The Garden (216803)

Claire Chase

Jill Johnson

Karthik Pandian

2020 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The Garden is a transdisciplinary arts collective, co-taught by faculty mentors in music, visual art, and dance, along with resident artists, scholars, and curators. Our contemporary world offers distinct challenges and opportunities for artists as makers, scholars, and local and global citizens. We believe transdisciplinary learning equips students with the critical tools, awareness, and perspectives needed for thinking and action. This course is for students who seek to imagine new alternatives, to push the critical and scholarly boundaries of their creative practice, and to expand their artistic inquiry in a collegial, rigorous, and lively environment. Each faculty mentor works with a cohort of five students, providing regular, sustained one-on-one mentorship to develop their practice. All three faculty, their student cohorts, residents, and guests hold frequent convivial gatherings to share and receive feedback on work, collaborate, improvise and dialogue in the spirit of dynamic exchange.

How to be a Tool: Storytelling Across Disciplines (000027)

Davone Tines

Isaac Winokur

2021 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

How to be a Tool: Storytelling Across Disciplines. Presenting data, advocating policies, and offering personal or historical narratives — is storytelling. Compelling storytelling requires tools. No matter the story, whether it be a personal narrative, a math problem, or political demands, how one tells a story is crucial to move ideas toward action. This course gives you a tool kit to do so.

How to be a Tool is co-taught by visiting lecturer-mentors, Davone Tines and Zack Winokur, who work in music-theater, opera and dance, along with guest performers, thinkers, scholars, and creators. This course is for students interested in these performative fields, especially those in the social sciences and fields outside the humanities, and engages capacious cross-disciplinary exchange. Each student will work on an independent project of their own initiation that pushes the boundaries of critical and scholarly presentation,

performance and messaging. Project development will be bolstered by lively collective conversation, in-class studio time, and sustained one-on-one dialogue with the faculty mentors.

Course Notes:

Enrollment capped at 10 and open to all students; no art or performance experience necessary.

To request enrollment, add the course to your Crimson Cart and submit a brief google form response via the link on the Canvas course website. If the meeting day or time is challenging due to your residing time zone, please contact iaskeu@g.harvard.edu.

An info session will be hosted before the course registration deadline. Students interested in enrolling are encouraged to attend. Please visit the Canvas course website for updated info and Zoom links.

African and African American Studies

Subject: African & African Amer Studies

African & African Amer Studies 11

Introduction to African Studies (123591)

Daniel Agbiboa

2020 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course introduces students to the rich diversity and complexity of Africa, including its historical dynamics, economic developments, social and political practices, and popular cultures. Throughout, we assume that Africa is not a unique isolate but a continent bubbling with internal diversity, historical change, entrepreneurial spirit, and cultural links beyond its shores. Our goal is to train students to think rigorously about Africa from interdisciplinary and transnational perspectives. We also aim to equip students with the analytical tools necessary for recognizing and deconstructing reductionist and stereotyped narratives of Africa. The course is open to all students who are interested in exploring various dimensions of African life, politics, peoples and cultures from the past to the postcolony.

Course Notes:

Required of concentrators in African Studies track.

African & African Amer Studies 20 Section: 1

Introduction to African Languages and Cultures (118883)

John Mugane

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This introduction to African languages and cultures explores how sub-Saharan Africans use language to understand, organize, and transmit (culture, history, etc.) indigenous knowledge to successive generations. Language serves as a road map to comprehending how social, political, and economic institutions and processes develop: from kinship structures and the evolution of political offices to trade relations and the transfer of environmental knowledge. As a Social Engagement course, AAAS 20 will wed scholarly inquiry and academic study to practical experience and personal involvement in the community. Students will be given the opportunity to study Africans, their languages, and their cultures from the ground up, not only through textbooks and data sets but through personal relationships, cultural participation, and inquisitive explorations of local African heritage communities. Throughout the semester you will be asked to employ video production, ethnographic research, creative writing, "social-portraiture," GIS mapping, and linguistic study as you engage with Africans, their languages, and their cultures. By examining linguistic debates and cultural traditions and interrogating their import in the daily lives of Boston-area Africans, we hope to bridge the divide between grand theories and everyday practices, between intellectual debates and the lived experiences of individuals, between the American academy and the African world. Ultimately, this

course aims to place Africans themselves in the center of the academic study of Africa.

Sophomore Tutorial:Pan-African Diasporic Imaginations: History, Concepts, Artistic Expressions (123590)

2021 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course explores the long history of creating pan-African solidarity among peoples of African descent in the Caribbean, North America, Latin America and on the African continent. Beginning with the Haitian Revolution and its lessons for understanding making history of diasporic past we examine the transformation of African identities under slavery, the economics of racial capitalism and then explore the origins of Pan-African thought. We examine the differences between Marcus Garvey's and W.E.B. Du Bois's pan-African visions and the influence of these ideas on anti-colonial struggles in Africa and the Civil Rights and Black Power movements. In the second half of the course we examine artistic expressions in music, theater, and film, first in the 60s and 70s in North American, and then more in more recent works of Afro-futurism and hip hop in the U.S. Brazil, and Nigeria

Course Notes:

The History of African Americans From the Slave Trade to the Civil War (144199)

Vincent Brown

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course surveys African American History from the first migrations of Africans to the Americas during the Transatlantic Slave Trade to the eve of the U.S. Civil War. Atlantic in scope, our studies will consider black US history in the context of broader regional variations, highlighting both the distinctive and the unexceptional features of black society, culture, and politics. Lectures, readings, discussions, and assignments will emphasize several key themes: the indispensability of slavery to the colonial development of the Americas, the entrenchment of race as a mode of categorical belonging and discrimination, the continuity of multivalent struggles for dignity, freedom, and equality, and the shaping force of gender, geography, and imperial warfare in the transformations of the period. Special attention will be paid to the interpretive possibilities of representing this history in the form of data, argumentative prose, storytelling, and works of visual art.

Chocolate, Culture, and the Politics of Food (108879)

Carla Martin

2021 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course will examine the sociohistorical legacy of chocolate, with a delicious emphasis on the eating and appreciation of the so-called "food of the gods." Interdisciplinary course readings will introduce the history of cacao cultivation, the present day state of the global chocolate industry, the diverse cultural constructions surrounding chocolate, and the implications for chocolate's future of scientific study, international politics, alternative trade models, and the food movement. Assignments will address pressing real world questions related to chocolate consumption, social justice, responsible development, honesty and the politics of representation in production and marketing, hierarchies of quality, and myths of purity.

American Democracy (111438)

*Cornel West**Roberto Mangabeira Unger*

2021 Spring (4 Credits)

Schedule:

W 0100 PM - 0300 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Democracy, inequality, and nationalism in America. The white working class and American politics. Class and race. Identities and interests. Conditions for socially inclusive economic growth and for the deepening and dissemination of the knowledge economy. Alternative directions of institutional change, viewed in light of American history. Democratizing the market and deepening democracy. Self-reliance and solidarity. We explore and discuss the past, present, and especially the future of the American experiment among ourselves and with invited guests: thinkers, politicians, social activists, and entrepreneurs.

Readings drawn from classic and contemporary writings about the United States. Extended take-home examination.

People as Infrastructure: The Politics of Urban Infrastructure in Africa (215997)

Daniel Agbibo

2020 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Infrastructures are commonly defined in physical terms or material forms (e.g. roads, buildings, power supplies) and are said to impose productivity on the city and positionality on its inhabitants. In this course, however, we will extend the notion of infrastructure directly to social networks and the evolving process of negotiation between state and nonstate urban actors with power differentials and competing interests. Taking inspiration from AbdouMaliq Simone's notion of "people as infrastructure," this course will examine collective agency, alliances and transnational organizing among urban residents and groups who are economically marginalized and socially excluded from modernizing processes of urban planning and reform in Africa. We will interrogate African cities as networked spaces characterized by fluid and precarious interdependence between formal and informal actors in particular sectors. The course will bring together two central dimensions of infrastructure in urban Africa. First, infrastructural power: how infrastructure constitutes a privileged institutional channel for governance, regulation, and contestation in urban Africa. Second, infrastructural lives: the everyday experience and politics of urban infrastructures in Africa.

A year-long graduate research and reading course exploring classic and contemporary efforts to develop interdisciplinary approaches drawn from philosophy, intellectual history, social and political theory, and socio-cultural criticism to explore central questions and thinkers in the field of African American Studies. With visiting scholars, students will engage recent work in the discipline, including the ethics of the oppressed, the dynamics of white supremacy, the relationship between racism and capitalism, intersectionality, the interpretation of African American intellectuals, and more. The course is for students who have an interest in pursuing independent research in African American Studies informed by these disciplinary approaches and their field-defining debates. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Mobility, Power and Politics (214576)

Daniel Agbibo

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

30

This course incorporates insights from the new mobilities paradigm in studying the linkages between movement, power and politics in the contemporary era. The course will discuss how issues of mobility are central to many lives and many organizations, and how movement intersects with the spatialization and materialization of power, difference and inequality within societies. Students will come to an understanding of how mobility, and control over mobility, both reflects and reinforces power; why mobile subjects are increasingly a risk and at risk; and the impact of the regulation and governance of mobility on conflict, security and development. Students will also benefit from the new light that this course sheds on how

issues of mobility and immobility intersect with security and development in at least five core areas: (1) questions of power and government (2) spaces of regulation and intervention (3) the quandary of freedom and control in a globalized world; (4) infrastructures that enable and constrain movement; and (5) issues of justice and ethics. Confirming the analytical appeal of the mobilities paradigm, this course will serve as a melting pot for a variety of disciplines, including sociology, anthropology, geography, gender studies, social work and social policy, disability and health studies, conflict analysis and resolution, urban studies, political science and international relations. Topics will include mobility and terrorism after 9/11; mobility and mobilization of the urban poor; youth, mobility and being 'stuck'; social mobility; roads, corruption and policing; mobility and illegality; gender and mobility; and mobility as fieldwork.

Black Womens Voices in the #MeToo Era (207805)

Linda Chavers

2021 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

17

When accepting the Oscar for Best Actress in 2015 Patricia Arquette said the following: "The truth is, right under the surface, there are huge issues that are at play that do affect women, and it's time for all the women in America and all the men that love women and all the gay people and all the people of color that we all fought for to fight for us now."

This course examines why such statements are part of a larger and longer tradition of disappearing black women and why they are popular in the cultural zeitgeist. Through extensive reading and tough discussion this class examines the current discourse around sexual harassment and assault from the #MeToo movement through the informed lens of Harriet Jacobs's slave narrative *Incidents in the Life of a Slave Girl*. Both "texts" involve navigating spaces of subjugation and supremacy and yet one voice has remained steadily ignored in mainstream audiences. We will also look at the intersection of race and gender that *Incidents* reveals and trace how these remain intact or not through today.

How Sweet is it to be Loved By You: Black Love and the Emotional Politics of Respect (110293)

Marcyliona Morgan

Jamaica Kincaid

2020 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The word 'love' is almost never used in any portrayal or description of the African American community's daily life in contemporary media and in the social sciences. But love, as a human experience, is central to our understanding of what it means to be a vital member of a culture and society and thus respected, nurtured, etc. This seminar examines the love that difference makes. It is a comprehensive study of the representation of gender, love and sexuality in African American and African Diasporan culture. It introduces students to some of the principal questions of feminist theory, as viewed from the social sciences and humanities including anthropology, psychology, media studies and literature. Love, in all its many forms: familial, erotic, romantic, fraternal, is abundant, sometimes dominant, in black culture in the form of song, film, poetry and rhyme, and literature. This course will review and analyze the 'look of Black love' in the humanities and social sciences and writings on intersubjectivity, family, language, culture and ritual. It will also look at the absence of love within and toward the African American community as well as love's role in movements like Black Lives Matter. We will closely read, watch and listen to some of the many Black artists who have looked deeply at this thing called Love. *How Sweet it Is* explores and analyzes Black Love from disciplinary, social and cultural perspectives including: family, romance, gender, sexuality, racism, and physical and emotional health, institutions and space, place and home.

This reading seminar takes up the question of how and why Hiphop art, culture and politics has taken over and dominated American public, youth, popular culture and African American discourse in general. *I AM HIPHOP* is a vivid exploration into the origins, culture, style, art and enduring influence of hiphop as a uniquely American black cultural art form adapted around the globe. It explores how hiphop language ideology has penetrated the 'arts' and American culture by identifying and reframing life in the 21st century. Readings will be on theoretical, ideological and philosophical arguments embedded in hiphop artistic practices in the U.S. and throughout the world. We will examine hiphop's influence in all genres including the arts, social sciences, business, etc. The course will examine how people throughout the world incorporate hiphop edicts to disseminate public and popular ideologies to represent individuals, neighborhoods, cities and nations.

The Hiphop Cipher: "These are the Breaks" (108837)

Marcyliena Morgan

Patrick Douthit

2020 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The Hiphop Cipher is an in-depth look at hiphop culture and production. It is for students who are familiar with hiphop as a cultural and artistic movement and enterprise and/or have taken courses on hiphop and popular music and culture. The focus of the course will be the year 1995. The course will closely examine a particular issue and topic and includes guest lecturers and master classes on areas or issues in hiphop culture, art, scholarship and performance. Fall Winter 2020 will feature Artist in Residence and Grammy Winning producer 9th Wonder (Patrick Douthit).

These are the Breaks: The connection between vinyl from the 60's, 70's and 80's and birth of what we now know as hip-hop music, is a connection that is known by producers, DJ's and collectors of music, but not to academia. Various political, cultural, and social movements of the 1960's created an environment for the stories of soul, jazz, and funk produced in the 1970's, which in turn created the platform for our most treasured hip-hop albums (Illmatic, The BluePrint, The Chronic, College Dropout, The Minstrel Show). "Diggers" from around the world travel from country to country, from record shop to basement, in search of the original "breaks" used for these albums, in some cases for 10+ years. This course examines the important break beats in hiphop and the cultural, political and social movements and contexts that the beats, songs and production represented.

This course is a historical survey of the centuries-old Christian traditions in Africa. It begins with an outline of the trajectory of Christianity's origins and presence in Africa from its beginning in ancient Mediterranean lands through the early period of European missionaries to the contemporary period. The course provides the ethnography of the old mission churches, indigenous independent African churches, and contemporary evangelical and Pentecostal Charismatic movements. The course explores the role of Christianity in relation to historical, cultural, social, and material realities of the African continent. It examines a broad range of topical issues related to conversion, missionization, and the development and growth of Christian agencies in Africa in relation to the construction of social, theological, and religious identities, as well as Christianity's response to cultural pluralism, nationhood, citizenship, and civil society.

This course focuses on the history and phenomenology of African peoples' religious experiences in the Americas. The historical and social processes that led to the emergence of African diasporic religions in Latin America and the Caribbean will form the core of our reading materials. We will examine the role of myth, ritual, arts, and symbols as well as the social and political processes that explain the evolution of Black Atlantic religious traditions as formed by African indigenous traditions, African Christianity, and African Islam. Using historical, ethnographic, and textual sources, the course will illuminate the lived religious experiences of enslaved Africans as well as new immigrant diaspora communities in South America, the Caribbean, and the USA. We will examine Africana religious parallels and divergences in religious practice and social identity. Guest lecturers will offer their expertise on the various religious processes and expressions of African peoples in the Americas, while contributing to broader conversations about the future of African religions in the diaspora and the sociopolitical challenges we face in today's world, particularly how the devotees of these traditions face forms of racial, ethnic and religious discrimination in their various countries.

Black children's lives matter. Our goal is to understand how black children's lives have mattered over the past two centuries. Toward this end, we ask, what have the diverse lives of African American children been like since the nineteenth century? How have African American children experienced family, education, play, work, and activism? How have they been affected by social structures such as schools and carceral systems? How have they enacted agency and resistance? How have images of and ideas about African American children, as well as individual African American children, been important to political movements including abolition, New Negro politics, the Civil Rights Movement, and #blacklivesmatter? Our study of African American children proceeds chronologically and uses the methodologies of historical and literary analysis.

Sources of Interracial Economic Inequality in the United States (215998)

Jacqueline Rivers

2020 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course examines current and historical developments that have created, multiplied and maintained economic inequality between African Americans and whites in the United States. The oppression of slavery left a legacy of profound social and economic disadvantage among blacks. Though that has been ameliorated over time, a variety of subsequent government policies such as red lining in housing have perpetuated the inequities that plague the black community. In addition, other policies such as the New Deal that have been beneficial have had less impact for blacks because of explicit aspects of how they were designed. The continued vulnerability of black people has also made them less able to withstand economic shocks such as the Great Recession. While middle class blacks have made substantial economic progress, the entrenched nature of the economic interracial gap and its compounding effects pose a challenge for remediating the situation, especially for the black poor.

Literary representations of memory and trauma in African postcolonial and contemporary literature will be the main focus of this course. In order to understand how trauma impacts individuals in their relationship with their physical and spiritual world, and how in a very unique way, characters cope with their traumatic reality, we will be analyzing structural disorder and historical event narratives, including novels, testimony and memoir by Aminata Forna, Tsitsi Dangarembga, Zakes Mda, Tayeb Salih, and Jennifer Makumbi. Our examination of these texts will be supplemented by theory in trauma studies, anthropology, comparative literary studies, religious studies, psychoanalysis, and the various subcategories that include the study of memory and forgiveness, retrospective narrative, testimony and bearing witness, PTSD, mourning, anthropology of war and violence, transgenerational trauma as well as healing and working through trauma.

Social Revolutions in Latin America (110501)

Alejandro de la Fuente

2021 Spring (4 Credits)

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

This course seeks to explain why social revolutions have taken place in Latin America and analyzes their impact on the region. The objective is for students to gain a critical understanding of the origins, development, and impact of revolutionary movements in Latin America during the twentieth century. We will try to identify: (1) the historical factors that led to revolutions in the region (the so-called revolutionary situations); (2) the strategies followed by different movements and how successful they were; (3) the programs and policies instituted by the different revolutionary governments; (4) the social and political forces opposed to those policies, including international forces; and (5) the ability of these revolutionary movements to hold on to power for extended periods of time. The course examines several case studies, which may include Mexico, Cuba, Chile, Nicaragua, the Zapatista uprising in Chiapas, and the so-called "Bolivarian revolution" of Venezuela. Our goal is to identify similarities and differences among these cases.

Social Theory, In and Out of Africa (216012)

Jean Comaroff

2021 Spring (4 Credits)

Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Social Theory, In and Out of Africa examines some of the major conceptual and methodological approaches that have shaped the history of social thought in, from, and about Africa. In so doing, it will address the historical roots, political investments, and philosophical foundations of theory-making as they have taken shape in the crucible of empire, with Africa serving largely as the object of hegemonic Eurocentric knowledge-production. The readings will explore the interplay of scholarly practice and political historical struggle in the unfolding of social theory from colonial to postcolonial times. While "Africa" has long served as foil to European constructions of history, civilization, culture, and society, scholars on the continent have always disrupted these schemes, refuting and rewriting them in globally consequential ways. The course strives to open up a critical, open-ended discussion about the genealogy of disciplinary knowledge in the social sciences, especially as revealed by arguments emerging from the vexed place of Africa, in theory and in practice. Readings cover classic Africanist texts but focus mainly on scholarship emerging from the continent itself, examining a range of key issues – from Marxist and liberationist thought to questions of political economy, colonialism, development, gender, generation, and future-making.

Africa Rising? New African Economies/Cultures and Their Global Implications (108694)

Jean Comaroff

2021 Spring (4 Credits)

Schedule:

M 0945 AM - 1130 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course is taught in conjunction with, and as part of, the African Studies Workshop at Harvard (ASW). It consists of two components: (i) an under/graduate student seminar component, to be held every Monday at 9.45-11.30, at which the class will discuss an original research paper, and (ii) a public session, held every Monday afternoon at 2.00-4.00, at which the author of that paper will present it in person to an audience composed of faculty, students, and Africanists from elsewhere. During the semester, we shall explore Africa's changing place in the world, and the new economies, legalities, socialities, and cultural forms that have arisen there. We shall also examine the claim that the African present is a foreshadowing of processes beginning to occur elsewhere across the globe; that, therefore, it is a productive source of theory and analysis about current conditions world-wide.

9

This workshop offers students an opportunity to envision and formulate research projects that (1) involve a substantial ethnographic component and that (2) are centrally informed by gender and sexuality studies, queer and feminist methodologies, queer of color critique, postcolonial theory, and/or queer theory from the Global South. Students will participate in a weekly seminar where, through intensive writing exercises, they will identify social phenomena of interest and craft conceptual questions and methodological tools to research them. The goal of the course is to help students imagine cutting-edge ethnographic research projects on issues related to, among other things, sexuality, gender, intimacy, love, kinship, and friendship in contexts shaped by the legacies of colonialism, racism, capitalism, and globalization. The workshop will also host a few speakers who will trace back their award-winning books in queer ethnography to their work as doctoral students. The seminar is open primarily to graduate students in the early stages of envisioning and designing doctoral projects in African and African America Studies, Anthropology, Women, Gender, and Sexuality Studies, and related fields. Enrollment is limited to nine students.

Themes in the History of African American Political Thought: Seminar (216013)

Brandon Terry

2021 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar will closely examine influential figures and texts in the history of African-American political thought from slavery to the contemporary era. We will critically evaluate, assess, and critique a range of African American authors and their interlocutors across genres (e.g., philosophy, literature, music, etc.) to better understand and build upon the development of key traditions, themes, and concepts. This year's theme will be the idea of "crime" in black politics and political thought, with special eye toward illuminating contemporary debates around hyperincarceration, public safety, and the political ethics of social movements. Open to graduates and undergraduates.

Subject: Gikuyu

Gikuyu AA

Elementary Gikuyu (120934)

John Mugane

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Gikuyu is a Bantu language spoken by Kenya's most populous ethnic group. The Gikuyu are among Africa's most recognized peoples because of the Mau Mau freedom fighters who were mainly Gikuyu. Students are strongly encouraged to take both parts of the course (AA and AB) within the same academic year. The curriculum builds throughout the year.

Course Notes:

The course is designed primarily for students who have no prior knowledge of Gikuyu; however, students with minimal knowledge of the language may also register for the course. Not open to auditors.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Meets Foreign Lang Req	Gikuyu
Full Year Course	Divisible Course

Subject: Jamaican

Jamaican AB Section: 01

Elementary Jamaican Patois (205844)

John Mugane

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 20

A study of Jamaican Patois the primary native language of Jamaica at the Elementary level (First year part 2). Contact hours supplemented by language digital resources. Emphasis on written expression, reading comprehension, and oral fluency. Students are strongly encouraged to take both parts of the course within the same academic year.

Course Notes:

Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the department to learn more.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Meets Foreign Lang Req	Jamaican Patois
FAS Divisional Distribution	None

Subject: Kimeru

Kimeru AA Section: 01

Elementary Kimeru (217926)

John Mugane

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 10

Anthropology 97Z

Sophomore Tutorial: Anthropology as Social Theory and the Social Theory of Anthropology (143028)

Malavika Reddy

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Anthropology 97z is a course about what social theory is, how to read it and how it relates to the discipline of anthropology.

The course encourages students to think expansively about the sources and boundaries of "theory," guiding them through three approaches to the theorization of social life:

First, we work from early anthropological conceptualizations of society, culture and race to trace the impacts of these concepts on the formation of the discipline and on contemporary life, more broadly;

Second, we consider the insights that a Marxist approach to theory and anthropological analysis can generate;

Third, we think with Audre Lorde's discussion of the 'erotic' to see what aspects of social life it opens up.

The course will tackle the study of these concepts and theories in three ways: by relating them to the philosophical traditions that they engage, by situating them within the political projects in which they operate and by analyzing the anthropological insights they enable. An aim of the class will be to understand and disrupt the roots of the discipline, while articulating the importance of 'anthropology disrupted' to the contemporary world.

Course Notes:

Required of all concentrators. Weekly 2-hour sections to be arranged.

Class Notes: This course will follow the [traditional class model](#).

Anthropology 98A

Junior Tutorial in Anthropology (205494)

Zoe Eddy

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course is focused on preparing students to do anthropological fieldwork and develop their own research projects. Through concrete case studies and practical exercises students will be introduced to different approaches to developing research problems, conducting research, and ethnographic writing. Topics covered will include defining research questions and objects of study, situating projects within scholarly literature, and bringing together research data and analysis in different forms of anthropological writing.

The aim of the course is not an exhaustive overview of research design but to familiarize students with some of the key practices and concerns of anthropological research and writing. The course seeks to guide students in reading anthropological texts, understanding the range of data and its representations, unpacking the analytical moves being made in the text, and thinking through the implications of such presentation.

The course is divided into two main components. The first focuses on a case study of a developing anthropological work by the instructor. Through select readings related to their topic of interest and original research documents (proposals, fieldnotes, media, news reports, photographs, analytical essays, among others) students will learn the process of turning a research question into an anthropological project. The case study is also meant to prepare students for the experience of conducting their own research and serve as an example of how to transform research findings into anthropological writing.

Simultaneously, this course is also a research practicum in which students will apply what they have learned to design their own anthropological projects and share with each other research goals, experiences, and components of their emerging work. Through structured assignments, seminar workshops, and regular individual meetings with their instructor students will produce an original research essay based on their research over the course of the semester.

Course Notes:

Required of all concentrators in Anthropology.

Class Notes:

Meeting time will be determined based on the availability of enrollees.

Anthropology 98B

Junior Tutorial for Thesis Writers in Anthropology (205522)

Zoe Eddy

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

This individual tutorial is for anthropology students intending to write a senior thesis, and is normally undertaken with an advanced graduate student during the second term of junior year. Students will have weekly meetings with the project advisor for the purposes of developing the appropriate background research on theoretical, thematic, regional, and methodological literature relevant to their thesis topic, and fully refining their summer research proposal. The tutorial's final paper will be comprised of a research proposal representing the research undertaken during the semester.

American History Before Columbus (125588)

Matt Liebmann

2020 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

Instructor Permissions: Instructor **Enrollment Cap:** 12

What happened in America before 1492? What were the major turning points in Native American history? Why don't we know more about the ancient history of North America? Anthropology 1080 answers these questions by introducing you to the discipline of North American archaeology. This lecture course will help you to understand how Native American societies developed in the millennia before the European invasion, why American Indian peoples live where they do today, and how their dynamic populations have changed over the course of the past 15,000 years. In the process you'll have the opportunity to examine a truly world-class collection of artifacts from the Peabody Museum, allowing you to hold the remains of American history in your own hands and investigate the past with your own eyes.

Ancient Landscapes (120579)

Jason Ur

2021 Spring (4 Credits) **Schedule:** TR 0730 PM - 0845 PM

Instructor Permissions: None **Enrollment Cap:** n/a

Archaeology has focused traditionally on excavations of settlement sites. However, no settlement existed as an island; ancient peoples moved within a larger environment which constrained their actions while it was simultaneously transformed by them. In addition to the modification of physical spaces, communities also imposed meaning upon them, and were affected to varying degrees by the meanings of landscapes

imposed by their ancestors. This course will investigate the relationship between ancient societies and their landscapes. We will review the ways in which ancient "off-site" activities are preserved in the landscape and how archaeologists identify and document them. We will discuss the exploitation of the landscape for agriculture, pastoralism, and industry (particularly in the context of the earliest complex societies). We will examine the relative roles of anthropogenic and climatic influences on the development of human societies. Throughout, we will consider how ancient communities perceived their landscapes and imbued them with meaning. In the process, we will review and critique a variety of theoretical approaches to landscape.

Anthropology 1178

Amazonian Archaeology (216422)

Sadie Weber

2020 Fall (4 Credits)

Schedule:

MW 0600 PM - 0715 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Amazonia is seen as a pristine wilderness that has remained untouched since the arrival of Europeans. Much of the current narrative on the Amazon focuses on the preservation of natural resources and yet-to-be-discovered species of flora and fauna. While the ecological conservation of this space is undoubtedly crucial, much of this work has excluded the cultural aspects of this region. Recent archaeological research has demonstrated that this landscape was heavily modified by Indigenous peoples prior to the arrival of Europeans. This course aims to upend preconceived notions of the Amazon and to problematize modern conservation and land-use strategies by teaching the deep Indigenous history of the region. We will examine Amazonia as a cultural space with complex societies whose human history stretches back millennia and whose vibrant culture continues to exist today. This course will draw on material ranging from Europeans' accounts of the region, to academic articles, to modern film and literature produced by Indigenous/traditional peoples living in Amazonia today.

Anthropology 1181

Tacos, Tamales, and Tequila: Eating and Drinking in Ancient Mexico (205154)

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Is there such a thing as "authentic" Mexican cuisine? Where do menu items like tacos, burritos, guacamole, and margaritas have their origins? When the Spanish arrived in Mexico just over 500 years ago, they were amazed by the variety of food and drinks they had never seen before--tomatoes of all kinds and colors, chili peppers, spices like chocolate and vanilla, tortillas, tamales, alcoholic drinks made from fermented agave sap, and more. While historical accounts provide an important starting point to understanding what Aztec cuisine was like in the 1500s, archaeology is revealing the diversity of ancient Mexican food, drink, and cultures, across time and space. This course introduces students to Mexican cuisine from an archaeological perspective, and examines how foodways intersect with social phenomena such as status, ethnicity, gender, and religion. Topics include the "Paleo-diet" of early hunter-gatherers; farming and feasting in early villages; how tortillas and other inventions were important to the rise of towns, temples, and urbanism; food and drink in sacrifice and ritual; courtly behavior and regional cuisines; food production, marketplaces, and political economy; the Columbian exchange and the beginnings of modern cuisine. Virtual museum and lab activities will be incorporated into class discussions and assignments, as students gain a deeper understanding of the archaeology of ancient Mexico. Students will be encouraged to contribute their own interests and background to class discussions. Students from any level, from freshmen to graduate students, are welcome.

Osteoarchaeology (113280)

*Christina Warinner**Richard Meadow*

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

25

This course provides an introduction to the analysis of the kinds of skeletal remains that commonly occur in archaeological contexts. Vertebrates - principally mammals, including humans - are considered, and the level of instruction assumes little prior acquaintance with vertebrate skeletons. The course begins with an overview of the animal skeleton and of bone as a structural and biological material. This is followed by formal comparative osteology using modern comparative specimens, proceeding from the head through the axial skeleton to the limbs and extremities. Molecular methods of species identification, namely 'zooarchaeology by mass spectrometry' (ZooMS) using the techniques of collagen protein mass fingerprinting, are introduced and applied through laboratory exercises. Discussion of methods and problems of characterization and interpretation of vertebrate faunal assemblages runs throughout the course. Lectures and discussions deal with aspects of terminology, morphology, function, skeletal

development and variation, and taphonomy, while the labs use skeletal materials to demonstrate major differences in bone morphology. Throughout, emphasis is put on features that are useful for characterizing archaeofaunal assemblages, which are often fragmentary and differentially preserved. Mid-term, each student is provided with a faunal collection from an archaeological site to record, analyze, and write-up by the end of the semester, at which time students will have become attuned to the special nature of archaeofaunal collections and the kinds of expertise that are necessary to analyze them.

Course Notes:

Given in alternate years. Fulfills laboratory course requirement for archaeology graduate students and archaeological science requirement for undergraduate concentrators.

Quests for Wisdom: Religious, Moral and Aesthetic Experiences in the Art of Living in Perilous Times (108865)

Arthur Kleinman
David L. Carrasco
Michael J. Puett
Stephanie Paulsell

2020 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is an experimental course taught from the perspectives of anthropology and religious studies intended to be transformative for students and teachers alike. Our goal is to develop, in collaboration with enrolled students, a pedagogy for fostering students' personal quests for wisdom, through lectures and readings, through extensive conversation, and also through other experiences inside and outside of class, including dramaturgical experiences with film or theater, caregiving, and meditation.

As teachers we are inspired by William James's conception of knowledge in the University as intended for strategies needed to live a life of purpose and significance that also contributes to improving the world. In the words of Albert Camus, "Real generosity toward the future lies in giving all to the present." Together, we will engage with the problems of danger, uncertainty, failure, and suffering that led the founders of the social sciences and humanities to ask fundamental questions about meaning, imagination, aesthetics, social life and subjective experience. These are the same existential questions that bring ordinary people all over the world, and throughout history, to question commonsense reality in the face of catastrophes and the violence of everyday life. The many answers to these questions – wisdom that is found in religious, ethical and aesthetic quests, expressions and traditions - are intended to furnish individuals' art of living with strategies to respond to potential and hope, pain and suffering, to promote healing, and to address concerns about salvation, redemption, or other kinds of moral- emotional transformation.

Together - through discussions, lectures, films, virtual museum visits, readings, and action - we will explore different paths to wisdom, including (1) the youthful quest for truth, beauty and goodness; (2) the affirmation of caregiving for others as the means of applying wisdom to repair and improve the world; (3) suffering and the ordeal of journeying through labyrinths and tests of courage; (4) the discovery of wisdom in teachers and mentors near and far; (5) the process of creative mourning for past losses and shaping new beginnings.

This course will show the usefulness of anthropology, conceptually and methodologically, for understanding water consumption and management in past and contemporary societies, especially those undergoing water stress. Topics include cultural notions and values of water, the hydrology and technologies of water purification and conservation, irrigation and the state, big dams controversies, water as a "right" and water as a "commodity," and local, national and international water management schemes. Case studies are drawn from around the world. Though social anthropology and archaeology are the main disciplines upon which the course draws, it will also engage developmental economics, geography,

political ecology, history, and water sciences such as conservation and engineering.

Something Else: Material Revolutions in Indigenous Activism (217827)

Zoe Eddy

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course is an interdisciplinary exploration of how North American Indigenous communities, particularly women and two-spirit people, navigate activist movements through material culture and media. We will examine Indigenous material culture across various timelines and focus specifically on trajectories of *objects of resistance*. Students will learn how to approach material objects from a historical perspective as well as how to consider these objects in their current cultural context. In addition to scholarly texts, we will use literature, visual and performing arts, popular media, and oral traditions to inform our classroom conversations. Classes will be framed around a material object, often from a museum collection, and a contextualizing piece of alternative media.

Course themes prioritize issues relevant to Indigenous feminist movements and contemporary decolonial practices. These issues include but are not limited to histories of genocide and violence, forced sterilization, residential schools and foster care systems, sovereignty and environmentalism, domestic and/or sexual violence, and the epidemic of Missing and Murdered Indigenous People. While the course contextualizes and details these issues, curricular emphasis is placed on resistance, healing, and community movements within their cultural contexts.

While this course includes all genders, primary emphasis will be placed on women and two-spirit people. Additionally, while this course focuses on Indigenous movements, students are welcome and encouraged to focus on parallel movements relevant to their own research and interests.

Due to course themes, participants are asked to engage in respectful and thoughtful conversation. Please come to class ready to make space for a diversity of perspectives and experiences. Finally, this course contains themes of sexual and gender violence, mental health, disease and death, colonial violence, and racism; while content warnings

will be issued periodically, students are encouraged to talk to the professor if they have specific questions about course content.

Class Notes: This course will follow the [traditional class model](#).

Engaged Anthropology: From the Local to the Global (215944)

Andrea Wright

2021 Spring (4 Credits)

Schedule:

R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

What is engaged anthropology? What responsibility do anthropologists have to the communities with which they work? What methodologies do anthropologists use to both examine and strengthen the interplay between theory and practice? Can and should anthropologists engage in research that is community driven, politically conscious, and socially concerned? Now, more than ever, it is imperative that we connect the work we are doing inside the classroom with the work being done in our local and global communities, but this work is not apolitical or individual and we must analyze the inherent inequalities and social dimensions of what it means to conduct engaged scholarship. By employing a hands-on approach to engaged anthropology, this course will explore these questions and more. We will begin the semester by learning the theoretical and methodological underpinnings of anthropology as a discipline and engaged anthropology as an intervention. Readings will focus on ethnographic, scholarly, and public-facing works that illustrate how culture, social relations, and systems of power shape the experiences, roles, practices, and interactions of individuals and their communities as they strive to establish and maintain collaborative relationships in pursuit of a more just world. The course will culminate in a community-based project on a critical topic chosen by the student and supervised by a community organization.

Anthropology 1824

Race and Genetics: American Biopolitics (213467)

Anna Jabloner

2020 Fall (4 Credits)

Schedule:

W 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar examines the increasingly convoluted relationship between genetics/genomics and race in the United States. In this contemporary moment, geneticists are debating definitions or "locations" of race on the human genome. Some draw on older racial classifications, others claim that the complexities of human ancestry cannot be captured by race. In this course, we will read social scientific studies of race categories in genetics and genomics, as well as scholarship on the meanings of race as identity category in American society. Rather than define what race really is or pass judgments on biology, our goal will be to understand a) the historically and culturally specific relationship between race and genetics, and b) the political stakes and charged conditions and implications of the current entanglements of genomic science and race categories in American society.

Course Notes:

Advanced undergraduate students

Class Notes:

Possible time options considered:

WEDNESDAY

12:00 PM 2:45 PM

12:45 PM 2:45 PM

3:00 PM 5:45 PM

Anthropology 1826

Epidemics, Pandemics, and Syndemics: Experiments in Medical Anthropology (160441)

Arthur Kleinman

2021 Spring (4 Credits)

Schedule:

T 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

As the COVID-19 pandemic continues to unfold, this seminar brings together a diverse array of ethnographies, alongside selected literary, cinematographic, and historical perspectives, to examine the contributions of medical anthropology to understanding and addressing epidemics, pandemics, and syndemics across the globe. Centered on a close, critical reading of each week's monographs, the seminar will cultivate direct conversation with a number of the assigned authors and other experts who will visit our virtual classroom to discuss their work. Final projects in the seminar will foster collaboration, creativity, and the development of students' individual research interests.

Course Notes:

Open to advanced undergraduates with some background in social sciences or humanities (regardless of concentration), and to graduate and professional students. Because of the extent of the readings and the intensity of the analysis, the course will be limited to 30 students.

Class Notes:

This course will follow the [traditional class model](#).

Audio in Multimodal Practice (215955)

Ernst Karel

2021 Spring (4 Credits)

Schedule:

WF 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course presents an opportunity for students engaged in media anthropology, critical media practice, art, or other audiovisual projects to focus primarily on the sonic aspects of their experiments in nonfiction, and to gain experience in working with audio in conjunction with other media. We will begin by examining the rubric of "multimodality" which has increasingly been taken up in the context of anthropology, and its implications or possibilities for approaches to sensory ethnography. Projects will be geared towards materials at hand or within reach given the current situation, and will also include opportunities for collaboration with fellow students. Through readings and listening sessions we will also listen beyond the academy to experiments in other domains, including sound art, ethnographic film, and other nonfiction media practices. In conversation we may problematize, perhaps even undermine, and reformulate ideas and practices which combine audio with moving image or other media. Aesthetics and ethics, theory and technique, concept and practice are interwoven at every level in multimodal work, and so this course will combine technical workshops with working through conceptual and theoretical motivations and implications of the work throughout the semester. Rather than taking up conventions or formulae, the course will provide a space for experimentation, to reconsider possibilities in an expanded sense of nonfiction for relationships between audio and image, text, or other media.

Anthropology 1883

Where Science Meets Society: Introduction to STS (213469)

Anna Jabloner

2021 Spring (4 Credits)

Schedule:

W 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

The German word for science literally means "knowledge made." In line with this meaning, STS approaches science as practice. The interdisciplinary field asks empirically and methodologically how knowledge is made, how truths become truths, and how matters come to matter and to be matters of fact. This course serves as basic introduction to STS, highlighting key political interventions, theoretical contributions, and the field's recent ascent into a burgeoning academic inter-discipline.

Anthropology 1906

Care in Critical Times (216164)

Andrea Wright

2020 Fall (4 Credits)

Schedule: R 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

What is care? How can and do communities mobilize care as a social intervention, political act, and tool for building intimacy, healing, and hope? Now, more than ever, it is imperative that we care for ourselves and our communities, but caring is not an apolitical or individual act and we must analyze the inherent inequalities and social dimensions of what it means to give and receive care. Employing a feminist mode of inquiry and an engaged anthropology approach, this course requires students to not only ask how they might engage in caring acts with their own communities, but to complete a locally based community project that brings care, in all its multifariousness, to the fore. Readings will focus on ethnographic, scholarly, and public-facing works that illustrate how culture, social relations, and systems of power shape the experiences, roles, practices, and interactions of individuals and their communities in the exchange of care.

Ethics in Archaeology (216423)

Sadie Weber

2020 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

Archaeology raises profound ethical issues due to its elitist and colonialist roots. As the field reckons with its past, new standards for practice are brought forth through trial and error. Through case studies and interviews with guest speakers, this course will explore ethical issues within archaeology and the accountability of its practitioners to descendant communities, students, and the general public. We will engage with literature surrounding museums, heritage ownership, NAGPRA, new technologies, and ancient DNA. The final portion of the course will focus on archaeology in 2020. Where can and does archaeology fit in a world fighting a pandemic? How can archaeology meaningfully contribute to discourses of increasing equity for all as the #BlackLivesMatter and #LandBack movements gain further traction in the United States today?

History and Theory of Social Anthropology: Proseminar II (144623)

George Paul Meiu

2021 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

12

The second semester of the graduate proseminar explores the political economy of anthropological knowledge production. It examines anthropology's relation to alterity and sociality in different historical contexts, in the colony and in the metropole, in the socialist East and the capitalist West, at the center and at the periphery. Anthropology has long been seen as a quintessentially "Western discourse" problematically aligned with the ideologies of power. Rather than approach the discipline as a unified whole, however, this seminar revisits key moments, figures, and events that demonstrate how important anthropological concepts emerged as expressions of—and reflections upon—complex historical conjunctures. Various attempts to conceptualize society, culture, race, hegemony, value, commodity fetishism, the state, ontology, and alterity have resonated with, but also beyond, their immediate contexts. Informed by a desire to de-center "the canon" (without losing sight, that is, of the effects of its normative centrality) or to decolonize the discipline, we pursue a set of theoretical and ethnographic detours through and around key anthropological moments and concepts, all along seeking to understand how idioms, objects, and events of theoretical and ethnographic attachment shape and are shaped by historical context. Thus, students are encouraged to think anthropologically about anthropology, its concepts, practices, potentialities, and futures. This presupposes not only reading texts closely but also identifying how the assigned readings resonate with one another; what potentialities they have for understanding the present and anticipating the future; and how such potentialities are to be activated, pursued, actualized.

Feminism and Anthropology (213468)

Anna Jabloner

2021 Spring (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course considers the relationship between feminism (as activist realm, as theoretical field, in its institutionalized form as gender studies) and anthropology. We will begin with early ethnographic writing by women and about women, and analyze some of the interventions feminists hope to make in anthropology. We will then examine the relationship between feminism and anthropology through two topics: kinship and politics. Our course will consider how feminist anthropologists have connected the study of kinship, culture and nature, and carved out a place for the anthropological study of gender relations. In our study of kinship, the politics of reproduction and of labor will be important issues, such as the question of who gets to be related to whom, and whose work counts as what. In our study of politics, we will look at specific feminist statements and consider their impact on, and relationship with, the field of anthropology. Finally, our course will investigate more recent work on nature and biology, as well as (queer) gender and sexuality, in order to speculate on the futures and potentials of feminist anthropologies.

Anthropology 2679

Kings and Criminals: Figurations of Sovereignty (215947)

Malavika Reddy

2020 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course considers how anthropology has understood sovereignty, as theoretical object and political process. What is at stake in asking about how authority is founded and sustained? How have anthropologists posed these questions and, in so doing, related their findings both a) to philosophical inquiries into the ontology of politics and b) to colonial and imperial projects? A central concern of the course is how

sovereignty is embodied, hence a focus on figuration. Close attention will be paid to the ways in which anthropologists have grappled with the material worlds of sovereignty – crowns, ritual, flesh and so on – in part to enable students to construct a methodological toolkit to apprehend and analyze sovereign forms.

Anthropology 2695

Landscape Fieldwork: People, Politics, Practices (107371)

Gareth Doherty

2021 Spring (4 Credits)

Schedule:

W 0600 PM - 0800 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Course description: This lecture course explores landscape architecture's ethical and political power to shape the world. It will provide students with fieldwork skills to understand human interactions with the land and to apply this knowledge to design practice and theory. We will see how a sociocultural focus ultimately leads to more successful design practice, processes, and projects. A central premise is that experiential knowledge—gained from the embodied engagement of landscape fieldwork—can help to revise how we understand and use Western canons of landscape knowledge and offer us new possibilities for the design imagination.

Structure of the course: The course is structured in five parts— 1) Flat Fieldwork; 2) Experiential

Knowledge; 3) Walking and Talking; 4) Collective Endeavour; and 5) Operational Fields. Each of the five sections is framed with a landscape project that outlines a particular set of fieldwork challenges.. Cases include smaller-scale public spaces, border landscapes, sacred groves, archipelagos, and regions. We will concentrate mostly in the postcolonial and Islamic worlds in the Arabian Peninsula, the Caribbean, Brazil and West Africa, as well as Western Europe. We will unpack these case studies using theory and formulate new epistemological understandings of landscape. In doing so, we will apply the descriptive, participatory, and reflective aspects of ethnography to design and the imaginative, projective, and prescriptive capacities of design to ethnography. By cultivating the common ethnographic ground between landscape architecture and anthropology, this course opens up new possibilities for understanding the present and imaging the future.

In addition, the course will be punctuated with discussion on required readings, fieldwork assignments, and mostly asynchronous interviews with fieldworkers. These weekly interviews with practicing landscape architects, architects, and academics will help to reveal diverse landscape fieldwork methods, and in the process help conceptualize landscape fieldwork. For the list of interviewees see the course syllabus on Canvas.

Course Notes:

Offered jointly with the Graduate School of Design as GSD 3336.

Class Notes:

Structure of the sessions: Classes will alternate between asynchronous, pre-recorded lectures posted on Canvas, and synchronous lectures and class discussions on Wednesdays, 6--7:30 pm, ET. All required readings, and recordings, will be available on Canvas: <https://canvas.harvard.edu/courses/86656>

Evaluation: Final grades are based on participation, completion of weekly response papers, and three assignments including a remote fieldwork project. Recognizing the limitations imposed by COVID-19, the fieldwork assignment will be completed remotely. Working collaboratively, the final design proposal will focus on the Osun Sacred Grove and a nearby site in Osun State, Nigeria using remote fieldwork techniques presented in class. A brief final project will be based on the collective fieldwork.

Learning outcomes: This course provides students with training in ethnographic fieldwork methods that can be applied in several academic and professional projects and will prepare students to conduct landscape fieldwork, either alone or collectively.

There are no prerequisites. Undergraduates as well as masters and doctoral students are welcome to enroll. The course has no enrollment limit. Cross-listed between the Department of Landscape Architecture and the Department of Anthropology, a version of this course was previously offered as "Design Anthropology: Objects, Landscapes, Cities."

Anthropology 2710

Event, Time, Memory (116071)

Steven C. Caton

2021 Spring (4 Credits)

Schedule: T 0600 PM - 0845 PM**Instructor Permissions:** None**Enrollment Cap:** n/a

This course examines the way anthropology has looked at time theoretically and ethnographically. It begins with a comparison of the way different cultures have "classified" time and time reckoning. This is then followed by the anthropology of the event as started by Marshall Sahlins' and his work on Captain Cook's arrival in the Pacific, and host of other analyses of the "event" that came after it (drawing inspiration from historiography). The third framework is the study of "memory," particularly the idea of collective memory, as it bears on both anthropological and historical analysis. The fourth framework has to do with different formulations of "temporalities" that infuse our experiences of "everyday" life. Besides anthropological

readings, the course will draw from historiography and philosophy to inform what we mean by event, time, and memory.

Course Notes:

No prior knowledge of anthropology is required. Graduates and undergraduates are welcome

Sonic Ethnography (108976)

Ernst Karel

2021 Spring (4 Credits)

Schedule:

MW 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This is a practice-based course in which students record, edit, and produce anthropologically informed audio works. Students will select a local 'site' where they can safely spend time throughout semester, and where the basic activity of research is stereo audio recording. Given our current spatial dispersion, this semester the focus will be on composing specifically for headphones. Over the course of the semester, listening sessions will provide a broad context of contemporary work using location recordings, and readings will situate the practice in relation to adjacent currents. In their projects, students will experiment with technical and conceptual strategies of recording and composition as they engage with questions of ethnographic representation through the medium of audio.

Class Notes:

This course will follow the [traditional class model](#).

Schedule subject to be revised based on a discussion with the enrolled students in the first week of classes.

Recommended Prep:

Experience in media production helpful but not required.

Byron Good

Mary Jo Good

Michael Fischer

2020 Fall (4 Credits)

Schedule:

T 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course will engage three major themes. First, it will review issues related to the complex relationships between anthropology and colonialism(s) and their after lives in the postcolonial settings in which anthropologists work. While it is not a course focused narrowly on anthropology and colonialism, it takes up issues of anthropology's relations with colonialism, colonial legacies in places anthropologists work, decolonizing and newer decolonial methodologies. Second, the course will take up issues of 'postcolonial disorders' and roles of engaged anthropologists in such settings. These will include a special focus on mental health problems and the development of mental health responses in American Indian and other settler colonial communities, as well as in post-conflict settings. Special attention will be given to debates about the nature of (or approaches to) cultural variation in ideas of personhood, expression of emotion, mental health problems ('trauma,' historical trauma, PTSD), and the relation of cultural distinctive interventions to psychological and medical components of mental health services. Third, the course will explore issues of haunting and hauntology, along with related issues of silencing and memory in postcolonial and post-trauma settings. We will engage discussions of the haunting qualities of historical violence, including colonial violence, and anthropologists' use of theories of hauntology. Featured throughout will be perspectives and voices on decolonization from Indigenous peoples themselves (including both activists and scholars), and discussion of how these can be engaged in research, writing, and collaborations in developing mental health programs. Special attention will be given to work in American Indian communities, Southeast Asia, and the Middle East, where the seminar leaders have worked, but these will be linked to studies in other regions where students may work and where there are robust literatures.

