probes and how they offer a unique opportunity to understand the biological rationale for potential cancer therapeutics, how immune cells employ different cellular and molecular mechanisms to eliminate transformed cells, and you will learn about the rapid pace of cancer drug development highlighting results from recent clinical trials that have led to transformative FDA approvals. The topics are organized into eight modules and led by one faculty member. Faculty joining us this Spring are experts in the various fields and will provide you with an integrated perspective on past, current, and future approaches in cancer biology research. Modules consist of three sessions – an introductory lecture that provides an overview of the topic, a keynote lecture that talks about recent discoveries in the field, and, a group discussion that gives you the opportunity to synthesize the knowledge and think critically about the scientific questions in the field, while focusing on building and improving scientific communication skills through the practice of presentation, discussion, and peer evaluation & feedback.

Course Objectives:

- *Understand foundational discoveries that led to major concepts in the field
- *Describe the molecular basis of cancer formation
- *Identify big open questions in the research areas around the course topics
- *Synthesize and implement content knowledge while practicing your presentation skills
- *Practice providing evaluation and feedback to your peers

Course Notes:

Given alternate years with Cell Biology 212. Offered jointly with the Medical School as CB 704.0.

Recommended Prep:

General knowledge of biochemistry, molecular genetics, and cell biology.

Instructor Permissions: Instructor

Enrollment Cap: 25

This course will focus on both the theory and practice of experimental design. The emphasis is on project planning and vetting, individual experimental design, and trouble-shooting. Special focus will be placed on methods to avoid experimental bias, and potential sources of inappropriate interpretation. Also the importance of system validation is especially emphasized.

Course Notes:

Special consent required - preference given to Therapeutics Certificate Program students.

Teaching 100: The Theory and Science of Teaching (107400)

Tari Tan

2024 Fall (2 Credits)

Schedule: M 0200 PM - 0359 PM

Instructor Permissions: Instructor

Enrollment Cap: 40

For many graduate students and medical educators, teaching will be part of their career, whether as mentoring, formal classroom teaching, or teaching in the hospital. In addition, the theory and research evidence accumulating in the disciplines of cognitive psychology, neuroscience, and from STEM classrooms, has turned the question of "How do we best teach science and medicine?" into its own scientific discipline. The Theory and Science of Teaching focuses on understanding why certain teaching methods are effective by examining the scientific research and theoretical frameworks that support these methods. We will read and discuss foundational educational and cognitive psychology texts and primary literature, and then develop course materials that allow us to put these ideas into practice.

Course Notes:

The course has been designed as a companion to Genetics 302qc: Teaching 101, but neither course is a prerequisite of the other.

Recommended Prep:

Make It Stick, by Brown, Roediger and McDaniel is required pre-reading and should be completed before the first day of class on September 18th/20th. A required asynchronous 'module 0' will be

released on Canvas on September 6th.

John Flanagan

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Cell Biology 307

Cell-Cell Signaling in Neural Development and Regeneration (111101)

John Flanagan

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 310

Mechanisms of Vertebrate Hedgehog Signaling (121563)

Adrian Salic

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
FAS Divisional Distribution	None

Cell Biology 310

Mechanisms of Vertebrate Hedgehog Signaling (121563)

Adrian Salic

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Cell Biology 310L

Mitochondrial redox control over pathophysiology (215789)

Edward Chouchani

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt

Cell Biology 310L

Mitochondrial redox control over pathophysiology (215789)

Edward Chouchani

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None

Cell Biology 311

Cardiovascular Signal Transduction (117256)

Thomas Michel

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 311

Cardiovascular Signal Transduction (117256)

Thomas Michel

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Cell Biology 312

Molecular Mechanisms of Transcriptional Control (117257)

Anders Naar

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 312

Molecular Mechanisms of Transcriptional Control (117257)

Anders Naar

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Cell Biology 313

Systems Biology of Mammalian Signal Transduction (126366)

Peter Sorger

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 313

Systems Biology of Mammalian Signal Transduction (126366)

Peter Sorger

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Cell Biology 314

Molecular Biology of Extracellular Matrix (115128)

Yingzi Yang

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
No FAINFO	300 or 3000 level class, do not generate FAINFO

Cell Biology 314

Molecular Biology of Extracellular Matrix (115128)

Yingzi Yang

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 314QC Section: 0001

Science of Mindfulness: A research based approach to understanding and practicing mindfulness (219915)

Neena Haider

2025 Spring (2 Credits)

Schedule: WF 1130 AM - 1259 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course delves into the science behind mindfulness using a research- based approach to understand the impact of mindfulness on the mind and body. The course will include a discussion of published work as well as practical applications in a workshop format. Topics include power of breath, positive thinking, and impact of mindfulness on cognitive function. Workshop portions will include guided breath and guided meditation and learning how to focus the mind, and learn observation without judgment.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Cell Biology 316

Mechanism and Function of Intracellular Protein Turnover (107782)

Alfred Goldberg

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Cell Biology 316

Mechanism and Function of Intracellular Protein Turnover (107782)

Alfred Goldberg

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 318

Molecular Biology of Cell Growth Regulation and Transformation (112913)

John Blenis

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO

Cell Biology 318

Molecular Biology of Cell Growth Regulation and Transformation (112913)

John Blenis

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Cell Biology 319

Signaling Pathways in Cancer Cell Biology (109148)

Alex Toker

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation Exempt

Cell Biology 319

Signaling Pathways in Cancer Cell Biology (109148)

Alex Toker

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation Exempt

Cell Biology 321

Neuronal Pathfinding and Synaptogenesis (114269)