Anthropology 3070

Professionalization in Archaeology (120488)

Christina Warinner

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

All good research begins with a strong foundation. This course is aimed at providing you with the foundational knowledge and basic tools you need to succeed as a professional archaeologist. Aided in part by guest speakers from within and beyond Harvard, this course emphasizes collaborative research, presentation, publication, grant proposal writing, conflict resolution, and other skills to help you complete your PhD and to be competitive on the job market afterwards, and to navigate the complex intellectual, social, and personal demands of academia.

Course Notes:

Anthropology 2070 is commonly taken before Anthropology 3070, but is not a prerequisite. Required of students in the Archaeology Program of Anthropology; open to other graduate students and advanced undergraduates with permission of instructor.

Class Notes:

This course will follow the [traditional class model](#).

Requirements: Course open to Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Local offset from Cambridge MA	+7
All: Cross Reg Availability	Available for Harvard Cross Registration

Anthropology 3636

Pedagogy in Anthropology (214587)

Ajantha Subramanian

Matt Liebmann

2021 Spring (2 Credits)

Schedule: M 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course has two aims: 1) to provide graduate students with the necessary training to be effective Teaching Fellows at Harvard, and 2) to give you the tools to develop your own approach to critical pedagogy in the field of Anthropology. Required for graduate students in the Spring of their second year. Classes will also be advertised to all Anthropology graduate students as optional Pedagogy Workshops for professional development. While discussions will be tailored to the unique challenges of teaching in Anthropology (across Archaeology and Social Anthropology), students will also be prepared to TF outside of Anthropology. Workshop-style classes are interspersed with formal office hours throughout the semester. Office hours are designed for one-on-one or small-group consultation with the Pedagogy Fellow in conjunction with course requirements.

Class Notes: The meeting time will be determined based on the availability of enrollees.

Requirements: Course open to Graduate Students Only

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	+7
Local offset from Cambridge MA	+9:45
Local offset from Cambridge MA	+8 +9
FAS: Course Level	Graduate Course
Local offset from Cambridge MA	+10 +11
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Computation

Subject: Applied Computation

Applied Computation 207

Systems Development for Computational Science (128105)

David Sondak

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to fit tools and approaches to the problem being solved.

Class Notes:

Students who previously took CS207 are not eligible to enroll in CS107 or AC207.

Recommended Prep:

Students are expected to have basic programming experience (Computer Science 50).

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Computation 209A

Data Science 1: Introduction to Data Science (109898)

Pavlos Protopapas

Kevin A. Rader

Christopher Tanner

2020 Fall (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part one of a two part series.

Course Notes:

Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements:

Not to be taken in addition to Computer Science 109, or Computer Science 109A, or Statistics 121, or Statistics 121A.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
Full Year Course	Divisible Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Computation 209B

Data Science 2: Advanced Topics in Data Science (203547)

Pavlos Protopapas

Mark Glickman

Christopher Tanner

2021 Spring (4 Credits)

Schedule:

MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two part series.

Course Notes:

Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.

Recommended Prep:

CS 109a, AC 209a, or Stat 121a required.

Requirements:

Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking APCOMP 209B) AND (Cannot take APCOMP 209B, if already taken APCOMP 209 OR CS 109 OR CS 109B OR STAT 121 OR STAT 121B)

Applied Computation 221

Critical Thinking in Data Science (207093)

Michael Smith

2021 Spring (4 Credits)

Schedule:

TR 0730 AM - 0845 AM

Instructor Permissions: Instructor

Enrollment Cap:

75

This course examines the wide-ranging impact data science has on the world and how to think critically about issues of fairness, privacy, ethics, and bias while building algorithms and predictive models that get deployed in the form of products, policy and scientific research. Topics will include algorithmic accountability and discriminatory algorithms, black box algorithms, data privacy and security, ethical frameworks; and experimental and product design. We will work through case studies in a variety of contexts including media, tech and sharing economy platforms; medicine and public health; data science for social good, and politics. We will look at the underlying machine learning algorithms, statistical models, code and data. Threads of history, philosophy, business models and strategy; and regulatory and policy issues will be woven throughout the course.

Course Notes:

This does not count as a technical or disciplinary course for SEAS PhD students, nor for SEAS masters-degree students outside of CSE and Data Science.

Recommended Prep:

CS 109A, Introduction to Data Science or equivalent by instructor approval.

Additional Course Attributes:

Applied Computation 275

Computational Design of Materials (128103)

Boris Kozinsky

2021 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will teach theoretical background and practical applications of modern computational methods used to understand and design properties of advanced functional materials. Topics will include classical potentials and quantum first-principles energy models, density functional theory methods, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties, and machine learning approaches. Examples will be based on rational design of industrially relevant materials for energy conversion and storage, electronic and magnetic devices, and nanotechnology.

Course Notes:

Applied Computation 275 is also offered as Applied Physics 275. Students may not take both for credit.

Recommended Prep:

Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.

Additional Course Attributes:

Applied Computation 295

Topics in Applied Computation: Advanced Practical Data Science (215121)

Pavlos Protopapas

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course we explore advanced practical data science practices. The course will be divided into three major topics:

- 1) How to scale a model from a prototype (often in jupyter notebooks) to the cloud. In this module, we cover virtual environments, containers, and virtual machines before learning about microservices and Kubernetes. Along the way, students will be exposed to Dask.
- 2) How to use existing models for transfer learning. Transfer learning is a machine learning method where a model developed for a task is reused as the starting point for a model on a second task. It is a popular approach in deep learning where pre-trained models are used as the starting point on computer vision and natural language processing tasks. This can be very important, given the vast compute and time resources required to develop neural network models on these problems and given the huge jumps in skill that these models can provide to related problems. In this part of the course we will examine various pre-existing models and techniques in transfer learning.
- 3) In the third part we will be introducing a number of intuitive visualization tools for investigating properties and diagnosing issues of models. We will be demonstrating a number of visualization tools ranging from the well established (like saliency maps) to recent ones that have appeared in <https://distill.pub>.

Recommended Prep:

AC209A, AC209B

Additional Course Attributes:

Computational Science and Engineering Capstone Project (156202)

Christopher Tanner

2021 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The CSE capstone course is intended to provide students with an opportunity to work in groups of 3-4 on a real-world project. Students will develop novel ideas while applying and enhancing skills they have acquired from their core courses and electives. By requiring students to complete a substantial and challenging collaborative project, the capstone course will prepare students for the professional world and ensure that they are trained to conduct research. There will be no additional homework. There will be several mini-lectures, focusing on supplemental skills such as technical writing, public speaking, reading research papers, using version control software, identifying biases, etc. Since the projects concern real-world projects, datasets will likely be messy, and there is a focus on effectively communicating your progress to both the staff and partner organization.

Interdisciplinary Seminar in Applied Computation (109339)

Daniel Weinstock

2020 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course, centered on the Institute for Applied Computation Science (IACS) seminar series, will provide broad exposure to cutting-edge topics, applications, and unifying concepts in Computational Science & Engineering. Students will read, present and discuss journal articles related to IACS talks, attend the seminars and meet with visiting speakers. Possible topics to be covered include scientific visualization, computational approaches to disease, mathematical neuroscience, computational archeology, and computational finance.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is a systematic introduction to a computing environment (python with jupyter notebooks) suited for applications to science and engineering. It consists of three Modules: 1. Basics: essential elements of computing: types of variables (integer, floating, logical), lists, arrays, basic operations (for, while loops, if statement), definition of functions, file handling and plotting. 2. Elementary: numerical differentiation, root finding, series expansions, numerical integration, fitting of curves and error analysis, plotting and simulating in higher dimensions (contours). 3. Advanced: solving simple first and second-order ordinary differential equations, solving partial differential equations, use of random numbers for sampling and simulations, such as Monte Carlo integration and modeling realistic problems, like the spread of the COVID-19 pandemic. The course work consists of attending lectures and labs, weekly homework assignments, a mid-term project and a final project; all work is developed in small groups, but assignments must be written by students individually.

Class Notes:

One lab section/week, Fri. (three options, 75 min. / times to be determined)

Recommended Prep:

AP Calculus BC in high school and/or co-enrollment in Math 1b or higher; students who do not meet these requirements in their first-year are welcome to take the course as sophomores. No programming background is required. CS50 is independent of this course; students could take CS50 before or after this course – there is no preference.

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
FAS Divisional Distribution	None

Applied Mathematics 22A

Solving and Optimizing (211334)

Steven Gortler

2020 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers a combination of linear algebra and multivariate calculus with an eye towards solving systems of equations and optimization problems. Students will learn how to prove some key results, and

will also implement these ideas with code. Linear algebra: matrices, vector spaces, bases and dimension, inner products, least squares problems, eigenvalues, eigenvectors, singular values, singular vectors. Multivariate calculus: partial differentiation, gradient and Hessian, critical points, Lagrange Multipliers.

Course Notes:

Not to be taken in addition to AM21b or Math21b. Some overlap with AM21a and Math21a. Can be used in conjunction with Stat110 to fulfill the mathematics requirements for computer science.

Recommended Prep:

Mathematics 1b or an equivalent background in mathematics.

Additional Course Attributes:

Attribute	Value(s)
Quantitative Reasoning with Data	Yes
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 22B

Integrating and Approximating (212922)

Sarah Iams

2021 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Multivariable and vector calculus, supplemented with numerical methods. Multivariate calculus: multiple integration, functions of two or three variables, approximating functions. Parameterized curves, line and surface integrals. Vector calculus: gradient, divergence and curl, Green's, divergence theorems. Complex numbers. Select differential equations topics.

Recommended Prep:

Either Math 1b or placement into Math 21a.

Requirements:

Prerequisite APMTH 22A

Introduction to Applied Mathematics (122564)

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

35

This course provides an introduction to the problems and issues of applied mathematics, focusing on areas where mathematical ideas have had a major impact on diverse fields of human inquiry. The course is organized around two-week topics drawn from a variety of fields, and involves reading classic mathematical papers in each topic. The course also provides an introduction to mathematical modeling and programming.

Course Notes:

Course limited to 35 students. Sections will meet Friday, 1:30pm-2:45pm.

Recommended Prep:

Mathematics 1b is a prerequisite, although it can be taken concurrently. Some limited concepts from Mathematics 21a / Applied Mathematics 21a will be used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, and starts from the level of a complete beginner.

Applied Mathematics 91R

Supervised Reading and Research (121692)

Margo Levine

Sarah Iams

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Supervised reading or research on topics not covered by regular courses. For AM concentrators, work may be supervised by faculty in other departments. For non-concentrators, work must be supervised by an AM faculty member. Students must receive the approval of an (Associate) Director of Undergraduate Studies and obtain their signature before submitting AM91r forms.

Course Notes:

Students cannot take AM 91r and 99r simultaneously with the same supervisors. Normally may not be taken more than twice. May be counted once for concentration credit in Applied Mathematics (as a breadth course). May be taken in either term. When project work from APMTH 91R is used to satisfy the honors modeling requirement, a paper describing the project must be submitted to the concentration for evaluation by the end of the final exam period in the semester in

which the 91R is undertaken. For further information, write am-
advising@seas.harvard.edu.

Applied Mathematics 104

Complex and Fourier Analysis with Applications to Art, Science and Engineering (122094)

L Mahadevan

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Complex analysis: complex numbers, functions, mappings, Laurent series, differentiation, integration, contour integration and residue theory, conformal mappings and circle packings. Applications to visualization, art (especially M.C. Escher) and photography. **Fourier Analysis:** orthogonality, Fourier Series, Fourier transforms. **Signal processing:** sampling theorems (Nyquist, Shannon), fast Fourier and other discrete transforms, wavelets and filtering. Applications to image, video, audio and morphological analysis: filtering and cleaning images, musical analysis, fraud and authentication, filter banks for engineering.

Course Notes:

Will be available along with video links and codes.

Recommended Prep:

Applied Mathematics 22a and 22b or Mathematics 21a and 21b.

Applied Mathematics 104 Section: 002

Complex and Fourier Analysis with Applications to Art, Science and Engineering (122094)

L Mahadevan

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Complex analysis: complex numbers, functions, mappings, Laurent series, differentiation, integration, contour integration and residue theory, conformal mappings and circle packings. Applications to visualization, art (especially M.C. Escher) and photography. **Fourier Analysis:** orthogonality, Fourier Series, Fourier transforms. **Signal processing:** sampling theorems (Nyquist, Shannon), fast Fourier and other discrete transforms, wavelets and filtering. Applications to image, video, audio and morphological analysis: filtering and cleaning images, musical analysis, fraud and authentication, filter banks for engineering.

Course Notes:

Will be available along with video links and codes.

Recommended Prep:

Applied Mathematics 22a and 22b or Mathematics 21a and 21b.
MATLAB or PYTHON experience recommended.

Graph Theory and Combinatorics (118482)

Leslie Valiant

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Topics in combinatorial mathematics that find frequent application in computer science, engineering, and general applied mathematics. Course focuses on graph theory on one hand, and enumeration on the other. Specific topics include graph matching and graph coloring, generating functions and recurrence relations, combinatorial algorithms, and discrete probability. Emphasis on problem solving and proofs.

Additional Course Attributes:

Applied Mathematics 108

Nonlinear Dynamical Systems (121989)

Sarah Iams

2020 Fall (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to nonlinear dynamical phenomena, focused on identifying the long term behavior of systems described by ordinary differential equations. The emphasis is on stability and parameter dependence (bifurcations). Other topics include: chaos; routes to chaos and universality; maps; strange attractors; fractals. Techniques for analyzing nonlinear systems are introduced with applications to physical, chemical, and biological systems such as forced oscillators, chaotic reactions, and population dynamics.

Recommended Prep:

Mathematics 21a and 21b, or Applied Mathematics 21a and 21b.

Additional Course Attributes:

Attribute	Value(s)

Applied Mathematics 115

Mathematical Modeling (118021)

Zhiming Kuang

2021 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 40

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes:

Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Class Notes:

Enrollment for APMTH/ENG-SCI 115 is limited to 40 students. Priority will be given to AM seniors taking this course to fulfill the honors requirement. To be given priority, you must request permission to enroll by Thursday, Jan. 21.

Recommended Prep:

Prerequisite: Applied Mathematics 21a and 21b, or Mathematics 21a and 21b or permission of instructor. Taking APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115 is recommended but not required.

Applied Linear Algebra and Big Data (113876)

Eli Tziperman

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Topics in linear algebra which arise frequently in applications, especially in the analysis of large data sets: linear equations, eigenvalue problems, linear differential equations, principal component analysis, singular value decomposition, data mining methods including frequent pattern analysis, clustering, outlier detection, classification, and machine learning, including neural networks and random forests. Examples will be given from physical sciences, biology, climate, commerce, internet, image processing and more.

Recommended Prep:

Mathematics 21a,b or equivalent, Computer Science 50 or Applied Mathematics 10 or equivalent programming experience.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

Quantitative Reasoning with Data	Yes

Applied Mathematics 121

Introduction to Optimization: Models and Methods (123662)

*Yiling Chen**Margo Levine*

2020 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

Introduction to basic mathematical ideas and computational methods for solving deterministic optimization problems. Topics covered: linear programming, integer programming, branch-and-bound, branch-and-cut. Emphasis on modeling. Examples from business, society, engineering, sports, e-commerce. Exercises in AMPL, complemented by Mathematica or Matlab.

Course Notes:

Applied Mathematics 121 is also offered as Engineering Sciences 121. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 121.

Recommended Prep:

Applied Mathematics 21b or Mathematics 21b (linear algebra) or equivalent preparation in linear algebra.

Applied Mathematics 201

Physical Mathematics I (112798)

Michael P. Brenner

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to methods for developing accurate approximate solutions for problems in the sciences that cannot be solved exactly, and integration with numerical methods and solutions. Topics include: dimensional analysis, algebraic equations, complex analysis, perturbation theory, matched asymptotic expansions, approximate solution of integrals.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Recommended Prep: Applied Mathematics 104 and 105, or equivalent; basic programming knowledge at the Computer Science 50 level.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 205

Advanced Scientific Computing: Numerical Methods (110684)

Christopher Rycroft

Zhiming Kuang

2020 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

An examination of the mathematical foundations of a range of well-established numerical algorithms, exploring their use through practical examples drawn from a range of scientific and engineering disciplines. Emphasizes theory and numerical analysis to elucidate the concepts that underpin each algorithm. There will be a significant programming component. Students will be expected to implement a range of numerical methods through individual and group-based project work to get hands-on experience with modern scientific computing.

Recommended Prep: Familiarity with linear algebra and calculus; basic programming knowledge at the Computer Science 50 level.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
Quantitative Reasoning with Data	Yes

Applied Mathematics 207

Advanced Scientific Computing: Stochastic Methods for Data Analysis, Inference and Optimization (127561)

Weiwei Pan

2020 Fall (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 35

Develops skills for computational research with focus on stochastic approaches, emphasizing implementation and examples. Stochastic methods make it feasible to tackle very diverse problems when the solution space is too large to explore systematically, or when microscopic rules are known, but not the macroscopic behavior of a complex system. Methods will be illustrated with examples from a wide variety of fields, like biology, finance, and physics.

Recommended Prep:

CS 50 or working proficiency in a computer programming language (python strongly recommended), as well as STAT 110 or a course in calculus based statistics and CS 109A, B.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Quantitative Reasoning with Data	Yes
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Mathematics 216

Inverse Problems in Science and Engineering (135919)

Michael P. Brenner

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Many problems in science and engineering are inverse problems. Any experiment that requires an explanation can be couched thus - given the data, what is the theory/model that provides it - this is an inverse problem. In engineering, a given function (in a product/software) requires a design - again an inverse problem. This course will introduce a wide array of features of inverse problems from science and engineering - from oil prospecting and seismology to cognitive science, from particle physics to engineering design. We will then introduce deterministic and probabilistic algorithms for solving these problems. Much of the class will be spent studying how the recent revolution in deep neural networks can (and cannot) be used to solve such inverse problems. The class will have a substantial computational component -- part of every class session will contain instruction and computer implementation of the algorithms in question. Students will carry out final projects in their own area of interest. Programming will be taught and carried out in Python and Tensorflow.

Class Notes: The class will meet twice per week. Meeting time will be determined according to enrolled students' availability.

Recommended Prep: Linear algebra, Differential equations, Basic probability.

Additional Course Attributes:

FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Mathematics 225

Advanced Scientific Computing: Numerical Methods for Partial Differential Equations (203586)

Christopher Rycroft

2021 Spring (4 Credits) **Schedule:** MW 1030 AM - 1145 AM

Instructor Permissions: None **Enrollment Cap:** n/a

This course examines a variety of advanced numerical methods, with a focus on those relevant to solving partial differential equations that arise in physical problems. Topics include the finite volume method, finite element method, and interface tracking methods. Associated problems in numerical linear algebra and optimization will be discussed. The course will examine the mathematical underpinnings of each method, as well as look at their practical usage, paying particular attention to efficient implementations on modern multithreaded and parallel computer architectures.

Recommended Prep: Intermediate programming ability at the level of CS50/51, APMTH 111, or APMTH 205. Knowledge of multivariable calculus, linear algebra, and partial differential equations.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	+7

Applied Mathematics 226

Neural Computation (212912)

Cengiz Pehlevan

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course introduces advanced mathematical methods and models used in theoretical neuroscience and theory of neural networks. We will explore computations and functions performed by the brain, and how they are implemented by neurons and their networks. We will cover selected topics from deep learning theory; spiking neuron models; population codes; normative theories of sensory representations; models of synaptic plasticity; computing with dynamics in recurrent neural networks; attractor network models of memory and spatial maps; neural models of probabilistic inference in the brain and drift-diffusion models of decision making. Concrete examples of applications of these ideas to the brain will be discussed. Topics at the research frontier will be emphasized.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Recommended Prep: APMTH 21A and APMTH 21B or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Mathematics 231

Decision Theory (203548)

Demba Ba

2021 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

ES 201/AM 231 is a course in statistical inference and estimation from a signal processing perspective. The course will emphasize the entire pipeline from writing a model, estimating its parameters and performing inference utilizing real data. The first part of the course will focus on linear and nonlinear probabilistic generative/regression models (e.g. linear, logistic, Poisson regression), and algorithms for optimization (ML/MAP estimation) in these models. We will pay particular attention to sparsity-induced regression models, that arise for instance in compressed sensing, because of their relation to artificial neural networks, the topic of the second part of the course. The second part of the course will introduce students to the nascent and exciting research area of generative models of deep networks called model-based deep learning. At present, we lack a principled way to design artificial neural networks, the workhorses of modern AI systems. Moreover, modern AI systems lack the ability to explain how they reach their decisions. In other words, we cannot yet call AI explainable or interpretable which, as a society, poses important questions as to the responsible use of such technology. Model-based deep learning provides a framework to develop and constrain neural-network architectures in a principled fashion. We will see, for instance, how neural-networks with ReLU nonlinearities arise from sparse probabilistic generative models

introduced in the first part of the course. This will form the basis for a rigorous recipe we will teach you to build interpretable deep neural networks, from the ground up. We will invite an exciting line up of speakers. Speakers will suggest papers that a group of students will present at the beginning of lecture, which will build up to a final project/paper that utilizes/on model-based deep learning applied to problems of interest to students.

Course Notes:

Engineering Sciences 201 is the same as Applied Mathematics 231. Students may not take both for credit.

Class Notes:

Enrollment for ES 201/AM 231 is capped at 30 students. Students who wish to enroll in this course should add it to their Study Card in my.harvard.edu by 23:59 on Tuesday January 19, and request permission to enroll. Please write a paragraph explaining your interest in this course, how it fits either with your concentration plans, and/or how model-based deep learning can help your research. The instructor will let students know if they can enroll by 17:00 on Thursday January 21.

Recommended Prep:

Applied Mathematics 21a,b or Mathematics 21a,b, and Statistics 110 or equivalents.

Physics as a Foundation for Science and Engineering, Part I (108880)

Eric Mazur

2020 Fall (4 Credits)

Schedule:

TR 0730 AM - 0845 AM

Instructor Permissions: None

Enrollment Cap:

n/a

AP 50A is the first half of a one-year, calculus-based introduction to physics focusing on the application of physics to real-world problems to teach scientific reasoning and problem-solving skills. The course is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard calculus-based introductory physics course. You will work in teams on three, month-long projects, each culminating in a project fair. Projects will involve a combination of construction of simple devices from kits provided to you, measurements taken in and around the home, and simulations. Besides mastering course content, such as kinematics, Newton's Laws, conservation laws, rotations, oscillations and waves, the course goals include self-directed learning and collaborative skills. In the online version of this course, you will carry out many activities asynchronously at your own convenience. Most of the face-to-face time with the staff (Tu/Th 7:30 am or 4:30 pm) will be spent to address specific difficulties and individual needs of the various teams.

Course Notes:

AP50a is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems.

Recommended Prep:

A solid knowledge of multivariable calculus at the level of Applied Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.

Additional Course Attributes:

Applied Physics 50A Section: 002

Physics as a Foundation for Science and Engineering, Part I (108880)

Eric Mazur

2020 Fall (4 Credits)

Schedule:

TR 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

AP 50A is the first half of a one-year, calculus-based introduction to physics focusing on the application of physics to real-world problems to teach scientific reasoning and problem-solving skills. The course is

designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard calculus-based introductory physics course. You will work in teams on three, month-long projects, each culminating in a project fair. Projects will involve a combination of construction of simple devices from kits provided to you, measurements taken in and around the home, and simulations. Besides mastering course content, such as kinematics, Newton's Laws, conservation laws, rotations, oscillations and waves, the course goals include self-directed learning and collaborative skills. In the online version of this course, you will carry out many activities asynchronously at your own convenience. Most of the face-to-face time with the staff (Tu/Th 7:30 am or 4:30 pm) will be spent to address specific difficulties and individual needs of the various teams.

Course Notes:

AP50a is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems.

Recommended Prep:

A solid knowledge of multivariable calculus at the level of Applied Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.

Applied Physics 195

Introduction to Solid State Physics (131331)

Julia Mundy

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); x-ray diffraction; electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); magnetism; superconductivity.

Course Notes:

APPHY 195 is also offered as PHYSICS 195. Students may not take both for credit.

Class Notes:

If 3-4:15 PM EST falls outside of 7 AM - 10:15 PM in a student's local time zone, we will provide an alternative viewing of the lecture with the TF. This will likely be held at 8 AM EST although exact time subject to enrollment. Please note, we not not anticipate being able to offer lecture time accommodations based on conflicts with other courses, commitments or preferences.

Recommended Prep:

Physics 15a, 15b and 15c or the equivalent. Physics 143a. Physics 181 and Physics 143b (taken concurrently) helpful but not required.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 202

Mechanics in Earth and Environmental Science (213560)

James Rice

2020 Fall (4 Credits)

Schedule:

WF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the mechanics of fluids and solids, organized around earth and environmental phenomena. Conservation laws, stress, deformation and flow. Inviscid fluids and ocean gravity waves; Coriolis dominated large scale flows. Viscosity and groundwater seepage; convective cells; boundary layers.

Turbulent stream flows; flood surges; sediment transport. Elasticity and seismic waves. Pore fluid interactions with deformation and failure of earth materials, as in poro-mechanics of consolidation, cracking, faulting, and landslides. Ice sheets and glacial flow mechanics.

Course Notes:

APPHY 202 is also offered as E-PSCI 202. Students may not take both for credit.

Recommended Prep:

Calculus-based introductory physics.

Additional Course Attributes:

Attribute	Value(s)

Applied Physics 216

Quantum and Classical Electromagnetic Interaction with Matter (141253)

Donhee Ham

2021 Spring (4 Credits)

Schedule:

WF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The first half of the course will cover the interaction of quantized atoms with electromagnetic fields, introducing a number of basic concepts such as coherent Rabi transitions vs. rate-equation dynamics, stimulated & spontaneous transitions, and energy & phase relaxations. These will be then used to study a range of applications of atom-field interactions, such as nuclear magnetic resonance, molecular beam and paramagnetic masers, passive and active atomic clocks, dynamic nuclear polarization, pulse sequence techniques to coherently manipulate atomic quantum states, and laser oscillators with applications. We will also touch upon the interaction of quantized atoms with quantized fields, discussing the atom + photon (Jaynes-Cummings) Hamiltonian, dressed states, and cavity quantum electrodynamics. The second half will cover the classical interaction of electromagnetic fields with matter, with special attentions to collective electrodynamics in particular, magnetohydrodynamics and plasma physics with applications in astrophysics, space physics, and Bloch electrons in crystalline solids.

Recommended Prep:

Undergraduate-level electromagnetism and quantum mechanics are recommended.

Additional Course Attributes:

Applied Physics 217

Foundations of Modern Optics (121975)

Lene Hau

Fawwaz Habbal

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Optical systems and lasers have revolutionized both technology and basic research. We cover the fundamental physics of light and of light-matter interactions, including optical wave-propagation, ray optics, optical imaging and Fourier optics, quantization of electromagnetic fields, and nano-optics. We will illustrate the material with its applications in atomic physics and biological imaging.

Class Notes: Primarily for graduate students and advanced undergraduate students.

Recommended Prep:

Elements of electromagnetism, for example an undergraduate course in electromagnetism such as Physics 153 or similar.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 218

Electrical, Optical, and Magnetic Properties of Materials (121594)

Xin Li

2021 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers the electrical, optical and magnetic properties of technologically important materials systems. It provides a quantitative description of structure-property relations by introducing tensor properties, crystal symmetry, Neumann's principle and Curie principle. A variety of properties of materials are then introduced, including pyroelectricity, dielectricity, piezoelectricity, ferroelectricity; pyromagnetism, magnetoelectricity, piezomagnetism, ferromagnetism; defect chemistry, transport properties and applications in semiconducting, dielectric and energy storage materials; crystal optics including birefringence, Pockels effect, Kerr effect, photoelastic effect and optical activity. Ferroelectric, ferromagnetic and topological phase transitions are also covered as special topics.

Recommended Prep:

Introductory solid-state physics or equivalent course.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	-6
Local offset from Cambridge MA	+17
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 225

Introduction to Soft Matter (121403)

Jennifer Lewis

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the physics of soft matter, also called complex fluids or squishy physics, includes the study of capillarity, thin films, polymers, polymer solutions, surfactants, and colloids,. Emphasis is on physical principles which scale bulk behavior. Students will understand the concepts, experimental techniques, and, especially, the open questions. Lecture notes are supplied in place of a textbook.

Recommended Prep:

Applied Physics 284 or Physics 262. Knowledge of basic thermodynamics, statistical mechanics and differential equations.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 275

Computational Design of Materials (110087)

Boris Kozinsky

2021 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course covers theoretical background and practical applications of modern computational atomistic methods used to understand and design properties of advanced functional materials. Topics include interatomic potentials and quantum first-principles energy models, wave function and density functional theory methods, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties, and machine learning approaches. Methods are applied to study microscopic and quantum-level effects in materials for energy conversion and storage, molecules, soft materials, electronic devices, and low-dimensional materials.

Course Notes:

Applied Physics 275 is also offered as Applied Computation 275. Students may not take both for credit.

Recommended Prep:

Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students

Local offset from Cambridge MA	+7

All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 284

Statistical Mechanics (131392)

Eugene Demler

2020 Fall (4 Credits)

Schedule: MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

Basic principles of statistical physics and thermodynamics, with applications including: the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical phenomena, as illustrated by the liquid-gas transition and simple magnetic models. Time permitting, introduction to nonequilibrium phenomena including Langevin dynamics and Boltzmann equation.

Course Notes:

Also offered as Physics 262. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program.

Recommended Prep:

Physics 143a and Physics 181 or Engineering Sciences 181.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 286

Inference, Information Theory, Learning and Statistical Mechanics (212685)

Sharad Ramanathan

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

We will build introduce modern applications of Statistical Mechanics from information theory, to coding and compression, finding probabilistic answers to poorly posed inverse problems to unsupervised learning. Further we will study supervised learning and machine learning. All of these topics will be taught using examples in the primary literature with an emphasis on the applications of the tools and framework we develop in the course. Applications will be taught through problems in genomics, neuroscience, mechanics, geophysics and engineering.

Class Notes:

The location for the Tuesday/Thursday 1:30pm-2:45pm EST lectures is <https://harvard.zoom.us/my/sharad.office>. This time will be for synchronous material with other times for sections TBA. Office hours which will also be synchronous.

Recommended Prep:

Comfort with Linear Algebra, Calculus is necessary, undergraduate Statistical Mechanics would be useful but not necessary.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Applied Physics 291

Electron Microscopy Laboratory (116509)

David Bell

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

Lectures and laboratory instruction on transmission electron microscopy (TEM) and Cs corrected, aberration-correction microscopy and microanalysis. Lab classes include; diffraction, dark field imaging, X-ray spectroscopy, electron energy-loss spectroscopy, atomic imaging, materials sample preparation, polymers, and biological samples.

Course Notes:

Primarily for graduate students planning to use TEM for their research.

Class Notes:

Due to the requirements of Harvardm Covid-19 policies we have implemented a hands on with remote instruction for the lab classes which has been developed so students will be able to do hands on experiments with the electron microscopes with corresponding asynchronous student training and synchronous remote lab supervision by TeamViewer and zoom. It will allow students to still

become self sufficient users of the TEM and SEM.

Applied Physics 295A

Introduction to Quantum Theory of Solids (143855)

Prineha Narang

David Bell

2020 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This is an introductory graduate level course in solid-state physics. Lattices and symmetries. Phonons. Electronic Structure of Crystals. Metals, semiconductors, and insulators will be covered. Electrical, optical, and thermal properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Additional topics from the theory of interacting electrons, including introduction to magnetism and superconductivity, and an introduction to topological insulators.

Course Notes:

PHYS/AP 295a is an introductory graduate-level course.

Class Notes:

We will meet at the lecture times listed (MW 9-10:15am). Additional times for sections and seminal paper discussions will be based on student polls during the first week. Some (not all) lecture content will be recorded and made available to make class time more interactive and to better accommodate time zone differences. Recorded lecture content is not a replacement for in-class work. We will hold expanded office hours and Q&A sessions this Fall.

Recommended Prep:

Physics 181 or equivalent, Applied Physics 195 or equivalent, and a graduate level quantum mechanics course similar to Physics 251a. (Physics 251b would be helpful and may be taken concurrently.)

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Applied Physics 295B

Quantum Theory of Solids (146948)

Subir Sachdev

2021 Spring (4 Credits)

Schedule:

MWF 1200 PM - 0100 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A course on the application of the principles of many-particle quantum mechanics to the properties of solids. The objective is to make students familiar with the tools of second quantization and diagrammatic perturbation theory, while describing the theory of the electron liquid, the BCS theory of superconductivity, and theory of magnetism in metals and insulators. Modern topics on correlated electron systems will occupy the latter part of the course.

Course Notes:

Applied Physics 295b is also offered as Physics 295b. Students may not take both for credit.

Recommended Prep:

Physics 251a,b, an introductory course in solid state physics, or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	+8 +9
All: Cross Reg Availability	Available for Harvard Cross Registration

FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 332

Experimental Condensed Matter Physics (131285)

Robert Westervelt

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None

Applied Physics 336

Theoretical Study of the Structure and Electronic Properties of Nanoscale Materials and Biological M (148255)

Efthimios Kaxiras

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 336

Theoretical Study of the Structure and Electronic Properties of Nanoscale Materials and Biological M (148255)

Efthimios Kaxiras

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Divisional Distribution	None

Applied Physics 340

Topics in Electromagnetic Theory (131560)

Tai Wu

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 340

Topics in Electromagnetic Theory (131560)

Tai Wu

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None

Applied Physics 342

Nano-Lasers and Single-Photon Sources (122881)

Marko Loncar

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 342

Nano-Lasers and Single-Photon Sources (122881)

Marko Loncar

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 346

Interdisciplinary Dissertation Research (109412)

David Keith

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Applied Physics 346

Interdisciplinary Dissertation Research (109412)

David Keith

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt

Applied Physics 348

Mechanics in Earth and Environmental Science (113128)

James Rice

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 348

Mechanics in Earth and Environmental Science (113128)

James Rice

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Applied Physics 350

Experimental Physics in Low Dimensional Materials (156736)

Philip Kim

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 350

Experimental Physics in Low Dimensional Materials (156736)

Philip Kim

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 354

Physics of Bacterial Growth (156741)

Ariel Amir

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 354

Physics of Bacterial Growth (156741)

Ariel Amir

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 356

Special Topics in Theoretical Engineering (116189)

Michael P. Brenner

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt

Applied Physics 356

Special Topics in Theoretical Engineering (116189)

Michael P. Brenner

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 360

Nonlinear Laser Physics and Materials Engineering (133140)

Eric Mazur

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 360

Nonlinear Laser Physics and Materials Engineering (133140)

Eric Mazur

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 362

Photonics, Quantum Devices and Nanostructures (117862)

Federico Capasso

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 362

Photonics, Quantum Devices and Nanostructures (117862)

Federico Capasso

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 364

Experimental Soft Condensed Matter Physics (112454)

David Weitz

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 364

Experimental Soft Condensed Matter Physics (112454)

David Weitz

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt

Applied Physics 366

Experimental Condensed Matter: Ballistic Transport in Semiconductors, Nanostructures, and Tunneling (113769)

Venkatesh Narayanamurti

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 366

Experimental Condensed Matter: Ballistic Transport in Semiconductors, Nanostructures, and Tunneling (113769)

Venkatesh Narayanamurti

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt

Applied Physics 368

Topics on Condensed Matter Physics (113715)

David R. Nelson

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 368

Topics on Condensed Matter Physics (113715)

David R. Nelson

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None

Applied Physics 372

Biological Physics and Quantitative Biology (125419)

Daniel Needleman

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt

Applied Physics 372

Biological Physics and Quantitative Biology (125419)

Daniel Needleman

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 374

Signaling Processing and Systems Biology (126172)

Sharad Ramanathan

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 374

Signaling Processing and Systems Biology (126172)

Sharad Ramanathan

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 376

Nonlinear Dynamics of Soft Interfaces (110265)

Shmuel Rubinstein

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt

Applied Physics 376

Nonlinear Dynamics of Soft Interfaces (110265)

Shmuel Rubinstein

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Applied Physics 384

Topics in Atmospheric and Climate Dynamics (121287)

Zhiming Kuang

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 384

Topics in Atmospheric and Climate Dynamics (121287)

Zhiming Kuang

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration

Applied Physics 388

Climate Dynamics and Physical Oceanography (118649)

Eli Tziperman

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Applied Physics 388

Climate Dynamics and Physical Oceanography (118649)

Eli Tziperman

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation exempt

Applied Physics 392

Experimental Soft Condensed Matter and Materials Physics (120887)

Vinothan Manoharan

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course

Applied Physics 392

Experimental Soft Condensed Matter and Materials Physics (120887)

Vinothan Manoharan

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Applied Physics 394

Experimental Studies of Interfaces and Surfaces (116593)

Cynthia Friend

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Applied Physics 394

Experimental Studies of Interfaces and Surfaces (116593)

Cynthia Friend

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Applied Physics 396

Topics in Materials Science (142229)

Michael Aziz

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Applied Physics 396

Topics in Materials Science (142229)

Michael Aziz

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Applied Physics 398

Materials Science (148042)

Frans Spaepen

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Applied Physics 398

Materials Science (148042)

Frans Spaepen

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Architecture, Landscape Arch, and Urban Planning

Subject: Design

Design 300 Section: 0005

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Giuliana Bruno

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Design 300 Section: 0005

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Giuliana Bruno

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt

Design 300 Section: 0007

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Jerold Kayden

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration

Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Design 300 Section: 0007

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Jerold Kayden

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt

Design 300

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Antoine Picon

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Antoine Picon

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None

Design 300 Section: 002

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

K. Hays

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None

Design 300 Section: 002

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

K. Hays

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 003

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Erika Naginski

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt

Design 300 Section: 003

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Erika Naginski

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Design 300 Section: 004

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Eve Blau

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None

Design 300 Section: 004

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Eve Blau

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 006

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Peter Galison

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Design 300 Section: 006

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Peter Galison

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 008

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Alina Payne

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 008

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Alina Payne

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Design 300 Section: 009

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Christine Smith

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300 Section: 009

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Christine Smith

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Design 300 Section: 011

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Joyce Chaplin

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Graduate Course

Design 300 Section: 011

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Joyce Chaplin

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Not Available for Cross Registration
Course Evaluation	Course Evaluation exempt

Design 300 Section: 012

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Edward Eigen

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 012

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Edward Eigen

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Not Available for Cross Registration

Design 300 Section: 013

Reading and Research in Architecture, Landscape Architecture, or Urban Planning (117756)

Sheila Jasanoff

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt

Design 300 Section: 013

Art, Film, and Visual Studies

Subject: Art, Film, and Visual Studies

Art, Film, and Visual Studies 12 Section: 1

Drawing 1: Drawing as a Visual Language (203312)

Katarina Burin

2021 Spring (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

A studio course to build the skills of drawing incrementally and expand students' visual vocabulary. Drawings will be made from life, photographs and invention. Emphasis will be placed on enhancing our observational sensibilities through life drawing and the figure, focusing on all aspects of technical development, particularly the importance of line. The aim of this course is to expand drawing skills with intention and purpose.

Course Notes:

This class is for beginners or anyone furthering their skill level.

Making Things (203314)

Katarina Burin

2021 Spring (4 Credits)

Schedule:

W 0300 PM - 0700 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Currently we find ourselves physically isolated, living through screens, missing a sense of touch. This class will provide a space in which to reflect upon our changing relationship to the physical world - to evaluate our engagement with objects, how we live with them and what we seek from them. With a series of progressive hands-on assignments, we will learn how to think and make through a variety of materials and methods including paper, wood, casting and other non-traditional domestic materials. Each assignment will be a means through which to think about our personal processes of self-actualization through the adaptation, transformation and reiteration of materials and forms.

Course Notes:

This course is open to all, no prerequisites or experience necessary. Interested students should submit the questionnaire available on the course Canvas site by 4pm Wednesday January 20th. Late applications will be considered based on availability. Q&A sessions will be held on Zoom via the course Canvas site on Friday January 15th and

Wednesday January 20th from 3-4 pm EST. Please feel free to e-mail Katarina Burin (katarinaburin@fas.harvard.edu) if you have specific questions..

Relief Printmaking: Beginning Studio Course (116003)

Annette Lemieux

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Relief Printmaking is the most direct method of reproducing images through print. An inky hand or foot print, a rubber stamp, or a carved block of wood or linoleum printed with ink on paper or fabric are all considered forms of relief printing.

In this course, relief printing, monotype, and frottage along with the techniques, materials and tools used will be explored with a critical emphasis on developing meaningful imagery. Materials and tools will be provided.

Course Notes:

No previous studio art courses required. First year students encouraged to apply.

Class Notes:

Shopping Week Instructions

No previous studio experience necessary. First year students and students who have not taken any AFVS courses are encouraged to apply as well as non-concentrators. Students are asked to fill out a questionnaire to lottery into the class. There is a limited enrollment of 12 students.

If you have any questions or concerns about this class, please email lemieux@fas.harvard.edu.

Monday, August 17: Early Shopping Begins

Friday, August 21: Course Questionnaire Deadline (link to questionnaire below)

Monday, August 24: Accepted students notified. Accept/decline your spot in the class within 24 hours.

Tuesday, August 25: Waitlisted students notified if accepted. Accept/decline your spot in the class within 24 hours.

Wednesday, August 26: Course Registration Deadline

Wednesday, September 2: First Day of Classes

To apply for enrollment/enter lottery in Relief Printmaking (AFVS 16R), complete the following by FRIDAY, AUGUST 21, 2020:

1. Fill out the following questionnaire (found here).

https://forms.office.com/Pages/ResponsePage.aspx?id=9CL6b2hFBUGtQy461HJpV_MA06_xEsVAnN_ANRZ0FwFUQ1JDQVBQUVICRkZJQ01UTIVPQ1dRNUpLSi4u

2. Submit your petition for enrollment on My.Harvard.edu

The pursuit of and response to the horizontal in art will be the focus of this studio class. To cite a few examples, abstract expressionist painting; cartography; earthworks; landscape photography; rayographs; as well as film, video, and performance examples will provide models of the horizontal that will be points of departure for studio projects, the forms of which will be determined by what the investigation provides. There are no prerequisites for this class.

Course Notes:

No previous studio experience necessary.

Class Notes:

Fall 2020: Enrollment Process

There is still space available in this course! Please contact the course's Teaching Assistant, Hadi Fallahpisheh at fallahpisheh@gmail.com for more information.

We adopt the interview process for this class to make an early, personal connection with each applicant and to clarify what is expected in the class. Because the class is "non-denominational," in that any way of working is acceptable, be it painting, sculpture, music, photography, video, design, writing, acts of civil disobedience, performance, etc., we are looking for a range of practices for the class, and students at a range of levels. The class depends upon its members to be self-motivated and self-determining, in that no specific assignments for studio are made. The members of the class must define projects, develop them, and execute them with the consultation with the professor, teaching assistant, and other members of the class. In other words, we want every applicant to know what they are in for opting to take this class.

Introduction to Still Photography (111189)

Elle Perez

2021 Spring (4 Credits)

Schedule:

MW 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

10

This course provides an introduction to the visual language of photography. Students will be introduced to the technical, conceptual, and historical aspects of the medium. We will focus on gaining familiarity with digital techniques and aesthetics through demonstrations and hands-on sessions that cover technical topics such as camera operation, proper image exposure, digital workflow (including RAW files and Camera Raw) Adobe Bridge and Photoshop, and digital printing techniques. Lectures and class discussions will provide historical context and an overview of historical and contemporary artists. Weekly photographic and written assignments will be given and regular critiques will be used to assess student work and progress. The class will conclude with a final project that reflects your individual and original interests, and a high level of engagement and investment with photography.

Class Notes:

No previous studio experience necessary.

Introduction to Photography (122184)

Sharon Harper

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

10

This studio course will introduce you to the conceptual, artistic potential of photography. Your understanding and use of the medium will be contextualized within contemporary and

historic photographic art practices. Your own art practice will be developed alongside technical skills. We will discuss topics such as the ethics of photographing people, how to make meaningful images amid the proliferation of digital images, and traits that are unique to photography. This class is organized around presentations on artists' work, presentations on photographic concepts, studio making assignments, individual meetings with the instructor and breakout meetings with peers to develop your practice, technical skill workshops, readings, reading discussions, group critiques, and visiting artist presentations. Curiosity, a strong work ethic and a sense of adventure are required. Technical skill development is supported by the class Teaching Assistant.

Course Notes:

No prior art experience necessary for enrollment in this class.

Class Notes:

Class enrollment limited to 10 students is determined by blind lottery. The lottery ensures space for AFVS concentrators, students across the university, FVS graduate students and CMP graduate students. It generates a balance of first years, sophomores, juniors, seniors and graduate students.

Choice and Chance: Mysteries of the Editing Room (107932)

Robb Moss

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

Documentary filmmakers often start with an idea, go into the world with cameras, return with this shot material and begin to look at what they have done. This is the point where filmmakers often confront a deep truth about filmmaking, that we all have to go through the footage to get to our ideas. Working with the footage is the process we call editing. This course is about documentary film editing, the sequencing, whittling and shaping of sounds and images that lead to a finished piece.

Fundamentals of Animation (110676)

Ruth Lingford

2020 Fall (4 Credits)

Schedule:

M 1200 PM - 0400 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

An introduction to the possibilities of animation. Using a mixture of traditional and 2D digital tools, students will complete practical exercises which will familiarize them with basic skills and techniques. Screenings and discussions will help develop the specialized thinking needed to understand the discipline.

Course Notes:

Drawing skills are optional, though helpful.

Class Notes:

SHOPPING WEEK DROP-IN SESSION: Go to the course Canvas site for the Zoom link to the shopping week drop-in session on Monday, Aug. 17.

Message from Professor Lingford (lingford@fas.harvard.edu) about class admission:

We are very unlikely to be oversubscribed this semester, but I would very much like to speak individually with all potential students, partly to get an idea of your level of experience and your interests, to help me plan the semester, but also so that you can get a chance to ask any questions about the class, and to make sure it is right for you.

This is a beginning level class. No previous knowledge or drawing ability is needed - this class is for everyone who is curious to try

animation and willing to try new things!

If we do have more applicants than we have space for, I will give priority to AFVS concentrators, first-years and undeclared sophomores.

But please don't be deterred from applying - if you are keen, we will do our best to fit you in!

Approaching Narrative: Introduction to Filmmaking (127469)

Dominga Sotomayor Castillo

2021 Spring (4 Credits)

Schedule: MW 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 10

In this production course, students will learn the basic principles of narrative filmmaking and film language. Different tools and filmmaking techniques, including lighting and cinematography, sound recording, and editing will be introduced to students by the lecturer and invited film professionals. Classes will also consist of screenings, discussion, and critiques of student work. By the end of the course, students will be equipped with the necessary tools to produce a short film with sync sound.

Emphasis is placed on sourcing personal stories and utilizing resources that are within students reach.

Course Notes:

No prior filmmaking experience necessary.

Class Notes:

SPRING 2021: Individual meetings will be held on Tuesday, Jan. 19 from 1pm to 3pm EST. Visit the Canvas site for the sign up sheet and more information. Please reach out to the Teaching Fellow, Pauline Shongov (paulineshongov@g.harvard.edu) with your questions.

Frame, Spectacle, Spectator: Video as Medium (213583)

Carissa Rodriguez

2020 Fall (4 Credits)

Schedule:

M 0130 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

In this intro-level production course, students will be introduced to video as a time-based art form. This course will explore different modes of spectatorship – from museum to mobile screen and examine the range of methods in which artists work critically with moving images, in relation to mass media. Through screenings and presentations by contemporary video artists, students will develop a moving image vocabulary and narrative techniques to be applied to individual video projects. Assignments may incorporate sound, text, found footage and multi-channel work. Video editing instruction will be offered on Adobe Premiere. Prior experience with editing tools is helpful but not required. All necessary devices will be provided.

Class Notes:

The remote version of this course may also utilize compact cameras such as smartphones, GoPro and other 'action cams' to adapt to the current situation. Topics around surveillance, identity and racialization will be incorporated.

If you are interested in taking this course, please contact us to schedule a brief one-on-one 10 minute conversation anytime during shopping week.

The Art of Film: Currents in Contemporary World Cinema (115688)

Haden Guest

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course closely studies important currents at work in contemporary world cinema by exploring the work of key directors who expand long standing definitions of what cinema is and should be. Among the filmmakers central to the class are Lav Diaz, Lucrecia Martel, Pedro Costa, Kevin Jerome Everson, Apichatpong Weerasethakul, Claire Denis, Kelly Reichardt, Hong Sangsoo, Mati Diop, Alice Rohrwacher and Sky Hopinka. Select filmmakers will visit the class to present and discuss their work.

Course Notes:

This course is required for all students concentrating in or pursuing a secondary field in the film and visual studies area of AFVS.

Class Notes:

Images don't merely *represent*; they perform. Their political importance has become urgently clear as cell phone recordings of police brutality have helped to energize movements against structural racism. This class ends with a discussion of those "material witnesses," but places them in historical context beginning with the invention of photography in 1839, as well as film, television, and museums. Included will be discussion of visual perspectives of Frederick Douglass, W.E.B. DuBois and Frantz Fanon.

Course Notes:

First year students are encouraged to take this course.

It fulfills one of two required introductory level courses for undergraduates pursuing the Film and Visual Studies track in AFVS.

Class Notes:

Weekly discussion sections may be scheduled for this course.

Art, Film, and Visual Studies 99A

Tutorial - Senior Year (Thesis/Senior Project) (117196)

Ruth Lingford

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

All students wishing to undertake an AFVS 99 project, either a senior thesis or senior project, must have permission of the project adviser, chosen by the student, before being considered. The Director of Undergraduate Studies and the AFVS Honors Board must approve all AFVS 99 projects and theses in advance. Part one of a two part series.

Course Notes:

The first term of the AFVS 99: Senior Thesis/Project should always be AFVS 99A. If you are beginning your thesis or project off-cycle, meaning, in the spring term, enroll in AFVS 99A.

Optional for senior concentrators. Students must be enrolled in AFVS 99 to do a thesis. Students should arrange regular tutorial meetings with their project adviser. Senior theses and projects are led by individual faculty members; however the Director of Undergraduate Studies approves AFVS 99 in each student's Crimson Cart.

Art, Film, and Visual Studies 107

Studies of the Built North American Environment since 1580 (122679)

John Stilgoe

2020 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

25

North America as an evolving visual environment is analyzed as a systems concatenation involving such constituent elements as farms, small towns, shopping malls, highways, suburbs, and as depicted in fiction, poetry, cartography, television, cinema, and advertising and cybernetic simulation.

Course Notes:

Offered jointly with the Graduate School of Design as 4105.

Class Notes:

Students interested in taking this course are invited to a Zoom shopping session at 9:00AM EST on Tuesday, August 18. The Zoom link will appear on the Canvas course site.

Stranger than Fiction (108657)

Carrie Lambert-Beatty

2020 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

Is there an art history of post-truth? False personas, invented figures, museums of unnatural history and other fictive phenomena fill the annals of contemporary art. How do decades of factually-presented fictions, and thousands of temporarily deceived viewers, relate to the cultural changes that generated "truthiness," "fake news" and "The Death of Truth"? In this course you'll learn about installation art, conceptual art, photography, performance and video, while mapping out varieties of fact-based, fictional, and parafictional art, and debating their implications for art history— and for everyday life. (Note: class can be taken for credit in either HAA or AFVS; total enrollment limited to 18.)

Drawing 2: Model Witness (203313)

Katarina Burin

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This studio art course foregrounds the medium of drawing, investigating its many potentials, both on and off the page. Drawing is positioned as model and as witness, and as something which carries ideas forward. It is experimental, light and flexible, while maintaining the ability to record direct process or be deeply specific.

Students will explore the potential of depicting both literal and metaphorical space, including the space of personal or collected memory, of future possibility and the imprint of time and process. Working in two-and three-dimensions we will strengthen our conceptual, technical and artistic visual skills.

Course Notes:

This course is open to anyone who has some experience with creative visual work.

Additional Course Attributes:

Curating Contemporary Art: Exhibitions, Artists, Institutions, and Audiences (213509)

Daniel Byers

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course introduces the practice and study of curating contemporary art from a number of diverse perspectives. We will look at exhibition, publication, and public program/performance projects that center living artists, and political and social engagement. The class will introduce exhibition typologies such as biennials, solo exhibitions, thematic and historical surveys, and consider ways curators navigate their engagement with artists, the institutional context of the museum, audiences and communities, and the field of art history. We will also consider the art market, and the role commercial galleries play in the reception of artists' work. Through conversations with numerous leading curators from around the country, we will critically engage the role of curator and art institution within a broad cultural and contemporary art context.

Course Notes:

Log in to the information session for AFVS 118C - Curating Contemporary Art: Exhibitions, Artists, Institutions, and Audiences at 12:00 PM (EDT) on Tuesday, 1/19/21; for more information go to the Canvas course site.

Class Notes:

The class will be built around a series of conversations with a diverse group of curators from museums, universities, galleries, alternative spaces, and other institutions.

Recommended Prep:

History of Art and Architecture 17K: Introduction to Contemporary Art or advanced classes in the Department of Art, Film, and Visual Studies.

Art, Film, and Visual Studies 120

Thinking With Your Hand: Intermediate Painting (216297)

Judith Belzer

2020 Fall (4 Credits)

Schedule:

T 1200 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

This class will support developing painters in their explorations of paints as powerful tools for engaging and questioning the world around them, guided by their senses. Using the home as their studio base, students will be encouraged to expand their view of what is close at hand and to transform everyday experience into art. Commitment to an exploratory studio process will be encouraged through directed prompts and open-ended project work. This class is designed for students who have had some studio art experience.

Course Notes:

At least one previous AFVS/VES course or previous studio experience recommended.

Class Notes:

FALL 2020: Instructions regarding the admissions process for this class will appear in the Canvas course site.

There will be a break scheduled during classtime.

Time Out of Mind: Exploring Painting as Time Based Media (217478)

Tomashi Jackson

2021 Spring (4 Credits)

Schedule:

R 1200 PM - 0400 PM

Instructor Permissions: Instructor**Enrollment Cap:**

12

In this class, we will explore the practice of painting and notions of time through disciplinary lenses of video, music, and literature. We will define the characteristics of painting and time-based media for ourselves and through reflecting upon formal reference materials including texts, recordings and visits with special guests. Artist Sondra Perry will join monthly, guiding our discourse of video. Areas of critical focus include the stratas of painting and video: Image building, space, layering, figure/ground, color, form, and figuration. Class sessions will be designated for collective studio time/post production, individual studio

visits, presentations, reading and listening, discussion, and group critique. Participants are expected to commit to active engagement and generosity of spirit to co-create the space and time we will share weekly

Course Notes:

This course is a studio and seminar. We will be reading, screening video, drawing, painting and discussing together. Some of our meetings will be dedicated to experiencing our time by making and listening together.

Class Notes:

SPRING 2021: There will be a shopping week session for this course on Friday, Jan. 15 from 5pm EST to 6pm EST. Zoom link and further information is on the Canvas course site.

Sun & Shadow, Sculpture Studio (216299)

Nora Schultz

2020 Fall (4 Credits)

Schedule:

TR 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

This sculpture course considers "distance" and "access" as means of production. "Distance" as in "Zoom" and "access" as in "Main Entrance." In the material life of a sculpture studio, physicality is up in the air. What is the "land" in Land Art? Can a sculpture be imagined into existence? This course considers experiences of remoteness, and repositions both materiality and the artist, to ask if this remoteness can accommodate a sculpture studio.

Class Notes:

Enrollment in *Sun & Shadow, Sculpture Studio* is limited to ten students, selected by lottery. Though the lottery process is random, the department of Art, Film and Visual Studies (AFVS) requires that priority be given to: AFVS concentrators, prospective AFVS concentrators, secondary field students, and graduate students who require a studio course. To enter the enrollment lottery, attend one introductory meeting in shopping week.

Introductory meetings will be held during "shopping week" on Tuesday, August 18 from 9:00–10:30am and Thursday, August 20 from 10:30am - 12:00pm. Please email the instructors if you are unable to attend one of these dates.

Nah; or, gestures of resistance: Performance, Technology, and Refusal (216782)

E. Jane

chukwumaa --

2020 Fall (4 Credits)

Schedule:

WF 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

With a focus on opacity, refusal, and other gestures of resistance, this studio course will be an experimental testing ground for performance art using new media. We will study performances that refuse, subvert, and question oppressive structures often using new media and technology and the strategies these performances deploy. Students will work intensively to create performance works using sound, video, installation, and networked media (including the internet). Students should be prepared to think critically about the works they produce and be able to articulate their goals for their work. This course will include readings, class dialogue, lectures, screenings, critiques, and performances. This course is being offered by the sound and performance art duo SCRAATCH.

Class Notes:

Course enrollment procedures for this course will appear on the Canvas course site.

Recommended Prep:

Previous AFVS course experience helpful, but not required.

Making Mischief: A Studio Based Seminar (205346)

Sharon Harper

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This class supports an independent photographic practice that is an extension of your own interests. The framework of the class will be a comparison of American documentary photographic strategies that arose on the East Coast and on the West Coast in the 1960s and 1970s in order to familiarize you with an array of artists and working methods. We will examine social and historic assumptions regarding photography during this time, and how those assumptions were challenged by emerging uses of photography. This class will ask you to

experiment with various photographic strategies demonstrated by the artists we study to expand your understanding of the medium and facility with it. The class is organized around lectures, readings, class discussions, group critiques, guest artist presentations, individual meetings with the instructor and breakout meetings with peers to develop your practice. Technical skill development is supported by the class Teaching Assistant.

Class enrollment limited to 12 students

Class Notes: Permission of the instructor is required for enrollment. Instructor is looking for a willingness to develop and sustain a self-generated visual practice.

Intermediate Photography (217456)

Carissa Rodriguez

2021 Spring (4 Credits)

Schedule:

M 0130 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

Photography is the art of reproduction and society reproduces itself through its images. Images proliferate. Images resist. Under capitalism, the worker reproduces the most indispensable means of production—her self. How are the self and the world constructed through the lens of reproduction? Looking at examples from biological and social reproduction; as well as feminist and artistic practices, students will create bodies of independent photographic work throughout the semester. Guest artists will lead class sessions with presentations of their work. Student projects may be self-initiated and are not required to adhere strictly to course material.

Film Directing: Approaching Fiction Now (114116)

Dominga Sotomayor Castillo

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course guides students through different issues and challenges in the filmmaking process from the initial development of ideas through to completion.

Throughout the semester, students will write and discuss their own short film scripts. At the end of the first semester, these projects will be ready to move through the pre-production process so that they can be shot during the second semester.

Emphasis is placed on finding a voice, point of view and approaching the film language. There will be formal explorations and various assignments which impose restrictions.

Throughout several personal and group exercises different topics will be explored, such as: directing actors, composition, directorial authorship, as well as the role of camera work in conjunction with narrative structure.

In-class screenings and critiques of student assignments will form an important component of the course.

Class Notes: **This course meets from 1:30 to 4:15.**

Recommended Prep:

AFVS 50 or two other AFVS courses in video or film production required.

Film Direction: From Script to Screen (113516)

Dominga Sotomayor Castillo

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This production course is an advanced continuation of 150A. It is compulsory for students to have the first draft of their short screenplays on the first day of class. Content includes scene analysis and script revision, directing professional and non-professional actors, cinematography, blocking and mise-en-scène, sound design, editing and post-production. Students will be given assignments related to their written screenplays throughout the course, culminating in what will be their final project: the production of a narrative short film. Film professionals will occasionally be invited to conduct workshops or hold masterclasses with students.

Course Notes:

Students seeking to enroll should come to the first class meeting with a developed short narrative screenplay.

Recommended Prep:

AFVS 150A or two courses in video production.

Experimental Animation: Intermediate Animation Course (115390)

Young Joo Lee

2020 Fall (4 Credits)

Schedule:

W 0200 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This studio class explores animation as an artistic expression, different from a commercial studio production. We will study the examples of earlier abstract, non-linear animation works, as well as contemporary animation works in museum and gallery context. Students will work with drawing, collage and cut-up techniques to create abstract works in response to in-class prompts. We will discuss how to structure images and sounds in experimental animation to create desired effects. There will be screenings of contemporary artists' work in animation and readings of related theories and articles to enrich our understanding of animation as a contemporary art form.

Class Notes:

SHOPPING WEEK NOTE: Due to the instructor's current time zone, the drop-in shopping week session will be held on Wednesday, Aug. 19, 9am-12pm EST. Please check the course Canvas site for the link and more information.

This course is held from 2pm to 5:45pm EST. There will be mandatory screenings built into class time. Please note that depending on the students enrolling in class, the class time may be divided into 2 sessions to accommodate students in different time zones, therefore the first class meeting is essential. The Zoom link will be on the Canvas site and can be launched from there.

Please e-mail the instructor, Young Joo Lee (youngjoo_lee@fas.harvard.edu) if you are interested in taking the class. These students will be given priority for enrolling. During the first class meeting, interviews will be held if necessary.

Required equipment: Before the beginning of the semester, please take a brief survey on the Canvas course site to determine which equipment you have available. Necessary equipment will be provided.

Software: Adobe Creative Suite (After Effects, Premiere Pro, Photoshop, Audition)

Hardware: Personal Computer (Mac or Windows), Camera (smartphone is OK), external hard drive, tripod, digital scanner & printer, Wacom tablet, computer mouse

Recommended Prep:

This class welcomes students without any previous animation experience, but some video and sound editing and recording knowledge/skills are required.

Social Justice Filmmaking (216294)

Julie Mallozzi

2020 Fall (4 Credits)

Schedule:

WF 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This production course will consider filmmaking as a means to explore social justice. Students will learn how to conceive, shoot, and edit digital videos; screen examples of successful works; and meet with accomplished social justice filmmakers. Working individually or in small groups, students will create films investigating topics such as human rights, racial equity, environmental justice, food security, and mass incarceration. Remote learning presents an opportunity to experiment with distributed storytelling and smartphone filmmaking in addition to conventional forms. We will scrutinize our role as makers responding to the complex demands of aesthetics, ethical representation, and social impact.

Class Notes:

We ask prospective students to attend the first shopping period meeting on August 19, 12-1:30pm EST; complete a brief online application form; and sign up at for an informal Zoom interview, which will take place that afternoon or the next morning to determine who is the best fit for the course. Links for all three are available on the Canvas site.

Immersive Experience as Art (216369)

Young Joo Lee

2021 Spring (4 Credits)

Schedule:

F 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This course is a studio class that investigates immersive experience as a form of art. Utilizing moving image, sound, text, and virtual reality, we will experiment and develop different methods to create immersive experiences. Starting with the history of immersive media, the class will discuss the relationship between the experience of art and the technological development. We will screen examples of relevant artworks and analyze the technological aspects and conceptual background of these works. Throughout the semester, students will develop projects, reflecting on the discussions and using the tools learned in the class. Critiques and presentations of the students' works are essential part of the class.

Coding for Artists Workshops will be offered outside of the class time (please visit the course Canvas site for the dates and time). Participation is strongly encouraged.

Class Notes:

SPRING 2021: There is a shopping session for this class Friday, Jan. 15 at 3pm and on Tuesday, Jan. 19 at 3pm to 4pm. Please visit the canvas site for the Zoom links and more information.

Recommended Prep:

There is no prior knowledge of Unity 3D nor Blender required. However, your knowledge and basic skills in visual art and digital media production are helpful in completing the assignments.

Marginal Images: cinematography for filmmakers (213728)

Joana Pimenta

2021 Spring (4 Credits)

Schedule:

TR 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

10

Some of us, perhaps recently more and more, inhabit permanent spaces of transience, between here and elsewhere, the spaces of bodies and images. And as filmmakers and cinematographers, when holding a camera even towards the most familiar, we are always outsiders, inevitably inscribed in a relation between who records and who is recorded. This is a non-fiction filmmaking course with a specific focus on cinematography, directed to students who want to direct and simultaneously film their own work. Cinematography will be here explored as a language and as a quotidian practice that takes place between the street and the studio. We will find subjects in transient forms, and explore studio practices of model-making and light setups for the preparation and filming of our work. In the remote version of this class, students will be completing short films that they will send to each other. Work can be created in response to these filmed assignments, or pursued individually.

Class Notes:

SPRING 2021: Course info session and admission conversations:
Tuesday, Jan. 19 at 9am EST (if you cannot make it to this date, please write to us, and we can meet you by appointment. Visit the course Canvas site for more information and Zoom link. Schedule open to be revised upon discussion with the students enrolled.

Enter the Mediaverse (217449)

Lex Brown

2021 Spring (4 Credits)

Schedule:

M 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

Enter the Mediaverse will function like a think tank to investigate media through perspectives of psychology, linguistics, technology, aesthetics, and practice to seek an answer to a fundamental, metaphysical question: What *is* media, what does it mean to have so much of it, and what is it leading to? The course covers topics including media convergence, the magic of filmmaking, early video art, reality TV, televangelism, the Internet, pulp media, the poor image, satellite networks, and hyperobjects, amongst others. Throughout the semester, we will be joined by guest lecturers from different visual and media fields. Students will complete 4 projects throughout the course, which systematically map and decode the various visual and auditory structures of commercials, news, Youtube videos, reality TV, etc., and recombine those structures to deliver information in surprising, effective, optimistic, and useful ways. These projects will be designed to be uploaded onto a public website from the class. The final project for each student is a trend forecast for the future of media.

Course Notes:

The goals of this class are for students to 1. Understand through practice and observation the various storytelling languages of telecommunication and how cultural, technical, & scientific information is disseminated across media, 2. To independently research topics of importance for public knowledge (in any field or application) alongside seemingly meaningless wormholes, and 3. To strategically broadcast this information across Internet and social media platforms. Short writing projects will accompany each assignment to develop students' abilities to articulate their thoughts to and motivations behind their work.

In addition to the regular class date (Monday), we will schedule an additional weekly block for tech tutorials and co-working. This course welcomes sophomores, juniors, seniors, and graduate students. Interested first years, please send an email to lexbrown@fas.harvard.

edu.

Class Notes:

This course welcomes sophomores, juniors, seniors and graduate students.

SPRING 2021: There will be two intro Zoom sessions for this class on Tuesday, January 19 at 5pm EST and on Thursday, January 21 at 10am EST. These sessions will cover the same information about the class. Zoom information appear on the course Canvas site.

Un cine para hoy: Remapping Latin American Cinema (216313)

Haden Guest

Dominga Sotomayor Castillo

2020 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

Challenging traditional assumptions about the national borders defining separate cinemas across Central and South America, this hybrid filmmaking and film studies course explores contemporary Latin America cinema as a vital transnational territory and community defined by a network of filmmakers in close dialogue with one another and joined by a shared desire to create new forms and audiences. Chilean filmmaker Dominga Sotomayor and film historian Haden Guest will co-teach this course. Each week directors will be invited to present and discuss their films, with some also leading small group production workshops

Class Notes:

Students interested in taking this course are invited to attend a live shopping week session on Wednesday, August 19 at 12:00PM-1:00PM EST. The Zoom link will appear on the Canvas course site.

There will be a two hour workshop required for this class to be scheduled.

Queer (and Queering) Cinema (217515)

Dennis Lim

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course seeks to map a history and to expand the boundaries of what is commonly thought of as queer cinema. We will explore LGBTQ films within a variety of frameworks, including but not limited to queer history, theory, and politics, and across a range of modes and genres, from classical Hollywood to the experimental underground. Looking beyond a predominantly white Western canon, we will consider examples of queer films from around the world, and the cultural and cinematic contexts from which they emerged. Throughout the course we will also engage with larger issues of representation and resistance, the practice of queer reading, and the question of queer form and queer aesthetics.

Class Notes:

The shopping session for this course will be Friday, Jan. 15 from 3pm to 4pm EST. Zoom information will be on the Canvas course site; log in using HUID.

Political Cinema (216346)

Dennis Lim

2020 Fall (4 Credits)

Schedule:

M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This seminar surveys the landscape of global political cinema from the explosive 1960s to the unsettled present. We will trace a history of politically engaged filmmaking and explore the role of cinema in revolutionary culture. The class also seeks to expand our understanding of the ways in which cinema can be political. We will consider the relationship between politics and aesthetics, the possibilities of cinema as politics, and the question of what it means (as Jean-Luc Godard put it) to "make films politically."

Course Notes:

There are weekly film screenings required for this course; schedule to be determined.

Class Notes:

Students who are interested in taking this class are invited to a live shopping session on Mon., Aug. 17 from 3pm to 4pm; the Zoom link, and more information can be found on the Canvas course site.

T 1245 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

With a camera positioned at the entrance to the director's factory, Louis Lumière's famous early film of 1895, *La Sortie de l'usine Lumière à Lyon*, captured workers as they left for the day. Today, surveillance practices have infiltrated daily lives around the globe, from the ubiquitous cameras on city streets and public spaces to tracking systems that monitor, store, and monetize even our most intimate activities. In this class we will probe and problematize the modern history of surveillance technologies and monitoring practices, from the first manifestations of police photography to CCTV, drones, racial profiling, GPS technology, and user security on social media and digital platforms. To this end we will look at exemplary features such as *The Conversation* (1974), *Strange Days* (1995), *Caché* (2005), *Red Road* (2006), *The Lives of Others* (2006), and *Snowden* (2016), documentaries like *13th* (2016), *The Creepy Line* (2018), and *The Great Hack* (2019) as well

as selected videos and tv programs. We will also consider the analytical and theoretical perspectives of, among others, Michel Foucault, Jean Baudrillard, Wolfgang Ernst, Gilles Deleuze, Harun Farocki, Shoshana Zuboff, Catherine Zimmer, Lev Manovich, Mark Andrejevic, Thomas Levin, Patricia Pisters, and Christian Parenti.

This course is intended for students who have developed the beginnings of a practice they are prepared to pursue. The motive is to assemble a group of disparate artists who come together to exchange thoughts across disciplines: painting next to photography next to writing next to filmmaking, and so on.

Course Notes:

This course meets from 6pm to 9pm EST on Wednesdays.

Recommended for concentrators in Art, Film, and Visual Studies in their junior and senior year but also open to others with permission of the instructor.

Class Notes:

FALL 2020: There is still space available in this course! Please contact the course's Teaching Assistant, Hadi Fallahpisheh at fallahpisheh@gmail.com for more information.

We adopt the interview process for this class to make an early, personal connection with each applicant and to clarify what is expected in the class. Because the class is "non-denominational," in that any way of working is acceptable, be it painting, sculpture, music, photography, video, design, writing, acts of civil disobedience, performance, etc., we are looking for a range of practices for the class, and students at a range of levels. The class depends upon its members to be self-motivated and self-determining, in that no specific assignments for studio are made. The members of the class must define projects, develop them, and execute them with the consultation with the professor, teaching assistant, and other members of the class. In other words, we want every applicant to know what they are in for opting to take this class.

Studio Language (213421)

Nora Schultz

2020 Fall (4 Credits)

Schedule: MW 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 10

Directed to specific themes in the practices of graduate students and undergraduate students in their junior and senior years, Studio Language considers the intersection of visual art and language (in its many forms). Drawing on intermedia and interdisciplinary work in the wider fields of art making and art theory, the course investigates the relationship between artwork and its conceptualization, contextualization, critique, exhibition, and dissemination.

Course Notes:

This course is for graduate students and undergraduates in their junior and senior years.

Class Notes:

Enrollment in *Studio Language* is limited to ten students, selected by lottery. Though the lottery process is random, the department of Art, Film and Visual Studies (AFVS) requires that priority be given to: AFVS concentrators, prospective AFVS concentrators, secondary field students, and graduate students who require a studio course. To enter the enrollment lottery, attend one introductory meeting in shopping week.

Introductory meetings will be held during "shopping week" on Monday, August 17 from 9:00–10:30AM and Wednesday, August 19 from 10:30AM–12:00PM. Please email the instructors if you are unable to attend one of these dates.

This course meets from 9:15 to 12pm EST.

New Media Theory (110046)

Laura Frahm

2020 Fall (4 Credits)

Schedule:

M 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

This graduate course surveys new developments in media theory and provides an overview of advanced approaches to the study of media. We will look at different schools and streams of thought that productively expand and transform the established corpus of media theory, with a special emphasis on recent positions on art, media, and ecology. Weekly blogs, film screenings, and research projects will further enhance our survey of recent media theoretical positions.

Course Notes:

Open to all graduate students and advanced undergraduate students.

This course has mandatory weekly film screenings to be determined.

Sonic Ethnography (108976)

Ernst Karel

2021 Spring (4 Credits)

Schedule:

MW 0600 PM - 0845 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This is a practice-based course in which students record, edit, and produce anthropologically informed audio works. Students will select a local 'site' where they can safely spend time throughout semester, and where the basic activity of research is stereo audio recording. Given our current spatial dispersion, this semester the focus will be on composing specifically for headphones. Over the course of the semester, listening sessions will provide a broad context of contemporary work using location recordings, and readings will situate the practice in relation to adjacent currents. In their projects, students will experiment with technical and conceptual strategies of recording and composition as they engage with questions of ethnographic representation through the medium of audio.

Recommended Prep:

Experience in media production helpful but not required.

Art, Film, and Visual Studies 271

Proseminar in Film and Visual Studies: Theory (122080)

Giuliana Bruno

2020 Fall (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

An advanced survey of current debates on the place of the moving image in contemporary visual culture, art practice, and media ecologies, with regards to concepts of space, time, archive, movement, and affect. Topics include visual studies and the culture of modernity, media archaeology and cultural techniques, screen culture in the museum, new media and contemporary art, moving images and architectural space.

Course Notes:

Required of all Film and Visual Studies graduate students as well as graduate students intending to declare a secondary field in Film and Visual Studies.

Class Notes:

Visit Canvas class site during shopping week for application and registration procedure.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students

Art, Film, and Visual Studies 283

Screens--Projecting Media and the Visual Arts (108653)

Giuliana Bruno

2020 Fall (4 Credits)

Schedule:

W 1200 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

How do screens function as interface between us and the world? What is the role of the screen in contemporary visual arts and media culture? The art of projection has traveled from film theatre to art gallery, from pre-cinematic exhibition to post-medium conditions. We examine this history and archaeology of screen media, and their current cultural and aesthetic dimensions. We explore the architecture of the screen, transforming into environments of screen surfaces and interconnected sites of projection

Course Notes:

There will be occasional film screenings to be arranged.
Offered jointly with the Graduate School of Design as 4356.

Class Notes:

Visit Canvas class site during shopping week for application and registration procedure.

Recommended Prep:

A course in film or visual theory, art history, architecture studies or the equivalent course in cultural history.

Art, Film, and Visual Studies 293

From Biopolitics to Care of the Self (New Course) (216303)

David Joselit

2020 Fall (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This seminar will consist of close readings of Michel Foucault, focusing on his Collège de France lectures (1971 – 1984), and charting his transition from biopolitics, the seizure of human life by apparatuses of power, to "care of the self," exploring the extent and limits of a subject's agency to fashion itself. The course will put these ideas in dialogue with thinkers like Rosi Braidotti, Achille Mbembe, Rey Chow, and Judith Butler.

CMP Projects: Production and Publication (216340)

Joana Pimenta

2020 Fall (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

The goal of *CMP Projects* is to establish an alternative curatorial and editorial platform for research-based artistic projects in various academic fields, producing and publishing works that bridge different media and formats, and support forms of production positioned between research and practice. The class will work towards curating and supporting the production as well as the diffusion of selected research-based artistic projects; build a network which enables collaboration with other art institutions, museums, art/design schools, artist-run spaces, publishers, book fairs, etc.; invite guest curators, artists and editors to offer critiques and lead workshops. Throughout the semester, the class will produce a new publication series, *CMP projects*, featuring work curated and edited by the students, and produced by artists and researchers from Harvard and beyond. It will serve as an editorial space where research can be articulated experimentally. Artist-researchers pursuing individual publication projects are also welcome to join.

Class Notes:

Course Admission Process: This course is limited to ten students, and an interview with the instructors is required before admission. The interview will be 5 to 10 minutes long, and we will discuss the work you plan to develop during the semester. We are also happy to respond to any questions you may have about the class. If you are interested in enrolling, please contact Joana Pimenta and Noha Mokhtar (pimenta@fas.harvard.edu; mokhtar.noha@gmail.com) with a brief description of your work, and links to documentation of any projects. Interviews will take place on Friday, August 21. (If you are unable to meet with us then, please write to let us know and we will schedule an alternative meeting time.)

Astronomy

Subject: Astronomy

Astronomy 1

The Big Questions of Astronomy (113797)

David Charbonneau

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 60

We will discuss the big questions of astronomy that have engaged scientists and the general public alike for centuries: How did the universe begin? What is the ultimate fate of the Sun? How do planets form? Is there life outside the Solar system? Students will use telescopes to study the night sky and examine how the combination of astronomical observations and physical theory have led to an understanding of the vast and dynamic cosmos we inhabit.

Class Notes:

In Fall 2020, the course will be offered through remote instruction: There will not be synchronous lectures. Rather, a weekly reading will be assigned, and students will then meet in small groups twice a week with Prof. Charbonneau to discuss the content. Several different weekly time slots will be offered so that any student should be able to identify a reasonable option regardless of their local time zone. Students will also meet weekly in a small group section with their teaching fellow. Each week there will be a brief reading questionnaire and a homework assignment, submitted via Canvas.

Astronomy 5

Astrosociology (205519)

Gerhard Sonnert

2021 Spring (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 50

In an age of magnificent astronomical progress and discoveries, the increasing knowledge of the cosmos has manifold repercussions in society and culture. This course will examine how outer space-related phenomena impact, or potentially impact, society and culture, and vice versa. Especially in light of the proliferating discovery of exoplanets, an intriguing topic of astrosociology is presented by the possibility of the existence of extraterrestrial civilizations, their detection, communication with them, and even contact.

Astronomy 16

Stellar and Planetary Astronomy (118136)

John Johnson

2021 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to the physical principles describing the formation and evolution of stars and their planetary companions. Topics include thermal radiation and stellar spectra; telescopes; energy generation in stars; stellar evolution; orbital dynamics; the Solar system; and exoplanets. This course includes an observational component: students will determine the distance to the Sun, and use the Clay Telescope atop the Science Center to study stellar evolution and detect exoplanets.

Course Notes:

This course is offered each year.

Recommended Prep:

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16 or Physical Sciences 12a.

Requirements:

Prerequisite: Physics 15a, Physics 16, or Physical Sciences 12a. May be taken concurrently.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	-6
FAS Divisional Distribution	None

Astronomy 17

Galactic and Extragalactic Astronomy (125884)

Daniel Eisenstein

2020 Fall (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

35

This course will introduce you to the physical principles describing galaxies and the composition and evolution of the Universe. We will cover a wide range of topics from nearby galaxies to quasars to the Big

Bang.

The goals of the course are 1) to introduce you to the broad sweep of extragalactic astronomy and cosmology, including major concepts and common jargon, 2) to develop detailed applications of physics, particularly mechanics, to galaxies and cosmology, 3) to gain exploratory experience in observational astronomy.

Course Notes:

This course is offered each year.

Class Notes:

Relative to past years, in Fall 2020 we are making some important changes to the course. While the topics are largely the same, we are going to integrate observational methods and survey astronomy into the course on a weekly basis, using the upcoming Dark Energy Spectroscopic Instrument at the Kitt Peak National Observatory Mayall telescope as a continuing example (<http://desi.lbl.gov>). In small groups, students will explore the imaging and spectroscopic data sets of DESI, the Legacy Survey, and the Sloan Digital Sky Survey, as a way to learn about the observational practice of astronomy as well as the engineering considerations of a major observatory.

Class Notes:

The course requires attendance at both the Monday and Wednesday classes; this is not an asynchronous course. These classes will be interactive discussion and problem-solving sessions, rather than traditional lectures. There will be required readings before Monday in-class discussions. Each week will involve a multi-step assignment, including in-class group work on Wednesdays, a problem set, and a short quiz due by the end of the week. We are designing it to require about 10 hours/week, including class time.

Astronomy 17 is a required course for both the concentration and the secondary field in Astrophysics. Astronomy 16 & 17 form a complete introductory survey of astrophysics. You can take these courses in either order.

Recommended Prep:

An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16, or Physical Sciences 12a, as well as a course in integral calculus, which may be taken concurrently, satisfied by Math 1b.

Additional Course Attributes:

The Unity of Science: From the Big Bang to the Brontosaurus and Beyond (212793)

Irwin Shapiro

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Science is like a well-woven, ever-expanding fabric, designed to uncover Nature's secrets. This course emphasizes the strong connections between subfields of science, showing it as the never-ending and greatest detective story ever told, with evidence always the arbiter. These characteristics are exhibited in the semi-historical treatment of three main themes: unveiling the universe, the earth and its fossils, and the story of life.

Methods of Observational Astronomy (125880)

Edo Berger

2021 Spring (4 Credits) **Schedule:** TR 1030 AM - 1145 AM

Instructor Permissions: Instructor **Enrollment Cap:** 15

In this course we will learn the basic tools of modern astronomical research, including telescopes, detectors, imaging, spectroscopy, and common software. Emphasis will be placed on both the theory behind telescopes and their use, and hands-on experience with real data. Using this basic knowledge we will analyze science-level astronomical data from a wide range of telescopes and review the basic properties of stars, galaxies, and other astronomical objects of interest. The course includes a trip to the F. L. Whipple Observatory on Mount Hopkins, Arizona, to gather data with various telescopes.

Course Notes:

This course is offered each year.

Enrollment Cap: n/a

Fluid and gas dynamics with applications drawn from astrophysical phenomena. Topics include: kinetic theory, diffusive effects, incompressible fluids, inviscid and viscous flows, boundary layer theory, accretion disks, fluid instabilities, turbulence, convection, gas dynamics, linear (sound) waves, method of characteristics, Riemann invariants, supersonic flow, non-linear waves, shocks, similarity solutions, blast waves, radiative shocks, ionization fronts, magnetohydrodynamics, hydromagnetic shocks, dynamos, gravitational collapse, principles of plasma physics, Landau damping, computational approaches, stability criteria, particle based (Lagrangian) methods, adaptive mesh refinement, radiation hydrodynamics.

Class Notes:

The Monday morning classes will start at 8:30 am to accomodate students on other continents.

Astronomy 203

Interstellar Medium and Star Formation (118138)

Karin Oberg

2021 Spring (4 Credits)

Schedule:

T 0700 PM - 0820 PM

R 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

The interstellar medium (ISM) is the reservoir of gas and dust between stars. It is the nursery of new stars and planets, and the depository of energy and material from stellar winds and supernovae. This course will treat the often extreme physics and chemistry of the interstellar medium under its observed range of temperatures, densities, and radiation fields. It will cover the processes that govern the interactions between the ISM, stars and their host galaxies, including star and planet formation, and feedback from stellar deaths. The observational and laboratory methods and results that underpin the theories of interstellar environments will be highlighted.

Course Notes:

This course offered in alternate years.

Class Notes:

The Thursday morning classes will begin at 8:30 AM to accomodate students in other countries.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Local offset from Cambridge MA	+12
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	+13
Local offset from Cambridge MA	+7
Local offset from Cambridge MA	+9:45

Astronomy 204

Stellar Astrophysics (118266)

Charles Conroy

2020 Fall (4 Credits)

Schedule:

T 0700 PM - 0815 PM

R 0830 AM - 0945 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Stars are the basic building blocks of the universe, and they are responsible for the production of most elements via nucleosynthesis. This course covers the energy generation and transport in stars, stellar atmospheres and radiative transfer, stellar evolution, asteroseismology & variability, compact objects and supernovae.

Course Notes:

This course offered in alternate years.

Recommended Prep:

Astronomy 200 (may be taken concurrently).

Additional Course Attributes:

Astronomy 302

The Science of Teaching Science (117515)

Philip Sadler

2021 Spring (4 Credits)

Schedule:

T 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Learn the secrets of lecturing well, leading discussions, connecting to real-world applications, and creating tests in any scientific discipline as we focus on relevant educational research and case studies, plus engage in practical classroom activities.

Course Notes:

Open to graduate students in all areas of science. Assignments help illustrate research findings from life, earth, and physical science education. Undergraduates with an interest in teaching at the pre-college level may be admitted with instructor permission. This course offered each year.

Recommended Prep:

Experience as a teaching fellow or tutor.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	-6
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	+7
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Astronomy 305

Topics in Origins of Life Research (161303)

Dimitar Sasselov

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

30

This semester we will lay out a plausible story of how life emerged on Earth from chemistry that led to the synthesis of molecular building blocks, which in turn self-assembled to form cells. I will do that by reviewing two recent papers – the required reading for this course [1,2]. Each week we will also use, as necessary, relevant papers to the topics to be discussed. The list of topics is enclosed in the syllabus, as are some of the papers.

Class Notes:

This course meets at the Center for Astrophysics, 60 Garden St, in the Classroom A-101. Actual class times are 2:00 - 3:15 pm

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Sciences in Dental Medicine

Subject: Bio Sciences in Dental Med

Bio Sciences in Dental Med 300

Biological Sci in Public Hlth 208

Human Physiology (113276)

Nancy Long Sieber

2020 Fall (4 Credits)

Schedule: MW 0945 AM - 1114 AM

Instructor Permissions: None

Enrollment Cap: n/a

As an introduction to the principles governing function in the human body, this course is designed to provide a framework in physiology for future public health researchers and professionals who have not taken college level physiology courses. Emphasis is placed on the concept of homeostasis and on integrative aspects of physiology. Examples of pathophysiology and environmental physiology will highlight these processes.

Course Activities: Problem sets, exams, laboratory

Course note: students should have taken college level introductory biology before taking this class

Course Notes:

Offered jointly with the School of Public Health as EH 205

Class Notes:

THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | EH Plans and Subplans

Wave 2 | PHD BPH, PHS SBS, PHS EPI & Wave 1

Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM

Wave 2 | 8/26/2020 12:00AM – 8/27/2020 11:59PM

Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

****Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course**

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Biological Sci in Public Hlth 215

Principles of Toxicology (115767)

Jin-Ah Park

2020 Fall (4 Credits)

Schedule:

MW 0945 AM - 1114 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The course is designed to expose students to the principles and methods that should be used to determine whether a causal relationship exists between specific doses of an agent and an alleged adverse effect, observed primarily in humans. Integration of principles and methods of toxicology is extremely important since the primary purpose of toxicology is to predict human toxicity. Toxicological data obtained in animal studies must be placed in proper relationship to the exposure observed in the human population. The course deals with organ systems and whole organisms but relies on an understanding of the mechanistic approaches covered in EH508. Key target organs, selected classes of toxic agents and the application of toxicological principles are covered. Students are assigned a topic for a short presentation.

Course Notes:

Offered jointly with the School of Public Health as EH 504.

THIS CLASS HAS PRIORITY ENROLLMENT

Biological Sciences Communications (110521)

Brendan Manning

Zachary Nagel

2020 Fall (4 Credits)

Schedule:

MW 0230 PM - 0359 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Emphasis of this course is effective scientific communication. Students will develop skills in writing and critiquing grants and scientific papers, learn about the grant application process, and present seminars that focus on structure, language, and content appropriate for technical and lay audiences. Topics covered will apply to research in the biological sciences across various disciplines related to public health and medicine.

Course Notes:

Required for all first year BPH PhD students.

Course Location: TBA

Cross-listed with DBS 205

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biological Sci in Public Hlth 222 Section: 01

The Biological Basis of Human Nutrition (111293)

Frank M. Sacks

Jeremy Furtado

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 30

This course teaches the biochemistry and metabolism of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Contemporary topics are emphasized. Particular emphasis is given to current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer.

Course Notes:

Offered jointly with the Medical School as BPH 733.0 and with the School of Public Health as NUT 202.

Recommended Prep:

Introductory nutrition course. Prior familiarity with nutrition and the health sciences expected, as well as a basic knowledge of biochemistry and human physiology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Molecular Basis for Nutritional & Metabolic Diseases (127598)

Chih-Hao Lee

2021 Spring (2 Credits)

Schedule: W 0200 PM - 0330 PM
F 0345 PM - 0515 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

Students have an opportunity to review and analyze key papers that provide physiological and molecular evidence that bears on a topic of current interest in human nutrition and related disorders. Additionally, students learn skills necessary for critical thinking, and oral and written presentations.

Course Notes:

Offered jointly with the School of Public Health as ID 512.

Will next be offered in Spring 1 2023.

Interdisciplinary Training in Pulmonary Sciences Part II (127599)

Quan Lu

2021 Spring (2 Credits)

Schedule:

T 0945 AM - 1044 AM

F 0101 PM - 0200 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing

interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

Biomedical Engineering

Subject: Biomedical Engineering

Biomedical Engineering 110

Physiological Systems Analysis (150189)

Maurice Smith

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A survey of systems theory with applications from bioengineering and physiology. Analysis: differential equations, linear and nonlinear systems, stability, the complementary nature of time and frequency domain methods, feedback, and biological oscillations. Applications: nerve function, muscle dynamics, cardiovascular regulation. Laboratory: neural models, feedback control systems, properties of muscle, cardiovascular function.

Recommended Prep:

Engineering Sciences 53 (or equivalent); Physical Sciences 12b (or equivalent); and Math 21a and Math21b (or equivalents)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Biomedical Engineering 125

Tissue Engineering (121282)

David Mooney

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Fundamental engineering and biological principles underlying field of tissue engineering, along with examples and strategies to engineer specific tissues for clinical use. Students will prepare a paper in the field of tissue engineering, and participate in a weekly laboratory in which they will learn and use methods to fabricate materials and perform 3-D cell culture.

Recommended Prep:

LS1a, Chem17 or 20, or biochemistry and cell biology background.

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
Local offset from Cambridge MA	+7
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Local offset from Cambridge MA	-6

Biomedical Engineering 128

Introduction to Biomedical Imaging and Systems (204470)

Linsey Moyer

2021 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The course is designed as an introduction for students who want to gain both hands on training as well as an introduction to the physics and image reconstruction techniques involved in generating images. The course will introduce the fundamentals of the major imaging modalities including, but not limited to: electron microscopy, optical microscopy, x-ray, computed tomography, ultrasound, MRI, and nuclear imaging, as well as an overview of in vivo imaging and molecular imaging.

Recommended Prep:

Physics, Calculus; Basic biology helpful but not required.

Requirements:

Prerequisite: Applied Physics 50b OR Physical Sciences 12b OR Physics 15b OR PHYSICI 3 AND Math1b or higher

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
FAS Divisional Distribution	None
Local offset from Cambridge MA	-6
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
Local offset from Cambridge MA	+17
FAS: Live Shopping Event	Live Shopping Event

Biomedical Engineering 129

Introduction to Bioelectronics (211359)

Jia Liu

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to bioelectronics and its applications in neuroscience, neuroengineering, cardiology, wearable technology and so on. The focus is on the basic principles of bioelectricity, biochemistry and physiological behaviors of biological systems and how to design tools to precisely measure and control them. Key themes throughout the course will include bioelectricity, biochemistry, cellular and tissue physiological behavior, optogenetics, sensors, stimulators, circuits, signals, biointerface and applications. This includes both the practical and theoretical aspects of the topic.

Recommended Prep:

Applied Physics 50b (OR Physical Sciences 12b, OR Physics 15b), and Math 1a or equivalent. Some background in chemistry and biology at the level of ES 53 is helpful but not required.

Requirements:

Prerequisite: LS1a or LPSa; Math 1b; and AP50b or Physical Sciences

12b (or equivalent)

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	+10 +11
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
Local offset from Cambridge MA	+9:45
Local offset from Cambridge MA	+7
Local offset from Cambridge MA	+8 +9
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biomedical Engineering 130

Neural Control of Movement (122341)

Maurice Smith

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Approaches from robotics, control theory, and neuroscience for understanding biological motor systems. Analytical and computational modeling of muscles, reflex arcs, and neural systems that contribute to motor control in the brain. Focus on understanding how the central nervous system plans and controls voluntary movement of the eyes and limbs. Learning and memory; effects of variability and noise on optimal motor planning and control in biological systems.

Course Notes:

Offered in alternate years.

Recommended Prep:

Mathematics 21b or Applied Mathematics 21b or equivalent, probability and statistics, Applied Physics 50a, Physical Sciences 12a, or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
Local offset from Cambridge MA	-6
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	+7

Biomedical Engineering 131

Neuroengineering (216486)

Jia Liu

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course provides an introduction to biological neural systems, and current engineering efforts to understand, control, and enhance the function of neural systems. The focus is on the basic knowledge of molecular basis, anatomic structures, and electrical functions of central and peripheral nervous systems, and the most state-of-the-art genetic/genomic, optical, electrical, magnetic, and computational tools for nervous systems. Key themes throughout the course will include structures of central and peripheral nervous systems, genetic engineering, RNA sequencing, optogenetics, microscope, bioelectronics, MRI, and computational neuroscience. This includes both the practical and theoretical aspects of the topic.

Course Notes:

Enrollment limited to 20 students total.

Recommended Prep:

ENG-SCI 54 recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biomedical Engineering 191

Introduction to Biomaterials (110020)

Jennifer Lewis

2021 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

24

A biomaterial is any form of matter that is produced by or interacts with biological systems. One of the pillars of biomedical engineering is to use naturally derived and synthetic biomaterials to treat, augment, or replace human tissues. This course examines the structure, properties and processing of biomaterials.

Recommended Prep:

Physical sciences 1, Math 1b.

Requirements:

Prerequisite: (LS 1A or LPS A or PS 1 or PS 11) AND (Math 1b or higher)

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
Local offset from Cambridge MA	+7
Local offset from Cambridge MA	+8 +9
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics

Subject: Biophysics

Biophysics 170

Evolutionary and Quantitative Genomics (121318)

Leonid Mirny

2020 Fall (4 Credits)

Schedule:

MWF 1100 AM - 1229 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Aims to develop deep quantitative understanding of basic forces of evolution, molecular evolution, genetic variations and their dynamics in populations, genetics of complex phenotypes, and genome-wide association studies. Application of these foundational concepts to cutting edge studies in epigenetics, gene regulation and chromatin; cancer genomics, and microbiomes. Modules consist of lectures, journal club discussions of high impact publications, and guest lectures that provide clinical correlates. Homework assignments and final projects aim to develop hands-on experience and understanding of genomic data from evolutionary principles.

Course Notes:

Also listed as HST.508. Harvard students should enroll through Biophysics 170.

Meets remotely for 2020 Fall semester. Contact Instructors for access, or email program administrator.

Mondays & Wednesdays 11:00 am-12:30pm.

Class Notes:

Class will be offered as a remote course. First day of class is Wednesday, September 2nd.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 205

Computational and Functional Genomics (119807)

Martha Bulyk

Shamil Sunyaev

Peter Sorger

2021 Spring (4 Credits)

Schedule:

MW 0230 PM - 0345 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Experimental functional genomics, computational prediction of gene function, and properties and models of complex biological systems. The course will primarily involve critical reading and discussion rather than lectures.

Class Notes:

Meets via Zoom for the Spring 2021 semester.

Recommended Prep:

Molecular Biology (MCB 52 or equivalent), solid understanding of basic probability and statistics.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 242R

Special Topics in Biophysics (117635)

Venkatesh Murthy

Hao Wu

Martha Bulyk

Stephen Harrison

Mark Andermann

Joseph John Loparo

Tomas Kirchhausen

Wesley Wong

Michael Do

2021 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Biophysical topics emerging from special interest research not normally available in established curriculum. The 2020-21 year's course is focused across 4 topic blocks: Advanced Optical Imaging (e.g., lattice light-sheet microscopy) in the context of single-molecule sensitivity imaging of cells and tissues, Cryo-EM imaging, with an introduction to basic Fourier optics; X-ray Crystallography; Single-molecule Approaches in Biology: Single-molecule force spectroscopy, single-molecule fluorescence, and the role of thermal fluctuations on geometry and interaction kinetics; Biophysical Neuroscience: Two-photon calcium imaging, electrophysiology, and properties of single molecules (ion channels, visual pigments).

Course Notes:

Lectures, Research Papers and potential lab components.

Class Notes:

Course will include four topic blocks that involve a lecture and paper reading/ presentation component.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	-6
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
Local offset from Cambridge MA	+17
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 300

Introduction to Laboratory Research (121518)

Venkatesh Murthy

Martha Bulyk

Adam Cohen

2020 Fall (4 Credits)

Schedule:

MWF 0430 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

50

Introductory lectures by associated Biophysics faculty members. Lectures Fall semester only accompanied by three periods of instruction in laboratories of structural biology, cell and membrane biophysics, molecular genetics and development, neurobiology, bioinformatics, and physical biochemistry.

Course Notes:

Fall semester only: meets on both the Cambridge and HMS campuses. Contact department Admin for fall course location and individual faculty member presentation schedule.

Class Notes:

Contact Biophysics Program Administrator for Schedule of Faculty presentation topics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 335

Developing novel single-molecule methods to study multi-protein complexes (127686)

Joseph John Loparo

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 336

Mass Spectrometric and Proteomic Studies of the Cell Cycle (126676)

Hanno Steen

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 337

Membrane Structure and Function (111008)

Keith Miller

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 338

Foundation of Information Directed Molecular Technology: Programming Nucleic Acid Self-Assembly (127687)

Peng Yin

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 339

Theoretical and Experimental Approaches to Study Genetic Variation within Populations (127688)

Michael Desai

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 340

Novel Theory and Experiments in NMR Spectroscopy (127689)

Andrew Kiruluta

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 341

Structure and Function of Ligand-Gated Ion Channels (121622)

Jonathan Cohen

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 342

Novel Optical Detection for Treatment and Monitoring Approaches Targeting Major Disease (127690)

Conor Evans

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 343

Theoretical Protein Science, Bioinformatics, Computational Chemistry (120068)

Eugene Shakhnovich

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 344

Directed Evolution and Design of Simple Cellular Systems (118046)

Jack Szostak

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Course Evaluation	Course Evaluation exempt
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 345

Regulation of RNA Polymerase Motor Mechanism In Vivo (156013)

Stirling Churchman

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 346

Biofilm Dynamics (116418)

Roberto Kolter

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 347

Membrane Dynamics; Membrane Structure (116349)

David Golan

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 349

Structural Biochemistry and Cell Biology of Intracellular Membrane Traffic (113957)

Tomas Kirchhausen

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 350

Organization, Structure and Dynamics of Prokaryotic Cytoplasm (156014)

Ethan Garner

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 352

Mechanical Force in Nanoscale Biology; Hemostasis to Single-Molecule Centrifugation (156015)

Wesley Wong

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 353

Molecular Genetics of Development (114897)

Gary Ruvkun

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 354

Structural Biology and Cancer Drug Discovery (113908)

Gregory Verdine

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 355

Chemical Genetics and Genomics (112211)

Stuart Schreiber

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 360

Functional Mapping of Neurons and their Axonal Inputs Across Cortical Laminae (156016)

Mark Andermann

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 361

Rational Drug Design; Biomaterials Science; Biophysics (120322)

George Whitesides

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 362

Molecular Physiology of Ion Channels (113415)

Gary Yellen

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 363

Biophysics of Receptor-Ligand Interactions (124197)

Stephen Blacklow

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 364

Systems Cell Biology (116372)

Pamela Silver

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 365

Visual Processing in Primates (112369)

John Assad

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 366

Imaging, Optics, and Biology (115666)

David Clapham

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 367

Structure Biology of Cytoplasmic Signal Transduction (115667)

Michael Eck

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 368

Probing Polymers with Nanospores, Experimental Condensed Matter Physics (115668)

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None

Biophysics 369

Organic Chemistry and Chemical Biology of Molecular Evolution (115669)

David Liu

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt

Biophysics 370

Cytoskeleton Dynamics; Mitosis and Cell Locomotion; Small Molecule Inhibitors (115670)

Timothy Mitchison

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 371

Mechanisms of Synaptic Transmission and Plasticity (115671)

Venkatesh Murthy

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 372

Protein Transport Across the ER Membrane (115673)

Tom Rapoport

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 373

DNA Replication and Repair Mechanisms that Suppress Genomic Instability (156017)

Johannes Walter

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 375

Single-Molecule Biophysics (115676)

Xiaoliang Xie

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 376

Functional and Computational Genomics Studies of Transcription Factors and Cis Regulatory Elements (116572)

Martha Bulyk

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 377

Statistical Theory and Inference for Stochastic Processes: With Applications to Bioinformatics (116573)

Jun Liu

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 378

Structural and Cellular Biology of Insulin Signal Transduction (116574)

Steven Shoelson

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 380

Microarray Data: Issues and Challenges (116576)

Leonid Mirny

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None

Biophysics 381

Single-Molecule Biophysics (116577)

Xiaowei Zhuang

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 382

Regulation of Synaptic Transmission and Dendritic Function in the Mammalian Brain (116678)

Bernardo Sabatini

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 384

NMR Spectroscopy on Membrane-associated Proteins and Peptides (119221)

James Chou

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 384

NMR Spectroscopy on Membrane-associated Proteins and Peptides (119221)

James Chou

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 386

Synaptic Plasticity and Neuronal Networks (118091)

Florian Engert

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 386

Synaptic Plasticity and Neuronal Networks (118091)

Florian Engert

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
Course Evaluation	Course Evaluation exempt

Biophysics 387

Structural Studies of the Stereochemistry of Signaling and Transport through Biological Membranes (118092)

Rachelle Gaudet

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 387

Structural Studies of the Stereochemistry of Signaling and Transport through Biological Membranes (118092)

Rachelle Gaudet

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 390

Regulation of Mitosis (118096)

Andrew Murray

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 390

Regulation of Mitosis (118096)

Andrew Murray

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 391

Computational Methods in Genetics, Genomics and Proteomics (118097)

Shamil Sunyaev

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 391

Computational Methods in Genetics, Genomics and Proteomics (118097)

Shamil Sunyaev

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 392

Biophysics of Mechanosensation (119222)

David Corey

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course

Biophysics 392

Biophysics of Mechanosensation (119222)

David Corey

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course

Biophysics 393

The Mechanics and Regulation of Mitosis (119223)

David Pellman

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a**Additional Course Attributes:**

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 393

The Mechanics and Regulation of Mitosis (119223)

David Pellman

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS Divisional Distribution	None
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 394

Experimental Biophysics (119225)

Mara Prentiss

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biophysics 394

Experimental Biophysics (119225)

Mara Prentiss

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Graduate Course
FAS Divisional Distribution	None

Biophysics 395

Biophysics of Cell Adhesion and Vascular Shear Flow (119226)

Timothy Springer

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None

Biostatistics

Subject: Biostatistics

Biostatistics 230

Probability Theory and Applications I (119844)

Marcello Pagano

2020 Fall (4 Credits)

Schedule:

MW 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Notes:

Offered jointly with the School of Public Health as BST230.

Requirements:

Prerequisite: Biostatistics PhD Program

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 231

Statistical Inference I (119845)

Robert Gray

2021 Spring (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

17

Exponential families, sufficiency, ancillarity, completeness, method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, Neyman-Pearson theory, likelihood ratio, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency.

Course Notes:

Offered jointly with the School of Public Health as BST231.

Requirements:

Prerequisite: Biostatistics 230

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
Local offset from Cambridge MA	+10 +11
FAS: Course Level	Primarily for Graduate Students
Local offset from Cambridge MA	+7
FAS Divisional Distribution	Science & Engineering & Applied Science

Local offset from Cambridge MA	+9:45
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	+8 +9

Biostatistics 232

Methods I (119846)

Brent Coull

2020 Fall (4 Credits)

Schedule:

MW 0800 AM - 0930 AM

Instructor Permissions: Instructor

Enrollment Cap:

35

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Notes:

Offered jointly with the School of Public Health as BST232.

Recommended Prep:

Signature of instructor required if prereq not met.

Requirements:

Prerequisite: Biostatistics PhD Program

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 234

Introduction to Data Structures and Algorithms (160641)

Christoph Lange

Georg Hahn

2021 Spring (4 Credits)

Schedule:

MW 1130 AM - 0100 PM

Instructor Permissions: Instructor

Enrollment Cap:

35

Introduction to the data structures and computer algorithms that are relevant to statistical computing. The implementation of data structures and algorithms for data management and numerical computations are discussed.

Course Notes:

Offered jointly with the School of Public Health as BST 234.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 235

Advanced Regression and Statistical Learning (119848)

Junwei Lu

2020 Fall (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimension reduction, and classification methods. Background in matrix algebra and linear regression required.

Course Notes:

Offered jointly with the School of Public Health as BST235.

Requirements:

Prerequisite: Biostatistics 231 AND Biostatistics 232

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 238

Principles and Advanced Topics in Clinical Trials (125262)

David Wypij

2021 Spring (4 Credits)

Schedule:

MW 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course focuses on selected advanced topics in design, analysis, and interpretation of clinical trials, including study design; choice of endpoints (including surrogate endpoints); interim analyses and group sequential methods; subgroup analyses; and meta-analyses.

Course Notes:

Offered jointly with the School of Public Health as BST 214 & BST 238.

Requirements:

Prerequisite: BIST 230 AND BIST 231 (may be taken concurrently)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students

Biostatistics 240

Probability Theory and Applications II (119854)

Lorenzo Trippa

2020 Fall (4 Credits)

Schedule:

MW 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

A foundational course in measure theoretic probability. Topics include measure theory, Lebesgue integration, product measure and Fubini's Theorem, Radon-Nikodym derivatives, conditional probability, conditional expectation, limit theorems on sequences of random variables, stochastic processes, and weak convergence.

Course Notes:

Offered jointly with the School of Public Health as BST240.

Requirements:

Prerequisite: Biostatistics 231

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 241

Statistical Inference II (119855)

Rui Wang

2021 Spring (4 Credits)

Schedule:

TR 0200 PM - 0330 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

Advanced topics in statistical inference. Limit theorems, multivariate delta method, properties of maximum likelihood estimators, saddle point approximations, asymptotic relative efficiency, robust and rank-based procedures, resampling methods, nonparametric curve estimation.

Course Notes:

Offered jointly with the School of Public Health as BST 241.

Requirements:

Prerequisite: Biostatistics 240

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 244

Analysis of Failure Time Data (119849)

L. Wei

2021 Spring (4 Credits)

Schedule:

MW 0945 AM - 1115 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using

counting processes and martingale methods.

Course Notes:

Offered jointly with the School of Public Health as BST 244.

Requirements:

Prerequisite: BIostat 233 AND BIostat 240

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	+8 +9
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	+10 +11
Local offset from Cambridge MA	+7
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Graduate Students
Local offset from Cambridge MA	+9:45

Biostatistics 245

Analysis of Multivariate and Longitudinal Data (119850)

Tom Chen

2020 Fall (4 Credits)

Schedule:

TR 1130 AM - 0100 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The multivariate normal distribution, Hotelling's T², MANOVA, repeated measures, the multivariate linear model, random effects and growth curve models, generalized estimating equations, multivariate categorical outcomes, missing data, computational issues for traditional and new methodologies.

Course Notes:

Offered jointly with the School of Public Health as BST 245.

Requirements:

Prerequisite: Biostatistics 231

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 249

Bayesian Methodology in Biostatistics (119853)

Jeffrey Miller

2021 Spring (4 Credits)

Schedule:

TR 0345 PM - 0515 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

General principles of the Bayesian approach, prior distributions, hierarchical models and modeling techniques, approximate inference, Markov chain Monte Carlo methods, model assessment and comparison. Bayesian approaches to GLMMs, multiple testing, nonparametrics, clinical trials, survival analysis.

Course Notes:

Offered jointly with the School of Public Health as BST249.

Requirements:**Prerequisite: Biostatistics 231 AND Biostatistics 232****Additional Course Attributes:**

Attribute	Value(s)
Local offset from Cambridge MA	+17
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
Local offset from Cambridge MA	-6
FAS Divisional Distribution	Science & Engineering & Applied Science

Biostatistics 281

Genomic Data Manipulation (126944)

*Curtis Huttenhower**Eric Franzosa*

2021 Spring (4 Credits)

Schedule:

MW 0345 PM - 0515 PM

Instructor Permissions: Instructor**Enrollment Cap:**

20

Introduction to genomic data, computational methods for interpreting these data, and survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.

Course Notes:

Offered jointly with the School of Public Health as BST 281.

Requirements:**Prerequisite: BST 272 or BST 273****Additional Course Attributes:**

Attribute	Value(s)
FAS Divisional Distribution	None
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	+17
FAS: Course Level	Primarily for Graduate Students
Local offset from Cambridge MA	-6
All: Cross Reg Availability	Available for Harvard Cross Registration

Biostatistics 282

Introduction to Computational Biology and Bioinformatics (126946)

Xiaole (Shirley) Liu

2021 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Basic biological problems, genomics technology platforms, algorithms and data analysis approaches in computational biology. There will be three major components of the course: microarray and RNA-seq analysis, transcription and epigenetic gene regulation, cancer genomics.

This course is targeted at both biostatistics and biological science graduate students with some statistics

and computer programming background who have an interest in exploring genomic data analysis and algorithm development as a potential future direction.

Course Notes:

Offered jointly with the School of Public Health as BST 282.

Class Notes:

This course is also offered as STAT 215/STAT 115.

Recommended Prep:

Biostatistics degree program or Computational Biology and Quantitative Genetics degree program

Requirements:

Prerequisite: STAT 110 OR CS 50 OR BIOSTAT PhD Students

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	None
Local offset from Cambridge MA	+8 +9
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	+7

Biostatistics 311

Teaching Assistant (211229)

2020 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: Department

Enrollment Cap: n/a

Work with instructors in the department in laboratory instruction and other teaching-related duties.

Additional Course Attributes:

Attribute	Value(s)
ALL: Exclude from Canvas Feed	Exclude from Canvas Feed
FAS: Course Level	Graduate Course
FAS Divisional Distribution	Science & Engineering & Applied Science

Finn: The Great Gaelic Hero (127630)

Natasha Sumner

2021 Spring (4 Credits)

Schedule: MW 1030 AM - 1145 AM**Instructor Permissions:** None**Enrollment Cap:** n/a**This course explores the lengthy and wildly popular Irish and Scottish Gaelic tradition surrounding the hero Finn mac Cumail (Finn McCool). Stories about Finn and his legendary warrior band, the Fianna, have**

circulated in manuscript, print, and oral forms for well over a millennium. The protectors of Ireland and Gaelic Scotland, Finn and the Fianna are presented alternatively as hunters, warriors, and seers. Embodying heroic qualities valued by their culture at different periods, they undertake seemingly impossible tasks and defend Gaels from foreign and supernatural threat.

In the course, we examine literature about Finn and the Fianna as it is presented in medieval and early modern manuscripts; we engage with the rich modern folklore of Ireland, Scotland, and Nova Scotia; and we consider the international impact of the tradition by examining James Macpherson's infamous English-language adaptations and the vicious controversy over their 'authenticity' that erupted in the eighteenth century and persists to this day. All Gaelic texts are read in English translation.

The Celtic Arthur (216050)

Joseph Nagy

2020 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

We will be reading, in translation, the earliest surviving British Celtic texts featuring the figure of Arthur as well as the prototypes of the legendary figures (such as Merlin, Tristan, Isolde, and Guinevere) popularly associated with him. We will also study the historical context behind the evolution of Arthur from Roman Britain to the era of the Norman Conquest and its aftermath; possible analogs to "Celtic Arthur" and Arthurian tales in Irish tradition; reflections of Arthur in Celtic folklore; and Celtic elements in the treatment of Arthurian story in more recent cultures, including operas and films.

Ireland 1600-1800: Upheaval and Adaptation (216034)

Natasha Sumner

2020 Fall (4 Credits)

Schedule:

F 0130 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The two centuries considered in this course witnessed some of the most dramatic and fateful changes in Irish history and, indeed, of the British Empire. The period opens in the midst of armed rebellion linking Gaelic Ireland with Catholic allies from continental Europe which threatened to throw off English monarchical control of the island; it closes on the eve of the Act of Union which would see Ireland legislatively linked to England, Scotland, and Wales. In spite of the political dominance of English crown and Parliament, and the cultural destruction wrought by settler colonialism, Ireland's majority across those 200 years remained Irish-speaking. What do the voices of those witnesses to upheaval tell us about history, culture, colonialism and the character of "modernity" more broadly?

This cross-disciplinary graduate seminar, co-taught by Natasha Sumner (Harvard) and Brendan Kane (University of Connecticut), pairs a consideration of the major historiographical questions associated with early modern Ireland with close study of Irish-language poetry and prose of the seventeenth and eighteenth centuries. In a time of regular conflict and drastic sociopolitical change for the island's Irish-speaking majority, we will consider authors' preoccupations in relation to historical events, and explore their changing creative impulses. Broad historical themes such as the emergence of modern imperialism and state formation will be investigated, and macro-historical themes will be tested through localized case studies. From a literary perspective, critical issues to be deliberated include, but are not limited to, the role(s) of the poet in society, tradition and innovation, orality, and intertextuality. Weekly readings will be drawn from primary sources and historical and literary scholarship, and translations of primary sources will be available. Engagement with the secondary historical literature is intended both to set the literary texts in context and to explore questions of methodology, theory, and argument in working with Irish sources.

The seminar is designed to be accessible to graduate students specializing in either history or literature (in Irish or English). Students from other disciplines are also welcome, and are encouraged to contact the instructors with questions: nsumner@g.harvard.edu; brendan.kane@uconn.edu.

N.B.: This course will be taught concurrently at the University of Connecticut and in the event that in-person instruction is permitted, some of our meetings may take place at UConn. There are no prerequisites. Competence in Irish would be helpful, but is not required.

Recommended Prep:

Competence in Irish would be helpful, but is not required.

Celtic 231

Uncertainly Wonderful: Welsh and Irish Literature Read Again (216375)

Aled Jones

2020 Fall (4 Credits)

Schedule:

R 1200 PM - 0200 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

A chance to read (and to reread) some of the central texts of the medieval 'canon', both prose and poetry, alongside more 'marginal' medieval works. These will be mainly Welsh, but also Irish: e.g., prose legends; political prophecy; poetry of love, praise, mockery and insult. By considering a range of critical studies of these texts, as well as comparative theory and relevant modern rethinkings, our aim will be to develop and focus our own approaches. We ask ourselves which contexts we find relevant, what genres we see being created, and what ways of reading we consider most useful. We know these texts to be wonderful: why exactly is that?

The course is intended to be broadly interdisciplinary and conversation is encouraged between readers and rereaders: students with new perspectives and fresh eyes are welcomed from all areas of study. Relevant Welsh and Irish texts will be provided in translation, though students with relevant linguistic knowledge will be encouraged to engage with the original languages, and with a wider range of texts. Additional close-reading sessions may be arranged.

This Seminar will be taught by Visiting Associate Prof. Aled Llion Jones (Bangor University).

Subject: Scottish Gaelic

Scottish Gaelic 130 Section: 1

Introduction to Scottish Gaelic (111042)

Natasha Sumner

2020 Fall (4 Credits)

Schedule: MTWR -

Instructor Permissions: None

Enrollment Cap: n/a

Scottish Gaelic is spoken primarily in communities of the West Highlands and the Hebrides—a group of islands off the west coast of Scotland. There is also a Gaelic community on Cape Breton Island in Nova Scotia. Gaelic language and culture thrive in poetry, fiction, traditional and

contemporary music, oral tradition, and a very lively blogosphere.

The course introduces students to Scottish Gaelic as it is spoken and written today. It surveys the grammar while also emphasizing practice in speaking the language. Class work is highly participatory; students are encouraged to take part in a range of communicative activities which enhance oral/aural ability. Translation exercises develop skills in the written language. A range of audio/audiovisual materials and online resources is used to support student learning. Meets four times a week.

Course Notes:

The combination of Scottish Gaelic 130 followed by Scottish Gaelic 131r satisfies the language requirement. It is recommended in any case that this course be followed by Scottish Gaelic 131r. May not be taken Pass/Fail. Not open to auditors. Meets 4 times/weekly.

Additional Course Attributes:

Subject: Breton

Breton 122

Introduction to Modern Breton (216064)

Joseph Nagy

2020 Fall (4 Credits)

Schedule: MTWR -

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to the basic grammar of the standard spoken language of Brittany, a region of coastal western Europe deeply rooted in the Celtic tradition. Emphasis will be on pronunciation and conversational skills, but attention will also be paid to the cultural, historical, and folkloric background to this Celtic language. Included among the readings will be simple folk texts. Meets four times a week.

Subject: Irish

Irish 132

Introduction to Modern Irish (119128)

Natasha Sumner

2020 Fall (4 Credits)

Schedule: MTWR -**Instructor Permissions:** None**Enrollment Cap:** n/a

Irish is the first official language of Ireland, and it has been officially recognized in Northern Ireland since 1998. Today Irish is spoken not only in the western 'Gaeltachtaí' (Irish-speaking regions), but also in cities like Dublin and Belfast. There is Irish-language television, film, radio, and print journalism, and many wonderful poets and fiction writers continue into the present a literary tradition that dates back to the sixth century.

The course introduces students to Irish as it is spoken and written today. Class work is participatory, and includes conversational role play and games as well as grammar study and drills. Audio and audiovisual resources reinforce pronunciation and aural comprehension. Songs, proverbs, and poems are an integral part of the course, introducing students to the vibrant oral and literary tradition of Gaelic Ireland. Meets 4 times a week.

Course Notes:

The combination of Irish 132 and 133r satisfies the language requirement. It is recommended in any case that this course be followed by Irish 133r. May not be taken Pass/Fail. Not open to auditors. Meets four times a week for an hour.

Additional Course Attributes:

Attribute	Value(s)
FAS: Meets Foreign Lang Req	Irish

Chemical and Physical Biology

Subject: Chemical and Physical Biology

Chemical and Physical Biology 91

Research for Credit in Chemical and Physical Biology (122591)

Dominic Mao

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

91 is research for credit. It cannot be taken as a fifth course. To be eligible to enroll, you must have a Harvard-affiliated principal investigator agree to mentor you for the semester. For this reason, students must reach out to labs and interview with labs ahead of the start of the semester. Students are expected to work an average of 15 hours/week during term time.

Course Notes:

Limited to CPB concentrators. Students must have secured a position in a laboratory prior to enrolling in the course; the instructor will verify this with the faculty sponsor. Ordinarily may not be taken as a fifth course. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Chemical and Physical Biology 99A

Laboratory Research for Honors Thesis (122592)

Dominic Mao

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** 30

Laboratory research in topics related to the CPB concentration, culminating in an undergraduate thesis submitted to the CPB undergraduate office for review by members of the Board of Tutors in Biochemical Sciences and the greater Boston research community. The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Notes:

Limited to students writing a thesis in CPB. Students are required to submit a written proposal to the CPB undergraduate office in the summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work."

Chemical and Physical Biology 99B

Laboratory Research for Honors Thesis (159732)

Dominic Mao

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** 30

Laboratory research in topics related to the CPB concentration, culminating in an undergraduate thesis submitted to the CPB undergraduate office for review by members of the Board of Tutors in Biochemical Sciences and the greater Boston research community. The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Notes:

Limited to students writing a thesis in CPB. Students are required to submit a written proposal to the CPB undergraduate office in the

summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work."

Requirements: Pre-requisite: CPB 99A

Chemistry and Chemical Biology

Subject: Physical Sciences

Physical Sciences 1

Chemical Bonding, Energy, and Reactivity: An Introduction to the Physical Sciences (122574)

Kang-Kuen Ni

2021 Spring (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The course covers the chemistry and physics underlying molecular phenomena in the world. Starting from a single electron, the course will build up to atoms, molecules, and materials. Interactions of molecules are studied through thermochemistry, equilibria, entropy and free energy, acids and bases, electrochemistry, and kinetics. Applications include physical principles in biology, global energy demands, and modern materials and technology.

Course Notes:

A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

This course is part of an integrated introduction to the physical science intended for students who plan to pursue a concentration in the physical or life sciences and/or to satisfy a pre-medical requirement in general/inorganic chemistry. Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep:

A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

Local offset from Cambridge MA	+7

Physical Sciences 10

Quantum, Statistical, and Computational Foundations of Chemistry (107367)

Adam Cohen

2020 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to the fundamental theories of quantum mechanics and statistical mechanics and their role in governing the behavior of matter. The course begins with the quantum behavior of a single electron and develops the elements of the periodic table, the nature of the chemical bond, the bulk electronic and thermal properties of materials, and the thermodynamics of chemical reactions. Applications include semiconductor electronics, solar energy conversion, medical imaging, and the stability and dynamism of living systems. Calculus and numerical simulations will be used extensively. In at-home laboratory exercises, students will construct and apply instruments to illustrate core principles from the course.

Course Notes:

Three pre-recorded lectures will be given weekly, which students watch asynchronously. Students are required to attend the interactive live class meetings on Mondays, Wednesdays, and Fridays. During enrollment, students can choose either the 10:30 am - 11:45 am ET blocks on MWF (option 1) or the 7:30 pm - 8:45 pm ET blocks on MWF (option 2). On Mondays, the course instructor Professor Adam Cohen leads the class meeting from 10:30 am - 11:45 am ET. In the 7:30 pm - 8:45 pm class, students will watch a recording of the morning class in an interactive viewing session hosted by teaching fellows. In both Monday sessions, students will participate in breakout rooms, ask questions, and work on exercises. (Students who choose the evening class option are welcome and encouraged to attend the Monday morning class if possible.) On Wednesdays and Fridays, the morning and evening class meetings are repeated sessions where students participate in problem solving discussion with a Section TF and conduct labs (both numerical simulations and at-home hands-on lab exercises) with a Lab TF.

Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical school can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11.

Recommended Prep:

A strong background in chemistry (Chemistry AP score of 5, or Physical Sciences 1, or equivalent preparation), mathematics at the level of Mathematics 1b (may be taken concurrently), and some familiarity with physics (force, energy, work, and electric charge).

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration

Physical Sciences 11

Foundations and Frontiers of Modern Chemistry: A Molecular and Global Perspective (107368)

James Anderson

Gregory C. Tucci

Lu Wang

2021 Spring (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The Physical Sciences hold the key to solving unprecedented problems at the intersection of science, technology, and an array of rapidly emerging global scale challenges. The course emphasizes a molecular scale understanding of energy and entropy; free energy in equilibria, acid/base reactivity, and electrochemistry; molecular bonding and kinetics; catalysis in organic and inorganic systems; the union of quantum mechanics, nanostructures, and photovoltaics; and the analysis of nuclear energy. Case studies are used both to develop quantitative reasoning and to directly link these principles to global strategies.

Course Notes:

Students are expected to have high school chemistry, or have completed Life and Physical Sciences A (LPS A) or Life Sciences 1a (LS 1a), or have received permission of the instructors. Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical students can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11. NOTE: Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Class Notes:

Lecture attendance and participation via Zoom counts towards the final grade. For students who cannot attend the live lectures due to their Time Zones (i.e. 10:30-11:45 AM ET is outside of their local time 7:30 AM -10:15 PM), they can watch the recorded lectures between 4:00 PM -11:59 PM ET on the same day (M/W/F) to earn the lecture participation grade.

Recommended Prep:

A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed.

Subject: Chemistry

Chemistry 17

Principles of Organic Chemistry (115137)

Christina Woo

2020 Fall (4 Credits)

Schedule: MWF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to organic chemistry, with an emphasis on structure and bonding, reaction mechanisms, and chemical reactivity.

Course Notes:

Open to freshmen with a score of 750 or higher in the College Boards or the Chemistry Placement Examination; and to students who scored 5 on the Chemistry Advanced Placement Examination; and to the students who achieved a grade of B or higher in either Physical Sciences 1, 10, 11, or another college-level introductory chemistry course. Others may enter only by permission of the instructor. The Chemistry 17/27 sequence is intended primarily for students in chemistry or the life sciences, who have completed LPSA or LS1a and one of the PS courses (PS1, PS10, PS11). The Chemistry 20/30 sequence is intended primarily for students planning a concentration in chemistry or the physical sciences. Either sequence satisfies the organic chemistry requirement for medical school. Students may not count both Chemistry 17 and Chemistry 20 for degree credit. On the other hand, Chemistry 27 and Chemistry 30 cover different material, so students interested in taking both courses may choose to do so via one of two sequences: Chemistry 17-27-30 or Chemistry 20-30-27. Chemistry 27 satisfies the biochemistry chemistry requirement for most medical schools.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 20

Organic Chemistry (124312)

Logan McCarty

2021 Spring (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

An introduction to structure and bonding in organic molecules; mechanisms of organic reactions; chemical transformations of the functional groups of organic chemistry; synthesis; determination of chemical structures by infrared and NMR spectroscopy.

Course Notes:

Chemistry 20/30 is an integrated two-semester sequence that prepares students to study chemistry and other physical sciences, whereas the Chemistry 17/27 sequence focuses on application of organic chemistry concepts to the life sciences. Either sequence satisfies the organic chemistry requirement for medical school and the chemistry concentration. The content of Chemistry 17 is accelerated and overlaps with topics from both Chemistry 20 and 30. Students may not count both Chemistry 17 and 20 toward the degree. However, Chemistry 27 and Chemistry 20/30 cover different material, so students may choose to take Chemistry 27 after completing the 20/30 sequence.

Recommended Prep:

Open to students who scored 4 or 5 on the Chemistry Advanced Placement Examination, or who successfully completed Life Sciences 1A or Life and Physical Sciences A. Others should contact the instructor to discuss their preparation.

Chemistry 27

Organic Chemistry of Life (117558)

Emily Balskus

2021 Spring (4 Credits)

Schedule:

MWF 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Chemical principles that govern the processes driving living systems are illustrated with examples drawn from biochemistry, cell biology, and medicine. The course deals with organic chemical reactivity (reaction mechanisms, structure-reactivity relationships), with matters specifically relevant to the life sciences (chemistry of enzymes, nucleic acids, drugs, natural products, cofactors), and with applications of chemical biology to medicine and biotechnology. An understanding of organic reactions and their "arrow pushing" mechanisms is required.

Course Notes:

Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.

Recommended Prep:

Chemistry 17 or Chemistry 30 or Chemistry 20 with permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	None
FAS: Course Level	Primarily for Undergraduate Students
Local offset from Cambridge MA	+7
Local offset from Cambridge MA	-6
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 30

Organic Chemistry (118925)

Andrew Myers

2020 Fall (4 Credits)

Schedule:

TRF 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Continuation of Chemistry 20 with a greater focus on challenging problem solving. Fundamental principles of basic reactivity in organic chemistry. Carbonyl chemistry and pericyclic reactions are covered in particular detail, using principles of stereochemistry, stereoelectronic theory, and molecular orbital theory as a foundation. Students develop skills in planning organic chemical syntheses and are given an introduction to organometallic chemistry.

Course Notes:

The course has been optimized for virtual learning with the development of lecture recordings and synchronous instruction sessions. Students are expected to attend two lecture "watch parties" during the week (Primary Sessions: Tuesday and Thursday, 1:30PM–3:00PM EST, Zoom) hosted by Professor Myers and the teaching staff. These sessions will include watching of lecture recordings in small breakout groups over Zoom with teaching staff available for questions and discussion. Alternative sessions will be scheduled on Tuesdays/Thursdays based on student time zone restrictions following registration. Weekly discussion sections (recommended) will be held Wednesdays and Thursdays with several times available. Weekly review sessions will be held Fridays (Primary Session: 1:30PM–3:00PM EST, Zoom, recorded) and will focus on challenging, collaborative problem solving using the week's lecture material, with attendance strongly encouraged. Office hours and help rooms will be available throughout the week. The course will also feature a final project, containing written and presentation components, focused on the analysis of complex organic molecules from the chemical literature. Laboratory section will include experiment recordings, quizzes, and critiques, with specific information available during the semester.

Recommended Prep:

Chemistry 20 or the equivalent. Chemistry 27 and 30 may both be taken for degree credit. Students who have taken Chemistry 17 are welcome to take the course but should contact the teaching staff to discuss preparations at the start of the semester. First-year students with strong backgrounds in chemistry are encouraged to contact the teaching staff to discuss taking Chemistry 30.

Recommended Prep:

See notes section

Chemistry 40

Inorganic Chemistry (123126)

Daniel Nocera

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to basic concepts of inorganic chemistry. Develops principles of chemical bonding and molecular structure on a basis of symmetry, applying these concepts to coordination chemistry (highlighting synthesis), organometallic chemistry (applications to catalysis), materials synthesis, and bioinorganic processes.

Class Notes: Course note: For students who cannot attend the live lectures due to their Time Zones (i.e. 1:30-2:45pm PM ET is outside of their local time 7:30 AM -10: 15 PM), they can watch the recorded lectures.

Recommended Prep: Chemistry 17 or 20

Chemistry 98R

Introduction to Research - Junior Year (112494)

Gregory C. Tucci

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Research under the direction of, or approved by, a member of the faculty of the Department of Chemistry. This is a junior tutorial.

Course Notes:

Open with permission of the instructor to junior chemistry majors who have satisfactorily completed the non-credit Introduction to Research Tutorial in the spring term of the sophomore year. In that non-credit spring term tutorial, taught Tu., Th., 1-2:30, students will attend introductory lectures and research seminars in order to acquaint themselves with departmental research programs. In the junior year, students who complete the non-credit tutorial and obtain placement in a research laboratory will undertake research as Chemistry 98r. Written permission of the research adviser must be filed at the office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card.

Chemistry 98R

Introduction to Research - Junior Year (112494)

Gregory C. Tucci

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Research under the direction of, or approved by, a member of the faculty of the Department of Chemistry. This is a junior tutorial.

Course Notes:

Open with permission of the instructor to junior chemistry majors who have satisfactorily completed the non-credit Introduction to Research Tutorial in the spring term of the sophomore year. In that non-credit spring term tutorial, taught Tu., Th., 1-2:30, students will attend introductory lectures and research seminars in order to acquaint themselves with departmental research programs. In the junior year, students who complete the non-credit tutorial and obtain placement in a research laboratory will undertake research as Chemistry 98r. Written permission of the research adviser must be filed at the office of the Associate Director of Undergraduate Studies in Chemistry. Chemistry 100R

Experimental Chemistry and Chemical Biology (123022)

Heidi Vollmer-Snarr

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

Chem 100R is a project-based synthetic/physical organic, bioanalytical, and chemical biology research course. Students work in 2–4 person groups with course staff on zoom to conduct and contribute to cutting-edge, faculty-derived research. Throughout the semester students use electronic notebooks to keep track of their research findings, which they present in group meetings and write up in a formal research paper. As students learn to communicate technically with other scientists and peers, they also learn to communicate about the broader applications of their research to nonscientific audiences through science advocacy.

Course Notes:

This course will meet on zoom TTh 6:30–8:30 pm ET. Chem 100R is

suitable for students with or without extensive laboratory experience, and is open to freshman, sophomores, juniors, and seniors, regardless of concentration.

Recommended Prep:

Chem 30, 27, or S-20ab; and permission of the instructor.

Related Sections: Additional virtual laboratory meetings will be arranged with research project groups at times available to all group members.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 101

Chemical Biology Towards Precision Medicine (124554)

Stuart Schreiber

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

125

Advances in chemistry and biology suggest new ways to discover medicines that address the underlying cause of disease – in a precise and personalized way – and thus to accelerate the understanding and treatment of human disease and to deliver the right medicine to the right patient at the right time. Chemical Biology Towards Precision Medicine teaches students principles of chemical biology and human biology relevant to the discovery of safe and effective therapeutics – precision medicine. The course will explore patient-based 'experiments of nature' that illuminate disease in the context of human physiology prior to even starting a drug-discovery effort. After the first half of the course on "Foundations" a second half of the class will focus on "Applications" – different diseases for which human biology-based approaches offer promise. The indications to be explored in Chem 101 include: infectious disease (COVID, malaria; TB; HIV/AIDS), psychiatric disease (schizophrenia and bipolar disorder), neurodegenerative disease (Alzheimer's Disease), diabetes, cancer, cardiovascular and inflammatory bowel disease, regenerative medicine and aging. Lecture materials will be presented asynchronously via recorded videos, while synchronous in-class learning at the regular class time will explore additional features of Chem 101. For example, we will discuss how citizen–scientists can use their knowledge of science to advance important societal challenges through in-class interactions with policy makers, business leaders and philanthropists – in this case to defeat COVID. We will use Scientists to Stop COVID-19 as a case study.

Chemistry 105 Section: 1

Advanced Organic Chemistry (109454)

Eric Jacobsen

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Advanced reactivity principles in organic chemistry. Students learn 1) fundamentals of structure, bonding, and reaction energetics, 2) to identify and propose mechanisms for common organic, organometallic, and catalytic reactions, along with experiments to test those mechanisms; 3) to evaluate the factors controlling rate and selectivity in organic reactions; 4) to understand and analyze the current organic chemistry literature. The overarching goal of this course is to provide students with a solid foundation for a research career in organic chemistry and adjacent fields (chemical biology, inorganic chemistry).

Course Notes:

Prerequisites: Two semesters of college-level organic chemistry. At least one prior or concurrent course in physical and/or inorganic chemistry is recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Chemistry 110 Section: 01

The Chemistry and Biology of Therapeutics (110241)

*Matthew Shair**Brian Liao*

2020 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

50

This course will cover the chemical and biological principles that govern small molecule therapeutics. We will discuss small molecule conformational analysis, chemical forces that drive small molecule-protein interactions, and small molecule binding to proteins to affect disease states. We will also discuss how protein targets are identified and the frontiers of modern small molecule therapeutics. Protein targets include, but are not limited to kinases, proteases, GTPases, scaffolding proteins, epigenetic modifiers, metabolic enzymes and transcription factors. This course will teach students how to use modern computer modeling applications to perform structure-based design of small molecule ligands.

Course Notes:**Course Requirements:** Completion of Chem 27 or Chem 30**Additional Course Attributes:**

Attribute	Value(s)

Chemistry 145

Experimental Inorganic Chemistry (109110)

Dilek Dogutan Kiper

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to experimental techniques designed to demonstrate synthesis of inorganic compounds, and their purification and characterization by interpreting appropriate analytical data. The remote instruction of the course will have five components: (1) A coordinated narrative- and video-instruction for the syntheses of porphyrin macrocycles and metal-metal bonded compounds. (2) Building on the instruction of (1), students will then propose the synthesis of a new compound, a Pacman dipyrin bimetallic complex. The student's proposed synthesis plan then will be executed by TFs and characterization data of compounds will be provided to students to assess whether their proposed synthesis worked or not. (3) The video instruction will be augmented with lecture modules on numerous characterization techniques (H and multinuclear NMR, cyclic voltammetry, steady-state and time resolved spectroscopy, mass spectrometry, EPR, and magnetism). (4) Kits will be provided for students to perform experiments remotely of relevance to (1) and (2). (5) Special guest speakers will be invited to meet remotely with students, including faculty from top graduate schools in the U.S. to help those interested in preparing

for graduate studies, as well as renowned experts in synthetic chemistry.

Course Notes:

The class meeting times are not listed in the catalog. Class times will be set to best accommodate enrolled students, taking into consideration time zone and class schedules. Tentatively, a 2 hr session on Tuesday and a 2 hr session on Thursday will be planned with the precise time TBD. Additionally, a 2 hr weekly group meeting, TBD, is planned for in person activities related to class (e.g., TF sessions, further instruction, remote experiments). A survey link will be provided to determine class meeting times once the student enrollment is known (post Aug 25). Attending weekly lectures is required. If student cannot make all meetings in person, they should let the instructor know. In instances where in person attendance is not possible, a combination of recorded lectures and participation in live sessions will be scheduled between the student and instructor.

Recommended Prep:

Chemistry 40 and either Chemistry 27 or 30, or permission of the instructor.

Additional Course Attributes:

Chemistry 155

Advanced Inorganic Chemistry II (156395)

Theodore Betley

2020 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Transition element chemistry will be discussed with an emphasis on synthesis, structure, bonding, and reaction mechanisms. Connections between molecular structure and electronic structure and how that parlay into reactivity will be emphasized throughout. Advanced problems of interest to inorganic chemistry will be discussed in the context of catalysis, organometallics, and bioinorganic processes. The course will be discussion driven with a heavy reliance on the current literature.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Chemistry 156

Materials Chemistry (207680)

Jarad Mason

2021 Spring (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course will survey topics in materials chemistry, emphasizing how atomic-level interactions dictate the bulk properties of matter. Basic chemical principles will be applied to discuss the design, synthesis, and characterization of inorganic and organic materials. Specific topics will include: electronic, optical, and magnetic properties of inorganic solids, nanomaterials, micro and mesoporous solids, gas sorption, glasses, ionic liquids, and membranes. The primary literature will be used to highlight key historical discoveries and significant recent results relevant to each of these areas.

Class Notes:

Course note: For students who cannot attend the live lectures due to their Time Zones (i.e. 9:00-10:15am ET is outside of their local time 7:30 AM -10: 15 PM), they can watch the recorded lectures.

Chemistry 160

The Quantum World (112976)

Suyang Xu

2020 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Quantum mechanics is the fundamental principle of the microscopic world. Quantum mechanics allows us to understand the motion of electrons, atoms and molecules. Only with such understanding, we can rationally design and engineer quantum materials, in order to realize quantum technologies such as quantum information, quantum sensing, and quantum computation. In this class, you will learn the fundamental postulates of quantum mechanics and their implications for the structure and behavior of atoms and molecules. In particular, we will explore the mathematical framework behind molecular bonding, vibration, and rotation. We will also discuss how to probe the properties of atoms and molecules using tunable electromagnetic radiation, more commonly known as light!

The Fall 2020 course will consist of real-time lectures, sections, and office hours. Accommodations will be made for students who are not in the contiguous US.

Course Notes:

Applied Mathematics 21a and 21b, Mathematics 21a and 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; Physical Sciences 2 or Physics 11a, and Physical Sciences 3 or Physics 11b.

Additional Course Attributes:

Chemistry 165

Experimental Physical Chemistry (119035)

Nicholas Colella

2021 Spring (4 Credits)

Schedule:

T 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The goal of this course is to provide students with both detailed knowledge of established and fundamental methods of experimental physical chemistry and an introduction to selected state-of-the-art experiments that address contemporary scientific questions. You will learn about tools that are of broad utility in many areas of science and have fun discovering how to make these experimental apparatus work. The fundamental methods discussions will demonstrate how specific chemical phenomena can be used to

interrogate complex molecular systems. Some of the experimental techniques introduced in this class are now employed in many different fields of fundamental and applied science and are considered the often cornerstones of modern day experimental nanoscience. The class will provide a hands-on introduction to physical methods and techniques used widely in chemistry and chemical physics research laboratories. Computer-based methods of data acquisition and analysis are used throughout.

For Spring 2021, there will be a particular emphasis on computational chemistry.

Course Notes:

Recommended as an efficient preparation for research in experimental chemistry, chemical physics, engineering sciences, and related disciplines.

Class Notes:

Lab: Wed 6-10PM, Thurs 1:30-5:30PM, OR Thurs, 6-10PM (subject to change for Spring 2021)

Recommended Prep:

Applied Mathematics 21a or 21b, Mathematics 21a or 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; one year of college physics. Chem 160 is recommended but not strictly required.

Chemistry 177

The Chemistry, Biology, and Societal Implications of Genome Editing (216524)

David Liu

2020 Fall (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

The life sciences and medicine are undergoing a revolution stimulated by breakthrough advances in genome editing technologies. These technologies, including CRISPR, enable researchers and physicians to modify target DNA sequences in the genomes of living cells, including human cells and human embryos. This class will overview the chemistry and biology underlying recent and current genome editing agents. We will also discuss their current limitations, their potential to shape medicine, and some social and ethical implications of their use. In addition to attending lectures that present the chemistry and biology of genome editing, students will analyze recent reports from the scientific literature, and will present their analyses and reasoned opinions during the semester. Participants will also develop and present final projects on an aspect of genome editing to the class at the end of the semester. For advanced undergraduates and graduate students

Chemistry 242

Quantum Mechanics for Physical Chemistry (112103)

Eric Heller

2021 Spring (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course is designed to develop a familiarity and intuition for quantum mechanics, both time dependent and time independent. Emphasis on applications to spectroscopy and dynamics of large molecules, scattering theory, ultracold collisions, classical and semiclassical methods and their connection to quantum mechanics, decoherence theory and quantum measurement theory, and more topic to be determined by circumstance and student interests.

Class Notes:

For students who cannot attend the live lectures due to their Time Zones (i.e. 9:00 am to 10:15 am ET) is outside of their local time 7:30 AM -10: 15 PM), they can watch the recorded lectures.

Recommended Prep:

This should not be your first exposure to quantum mechanics but a good undergrad course in quantum mechanics and calculus plus some familiarity with differential equations is sufficient.

Chemistry 267

Surface and Interfacial Phenomena (144246)

Cynthia Friend

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Chemistry 267 will build a foundation for understanding surface and interfacial processes based on three pillars of physical chemistry: thermodynamics, quantum mechanics and kinetics. The overall course objective is to provide a working knowledge of surfaces and interfaces at the molecular level that can be used to predict physical and chemical phenomena. The class will combine overview lectures complemented by readings and in-depth problem solving exercises.

Course Notes:

Recommended for graduate and advanced undergraduate students in Chemistry, Applied Physics, and related areas with interest in Materials Chemistry and Engineering, Surface Chemistry, Applied Physics, and other areas dependent on properties and behavior of interfaces.

The meeting time will be M, W, F 1:30 pm - 2:45 pm ET and will meet via Zoom.

Subject: Life & Physical Sciences

Life & Physical Sciences A

Foundational Chemistry and Biology (123833)

Gregory C. Tucci

Nava Gharaei

Sirinya Matchacheep

2020 Fall (4 Credits)

Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

This course introduces fundamental concepts in chemistry and biology. Topics in chemistry include stoichiometry, acids and bases, aqueous solutions, gases, thermochemistry, electrons in atoms, and chemical bonding. The course also examines biological molecules, the transfer of information from DNA to RNA to protein, and cell structure and signaling.

Course Notes:

Alternative view times will be made available to students in different time zones. These alternatives will be posted after 8/26.

Requirements:

Anti-req: Cannot be taken for credit if Life Sciences 1a, OR Physical Sciences 1, OR Physical Sciences 10, OR Physical Sciences 11, OR Chemistry 17 OR Chemistry 20 already complete

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Subject: Greek**Greek AX**

Ancient Greek Review and Reading (122172)

Ivy Livingston

2020 Fall (4 Credits)

Schedule:

MTWR -

Instructor Permissions: None

Enrollment Cap:

n/a

Greek Ax is designed for students who have studied some Greek prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Greek grammar and apply that knowledge to the reading of short texts. Students should leave the course able to read with the precision that is necessary to

use primary sources in research.

Course Notes:

Students wishing to continue after Greek Ax should proceed to Greek 10. No auditors. May be taken Pass/Fail.

Class Notes:

Classes will be held live four days per week for between 60 and 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep:

Prerequisites: Students considering Greek Ax should take the Greek Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
HCOL: Foreign Lang Citation	Ancient Greek
FAS Divisional Distribution	None

Greek 1

Introductory Ancient Greek 1 (203024)

Ivy Livingston

2020 Fall (4 Credits)

Schedule:

MTWR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Greek 1 is a starting point for those interested in learning to read ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes:

Students wishing to continue after Greek 1 should proceed to Greek 2, which continues the introductory sequence and prepares students for Greek 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Class Notes:

Classes will be held live four days per week for between 60 and 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep:

None. Greek 1 is an introductory course for students with no prior experience. Those who have studied Greek formally are not permitted to enroll in Greek 1, but should instead consider Greek Ax (Review and Reading) or Greek 1x (Accelerated Introduction to Greek); please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Additional Course Attributes:

Greek 1X

Accelerated Introduction to Ancient Greek 1 (203257)

Ivy Livingston

2021 Spring (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

TR 0730 PM - 0845 PM

F 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

Greek 1x is the first half of a two-semester intensive introduction to ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings at a more rapid pace than Greek 1. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes:

Students wishing to continue after Greek 1x should proceed to Greek 2x, which completes the accelerated introductory sequence and prepares students for Greek 10. No auditors. May be taken Pass/Fail.

Class Notes:

Classes will be held live five days per week for between 60 and 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep:

Prerequisites: None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Greek 1x with the permission of the course head.

History of Greek Literature II (119867)

Alexander Riehle

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course offers a survey of Greek literature from around 400 BC to AD 200 through the lens of rhetorical discourse. We will read extracts from a broad range of texts from the Classical, Hellenistic and Roman periods. The selection will include exemplary orations (e.g., Demosthenes' *First Philippic*), inserted speeches in narrative texts (e.g., Pericles' famous funeral oration in Thucydides, Jesus' *Sermon on the Mount*) and texts about rhetoric and rhetoricians (Aristotle's *Rhetoric*, Lucian's satire *Teacher of Rhetoric*). The close reading and translation of the excerpts will be accompanied by discussions of genre in relation to historical contexts, performance, and discursive and linguistic (dis)continuities.

Class Notes: This course will meet on Tuesdays and Thursdays between 9 a.m. and 12 p.m. for 75 each day. The times will be set according to the availability of enrolled students.

Homer's The Iliad (140097)

Naomi Weiss

2020 Fall (4 Credits)

Schedule:

TR 0600 PM - 0715 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The *Iliad* is the foundation of ancient Greek literature. From the archaic period through the classical and beyond, this epic tale remained a cornerstone for Greek discourse about war, heroism, suffering, mortality, the gods, friendship, and much more. In this course, we will read extensive selections from the *Iliad* in Greek, focusing on Books 3, 6, 22, and 24, and the entire poem in English. Our focus will be translation and close reading, but we will also discuss the broader themes and narrative structure of this extraordinarily influential masterpiece. Students will thus improve their ability to read and analyze Greek poetry.

Class Notes: Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep:

Greek 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Latin AX

Latin Review and Reading (122177)

Ivy Livingston

2020 Fall (4 Credits)

Schedule:

T 0430 PM - 0530 PM

WRF 0900 AM - 1000 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Latin Ax is designed for students who have studied some Latin prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Latin grammar and apply that knowledge to the reading of short classical texts, both literary and non-literary (such as inscriptions). Students should leave the course able to read with the precision that is necessary to use primary sources in research.

Course Notes:

Students wishing to continue after Latin Ax should proceed to Latin 10. No auditors. May be taken Pass/Fail.

Class Notes:

Classes will be held live four days per week for between 60 and 75 minutes each. Meeting times will be determined according to the

availability of enrolled students.

Recommended Prep:

Students considering Latin Ax should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Richard Thomas

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Ovid's witty, exuberant, and learned epic of change and mortality encompasses the history of the world from its creation to the apotheosis of Julius Caesar. This course examines the work's shaping of narrative and myth, its generic multiformity and creative intertextual dynamics (embracing and reshaping tragic, elegiac, comic, and pastoral motifs, as well as epic), and its equally complex vision of human existence and the divine systems to which it is subject, justly or otherwise. Consideration of the poem in the context of the entrenched Augustan regime that is the context of its production.

Through close reading and discussion of key texts in the history of Roman rhetorical theory, this course will investigate the role of rhetoric in Roman society, politics, and literary culture. Selections from Cicero, *De Oratore* Book 3; the letters of Seneca the Younger and Pliny the Younger; and Quintilian, *Institutio Oratoria* Book 12, will be read in the original with supplementary readings of other relevant primary and secondary sources in English. The focus will be on the figure of the orator as constructed by these sources, their practical deployment and theoretical construction of style, and rhetoric's role in civic discourse. Through close-reading and discussion of sources from a range of genres, including dialogue, epistolography, and treatise, we will look at the following questions among others: what role do the orator and oratory play in Roman political theory? What is style and what role does it play in the construction of the orator? What is the connection between style and the body, rhetorical and artistic style, style and

periodization, and stylistic and other categories (e.g. biological, legal, political, bodily)?

Class Notes: Classes will be held live on Tuesdays and Thursdays from 6 to 7 p. m. An additional live section will be scheduled based on the availability of enrolled students.

Recommended Prep: Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Introduction to Modern Greek Texts (212818)

Calliopi Dourou

2020 Fall (4 Credits)

Schedule:

MRF 0400 PM - 0515 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is designed for students who possess an intermediate level in Modern Greek. It aims at further development of reading and listening comprehension as well as oral and written expression. The students will expand their vocabulary in thematic areas, such as technology, arts, environment, education, and politics. The course will also offer a targeted review of advanced grammatical phenomena, such as passive voice, indirect speech, and subordinate clauses. At the same time, the students will delve deeper into Modern Greek culture by being exposed to various cultural media, including prose (literary and journalistic), film, and music.

Course Notes:

Conducted in Modern Greek. It prepares students to take "MODGRK 100: Introduction to Modern Greek Literature" in the spring.

Class Notes:

Classes will be held live three days per week for 75 minutes each. Meeting times will be determined according to the availability of

enrolled students.

Modern Greek 90

Modern Greek Language Tutorials (214511)

Calliopi Dourou

2021 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the instructor to learn more.

Course Notes:

Special topic: Reading Scholarly Modern Greek.

This tutorial is addressed to students who want to develop literacy competence in order to read Modern Greek scholarly texts. No prior knowledge of the language is required: The entirety of the grammatical concepts and forms necessary to comprehend written academic Greek will be covered. The students will also gain familiarity with various academic genres in Greek (among others, articles, chapters, reviews, lecture transcripts). Emphasis is placed on grammar and on reading strategies that enable students to locate, select, and comprehend texts that are central to their research needs. Students will become familiar with the major stylistic features of contemporary academic Modern Greek and will consolidate their competence through various reading, translating, and writing activities. The assigned material will also familiarize students with basic aspects of Modern Greek life and culture.

Glimpses of Antiquity: Navigating the contours of Hellenism in Modern Greek Literature

Even as early as the fifteenth century, Greek intellectuals had increasingly begun to identify themselves primarily as *remnants of ancient Greece*. By calling attention to the impressive literary and philosophical achievements of their illustrious ancestors, as well as by foregrounding the continuity between the ancient past and the present, these renowned Hellenists, anticipating the much-coveted *regeneration* of Greece that Adamantios Korais was later to promote so passionately at the dawn of the nineteenth century, were not ushering in a stridently novel conceptualization of Greek antiquity.

Far from being unprecedented, the view that the Byzantines were descended from the ancient Greeks, spawned primarily in the wake of the Fourth Crusade and the concomitant conquest of Constantinople in 1204, enjoyed considerable popularity already in the thirteenth century, when the Empire of Nicaea proudly played a leading role in the reconfiguration of the Byzantine past and dynamically consolidated the reputation of the Byzantines as the true heirs to the enduring legacy of classical Greece.

At this early date, the newly evoked association with the Byzantines' ancient Greek forebears was mostly intended to bring further *kudos* to the traditional identity of the Byzantines *qua* Romans. This association was later to develop into a full-blown alternative identity, which by the second half of the fifteenth century had come to overshadow—or sometimes even eclipse—the identification of the Byzantines as Romans, which had lasted a thousand years.

Against this rich backdrop of sharply shifting perceptions of the ancient Greek past and increased focus on re-elaborations of a Hellenic collective identity, this course will seek to explore the intriguing ways in which Greek writers endeavored to get to grips with their Hellenic heritage in subsequent centuries. Authors to be studied include the following: C. P. Cavafy, Odysseas Elytis, Andreas Kalvos, Kostis Palamas, Alexandros Papadiamantis, Iakovos Pitzipios, Yiannis Ritsos, Giorgos Seferis, Dionysios Solomos, Dido Sotiriou, Georgios Vizyenos.

Medieval Greek 115

Introduction to Byzantine Greek (121896)

Alexander Riehle

2020 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to the language of late antique and Byzantine Greek texts. This "Medieval Greek" should not be understood as a particular, intermediate stage in a linear development from Ancient to Modern Greek, but rather as a conventional designation of a broad continuum of linguistic registers, ranging from archaizing usages ("Atticism") to the so-called vernacular. In the surviving texts, these registers may vary significantly, depending on the author and his (or rarely, her) audience, the genre and other contextual factors. Through a close reading of representative literary and "sub-literary" texts from various periods and genres, the course intends to give students a first impression of this diversity and multi-layeredness of Greek writing in late antiquity and the Middle Ages. Although the main focus will be on grammatical and lexical analysis, we will also discuss related aspects of composition and style.

Class Notes:

Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

In this class, we will explore how an innovative group of scholars across the European world utilized Latin to communicate with each other in a time of plague, upheaval, and enormous cultural and religious change. The medieval background to this period of renaissance and reformation will be discussed, in addition to the role that spoken Latin played in the university system and in the development of scientific thought. Students will gain confidence in approaching a wide range of genres, and become able to detect features such as humor and sarcasm. Texts include poetry, philosophy, scientific works, devotional texts, political and legal treatises, and theology.

Introduction to the Ancient Greek World (116729)

Natasha Bershadsky

2020 Fall (4 Credits)

Schedule: MF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course charts the outlines of what we now call ancient Greece, with its multitude of places, ways of life, and historical changes. We will survey the major transformations of that world, its foundational events, real and imagined, its great wars, and its most important social institutions and cultural traditions. We will also study everyday features, such as food and dress, to uncover the complex systems of signs to which they belonged. We will work with a wide variety of primary sources, both texts and images, and will learn about the challenges of interpreting them, assisted by selected items of scholarship. We will explore how the ancient Greeks perceived the world and themselves in it, and will attempt to listen to the voices of women and slaves that are often muted in our primary sources. Learning about the insights and the blind spots of that civilization, about its mysteries and its drama, may ultimately also help us to know more about ourselves.

Course Notes:

Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Class Notes: Classes will be held live two days per week, for 75 minutes each, and there will be also a live section. Meeting times will be decided in consultation with the interested students.

Shield of Achilles (215978)

Natasha Bershadsky

2021 Spring (4 Credits)

Schedule:

MF 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

15

This course invites students to explore the Homeric Shield of Achilles and to create their own versions of the Shield, both visual and verbal. The description of the Shield of Achilles in the process of being created by the god Hephaestus takes up a large part of Book 18 of the *Iliad*. The shield is a gleaming world in miniature, combining scenes of war and peace, labor and leisure, prompting both fear and delight. What is the relationship of this world to other worlds: the world of Achilles, the world of the *Iliad*, the worlds of different historical periods of ancient Greece? The Shield is magical: it dazzles, its figures move. The poem continually draws our attention to multiple techniques and levels of creation: the art of the divine bronzesmith; the verbal art of the narrative; the interior mechanisms of imagining what is being narrated. We are going to look at the historical, literary and artistic contexts of the Shield; we also are going to examine its complexities through art-making. The final project in the course is threefold: first, it is a digital version of the Shield, created by each student as their representations of the hero's cosmos; second, a verbal description of the Shield, allowing to experiment with techniques of ekphrasis; and an essay, explaining the relation of their version to the Shield of Achilles in the *Iliad*. The course is supported by workshops familiarizing students with Photoshop.

Class Notes:

This course shines a spotlight on the enslaved populations of Greece and Rome—their thoughts and

experiences, hopes and fears. We will consider how far it is possible to reconstruct the lives of slaves in antiquity; and how the ancients themselves justified and normalized the institution of slavery in their literature, philosophy, and rhetoric. We will also explore the dark legacy of ancient slavery in modern times, and ask what can be learned from the comparison of slave systems across different time periods and geographical locales. All readings, ancient and modern, are in English.

Class Notes: Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Romans and Barbarians in Late Antiquity (215976)

Adam Trettel

2020 Fall (4 Credits)

Schedule: WF 0330 PM - 0445 PM

Instructor Permissions: None

Enrollment Cap: n/a

Through a series of case studies, this class will explore the shifting relationships between the center and periphery of the Roman world in 300–700 CE. In doing so, students will come to know the different people groups who transformed the later Roman Empire, and eventually made it their own. Students will learn rigorous skills in historical research, and become confident in examining competing claims regarding the "fall" of a great empire. Specific topics include: ancient constructions of barbarism and otherness; migration and mobility; military alliances and changing power centers; innovations in art and architecture; bilingualism and translation.

Class Notes: Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Roman Music (215974)

Harry Morgan

2020 Fall (4 Credits)

Schedule:

W 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This graduate seminar will explore the music of ancient Rome, focusing on three main themes: (1) the practical aspects of Roman music (instruments, techniques, performance contexts, etc.); (2) theoretical and philosophical approaches to music; and (3) the influence of music on Roman society, culture, religion and politics, from the archaic period to late antiquity. Through close readings of literary, documentary and material sources, as well as discussions of modern scholarship, we will attempt not only to "reconstruct" the sounds of Roman music, but also to analyze key issues in Roman history from a musical perspective (e.g. Hellenization; imperial self-representation; Christianization).

Class Notes:

Class will meet live one day per week for two hours. The day and time will be determined according to the availability of enrolled students.

Subject: Classical Archaeology

Classical Archaeology 10

Greek Art (108583)

Adrian Staehli

2020 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The course provides a broad overview of the development of Greek art, architecture, and material culture from the end of the "Dark Ages" through the Archaic and Classical periods to the Hellenistic age. It offers basic knowledge about core categories of archaeological artifacts and remains within their topographical setting and the context of Greek culture and society, and includes issues of archaeological method and problems of current research.

Class Notes: Class will not be recorded and must be attended live. A few pre-arranged classes will be 90 minutes because they will involve virtual museum visits, which will consist of studying class-related objects and monuments in various European art museums and archaeological collections, co-taught—or co-explored—with the colleagues and curators in charge of these collections.

Additional Course Attributes:

How Houses Build People (215972)

Margaret Andrews

2021 Spring (4 Credits)

Schedule: R 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap: n/a

People build houses, but how do houses build people? This course will explore the house in both form and concept throughout pre-industrial Western history, with a focus on the ancient Mediterranean world (ca. 1300 BCE–1000 CE). Drawing on modern theories of space and sociology, we will examine how the spatial configurations and broader settings of houses actively shaped the way people acted, interacted, and thought—as both individuals and members of a collective society—within a variety of historical and cultural contexts.

The City of Rome (215861)

Margaret Andrews

2020 Fall (4 Credits)

Schedule: R 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Rome was central to the formation of Western European culture. This course examines the archaeology and history of Rome from the Iron Age to the Byzantine "reconquest" (ca. 850 BCE–550 CE) and the range of intellectual and scientific approaches that scholars have used to engage with the city and its legacy. Students will encounter a broad range of sources, both textual and material, from each period that shows how the city physically developed and transformed within shifting historical and cultural contexts. Our main theme will be how Rome in any period was, and still is, a product of both its present and past and how its human and material legacies were constantly shaping and reshaping the city in later periods.

Class Notes: Class will meet live one day per week for two hours. The day and time will be determined according to the availability of enrolled students.

Ancient Studies 201

Oracles and Divination in the Ancient Mediterranean (215990)

Giovanni Bazzana

Rachel Love

2021 Spring (4 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

This graduate seminar will focus on oracles and divination in the ancient world in their capacity as a widespread phenomenon. The course will deal with texts and material artifacts pulled from a broad range of epochs and regions across the ancient Mediterranean. We will explore the historical, literary, and artistic significance of this evidence in order to understand more adequately, for example, ancient concepts of divine-human communication, integration of divinatory practices into literatures, and authorization in religious and political discourses. This is an interdisciplinary course that focuses on developing research and communication skills across classics, religious studies, and ancient history.

Course Notes:

Offered jointly within the Faculty of Arts and Sciences as Religion 3421
and with the Divinity School as HDS 1981.

Classical Philology 211

Roman Antiquarian Literature (215983)

Jared Hudson

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar explores the distinctive literary and cultural features of written Roman antiquarianism. Item-based rather than chronological, enumerative rather than narrative, more concerned with the detail of everyday life than with historical events, ancient Roman antiquarianism represents a specific, and often overlooked, way of approaching and conceptualizing the past, one viewed as separate from traditional historiography. The course will trace the development and formal variety of Roman antiquarian literature by investigating recent scholarly work in this area and through in-depth reading of representative Latin texts (Aulus Gellius, Pliny the Elder, and Varro).

How to make a sound demonstration in the field of literary analysis? What are the building blocks for a cogent approach to comparative studies? We'll pay attention to various scales of textual commentary, from the microscopic lens of close reading to the medium scope of thematic reading, with an eye to macroscopic trends in literary history and critical theory. We'll befriend texts ranging from various genres (poetry; fiction; drama) and relate form to content, historical context to contemporary significance, and join the dots connecting notions of authorship to reception theory.

The Politics of Yiddish (207574)

Saul Zaritt

2020 Fall (4 Credits)

Schedule: M 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:** n/a

A bastardized German, a jargon, a woman's vernacular, an old world language, a dying and ghostly tongue, a Hasidic language, a queer language, a radical language—these are just a few of the ways that Yiddish has been labeled over its one-thousand-year history. This course will trace the shifting politics attached to Yiddish from its early modern beginnings as a language of translation between Jewish and non-Jewish cultures to its postwar vacillation between a language of mourning and nostalgia, Jewish American humor, Hasidic isolation, and contemporary Jewish radicalism. Through poetry, fiction, essays, and film, we will discuss what it might mean to discover "the secret" language of the Jews" at the origins of Jewish socialism and at the foundations of diaspora nationalism. All texts will be read in translation.

Class Notes: Course timing will be determined in consultation with those enrolled in the course.

Translating World Literature (212721)

Luke Leafgren

2020 Fall (4 Credits)

Schedule: MW 1030 AM - 1145 AM**Instructor Permissions:** None**Enrollment Cap:** n/a

In this course, students will read selections from a dozen works from the canon of world literature with particular attention to their existence as translated texts. The course will highlight the role of translation in the history of a text and its reception within new contexts. By reading different translations of the same work, students will be able to examine the choices translators have made, consider the ethical responsibilities of the translator, and explore the role of translation in mediating the meaning of the text. The course will also incorporate short readings on translation theory and presentations on the original languages of composition. Assignments will include written comparisons of different translations, with the option to translate a text into English.

Mainstream Jews (216022)

Saul Zaritt

2021 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Why is it that Jews and discussions of Jewishness appear with such frequency and with such prominence in American culture of the twentieth and the twenty-first century? One can often hear the claim that Hollywood is "owned by Jews." Many call attention to the number of Jews involved in comics and graphic novels. The State of Israel, and its definition of Judaism, has become an important touchstone in American politics, while antisemitic dog whistles have become commonplace in contemporary political discourse. Contemporary left-wing activists often refer to the legacies—contested or otherwise—of Jewish American labor politics of the nineteenth and early twentieth century. What can we make of these intersecting and surprising references to Jews/Judaism/Jewishness in the current American moment? This seminar discusses the ways that images of the Jew—philosemitic, antisemitic, and everything in between—recur in the American mainstream. Through analysis of film, television, music, comics, and other mass media, we will track the multiple and contradictory portrayals of Jewishness in the popular American imagination.

Singing Love and Horror Stories: Opera and Greek Mythology (216779)

Katharina Piechocki

Federico Cortese

2021 Spring (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 20

This course explores the centrality of Greek and Roman mythology in Western opera. We will engage with a broad range of myths to see how they not only informed and transformed opera, from its beginnings in ca. 1600 to the 20th century, but truly shaped opera as a new musical language. Our central interest will be the complex, and yet fascinating, tension between feelings of love and hate—toward a partner or a family member. Myths we will focus on include: Orpheus, Apollo and Daphne, Psyche, Hercules, Oedipus, Electra, Iphigenia in Aulis, and Dido and Aeneas. Composers include Monteverdi, Cavalli, Lully, Purcell, Handel, Gluck, Vivaldi, Rameau, Berlioz, Strauss, Stravinsky, and Enesco.

The Arab American Experience in Fiction, Film, and Popular Culture (128114)

Sandra Naddaff

2021 Spring (4 Credits)

Schedule:

R 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Since 9/11, there has been an explosion of cultural work about the Arab-American experience. This course will explore that experience as expressed in various cultural forms--fiction, film, comedy acts, graphic novels, memoirs, art installations, and new media. We will pay particular attention to contemporary works and authors (e.g., Kahf, Nye, Alameddine, Hammad, Abu Jaber), although we will also consider the work of early 20th-century Arab-American writers (Gibran, Rihani, Rizk). Topics include mapping the exilic experience, translation and bilingualism, cultural translation, and the semiotics of food.

History of Theater (109675)

Katharina Piechocki

2020 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the rich history and manifold layers of theater in Europe, the Middle East, Japan, and the New World from antiquity to the present, with a strong focus on early modernity. What is theater and what is its relationship with attendant disciplines such as the visual arts, music, medicine, and philosophy? What does it mean to perform and to represent a written text? What meaning does theater have nowadays and how is it staged, translated, and transformed across a globalized world? How ought we to historicize and think gender difference and non-binary gender identity on stage? How can we assess the importance of the mask (central to the carnival in Venice and the commedia dell'arte)? Authors will include: Sophocles, Aristotle, Muhammad Ibn Daniyal, Gil Vicente, Fernando de Rojas, Machiavelli, Isabella Andreini, Molière, and Sor Juana. We will look at different renderings of ancient and early modern performance(s) in the late 20th and 21st century (Mnouchkine, Wang Chong, Romeo Castellucci, Warlikowski).

Comparative Literature 137

Child Sacrifice, Pros and Cons: The Binding of Isaac in Jewish, Christian, Islamic, and Modern Lit (160331)

David Stern

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Child Sacrifice-- specifically, the story of the parent's sacrifice of the first-born child-- lies at the heart of Western religion and culture. The Biblical narrative in Genesis 22, known as the Binding of Isaac, is one of the most famous and problematic tales in the Bible. The same narrative is foundational to Christianity. Later Jewish tradition has interpreted the Biblical text in countless ways from the ancient period down to the present day. The narrative figures prominently in Islam from the Qur'an on. And the Biblical story has been criticized and critiqued since the Middle Ages as a barbaric narrative. Recent works have blamed it for the ubiquity of child abuse in Western society, and it has become a ubiquitous motif of anti-war and protest poetry all over the world. This course will use the interpretive career and literary history of Genesis 22 as a lens through which to study the place of this foundational narrative in Western culture.

Readings will include Biblical texts, Euripides' *Iphigeneia in Aulis*, Philo of Alexandria, ancient Jewish sources, the New Testament, St. Augustine and other Christian exegetes, the Qur'an and later Islamic traditions, Kierkegaard's *Fear and Trembling*, Martin Buber, Kafka, Bob Dylan, Yehuda Amichai, and Leonard Cohen, among many other modern writers and poets.

Comparative Literature 159

Poetry as Musical Performance (216042)

Gregory Nagy

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is inspired by the words of T. S. Eliot, in "The Dry Salvages" (1941): "You are the music / While the music lasts." Participants are encouraged to explore the musicality of poetry composed as poetry, where poets build into their poetry an internal music that invites musical composers to "set it to music." A celebrated example is a lyric poem composed by Heine, which also gets set to music in the form of a Lied by Schumann. Students are free to select for their focus of research any particular kind of poetry, composed in whatever language, including English. No requirement of competence in any language other than English.

Migratory Identities (217512)

David Damrosch

2021 Spring (4 Credits)

Schedule:

T 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

The world today is increasingly being reshaped by growing waves of migration, whether for new social and economic opportunities or by people fleeing war, political or religious oppression, or environmental degradation. Meanwhile writers too have often migrated, sometimes by choice, sometimes not, and a wide range of modern and contemporary writing probes the losses and gains that minority populations have experienced after arriving as "strangers in a strange land." This course will take up a series of compelling literary works by migrant writers who take migrancy as their theme. The course will begin with writers (Walcott, Rhys, Soyinka, Duras) who look back at colonial situations in the Caribbean, Africa, and Indochina; then we'll look at immigrants' experience within metropolitan centers, in works by Perec, Aboulela, Ben Jelloun, and Erpenbeck. The course will end with works by Walcott, Rushdie, Lahiri, and Adichie that probe the ongoing connection of people to the places they've left behind but are still connected to in a globalizing world.

Counter-Imperialism and Asian-African Literatures (216023)

Annette Lienau

2020 Fall (4 Credits)

Schedule:

F 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The first Asia-Africa conference of newly independent states (held in Indonesia in 1955) was hailed by contemporary observers as an event as significant as the European renaissance in global importance. It inspired a sequence of political and cultural initiatives (including several African-Asian writers' conferences) in pursuit of new forms of cultural exchange and political brokering unmediated by former colonial centers. This course explores the historic tensions of this transition towards a post-colonial global order across two continents. It takes as its point of departure historic notions of African-Asian political and cultural solidarity to explore important questions about counter-imperial forms of autonomy and anti-colonial practices of lateral alliance and cultural exchange. Moving through a range of literary texts and historical documents that mark this historical transition and its internal tensions, the course invites you to engage with the comparative legacies of African-Asian independence movements and solidarity initiatives as they rose to international circuits of recognition, with implications for enduring cultural debates across the Global South. To the extent that 20th century African-Asian independence movements were considered by many authors in the mid- to late- twentieth century to be politically ambiguous and perennially incomplete, the course more specifically raises the following questions: how did several influential, anti-colonial African and Asian authors and political figures consider the fields of culture and literature to be an extension of their own political engagements? How were the fields of literature and culture comparatively viewed as a way of advancing (anti-colonial) forms of revolutionary change, or of addressing entrenched social grievances and enduring global inequalities? How did writers in the wake of anti-colonial movements reconcile the ambiguities of national independence with the risks of neo-colonial or ethno-nationalist exploitations—at times pursued in the name of lateral solidarities and liberation? And how would counter-colonial efforts to develop transregional, African and Asian forms of cultural exchange contend with the paradox that their "common ground" or shared purpose both derived from and sought to transcend a colonial past? Readings for the course will include Richard Wright's *The Color Curtain*, an iconic account of the first Asian-African conference of independent states, on the cultural commonalities and uneven temporalities of African-Asian independence movements; theoretical texts on the cultural ambiguities of anti-colonial nationalisms (such as Fanon's *The Wretched of the Earth*); and essays by major anti-colonial, political figures such as Sukarno, Nasser, Nkrumah, and Senghor. Literary texts will include revolutionary poetry and prose works, from examples of the "strike novel" to writing that challenged the post-revolutionary emergence of dictatorial regimes and cultural censors across both continents. Course assignments will include three analytical papers.

Comparative Literature 186

Comparative Love: The Song of Songs in Western Tradition (216309)

David Stern

2020 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The Song of Songs is, arguably, the greatest love poem in Western literature, but the nature of the love depicted in its verses has been disputed since the time the poem was committed to writing until today. Virtually every type of interpretation has been applied to the poem, from literalist to Jewish and Christian allegorical readings, philosophical and mystical exegeses, and nationalist and political interpretations, not to mention the innumerable implicit meanings underlying the many poems and prose works that have imaginatively recreated the Song through allusion and intertextuality. This course will trace the interpretive career of this unique poem, and in the process explore such basic literary questions as the relation between literalism and allegoresis, the exploitation of literature by religion and other ideologies and its consequences, eros and gender as principles of desire, and the role of influence and appropriation in the history of the poem's interpretation. Readings will include, in addition to the Song itself and select modern scholarship about it, selections from the Old Greek translation, classical Jewish interpretation (midrash and Targum), Origen, medieval Jewish commentaries and secular love poetry, Bernard of Clairveaux and other medieval Christian exegetes, the Zohar and Christian mystics, S.Y. Agnon, and Toni Morrison. All readings will be in translation. No previous knowledge of love required.

Comparative Literature 188

Futurisms (a comparative history) (205146)

Jeffrey Schnapp

2020 Fall (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

From its foundation in Feb. 1909 through WWII, futurism developed into the first international cultural-political avant-garde. Its aim was a revolutionary transformation of all spheres of life and its influence extended to the whole of Europe, parts of Asia, and the Americas. Combating the traditionalism of turn-of-the-century European culture, the movement sought to found a cosmopolitan (but nationalist) counterculture based on the exaltation of youth, speed, violent revolt, innovation, and experimentation. Hence the movement's name: the label "Future-ism" denoting at once adoration of the new and struggle against the prevalence of "past-ism" or passatismo (the idolatry of the past). In its first decade of existence Futurism became the first full-fledged cultural/political avant-garde of our century, gathering together painters, musicians, architects, political revolutionaries, and poets from several European nations. A key progenitor of later movements such as Dada-, Vorticism, and Surrealism, Futurism had a powerful formative influence not only on the cultural atmosphere of Italy during the Fascist era (1922-1945), but also on 20th century culture as a whole.

Document, Testimony, and Political Fictions (216648)

Justin Weir

Jonathan Bolton

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

15

We will consider classic narratives that incorporate real written documents or personal testimonies into works of fiction, film, and journalism. How do such works blur the line between fiction and reality, between individual testimony and collective experience, in order to construct larger narratives about political repression and political history? We will explore why some testimonies, images, or documentary details feel more "authentic" or "truthful," inspiring a strong response in readers and viewers, while others recede into the background. What is gained or lost when facts are folded into a narrative that does not just inform but also entertains? Why do works of fiction and film create such persuasive versions of the past, and how do these stories shape our sense of political life and state power? We will examine diverse historical documents, individual and collective testimonies, stories, novels, photos, and films from Russia, Eastern Europe, and other regions in order to investigate these questions. Course readings will range from Defoe, Melville, Tolstoy, Dostoevsky, and Babel to Nobel Prize winners Alexander Solzhenitsyn and Svetlana Alexievich, as well as non-fiction from Elena Poniatowska, Ryszard Kapuściński, Javier Cercas, Liao Yiwu, Carlo Ginzburg, and others; we will also discuss films from Errol Morris and Andrei Tarkovsky.

Class Notes: All readings in English.

Comparative Literature 190

Translation: Language at Work (205097)

Marc Shell

2021 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

What difference does language make? This class begins with Goethe's *Faust*, a work that translates the Bible ("In the beginning was the Word") and teases out the idealist philosophical theorization of translation (Helen of Troy speaking German words in Greek syntax). Seminar participants will then engage collaboratively in comparative readings: the particular language expertise of every one of us will benefit the group as a whole: the final reading list will thus arise from group discussion of the languages we know. The first half of the course considers issues of literalness and literariness along with rhythm and rhyme in both poetry and prose. At the same time we will discuss simultaneous translation, dubbing, and general ineffability along with American literature written in languages other than English. The second half focuses on the relationships of language translation to economic transfer and to literary metaphor and also considers the roles of inter-linguistic translation in various arts and media: movies, plays, music, and variably 'bilingual' paintings.

What's Love Got to Do With It; Love Poetry of the Middle Ages and Early Modernity (108791)

Luis Giron Negron

2021 Spring (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Does love have a history? This course will explore a particularly rich, multiseccular episode in the literary history of this emotion: the efflorescence and varieties of love poetry, both lyrical and narrative, in Europe and the Middle East from the Middle Ages through the 16th century. Weekly discussions will center on close readings of selected love poems and versified narratives from a variety of literary traditions, including: Provençal troubadour lyric; French chansons, the Germanic Minnesang and the Galician-Portuguese cantigas (the question of amour courtois); Ibero-Romance and colloquial Arabic jarchas; the Italian dolce stil novo; the Petrarchan sonnet and its early modern heirs in Portugal, England and Spain; Arabo-Andalusian and Hispano-Jewish qaṣīd and muwashshaḥāt, medieval Latin love lyric; Persian Sufi and Christian mystical love poetry; Dante's Vita nuova; and selections from two other erotological classics in narrative verse, Libro de buen amor and Roman de la Rose. Discussions will be framed by an overview of both premodern discussions on love – how love is conceptualized at the intersection of philosophy, theology and medicine by Jewish, Christian and Muslim thinkers– and contemporary scholarly debates on the origins and development of medieval love literature.

The Borges Machine (216043)

Mariano Siskind

2021 Spring (4 Credits)

Schedule:

F 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Between 1923 and 1970, Jorge Luis Borges wrote some of the most original poems, short stories, essays and film scripts in Latin America and anywhere in the world, and he redefined the meaning and scope of literature. In this course, we will examine the signifying power of Borges' short stories, essays and poems, and we will consider his work as a literary machine whose output radically transforms aesthetic formations and imaginaries beyond Argentina and Latin America. Rather than thinking about what his literature means, we will concentrate on what it produces as a fictional-poetic machine: cities and worlds, love and treason, popular and high culture, politics and death, institutions of knowledge and traditions, and new ways of reading and thinking about aesthetic and social relations (this year, the course will be taught in Spanish).

Class Notes: This course will be taught in Spanish for Spring 2021.

Comparative Literature 222

The Passover Haggadah (217544)

David Stern

2021 Spring (4 Credits)

Schedule: W 0600 PM - 0845 PM

Instructor Permissions: None

Enrollment Cap: n/a

The Passover Haggadah is the Jewish book of redemption par excellence. As the script for the seder (the ritual banquet on the first night(s) of Passover), the Haggadah has changed and developed as the Jews have moved from one diasporic center to another from Late Antiquity until the present day. In this course we will study the history and development of both the seder and the Haggadah-- as a ritual, as a text, and as a physical book. Readings will be drawn from the Bible, Mishnah, the Jerusalem and Babylonian Talmuds, the New Testament and early Christian writers, medieval Haggadah manuscripts and early printed editions, as well as more recent versions of the Haggadah from both Israel and America (including non-traditional haggadot). We will deal extensively with the tradition of Haggadah illustration, and will utilize Harvard's extensive collection of Haggadot in both Widener and Houghton Library. The focus of the course will be on the reading and analysis of primary sources. No previous experience with Passover is required, but students should have at least two years of Hebrew (Biblical or modern) and be prepared to read texts in Hebrew. Any student with questions about their Hebrew competence should contact Professor Stern.

Course Notes:

Offered jointly with the Divinity School as HDS 1641.

Recommended Prep:

Two years of Hebrew.

Jew Theory (216044)

Saul Zaritt

2021 Spring (4 Credits)

Schedule:

T 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar will discuss the possibility of "Jew theory" as a method for theorizing the modern. Beginning with a survey of the history of Jewish studies and its place in the academy, the course will then examine how the figure of the Jew, as symbol and stereotype, enters the work of important thinkers of the nineteenth, twentieth, and twenty-first century—from Marx to Slezkine, from Rosezweig to Blanchot, Derrida, and Agamben. In parallel we explore the potential of new modes of "Jewish cultural studies" emerging over the last decades in Jewish studies.

Affects, Bodies, Ecologies: Borders of Performance from Antiquity to the Early Modern World (216429)

Katharina Piechocki

2020 Fall (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Pandemics such as COVID-19 have revealed not only the fragility of the human body within an equally delicate environment, but also our deep connection and commitment to artistic performances—the latter were the first to be canceled due to the high risk of infection and will be the last to return. This course asks how performance in its manifold guises (theater, processions, auto da fés, carnivals, etc.) and the presence (or absence) of the human body in public, on stage, and in the audience was negotiated in the early modern period. With the face covering currently implemented as a mandatory element of our clothing in public spaces, we ask about the history and the "aesthetic of the mask" (Carlos Amorales); the theorizing, practicing, and gendering of space; the relationship between the written and the staged word, between passions and affects (Melissa Gregg and Gregory J. Seigworth), and between the corporeal and the incorporeal (Elizabeth Grosz)—all elements central to the early modern period. Starting from the origins of performance in antiquity (Sophocles, Aristotle) and with an eye to the present, we will explore performance in its different articulations across the early modern world: from Japanese Kabuki to performances in the New World; from puppet theater in North Africa to new forms of theater (tragicomedies, opera, etc.) in Europe.

Asian-African Comparatisms (216379)

Annette Lienau

2020 Fall (4 Credits)

Schedule:

F 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

"We have so much in common. And yet we know so little of each other." In Bandung, 1955, the hosting Indonesian president of the first Asia-Africa conference of independent states, Ahmed Sukarno, identified in these terms Asia and Africa's shared experience of colonial "unfreedom," lamenting that mutual ignorance had come to define both continents as a geographically and culturally proximate space. Notwithstanding the uneven efforts to correct this paradox of high commonality and mutual ignorance after the Bandung conference, the iconic gathering left open the question of how this challenge would be resolved across Asia and Africa's linguistic diversity and through both continents' shared cultures of historical contact. This graduate course on Asian-African comparatism reconsiders this paradox as a (post)-colonial constraint and an enduring dilemma within the field of Comparative Literature, and challenges graduate students to creatively imagine what lateral, literary comparisons in the "spirit of Bandung" could resemble, including: a re-examination of colonially inflected "master" concepts (like the Europhone concept of literature itself); privileging parallel or resonant histories across Asia and Africa; and retracing under-examined circuits of cultural exchange across both continents. Readings for the course will pair texts now considered classics of (post)-colonial studies (drawing from work within African, West Asian, and Southeast Asian contexts) with more recent, groundbreaking scholarship in the field of Comparative Literature across these regions.

Karen Thornber

2021 Spring (4 Credits)

Schedule:

M 0600 PM - 0800 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course explores approaches to literature and transculturation in the context of new understandings of human and textual border creation and crossings. Topics include the ethics of dividing cultural products along ethnic, linguistic, and national lines on the one hand and classifying phenomena as global on the other, and the possibilities and ramifications of cross-cultural study. We also examine the relationship between creative production/literary scholarship and ethnic studies, empire and (post)colonialism, identity, travel/migration/exile/diaspora, labor, war, trauma, multilingualism, translingualism, literary reconfiguration (adaptation, intertextuality), and world literature. Course readings are drawn from Africa, Asia, and the Americas.

Computer Science

Subject: Computer Science

Computer Science 1

Great Ideas in Computer Science (119953)

Henry Leitner

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the most important discoveries and intellectual paradigms in computer science, designed for students with little or no previous background. Explores problem-solving and data analysis using the Python programming language; presents an integrated view of computer systems, from switching circuits up through compilers and object-oriented design. Examines theoretical and practical limitations related to unsolvable and intractable computational problems, and the social and ethical dilemmas presented by such issues as software unreliability, algorithmic bias, and invasions of privacy.

Course Notes:

May not be taken for credit after completing Computer Science 50.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 10

Elements of Data Science (212950)

Hanspeter Pfister

Liberty Vittert

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

60

Data science combines data, statistical analysis, and computation to gain insights and make useful inferences and predictions. This course will take a holistic approach to helping students understand the key factors involved, from data collection and exploratory data analysis to modeling, evaluation, and communication of results. Working on case studies and a final project in teams will provide students with hands-on experience with the data science process using state-of-the-art tools. Emphasis will be given to the strengths, trade-offs, and limitations of each method to highlight the importance of merging analytical skills with critical quantitative thinking.

Course Notes:

Also offered as STAT 10. Students may not take both for credit.

Please note that the enrollment cap of 60 is a combined total for both STAT 10 and COMPSCI 10.

Requirements: Anti-requisite: Cannot be taken for credit if AC 209A or CS 109A or STAT10 or STAT 121A is already complete.

Additional Course Attributes:

Discrete Mathematics for Computer Science (128073)

Rebecca Nesson

2021 Spring (4 Credits)

Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Widely applicable mathematical tools for computer science, including topics from logic, set theory, combinatorics, number theory, probability theory, and graph theory. Practice in reasoning formally and proving theorems.

Course Notes:

Covers material used in Computer Science 121 and Computer Science 124. Ordinarily, not to be taken after those courses or after courses such as Applied Mathematics 106, Applied Mathematics 107, Mathematics 101, and Mathematics 153.

Class Notes:

Students in other time zones or with scheduling conflicts will be allowed to attend the Harvard Extension School evening sessions, T/Th 7:20pm-9:20pm.

Computer Science 50

Introduction to Computer Science (152514)

David Malan

Brian Yu

2021 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

60

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web programming. Languages include C, Python, and SQL plus HTML, CSS, and JavaScript. Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project.

Class Notes:

This spring version of CS50 is for SEAS concentrators (or secondaries) who were unable to take the course in Fall 2020. Enrollment limited; apply at cs50.harvard.edu/petition. All students, including concentrators and non-concentrators, are encouraged to take CS50 in fall term instead. See cs50.harvard.edu/spring for differences between fall term and spring term. Students must register via my.harvard.edu for and attend weekly class meetings via Zoom on Tuesdays, 3pm–5pm ET. Instructor-led tutorials to be arranged. CS50 is ordinarily graded SAT/UNS, though students whose concentration requires letter grades should change their grading status to letter-graded by the term's fifth Monday. Students may take CS50 SAT/UNS to fulfill the Science and Engineering and Applied Science distribution requirement or the Quantitative Reasoning with Data requirement, but not both. First years may take both CS50 and a freshman seminar SAT/UNS.

Introduction to Computer Science (152514)

David Malan

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web programming. Languages include C, Python, and SQL plus HTML, CSS, and JavaScript. Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project. Designed for concentrators and non-concentrators alike, with or without prior programming experience. Two thirds of CS50 students have never taken CS before. Among the overarching goals of this course are

to inspire students to explore unfamiliar waters, without fear of failure, create an intensive, shared experience, accessible to all students, and build community among students.

Class Notes: This course ordinarily meets for lectures via Zoom on Mondays at 1:30pm–4:15pm, but the course's first lecture will be Wednesday, 9/2/20. Students may simultaneously enroll in CS50 and another course that meets at the same time, watching recordings of CS50's lectures and attending the other course via Zoom. The Ad Board has already granted this exception for CS50; no other steps are required. CS50 is ordinarily graded SAT/UNS, though students whose concentration requires letter grades should change their grading status to letter-graded by the term's fifth Monday. Students may take CS50 SAT/UNS to fulfill the Science and Engineering and Applied Science distribution requirement or the Quantitative Reasoning with Data requirement, but not both. First years may take both CS50 and a freshman seminar SAT/UNS. Graduate students are welcome to cross-register for CS50. All students are expected to attend an orientation meeting via Zoom during the second week of term; students with conflicts may watch a recording thereof. Required sections via Zoom to be arranged. See cs50.harvard.edu for FAQs, syllabus, and what's new for Fall 2020.

Computer Science 51

Abstraction and Design in Computation (112960)

Stuart Shieber

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Fundamental concepts in the design of computer programs, emphasizing the crucial role of abstraction. The goal of the course is to give students insight into the difference between programming and programming well. To emphasize the differing approaches to expressing programming solutions, you will learn to program in a variety of paradigms -- including functional, imperative, and object-oriented. Important ideas from software engineering and models of computation will inform these different views of programming.

Class Notes: Times: All times shown are Eastern Standard Time

Lectures: January 26 and 28, March 9, April 20 and 27 at 10:30–11:45am, via Zoom.

Labs: All other Tuesdays and Thursdays during the term in one of two slots – 10:30–11:45am and 4:30–5:45pm – via Zoom.

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course

Computer Science 61

Systems Programming and Machine Organization (123623)

*Eddie Kohler**Minlan Yu*

2020 Fall (4 Credits)

Schedule: TBD**Instructor Permissions:** None**Enrollment Cap:** n/a

Fundamentals of computer systems programming, machine organization, and performance tuning. This course provides a solid background in systems programming and a deep understanding of low-level machine organization and design. Topics include C and assembly language programming, program optimization, memory hierarchy and caching, virtual memory and dynamic memory management, concurrency, threads, and synchronization.

Recommended Prep:

CS50 or some experience programming in C.

System Design Projects (121508)

Krzysztof Gajos

2020 Fall (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

Cooperative formative research, design, development, and testing of a sizable and realistic sociotechnical system, i.e., a solution to a real-world problem that includes both technical and human components. Students work as a team with a client on a real-world open-ended problem, and gain experience in Computer Science (problem definition, software development, iterative design), and in other fields relevant to the problem. Both student participation in the classroom and effective teamwork outside the classroom

are stressed. The specific challenge for Fall 2020 will be announced on the course website.

Course Notes:

Course is enrollment-limited by application

Recommended Prep:

This course is primarily intended for juniors and seniors. Students from any field of study are welcome, though some prior exposure to CS is helpful.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Privacy and Technology (125407)

James Waldo

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

48

What is privacy, and how is it affected by recent developments in technology? This course critically examines popular concepts of privacy and uses a rigorous analysis of technologies to understand the policy and ethical issues at play. Case studies: database anonymity, research ethics, wiretapping, surveillance, and others. Course relies on some technical material, but is open and accessible to all students, especially those with interest in economics, engineering, political science, computer science, sociology, biology, law, government, philosophy.

Additional Course Attributes:

Systems Development for Computational Science (216324)

David Sondak

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to fit tools and approaches to the problem being solved.

Class Notes: Students who previously took CS207 are not eligible to enroll in CS107 or AC207.

Recommended Prep: Students are expected to have basic programming experience (Computer Science 50).

Additional Course Attributes:

Data Science 1: Introduction to Data Science (109899)

Pavlos Protopapas

Kevin A. Rader

Christopher Tanner

2020 Fall (4 Credits)

Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes:

Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep:

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements:

Not to be taken in addition to Applied Computation 209, or Applied Computation 209A, or Statistics 121, or Statistics 121A.

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course

Computer Science 121

Introduction to Theoretical Computer Science (119064)

Madhu Sudan

Adam Hesterberg

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Computation occurs over a variety of substrates including silicon, neurons, DNA, the stock market, bee colonies and many others. In this course we will study the fundamental capabilities and limitations of computation, including the phenomenon of universality and the duality of code and data. Some of the questions we will touch upon include: Are there functions that cannot be computed? Are there true mathematical statements that can't be proven? Are there encryption schemes that can't be broken? Is randomness ever useful for computing? Can we use the quirks of quantum mechanics to speed up computation?

Course Notes:

Students may not receive credit for both CS 121 and CS 125.

Recommended Prep:

Experience in formal mathematics at the level of CS 20. A "Homework

Zero" will be posted on the course website http://madhu.seas.harvard.edu/courses/Fall2020 by July 31st. It is highly recommended that students complete it before the first lecture.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Computer Science 124

Data Structures and Algorithms (115384)

Michael Mitzenmacher

Adam Hesterberg

2021 Spring (4 Credits)

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

Design and analysis of efficient algorithms and data structures. Algorithm design methods, graph algorithms, approximation algorithms, and randomized algorithms are covered.

Course Notes:

Students will not receive credit for both CS 124 and CS 125.

Recommended Prep:

Computer Science 50 or equivalent is strongly recommended; Computer Science 20 or equivalent mathematical background, including knowledge of how to write proofs, is strongly recommended; Computer Science 51 or 61 is helpful.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 126

Fairness and Privacy: Perspectives of Law and Probability (204972)

Cynthia Dwork

Martha Minow

2020 Fall (4 Credits)

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

Students will learn to analyze and mitigate privacy loss, overfitting, and unfairness in data analysis. Principal techniques will come from cryptography, differential privacy, and the newly emerging areas of adaptive data analysis and algorithmic fairness.

Class Notes: Course enrollment limited. Offered jointly by HLS and SEAS, with interwoven tracks emphasizing, respectively, law and computer science, the tracks will meet jointly and separately every week. Admission is by permission of instructors.

Recommended Prep: Experience with writing proofs.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Computing Hardware (113856)

Vijay Janapa Reddi

2021 Spring (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on *digital* devices and systems, and it complements ENG-SCI 152, which focuses on devices and systems that use analog electronics. Topics include: combinational and sequential logic; computer architecture; machine code; and altogether the infrastructure and computational framework composing a MIPS processor. Consideration is given in design to interactions between hardware and software systems. Students will design application specific hardware for an embedded system.

Recommended Prep: CS50 or programming experience required.

Additional Course Attributes:

Attribute	Value(s)

Computer Science 143

Computer Networks (118418)

H. Kung

2020 Fall (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Computer networking has enabled the emergence of mobile and cloud computing, creating two of the most significant technological breakthroughs in computing. Computer networks have become even more critical these days since remote activities have become a new norm. We expect several focuses in the coming years. First, we will witness the emergence of 5G wireless mobile networks, which have already begun to replace the current 4G networks. Second, cybersecurity and privacy will receive unprecedented attention from the industry. Third, blockchain technology, which underlies Bitcoin, creates a new trusted network infrastructure for many new distributed applications. Fourth, distance learning and virtual meetings will push the limits of current multicast and network management technologies. In this course, students will learn basic networking protocols as well as these timely topics.

Class Notes:

This course will take place remotely and use synchronized remote lectures and Zoom breakout sessions along with Piazza, Slack, and other collaboration tools. The teaching staff will hold frequent office hours.

Recommended Prep:

CS50 (or programming experience) and a strong interest in the subject matter. Lab sessions will be provided to give extra support.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course

Computer Science 145

Networking at Scale (208314)

Minlan Yu

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Modern networks have grown to extremely large scale (connecting millions of servers) and high speed (with Terabits per second) to meet the needs of a variety of cloud applications in business and society (e.g., social media, public health, and entertainment). In this course, we will study not only basic concepts in networking but also how these concepts get applied and extended for networking at scale. We will discuss the recent technology trends and design choices of performance, scalability, manageability, and cost faced by companies who own large-scale networks such as Amazon, Google, Microsoft, and Facebook. This course includes lectures and system programming projects. More information can be found at <https://github.com/minlanyu/cs145-site>.

Recommended Prep:

System programming at the level of CS 61.

Computer Science 152

Programming Languages (119629)

Nada Amin

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Comprehensive introduction to the principal features and overall design of both traditional and modern programming languages, including syntax, formal semantics, abstraction mechanisms, modularity, type systems, naming, polymorphism, closures, continuations, and concurrency. Provides the intellectual tools needed to design, evaluate, choose, and use programming languages.

Recommended Prep:

Computer Science 51; Computer Science 121 is recommended. Students must have good programming skills, be very comfortable with recursion, proofs, basic mathematical ideas and notations, including sets, relations, functions, and induction.

Additional Course Attributes:

Attribute	Value(s)

Operating Systems (113847)

James Mickens

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course focuses on the design and implementation of modern operating systems. The course discusses threads, processes, virtual memory, schedulers, and the other fundamental primitives that an OS uses to represent active computations. An exploration of the system call interface explains how applications interact with hardware and other programs which are concurrently executing. Case studies of popular file systems reveal how an OS makes IO efficient and robust in the midst of crashes and unexpected reboots. Students also learn how virtualization allows a physical machine to partition its resources across multiple virtual machines. Class topics are reinforced through a series of intensive programming assignments which use a real operating system.

Recommended Prep:**Computer Science 61.****Additional Course Attributes:**

Design of Useful and Usable Interactive Systems (123971)

Elena Glassman

2021 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

71

The course covers skills and techniques necessary to design innovative interactive products that are useful, usable and that address important needs of people other than yourself. You will learn how to uncover needs that your customers cannot even articulate. You will also learn a range of design principles, effective creativity-related practices, and techniques for rapidly creating and evaluating product prototypes. You will also have several opportunities to formally communicate your design ideas to a variety of audiences. You will complete two large team-based design projects.

Boaz Barak

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Artificial Intelligence (AI) is an exciting field that has had a tremendous impact on life and society. The goal of this course is to introduce the ideas and techniques underlying the design of computer systems that make intelligent decisions based on data. Topics covered in this course are broadly divided into 1) planning and search algorithms, 2) probabilistic reasoning and representations, and 3) machine learning (although, as we will see, it is impossible to separate these ideas so neatly). Within each area, the course will also present practical AI algorithms being used in the real-world, with a special focus on the recent emergence of applications in "AI for Social Good", i.e., areas of direct societal benefit. The class will include lectures connecting the models and algorithms we discuss to applications in areas such as public health, conservation, social work, education, public safety and also discuss ethical challenges faced in applications of AI in society.

Recommended Prep:

CS 51; Stat 110 (may be taken concurrently).

Additional Course Attributes:

Introduction to Computational Linguistics and Natural-language Processing (117372)

Stuart Shieber

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

36

Natural-language-processing applications are ubiquitous: Alexa can set a reminder if you ask; Google Translate can make emails readable across languages; Watson outplays world Jeopardy champions; Grover can generate fake news, and recognize it as well. How do such systems work? This course provides an introduction to the field of computational linguistics, the study of human language using the tools and techniques of computer science, with applications to a variety of natural-language-processing problems such as these. You will work with ideas from linguistics, statistical modeling, and machine learning, with emphasis on their application, limitations, and implications. The course is lab- and project-based, primarily in small teams, and culminates in the building and testing of a question-answering system.

Course Notes:

Enrollment limited to 36 students.

Recommended Prep:

Programming ability and computer science knowledge at the level of CS51; knowledge of discrete mathematics, including basic probability, statistics, and logic at the level of CS20; some familiarity with Python programming.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Computing Foundations for Computational Science (128104)

David Sondak

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Computational science has become a third partner, together with theory and experimentation, in advancing scientific knowledge and practice, and an essential tool for product and process development and manufacturing in industry. Big data science adds the 'fourth pillar' to scientific advancements, providing the methods and algorithms to extract knowledge or insights from data. The course is a journey into the foundations of Parallel Computing at the intersection of large-scale computational science and big data analytics. Many science communities are combining high performance computing and high-end data analysis platforms and methods in workflows that orchestrate large-scale simulations or incorporate them into the stages of large-scale analysis pipelines for data generated by simulations, experiments, or observations. This is an applications course highlighting the use of modern computing platforms in solving computational and data science problems, enabling simulation, modeling and real-time analysis of complex natural and social phenomena at unprecedented scales. The class emphasizes on making effective use of the diverse landscape of programming models, platforms, open-source tools, computing architectures and cloud services for high performance computing and high-end data analytics.

Recommended Prep:

Students are expected to have basic programming experience and understanding of algorithms (e.g. CS50/CS51/CS207), familiarity with Python, C or similar, and basic knowledge of Linux including using the command line.

Advanced Topics in the Theory of Machine Learning (207862)

Boaz Barak

2021 Spring (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

80

This will be a graduate level course on recent advances and open questions in the theory of machine learning and specifically deep learning. We will review both classical results as well as recent papers in areas including classifiers and generalization gaps, representation learning, generative models, adversarial robustness and out of distribution performance, and more.

This is a fast-moving area and it will be a fast-moving course. We will aim to cover both state-of-art results, as well as the intellectual foundations for them, and have a substantive discussion on both the "big picture" and technical details of the papers. In addition to the theoretical lectures, the course will involve a programming component aiming to get students to the point where they can both reproduce results from

papers and work on their own research. This component will be largely self-directed and we expect students to be proficient in Python and in picking up technologies and libraries on their own (aka "Stack Overflow oriented programming"). We will ensure students have access to the appropriate computational resources (i.e., GPUs).

This Harvard seminar will be coordinated with a "sister seminar" at MIT, taught by Ankur Moitra. Details will be announced later.

Class Notes: There will be an application process to the course, details of which will be announced on the course webpage--<https://boazbk.github.io/mltheoryseminar/>.

Recommended Prep: The course will require mathematical maturity, and proficiency with proofs, probability, and information theory, as well as the basics of machine learning. We expect that students will have both theory background (CS 121 and 124 or similar) as well as machine learning background (CS 181 or 183 or similar).

Topics in Theoretical Computer Science: Biology and Complexity (120237)

Leslie Valiant

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Many processes in biology consist of step by step processes, whether in evolution, neural activity, development, or protein circuits. In many of these processes the actual steps taken by biological systems are not currently understood. Further, even the outcomes that are being realized by these processes are not well understood. In general current understanding of most aspects of biology is not complete or specific enough to provide theories in which predictions can be made by analysis or computer simulation. Computer science is the study of step by step processes and of specifications of the outcomes that such processes can realize. For many computational outcome specifications it is known or believed that no mechanism with feasible resources can realize them. Computer science therefore offers a top-down approach to understanding what could possibly be computed in biology, and how. In this course we shall pursue this computational complexity approach, whose origins go back to Turing and von Neumann. Emphasis will be on evolution and neuroscience, but other topics such as development will be also discussed. Research papers that address some aspect of the complexity question, whether by mathematical analysis, computer simulations or experimental findings will be discussed.

Recommended Prep: CS 121/124 or equivalents.

Optimized Democracy (217635)

Ariel Procaccia

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

The course examines the mathematical and algorithmic foundations of democracy, running the gamut from theory to applications. The goal is to provide students with a rigorous perspective on, and a technical toolbox for, the design of better democratic systems. Topics include computational social choice (identifying optimal voting rules), fair division with applications to political redistricting (avoiding gerrymandering) and apportionment (allocating seats on a representative body), sortition (randomly selecting citizens' assemblies), liquid democracy (transitively delegating votes), and weighted voting games (analyzing legislative power through cooperative game theory).

The course website can be found here: <https://sites.google.com/view/optdemocracy>

Class Notes:

Course enrollment limited. Offered jointly with HKS as DPI 612.

Recommended Prep:

Students should have a basic understanding of probability theory and algorithms. Examples of concepts that are useful to know include Markov chains, concentration inequalities, NP-hardness and linear programming. Mathematical maturity (following proof sketches in real time) is expected. Although this is primarily a graduate course, undergraduate students who have previously taken Stat 110 and CS 124 (or similar courses) are very welcome.

Computing at Scale (160624)

H. Kung

2021 Spring (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Scaling computation over parallel and distributed computing systems is a rapidly advancing area of research receiving high levels of interest from both academia and industry. The objective can be for high-performance computing and energy-efficient computing ("green" data center servers as well as small embedded devices). In this course, students will learn principled methods of mapping prototypical computations used in machine learning, the Internet of Things, and scientific computing onto parallel and distributed compute nodes of various forms. These techniques will lay the foundation for future computational libraries and packages for both high-performance computing and energy-efficient devices. To master the subject, students will need to appreciate the close interactions between computational algorithms, software abstractions, and computer organizations. After having successfully taken this course, students will acquire an integrated understanding of these issues. The class will be organized into the following modules: Big picture: use of parallel and distributed computing to achieve high performance and energy efficiency; End-to-end example 1: mapping nearest neighbor computation onto parallel computing units in the forms of CPU, GPU, ASIC and FPGA; Communication and I/O: latency hiding with prediction, computational intensity, lower bounds; Computer architectures and implications to computing: multi-cores, CPU, GPU, clusters, accelerators, and virtualization; End-to-end example 2: mapping convolutional neural networks onto parallel computing units in the forms of CPU, GPU, ASIC, FPGA and clusters; Great inner loops and parallelization for feature extraction, data clustering and dimension reduction: PCA, random projection, clustering (K-means, GMM-EM), sparse coding (K-SVD), compressive sensing, FFT, etc.; Software abstractions and programming models: MapReduce (PageRank, etc.), GraphX/Apache Spark, OpenCL and TensorFlow; Advanced topics: autotuning and neuromorphic spike-based computing. Students will learn the subject through lectures/quizzes, programming assignments, labs, research paper presentations, and a final project. Students will have latitude in choosing a final project they are passionate about. They will formulate their projects early in the course, so there will be sufficient time for discussion and iterations with the teaching staff, as well as for system design and implementation. Industry partners will support the course by giving guest lectures and providing resources. The course will use server clusters at Harvard as well as external resources in the cloud. In addition, labs will have access to state-of-the-art IoT devices and 3D cameras for data acquisition. Students will use open source tools and libraries and apply them to data analysis, modeling, and visualization problems.

Recommended Prep:

(1) programming experience (Python, MatLab or C/C++ should be fine); (2) basic knowledge in systems and machine organization; (3) familiarity in data structures and algorithms; and (4) maturity in mathematics (e.g., undergraduate linear algebra and statistics). For students with strong interest in the subject matter and related research topics, one of these four requirements may be waived. Labs and extra support will provide preparation in the first weeks of the semester to help students quickly obtain the background necessary to excel in the course.

Additional Course Attributes:

Computer Science 246

Advanced Computer Architecture (127937)

David Brooks

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Review of the fundamental structures in modern processor design. Topics include computer organization, memory system design, pipelining, and other techniques to exploit parallelism. Discussion of modern topics including GPU architectures, datacenter architecture, mobile/embedded SoC architectures, and machine learning acceleration as time permits. Emphasis on a quantitative evaluation of design alternatives and an understanding of performance and energy consumption issues.

Course Notes:

The contents and course requirements are similar to those of Computer Science 146, with the exception that students enrolled in Computer Science 246 are expected to undertake a course project appropriate for a graduate course.

Recommended Prep:

Computer Science 141.

Computer Science 249R

Tiny Machine Learning (212687)

Vijay Janapa Reddi

2020 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Tiny machine learning (TinyML) is defined as a fast-growing field of machine learning technologies and applications including hardware (dedicated integrated circuits), algorithms and software capable of performing on-device sensor (vision, audio, IMU, biomedical, etc.) data analytics at extremely low power, typically in the mW range and below, and hence enabling a variety of always-on use-cases and targeting battery-operated devices. The pervasiveness of ultra-low-power embedded devices, coupled with the introduction of embedded machine learning frameworks like TensorFlow Lite for Microcontrollers, will enable the mass proliferation of AI-powered IoT devices. The explosive growth in machine learning and the ease of use of platforms like TensorFlow (TF) make it an indispensable topic of study for modern computer science and electrical engineering students.

Advanced Topics in Programming Languages (114807)

Nada Amin

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Seminar course exploring recent research in programming languages. Topics vary from year to year. Students read and present research papers, undertake a research project.

Fall 2020: We will explore programming languages for artificial intelligence. Programming Languages drive the way we communicate with computers, including how we make them intelligent and reasonable. In this advanced topic course, we will look at artificial intelligence broadly construed from the point of view of programming languages. We gain clarity of semantics, algorithms and purpose. Topics include differentiable programming, neuro-symbolic systems, constraint and probabilistic programming, interpretable AI and more. Reading and discussion will be based on a selection of papers, suggested collectively. Grading is based on participation, presentation and final project. For more course information can be found at <http://pl-ai-seminar.seas.harvard.edu/>

Recommended Prep:

Computer Science 152 or permission of the instructor.

Computer Science 263

Systems Security (160579)

James Mickens

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores practical attacks on modern computer systems, explaining how those attacks can be mitigated using careful system design and the judicious application of cryptography. The course discusses topics like buffer overflows, web security, information flow control, and anonymous communication mechanisms such as Tor. The course includes several small projects which give students hands-on experience with various offensive and defensive techniques; the final, larger project is open-ended and driven by student interests.

Recommended Prep:

Computer Science 161 (Operating Systems)

Additional Course Attributes:

Attribute	Value(s)

All: Cross Reg Availability	Available for Harvard Cross Registration

Computer Science 271

Topics in Data Visualization (211349)

Johanna Beyer

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

This course covers advanced topics in data visualization. Over the course of the semester, we will examine seminal works and recent state-of-the-art research in information visualization, scientific visualization and visual analytics. Students will work on a semester-long visualization project that will allow them to visualize their own data sets and write a short paper about their project. We will employ peer-feedback and formal design critiques to analyze each other's work.

Course Notes:

Enrollment limited to 30 students. Instructor permission needed.

Recommended Prep:

CS 171, CS 179, CS 279, or some data visualization experience. Please contact course staff if you are unsure about the course pre-requisites.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 279R

Research Topics in Human-Computer Interaction (121985)

Elena Glassman

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

This year only: Students will read and discuss HCI papers about computers working with---or clashing against---the strengths and weakness of human cognition, e.g., the positive and negative impacts of AI recommendation systems and the impact of interruptions on continuity of thought. Activities will include a small number of lectures, discussion of relevant literature in each field, and a project, in which students will work together in groups to design and carry out HCI research.

Course Notes:

Designed for PhD students from all areas. Masters students and advanced undergraduates are welcome, particularly those who wish to do research (or write a thesis) in an area related to Human-Computer Interaction.

Recommended Prep:

None for PhD students; for undergrads CS 179 or CS 171.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science

Computer Science 282BR

Topics in Machine Learning: Interpretability and Explainability (213653)

Hima Lakkaraju

2021 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

As machine learning models are increasingly being employed to aid decision makers in high-stakes settings such as healthcare and criminal justice, it is important to ensure that the decision makers (end users) correctly understand and consequent trust the functionality of these models. This graduate level course aims to familiarize students with the recent advances in the emerging field of explainable ML. In this course, we will review seminal position papers of the field, understand the notion of model interpretability from the perspective of decision makers (end users), discuss in detail different classes of interpretable models (e.g., case (prototype) based approaches, sparse linear models, rule-based techniques, saliency maps, generalized additive models, and counterfactual explanations), and explore the connections between model interpretability and causality, debugging, and fairness. The course will also emphasize on various applications which can immensely benefit from model interpretability including medical imaging and judicial decision making.

Class Notes: Total class capacity of 25 includes students in both CS 282BR and HBSDOC 4914. Interested students should submit the application form at that can be found [here](#).

Recommended Prep: Knowledge of machine learning, convex optimization, probability and statistics, basic computer science and programming skills.

Additional Course Attributes:

Computer Science 286

Multi-Robot Systems: Control, Communication, and Security (216508)

Stephanie Gil

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The ability to connect devices over long distances, via the internet, changed our world. The second phase of this revolution, that we are still living in today, came about when these devices became wireless. Now we are at the cusp of a new phase of this evolution where devices are connected, wireless, and controlled – i.e. the robot revolution.

Multi-robot systems are becoming more pervasive; from future autonomous vehicle fleets, to drones, to manufacturing robots. As a result, the question of how to control, coordinate, and secure these systems has been a growing topic in the robotics literature in recent years. In this seminar-style course we will do a deep dive into this topic by reviewing classic and recent results in multi-agent planning and control literature. We will cover a wide gamut of applications from control of groups of flying drones, to decision making in autonomous car networks, to space exploring CubeSats.

This class will treat both the theory and the practical applications behind multi-robot systems. Students with mathematical inclinations and exposure to graph theory, probability theory, linear algebra, and algorithms will derive the most benefit from this course.

Course Notes:

This course is a graduate-level seminar course. Motivated advanced undergraduate students are also welcomed!

Recommended Prep:

It will be assumed that students have a strong command of calculus and basic probability theory. An understanding of mathematical optimization methods is preferable. A background in algorithms, dynamics/controls, and intro to robotics would be beneficial.

Additional Course Attributes:

AI for Social Impact (217643)

Milind Tambe

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

Recent years have seen AI successfully applied to societal challenge problems; indeed, it has a great potential to provide tremendous social good in the future. In this course, we will discuss the successful deployments and the potential use of AI in various topics that are essential for social good, including but not limited to health, environmental sustainability, public safety and public welfare. We will focus on challenges in "AI for Social Impact" (AI4SI), what makes projects successful, and why projects fail. A key part of this course will be to start AI4SI projects with local area non-profits.

Course Notes:

Only advanced undergraduates who have demonstrated significant knowledge of AI may enroll. Enrollment capped at 30. Students must have adequate background in AI. Students who have previous experience in AI for Social Impact will be given priority.

Recommended Prep:

A graduate level course in AI.

PhD Grad Cohort Research Seminar (216811)

David Brooks

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

In lieu of typical on-campus interactions that normally occur during the first year of the PhD program, this course provides an opportunity for entering CS PhD students to engage with the Harvard CS community and to build a cohort among the entering PhD students. The class is intended for first-year students and students transferring into the Harvard CS PhD program. The class will include an introduction to the community through virtual talks and interactive Q&As with regular course guests. We plan to bring in a broad mixture of CS faculty, current PhD students, and PhD alumni. The course will also include an off-line component primarily consisting of select broad-interest CS research readings and writing assignments.

Course Notes:

We will meet synchronously twice a week (two, one-hour meeting slots) at times that accommodate the time zones of students. CS290 will satisfy a CS 200-level technical elective (one of the 10 required classes for the CS PhD degree).

Computer Science 333

Individual Risk (216384)

Cynthia Dwork

Joseph Blitzstein

2020 Fall (4 Credits)

Schedule: F 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Risk assessment tools are increasingly deployed in high-stakes settings: What is the probability that the tumor will metastasize? What is the chance that this individual will commit a violent crime in the next two years? What is the probability that the student will graduate within 4 years? But what is the probability of a non-repeatable event? What is the mathematical meaning of "individual risk" and what should we require of a risk assessment algorithm? This reading course will explore different notions of risk, based on different notions of probability, and will connect this literature to notions of regret and indistinguishability from computer science.

Course Notes:

Also offered as Stat 333. Only one of CS 333 or Stat 333 may be taken for credit.

Recommended Prep:

Familiarity with probability (e.g., Stat 110 and/or exposure through theoretical computer science). Exposure to theoretical computer

science will be helpful but is not mandatory.

Earth and Planetary Sciences

Subject: Earth & Planetary Sciences

Earth & Planetary Sciences 6

Introduction to Environmental Science and Engineering (216015)

Elsie Sunderland

Steven Wofsy

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course will provide students with an introduction to current topics in environmental science and engineering by providing: an overview of current environmental issues, critically evaluating their underlying science and knowledge limitations, and exploring the best-available engineering solutions to some of our most pressing environmental problems. The course will emphasize the interconnected biological, geological, and chemical cycles of the earth system (biogeochemical cycles) and how human activity affects these natural cycles within each of the major environmental compartments (atmospheric, aquatic, and terrestrial).

Course Notes:

EPS 6 is also offered as ESE 6. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans.

Recommended Prep:

The course presumes basic knowledge in chemistry, physics, and mathematics at the high school level.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students

Local offset from Cambridge MA	+9:45

Earth & Planetary Sciences 10

A Brief History of the Earth (203888)

Jerry Mitrovica

Rebecca Fischer

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is an introduction to Earth and Planetary science for EPS concentrators and an overview, for those outside the field, of the critical events and processes that have shaped the Earth's evolution and its place in the solar system. The course is designed to highlight the processes, from tectonic plate to microbial scale,

that drive the Earth's response to (internal and external) perturbations and we will explore both the time scale of those perturbations and the limits of the Earth's resilience. By considering the full sweep of geological time, from the early Earth to the modern world, the course will take advantage of a series of natural experiments to compare the Earth system during periods with and without atmospheric oxygen, animals, land plants and polar ice sheets, and to compare it, on occasion, with other terrestrial planets.

Course Notes:

Students must be able to join one of the lab sections ([TBD]) in order to enroll in the class. Students who wish to enroll in the class but cannot make the listed class times (due to their local time zone only, not due to scheduling conflicts with other courses) will be eligible for a lecture summary tutorial with Profs. Mitrovica and/or Fischer once a week at time suitable for everyone unable to make the regular course time - to be determined once students enroll. This course includes a mandatory lab component.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 52

Introduction to Global Geophysics (109231)

Jerry Mitrovica

2020 Fall (4 Credits)

Schedule:

WF 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a comprehensive introduction to global geophysics and serves as a bridge between introductory Earth science courses and higher-level courses in tectonics, seismology and planetary sciences. Topics include: plate tectonics, the Earth's composition and thermal state, rheology, seismology, ice age dynamics, mantle convection, the Earth's gravity field and geodesy, sea-level changes from deep time to modern, and (if time permits) Earth rotation.

Course Notes:

This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Recommended Prep:

Applied Mathematics 21a,b (or Mathematics 1a,1b; or Mathematics 21a, b); Physics 15a,b (prior or concurrent) or Physical Sciences 12a,b; or permission of the instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 53

Marine Geochemistry (126174)

David Johnston

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to low temperature biogeochemistry. We will focus on key biogeochemical elements and look to understand the linkages between the biosphere, atmosphere and hydrosphere. The course begins with a description of marine geochemistry (alkalinity and chemical fluxes) and works toward understanding isotopic fractionation and what it can tell us about the environment. We will explore biogeochemistry over a range of physical and temporal scales.

Course Notes:

This course includes a weekly two-hour lab to be arranged. This course fulfills the EPS sub-discipline requirement of either Atmosphere(s) and Oceans or Earth History and Geobiology. Given in alternate years. Formerly offered as EPS 186. Students who have taken EPS 186 cannot take EPS 53 for credit.

Recommended Prep:

A course in college chemistry is recommended.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 55

Earthquakes and Tectonics (205190)

Brendan Meade

Esther James

2021 Spring (4 Credits)

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to earthquakes in the context of global tectonics, source mechanisms, types of natural and induced quakes. Faults in the field, dating earthquakes, materials of fault cores. Observations, introduction to the theory, and analog modeling of earthquake cycles, mountain building, infrastructure response to earthquake ground motion. Introduction to tsunami hazard and to earthquake risk analysis.

Course Notes:

This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Students will be expected to participate in one section per week. Section times will be scheduled after course registration.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students

Earth & Planetary Sciences 56

Geobiology and the History of Life (108969)

David Johnston

Andrew Knoll

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

Course Notes:

Course includes a weekly three-hour lab to be arranged and one field trip.

EPS 56 is also offered as OEB 56. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

Recommended Prep:

EPS 10, OEB 10, or Life Sciences 1b, or permission of instructor.

Earth & Planetary Sciences 99B

Tutorial - Senior Year (159619)

Annika Quick

Esther James

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Research and writing of the senior thesis under faculty direction.

Course Notes:

Senior honors candidates must take at least one term of this course (fall or spring) if writing a thesis; an oral presentation is required. To enroll, students must submit a registration form, which includes permission of their faculty sponsor, to the Academic Administrator.

Requirements:

Pre-requisite: E-PSCI 99A

Additional Course Attributes:

Earth & Planetary Sciences 100

The Missing Matlab Course: A Practical Introduction to Programming and Data Analysis (122333)

Miaki Ishii

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Being able to write a working program is not just about syntaxes of the programming language but involves other skills such as debugging and being able to convert a problem at hand to a sequence of commands. This intense course develops these skills for successful program writing by being hands-on. Students will first learn new syntaxes and then spend time writing numerous scripts.

Course Notes:

The course time is flexible. The lecture time will be chosen in consultation with students to maximize participation.

No prior knowledge of MATLAB is required. Course meeting time includes lecture and lab. Students are not allowed to audit the course.

Additional Course Attributes:

Earth & Planetary Sciences 101

Global Warming Science 101 (214499)

Eli Tziperman

2021 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

An introduction to the science of global warming/ climate change, meant to assist students to process issues that often appear in the news and public debates. Topics include: the greenhouse effect, and consequences of the rise of greenhouse gasses including sea level rise, ocean acidification, heat waves, droughts, glacier melting, hurricanes and more. Throughout, an ability to critically evaluate observations, predictions and risk will be emphasized. The students will be involved in in-class quantitative analysis of climate observations, feedbacks and models via python Jupyter notebooks that will be provided.

Course Notes:

This course fulfills the E-PSCI sub-discipline requirement of Atmosphere(s) and Oceans. E-PSCI 101 is also offered as ESE 101. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 101. AB students may enroll in either E-PSCI 101 or ESE 101 to meet their concentration requirements.

Recommended Prep:

Basic calculus and ordinary differential equations, as covered for example by Math 1b or Math 19 or Math 21b.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	+17
Quantitative Reasoning with Data	Yes
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 102

Data Analysis and Statistical Inference in the Earth and Environmental Sciences (216019)

*Steven Wofsy**Roger Fu*

2021 Spring (4 Credits)

Schedule:

WF 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Statistical inference, deterministic and stochastic models of data, denoising and filtering, data, visualization, time series analysis, image processing, Monte Carlo methods. The course emphasizes hands-on learning using real data drawn from atmospheric and environmental observations, applied by students in projects and presentations.

Course Notes:

EPS 102 is also offered as ESE 102. Students may not take both for credit.

Recommended Prep:

Math 21 or Applied Math 22 a and b or equivalent.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	+7
Quantitative Reasoning with Data	Yes
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	-6
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 109

Earth Resources and the Environment (114664)

John Shaw

Annika Quick

2021 Spring (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An overview of the Earth's energy and material resources, including conventional and unconventional hydrocarbons, nuclear fuels, alternative/renewable energy resources, metals, and other industrial materials. The course emphasizes the geologic and environmental factors that dictate the availability of these resources, the methods used to identify and exploit them, and the environmental impacts of these operations. Topics include: coal and acid rain; petroleum exploration, drilling, and production, shale gas/oil, photochemical smog, and oil spills; nuclear power and radioactive hazards; alternative energies (solar, hydroelectric, tidal, geothermal power), metals and mining.

Course Notes:

Course includes three hours of laboratory work each week and two field trips. EPS 109 is also offered as ESE 109. Students may not take both for credit. Undergraduate engineering students should enroll in ESE 109. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.

Recommended Prep:

EPS 10, ES 6, an equivalent course, or permission of instructor.

Earth & Planetary Sciences 110

Introduction to Planetary Materials and Earth Resources (109527)

Stein Jacobsen

2020 Fall (4 Credits)

Schedule:

MW 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A comprehensive introduction to how the principles of geochemistry and chemical compositions of terrestrial and extraterrestrial materials are used to understand the evolution of the Earth and its resources. The course will discuss how we know that the Earth's crust has more than sufficient resources for its human population.

Course Notes:

Course includes a weekly lab and three 1-day field trips. This course fulfills the EPS sub-discipline requirement of either Earth History and Geobiology or Geology, Geophysics and Planetary Science.

Recommended Prep:

An introductory earth and or planetary science course and a course in college-level chemistry or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 112

Thermodynamics by Case Study (161215)

Scot Martin

2021 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes:

EPS 112 is also offered as ES 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. Total class capacity of 18 includes students in both ES 112 and EPS 112.

Meets on Monday and Wednesday from 12pm to 12:50pm for all 18

students. Also meets on Friday in one of two separate 50-min blocks of 9 students for discussion. Friday meeting times will be determined according to enrolled students' availability. Please see course page for lottery instructions.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 129

Climate and Atmospheric Physics Laboratory (213672)

Marianna Linz

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course will take a hands-on approach to learning climate and atmospheric physics. Topics covered will include global scale atmospheric dynamics, synoptic meteorology and weather forecasting, and climate modeling. Some fundamental fluid dynamics will be covered along the way. Half of the weeks will involve experiments using water and food coloring with lab kits that will be provided to each student, and half of the weeks will involve working with observed and/or modeled climate data or running a climate model. Each week will have three components: one 1.5 hour lab session to perform laboratory experiments, run models, and analyze data over zoom; one peer-to-peer feedback/problem solving session; and one 1.5 hour class session. In this flipped-classroom environment, knowledge transfer will occur outside of class through readings, videos, and lab prep in advance of each lab session. Peer-to-peer sessions will be focused on writing up the labs and providing feedback. Class sessions will include a lab discussion, a wrap-up activity, and an introduction to the next week's subject.

Course Notes:

EPS 129 is also offered as ESE 129. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in EPS 129. AB students may enroll in either EPS 129 or ESE 129 to meet their concentration requirements.

Class Notes:

Tuesday: 90-minute lab and Thursday: 75-minute class, times TBD

Recommended Prep:

Physics 12a/15a/16, Math/AM 21a (b recommended) or equivalent or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 132

Introduction to Meteorology and Climate (123877)

Brian Farrell

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Physical concepts necessary to understand atmospheric structure and motion. Phenomena studied include the formation of clouds and precipitation, solar and terrestrial radiation, dynamical balance of the large-scale wind, and the origin of cyclones. Concepts developed for understanding today's atmosphere are applied to understanding the record of past climate change and the prospects for climate change in the future.

Course Notes:

EPS 132 is also offered as ESE 132. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

Mathematics 21 or Applied Mathematics 21a and 21b; Physical Sciences 12; or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 133

Atmospheric Chemistry (122093)

Daniel Jacob

2021 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Physical and chemical processes determining the composition of the atmosphere and its implications for climate, ecosystems, and human welfare. Construction of atmospheric composition models. Atmospheric transport. Nitrogen, oxygen, and carbon cycles. Climate forcing by greenhouse gases and aerosols. Stratospheric ozone. Oxidizing power of the atmosphere. Surface air pollution: aerosols and ozone. Deposition to ecosystems: acid rain, nitrogen, mercury.

Course Notes:

EPS 133 is also offered as ESE 133. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

Physical Sciences 1, 2, Mathematics 1b; or equivalents.

Additional Course Attributes:

Attribute	Value(s)

Earth & Planetary Sciences 139

Paleoclimate as Prologue (205194)

Peter Huybers

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course we will quantitatively assess past events in Earth's history involving temperature, precipitation, and sea level, and leverage these past phenomena to inform about future changes in climate. Topics include inferring temperature from instrumental, dendrochronological, ice-core, and marine proxy records over the Medieval Warm Period, Little Ice Age, and post-industrial epochs; exploring variations in sea level recorded by tide gages and coral records over the Holocene and Last Interglacial; assessing precipitation variability using modern instrumental records and late-Pleistocene lake level and speleothem records; and evaluating changes in mountain glaciers and ice sheets over the Plio-Pleistocene. Statistical approaches paired with these analyses include Bayesian inference, Fourier analysis, quantile regression, and extreme value theory. You will be provided with data, example code, and sufficient context to come to your own conclusions regarding past phenomena and how they inform regarding future warming, drought, and changes in sea level. A typical class session involves discussion of a scientific paper, lecture introducing relevant theory and analytical approaches, hands-on data analysis, and a brief interview with an outside expert. A complimentary component of the course involves you individually, or in a small team, developing a line of research in collaboration with the teaching staff. Your research will extend upon class topics or related paleoclimate questions. Student projects sometimes lead to senior theses and publication in professional journals. There are no firm prerequisites but background in the sciences, mathematics, statistics, and/or coding is helpful.

Course Notes:

Each class will involve lecture, discussion, and in-class data analysis. This course fulfills the EPS sub-discipline requirement of either Atmosphere(s) and Oceans or Earth History and Geobiology.

Recommended Prep:

EPS 131 or EPS 132, or permission of instructor; experience with statistics and coding is helpful.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Quantitative Reasoning with Data	Yes

Earth & Planetary Sciences 140

Geochemical and Cosmochemical Thermodynamics (215878)

Stein Jacobsen

2021 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

The laws of thermodynamics. Equilibrium and spontaneous transformations in systems of variable chemical composition. Components, phase rule and petrogenetic grids. Calculation of phase diagrams. Applications to cosmochemistry, igneous and metamorphic petrology, and environmental geochemistry.

Course Notes:

For advanced undergraduates; A course in college-level chemistry or equivalent; Mathematics 21a or Applied Mathematics 21a (may be taken concurrently).

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Undergraduate Students
Local offset from Cambridge MA	+17
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	-6

Earth & Planetary Sciences 150

Exceptional Paleobiological Insights into Animal Evolution (215957)

Javier Ortega-Hernandez

2021 Spring (4 Credits)

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

In this course we will explore the importance of soft-tissue preservation in the rock record through an overview of major exceptional fossiliferous sites around the world and throughout the Precambrian to Mid-Phanerozoic, with particular emphasis on the evolutionary history of invertebrate animals. Our aim is to produce a thorough understanding of the inherent biases of the fossil record, how exceptional deposits break with these limitations, and the contribution of exceptional paleontological data towards reconstructing the origin and early evolution of the major animal groups.

Course Notes:

EPS 150 is also offered as OEB 150. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
Local offset from Cambridge MA	+7
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	+8 +9
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 160

Space Science and Engineering: Theory and Applications (160957)

Robin Wordsworth

2020 Fall (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

This course is an introduction to the challenges involved in designing spacecraft for observation of Earth and exploration of other planets. Topics covered include basic atmospheric and planetary science, key principles of remote sensing, telemetry, orbital transfer theory, propulsion and launch system design, and thermal and power management.

Course Notes:

EPS 160 is also offered as ESE 160. Students may not take both for credit. Undergraduate engineering students should enroll in ESE 160. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Recommended Prep:

Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences 12a and 12b (or equivalents)

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 162

Hydrology (108750)

Kaighin McColl

2020 Fall (4 Credits)

Schedule: MW 0415 PM - 0515 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course provides an introduction to the global hydrologic cycle and relevant terrestrial and atmospheric processes. It covers the concepts of water and energy balance; atmospheric radiation, composition and circulation; precipitation formation; evaporation; vegetation transpiration; infiltration, storm runoff, and flood processes; groundwater flow and unsaturated zone processes; and snow processes.

Course Notes:

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Course includes a weekly 1.5 hour lab session or section for discussion of assigned problems. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics, and Planetary Science. EPS 162 is also offered as ESE 162. Students may not take both for credit.

Recommended Prep:

Applied Mathematics 21a,b or Mathematics 21a,b; AND Applied Physics 50a,b, Physics 15a,b or Physical Sciences 12a,b.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 164

Environmental Chemistry (216417)

Scot Martin

2020 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Concepts and applications of chemical kinetics and thermodynamics for environmental science and engineering.

Course Notes:

EPS 164 is also offered as ESE 164. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans. The course schedule is MWF 12:00-12:50pm.

Recommended Prep:

Physical Sciences 11 or equivalent in general chemistry.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	For Undergraduate and Graduate Students

Earth & Planetary Sciences 168

Human Environmental Data Science: Agriculture, Conflict, and Health (216421)

Peter Huybers

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

The purpose of this course is to develop understanding and guide student research of human and environmental systems. In class we will explore agriculture, conflict, and transmissible disease. Study of each topic will involve introduction data, mathematical models, and analysis techniques that build toward addressing a major question at each interface: Have agricultural systems been adapted to climate change? Has drought caused conflict? And does the environment influence the spread of COVID-19? These questions are diverse, but are addressed using common analytical frameworks. Analytical approaches include simple mathematical models of feedback systems, crop development, and population disease dynamics; frequentist statistical techniques including linear, multiple linear, and panel regression models; and Bayesian methods including empirical, full, and hierarchical approaches. You will be provided with sufficient data, example code, and context to come to your own informed conclusions regarding each of these questions. Furthermore, topics covered in class will provide a template for undertaking independent research projects in small teams. Research will either extend on topics presented in class or address other human-environmental questions. Historically, such student projects have sometimes led to senior theses or publication in professional journals.

Course Notes:

The course is designed for upper-level undergraduates. Enrollment is by instructor permission. This course fulfills the EPS sub-discipline

requirement of Atmosphere(s) and Oceans.

Recommended Prep:

There are no specific prerequisites but a background in environmental, physical or life sciences; experience in coding or statistical analysis; and/or facility with differential equations is useful.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Undergraduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 169

Seminar on Global Pollution Issues: Case Study of Lead Biogeochemistry (216016)

Elsie Sunderland

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides a cross-disciplinary overview of environmental science and how research contributes to public policy and human health risk assessment through a case study of a global pollution issue: lead biogeochemistry. The scientific foundations of environmental research methods are discussed (i.e., analytical chemistry, ecology, use of environmental archives, environmental modeling). Experience conducting multidisciplinary environmental research and data analysis will be provided. Course Activities: Lectures, discussions, case studies, field/lab visits.

Course Notes:

Prerequisite: Physical Sciences 1 or 11; and Math 1b.
EPS 169 is also offered as ESE 169. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep:

Two semesters of undergraduate chemistry including Physical Sciences 1 or Physical Sciences 11; Mathematics 1a & 1b. Knowledge of basic statistics is also helpful.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	-6
FAS: Course Level	For Undergraduate and Graduate Students
Local offset from Cambridge MA	+7
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 174

Field Experiences in Earth and Planetary Sciences (120728)

Miaki Ishii

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Attend a domestic or overseas geological field program of 3-6 weeks duration to learn methods of obtaining, synthesizing, and interpreting field observations.

Course Notes:

Field programs are selected individually by students with the advice and approval of the instructor. Students must notify the instructor and Academic Administrator of intention to enroll by the course registration deadline of the preceding term.
This course fulfills the EPS sub-discipline requirement of either Earth History and Geobiology or Geology, Geophysics and Planetary Science.

Recommended Prep:

Permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 200

Atmospheric Chemistry and Physics (111855)

Daniel Jacob

Steven Wofsy

2020 Fall (4 Credits)

Schedule:

WF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Tropospheric and stratospheric gas and aerosol chemistry. Carbon, nitrogen, oxygen, and mercury cycles. Implications for climate change, air quality, ecosystems.

Course Notes:

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Intended to be an introductory survey of atmospheric chemistry to serve first-year Ph.D. students in the atmospheric sciences as well as students specializing in other areas of Earth & Planetary Sciences or Environmental Science & Engineering. Undergraduate students may take EPS200 with permission of the instructors.

Recommended Prep:

College mathematics up to multivariable calculus, basic college physics and chemistry.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 202

Mechanics in Earth and Environmental Science (124688)

James Rice

2020 Fall (4 Credits)

Schedule:

WF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to the mechanics of fluids and solids, organized around earth and environmental phenomena. Conservation laws, stress, deformation and flow. Inviscid fluids and ocean gravity waves; Coriolis dominated large scale flows. Viscosity and groundwater seepage; convective cells; boundary layers. Turbulent stream flows; flood surges; sediment transport. Elasticity and seismic waves. Pore fluid interactions with deformation and failure of earth materials, as in poro-mechanics of consolidation, cracking, faulting, and landslides. Ice sheets and glacial flow mechanics.

Course Notes:

EPS 202 is also offered as APPHY 202. Students may not take both for credit.

Recommended Prep:

Calculus-based introductory physics.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 230

Paleoclimate as Prologue (160230)

Peter Huybers

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

In this course we will explore and quantitatively assess past events in Earth's history involving temperature, sea level, and the cryosphere; and compare these events with respect to our understanding of current and predicted changes. The class will take a 'raw-data' and 'first-principles' approach to the subject: raw data in the sense that we will work with quantities that are directly observed in order to make estimates and draw inferences, and first principles in the sense of focusing on basic mechanisms. Working backward in time, topics will include modern temperature variability, the Little Ice Age, Medieval Warm Period, and more ancient climate variations. Complimentary to study of existing datasets, the course will also involve developing quantitative inferences from historical artwork and archival information, including through a series of field trips to the Harvard Art Museums and University Archives.

Course Notes:

Each class will involve lecture, discussion, and in-class data analysis.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	+17
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 235

Stochastic Methods in Climate Dynamics (160228)

Brian Farrell

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to stochastic methods for studying climate dynamics. Topics will include the Langevin equation, stochastic turbulence modeling, linear inverse modeling, and applications of statistical state dynamics to problems in planetary scale turbulence.

Course Notes:

Given in alternate years.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 236

Environmental Modeling and Data Analysis (120783)

Steven Wofsy

Daniel Jacob

2020 Fall (4 Credits)

Schedule:

WF 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Graduate-level introduction to environmental modeling and data analysis: data visualization, statistical inference, Bayes Theorem, optimal estimation, adjoint methods, Monte Carlo methods, time series analysis, denoising; principles and numerical methods for chemical transport and inverse models.

Course Notes:

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Focused on computer-based projects, 2- 4 hours per week, in small groups, adapted for on-line instruction in 2020. Suitable for: graduate students and advanced undergraduates in Earth and Planetary Sciences, Environmental Science and Engineering, Applied Math, Chemistry, and Physics. At MIT: EAPS, Civil & Environmental. Helpful to have preparation in differential equations, or atmospheric science, but not required.

Recommended Prep:

Applied Mathematics 105; a course in atmospheric chemistry (EPS 133 or 200 or equivalent); or permission of the instructors.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 241

Isotope Geochemistry and Processes of Planetary Evolution (146721)

Stein Jacobsen

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

The composition and the evolution of the Solar Nebula. Application of radiogenic and stable isotopes to study the processes of formation and evolution of planetary crusts, mantles, and cores.

Course Notes:

Given in alternate years.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 243

Geochemical and Cosmochemical Thermodynamics (118676)

Stein Jacobsen

2021 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The laws of thermodynamics. Equilibrium and spontaneous transformations in systems of variable chemical composition. Components, phase rule and petrogenetic grids. Calculation of phase diagrams. Applications to cosmochemistry, igneous and metamorphic petrology, and environmental geochemistry.

Course Notes:

Given in alternate years.

Recommended Prep:

A course in college-level chemistry or equivalent; Math 21 A or equivalent

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
Local offset from Cambridge MA	+17
Local offset from Cambridge MA	-6

Earth & Planetary Sciences 244

Atmospheric Evolution and Habitability of Terrestrial Planets (217618)

Robin Wordsworth

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Earth is our best-studied example of a rocky or 'terrestrial-type' planet, but there are many others. Our understanding of Earth's evolution and habitability is deepened by knowledge of the other rocky planets in the solar system, such as Venus and Mars, as well as more distant objects like Enceladus, Titan and Pluto. Even further afield, the emerging science of terrestrial exoplanets holds the promise of revolutionizing our understanding of planetary evolution and habitability over the next few decades. The aim of this course is to provide a wide overview of the state of the art of this subject, with a focus on in-class discussion of the primary literature.

Course Notes:

The course time is flexible. Seminar times will be chosen in consultation with students to maximize participation.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	+10 +11

Earth & Planetary Sciences 248

Topics in Mineral Physics and Chemistry: Mineralogy of Planetary Interiors (207625)

Rebecca Fischer

2021 Spring (4 Credits)

Schedule:

M 1130 AM - 0130 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This seminar course will generally focus on recent advances in understanding the physical and chemical properties of minerals and melts at extreme pressures and temperatures, with implications for the properties, composition, formation, and evolution of Earth and planetary cores and mantles. Students will read and present journal articles on relevant topics, and will rotate responsibility for leading discussions. Specific topics will vary each year offered.

In spring 2021, this course will focus on the mineralogy of planetary interiors, primarily comprised of silicate and ice minerals. The first half of the course will focus on concepts, including how interior mineralogy can be inferred, phase relations and properties of common minerals, solidification of magma oceans, and the influence of mineralogy on seismic properties, dynamics, and atmospheres. The second half of the course will apply these concepts to the Earth, Moon, asteroids/comets, other terrestrial planets, and outer Solar System planets and satellites.

Additional Course Attributes:

All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 258B

Planetary Dynamics: Magnetic Fields (215881)

Jeremy Bloxham

2021 Spring (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to the generation of planetary magnetic fields by self-sustaining dynamo action. Magnetohydrodynamics: derivation of the induction equation from Maxwell's equations; the perfectly-conducting limit and frozen-flux; flux expulsion; diffusion and re-connection. Kinematic dynamo theory: Cowling's theorem; existence proofs; the Bullard-Gellman formalism; mean-field theories; fast dynamos. Dynamical considerations: the Navier-Stokes equation; rotating magnetoconvection; Taylor states; torsional oscillations and MAC-waves. Thermodynamic considerations: energy and entropy equations; the core heat flux problem. Numerical dynamo models.

Course Notes:

Given in alternate years or upon announcement.
Students can take EPS 258a and EPS 258b in either order.

Recommended Prep:

Applied Mathematics 104, 105; Physics 153 or equivalent; or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	-6
Local offset from Cambridge MA	+17

Earth & Planetary Sciences 262

Theoretical Seismology: Part 2. Low-Frequency Seismology (107767)

Miaki Ishii

2020 Fall (4 Credits)

Schedule:

WF 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

This course covers theoretical basis for low-frequency seismology. The topics covered include boundary conditions, eigenfunctions and frequencies of the Earth, normal-mode summations for synthetic seismogram calculations, surface waves, and model-ray duality.

Course Notes:

Given in alternate years or upon announcement.

Recommended Prep:

Part 1 of EPS262 on theoretical body-wave seismology

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 270

Advanced Structural Interpretation Methods (108133)

John Shaw

Andreas Plesch

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap: n/a

Methods of interpreting complex geologic structures imaged in 2- and 3-dimensional seismic reflection data. Methods of integrated geologic and remote sensing data will be described. Students will complete independent projects analyzing seismic data on workstations.

Course Notes:

The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation. Two 2-hour combined lecture lab sections will be scheduled each week.

Given in alternate years.

Recommended Prep:

EPS 171 or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science

Earth & Planetary Sciences 272

Topics in Structural Geology and Earthquake Science (115931)

John Shaw

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Review of current research topics in structural geology and geophysics. Themes include active faulting and folding, geomechanical modeling, critical taper wedge mechanics, regional tectonics, fractures (joints), and stress in the crust.

Course Notes:

The course time is flexible. Lecture times will be chosen in consultation with students to maximize participation. One 2-hour session will be scheduled each week. Given in alternate years.

Recommended Prep:

EPS 171 or equivalent. Intended for graduate and advanced undergraduate students involved in structural geology research.

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 274

Field Geology (107945)

Miaki Ishii

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Attend an advanced domestic or overseas geological field program of 3-6 weeks duration to learn methods of obtaining, synthesizing, and interpreting field observations.

Course Notes:

Field programs are selected individually by students with the advice and approval of the instructor. An upper level field course at another university can be substituted with approval of the instructor. Students must notify the instructor and Academic Administrator of intention to enroll by the course registration deadline of the preceding term.

Recommended Prep:

Permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Earth & Planetary Sciences 286

Biogeochemistry of Cryptic Cycles (126176)

David Johnston

Ann Pearson

2020 Fall (4 Credits)

Schedule:

W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

We will explore the geochemical importance of cryptic, or "net-zero", cycles in Earth surface process. A classic example is the deep sedimentary methane cycle, in which the net energy source is organic matter and the net sink is sulfate. Despite being nearly zero-sum, the existence of this cycle impacts the geochemical rates and signatures of other sedimentary processes. We will explore this, and other, topics from the perspective of questions such as how would the ocean-atmosphere system be different if this set of coupled reactions had not evolved? What other hidden reactions could be similarly important? We will draw from literature mainly on light stable- and radio-isotopic approaches to investigating these processes.

Course Notes:

Given in alternate years.

Recommended Prep:

EPS 186 and 187 or equivalent; or permission of instructor.

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Earth & Planetary Sciences 299

Communication Skills of Academia (215120)

Ann Pearson

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

This course will provide formal mentorship in a variety of skills essential for an academic career in geosciences. Students will be guided through modules that provide practical tools to improve strategies for reading, paper writing, proposal writing, teaching, giving research seminars, informal networking, and peer review. Peer-to-peer feedback and group exercises will be used in addition to typical formats such as written assignments and oral presentations. The units are designed to complement the curriculum of graduate students as they prepare for the qualifying exam.

Course Notes:

This course is an elective and will not count toward the breadth or subject requirements. Students must obtain permission of the advisor before enrolling.

East Asian Studies 97AB

Introduction to the Study of East Asia: Issues and Methods (145419)

Melissa M. McCormick

2021 Spring (4 Credits)

Schedule: TR 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: n/a

This interdisciplinary and team-taught course provides an introduction to several of the approaches and methods through which the societies and cultures of East Asia can be studied at Harvard, including history, philosophy, literary studies, political science, film studies, anthropology and gender studies. We consider both commonalities and differences across the region, and explore how larger processes of imperialism, modernization, and globalization have shaped contemporary East Asian societies and their future

trajectories.

Course Notes:

Required of sophomore concentrators and secondary field candidates.
Open to freshmen. EAS 97ab may not be taken Pass/Fail.

Political Economy of 21st Century China: Junior Tutorial (212974)

Daniel Koss

2021 Spring (4 Credits)

Schedule:

W 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

10

This course examines central challenges facing the Chinese leadership since 2000, in (1) domestic politics, (2) economics, and (3) foreign policy. Concepts and methods from the social sciences are introduced to analyze topics including the SARS health crisis, the strained leadership transition to Xi Jinping, internet censorship, the great variety of protests, policy experimentation, factions in elite politics, ethnic minorities, state-led development with the emergence of companies designated as national champions, anti-corruption efforts, rising inequality, artificial intelligence (AI) in the country's digital strategy, international power transitions, China's entry into the World Trade Organization (WTO), the ongoing trade dispute, and the Belt and Road initiative. This is a junior tutorial with enrollment capped at 10 students.

Japanese Monsters (216390)

Bill Tsutsui

2021 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Academic "monster studies" has boomed over the past twenty years and Japan offers a rich history for exploring how a culture's monstrous imagination has been shaped by (and in turn shaped) social, political, economic, and technological change. This course will examine Japan's rich profusion of monsters in a variety of media (folklore, fiction, manga and anime, film, character goods, video games), with a focus on the 19th century to the present. Ranging from Noh plays to Godzilla movies to Hello Kitty advertisements, we will experience monsters in Japanese mythology, religion, and folk belief; the supernatural in court and

warrior culture; the cataloging and commercialization of monsters in early modern Japan; science, the nation, and the making of "modern" monsters; nuclear anxiety and *kaijū* films; nostalgia and the cute (*kawaii*) in the postwar "monster boom"; and urban legends, cryptozoology, and Pokémon in millennial Japan. Through an immersion in the history of Japan's fantastical creatures, this course will develop what Jeffrey Jerome Cohen calls "a method of reading cultures from the monsters they engender."

No prior knowledge of Japanese language or history is required or assumed.

East Asian Religions: Traditions and Transformations (126199)

James Robson

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to the study of East Asian religions. It covers the development of Buddhism, Daoism, Confucianism and Shinto. It is not a comprehensive survey, but is designed around major conceptual themes, such as ritual, image veneration, mysticism, meditation, death, and category formation in the study of religion. The emphasis throughout the course is on the hermeneutic difficulties attendant upon the study of religion in general, and East Asian religions in particular.

Course Notes:

Offered jointly with the Divinity School as 3010.

Wisdom (215842)

*Shigehisa Kuriyama**Thomas Kelly*

2021 Spring (4 Credits)

Schedule:

W 0600 PM - 0845 PM

Instructor Permissions: Instructor**Enrollment Cap:**

45

Modern universities offer instruction in a dazzling variety of fields, but it is rare to find courses focused explicitly on wisdom. How should we understand this? After all, for much of history, wisdom was prized as the supreme and most essential form of knowledge; and the abundant follies of our own world make plain that it is still urgently needed. And yet somehow, the quest for wisdom seems to have faded from our consciousness today, lingering only as a faint and occasional memory, a barely remembered dream. Why? What is wisdom, and why does its earnest cultivation now seem like an effort to return to a lost age, to a home that is no longer ours?

Our study of these questions will center on the fate of those vehicles that were long thought vital to communicating wisdom—proverbs and aphorisms, parables and fables, dialogues, riddles, and emblems. By probing the modern waning of these expressive forms, we will discover how the vagaries of wisdom are profoundly entwined with the histories of memory, experience, storytelling, and the relationship between human beings and their environment.

Because the class will emphasize seminar-type breakout discussions and active learning experiments, enrollment will be capped at 45.

China's Cultural Revolution (212976)

Daniel Koss

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course introduces a cataclysmic movement that brought the People's Republic of China to the brink of anarchy: The Great Proletarian Cultural Revolution (1966-1976). The first part looks at historical precursors, including rebellion in the imperial era, political movements in the Republican Era, Communist campaigns and purges, as well as the Great Leap Forward famine that cost tens of millions of lives. Paying equal attention to elite politics at Mao Zedong's "court" and the lived experiences of ordinary citizens, the second part focuses on the evolution of the turmoil, once Mao had called for "bombarding the headquarters" of his own party state, discussing the "Gang of Four," the "attempted coup" by Lin Biao, the Red Guards and the worker rebels in Shanghai, local power seizures and factional warfare, military crackdowns, and the return to order. The third part begins with the reception of the movement abroad, and focuses on its afterlives, including the quasi-pluralist lessons drawn in the immediate aftermath, the role of Cultural Revolution legacies in decisions such as the violent crackdown on the Tiananmen protesters in 1989, and memory politics under Xi Jinping. No language requirement.

Class Notes:

EAS 197 can be counted as EAS 98 Junior Tutorial.

Political Parties of East Asia (212977)

Daniel Koss

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

East Asia has been home to an astonishing assortment of political parties, covering the spectrum from democratic to authoritarian institutions, including some of the world's most sophisticated and resilient

political organizations. We begin with China's Communist Party, revisiting its foundation in 1921, its rise during the Sino-Japanese War 1937-45, and its transformation from a revolutionary party to a party in power; then turn to the present day to cover the deep reach of the party into society, the activities and functions of ordinary members, as well as the dynamics of the leading echelons. The second part of the course focuses on Japan, including the origins of political parties in the late 19th century, the post-War emergence of the perennial ruling party, the age of grand money politics under Tanaka Kakuei, the electoral reform of 1993, and the origins of the party's current strength. The third part consists of case studies, covering contemporary parties in North and South Korea, parties in Taiwan before and after the democratic transition, as well as parties in Malaysia and Vietnam, with their multiple connections to East Asia. The course also puts East Asian parties into a comparative perspective to other world regions.

Class Notes: Class meeting time will be determined according to enrolled students' availability.

China and the African Continent (215837)

Daniel Koss

2020 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

As Africa faces daunting challenges, the "Beijing model" invites intriguing alternative visions to the poorly performing designs by traditional foreign actors in the region. Moving from Chinese farm households in Mozambique to state-owned copper mines in Zambia, military bases in East Africa and the United Nations headquarters, this seminar critically assesses the potential for China's presence to transform Sub-Saharan Africa. After identifying the intellectual stakes (week 1), and discussing anecdotal glimpses from the grassroot-levels (week 2), the class deals with traditional development assistance, along with Maoist attempts to revolutionize the "world countryside" – resulting in legacies such as a China-trained guerilla fighter serving as the President of Zimbabwe. We then discuss the current footprint of Beijing, including its influence on elite politics, Chinese public and private business interests, and the diversity of the one million Chinese migrants to Africa. Four sessions specialize on (1) resource extraction versus opportunities for human capital development (2) debt-traps of Western and Eastern origins (3) emerging tensions over human rights policies (4) and the military dimension, including China's role in Peace-Keeping Operations. Finally, the course addressees how the Chinese presence may transform established multilateral institutions, and the challenges associated with African migration to China. Social science research will be read alongside journalistic accounts and primary documents, such as leaked diplomatic

cables and strategy papers. Will Africa become "Beijing's Second Continent," of the neo-colonial or tributary kind? What promises does the China model hold for Africans? How do the partners on both continents react to experiences of disillusionment and retreat? The assignments are designed to train students for public policy work and require close group collaboration.

EALC Teaching Practicum (212681)

Wai-yee Li

2020 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course is intended for graduate students in the Department of East Asian Languages and Civilizations, who are either first-time teachers or first-time teaching fellows (TF) in the department. While convened by the EALC PF, who will serve as a resource on weeks that are departmentally specific, invited experts trained in each week's topics will primarily run the course. It will begin by providing students with a tool-kit for effectively fulfilling their role as TF in the remote learning environment. This will include strategies for online teaching, managing and engaging students in the virtual classroom, and effective grading and feedback methods. The course will then transition into more specific topics that may arise in the classroom, and finally expand to consider broader issues that we all face when teaching in East Asian Studies departments.

The course will meet for a total of 9 times. We will meet weekly for weeks 1-4 and bi-weekly for the remainder of the semester, in two-hour sessions. There are a total of 9 sessions, as well as the expectation that participants complete the Bok Center's self-paced Canvas site before the first course meeting. Students must successfully complete the course before advancing to their general exams. Each meeting will focus on a specific skill and is intended to give students the chance to not only think about how they want to teach, but also the opportunity to put those ideas into practice before stepping into the classroom. Beyond its specific weekly agendas, the course is intended to provide a comfortable space to voice concerns, discuss anxieties, identify fears, and share successes. Students are encouraged to raise issues about teaching and professional growth. The syllabus is flexible and can respond to student needs and concerns as the semester progresses, so please be sure to provide your feedback as we go along.

The course is primarily intended for students currently in the fall semester of their G3 year, although G2 students are also welcome to enroll in the course. For G3 students, this is a chance to use actual materials from your assigned course to prepare for leading discussion sections in parallel with the demands of the semester. For G2 students, who will not yet have a teaching assignment, you will be asked to consult with your advisor about what course you are most likely to teach in the coming year, obtain a syllabus used in previous years for that course, and prepare for class activities based on those readings and potential lecture topics. Class requirements regarding collecting midterm feedback and class observation/recording may be completed during the following academic year without repeating the course.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Korean Cinema as World Cinema (216433)

Tian Li

2020 Fall (4 Credits)

Schedule: M 0600 PM - 0845 PM

Instructor Permissions: None

Enrollment Cap: n/a

In recent times, world cinema has witnessed the rise of South Korean cinema as an alternative to Hollywood and includes many distinguished directors such as Park Chan-wook, Lee Chang-dong, Kim Ki-duk, and Bong Joon-ho. This course examines the aesthetics, history, and storytelling of South Korean film, and analyzes several key texts that are critical for understanding this field of study. How is Korean cinema shaped by (re)interpretations of history and society? How do we understand Korean cinema vis-à-vis the public memories of the Korean War, industrialization, social movements, economic development, and globalization? And how do aesthetics and storytelling in Korean cinema contribute to its popularity among local spectators and to its globality in shaping the contours of world cinema? By deeply inquiring into such questions, students will learn how to critically view, think about, and write about film. Primary texts include literature and film. All films will be screened with English subtitles.

Class Notes: This course will be taught by Tian Li. Her faculty page can be found [here](#).

Meeting time may change depending on availability of enrolled students.

Topics in Asian Media Studies (215839)

Alexander Zahlten

Tomiko Yoda

2020 Fall (2 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The course covers theoretical issues connected to the emerging field of Asian Media Studies.

(AMS). First, it surveys recent developments in the field and delineates the various disciplinary lineages they are a part of. Second, it maps basic conceptual tensions inherent in this new field.

Some of the questions the course will address are: How does the combination of media studies and area studies change basic premises in both of these fields? What are the current approaches in the emerging field of Asian Media Studies, what are the most relevant interventions? What intellectual issues does a possible tension between historically oriented and speculatively oriented Asian Media Studies raise?

The course puts special emphasis on developing students' projects and will include regular student presentations and book reviews. Additionally, the course will also fulfill professional development functions: over the course of the year students will each develop and refine one conference presentation and one journal article related to their research interests.

Students must complete both terms of this course (Parts A and B) within the same academic year to receive credit.

Class Notes: Classes will be taught bi-weekly over two semesters.
Class meeting times to be determined according to enrolled students' availability.

Subject: Uyghur

Uyghur A

Elementary Uyghur (124106)

Aizezi Gulina

2020 Fall (4 Credits)

Schedule: MWF 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to Uyghur, the Turkic language spoken in China's Xinjiang Uyghur Autonomous Region and

throughout Central Asia. This class is for students who have little or no previous knowledge of Uyghur. The course will introduce the basic letters and sounds of the Perso-Arabic based Uyghur script. In addition to the script, the students will gain some fundamental knowledge of the grammar and develop preliminary conversation skills. All four areas of skill: reading, writing, listening and speaking will be emphasized through lectures, drills, and use of media to facilitate basic language acquisition.

This course will explore what it means to read historical texts as literature and to take a historical view of literary texts. What role should historical understanding and historical imagination play in literary criticism? How is "historical knowledge" understood? What is the role of imagination in the writing of history? How do allegorical and philological interpretations function in the reading of historical and literary texts? What does it mean to read fictional texts as responses to historical events? We will consider these questions from three perspectives: the genealogies (and rewriting) of figures and stories, the role of genres and contexts in shaping reception, and the relationship between history and fiction.

The Literary Life of Things in China (215833)

Thomas Kelly

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None**Enrollment Cap:**

n/a

This seminar investigates literary strategies for depicting and animating things in premodern China. We will trace the development of the principal genres for talking about objects, from yongwu poetry and riddle tales, to inscriptions, colophons, and manuals of taste. How, we will ask, have authors probed and reimagined human attachments to things. How have practices of collecting and connoisseurship transformed Chinese literary culture? How have objects been used to think about what it means to be human in the Chinese literary tradition. Our discussions will engage recent scholarship on materiality from the fields of literary theory and the history of material culture. The course will include viewing sessions in the Harvard Art Museums and Harvard-Yenching Library.

Japanese History 151A Section: 01

Introduction to Edo and Meiji Period hentaigana (215836)

Shigehisa Kuriyama

2020 Fall (2 Credits)

Schedule:

W 0730 PM - 0845 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course offers a basic introduction to reading *hentaigana* the various cursive forms of *hiragana* with which the greater part of texts and image inscriptions of premodern Japan were composed. The course will concentrate chiefly on mastering the *hentaigana* found in printed books and images of the Edo and Meiji periods, but it will also cover a limited number of common *kuzushiji* (cursive rendering of Chinese characters). No prior experience with cursive scripts is assumed, but students should normally have taken three years of modern Japanese.

FAS Divisional Distribution	Arts and Humanities
All: Cross Reg Availability	Available for Harvard Cross Registration

Japanese History 260R Section: 01

Topics in Japanese Cultural History--Toward a History of the Here and Now (120567)

Shigehisa Kuriyama

2021 Spring (4 Credits)

Schedule:

M 0600 PM - 0845 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The seminar this spring will center on the historical phenomenology of place and time. Specifically, our main concern will be this: How might one study, historically, the *experience of the here and now*? That the sense of the local "here" and the present "now" has varied over the course of history seems obvious. But in exactly what ways has this sense varied—and why? And most critically: what sorts of sources and interpretive frames might allow us to articulate and understand this variation?

Our case studies will draw on a wide range of sources in Japanese cultural history spanning from the late classical period to the digital present. About half of our meetings, however, will be devoted to discussing theoretical writings about the study of place and time. While the greater part of the assigned readings will be in English, participants should also be prepared for some readings in modern Japanese.

Recommended Prep:

Advanced reading knowledge of Japanese with some acquaintance with (or at least concurrent study of) *bungo* and *kambun*.

Additional Course Attributes:

Continuation of Korean Ba. This introductory course is designed to provide a basic foundation in modern Korean language and culture by focusing on the balanced development of the interpersonal (speaking), interpretive (listening & reading), and presentational (formal speech & writing) skills. To provide sufficient opportunities to apply what has been learned in class, there are small group drill sessions, language tables, and a number of other cultural activities.

Class Notes: All lecture and discussion will meet for the duration of 1 hour.

Recommended Prep: Korean Ba or equivalent.

Requirements: Prerequisite: Korean BA or equivalent.

Additional Course Attributes:

Korean Bxa is an accelerated course designed for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills, but haven't had sufficient opportunity to develop their knowledge of basic reading, writing, and grammar. This course will cover important grammatical structures covered Elementary Korean (Ba and Bb) for the purpose of providing

tools to build upon the existing level of each student's Korean language ability.

Class Notes: A 30 minute discussion section (2-3 students per section) for a more focused speaking practice will be scheduled on either Tuesdays or Thursdays between 1:30-2:30 after classes begin. This will replace the "Related Section" currently listed.

Additional Course Attributes:

Korean 120A

Intermediate Korean (117220)

Ahsil Noh

2020 Fall (4 Credits)

Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Korean 120a is the first half of the intermediate course designed for students who have successfully completed Elementary Korean or students who have an equivalent proficiency level. This course aims to increase students' ability to communicate in Korean in a wide range of daily life situations with an equal focus on expanding and on consolidating students' knowledge of the fundamental grammar of Korean.

Students are introduced to reading and listening materials of increasing complexity on a variety of topics in modern Korean society and culture. In addition, in order to develop a deeper understanding of the basic structures of the Korean vocabulary, simple Chinese characters will be introduced in this course.

Class Notes: All lecture and discussion will meet for the duration of 1 hour.

Recommended Prep: Korean Bb or equivalent.

Korean 123XB

Intermediate Korean for Advanced Beginners (161278)

Hi-Sun Kim

2021 Spring (4 Credits)

Schedule: MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Korean 123xb is a continuation of Korean Bx and is for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills. It is an accelerated course covering important grammatical structures and materials from Intermediate Korean (120a and 120b) for the purpose of providing tools to build upon the basic foundation of student's Korean language ability. Hence, this class is designed to meet the linguistic needs that are unique to heritage language students to (i) increase accuracy in grammar, (ii) develop basic reading writing skills, and (iii) expand vocabulary through introduction of Chinese characters. Upon completion of this course, students will be fast-tracked into an upper-level course (e.g. Korean 130a).

Class Notes: Korean 123xb small group section: one 30 minute section on Tuesday or Thursday will be added from week 2.

Additional Course Attributes:

Attribute	Value(s)

Korean 130A

Pre-advanced Korean (111235)

Jee Hyun Lee

2020 Fall (4 Credits)

Schedule: MW 1200 PM - 0200 PM

Instructor Permissions: None

Enrollment Cap: n/a

Korean 130a is designed for students who have completed Intermediate Korean 120b or have equivalent proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring these topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

Class Notes: Related sections: 1 hour small group discussion section will be added on T 12-1pm OR T 1-2pm

Recommended Prep: Korean 120b or equivalent.

Korean 140a is designed to enhance students beyond the high-intermediate level in reading, speaking, and writing skills in order to begin understanding socio-cultural and historical issues of contemporary Korea. Hence, the aim of the course includes (i) comprehending authentic materials from contemporary Korean mass media, (ii) following essential points of oral and written discourses that are linguistically complex, (iii) discussing concrete topics relating to major issues of contemporary Korean society and culture through supporting opinions, refutations, hypotheses, and detailed explanations of ideas, and (iv) writing about a variety of topics of Korean culture and society in detail with significant accuracy in grammar and structure. Furthermore, further development of knowledge in Chinese characters, idioms, proverbs, maxims, will be covered in this course.

Japanese 106A

Classical Japanese (110782)

David Atherton

2020 Fall (4 Credits)

Schedule:

TR 0730 PM - 0845 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This class teaches students how to read classical Japanese, the standard written form of the Japanese language from ancient times into the 20th century. It is the language of classical poetry, great works of prose like the *Tale of Genji*, and dramatic forms like the noh and kabuki theaters. It is the language in which the emperor announced Japan's surrender in 1945, and it is even used by many Japanese poets to this day. By the end of the semester, students will have learned the fundamental grammar, usage, and vocabulary of the classical language, enabling them to read any of the texts above—and many more—with the aid of a dictionary. We will also read together through portions of canonical classical texts throughout the course. Because modern Japanese evolved from classical Japanese, students will deeply enrich their understanding of the modern language along the way.

Class Notes:

Meeting time will be determined according to enrolled students' availability.

Recommended Prep:

Japanese 130b.

Subject: Korean History

Korean History 115 Section: 01

Korean History Through Film (108233)

Sun Joo Kim

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0515 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is to examine history of premodern Korea through select Korea's contemporary feature films. Films and dramas with historical themes and personages have been very popular in Korea. We will examine the content of the films, and investigate how "true" or "false" they represent Korea's past, how they imagine and invent Korea's past, in what ways films are useful in better understanding Korean history, people's lives and practices.

Subject: East Asian Buddhist Studies

East Asian Buddhist Studies 230 Section: 01

Buddhist Meditations: Principles and Practices (217627)

James Robson

Janet Gyatso

2021 Spring (4 Credits)

Schedule:

W 0100 PM - 0300 PM

Instructor Permissions: Instructor

Enrollment Cap:

25

This class will study the history of Buddhist meditation traditions, from early Pali and Sanskrit scriptures through developments like Zen and Tantra. It will look closely at what happens in meditative states, how Buddhist contemplation traditions have changed, and what elements we can say are found in virtually all periods and places in Buddhist history. All readings in English translation.

Course Notes:

Some previous study of Buddhism preferred for admission to the class. Students wishing to take the class should send one paragraph on their background in Buddhist Studies and why they want to take the class to jgyatso@hds.harvard.edu and jrobson@fas.harvard.edu by January 19 at 6 pm. All students who have emailed the instructors will be informed if they are admitted to the course by January 21. If places remain in the class, students may also be admitted after that date, but this possibility is not guaranteed.

Jointly offered with Harvard Divinity School as HDS 3248.

Class Notes:

Course has additional section hour to be arranged.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Arts and Humanities

Subject: Chaghatay

Chaghatay A

Elementary Chaghatay (214585)

Aizezi Gulina

2020 Fall (4 Credits)

Schedule:

MWF 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is intended to develop a basic reading knowledge of Chaghatay, the classical antecedent of modern Uzbek and modern Uyghur, and the common literary language of all Central Asian Turks from the fourteenth to the early twentieth centuries. The course includes a survey of Chaghatay literature as well as a discussion of grammar, the writing system, and lexicographical resources; the class meetings will be devoted to both textbook-based instruction and (particularly in the second half of the semester) the reading of samples from Chaghatay texts drawn from printed sources and manuscript copies.

Economics

Subject: Economics

Economics 10A

Principles of Economics (Microeconomics) (113326)

Jason Furman

David Laibson

2020 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Economists study human behavior using a combination of models and data. Ec 10a introduces students to economic models by using intuitive discussions, graphical analysis and, in some cases, very basic algebra. The models study individual decision-making and markets, and range from classical approaches like supply and demand to more recent approaches that consider informational limitations and behavioral mistakes. We will also use data to understand the strengths and weaknesses of these models. The course also discusses the role that ethics and values play in people's choices and in policy discussions including an understanding and critique of approaches like utilitarianism and libertarianism. The goal of the course is to provide students with a set of tools that will help them develop answers for themselves on how to make better choices and participate in debates on major public policy issues in areas including tax policy, inequality, discrimination and the environment.

Course Notes:

Ec 10a is the first half of an integrated sequence that continues with the study of macroeconomics in Ec 10b. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Ec 10a or 10b fulfill the Social Sciences divisional distribution requirement. It is not necessary for students to take both halves of Ec 10 to fulfill this requirement.

Class Notes:

Ec 10a meets in lectures on Mondays and Wednesdays 10:30-11:45 a.m. that you can join synchronously or asynchronously. Sections are available at a wide range of times on Thursdays and Fridays and must be joined synchronously.

You may simultaneously enroll in Ec 10a and another course that meets during the Monday and Wednesday lecture times. You will need to keep up with all lectures on video and attend sections which meet at various times on Thursdays and Fridays.

Recommended Prep:

There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Ec 10a is strongly recommended in advance of Ec 10b which covers macroeconomics

Economics 10B

Principles of Economics (Macroeconomics) (109894)

Jason Furman

David Laibson

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Ec 10b continues the curriculum presented in Ec 10a, moving to the study of macroeconomics including the growth of the overall economy, business cycles, and economic crises. Ec 10b explains what economists do and do not understand about these issues by developing analytical approaches and examining data, including studying the global financial crisis and the economic crisis caused by COVID-19. The course also explains how policy makers can dampen economic fluctuations using monetary policy (i.e., government influence over interest rates and government regulation of banks), fiscal policy (e.g., government control of spending and taxation), and financial rescues in economic crises. We will also discuss how macroeconomic policies work in an international context, including the factors that affect exchange rates, trade deficits, international capital flows, and how these link economies around the world. Like Ec 10a, Ec 10b introduces students to economic models and discusses both how they are supported and how they are contradicted by available data.

Course Notes:

Ec 10b is the second half of an integrated sequence that begins with the study of microeconomics in Ec 10a. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Ec 10a or 10b fulfill the Social Sciences distribution requirement for the General Education program. It is not necessary for students to take both halves of Ec 10 to fulfill this requirement.

Class Notes:

Ec 10b meets in lectures on Mondays and Wednesdays 10:30-11:45 a.m. that you can join synchronously or asynchronously. Sections are available at a wide range of times on Thursdays and Fridays and must be joined synchronously.

You may simultaneously enroll in Ec 10b and another course that meets during the Monday and Wednesday lecture times. You will need to keep up with all

lectures on video and attend sections which meet at various times on Thursdays and Fridays.

Recommended Prep:

There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Taking Ec 10a which covers microeconomics and is taught in the Fall is strongly encouraged but is not a formal prerequisite.

Economics 20

Introduction to Data Analysis (212557)

Isaiah Andrews

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

This course will introduce students to data analytic methods useful for answering social science questions. The course will cover the fundamentals of probability and statistics while introducing students to causal inference, quasi-experimental methods, and regression analysis. All the methods studied in the course will be motivated and illustrated with real-world applications. This course does not require any prior coursework in economics, but is complementary to Econ 50 and satisfies the prerequisites for Econ 1123.

Course Notes:

Students cannot received EC credit for both Ec 20 and Stat 104. If Stat 104 has been taken, a writing requirement for Ec 20 is possible.

Recommended Prep:

High school algebra,

Economics 50A

Using Big Data to Solve Economic and Social Problems with Laboratory Component (216409)

Gregory Bruich

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is a modified version of Economics 50, ordinarily taught by Raj Chetty and Gregory Bruich. Economics 50a will instead be taught by Gregory Bruich.

Economics 50a will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as for more advanced students. The course will include discussions with leading researchers and practitioners, who use big data in real-world applications.

Topics include equality of opportunity, education, racial disparities, innovation and entrepreneurship, health care, climate change, criminal justice, tax policy, and poverty in developing countries. In the context of these topics, the course will provide an introduction to basic methods in data science, including regression, causal inference, and machine learning.

In empirical projects and weekly labs, students will work with real data to learn how the methods discussed in the course can be implemented in practice.

Students will participate in weekly labs, collaborative work, and discussions with leading researchers and practitioners. The class content will include short videos featuring Raj Chetty, Greg Bruich, and others.

Economics 980MM

Designing Real-World Experiments to Improve Firm Decision-Making and Public Policy (212568)

Amanda Pallais

2021 Spring (4 Credits)

Schedule:

R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

18

Field experiments (experiments that take place in real-world settings) are increasingly being used to analyze public policies, make business decisions, and test theories. The most recent economics Nobel Prize recognized experiments' role in alleviating global poverty. This class will dive into how to design a field experiment and learn about some of the most exciting recent experimental research. It will also use experiments to learn about the research process. We will discuss how to frame a question so that the research informs policy, when to trust research discussed in the popular press, and how to interpret and apply results to improve decision-making.

Economics 980U

Immigration Economics (126771)

George Borjas

2020 Fall (4 Credits)

Schedule:

W 0730 PM - 0930 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

There has been a resurgence of large-scale international migration in the past few decades. This course explores the economic determinants and consequences of these population flows. Specific topics include the study of how immigrants are non-randomly selected from the population of the countries of origin, the measurement and implications of economic assimilation in the receiving country, the impact of the flows on the labor markets of both receiving and sending countries, and the calculation of the economic benefits from immigration. This is a junior tutorial.

Course Notes:

A research paper will be required.

Recommended Prep:

Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980W

Economic Aspects of Health Policy (107675)

Ariel Pakes

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Description: The seminar will focus on policy issues in health economics. We will read papers on an assortment of policy options and formulate frameworks for analyzing their likely impacts on outcomes of interest. Examples include the analysis of mergers in hospital and insurance markets, the choice of capitation vs fee for service contracts and its impact on cost and quality of care, policy options for health insurance, and the re-structuring of health service providers. Where possible we will use data and do the analysis quantitatively. Some knowledge of microeconomic and statistical tools, particularly those related to industrial organization, will be helpful (a few of the needed techniques will be taught during the course). This is a Junior Tutorial.

Course Notes:

This course requires special action- application or lottery- to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.

Class Notes:

This course will meet from 12:45-2:45pm

Recommended Prep:

Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980X

Personal Economics : Junior Seminar (108892)

Claudia Goldin

2020 Fall (4 Credits)

Schedule:

M 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

30

How are the most personal choices and life transitions decided? When and whom do you marry, how many children do you have, how much education should you obtain, and which careers or jobs will you pursue? Much will be explored in terms of change over time, particularly concerning the economic emergence of women and the growing role of government. Readings draw on economic theory, empirical analyses, history, and literature from the 19th century to the present. This is a Junior Tutorial.

Class Notes:

Course will start at 12:45pm

Recommended Prep:

Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Behavioral Finance (203866)

Jeremy Stein

2021 Spring (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor**Enrollment Cap:**

30

This junior seminar will provide an overview of theoretical and empirical research on asset pricing that adopts a "behavioral" perspective, i.e. that considers the joint consequences of: (i) investors who have either less than fully rational beliefs or non-standard preferences; and (ii) various impediments to arbitrage. We will also spend considerable time fleshing out the implications of investor sentiment for corporate finance, macroeconomics, and public policy.

Class Notes:

Course will take place from 12:00-2:00pm

Recommended Prep:

Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 985A

Econ 985: Senior Thesis Research (120541)

Kiran Gajwani

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Part one of a two part series. The curriculum for this course builds throughout the academic year. Students must to complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Workshop for seniors writing economics theses, taught in classes of approximately 12 students each. Emphasis on choice of research topics, methodology, and writing. Students are required to complete written and oral presentations of their work in progress. Part one of a two-part series; students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. This seminar is required for economics concentrators writing senior theses. Thesis writers in other concentrations writing on economics topics may take the seminar, space-permitting.

From Gorbachev to Putin: The Economics and Politics of the Russian Transition (203356)

Maxim Boycko

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

16

The course covers the transformation of Russia from "mature socialism" of the early days of Mikhail Gorbachev to the present-day mix of market economics and authoritarian politics under Vladimir Putin. After introducing the basic concepts of capitalism, socialism, and transition the course focuses on Russia's key economic and political reforms. Additional topics include Russian economic growth, oligarchs, corruption, the energy sector, and Putin's foreign policy. Students will have reading assignments twice a week, participate in classroom discussions, make an oral presentation, prepare an empirical note, and take the final exam. Class time will be devoted to a mix of lectures, discussions, and student presentations. Econ 1025 fulfills the writing requirement for economics concentrators.

Recommended Prep:

Prerequisites: Ec10a, Ec10b or equivalents; and Stat104 or equivalent.

Economics 1033

The Economics of Networks (160360)

Benjamin Golub

2020 Fall (4 Credits)

Schedule:

TR 0600 PM - 0715 PM

Instructor Permissions: Instructor

Enrollment Cap:

100

Social and economic networks are an essential part of the fabric of modern life. Some examples: the complex trading networks that underlie modern financial markets and supply chains; social media platforms; networks of personal connections that help people find jobs. These networks profoundly affect the economy and society more broadly: for instance, financial interdependencies are critical in economic crises, while rumors on Twitter have come to play a central role in our politics. How can we make sense of these phenomena—as individuals, within companies, and as policymakers? This seminar teaches models from the economics and statistics of networks that are essential to the task. Topics include the diffusion of information and rumors, racial segregation, and the network origins of recessions. We emphasize how network models relate to key ideas from microeconomics. For a sense of the course, see reviews of Econ9800: this course will focus on similar material without the project component.

Sports Economics (211392)

Judd Cramer

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

80

This course will apply economic principles from game theory, labor economics, and econometrics to analyze a wide range of issues primarily in the realm of professional sports and collegiate athletics rigorously with a focus on causality. Topics include: the hot hand; expansion and rival leagues; franchise relocation and venue construction; revenues from merchandising, broadcast rights and their distribution; free agency, arbitration, and salary caps; player development through amateur drafts and minor leagues; NCAA rules on scholarships and eligibility; in-game strategy; and financial aspects of collegiate athletic programs. Class discussion, problem sets, and an exam will form the bulk of the course requirements. Readings will draw upon a variety of sources, including Andrew Zimbalist's *Baseball and Billions*, Robert Frank and Phil Cook's *The Winner-Take-All Society*, and newspaper, magazine and academic journal articles.

Strategy, Conflict, and Cooperation (123893)

Robert Neugeboren

2021 Spring (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

Game theory is the study of interdependent decision-making. In the early days of the cold war, game theory was used to analyze an emerging nuclear arms race; today, it has applications in economics, psychology, politics, the law and other fields. In this course, we will explore the "strategic way of thinking" as developed by game theorists over the past sixty years. Special attention will be paid to the move from zero-sum to nonzero-sum game theory. Students will learn the basic solution concepts of game theory -- including minimax and Nash equilibrium -- by playing and analyzing games in class, and then we will take up some game-theoretic applications in negotiation settings: the strategic use of threats, bluffs and promises. We will also study the repeated prisoner's dilemma and investigate how cooperative behavior may emerge in a population of rational egoists. This problematic -- "the evolution of cooperation" -- extends from economics and political science to biology and artificial intelligence, and it presents a host of interesting challenges for both theoretical and applied research. Finally, we will consider the changing context for the development of game theory today, in particular, the need to achieve international cooperation on economic and environmental issues.

The course has two main objective: to introduce students to the fundamental problems and solution concepts of noncooperative game theory; and to provide an historical perspective on its development, from the analysis of military conflicts to contemporary applications in economics and other fields. No special mathematical preparation is required.

Economics 1052

Game Theory and Economic Applications (111817)

Shengwu Li

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Game theory is a mathematical method for analyzing strategic situations. It deals with situations in which multiple people must make interdependent decisions, such as chess, poker, bargaining, oligopoly pricing, and warfare. Topics include strategic-form and extensive-form games, rationalizability, Nash equilibrium, and subgame-perfect equilibrium. We will study applications such as long-term cooperation, auctions, mechanism design, and division of treasure between pirates.

Course Notes:

Students may not take both Economics 1051 and Economics 1052 for credit.

Recommended Prep:

The only formal prerequisite for this course is Mathematics 21a. Students should have a strong grasp of calculus, basic probability theory, and some exposure to proofs. No prior knowledge of game theory is necessary.

Additional Course Attributes:

Economics 1057

Game Theory with Applications to Social Behavior (203555)

Erez Yoeli

Moshe Hoffman

2020 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

Game theory is the formal toolkit for analyzing situations in which payoffs depend not only on your actions (say, which TV series you watch), but also others' (whether your friends are watching the same show). You've probably already heard of some famous games, like the prisoners' dilemma and the costly signaling game. We'll teach you to solve games like these, and more, using tools like Nash equilibrium, subgame perfection, Bayesian Nash equilibrium, and the one-shot deviation principle.

Game theory has traditionally been applied to understand the behavior of highly deliberate agents, like heads of state, firms in an oligopoly, or participants in an auction. However, we'll apply game theory to social behavior typically considered the realm of psychologists and philosophers, such as why we speak indirectly, in what sense beauty is socially constructed, and where our moral intuitions come from.

Each week, students are expected to complete a problem set, to read 2-3 academic papers, and to complete a 1-2 page response to short essay questions ('prompts') on these readings. All assignments can be completed in groups of two. Tutorials are not required but are highly recommended for students without a substantial background, especially in math. There will also be a final exam.

Analyzing Education Policy (204433)

Michela Carlana

2020 Fall (4 Credits)

Schedule:

M 1200 PM - 0115 PM

Instructor Permissions: Instructor**Enrollment Cap:**

10

This course examines a variety of education policy issues in the United States and abroad, with an emphasis on rigorous econometric evaluation of such policies. By the course's end, students should have an analytical framework that allows them to think clearly about the impacts of education policies, as well as be able to distinguish good research from bad. The first half of the course reviews important empirical techniques in the context of broad questions, such as whether people make educational decisions by weighing benefits and costs and whether education improves students' long-term outcomes. The second half of the course centers on debates in which teams of students will argue for a given policy proposition and I will argue against it, with the aim of sharpening everyone's arguments on the basis of existing empirical evidence. . Prerequisites: Familiarity with regression analysis and causal inference, or permission of the instructor.

Financial Markets for the Poor (213522)

Emily Breza

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

30

1.7 billion adults around the world do not have access to a financial account. Why has it been so challenging to reach this population? What financial product innovations have worked for banking poor customers? How do the underbanked make do without access to the formal financial market? This course investigates the functioning of the financial market for low income populations, with a focus on developing countries. Example topics include: 1) the link between financial market development and economic growth; 2) financial literacy and consumer protection; 3) savings; 4) credit; 5) insurance; 6) mobile banking and digital payments. The course will cover relevant economic principles, business case studies, product design experiments, and research papers.

Course Notes:

Ec 1088 offers an optional writing requirement. Students writing the final project without a partner will satisfy the concentration writing requirement.

Public Economics: Designing Government Policy (117818)

Stefanie Stantcheva

Stan Veuger

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course analyzes what role the government plays and should play in a market economy, especially those policies that work through taxes and government spending. It covers topics such as tax and welfare policy, unemployment insurance, social security, environmental protection, and state and local policy. The course emphasizes recent empirical research on policy issues and will teach students how to conduct such studies.

The first half of the course, taught by Professor Stantcheva, will cover the basic principles of public economics. These principles will be used to shed light on current questions and debates on tax policy, the provision of public goods, and social insurance.

The second half of the course, taught by Professor Veuger, will highlight recent empirical research on business taxation, the regulatory state, political economy, and multilevel government. In this part of course we will also see how the theoretical and empirical approaches covered in the course can be and have been used to inform and assess the economic policy response to the COVID-19 crisis, in particular in the United States and Europe.

Course Notes:

Students should have some knowledge of basic calculus and statistics, but there is no formal mathematics prerequisite. Offered jointly with the Kennedy School as SUP-125. This course offers an optional writing requirement which if completed will satisfy the concentration writing requirement.

Recommended Prep:

Economics 1010a or 1011a or permission of the instructors. Familiarity with multivariate calculus and econometrics (at the level of economics 1123 or 1126) is desirable.

Additional Course Attributes:

Analytic Frameworks for Policy (107613)

Richard Zeckhauser

2020 Fall (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

3

This course develops abilities in using analytic frameworks in the formulation and assessment of public policies. It considers a variety of analytic techniques, particularly those directed toward uncertainty and interactive decision problems. It emphasizes the application of techniques to policy analysis, not formal derivations. Students encounter case studies, methodological readings, modeling of current events, the computer, a final exam, and challenging problem sets.

Course Notes:

Jointly offered with the Kennedy School as API-302.

Class Notes:

Course will take place at HKS in L-230.

Recommended Prep:

Economics 1011a or permission of instructor.

Additional Course Attributes:

Economics of European Integrations (127519)

Hans-Helmut Kotz

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

40

The aim of the course is to give students familiarity with a broad range of European policy issues: integration of markets (for goods, services, and labor), monetary union (ECB) and its consequences for fiscal policy, financial sector regulation as well as supervision. It is offered for students who would like to employ the tools they have learned in principles of economics and introductory micro and macro courses on real world cases. This implies to write and present a paper (mandatory writing requirement).

Course Notes:

Writing requirement: A research paper is required. This course meets the concentration writing requirement.

Recommended Prep:

Ec 10a and Ec 10b.

The Political Economy of Religion (107425)

Robert Barro

2020 Fall (4 Credits)

Schedule:

W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The study of the political economy of religion is grounded in two intellectual strands of thought developed in economics and sociology. The economic approach views religious competition and church-state relations as market phenomena. The absence of state religion allows for competition, thereby creating an environment for a plurality of religious faiths in society. The continual subdividing of religion into sects ensures an open and competitive market whereby no one single religion dominates. The sociological approach focuses on religious beliefs and activities as rational choices as well as cultural phenomena. Religious beliefs are a part of cultural traits, values, and organizations which contribute to economic outcomes. As in commercial activity, people respond to religious costs and benefits in a predictable, observable manner. Religious beliefs that promote hard work, thrift, and honesty can be found across the world's major religions. The key question is: How does a society promote these values and in what circumstances does it, intentionally or unintentionally, discard them? People choose a religion (the theory of sects) and the degree to which they participate and believe (if at all). In this course we discuss a wide range of topics--religious competition, secularization (and its varieties), pluralism and tolerance, the structure of religious organizations, religion and individual behavior—that highlight the contributions and areas of further research in the field of political economy of religion.

Low Interest Rates, Secular Stagnation and Macroeconomic Policy (217408)

*Lawrence H. Summers**Paul Tucker*

2020 Fall (4 Credits)

Schedule: R 1200 PM - 0245 PM**Instructor Permissions:** Instructor**Enrollment Cap:** n/a

With real interest rates negative for nearly a decade and nominal interest rates close to zero throughout the industrial world, we are in a new era for macroeconomic policy making. This seminar course will focus on the reasons for low real rates, their impact on growth, inflation, inequality and financial stability, and their implications for macroeconomic policy.

The focus of the class will be on student research papers. Students will be expected to choose a topic related to the course theme and write a 25- to 30-page original research papers developing, applying and testing relevant economic theory. Students will work closely with one of the course instructors and an economics PhD student on their papers.

Examples of topic areas for papers might include: The role of risk premiums vs. savings-investment gaps in explaining interest rate fluctuations; the influence of social insurance on aggregate demand; Ricardian equivalence and the impact of fiscal policy in raising long run demand; the implications of low rates for target returns on institutional portfolios, financial stability, and creative destruction; saving gluts and current account surpluses; the risks of destabilizing deflation; and lessons from the Japanese experience.

Only students with significant exposure to advanced undergraduate courses in economics and statistical and quantitative work should consider this class. This class is potentially open to seniors writing theses on this topic. Admission is by permission of the instructors; Charles W. Eliot University Professor Lawrence Summers and Sir Paul Tucker, the Former Deputy Governor of the Bank of England.

Course Notes:

Interested students should send a transcript and a 250-word statement of why they want to take the class to: Lhs@lawrencesummers.com.

Class Notes:

This course will take place from 12:00-2:00pm.

Market Power in the New Economy (217793)

Myrto Kalouptsi

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

50

This course studies firms, markets and competition, in the context of today's (globalized) world. Nowadays, in the majority of markets, a handful of firms interact strategically and compete in numerous dimensions, including prices, products offered, advertising and investment. We will use formal models in order to address questions like, Why are markets organized the way they are? How does market organization affect firm behavior, such as firm production or pricing? How does the behavior of firms in turn affect the market structure? How does government policy shape firm behavior and market structure? What is the impact on welfare? Through the use of both theory and data, we will attempt to answer these questions.

The course will proceed in three modules. We will first tackle decentralized markets; i.e. markets where many small firms compete in an ad hoc fashion (e.g. taxis, oceanic shipping, real estate). A recent and growing phenomenon in this setup is the emergence of platforms, such as Uber and Lyft, Uber Freight, Airbnb, etc. We will discuss their impact on markets and societal welfare.

The second module, will introduce key concepts of the field of Industrial Organization in order to study oligopolistic markets. Through the use of models (mainly game theory) but also empirical analysis, we will explore the strategic interactions between firms and the impact of market power on society. We will study collusion, product differentiation, mergers and vertical relations (supply chains).

The third and final module of the class will study market power in global markets. In a strong recent trend, governments around the world are engaging in industrial policy (e.g. Made in China 2025). What are the rationales behind these initiatives? Are they effective? What is their impact on both domestic and global societal welfare? In this part of the course we will focus on the role of governments in shaping global competition.

This course will explore the dramatic financial and macroeconomic developments that the United States has experienced over the last two decades. We will look at research on what factors precipitated the boom and bust in the housing market in the early 2000s and how the resulting mortgage crisis rippled through the global financial system and ultimately generated the most severe economic downturn since the Great Depression. We will analyze the policies put in place to stabilize the financial system, limit the economic fallout, and reduce the likelihood of future financial crises. The course will also examine the response of the financial system and the economy to the onset of the COVID-19 pandemic, with particular attention to how these developments and the appropriate policy responses compare with past episodes.

Recommended Prep:

Ec1010b, Econ 1011b, or permission of the instructor

Economics of Discontinuous Change (112195)

Richard Freeman

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Explores discontinuous changes in the economic position of groups and countries and presents mathematical and computer simulation models designed to illuminate the theme that economic and social lives are changed by sudden sharp shocks that generate positive feedback loops rather than the normal workings of markets that equilibrate through negative feedbacks. Will include effects of the Covid19 pandemic on the economy, Great Depression and 2008 collapse of Wall Street, growth/decline of trade unions which occurs in spurts, and such patterns as segregation of groups, power laws in income inequality growth/decline in social pathologies in neighborhoods, and Malthusian concerns about the environment. Models include nonlinear simulations, neural networks, finite automata, evolutionary stable strategies, and agent-based simulations with attention on getting evidence on key parameters from diverse empirics, from big data to case studies.

Course Notes:

Key requirement is an independent research paper. Professor and TF will provide guidance on topic, help in obtaining data, information from firms, etc. This course meets the concentration writing requirement, if the paper is a substantive, solo-authored, original research work (not a literature review). Students should have some mathematical background, but there is no prerequisite.

Class Notes:

SCHEDULING NOTE: Course will also include a section-discussion mtg every week. Post-enrollment, days & times of course mtg & section mtg can be adjusted to later afternoon, or early evening, to accommodate student time zones.

Economics 1936

Keynes (107388)

Stephen Marglin

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course explores the birth, death, and resurrection of The General Theory of Employment, Interest and Money from the Great Depression (1929-1939) to the Great Recession (2008-?). A major goal is to lay out a coherent argument that, for all its theoretical innovation, The General Theory did not deliver: the argument why a market system, even an idealized system with all of the warts removed, may fail to provide jobs for willing workers. In the process we will examine the orthodoxy that Keynes attacked and that resurfaced in the 1960s and 70s; the key concepts underlying the models implicit in The General Theory; and the attempts of the Keynesian mainstream to make peace with both Keynes and orthodoxy. We will also explore the applicability of The General Theory to the long run. A final section will view the present economic difficulties through a Keynesian lens.

Recommended Prep:

Economics 1010b or 1011b, or permission of instructor; a year of college calculus allowing students to understand mathematical notation and concepts (derivatives, maximization, etc.) even though mathematics will be used very sparingly.

Economics 2035

Psychology and Economic Theory (156371)

Matthew Rabin

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economics. Topics include ways utility theory can be improved--such as incorporating reference dependence, news utility, social preferences, self image, and other belief-based tastes--and ways we can relax assumptions of perfect rationality--such as incorporating focusing effects, limited attention, biased prediction of future tastes, present-biased preferences, biases in probabilistic judgment, and errors in social inference. The course will emphasize (a) careful interpretation and production of new evidence on relevant departures,(b) formalizing this evidence into models that can, with discipline and rigor, generate sharp predictions using traditional economic approaches, and (c) exploring economic implications of those models presented. Although we will primarily emphasize (b), the course is meant to be useful to students whose interests lie anywhere in this spectrum, under the premise that all such research will be improved by a greater appreciation of the full spectrum. The course is intended for PhD students in the Business Economics and Economics programs and others who have a solid background in microeconomic theory at the level of introductory PhD courses in these programs. While obviously appropriate to those wishing to specialize in "behavioral economics", the course is also designed for those interested in doing research in particular fields of economics. And while the course centers on theoretical models (learning and evaluation will center around solving formal problem sets), the theory is focused towards its empirical implementability and economic relevance, so that the course is also designed for those interested in theory-influenced empirical research.

Course Notes:

This course is cross listed with HBS as HBSDOC 4155.

Economics 2040

Experimental Economics (123849)

Benjamin Enke

2020 Fall (4 Credits)

Schedule:

F 0900 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

48

This course provides an introduction to experimental methods and their applications in economics. We will focus on (i) the use of lab experiments in establishing causal effects, testing models, and illuminating mechanisms; (ii) field experiments in behavioral economics; and (ii) the measurement of preference parameters and behavioral traits in lab-in-the-field settings. Topics include bounded rationality, wishful thinking, moral values and social image concerns, gender, the measurement of preferences in lab and large-scale survey settings, and the explanatory power of behavioral traits for field behaviors. We will cover methodological topics including the relationship between experiments and theory, simple process-tracing techniques, internet experiments, and surveys. Students will become acquainted with the full process of designing an experiment, and class discussions will place heavy emphasis on the development of early-stage research ideas. The course is intended not just for those with an interest in behavioral and experimental economics per se, but also for those who wish to measure behavioral parameters in non-lab settings in applied work or to conduct field experiments.

Course Notes:

Open to undergraduates with permission of the instructor.

Econometrics I (120668)

Gregory Bruch

2020 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

45

Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2110 (fall) reviews probability and statistics, then covers the fundamentals of modern econometrics, with a focus on regression methods for causal inference in observational and experimental data. Prerequisites: undergraduate courses in probability and statistics, regression analysis, linear algebra, and multivariate calculus.

Course Notes:

Enrollment limited to PhD candidates in economics, business economics, health policy, public policy, and political economy and government (PEG).

Recommended Prep:

The two-course sequence is open only to qualified PhD students from HKS, HBS, GSE, and HSPH, but occasionally others may be admitted at the discretion of the instructor (if the instructor is convinced that such individuals can perform well and would not negatively affect the nature and pace of the course).

Additional Course Attributes:

Economics 2115

Econometric Methods II (205523)

Will Dobbie

2021 Spring (4 Credits)

Schedule:

TR 1230 PM - 0145 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2115 (spring) covers topics (different methods) in current empirical research. Faculty members from across the university will teach modules each covering a different method of causal inference, including but not limited to instrumental variables, panel data methods, and regression discontinuity and kink designs. The course will emphasize a mixture of theory and application, with problem sets focused on the replication or extension of recent papers utilizing these methods.

Course Notes:

This course is designed for PhD candidates in health policy, public policy, education policy, the Business School DBA program. Qualified undergraduates are also permitted to take the course with permission of the instructor.

Recommended Prep:

Prerequisite: Economics 2110 or the equivalent.

Additional Course Attributes:

FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Social Sciences

All: Cross Reg Availability	Available for Harvard Cross Registration

Economics 2120 Section: 1

Principles of Econometrics (115026)

Elie Tamer

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Linear predictor as approximation to conditional expectation function. Least-squares projection as sample counterpart. Splines. Omitted variable bias and panel data. Bayesian inference for parameters defined by moment conditions. Finite sample frequentist inference for the normal linear model. Statistical decision theory and dominating least squares with many predictor variables; applications to estimating fixed effects (teacher effects, place effects) using panel data. Asymptotic inference in the generalized method of moments framework. Likelihood inference using information measures to define best approximations within parametric models. Instrumental variable models and the role of random assignment; applications include models of demand and supply and the evaluation of treatment effects.

Course Notes:

Enrollment is limited to PhD students in the Economics Department, Business Economics program, and PEG program. Other students wanting to enroll in the course should contact the instructor.

Recommended Prep:

probability at the level of Statistics 110; linear algebra.

Econometric Methods (120662)

Isaiah Andrews

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course continues the first year sequence in econometrics and covers a variety of topics and ideas that are important for pursuing and interpreting empirical research in economics. The first half of the course covers core econometric approaches that are important for a wide range of applications, including identification analysis, asymptotic approximations, large sample theory for estimation and hypothesis testing, and the bootstrap. The second part of the course examines a range of complementary topics and new developments, including reasons why canonical econometric methods may be unreliable (such as model misspecification, identification failure, and the incidental parameters problem) and extensions of and alternatives to the traditional econometric paradigm (such as partial identification, Bayesian inference, nonparametrics, and machine learning). Economic applications will be discussed throughout. Enrollment limited.

Recommended Prep:

Economics 2120 or equivalent.

Economics 2148

Topics in Econometrics: Optimization-Conscious Econometrics (110300)

Guillaume Pouliot

2020 Fall (4 Credits)

Schedule:

TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Economics 2148 will study key optimization methods and concepts underpinning classical econometric estimators.

First, we study Markov Chain Monte Carlo methods and theory. Then, each optimization topic is studied through the lens of an econometric method. Linear programming is studied via quantile regression, numerical linear algebra is studied via partial identification in ordinary least-squares, integer programming is studied via exact sparse methods, and so on. We will be particularly interested in questions at the intersection of econometrics and optimization.

Modern research in econometrics often intersects with machine learning and big data

questions. Likewise, while the overlap of econometrics with optimization and operations research has traditionally been limited, previously intractable large scale or combinatorially difficult econometrics problems are now being solved using modern optimization software and heuristics. This lays out a rich research agenda and opens up consequential new questions for econometricians. How can machine learning methods be used for econometric regression analysis and causal inference? How can modern optimization methods be applied to solve previously intractable econometric problems? What are the statistical consequences of changes made for numerical reasons? How does one do inference on the output of nonstandard optimization problems? At the heart of these new estimation and inference questions lies the need to design and understand estimators as the product of algorithms and optimization problem, not only the minimand and of objective functions.

You may find course material on the course web page: <https://sites.google.com/site/guillaumeallairepouliot/teaching>

Class Notes: This course will be taught by visiting Professor Guillaume Pouliot.

Transportation and Development: Evidence and Quantitative Models (215901)

Gabriel Kreindler

2020 Fall (4 Credits)

Schedule:

TR 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap:

n/a

How does spatial mobility affect firms, migrants, commuters and job-seekers? What barriers hamper mobility at these different scales? What are the equilibrium implications of changes in travel costs, for example, due to infrastructure improvements? This course discusses recent research on the links between transportation and the economy, with a focus on developing countries. It focuses on the interplay between empirical evidence and quantitative models, and students will gain hands-on experience with both. The first part of the course introduces the workhorse models and empirical tools, which we then apply to topics in infrastructure, migration, urban traffic congestion, and urban mobility and labor markets.

Unleashing Novel Data at Scale (217485)

Melissa Dell

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A vast number of important economic questions remain unanswered, in substantial part because the data required to examine them has traditionally been inaccessible. For example, much historical data remains trapped in hard copy. More broadly, information that could elucidate important questions is scattered throughout text, or contained in scans, photographs, videos, or audio files. This course will provide an introduction to deep learning-based methods and other data science tools that can process such sources on a massive scale.

We will examine natural language processing, with a particular focus on recent advances for creating and visualizing computable text measures that capture not just topics, but also sentiment and its polarization across sources. The course will also introduce deep learning-based methods for object detection and layout analysis, which can be used to extract complex structures from documents such as tables or newspapers. Active learning, which aims to optimally combine inputs from humans and deep learning to conserve tedious human labor, will receive particular emphasis. We will moreover discuss how to optimize character recognition using off-the-shelf solutions and how to design your own engine when existing tools fail. Efficiently harnessing the power of large-scale computing will receive emphasis throughout the course. We will combine the focus on methods with a discussion of papers that make particularly exemplary use of unique data sources, in order to build intuition for how such data can be located and processed. By introducing a range of methods to convert diverse information into computable data, we aim to increase the number of questions that will be feasible to research, as well as to make research agendas more robust to unforeseen data disruptions. The course is well suited to anyone with an interest in using observational data for applied research.

Macro-Finance: Rational and Behavioral (125372)

Xavier Gabaix

2020 Fall (4 Credits)

Schedule:

MW 0600 PM - 0715 PM

Instructor Permissions: None

Enrollment Cap:

n/a

(1) **Bounded rationality:** we'll go over a behavioral version of basic microeconomics (consumer theory, Arrow Debreu), basic macroeconomics (real and monetary) and public economics.

(2) **Macroeconomics with heterogeneity:** we'll study how microeconomic shocks can generate macro fluctuations; network models in macro-finance; models of the income distribution.

(3) **Finance:** we'll study unified macro-finance models. First, with perfect financial markets: we'll review unified models of stocks, bonds, options and exchange rates. Second, with imperfect financial markets: we'll study how this sheds light on financial crises and currency movements. Time permitting, we'll review some behavioral finance, merging all three themes.

The course is geared toward two types of students, and has accordingly two tracks, "behavioral" and "finance", with corresponding emphasis in the homework and exam.

Political Economy of Non-Democracies (215796)

David Yang

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

30

Non-democratic regimes have been the oldest and most common form of political governance. This course studies the forces of stability and forces of change in non-democratic regimes. Concerning the forces of stability, we will cover topics such as repression, hatred, state coercion, information control, corruption, co-optation, and political trust and norms. Concerning the forces of change, we will cover topics such as democratization, collective actions, conflict, nation building, reform and privatization, state capacity, bureaucracy, and the role of institutions on economic development and innovation. We will explore these topics both theoretically and empirically. Students will be exposed to various workhorse models in political economy, as well as recent advances in empirical methods such as natural experiments, field experiments, lab experiments, lab-in-the-field experiments, and text analyses.

Instructor Permissions: Instructor

Enrollment Cap: 35

This course surveys topics in health economics. It touches on public sector issues, the industrial organization of health care markets, interactions between health and labor markets, and health in developing countries. Theory and empirical work are presented.

Course Notes:

A graduate level microeconomics class at the level of Economics 2010 or 2020 is required for enrollment. Students unsure about the adequacy of their background should contact the instructor.

Economics 2530A

International Trade (113995)

Elhanan Helpman

2020 Fall (4 Credits)

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Provides a broad overview of theory and evidence concerning international trade, direct foreign investment, and trade policy.

Course Notes:

Strongly recommended as preparation for Economics 2530b. Open to undergraduates only with permission of instructor.

Requirements:

Prerequisite: Economics 2010a AND Economics 2010b

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Social Sciences
FAS: Course Level	Primarily for Graduate Students

Economics 2530B

International Finance (120439)

Kenneth Rogoff

Helene Rey

2021 Spring (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Financial aspects of growth and income determination in open economies. Topics include international business cycle, monetary and exchange rate regimes, capital flows, and current issues in international macroeconomic policy.

Class Notes: co-taught with visiting Professor Helene Rey.

Recommended Prep:

Economics 2530a provides extremely useful background.

Additional Course Attributes:

Attribute	Value(s)

Economics 2610

Industrial Organization I (113404)

Ariel Pakes

Robin Lee

2020 Fall (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to applied work in industrial organization. Static analysis (theory and estimation) of demand systems and cost functions (adverse selection, moral hazard, productivity), and applications of game theoretic concepts of equilibrium. Topics include the determinants of market structure and product availability, merger analysis and antitrust, and contracting and bargaining in vertical markets.

Additional Course Attributes:

Asset Pricing (111998)

Tarek Hassan

2021 Spring (4 Credits)

Schedule:

F 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

An introduction to financial economics emphasizing discrete-time models and empirical applications. Reviews basic asset pricing theory. Discusses empirical topics including predictability of stock and bond

returns, the equity premium puzzle, and intertemporal equilibrium models.

Course Notes:

Offered jointly with the Business School as 4209.

Requirements:

Prerequisite: Economics 2010a OR Economics 2020a

Additional Course Attributes:

Economics 2726

Theoretical and Empirical Perspective on Entrepreneurship: Economics and Finance (124076)

William Kerr

Josh Lerner

Shai Bernstein

2021 Spring (4 Credits)

Schedule:

W 0530 PM - 0830 PM

Instructor Permissions: None

Enrollment Cap:

n/a

TEPE explores scholarly work from economics and finance disciplines regarding entrepreneurship—the

formation and growth of new firms. While work on this topic dates back to Schumpeter and earlier, academic research regarding entrepreneurship has exploded over the last decade. There are two complementary doctoral classes, each taught every other year, with the Spring 2021 course focusing on the entrepreneurship research about corporate finance, including entrepreneurial finance and behavioral economics. The Spring 2022 course focuses on entrepreneurship and its relationship to economics fields like industrial organization, labor economics, and economic growth.

Course Notes:

Offered jointly with the Business School as 4350.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	None
FAS Divisional Distribution	Social Sciences

Economics 2727

Empirical Methods in Financial Economics (119971)

Samuel Hanson

Adi Sunderam

2021 Spring (4 Credits)

Schedule:

M 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Examines empirical research in corporate finance. Covers empirical research methodology, financial institutions, and financial policy. Major emphasis is on how to do well-executed and persuasive research in corporate finance.

Course Notes:

Structured to minimize overlap with Economics 2725. Seminar format; students write referee reports and a research paper. Offered jointly with the Business School as 4220.

Additional Course Attributes:

Attribute	Value(s)
Local offset from Cambridge MA	-6
All: Cross Reg Availability	Available for Harvard Cross Registration

Economics 2880

Economics of Science (124078)

Richard Freeman

2021 Spring (4 Credits)

Schedule:

R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap:

40

Analyzes economic issues regarding the role of science and RD in the economy and in the deployment and productivity of scientists, engineers, and highly skilled technical workers. Topics include: wage levels/employment prospects; stipend policy, education/recruitment, student unionization/post-doc organization, career choices/trajectories, with reference to women; scientific competition/collaboration, and affects of the Covid19 pandemic on the economics of science.

Course Notes:

Key requirement is graduate-level research paper, potentially using big data set on scholarly paper, R&D spending, patents, etc.

Class Notes:

Scheduling note: post-enrollment, day & time can be adjusted to later afternoon, or early evening, to accommodate student time zones. Total 3 hours of class time per week, divided into 2-3 sessions and

discussions via zoom (depending on class size).

Recommended Prep:

Attendance at the Economics of Science & Engineering Seminar is strongly suggested.

Product and Experience Design for Desirability (109374)

B. Ames Altringer

2021 Spring (4 Credits)

Schedule:

TR 0345 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

Multi-disciplinary, project-based course for students interested in designing products, services, or ambitious art or educational works that are meaningful, beautiful, useful, as simple as possible, and emotionally desirable (e.g., calming, inspiring, delightful, cool, covetable.). Students learn the fundamentals of design theory, emotional design, user-centered design, and design leadership. The class format consists of a series of project-based design challenges, and each challenge has three parts. The first part is a summary of the scientific literature on an important emotional concept that is relevant to design, such as trust, anxiety reduction, or belonging. The second part includes one or more case studies of past works that were exceptionally well designed for this emotional concept. The third part is a custom design challenge for students to practice applying what they are learning to their own creative ideas. Past project prompts include challenges like designing headphones for anxiety reduction, health literacy campaigns for rapid adoption, and sustainable materials like bamboo to represent the future of luxury. Along with this

cycle of theory and application, the course teaches research-based design process and design leadership skills. Weekly critique panels enable students to develop and refine their own design point of view. The final project in the course is a professional design portfolio.

Course Notes:

Limited enrollment. Instructor permission required for all students.
Engineering Sciences 22 is jointly offered with the Graduate School of Design as SCI 6276.

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 24

Flavor Molecules of Food Fermentation: Exploration and Inquiry (156947)

Pia Sorensen

2021 Spring (4 Credits)

Schedule:

MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Enrollment Cap:

28

Microorganisms produce a diverse array of specialized small molecules as part of their metabolic processes. In this course we will study the production, properties, and characterization of these molecules through the lens of food fermentation. In particular, we will focus on the small molecules that contribute taste and aroma in fermented foods. Students will experience the scientific inquiry process in a creative way by designing and implementing their own research project based on a fermented food of their choosing. Still a field with much potential for discovery, interested students are invited to continue their research project in the summer.

Recommended Prep:

Ls1a , LPSA or equivalent; first semester Organic Chemistry recommended but not required.

Engineering Sciences 26

Humanity and its Futures: Systems Thinking Approaches (204471)

Fawwaz Habbal

Vikram Mansharamani

2021 Spring (4 Credits)

Schedule:

M 0900 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

As citizens in a rapidly changing world facing increasingly complex challenges, the skills that tomorrow's leaders need are increasingly crossing disciplinary silos. Humanity's most pressing problems are interconnected, involve competing interests, and defy simplification into single disciplines. Reductionist approaches focused on linear understanding must be balanced against the integrative logic of systems-oriented thinking. Depth must be balanced with breadth.

This course will give students an appreciation for the complexities of today's most intractable problems, and in so doing, help students develop a methodology for navigating the world they will face. After an overview of systems thinking and its emphasis on interconnections and feedback loops, the course will explore several issues and the complications they generate. Over the course of the semester, topics including epidemics, inequality, human displacement, and food systems will be addressed.

The course will employ multiple methods of learning, with course preparation varying from reading novels to watching videos to reviewing academic papers. Each case will include an overview of the issue and why it matters, before exploring existing disciplinary approaches to address the challenge. Prior thinking is evaluated both in terms of its rigor and its effectiveness. What worked and didn't work? Why?

Students will learn to employ systems thinking using a multi-disciplinary method to evaluate possible solutions. This future-oriented analysis will emphasize the necessity to zoom out and paint a mosaic of possible unintended consequences and roadblocks that may impede progress. By the end of the course, students should have developed a robust framework for integrating economic, political, technical, ethical, and social lenses into an analysis of complex problems and their potential solutions.

Instructor Permissions: None

Enrollment Cap:

n/a

Engineers today can make almost anything they think of. Do we ask why to pursue one innovation over another? This course considers the personal and social drivers of innovation, including beauty and sustainable value. Complex or "wicked" problems today demand interdisciplinary approaches that bring the Humanities in dialogue with Technology. Along with predicting the success of new products through existing needs and desires, innovation in its most spectacular cases comes close to art, making new and unpredictable things that generate new desires, markets, and behaviors. How will engineers today respond to the opportunities and obligations that accompany technological advances?

Introduction to Electrical Engineering (140008)

Marko Loncar

Chris Lombardo

2021 Spring (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

The main course objectives are to introduce students to the exciting and powerful world of electrical engineering and to explain how gadgets that we use every day actually work. After taking ES 50, you will be able to leverage the power of electricity to build systems that sense, control and program the physical world around you. Examples include intelligent and autonomous systems (robots), audio amplifiers (e.g. guitar amp), interactive art installations, light-shows, mind-controlled machines, and so on.

Recommended Prep:

Enthusiasm, curiosity and desire to build things! Previous engineering or programming experience is NOT needed. The amount of high school physics required is minimal, and is limited to basic concepts only.

Daniel Needleman

Linsey Moyer

2020 Fall (4 Credits)

Schedule:

MWF 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

This course is designed as an introduction to thinking as a bio/biomedical engineer and is recommended for first years and sophomores but open to all students. Simple mathematical models are used to represent key aspects of organ systems function. Core engineering concepts are explored through mechanical and electrical examples within the human body. The primary focus is on quantitative descriptions of organ systems function and control in terms of physical principles and physiologic mechanisms. It includes a foundation in human organ systems physiology, including cardiovascular, pulmonary, and renal systems. Emphasis will be given to understanding the ways in which dysfunction in these systems gives rise to common human disease processes.

Course Notes:

Open to first-year students.

Class Notes:

Additional synchronous office hours will be available to students who cannot attend lectures at the primary course time. This course also includes a weekly laboratory section.

Recommended Prep:

Calculus at the high school level

Normally open to candidates accepted for work on a specific topic by a member of the faculty of the School of Engineering and Applied Sciences. Normally may not be taken for more than two terms; may be counted for concentration in Engineering Sciences with prior approval and if taken for graded credit. Applicants must file a project application form prior to the course registration deadline to receive permission to enroll. Project application forms may be obtained from the SEAS website or the Office of Academic Programs, Pierce Hall 110.

Engineering Sciences 94

Entrepreneurship and Innovation: Practical and Academic Insights (217639)

Josh Lerner

2021 Spring (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

60

Entrepreneurship is increasingly transforming our society and economy. This course aims to provide for undergraduates an introduction to entrepreneurship and its implications for innovation. The class will primarily consist of case study discussions, but will include some traditional lecture sessions that built on academic papers to provide more frameworks. As such, it draws primarily on materials from the introductory MBA course at Harvard Business School, "The Entrepreneurial Manager" (TEM). Students will be expected to come to class prepared to discuss the cases.

Class Notes:

Enrollment in this course is limited to 50-60 students and will be determined by the instructor if interest exceeds the limit. To help in this process, it would be helpful if you would fill out a short four-question survey that can be found [here](#) to highlight your interest in the class.

The survey would ask:

Name:

Year of study:

Concentration or program:

Why are you interested in taking this class? (one paragraph)

Engineering Sciences 95R

Startup R & D (109272)

Paul Bottino

2021 Spring (4 Credits)

Schedule:

T 0300 PM - 0545 PM

Instructor Permissions: Instructor**Enrollment Cap:**

n/a

Students do field-based work in entrepreneurship to develop their existing startup and explore new ideas and opportunities for startup design. The course is for students seeking innovation experience as a founder of a startup. Students may work individually; teams are preferred. Requires self-directed, independent work and active outreach to mentors, customers, and partners for guidance and feedback in addition to that provided by the instructor. Students will share their work regularly and engage in a peer-to-peer feedback forum. The coursework is customized to the needs of each student and their startup role and includes development of product, technology, market, business, organization and leadership.

Course Notes:**Enrollment limited; permission of instructor required.****Additional Course Attributes:**

Thermodynamics by Case Study (160454)

Scot Martin

2021 Spring (4 Credits) **Schedule:** MW 1200 PM - 0115 PM
Instructor Permissions: Instructor **Enrollment Cap:** 18

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes:

ES 112 is also offered as EPS 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. Total class capacity of 18 includes students in both ES 112 and EPS 112.

Class Notes:

Meets on Monday and Wednesday from 12pm to 12:50pm for all 18 students. Also meets on Friday in one of two separate 50-min blocks of 9 students for discussion. Friday meeting times will be determined according to enrolled students' availability. Please see course page for lottery instructions.

Mathematical Modeling (156427)

Zhiming Kuang

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor**Enrollment Cap:**

40

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes:

Engineering Sciences 115 is also offered as Applied Mathematics 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Class Notes:

Enrollment for APMTH/ENG-SCI 115 is limited to 40 students. Priority will be given to AM seniors taking this course to fulfill the honors requirement. To be given priority, you must request permission to enroll by Thursday, Jan. 21.

Recommended Prep:

Prerequisite: Applied Mathematics 21a and 21b, or Mathematics 21a and 21b or permission of instructor. Taking APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115 is recommended but not required.

Requirements:

Prerequisite: Must take APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking ENG-SCI 115

Introduction to the Mechanics of Solids (131270)

Joost Vlassak

2021 Spring (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

A first course in the mechanical sciences which introduces elements of continuum mechanics and explains how materials and structures stretch, bend, twist, shake, buckle, and break. Stress-strain behavior of materials. Statically determinate and indeterminate structures. Stress and strain, equations of motion or equilibrium, strain-displacement relations. Torsion. Beam theory with applications to beam deflections, vibrations, and buckling. Three laboratory sessions required.

Recommended Prep:

Applied Physics 50a, Physical Sciences 12a, or 15a and Applied Mathematics 21a or Mathematics 21a (previously) and Applied Mathematics 21b or Mathematics 21b (previously or concurrently).

Requirements:

Prerequisite: Math 21a (or equivalent); and Physical Sciences 12a, Physics 15a, or Applied Physics 50a; AND Co-requisite: Math 21b (or equivalent)

Innovation in Science and Engineering: Conference Course (118939)

David Weitz

2020 Fall (4 Credits)

Schedule:

TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap:

n/a

Explores factors and conditions contributing to innovation in science and engineering; how important problems are found, defined, and solved; roles of teamwork and creativity; and applications of these methods to other endeavors. Students receive practical and professional training in techniques to define and solve problems, and in brainstorming and other individual and team approaches.

Course Notes:

Offered jointly with the Design School as SCI-06272. Taught through a combination of lectures, discussions, and exercises led by innovators in science, engineering, arts, and business.

Requirements:

Anti-Req: May not be taken for credit if ENG-SCI 239 already complete

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 152

Circuits, Devices, and Transduction (207597)

Gu-Yeon Wei

2020 Fall (4 Credits)

Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on devices and systems that use *analog* electronics, and it complements COMPSCI 141, which focuses on digital devices and systems. Topics of this course include: time and frequency domain analysis of simple 1st and 2nd order circuits; operational amplifiers and op-amp circuits; basic semiconductor physics; PN junctions and diodes; bipolar junction transistors (BJT); field-effect transistors (MOSFETs); bias circuits and current sources; amplifier gain and bandwidth; frequency response, feedback, noise, and stability. Further, students are introduced to select transducers, particularly motors and their concomitant drive schemes, but also photocells, photodiodes, and semiconductor lasers to highlight device design and characterization.

Requirements: Prerequisite: Math 1a and 1b; AND Co-requisite: Physical Sciences 12b or Physics15b or Applied Physics 50b

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 155

Systems and Control (207626)

Na Li

Yue Lu

2020 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course and its follow-on course ENG-SCI 156 concern the fundamentals of information systems in the real world. Together they provide a comprehensive foundation in signal processing, systems design and analysis, control, and communications, while also introducing key linear-algebraic concepts in the context of authentic applications. The first course, ENG-SCI 155, focuses on the basic principles of feedback and its use as a tool for inferring and/or altering the dynamics of systems under uncertainty. Topics include linear algebra, the elemental representations of dynamic systems, stability analysis, the design of estimators (e.g., Kalman Filter) and feedback controllers (e.g., PID and Optimal Controller). The class includes both the practical and theoretical aspects of the topic.

Recommended Prep:

Applied math 21a, b or Math 21a, b or equivalent are encouraged to be taken concurrently but not required. Additional sections and materials of linear algebra will be provided in the course.

Requirements:**Prerequisite:** Math 1a and Math 1b**Additional Course Attributes:**

Attribute	Value(s)

Signals and Communications (148148)

*Flavio du Pin Calmon**Todd Zickler*

2021 Spring (4 Credits)

Schedule:

MW 1030 AM - 1145 AM

Instructor Permissions: None**Enrollment Cap:**

n/a

This course is a follow-on to ENG-SCI 155 and continues to develop the fundamentals of information systems in the real world. It focuses on the analysis and manipulation of signals in the time and frequency domains in the context of authentic applications. Topics include: the sampling theorem, convolution, and linear input-output systems in continuous and discrete time. Further, students are introduced to transforms—including Fourier, discrete cosine, wavelet, and PCA / SVD 'transforms'—that map between vector spaces via matrix multiplication as a method to ease analysis provided conditionalized knowledge. Randomness, noise, and filtering. Waves and interference in the context of communications; antennae, phasors, modulation, multiplexing. Applications in communications and data science.

Recommended Prep:**Applied Mathematics 21b or Mathematics 21b.****Requirements:****Prerequisite:** Math 21a and Math 21b (or equivalents), or Applied Math 22a**Additional Course Attributes:**

Engineering Sciences 157

Biological Signal Processing (109358)

Demba Ba

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

This is the first course on Biological Signal Processing, the science of collection, representation, manipulation, transformation, storing of biological signals, and the use of modern scientific computing tools (Python, Jupyter notebooks) to interpret biological signals and tell engaging and informative stories using biological data. The signals of interest can be deterministic, semi-periodic, transient, random, stationary, non-stationary, etc., depending on their source and generation mechanism. We will use EEG, EKG, temperature data, neural spiking data, and data from Covid-19 as examples. Our focus will be on foundational signal processing concepts that can be applied in a variety of biological applications. Examples include the Fourier Transform, Principal Component Analysis, Clustering, etc. Applications include those to patient monitoring, diagnostics, patient prognostics, online monitoring, and the computation of wellness measures. For many of us, one frustrating aspect of Covid-19 is our inability to understand figures that are reported, such as infection rates and numbers. We will introduce you to a powerful suite of mathematical and scientific computing tools will enable you to evaluate and make decisions based on evidence and data.

Recommended Prep:

It is helpful, but not necessary, for students to have taken Engineering Sciences 150 or 156 prior to Engineering Sciences 157.

Requirements:

Prerequisite: Math 21a and Math 21b (or equivalents)

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 171

Introduction to Quantum Materials and Devices (215415)

Robert Westervelt

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

This course provides an introduction to quantum materials and devices, including two-dimensional electron layers, single and double quantum dots, 2D materials such as graphene, and Josephson junctions. Their behavior is explained using semiclassical and quantum transport, electron states in reduced dimensions, the Coulomb blockade, and superconductivity. Quantum devices offer new approaches to electronics and photonics.

Course Notes:

Formerly APPHY 171

Class Notes:

Meeting time will be determined according to enrolled students' availability.

Recommended Prep:

ES 170 or Physics 143A, and ES 154 or Physics 153. AP 195 / Physics 195 provides a good introduction, but is not required.

Additional Course Attributes:

FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 181

Engineering Thermodynamics (135598)

Michael Aziz

2020 Fall (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to classical engineering thermodynamics. Topics: Zeroth Law and temperature. Properties of single-component gases, liquids, and solids. Equations of state for ideal and simple nonideal substances. First Law, heat and heat transfer, work, internal energy, enthalpy. Second Law, Third Law, entropy, free

energy, exergy. Heat engines and important engineering applications such as refrigerators, power cycles. Properties and simple models of solutions. Phase and chemical equilibrium in multicomponent systems; chemical potential. Electrochemistry, batteries, fuel cells. Laboratory included.

Recommended Prep:

High School AP Chemistry or higher

Requirements:

Prerequisite: Physical Sciences 12a, Physics 15a, or Applied Physics 50a

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS Divisional Distribution	Science & Engineering & Applied Science
FAS: Course Level	For Undergraduate and Graduate Students

Engineering Sciences 183

Introduction to Heat Transfer (108871)

David Clarke

2021 Spring (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The macroscopic description of the fundamentals of heat transfer and applications to practical problems in energy conversion, electronics and living systems with an emphasis on developing a physical and analytical understanding of conductive, convective and radiative heat transfer. Emphasis will also be given to problem solving skills based on applying governing principles, mathematical models and physical intuition. Includes laboratory sessions and semester-long projects.

Recommended Prep:

Applied Math 21a (Mathematical Methods in Science) or equivalent.

Requirements:

Prerequisite: Math 21b (or equivalent) and Physical Sciences 12a, Physics 15a, or Applied Physics 50aREQ: ENG-SCI 183

Additional Course Attributes:

Attribute	Value(s)
GSD: MDS/MDE Rec. Elec.	MDE approved SEAS 100 level course
FAS Divisional Distribution	Science & Engineering & Applied Science
Local offset from Cambridge MA	+7
FAS Divisional Distribution	None
FAS: Course Level	For Undergraduate and Graduate Students
Local offset from Cambridge MA	+8 +9
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 190

Introduction to Materials Science and Engineering (143870)

Xin Li

2020 Fall (4 Credits)

Schedule:

MW 0900 AM - 1015 AM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to the structure, properties, and applications of materials. Crystal structure and defects. Structure property relations and crystal symmetry. Phase transformations, phase diagrams, diffusion. Effect of microstructure on properties. Examples from a variety of engineering applications of electrical, optical and magnetic materials.

Recommended Prep:

Physical Sciences 12a,b, and Applied Mathematics 21a,b or Mathematics 21a,b.

Requirements:

Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences 12a and 12b, Physics 15a and 15b, or Applied Physics 50a and 50b

Additional Course Attributes:

Attribute	Value(s)

Materials Selection and Design (216405)

David Clarke

2020 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

The repertory of materials available to engineers today and embodied in engineering systems includes tens of thousands of different materials, as well as naturally occurring ones. This course addresses why specific materials are selected for particular applications and the rational basis for their selection. The course is intended to serve as an introduction to the principles and methodology of selecting materials for engineering components based on the functionality and purpose of the component in different system applications and operating environments. The selection specification includes satisfying a variety of objectives, such as minimizing weight, cost (financial as well as environmental), end of life recycling and material scarcity.

Engineering Sciences 201

Decision Theory (131407)

Demba Ba

2021 Spring (4 Credits)

Schedule:

TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap:

30

ES 201/AM 231 is a course in statistical inference and estimation from a signal processing perspective. The course will emphasize the entire pipeline from writing a model, estimating its parameters and performing inference utilizing real data. The first part of the course will focus on linear and nonlinear probabilistic generative/regression models (e.g. linear, logistic, Poisson regression), and algorithms for optimization (ML/MAP estimation) in these models. We will pay particular attention to sparsity-induced regression models, that arise for instance in compressed sensing, because of their relation to artificial neural networks, the topic of the second part of the course. The second part of the course will introduce students to the nascent and exciting research area of generative models of deep networks called model-based deep learning. At present, we lack a principled way to design artificial neural networks, the workhorses of modern AI systems. Moreover, modern AI systems lack the ability to explain how they reach their decisions. In other words, we cannot yet call AI explainable or interpretable which, as a society, poses important questions as to the responsible use of such technology. Model-based deep learning provides a framework to develop and constrain neural-network architectures in a principled fashion. We will see, for instance, how neural-networks with ReLU nonlinearities arise from sparse probabilistic generative models introduced in the first part of the course. This will form the basis for a rigorous recipe we will teach you to build interpretable deep neural networks, from the ground up. We will invite an exciting line up of speakers. Speakers will suggest papers that a group of students will present at the beginning of lecture, which will build up to a final project/paper that utilizes/on model-based deep learning applied to problems of interest to students.

Course Notes:

Engineering Sciences 201 is the same as Applied Mathematics 231. Students may not take both for credit.

Class Notes:

Enrollment for ES 201/AM 231 is capped at 30 students. Students who wish to enroll in this course should add it to their Study Card in my.harvard.edu by 23:59 on Tuesday January 19, and request permission to enroll. Please write a paragraph explaining your interest in this course, how it fits either with your concentration plans, and/or how model-based deep learning can help your research. The instructor will

let students know if they can enroll by 17:00 on Thursday January 21.

Recommended Prep:

Applied Mathematics 21a,b or Mathematics 21a,b, and Statistics 110 or equivalents.

Additional Course Attributes:

Engineering Sciences 220

Fluid Dynamics (146772)

L Mahadevan

2021 Spring (4 Credits)

Schedule:

WF 0430 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap:

n/a

From statistical to continuum mechanics. Geometry of motion. Strain, strain rate, polarity and nematicity. Vorticity. Conservation laws. Stress - passive and active. Symmetry, invariance and constitutive equations. Dimensional analysis and scaling. Navier-Stokes, Toner-Tu and Nematodynamic equations. Experimental hydrodynamics. Solutions for simple flow states. Boundary layers (and engineering flows). Rotating flows (and geophysics). Thin film flows (and environmental physics). Active matter flows (and biophysics). Similarity and singularity. Linear and nonlinear waves in passive and active fluids- acoustics, shocks, water waves, bird flocks. Flow instabilities. Mixing and turbulence.

Recommended Prep:

Familiarity with dynamics, vectors, multivariable calculus, and partial differential equations. An undergraduate course in continuum or statistical mechanics, electrodynamics, or quantum mechanics is strongly recommended.

Neuroengineering (216799)

Jia Liu

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

The contents and course requirements are similar to those of Biomedical Engineering 131 (BE 131), with the exception that students enrolled in Engineering Sciences 225 (ENG-SCI 225) are expected to undertake a substantial course project.

Course Notes:

Enrollment limited to 20 total students.

Recommended Prep:

ENG-SCI 258 or permission of instructor,

Additional Course Attributes:

Attribute	Value(s)
FAS Divisional Distribution	Science & Engineering & Applied Science
All: Cross Reg Availability	Available for Harvard Cross Registration
FAS: Course Level	Primarily for Graduate Students

Engineering Sciences 228

Computational Solid and Structural Mechanics (214512)

Katia Bertoldi

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: None

Enrollment Cap:

n/a

Introduction to finite element methods for analysis of steady-state and transient problems in solid and structural mechanics. Implementation of simple MATLAB codes and use of existing general-purpose software (ABAQUS). Final project offers opportunities to extend focus to fluid mechanics and heat transfer

and to explore additional software (e.g. COMSOL, FEniCS), if desired.

Course Notes:

Offered alternate years.

Recommended Prep:

Engineering Sciences 120 or equivalent introduction to the mechanics of deformable materials and fluids. Engineering Sciences 123 may be taken concurrently.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
FAS Divisional Distribution	Science & Engineering & Applied Science

Engineering Sciences 256

Informal Robotics/New Paradigms for Design and Construction (156726)

Chuck Hoberman

2021 Spring (4 Credits)

Schedule:

F 1200 PM - 0159 PM

Instructor Permissions: Instructor**Enrollment Cap:**

5

This course teaches how to create original robotic devices made of light, compliant – informal – materials.

New fabrication techniques are transforming the field of robotics. Rather than rigid parts connected by mechanical connectors, robots can now be made of folded paper, carbon laminates or soft gels. They can be formed fully integrated from a 3D printer rather than assembled from individual components. Informal Robotics draws on cutting-edge research from leading labs, in particular, [Harvard's Micro Robotics Laboratory](#) which has created unique designs for ambulatory and flying robots, end-effectors, medical instruments and other applications.

We will explore informal robotics from multiple perspectives, culminating with the design of original devices displaying animated intelligence in real-time. Going beyond traditional engineering approaches, we will also explore new opportunities for design at the product, architectural, and urban scales.

Techniques:

Hands-on: Working with the GSD's Fab Lab we are creating a kit of parts that will be available to all enrolled students. With the kit, you can create a wide range of folding mechanisms controlled by on-board miniature electronics.

Software / Simulation: Software workshops will be offered on Fusion 360 and Grasshopper to simulate robotic performance within a virtual environment.

Topics:

- Kinematics: design techniques for pop-ups, origami, and soft mechanisms.
- Fabrication: methods: for composite materials, laminated assembly, self-folding, and integrated flexures - the kit of parts will allow for hands-on exploration.
- Controls: how to actuate movement and program desired behavior. Topics include servos, linear actuators, and use of Arduino actuator control.
- Applications: takes us beyond purely technological concerns, contextualizing Informal Robotics within larger trends where materials, manufacturing and computation are starting to merge.

Format, prerequisites, evaluation:

A portion of the lecture material will be pre-recorded, allowing students to view this on their own schedule. The class session will emphasize discussion and review of assignments & projects.

There will be assignments to produce test mechanisms and CAD models, followed by final group projects. Presentations and discussions of ongoing student work are integral to the course. There are no prerequisites and evaluation will be based on completion of assignments and the final project.

Projects may be virtual, physical or both. Resources for fabricating customized final projects are not fully known at this point, but I am committed to supporting physical-making to the degree possible.

Course Notes:

This course does not count for concentration credit for SEAS undergraduate concentrators; this course does not count as a disciplinary course for SEAS Ph.D. students. Jointly offered with GSD, SCI 6478.

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 261

Stratospheric Dynamics (217786)

Marianna Linz

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course will review some introductory geophysical fluid dynamics before focusing primarily on the physics of the stratosphere. Topics covered will include eddy transport of heat and momentum, stratospheric Rossby and gravity waves, wave-mean flow interaction, and tracer transport. The course will alternate lecture with in-class coding activities. Each week will have a preparatory reading and brief assignment.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Recommended Prep:

Differential equations and some graduate level fluid dynamics, preferably Geophysical Fluid Dynamics (e.g. EPS 208, EPS 231, EPS 232. MIT 12.800)

Additional Course Attributes:

Attribute	Value(s)

Engineering Sciences 273

Optics and Photonics (123351)

Federico Capasso

Marko Loncar

2020 Fall (4 Credits)

Schedule:

MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

The focus is on the foundations of optics/photonics and on some of its most important modern developments and applications. Powerful and widely used computational tools will be developed in the sections. Topics to be covered: Maxwell's equations, Free space optics. Reflection, refraction, polarization (Jones Calculus and Stokes parameters); interference and diffraction. Light-matter interaction, dispersion and absorption. Guided wave optics (including optical fibers). Perturbation and couple mode theory, transfer matrix methods; numerical methods. Optical resonators. Photonic crystals. Near-field optics. Metal optics and Plasmonics. Metamaterials and Metasurfaces.

Course Notes:

Open to graduate students and advanced undergraduates.

Recommended Prep:

Elements of Electromagnetism, such as taught in Applied Physics 50b, Physics 15b, Physical Sciences 12b, Engineering Sciences 151 or equivalent.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students

2020 Fall (4 Credits)

Schedule:

TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap:

n/a

The focus of this course are quantum devices that have revolutionized the field of information science and technology. Particular emphasis this year will be on optical devices and communication technology. First, quantum devices that have enabled development of internet will be discussed, including semiconductor lasers, modulators and photo-detectors. Next, emerging quantum devices that will lead to so-called "second quantum revolution" and development of quantum internet and quantum computers will be introduced. These include single-photon sources and detectors, quantum memories, physical implementations of quantum gates, etc.. Topics that will be covered include quantum dots, color centers in solids, trapped ions and atoms, photon pair generation, quantum teleportation, quantum cryptography and quantum repeaters. The course is a mixture of quantum mechanics, semiconductor device physics, nanophotonics, quantum electronics and quantum optics.

Recommended Prep:

Undergraduate level quantum mechanics such as Physics 143a or equivalent.

Systems Engineering (208004)

Robert D. Howe

Venkat Venkatasubramanian

2020 Fall (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

30

This is the first core course for students in the MS/MBA: Engineering Sciences program, to be taken in August of the first year of the program. The course will begin with methods for modeling engineering and business systems, including discrete and continuous systems and feedback controls. Students will write simple simulations and then use professional modeling software to simulate complex systems. Students will next learn design methodology, including stakeholder modeling, ideation, and decision making tools. A final team project will involve design of a system, including simulation and prototyping.

Course Notes:

This course is limited to first-year MS/MBA: Engineering Sciences students only. Intensive 3-week course, Aug. 7-23.

Recommended Prep:

Calculus, linear algebra, differential equations.

Requirements:

First year MS/MBA students only

Additional Course Attributes:

Attribute	Value(s)
All: Cross Reg Availability	Not Available for Cross Registration
FAS: Course Level	Primarily for Graduate Students

Schedule:

MT 0430 PM - 0630 PM

Instructor Permissions: Instructor**Enrollment Cap:**

35

Leading advanced design projects requires the integration of multiple skill areas and ongoing learning about the best concepts and tools to guide development. This course in leadership and design practice trains students to lead multi-disciplinary, integrated teams capable of envisioning a meaningful project direction and developing seamless product and service experiences. Students learn strategic design and design leadership alongside the history of design and the principles, processes and techniques of intermediate to advanced Human Computer Interaction (HCI) and UX, graphic design, psychology of design, and design decision-making tools and tradeoffs. Students learn the skills needed to become not just an engineer or a manager, but integrated engineer-designers who have the unique capabilities needed to lead entrepreneurial projects. They learn to use collaborative sensemaking to find the most meaningful problem to work on, and to do this through an iterative cycle that integrates the technical, user experience, and interface design elements of a solution. The course is structured to provide a comprehensive education in all stages of the new product design process: from idea generation to concept development, detailed design and prototyping, testing and integrating data into design decisions.

Course Notes:

This course is limited to second-year MS/MBA: Engineering Sciences students only. Requires instructor consent.

Recommended Prep:

Integrated Design is a required core course for the Harvard MS/MBA joint degree program. It builds on skills and tools developed in prior courses in the MS/MBA core sequence. Specifically, students enrolled in this course must have taken Systems Engineering, which covers advanced statistical analysis techniques, data analytics, and the modeling and simulation of complex engineered systems. Students must also have taken the intensive course Technology Venture Immersion, which covers the fundamentals of achieving product-market fit in early-stage ventures, encompassing tools and techniques for problem finding (e.g., customer interviewing and persona development) and solution finding (e.g., brainstorming, prototyping, user testing and defining a Minimum Viable Product).

Engineering Sciences 291

Nano Micro Macro: Adaptive Material Laboratory (156219)

Joanna Aizenberg

Jonathan Grinham

2021 Spring (4 Credits)

Schedule:

F 0800 AM - 0959 AM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course is an interdisciplinary platform for designers, engineers, and scientists to interact and develop innovative new products. The course introduces ideas-to-innovation processes in a hands-on, project/product focused manner that balance design and engineering concepts with promising, real-world opportunities. Switching back and forth between guided discovery and focused development, between bottom-up and top-down thinking, and market analyses, the course helps students establish generalizable frameworks as researchers and innovators with a focus on new and emerging technologies. There are no prerequisites.

Note! MDE students, this course can satisfy a GSD course requirement by enrolling in SCI 6477, or a SEAS course requirement by enrolling in ES 291. But it cannot simultaneously satisfy both requirements.

Course Notes:

Offered jointly with Harvard Graduate School of Design as SCI 6477.

Class Notes:

See course video at <https://www.gsd.harvard.edu/course/nano-micro-macro-adaptive-material-laboratory-with-seas-spring-2021/>.

Engineering Sciences 292A

Launch Lab/Capstone 1 (214579)

Russell J Wilcox

Alan Maccormack

2021 Spring (4 Credits)

Schedule:

TBD

Instructor Permissions: Instructor

Enrollment Cap:

35

The MS/MBA Capstone is an intensive project that requires teams of students to apply and integrate the skills they have learned across core disciplines developed in the program curriculum. Specifically, teams will be expected to design, build and launch a new technology-based product/service venture, and thereby to demonstrate mastery with respect to three areas of knowledge: Design Knowledge: The use of human-centered design methods to understand users, identify solutions to their needs, and gather feedback via rapid, iterative prototyping. Technical Knowledge: The use of rigorous system engineering methods to plan, design, develop, build, and test a complex technology-based product/service, integrating knowledge across multiple engineering disciplines. Business Knowledge: The use of business model analysis and lean experimentation methods to develop and test a set of hypotheses that capture how the new product/service will create value, including business model design, pricing, sales and marketing, operating model and profit formula.

The Capstone is divided into two parts, the first of which is an immersive course completed during the January term of the G2 year (Capstone I). The subsequent spring course (Capstone II) follows on from and builds upon work completed in January. In Capstone II, dedicated mentors will be allocated to each team based upon the specific projects they are completing. Given students prior coursework, a working knowledge of human-centered design methods, systems engineering techniques, and business modeling and lean experimentation is assumed. Launch Lab therefore focuses on the practical application of these skills to team projects, supplemented by content in three areas: i) seminars on advanced methods and techniques, ii) workshops that demonstrate how to put these skills and tools into practice, and iii) guest speakers who share their experience in the areas of design, technology and business.

Course Notes:

Open to MS/MBA: Engineering Sciences students only.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Not Available for Cross Registration

Engineering Sciences 297

Professional Writing for Scientists and Engineers (207614)

*Jenny Hoffman**Suzanne Smith*

2021 Spring (4 Credits)

Schedule:

W 0300 PM - 0500 PM

Instructor Permissions: Instructor**Enrollment Cap:**

15

This class leads students to develop their skills in the critical reading and writing of science and engineering. Genres will include research articles, grant proposals, school/fellowship/job applications, or lay abstracts & press releases for the non-scientific public. Crucially, students will be empowered not only to achieve their own writing goals, but also to break down these learned skills and impart them to others, as effective collaborators and mentors of younger students.

Course Notes:

Also offered as Physics 297. We welcome graduate students and senior undergraduates! Enrollment is limited to 15 students. Tentative meeting time is 3-5pm on Weds, but may be updated based on student preference.

Additional Course Attributes:

Attribute	Value(s)

Methods & Practices in Design Engineering (214632)

Nabil Harfoush

Arianna Mazzeo

2020 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course is a practice-focused introduction to applied design research and analysis methods on human subjects (individuals or groups) and on organizations in a post-pandemic urban context. The first part of the course provides an introduction to qualitative research methods such as observation, interviewing and emergent design fiction from a cultural and systemic perspective. The second part introduces learners to key methods and tools for analyzing enterprises and their resilience. The course is intended to complement the knowledge of students in engineering, sciences, and multidisciplinary programs and provide them with practical skills in domains adjacent to their fields. The course is suitable for students and for graduate and undergraduate students of many disciplines.

Engineering Sciences 298CR

Innovating in Health Care (214632)

Regina Herzlinger

2021 Spring (4 Credits)

Schedule:

MTW 1040 AM - 1200 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This course enables students to bring their entrepreneurial health care ventures to market by: 1) Learning how to align their venture with the six factors that influence entrepreneurial ventures - the structure of the health care system, its financing, technology, consumers, accountability, and public policy; and 2) Learning the nine essential elements of a business model. The course uses case studies of all kinds of health care innovations – delivery, med tech, insurance, biopharma – in global settings and lectures on subjects such

as reimbursement to enable these learnings. Students apply these learnings to complete a business plan for an entrepreneurial venture. The project can be completed with a team of classmates.

Course Notes:

Med Tech Cases Include: CVI Ingenuity (A) & (B), PARAXEL International Corp.: Stages of Innovation, Reinventing Brainlab (A) & (B), Emdeon's Acquisition of Change Healthcare: Innovating Transparency Solutions for Health Care Consumers, ABC Pharmaceuticals, Medtronic: Patient Management Initiative (A) & (B), Fitbit, Philips-Visicu, and Phreesia.

Class Notes:

Methodologies in Design Engineering (213398)

Kit Parker

Fawwaz Habbal

2020 Fall (4 Credits)

Schedule:

F 1100 AM - 0100 PM

Instructor Permissions: Instructor

Enrollment Cap:

n/a

This is a SAT/UNSAT seminar course focused on design thinking, analysis, planning, and executing the development of engineered systems. Weekly meetings will include discussions and assigned readings of case studies and examples of the systems surrounding the developing technical system. Organizing and executing research, innovation, and product design at the scales from academic group, to startup, to major industry will be discussed. The course is designed to allow the engineer and designer to integrate technical knowledge into an executable framework as an individual or leader of a design team.

Course Notes:

Enrollment subject to approval of the instructor, with first and second year MDE graduate students receiving priority. Undergraduates are not allowed to enroll.

Additional Course Attributes:

Attribute	Value(s)
FAS: Course Level	Primarily for Graduate Students
All: Cross Reg Availability	Available for Harvard Cross Registration

Engineering Sciences 298R

Solving Tech's Public Dilemmas (107995)

Ash Carter

2020 Fall (4 Credits)

Schedule:

MW 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

20

This course identifies and analyzes alternative solutions to the dilemmas that disruptive technology is posing to public good in the digital, biotech, and jobs and training domains. The objective is for students to craft technologically-informed practical public-private approaches to some of the key policy issues of our time. It begins with a brief history of successful and unsuccessful governance of far-reaching technological changes in the past. The first part of the course treats the ongoing digital revolution, crafting solutions to issues of social media responsibility, cybersecurity, and artificial intelligence (AI). It then turns to the biotech revolution that is gathering momentum, addressing genome editing, bioweapons and bioterror, and the role of venture capital in biotech. The third segment of the course addresses the ways that technology is disrupting the nature of work and lifelong training. The example of driverless cars will be used to illustrate the challenges and opportunities that technology provides to sustain cohesive and prosperous societies in the era of tech "disruption". Assignments stress development of key writing and speaking skills.

Course Notes:

Cannot be used for computer science or engineering concentration credit. Also offered by HKS as IGA 505.

Engineering Sciences 301

SEAS Teaching Practicum (125374)

John Girash

2021 Spring (4 Credits)

Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

Practicum emphasizing an active but reflective approach to teaching applied sciences and engineering; designed for graduate students in any SEAS area, not specifically Engineering Sciences. Topics: presentation and communication; in-class teaching and interaction; developing, grading and giving feedback on assignments; course head / TF relations and expectations; cognition and learning. Seminar style with an emphasis on observation, practice, feedback, and reflection. While the primary context of the course is classroom-style teaching, those interested in developing instructional communication skills in other contexts within science and engineering -- labs/studios, presentations, etc. -- are quite welcome, and course tasks can be adjusted for such.

Class Notes:

Unlike most 300-level courses at SEAS, this is a class with a regular meeting time and some assignments, largely involving lesson prep and brief background reading. Counts towards the Derek Bok Center's [Teaching Certificate](#). Graduate students from all science and engineering fields within Harvard are welcome. Postdocs and motivated undergraduates may audit, doing the same work as enrolled graduate students. Once each month the regular class will be followed by a 45 minute open-attendance reading group.

Engineering Sciences 399-TIME

Academic-Related Work for SEAS Graduate Students (208271)

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Enrollment in ES 399-TIME is open to any SEAS Ph.D., M.E., or S.M. student who holds a SEAS or FAS Teaching Fellow (TF) appointment and is engaged in teaching a course. Once hired to teach in a specific course, whether within or outside SEAS, the student must complete the online form at <http://tinyurl.com/seastfform>.

SEAS Ph.D. students who are required to enroll in the Bok Center's non-credit *Communicating Science* seminar in order to meet the GSAS English Language Proficiency requirement may also enroll in 4 units of ES 399-TIME.

Course Notes:

Teaching Fellows may enroll in 4 units of ES 399-TIME for a .25 FTE TF appointment, or up to 8 units of ES 399-TIME for a .5 FTE TF appointment. TFs should not enroll in the course in which they are teaching.

Any enrollment in ES 399-TIME other than as described here is disallowed by SEAS policy, with exceptions requiring prior approval of the Director of Graduate Studies. ES 399-TIME cannot be used to satisfy any degree requirements.

Additional Course Attributes:

Attribute	Value(s)
Course Evaluation	Course Evaluation exempt
FAS: Course Level	Graduate Course
All: Cross Reg Availability	Not Available for Cross Registration

Writing the Now: The Art of Closeness: Workshop (216348)

Laura van den Berg

2020 Fall (4 Credits)

Schedule:

R 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap:

12

In *Lost Children Archive*, Valeria Luiselli writes: "I suppose that documenting things—through the lens of a camera, on paper, or with a sound recording device—is really only a way of contributing one more layer, something like soot, to all the things already sedimented in a collective understanding of the world." This class will focus on the art of documenting the "now" through prose and how such documentation can work to contribute another layer to the collective understanding. Together we will explore the art of writing from a space of "closeness," or rendering events/moments in time on the page as they unfold around us. How can closeness deepen intensity and insight? What value can we locate in writing from a place of ongoingness as opposed to in pursuit of resolution? What specific difficulties and questions can closeness introduce?

In support of this exploration, we will study published prose works that take the shape of diaries; self-portraits; drifts; hybrids of fiction and reportage. The reading list will include work from Ross Gay, Kate Zambreno, Valeria Luiselli, Zadie Smith, and Yuko Tsushima. Students will also undertake exercises designed to encourage experiments with form, perspective, time, observation, and genre (we'll be reading fiction, nonfiction, and hybrid forms, and students will be invited to write in any or all of those genres). Later in the term, your own stories will serve as the primary text as the focus shifts to workshop and revision.

Course Notes:

Admission by application only. For information on specific application requirements and instructions, please see the full course listing on the English Department website. **DEADLINE:** for all Fall 2020 workshops, applications are due via Submittable by 11:59pm ET on Wednesday August 19. Students will be notified of admissions decisions by 5:00pm ET on Monday, August 24. Workshops do not meet during Shopping Week.

Get Real: The Art of Community-Based Film (216411)

Musa Syeed

2020 Fall (4 Credits)

Schedule:

T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

"I've often noticed that we are not able to look at what we have in front of us," the Iranian director Abbas Kiarostami said, "unless it's inside a frame." For our communities confronting invisibility and erasure, there's an urgent need for new frames. In this workshop, we'll explore a community-engaged approach to documentary filmmaking, as we seek to see our world more deeply. We'll begin with screenings, craft exercises, and discussions around authorship and social impact. Then we each will develop a short documentary over the rest of the semester, building off of intentional community engagement. Students will end the class with a written documentary treatment and recorded material for a rough cut.

Course Notes:

Admission by application only. For information on specific application requirements and instructions, please see the full course listing on the English Department website. **DEADLINE:** for all Fall 2020 workshops, applications are due via Submittable by 11:59pm ET on Wednesday August 19. Students will be notified of admissions decisions by 5:00pm ET on Monday, August 24. Workshops do not meet during Shopping Week.

English CAFR

CAFR: Advanced Fiction Workshop: Writing this Present Life (160953)

Claire Messud

2020 Fall (4 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Intended for students with prior fiction-writing and workshop experience, this course will concentrate on structure, execution and revision. Exploring various strands of contemporary and recent literary fiction – writers such as Karl Ove Knausgaard, Rachel Cusk, Chimamanda Adichie, Valeria Luiselli, etc – we will consider how fiction works in our present moment, with emphasis on a craft perspective. Each student will present to the class a published fiction that has influenced them. The course is primarily focused on the discussion of original student work, with the aim of improving both writerly skills and critical analysis. Revision is an important component of this class: students will workshop two stories and a revision of one of these.

Course Notes:

Admission by application only. For information on specific application requirements and instructions, please see the full course listing on the English Department website. **DEADLINE:** for all Fall 2020 workshops, applications are due via Submittable by 11:59pm ET on Wednesday August 19. Students will be notified of admissions decisions by 5:00pm ET on Monday, August 24. Workshops do not meet during Shopping Week.