David Van Vactor

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
Course Evaluation	Course Evaluation Exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Cell Biology 321

Neuronal Pathfinding and Synaptogenesis (114269)

David Van Vactor

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation Exempt
FAS: Course Level	Graduate Course

Cell Biology 325

Molecular and Cellular Regulators of Cancer Progression (127374)

Sandra McAllister

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
No FAINFO	300 or 3000 level class, do not generate FAINFO
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 325

Molecular and Cellular Regulators of Cancer Progression (127374)

Sandra McAllister

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Cell Biology 326

Signal Transduction During Early Development (111066)

Malcolm Whitman

2024 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 326

Signal Transduction During Early Development (111066)

Malcolm Whitman

2025 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Cell Biology 328

Single-Molecule Biology and Visualization of Cellular Dynamics (139184)

Tomas Kirchhausen

2024 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
No FAINFO	300 or 3000 level class, do not generate FAINFO
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Human Bio & Translational Med

Human Bio & Translational Med 200

Pathology of Human Disease (107843)

Scott Lovitch

2025 Spring (4 Credits)

Schedule:

TR 0900 AM - 1059 AM

R 1100 AM - 1259 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a comprehensive overview of human pathology with emphasis on mechanisms of disease and modern diagnostic technologies. Topics include (1) general mechanisms of disease (inflammation, infection, immune injury, host response to foreign materials, transplantation, genetic disorders and neoplasia), (2) pathology of major organ systems, and (3) review of diagnostic tools from invasive surgical pathology to non-invasive techniques such as diagnostic imaging and molecular pathology. The objectives of this course are achieved through a set of integrated lectures and laboratories, as well as a student-driven term project leading to a formal presentation on a medical, socioeconomic, or technological issue in human pathology.

Course Notes:

Enrollment may be limited.

Recommended Prep:

General biology.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Human Bio & Translational Med 201 Section: 0001

Tumor Microenvironment and Immuno-Oncology: A Systems Biology Approach (143057)

Rakesh Jain

Lance Munn

2024 Fall (4 Credits)

Schedule:

M 0500 PM - 0700 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Provides theoretical background to analyze and synthesize the most up-to-date findings from both laboratory and clinical investigations into solid tumor pathophysiology. Covers different topics centered on the critical role that the tumor microenvironment plays in the growth, invasion, metastasis and treatment of solid tumors. Develops a systems-level, quantitative understanding of angiogenesis, extracellular matrix, metastatic process, delivery of drugs and immune cells, and response to conventional and novel therapies, including immunotherapies. Discussions provide critical comments on the challenges and the future opportunities in research on cancer and in establishment of novel therapeutic approaches and biomarkers to guide treatment.

Course Notes:

Given in alternate years. This course is taught as course in consort with HST.525J/10.548J at the Massachusetts Institute of Technology.

Class Notes:

LOCATION: MIT, TBD

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Human Bio & Translational Med 235

Principles of Human Disease: Physiology and Pathology (109394)

Connie Cepko

2024 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1029 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers the normal physiology and pathophysiology of selected organs, through lectures, readings, tutorials based on clinical cases, and patient presentations. Human biology is emphasized, with some examples also drawn from model organisms. Recent therapeutic approaches, including applications of stem cells, gene therapy, and genome editing will be covered.

Course Notes:

Course enrollment is open to graduate students from any program as well as undergraduates.

Recommended Prep:

Knowledge of introductory biochemistry, molecular biology, and cell biology required (MCB52 and MCB54 or equivalent for undergraduates is recommended).

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Human Bio & Translational Med 301QC

Case Studies in Human Biology and Translational Medicine (127520)

Marc Bonaca

Thomas Michel

2025 Spring (2 Credits)

Schedule:

MTWRF 0900 AM - 1029 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Two-week course that is required of and restricted to first-year LHB students. This course will review models of therapeutic development from epidemiologic observations through clinical development with a focus on lipid lowering therapies and diabetes. Students will be engaged in interactive workshops and will attend lectures led by leading clinical researchers.

Course Notes:

This is an intensive January term course. Restricted to Leder students only. Students will add this course to their cart and complete enrollment during the Spring Add/Drop period in January.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Human Bio & Translational Med 302QC

Imaging and Microscopy Methods in Biology and Medicine (107418)

Lev Perelman

2024 Fall (2 Credits)

Schedule:

R 0300 PM - 0459 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

This quarter course will introduce students to modern imaging modalities used in biology and medicine, with emphasis on modalities most frequently employed in cellular and molecular biology. The course will offer an overview of the basic principles of light and electron microscopy and explain their resolution limits and sources of contrast. We will discuss modality-specific functionally relevant fluorescence molecular probes which can be used for live cell imaging. The course will provide a detailed review and theory of operation of modern advanced light microscopy techniques such as confocal, line-scanning, light sheet, STED, light scattering, multi-photon and superresolution microscopy. We will then discuss Raman and light scattering spectroscopy methods for monitoring induced pluripotent stem cell differentiation, genetic targeting in microscopy and CRISPR-based photoactivatable transcription systems and basic concepts of optogenetics. We will review specific optogenetic actuators and sensors, modern light delivery techniques and various applications from investigating brain functions to cardiac optogenetics. We will also offer an overview of medical imaging techniques, such as ultrasound, X-ray CT, MRI, PET/SPECT, and ultrasound imaging, along with emerging optical imaging and spectroscopy methods. Lectures will be supplemented by visual demonstrations of the microscopy systems and hands-on laboratory work and discussions of the operation principles of those systems.

Additional Course Attributes:
